Acknowledgments

Gayle Winston, first and foremost, which is why I dedicated this book to her, as I do all my books.

John Lavett. He was a very good friend, not only of mine, but of my cousin George Dixon, the skipper of the LST to Heard and Kerguélen during the first ever ANARE. To John and Pat, and, of course, to George.

Ed Hillary, wherever you are.

Billy-Ace Baker, the most remarkable guy, and a very good buddy. He is really the Moriarty of Antarctica. Without Billy-Ace, this book would have been a slim volume of meaningless rubbish. He's says that's not true, and I'm sure he's right.

Jane Cameron of the Falkland Islands Archives. Jane was involved in a car crash in Argentina, and died just after Christmas 2009. We all lost a friend, and a great archivist.

Alan Carroll, a good buddy, one of the great Fids. If it was just for his book on the history of Port Lockroy, he would have to be thanked, but it is for much, much more. And for Jane, for putting up with me.

Ken Pawson, another legendary Fid, and another writer of a great book. Ken wrote the greatest Antarctic poem of all time.

Laura Snow, whose father, Ashley Snow, was on USAS 1939–41. I'd have missed so much without this wonderful lady.

Keith Holmes. Keith has done a lot for Antarctica, and he did a lot for me in the compilation of this book. A great Fid.

Gus Shinn, the legendary flyer, the first man to land a plane at the South Pole. Thanks for all for the great chats, Gus.

British Antarctic Survey Archives Service. Ellen Bazeley-White and Joanna Rae.

John Gillies, Henk Broelsma, and Syd Kirkby in Oz.

Neil Sandford in NZ.

Heather Lane and that great Fid Jack Reid, of SPRI.

My friends who looked after me, either with supplies or encouragement during the 4½-year, 15-hour a day every day effort. Just to mention Jane Singer hardly seems sufficient; Peg O'Connell; Robbie & Jan Noffsinger; Mikey Little; my own family; Glenn Stein; that great Fid Tommy Thomson; Renée Landau in New York; Nancy Lee Williams Hersch Ingram and Cdr. Steve Hersch, USNR, in Manassas; eminent Russian doctor Viktor Nikolayevich Anenyev; John Hess, without whom I'd be a raving lunatic every time my computer got a glitch; Emile and Judy Pandolfi; Janie Trench, who always offered her wonderful house in Jamaica; Noel R.O. Smith; Rich Halverson; Sandy Barrett, Edie & John Crutcher.

PREFACE

This is the second edition of *Antarctica: An Encyclopedia*. The first edition came out in 1990. There is nothing in that old edition that doesn't appear in this new one, except for the tedious chronology, and the occasional error. Of course, there is a great deal of information in this new edition that was not in the old edition.

That first edition was, as this one is, an A–Z of Antarctica, incorporating geographical features, expeditions, people, scientific subjects, and entries of general interest. It is a direct entry encyclopedia — you don't have to make any guesses based on logical or hierarchical principles to find what you are looking for. There are, however, numerous cross-references to facilitate use.

Information for the geographical features in this book had to come primarily from national gazetteers, current and old. Many, many of the features have alternative names — the Chileans might call a feature by one name, the Argentines another, the British another, and the Americans may use yet a fourth name. All completely different. In addition, a great number of features have had their names changed, some several times. The British gazetteer, particularly, often goes into considerable depth with the history of a feature, but this invaluable information is presented in a way that is nearly unreadable to the layman. The present work has digested this information for the benefit of the reader without reducing the level of detail in the original. In addition, the Spanish-language gazetteers, for example, which contain so much unique information, have not been translated, so one is somewhat stuck, unless one reads Spanish. This book, again, has presented this information in English, often for the first time.

In recent years, SCAR (Scientific Committee on Antarctic Research) has produced a monstrous gazetteer, collating entries from all the international gazetteers, and called, rather reasonably, the SCAR composite gazetteer, in which each feature is given an ID number. As of the time of writing this book, there were almost 20,000 such numbers. When you enter an ID number, you get all the entries pertaining to that number as they have been gazetteered by various countries. The size of the descriptor varies, one entry from another. Each relevant country's entry for each ID number had to be examined for this book, and, given that each ID number may have one, two, three, or more entries, that's in the order of between 50,000 and 100,000 entries to study, which is one of the reasons this book took four years to compile. Naturally, a project as huge as SCAR's is going to be prone to error. One of the useful by-elements of this book might then be another eye going over the SCAR data.

The date that a feature was accepted by a country's naming body is important. Again, one has to rely mainly on the gazetteers — current and old — for this information. Some give precise dates, others give just the year, while some give no date at all. Some give January 1 of a given year, but this is not only a meaningless device, it is also misleading.

As for place naming committees, the terms US-ACAN (U.S. Advisory Committee on Antarctic Names) and UK-APC (UK Antarctic Placenames Committee) are self-explanatory. ANCA (Antarctic Names Committee of Australia) is Australian. I have used the term NZ-APC (NZ Antarctic Placenames Committee) throughout this book regardless of whether it was actually officially called NZ-APC at the time of naming, or the NZ Board of Geographic Names, or some other name. It is the shortest, least confusing, and most readily identifiable way to write the name of the NZ naming body, and it makes no difference whether it was strictly speaking NZ-APC at the time.

A Note on Alphabetization

Entries are arranged alphabetically word by word (rather than letter by letter), under the primary word (frequently, the proper name), avoiding inversions except of persons' names. Inversion, particularly of names in a range of languages, can often be confusing or misleading.

Often there are several entries with the same primary word, but with it appearing in various positions. Using a fictitious entry name, *Hamby*, this is the order of precedence for the Hamby entries:

1. The *Hamby* (a ship); or The *Hamby* (a geographic feature).
2. Cape Hamby, Isla Hamby, Mount Hamby, etc., geographic features where the primary (proper) word comes second or even third, and thus the entry is subalphabetized by the first word(s).
3. Hamby (person's name; first name unknown).
4. Hamby, Capt. (person's name; only a rank or title known).
5. Hamby, Gwyn; Hamby, Zetta, etc.— personal name entries where both first and last names are known. These entries, and the ones in 4. above, are the only ones to be inverted, partly to make it clear at a glance that they are entries for persons and partly because the reader expects this convention.
6. Hamby Bluff, Hamby Cliffs, Hamby Mountains, The *Hamby of Boston* (a ship), Hamby Strait, Hamby Valley, etc.— all entries where the primary word comes first (thus they are subalphabetized by the second word).

Hyphens are to be ignored, both those that join complete words (example: "All-Blacks," which would be found under All) and those that are orthographic conventions within words ("Lake O-ike," for instance, which would be listed, not at the very beginning of the O's as if O were the primary word, but under Oike as if the hyphen did not exist).

A decision was made, because the alternative proved unacceptable, that names like "Mount A. Beck," "Mount S. Hassel," etc., would come at the beginning of the A's and S's respectively, as if "A." and "S." were the primary words. Even so, such entries are frequently merely "*see*" references (as is "**Mount A. Beck** *see* **Beck Peak**").

Proper last names consisting of two or more parts (La Grange or Van der Essen) are alphabetized as if all one word (Lagrange or Vanderessen).

Mc, Mac and M' entries have been listed together, under Mac, as if there were no difference.

All entries are alphabetized without reference to English-language definite and indefinite articles. For convenience, non–English language articles are, however, incorporated into the alphabetization (*Las Palmas*, the ship, is word-by-word under L). All accents are ignored in alphabetization.

THE ENCYCLOPEDIA

Dome A *see* **Dome Argus**

AAE *see* **Australasian Antarctic Expedition**

AAE Glacier. 67°35' S, 145°37' E. A glacier, NE of Mertz Glacier, in George V Land. Named by ANCA on Aug. 12, 2010, for the Australasian Antarctic Expedition, 1911-14.

Mount A. Beck *see* **Beck Peak**

Canal A. Cerda *see* **Aguirre Passage**

Mount A. Ditte *see* **Mount Ditte**

The "A" Factor. The Antarctic factor. Unforeseen difficulties or disasters.

Sommet A. Gaudry *see* **Mount Gaudry**

Mount A. Lindstrøm *see* **Lindstrøm Peak**

Glaciar Aagaard *see* **Aagaard Glacier**

Aagaard Glacier. 66°46' S, 64°31' W. Also spelled Aagard or Ågård. 13 km long, close E of Gould Glacier, and directly N of Karpf Point, it is the most easterly of 3 glaciers that flow in a general southerly direction into the head of Mill Inlet, on the Foyn Coast, on the E coast of Graham Land. Charted by Fids from Base D in 1946–47, plotted by them in 66°44' S, 64°29' W, and named by them for Consul Bjarne Aagaard (1873-1956), Norwegian Antarctic bibliographer, historian, and authority on whaling. Photographed aerially in Dec. 1947 by RARE 1947-48. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit on Dec. 31, 1952. It appears in the British gazetteer of 1955. The Argentines call it Glaciar Aagaard, and it first appears as such on an Argentine map of 1957 (well, almost — it was spelled Aargaard; they got the mis-spelling from a British chart of that year that had also misspelled it). The Chileans call it Glaciar Alderete, after Gerónimo de Alderete (1516-1556), governor of Chile and Terra Australis. It first appears as such on a Chilean chart of 1963, and then in the Chilean gazetteer of 1974. It has since been re-plotted.

Aagaard Islands. 65°51' S, 53°40' E. Also spelled Aagard or Ågård. Also called Bjarne Aagaard Islands, Bjarne Aagard Islands. A group of 10 or more small islands between 1 and 3 km W of Proclamation Island and Cape Batterbee, in Enderby Land. Discovered on Jan. 13, 1930 by BANZARE and named by Mawson for Bjarne Aagaard (*see* **Aagaard Glacier**). US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 24, 1953.

Aagot Grunning *see* **Expedition Rock**

Mount Aaron. 74°31' S, 64°53' W. Rising to about 1500 m, W of Nantucket Inlet, in the NW sector of the Latady Mountains, on the Lassiter Coast of Palmer Land. Mapped by USGS from ground surveys and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for W.T. "Henry" Aaron, electrician who wintered-over at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Aaron Glacier. 85°08' S, 90°40' W. A glacier, 6.5 km long, it flows E from the Ford Massif between Janulis Spur and Gray Spur in the Thiel Mountains. Peter Bermel and Art Ford, co-leaders of the USGS Thiel Mountains Party of 1960-61, named it for John Marshall Aaron III, geologist in that party and in a similar party the following year. US-ACAN accepted the name on Dec. 31, 1962.

Aas, Fredrik. b. Norway. Skipper of the *Fleurus* during her last Antarctic voyage, 1930-31.

Abbey Nunatak. 85°37' S, 134°43' W. A nunatak, 3.2 km SE of Penrod Nunatak, at the W side of Reedy Glacier, just N of the mouth of Kansas Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967 for Gordon Abbey (b. March 19, 1933. d. Sept. 18, 1985, Seattle), radioman who wintered-over at Byrd Station in 1957.

Abbot Ice Shelf. 72°45' S, 96°00' W. About 400 km long and 63 km wide, it fronts the Eights Coast from Cape Waite to Phrogner Point. Thurston Island lies along the N edge of the W half of this ice shelf; other sizable islands (Sherman, Carpenter, Dustin, Johnson, McNamara, Farwell, and Dendtler) lie wholly or partly within it. Sighted in Feb. 1940 on flights from the *Bear*. during USAS 1939-41. Its W portion was delineated from air photos taken during OpHJ 1946-47. The full extent of the shelf was mapped by USGS from air photos taken by USN in 1966. Named by US-ACAN in 1968, for Rear Adm. James Lloyd "Doc" Abbot, Jr. (b. June 26, 1918, Mobile, Ala.), commanding officer of U.S. Naval Support Force, Antarctica, Feb. 25, 1967 to June 1969.

Isla Abbott *see* **Abbott Island**

Islas Abbott *see* **Abbott Island**

Mount Abbott. 74°42' S, 163°50' E. Rising to 1020 m, 5 km NE of Cape Canwe, it is the highest point in the Northern Foothills of Terra Nova Bay, in Victoria Land. Mapped by Campbell's Northern Party during BAE 1910-13, and named for George P. Abbott. US-ACAN accepted the name in 1949.

Abbott, George Percy. b. March 10, 1880, 22 Trinder Road, Islington, London, but raised in Northampton, son of silk salesman John Abbott and his wife Fanny Elizabeth Ingman. He joined the RN, and was serving on the *Excellent* as a petty officer when he went on BAE 1910-13. He was one of Campbell's Northern Party, and went mad on his return to Hut Point. For some time during World War I he was attached to the Naval Air Service. He married Emily Soutar in Northampton in 1916, and they lived in Henlow, Beds. Flying Officer Abbott (as he had been since 1919) died of pneumonia at Henlow Aerodrome, near Hitchin, Herts, on Nov. 22, 1923, and was buried at Northampton four days later. His son, Lt. Cdr. Don Abbott, disappeared over the English Channel in 1950.

Abbott, William Joseph. b. 1850, Rochester, Kent, son of Suffolk-born sailor Joseph Abbott and his wife Esther Gowers (they weren't really married, as such). His mother died when he was four. He joined the Navy, as an engineer, and was assistant engineer on the *Challenger* Expedition 1872-76. In 1881 he was engineer on the *Blanche*, later served on the *Buzzard*, and was fleet engineer on the *St. George*. He married Emily Maria "Emmie" Spittle in Portsmouth in 1886, and retired there with his wife and family. Unfortunately, Abbott went insane, and spent the last part of his life in the Royal Naval Lunatic Asylum, in Great Yarmouth, where he died on Feb. 10, 1906. He was the second man from the *Challenger* to go that way (*see* **Allen, Alfred Joseph**).

Abbott Ice Shelf *see* **Abbot Ice Shelf**

Abbott Island. 64°06' S, 62°08' W. A little island, 1.5 km W of Davis Island, off the NE side of Brabant Island, between that island and Liège Island, in the S part of, and near the head of, Bouquet Bay, in the Palmer Archipelago. Roughly charted by FrAE 1903-05. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS cartographers in 1959. Named by UK-APC on Sept. 23, 1960, for Maude Abbott (1869-1940), U.S. authority on congenital heart disease. US-ACAN accepted the name later that year. It appears on a British chart of 1961. It appears on a Chilean chart of 1961, as Isla Abbott, and also, as such,

in their 1974 gazetteer. The Argentines pluralized it in their 1991 gazetteer, as Islas Abbott.

Abbott Peak. 77°26' S, 166°55' E. Also called Abbott's Peak, Demetri's Peak, and Dimitri Peak (sic; but named after Demetri Gerof). A pyramidal peak on Ross Island, on the N side of Mount Erebus, between that mountain and Mount Bird. Charted by BAE 1910-13, and named for George P. Abbott. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1964.

Abbott Spur. 78°16' S, 161°55' E. A ridge in the immediate vicinity of Allison Glacier, in the Royal Society Range of Victoria Land. Named by US-ACAN in 1994 for Robin Abbott (b. 1952), of Antarctic Support Associates, coordinator for Helicopter Field Operations at McMurdo in the 1990s. She had begun her Antarctic career there as a janitor in 1985-86.

Abbott's Peak *see* **Abbott Peak**

Mount Abbs. 70°35' S, 66°38' E. At 2134 m, the most prominent peak in the central part of the Aramis Range, about 18 km SSE of Mount McCarthy, in the Prince Charles Mountains, situated just W of Thomson Massif. Shaped like a truncated pyramid, it is 4 km long in an E-W direction, and 2 km in a N-S, and has an almost vertical face on its N side. Discovered in Dec. 1956 by the ANARE Southern Party led by Bill Bewsher, and named by ANCA on July 22, 1957, for Gordon Lindsay Abbs (b. Nov. 5, 1920, Pialba, Qld. d. 1999), radio operator who wintered-over at Mawson Station that year. He had been on Macquarie Island in 1952. US-ACAN accepted the name in 1962.

The *Abel-J*. British yacht which chartered out as a tourist vessel in the South Shetlands, the South Orkneys, and the waters around the Antarctic Peninsula, in 1990-91, under the command of Hamilton Carter. In 1992-93, again under Mr. Carter, she and the *Damien II* were in at the South Shetlands and the Antarctic Peninsula, taking Alastair Fotherill's BBC crew around as they filmed wildlife. She was back, chartering out to tours in the same places, in 1994-95 and 1996-97, under the command of J. Richard Farrell. She was back in 1997-98, under the command of Robert Wallace.

Abel Nunatak. 63°33' S, 57°41' W. The more easterly of two isolated nunataks, rising to about 200 m, on the S side of Broad Valley, Trinity Peninsula, off the Antarctic Peninsula. Named following a 1960-61 geological survey by FIDS, in association with nearby Cain Nunatak. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Abele, Clarence Arthur, Jr. b. April 23, 1911, Conn., son of naval lieutenant (later naval attaché and captain) Clarence Arthur Abele by his second wife. Known as Arthur, he and his twin brother Sanford (which was also his mother's maiden name) were raised partially by their Sanford grandparents. He was living in Boston when he went south on the *Bear of Oakland* as part of ByrdAE 1933-35, and was one of the shore party on that expedition. He died on July 23, 1978, in Santa Clara, Calif.

Abele Nunatak. 76°18' S, 143°15' W. A nunatak, 3 km E of Hutcheson Nunataks, at the head of Balchen Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for C.A. Abele, Jr.

Abele Spur. 83°13' S, 51°05' W. A rock spur, rising to about 1600 m, that descends W from Mount Lechner toward Herring Nunataks, in the Forrestal Range of the Pensacola Mountains. Photographed by USN in 1964, and surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project. Named by US-ACAN, at the suggestion of Art Ford, for Gunars Abele (b. 1934, Latvia. d. Aug. 27, 1989), civil engineer on the USARP-CRREL survey of the area in 1973-74. UK-APC accepted the name on May 21, 1979.

Cabo Abenante. 77°40' S, 41°58' W. A cape in the extreme W of Bahía Chica, in the S of the Weddell Sea. Formerly and provisionally called Cabo Q by the Argentines, they re-named it in 1958 for Mario Bruno Abenante, conscript of the class of 1934, who lost his life in the Argentine political events of Sept. 1955.

Abendroth Peak. 71°05' S, 62°00' W. About 1.2 km S of the head of Lehrke Inlet, and 6.2 km NE of Stockton Peak, on the divide between Murrish Glacier and Gain Glacier, on the Black Coast of Palmer Land. Photographed from the air by USN in 1966, surveyed from the ground by BAS personnel from Base E in 1972-73, and mapped by USGS from these efforts. They plotted it in 71°06' S, 61°58' W. Named by US-ACAN in 1976, for Ernst Karl Abendroth (b. Sept. 8, 1935, NY. d. Sept. 15, 1969, Litchfield, Conn.), USARP biologist at Palmer Station in 1968. UK-APC accepted the name on July 21, 1976. It has since been re-plotted.

Abercrombie Crests. 81°00' S, 160°09' E. A cluster of rock summits rising to 1259 m, 14 km SSE of Mount Deleon, in the N part of the Darley Hills, in the Churchill Mountains. Named by US-ACAN on Jan. 24, 2003, for the legendary Thomas James "Tom" Abercrombie (b. Aug. 13, 1930, Stillwater, Minn. d. April 3, 2006, Baltimore), of the *National Geographic Magazine* Foreign Editorial staff from 1956, on assignment in Antarctica, 1957-58, and who won a lottery to be the first civilian reporter at the Pole (*see* **South Pole**, Oct. 26, 1957, for what happened to him at the Pole). NZ-APC accepted the name on Feb. 27, 2003.

Abernethy, Thomas. b. 1802, Peterhead, Aberdeenshire. An able seaman on the *Hecla*, 1824-25, he was still on that ship in 1827, under Parry, when they tried for the North Pole in boats. He was with Sir John Ross on the *Victory*, in the Arctic, 1829-33, and was in the Antarctic, with Ross's nephew, James Clark Ross, on the *Erebus* during RossAE 1839-43. In 1848-49 he was gunner and ice master in the Arctic again, with James Clark Ross, and was with Sir John Ross again, in 1850-51, on the *Felix*. In 1852 he was 1st mate on the *Isabel*, under Capt. Inglefield. He died on April 13, 1860, at Peterhead.

Abernethy Flats. 63°52' S, 57°54' W. A gravelly alluvial plain cut by braided streams at the head of Brandy Bay, James Ross Island. Surveyed by Fids from Base D in 1952-54. Named by UK-APC on April 3, 1984, for Thomas Abernethy. It appears in the British gazetteer of 1986.

Cerro El Abismo *see* **under E**

Punta Ablación *see* **Ablation Point**

Ablation. The wearing away of a rock or glacier, or any snow or ice surface, by any means. Ablation is offset by accumulation.

Ablation Bay *see* **Ablation Valley**

Ablation Camp *see* **Ablation Valley**

Ablation Col. 70°49' S, 68°33' W. A col linking Ablation Valley with Jupiter Glacier, on the E coast of Alexander Island. Named by UK-APC on Jan. 18, 2002, in association with the valley.

Ablation Lake. 70°49' S, 68°26' W. A proglacial tidal lake in Ablation Valley, on the E coast of Alexander Island. It has stratified saline and fresh water, and depths exceeding 117 m, and is dammed in its upper portion by ice that pushes into the lake from the adjacent George VI Ice Shelf. Following BAS limnological research from 1973, it was named by UK-APC on Dec. 8, 1977, in association with Ablation Valley. US-ACAN accepted the name in 1978. It appears in the British gazetteer of 1980.

Ablation Point. 70°48' S, 68°22' W. The E extremity of a hook-shaped rock ridge rising to about 550 m, and which forms and marks the N side of the entrance to Ablation Valley, on the E coast of Alexander Island. First photographed, aerially, by Lincoln Ellsworth on Nov. 23, 1935, and mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936. Roughly surveyed in 1936 by BGLE 1934-37, it was re-surveyed by FIDS in early 1949, and used by them as a site for depots. Named by Fuchs in association with Ablation Valley. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Punta Ablación, which means the same thing, and it appears as such in their 1991 gazetteer.

Ablation Valley. 70°48' S, 68°30' W. A mainly ice-free valley, trending W-E for 3 km, it is entered immediately S of Ablation Point, and opens on George VI Sound, on the E coast of Alexander Island. First photographed, aerially, on Nov. 23, 1935, by Lincoln Ellsworth. It was first visited on land by BGLE 1934-37, who, in Oct. 1936, surveyed it, and named it Ablation Bay (at least that's what they named the part at its mouth), for the small amounts of snow and ice here. They set up a camp here, called Ablation Camp. Mapped by U.S. cartographer W.L.G. Joerg in 1936, from Ellsworth's photos. BGLE mapped their version in 1938. UK-APC redefined it, as Ablation Valley, on Sept. 8, 1953, and US-ACAN followed suit in 1955. It appears in the British gazetteer of 1955 as Ablation Valley, plotted in 70°49' S, 68°25' W. It has since been re-plotted by a 1978-79 University of Aberdeen party, who were supported by BAS.

Aboa Station. 73°03' S, 13°25' W. Finnish scientific station established in 1988-89 on Basen Nunatak, 400 m above sea level, in the Kraul Mountains, 130 km from the Princess Martha

Coast of Queen Maud Land. Designed and built as a summer station only, by the Technical Research Center of Finland, the work being funded by the Ministry of Trade and Industry. Olli-Pekka Nordlund led the 1988-89 summer team here, and Heikki Paapio led the 1989-90 summer team. There was no expedition in 1990-91, the Finns, Swedes, and Norwegians having decided to pool their resources and form the Nordic Antarctic Research Program, and to use Aboa and the Swedish station Wasa (only 200 meters away from Aboa) together as Nordenskjöld Base Camp (q.v.). Due to the increased size of expeditions, Aboa was refurbished in 2002-03, with a view toward not only giving more space to the workers, but also to striving toward a more energy-saving and environment-friendly station. Aboa now consists of a main building, four accommodation modules, three modular laboratory containers, storehouse containers, a vaulted hall, a generator building, a 15-square-meter medical suite, a bed for patients, and a vehicle hall. The station, built to provide for expeditions of about 10 people, can now accommodate 20 people. There is always a doctor on hand, and field hospital facilities.

Abolin Rock. 71°50' S, 11°16' E. A large rock outcrop, 1.5 km W of the N end of Vindegga Spur, in the Liebknecht Range of the Humboldt Mountains, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and plotted from these photos. Re-mapped (but not named) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again, by SovAE 1960-61, and named by the USSR in 1966 as Skala Abolina, for Latvian botanist Robert Ivanovich Abolin (1886-1939). US-ACAN accepted the translated name Abolin Rock in 1970. The Norwegians call it Abolinknausen (which means the same thing).

Skala Abolina *see* **Abolin Rock**

Abolinknausen *see* **Abolin Rock**

Punta Abovedada. 64°33' S, 61°59' W. A point forming the extreme SE of Enterprise Island, in Wilhelmina Bay, in the Gerlache Strait, off the W coast of Graham Land. Studied by ArgAE 1973-74, and so named ("arched point") by them for its characteristic form when covered with snow. The name was accepted by Argentina in 1978. The Chileans call it Punta Pairo, for Marinero de primera clase (i.e., able seaman) Pedro Pairo, of the *Yelcho*, in 1916. They also call it Punta Emma, for the *Emma*.

Abraham, Frederick George. b. 1885, East Ham, Essex, son of Hull-born postman Edward William Abraham and his wife Mary Day. He joined the Merchant Navy, as an assistant steward on Union Steamship Company vessels out of NZ, and on Dec. 28, 1907, signed on as an able seaman aboard the *Nimrod*, for the first half of BAE 1907-09. He was discharged at Lyttelton on March 23, 1908, and went to live in Belfast, Canterbury, NZ, as a laborer. He served in World War I, with the NZ Defence Force, as a lance corporal truck driver. After the war, he drove a cab in Avon, Canterbury, for years, retiring from that occupation in the mid-1950s, to live in a retirement home in Riccarton, where he died in the late 50s.

The *Abraham Larsen*. A 23,326-ton South African factory whaling ship. Formerly the *Empire Victory* (q.v.), she was bought in 1950 by Abraham Larsen, head of the Union Whaling Company, of Durban, and went to Antarctica in 1950-51. She was there again for the 1951-52 season, arriving back in Durban on March 16, 1952, and then was back in Antarctic waters for the 1952-53 season. Most of these crews were from Durban, but there were a lot of professional whaling men aboard, usually from Norway. The crew (an average, say, of 400) — Norsemen, white South Africans and Cape Coloureds — worked 12-hour days, with Sundays off with a tot of rum. The pay was good, but the smell was, of course, overpowering, and lasting. **Dec. 12, 1953**: The Big Ship (as they called her) left Durban, under the command of Capt. Olaf Vestrum, and flying the Union Jack, bound for the 1953-54 whaling season in Antarctica. Her catchers were the *J.K. Hansen* (skipper Theodor Augensen), the *Anders Arvesen* (skipper Elling Nilsen), the *Ernst Larsen* (skipper Johan Aarnes), the *R.L. Goulding* (skipper Edward F. Karlsen), the *R.K. Fray* (skipper Håkon Lie), the *Arnt Karlsen* (skipper Nils Martinsen), the *W.R. Strang* (skipper Bjarne Larsen), the *Sidney Smith* (skipper Martin Karlsen), and the *Wilfrid Fearnhead* (skipper Johannes Røsvik). They also had four buoy boats — the *UNI-2* (skipper Gunnar Firing), the *UNI-3* (skipper Arnt Nilsen), the *UNI-4* (skipper Andreas Iversen), and the *UNI-5* (skipper H. Nilsen-Dahlen). The following (almost) day-by-day account of their trip is used here as an illustration of a typical South African whaling season in Antarctica, actually any whaling season. **Dec. 20, 1953**: They crossed into Antarctic waters, and finished the day in 60°40' S, 11°41' E. **Dec. 25, 1953**: Fresh pork for Christmas dinner. **Jan. 26, 1954**: They made a second foray into Antarctic waters, finishing the day in 61°04' S, 20°37' E. **Jan. 27, 1954**: Still in Antarctic waters, they finished the day in 60°30' S, 20°50' E. **Jan. 28, 1954**: They passed briefly out of Antarctic waters, finishing the day in 59°59' S, 19°30' E. **Jan. 29, 1954**: They passed back into Antarctic waters, finishing the day in 60°06' S, 21°31' E. **Jan. 31, 1954**: They were in 60°27' S, 20°42' E. **Feb. 1, 1954**: They were in 62°30' S. **Feb. 2, 1954**: 63°02' S, 22°24' E. **Feb. 3, 1954**: 65°26' S, 29°51' E. **Feb. 4, 1954**: 65°43' S, 30°07' E. **Feb. 5, 1954**: 65°17' S, 32°37' E. **Feb. 7, 1954**: 64°47' S, 38°11' E. **Feb. 8, 1954**: 64°32' S, 38°54' E. **Feb. 9, 1954**: 66°25' S, 40°02' E. **Feb. 10, 1954**: They crossed the Antarctic Circle, finishing the day in 66°44' S, 40°50' E. **Feb. 11, 1954**: 66°40' S, 44°55' E. **Feb. 12, 1954**: 67°33' S, 39°56' E. **Feb. 13, 1954**: 66°41' S, 35°18' E. **Feb. 14, 1954**: 65°54' S, 34°46' E. **Feb. 15, 1954**: 65°07' S, 32°54' E. **Feb. 16, 1954**: 66°15' S, 30°06' E. **Feb. 17, 1954**: 69°15' S, 22°34' E. **Feb. 18, 1954**: 69°13' S, 20°15' E. **Feb. 19, 1954**: 69°15' S, 19°19' E. This was as far south as they got this season. **Feb. 20, 1954**: 68°40' S, 15°43' E. **Feb. 22, 1954**: 68°34' S, 26°42' E. **Feb. 25, 1954**: 68°24' S, 27°39' E. **Feb. 26, 1954**: 68°29' S, 24°13' E. **Feb. 27, 1954**: 68°40' S, 22°37' E. **Feb. 28, 1954**: 68°35' S, 24°55' E. **March 1, 1954**: 68°52' S, 28°42' E. **March 2, 1954**: 67°35' S, 34°11' E. **March 3, 1954**: 67°49' S, 32°18' E. **March 4, 1954**: 67°36' S, 30°56' E. **March 5, 1954**: 67°04' S, 30°38' E. **March 6, 1954**: 68°18' S, 27°12' E. **March 7, 1954**: 68°34' S, 23°49' E. **March 8, 1954**: 68°28' S, 20°02' E. **March 9, 1954**: 68°06' S, 17°45' E. **March 10, 1954**: 68°40' S, 10°35' E. **March 11, 1954**: 68°52' S, 9°47' E. **March 12, 1954**: 68°39' S, 9°15' E. **March 14, 1954**: 67°48' S, 10°35' E. **March 15, 1954**: 67°52' S, 12°33' E. **March 16, 1954**: 67°41' S, 13°54' E. **March 17, 1954**: 67°52' S, 20°35' E. **March 18, 1954**: 68°07' S, 27°32' E. **March 19, 1954**: 68°23' S, 27°10' E. **March 20, 1954**: 64°52' S, 27°30' E. **March 21, 1954**: They crossed out of Antarctic waters, heading home. **March 29, 1954**: They arrived back in Durban, having taken 47 blue whales (including two that were 99 feet long), 1698 fin whales, 4 humpback whales, and 157 sperms, for a total of 2206 whales. They brought back 147,250 barrels of oil. The *Abraham Larsen* was back in Antarctic waters in 1954-55 and 1955-56. **Dec. 15, 1956**: She left Durban, for the 1956-57 Antarctic whaling season. **Dec. 22, 1956**: They buried Odd Dahlberg at sea, as they were fast approaching Antarctic waters. **Jan. 5, 1957**: They crossed into Antarctic waters. **Jan. 24, 1957**: They passed briefly out of Antarctic waters, but were back the next day. **Feb. 17, 1957**: They reached their southing record of the season, in 68°22' S, 77°39' W. **March 19, 1957**: They passed out of Antarctic waters, heading home. **March 28, 1957**: They arrived back in Durban. In 1957 the Big Ship was sold to the Japanese company Taiyo Gyogoy and renamed *Nisshin Maru 2*.

Abram, Pascal-Jean-Baptiste. b. Aug. 29, 1805, Toulon. Caulker on the *Zélée* during FrAE 1837-40.

Mount Abrams. 75°22' S, 72°27' W. Rising to about 1400 m, 4 km E of Mount Brice, in the Behrendt Mountains, NW of Cape Zumberge, on the Orville Coast, where Ellsworth Land meets southern Palmer Land. Discovered and photographed aerially by RARE 1947-48, and named by Finn Ronne for Talbert "Ted" Abrams (1895-1990), American photogrammetric engineer and instrument manufacturer, "the father of aerial photography," and supporter of the expedition. US-ACAN accepted the name in 1966, and it appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Abraxas Lake. 68°29' S, 78°17' E. A sparkling blue lake in the Vestfold Hills, with an average depth of 13 m, and a maximum depth of 19 m. It contains at least 3 species of small crustacea and some unusual algae. Abraxas is a Greek word signifying something magical; the lake is unique in the Vestfold Hills. Named by ANCA on Oct. 18, 1979.

Abrazo de Maipú Refugio. 63°27' S, 57°30' W. Argentine refuge hut built by the Army on Sept. 7, 1967, 4 km WSW of Camel Nunataks, on the S side of Mott Snowfield, Trinity Peninsula, between Esperanza Station and the Chilean station O'Higgins. It was closed, and then reopened in 2003, for joint use with Chile. The rather peculiar (but very apt) name comes from the embrace between generals O'Higgins and San Martín after the battle of Maipú, in 1818, in which combined Argentine-Chilean forces beat the Spanish royalists, thus sealing independence.

Fondeadero Ábrego *see* **Cañadón Anchorage**

Abregú Delgado, Domingo Ángel María Roque *see* **Órcadas Station**, 1948, and **San Martín Station**, 1951

Isla Abrigo *see* **Shelter Islands**

Islas Abrigo *see* **Shelter Islands**

Abrit Nunatak. 63°27' S, 57°31' W. A rocky hill, rising to over 400 m, E of the Laclavère Plateau, and S of Mott Snowfield (i.e., it overlooks this snowfield to the N), 4.47 km NE of Theodolite Hill, 2.49 km E by S of Uguri Nunatak, 8.2 km S by E of Fidase Peak, and 4.83 km SW of Camel Nunataks, it overlooks Retizhe Cove to the SE, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Abrit, in northeastern Bulgaria.

Abrupt Island. 67°00' S, 57°46' E. A small island, 0.9 km wide, 2.5 km E of Lang Island, and close E of the Øygarden Group and Edward VIII Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Brattøy (i.e., "abrupt island"). Following Bob Dovers' 1954 ANARE survey of the area (he plotted this island in 67°00' S, 57°51' E), the name was translated by ANCA to Abrupt Island, on Feb. 18, 1958, and US-ACAN accepted that name in 1965. The feature has since been re-plotted.

Abrupt Point. 66°54' S, 56°42' E. A rocky point 5 km SW of the Patricia Islands, on the W side of Edward VIII Bay, in Kemp Land, in Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Brattodden (i.e., "abrupt point"). First visited by an ANARE sledging party led by Bob Dovers in 1954, following which the name was translated by ANCA as Abrupt Point, on Aug. 20, 1957. US-ACAN accepted that name in 1965.

Mount Absalom. 80°24' S, 25°24' W. Rising to 1645 m, it is the highest and most southerly of the Herbert Mountains, in the central part of the Shackleton Range. Mapped in 1957 by BCTAE, and named by them for Henry William Lyon Absalom (1894-1965), member of the scientific committee for that expedition. US-ACAN accepted the name in 1962, and UK-APC did so on Aug. 31, 1962.

Absolute Magnetic Hut. An Australian field hut, measuring 1.8 m by 1.8 m, built in 1912 by Mawson, 52 m south of Magnetograph House, at Cape Denison, on Commonwealth Bay, during AAE 1911-14. Constructed from remnant timber and tar paper, and using copper nails rescued from the shipwrecked *Clyde* (copper, being non-ferrous, would not interfere with the magnetic measurements; however, when the copper nails ran out, they used steel ones, thus — incredibly — defeating the object). The hut was used to collect measurements of the Earth's magnetic field, and no one entered it. The instruments were set in rock, inside the hut, and the men would get to them through small sliding doors. The hut was used by the French to take magnetic measurements in 1951 and 1959, and by NZ researchers in 1962. It is now in ruins, the roof has gone, the walls have collapsed, and the hut is filled with ice. *See also* **Magnetograph House**, **Main Hut**, and **Transit Hut**.

Punta Aburto. 66°53' S, 67°35' W. On the SW side of Liard Island, in the N central part of Hanusse Bay, between Adelaide Island and the W coast of Graham Land. Named by the Chileans for Luis Eduardo Aburto Contreras, professor of biology at the University of Concepción, who took part in ChilAE 1970-71. The Argentines call it Punta Remedios.

Abus Valley. 79°53' S, 155°05' E. An ice-free valley 5 km SE of Turnstile Ridge, at the N end of the Britannia Range. Named in association with Britannia (the Roman name for Britain) by a University of Waikato (NZ) geological party, 1978-79, led by Michael J. Selby, professor of earth sciences and (later) deputy vice-chancellor of the university. Abus was the Roman name for what is now the River Humber. NZ-APC and US-ACAN both accepted the name.

Abyssal plains. Extremely flat (and sometimes slightly sloping) areas of the ocean and sea floors, at abyssal depths of between 3 and 6 km, under the oceans surrounding continents. The surface (up to a half mile thick) is sediment deposited over the centuries. The main ones are: Amundsen, Bellingshausen, Enderby, and Weddell.

Academia Peak. 62°40' S, 60°13' W. A peak rising to about 1300 m, on Friesland Ridge, 1.4 km NW of St. Boris Peak, 2.45 km SSE of the summit of Pliska Ridge, and 3.45 km ESE of Willan Nunatak, in the Tangra Mountains, in the E part of Livingston Island, in the South Shetlands. It has precipitous and ice free N slopes, and surmounts Huntress Glacier to the NW and SW. Named by the Bulgarians on Feb. 17, 2004 for the Bulgarian Academy of Sciences (established in 1869), the feature was mapped by them in 2005, during their Tangra survey of 2004-05.

Academy Glacier. 84°15' S, 61°00' W. A major glacier in the Pensacola Mountains, flowing NW between the Patuxent Range and the Neptune Range into Foundation Ice Stream. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1966. Named by US-ACAN in 1968, after the U.S. National Academy of Sciences, for its important role in USARP. It appears on an American map of 1968. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974. The Russians call it Lednik Akademy.

ACAN. The Advisory Committee on Antarctic Names. Usually seen as US-ACAN. It is part of the U.S. Board on Geographic Names.

Islote Acantilado *see* **Cliff Island**

Acapulcofelsen. 70°33' S, 164°02' E. A rock, in the area of Lillie Glacier, between the Bowers Mountains and the Concord Mountains, in Victoria Land. Named by the Germans ("Acapulco rock").

Acarospora Peak. 86°21' S, 148°28' W. A peak, 1.5 km NE of, and only slightly below the elevation of, Mount Czegka, at the SW end of the Watson Escarpment. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by NZ-APC on the suggestion of the NZGSAE Scott Glacier Party 1969-70, for the lichen *Acarospora emergens* Dodge found on the peak. US-ACAN accepted the name in 1971.

Punta Access *see* **Access Point**

Access Point. 64°49' S, 63°47' W. Just SE of Biscoe Point, and 3 km NW of Cape Lancaster, on the S side of Anvers Island, in the Palmer Archipelago. Charted by FrAE 1903-05. Surveyed in 1955 by Jim Rennie of FIDS, who so named it because it had a landing place for boats, and thus leads to the interior of the island. UK-APC accepted the name on Sept. 4, 1957, and US-ACAN followed suit in 1963. It appears in the Argentine gazetteer of 1991 as Punta Access.

Access Slope. 79°41' S, 156°03' E. A narrow ice slope, between Tether Rock and the N end of Lindstrom Ridge, in the Meteorite Hills, in the Darwin Mountains. It forms part of, and appears to be the only pass through, Circle Icefall. It is bordered on the S side by the Darwin Mountains and on the N side by an exposed ice buttress. Named by the Darwin Glacier Party of BCTAE 1955-58, who made the first descent of the Darwin Glacier. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit on Dec. 23, 2002.

Accidents *see* **Disasters**

Ace Lake. 68°28' S, 78°11' E. A saline lake, 9 m deep, on Langnes Peninsula, in the Vestfold Hills. Investigated in 1974 by biologists from Davis Station, who had spent 9 months searching for a saline lake containing copepods and, finding them in this lake, considered it an "ace" (a winner). A refuge hut was set up here in 2004-05.

Monte Acevedo *see* **Mount Tricorn**

Achaean Range. 64°30' S, 63°38' W. In the central part of Anvers Island, in the Palmer Archipelago, it is bounded on the E by Iliad Glacier and the Trojan Range, and on the W by Marr Ice Piedmont. This range extends 25 km SW from Lapeyrère Bay, and rises to 2570 m at Mount Agamemnon, from which it extends NW for 10 km, curving NE for a further 19 km through Mount Helen and Mount Achilles to Mount Nestor. Surveyed by Fids from Base N in 1955 and photographed aerially by FIDASE in 1956-57. In association with the Trojan Range, this range was named by UK-APC on Sept. 4, 1957, for the Achaeans of Homer's time, other features in the area following the *Iliad*

theme. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Mount Achala. 62°55' S, 60°42' W. A mountain rising to 680 m on the NE end of Telefon Ridge, on Deception Island, in the South Shetlands. Named by ArgAE 1956 (as Monte Achala) for a mountain in Argentina. US-ACAN accepted the name Mount Achala in 1965.

Mount Achernar. 84°12' S, 160°56' E. Forms the NE end of the MacAlpine Hills, on the S side of Law Glacier, at the top of Bowden Névé, in the Queen Maud Mountains. Named by NZGSAE 1961-62, for the star Achernar, which one of their parties used in fixing the survey baseline. US-ACAN accepted the name in 1965.

Achernar Island. 66°58' S, 57°12' E. An island, 2 km long, 1.5 km W of Shaula Island in the Øygarden Group. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Utøy (i.e., "outer island"). First visited by ANARE in 1954. Renamed by ANCA on Feb. 18, 1958, for the star Achernar, which was used as an astrofix in the area. US-ACAN accepted the Australian naming in 1965.

[1]**Mount Achilles**. 64°29' S, 63°35' W. A snow-covered, steep-sided mountain rising to 1280 m, 6.2 km SW of Mount Nestor, in the Achaean Range of central Anvers Island, in the Palmer Archipelago. Surveyed in 1955 by Fids from Base N, and named by UK-APC on Sept. 4, 1957 for the Achaean hero of Homer's *Iliad*. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

[2]**Mount Achilles**. 71°53' S, 168°08' E. Rising pyramidally and prominently to 2880 m from the divide between Fitch Glacier and Man-o-War Glacier, in the Admiralty Mountains. Named by NZGSAE 1957-58, for the former NZ cruiser *Achilles* (which never got to Antarctica). US-ACAN accepted the name in 1967.

Achilles Heel. 64°30' S, 63°38' W. A snow-covered hill rising to 915 m in the middle of the col between Mount Helen and Mount Achilles, in the Achaean Range of central Anvers Island, in the Palmer Archipelago. Surveyed by Fids from Base N in 1955, and named by UK-APC on Sept. 4, 1957 for its position in relation to Mount Achilles. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Monte Aciar *see* **Mount Aciar**

Mount Aciar. 64°24' S, 62°33' W. Also called Monte E. Rising to about 1300 m, between the heads of Rush Glacier and Jenner Glacier, in the Solvay Mountains, in the SW part of Brabant Island. ArgAE named it Monte Ferrer (*see* **Ferrer Point**), but the name Monte Primer Teniente Aciar appears on a 1957 Argentine hydrographic chart. The Argentines now call it simply Monte Aciar. Photographed aeriallly by FIDASE in 1956-57. On Sept. 23, 1960, in keeping with the spirit of naming various features in this area after pioneers in medicine, UK-APC named it Mount Ehrlich, after Paul Ehrlich (1854-1915), of magic bullet fame. In 1965, US-ACAN translated the shortened version of the Argentine name, and came up with Mount Aciar.

Ackerman Nunatak. 82°41' S, 47°45' W. An isolated nunatak, rising to 655 m, 11 km SSE of Butler Rocks, in the N end of the Forrestal Range, in the Pensacola Mountains. This is almost certainly the nunatak sighted during the first Argentine flight to the South Pole, in 1962, and named by them as UT78. It was photographed from the air by USN in 1964, and surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for Thomas A. Ackerman, USN, aerographer at Ellsworth Station in the winter of 1957. It appears on a U.S. map of 1969. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Ackerman, Peter *see* **USEE 1838-42**

Ackerman Ridge. 86°34' S, 147°30' W. A prominent rock ridge forming the NW extremity of the La Gorce Mountains, in the Queen Maud Mountains. Discovered and roughly mapped by Quin Blackburn's geological party in Dec. 1934, during ByrdAE 1933-35 and named by US-ACAN in 1967, for Lt. Ronnie J. Ackerman, VX-6 navigator on OpDF 1965 (i.e., 1964-65) and OpDF 1966 (i.e., 1965-66).

Ackley Point. 77°47' S, 166°55' E. An ice-covered point, elevated at the junction with the ice shelf, 1.5 km SE of Cone Hill, on the E side of Hut Point Peninsula, Ross Island. Named by US-ACAN on Oct. 25, 2000, for Stephen Fred "Steve" Ackley (b. 1944, NH) of the Snow and Ice Division of CRREL, a sea ice specialist in Antarctica for many years from the 1976-77 season on. NZ-APC accepted the name on Feb. 20, 2001. However, they had originally planned to name it Sheppard Point, after Deirdre Sheppard (*see* **Sheppard Crater**), but US-ACAN objected on the grounds that there was already a Sheppard Point (at Hope Bay).

Ackroyd Point. 70°46' S, 166°47' E. Just E of O'Hara Glacier, on the S side of the inner portion of Yule Bay, on the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1969, for Lt. Frederick William "Fred" Ackroyd (b. Jan. 1930), USNR, who after graduating from Boston University School of Medicine, wintered-over as medical officer at McMurdo in 1958. He lived in Miami for years, and retired to Palo Alto, Calif.

Aconcagua *see* **Punta Aconcagua**

Islas Aconcagua *see* **Sillard Islands**

Punta Aconcagua. 62°24' S, 59°39' W. On the N shore of English Strait, 2.8 km SE of Fort William (the SW end of Robert Island), in the South Shetlands, it constitutes a salient that separates Mitchell Cove from Carlota Cove. It appears on 1947 Chilean maps as Aconcagua, with no indication of what type of feature it is. Named Punta Aconcagua by Leopoldo Fontaine of ChilAE 1948-49, for Aconcagua, the Chilean province.

Caleta Acosta. 64°42' S, 62°03' W. An interior inlet, 1.5 km wide at its mouth and 2.5 km wide at its head, on the S coast of Wilhelmina Bay, 5 km S of Brooklyn Island, off the W coast of the Antarctic Peninsula. Named by the Argentines in 1974, for Guillermo Acosta, marinero de primera clase (i.e., able seaman) on the *Uruguay* in 1904. The Chileans call it Caleta Macera, for Engineer captain Emilio Enrique Macera Dellarossa, who, during ChilAE 1947, was responsible for building what would become Capitán Arturo Prat Station. Don Emilio died at the age of 93, in Villa Alemana, near Valparaíso.

Acosta Glacier. 71°58' S, 100°55' W. About 3 km long, flowing N from Thurston Island, just E of Dyer Point. Named by US-ACAN on Jan. 31, 2003, for Alex V. Acosta (b. May 1942), computer and graphics specialist, a member of the USGS team that compiled the high resolution satellite maps of Antarctica.

The *Active*. 340-ton, 3-masted whaling barque, built by Francis Robertson, in Peterhead, in 1852, and which formed part of DWE 1892-93. She was the second largest of the four ships of the expedition, being 117 feet long, and with a 40 hp engine, and was under the command of Thomas Robertson. On Jan. 10, 1893, during the expedition, the vessel ran areef for six hours during a gale. The *Active* went down in a storm off the Orkneys (Scotland) on Christmas Day 1915, during World War I. All hands lost.

Estrecho Active *see* **Active Sound**

Roca Active *see* **Active Reef**

Active Channel *see* **Active Sound**

Active Reef. 63°23' S, 55°52' W. An isolated reef on the S side of the Firth of Tay, just off the N coast of Dundee Island, in the extreme NE of the Antarctic Peninsula. Discovered and charted by Thomas Robertson, skipper of the *Active* during DWE 1892-93, who named it thus because his ship ran areef here for six hours on Jan. 10, 1893, during a gale. Because its location and characteristics were not certain, the name was not accepted by US-ACAN, but between Dec. 1953 and Jan. 1954 Fids from Base D re-identified it and surveyed it, and UK-APC accepted the name on Sept. 4, 1957. It appears on a British chart of 1961. US-ACAN accepted the name in 1963. It appears in the 1991 Argentine gazetteer as Roca Active.

Active Sound. 63°25' S, 56°10' W. Just over 3 km wide on average, it trends 17.5 km ENE from Antarctic Sound toward the Firth of Tay, with which it separates Joinville Island from Dundee Island, at the extreme NE end of the Antarctic Peninsula. Discovered by Thomas Robertson, captain of the *Active* during DWE 1892-93, and he named it for his vessel (one of the four in that expedition) that passed through this sound in Jan. 1893, being the first vessel to navigate it. It appears on two of the expedition's charts, but one shows Active Channel and the other shows Active Sound. A 1904 American reference is to Active Strait. The Chileans, in their official maps of 1947 and 1951, called it Paso Activo (i.e., "active passage"), but realizing that this was not faithful to the original meaning, by the time of their 1961 map had changed it to Estrecho Active (meaning "Active sound"), a

name they still use today. However, the name Estrecho Active appears for the first time on an Argentine map of 1949, and to this day, like the Chileans, the Argentines call it by that name. It was surveyed by Fids from Hope Bay (Base D), in 1952-54, and UK-APC accepted the name Active Sound on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. US-ACAN accepted the name in 1956.

Active Strait *see* **Active Sound**

Paso Activo *see* **Active Sound**

Mount Acton. 70°58' S, 63°42' W. The highest of the Welch Mountains, in central Palmer Land, it is on the W ridge of those mountains, rising to about 3015 m. Mapped in 1974 by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Cdr. William Acton, USN, operations officer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1967-68, and executive officer, 1968-69. UK-APC accepted the name on July 21, 1976.

Islote Acuña *see* **Acuña Island**, **Acuña Rocks**

Punta Acuña. 68°08' S, 67°08' W. A point at the extreme NE end of Millerand Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. The Argentines named it provisionally for Carlos E. Acuña, organizer of the 1935-36 relief expedition to Órcadas Station by the *Pampa* in 1935-36.

Roca Acuña *see* **Acuña Rocks**

Acuña, Hugo Alberto. b. 1885. The very young pioneer Argentine meteorologist at Omond House in the South Orkneys with ScotNAE 1902-04, just before the station became Argentine, with him in command. Sent down by the Argentine Postal Service on the *Scotia* (*see* **Scottish National Antarctic Expedition**) to establish the first post office in Antarctica (which he did), he was also one of the first Argentines to set foot in Antarctica, raising the flag in -5°F (and dressed in ordinary clothes) on Feb. 22, 1904. He was in charge of the post office at Órcadas Station. He died on May 13, 1953, in Bahía Blanca, Argentina.

Acuña Island. 60°46' S, 44°37' W. A small island 0.3 km S of Point Rae, in the entrance to Scotia Bay, off the S coast of Laurie Island in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named Acuña Isle that year by Bruce for Hugo Acuña. The name appears as such on a map of that year. However, in certain expedition references it appears as Delta Island, and even as Delta Islands (including the island to the SW of it). It appeared with the name Islote Acuña on a 1930 Argentine nautical map, and in 1933 the Discovery Investigations re-charted it as Acuña Islet. It appears on a Chilean map of 1948 as Isla Delta. US-ACAN accepted the name Delta Island in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. However, it was subsequently changed to Acuña Island, by both the British and Americans.

Acuña Isle *see* **Acuña Island**

Acuña Islet *see* **Acuña Island**

Acuña Rocks. 63°18' S, 57°56' W. Two rocks 0.6 km W of Largo Island, in the Lemaire Channel, opposite Deloncle Bay, 1.7 km NNW of Cape Legoupil, and 1.1 km directly S of Labbé Rock, in the Duroch Islands, off Trinity Peninsula, off the NW coast of the Antarctic Peninsula. Charted as one feature by ChilAE 1947-48, and named by them as Islote Sub-Teniente Acuña, for a member of that expedition. Recharted by ChilAE 1950-51, at which time it was determined to be 2 features, rather than one, and the name Islote Acuña was applied to the larger, while the name Roca Acuña was applied to the smaller. This situation was reflected in their expedition chart of 1951. The Americans translated the 2 combined features as Acuña Rocks, and this name was appearing on U.S. charts by 1963. US-ACAN accepted the name in 1964, and UK-APC followed suit on Dec. 15, 1982. It appears as such in the British gazetteer of 1986. The Argentine history of this feature is, not untypically, entirely their own. ArgAE 1974-75 described it, and named it Roca Acuña, for Pedro Acuña, able seaman on the second trip of the *Uruguay* to Laurie Island, in 1904. The Argentine government accepted the name in 1978.

Mount Adam. 71°47' S, 168°37' E. Rising to 4010 m, 4 km WNW of Mount Minto, in the Admiralty Mountains. Discovered by Ross in Jan. 1841, during RossAE 1839-43, and named by him for Vice Admiral Sir Charles Adam (1780-1853), a lord of the Admiralty. The Russians had erroneously plotted it in 71°17' S, 168°35' E. US-ACAN accepted the name in 1951.

Adamkiewicz, Ladislaus Louis. Obviously known as "Adam," or "Doc A–Z." b. Feb. 21, 1893, Milwaukee, Wisc., son of Polish parents, carpenter Frank Adamkiewicz and his wife Victoria. He joined the U.S. Navy on Sept. 11, 1917, as an assistant surgeon, and almost immediately survived the sinking of the *Jacob Jones*. In 1927, as a lieutenant commander, he was attached to the Marines in San Diego, and then with them on to China. In 1930, he was medical officer at the Navy Yard in Philadelphia. He was a commander and medical officer on the *Bear*, during USAS 1939-41. After the expedition, he married a Georgia girl, Mary, was professor in brain surgery at Marquette, and they lived in Newton Square, Pa., and then Folcroft, Del., which is where he died on July 14, 1971. He was buried 2 days later in Arlington National Cemetery. Mary died in 1994, and was buried with him.

Cabo Adams *see* **Cape Adams**

Cape Adams. 75°04' S, 62°20' W. An abrupt scarp of bare rock forming the extreme S tip of Bowman Peninsula, and marking the N side of the E entrance to Gardner Inlet at the S end of the Lassiter Coast, on the E side of Palmer Land (it divides the Lassiter Coast from the Orville Coast), and projects into the most northeasterly part of the Ronne Ice Shelf. Discovered by RARE 1947-48, and photographed by them from the air in Nov. 1947. Sighted from the ground (but not precisely located) by Fids from Base E in Dec. 1947. Named by Ronne as Cape Charles J. Adams, for Chuck Adams, but in 1948 the name was shortened. It first appeared on an American Geographical Society map of 1948, with the long name, but plotted in 75°03', 61°50' W. However, it appears on another 1948 American map with the shortened name. The shortened name was accepted by US-ACAN in 1951, and by UK-APC on Jan. 28, 1953. It appears as such in the British gazetteer of 1955. The Argentines and Chileans have been calling it Cabo Adams since 1952, and it appears as such in the Chilean gazetteer of 1974. The Argentines accepted the name officially in July 1959. It was mapped by USGS from USN air photos taken between 1965 and 1967. An American automatic weather station operated here, at an elevation of 25 m, from Jan. 1989 to Sept. 1992.

Mount Adams *see* **Adams Mountains**

Nunatak Adams *see* **Adams Nunatak**

Adams, Charles J. "Chuck." b. Aug. 22, 1921, Beaver Dam, in the extreme northern part of Utah, son of Arthur W. Adams and his wife Mary. Arthur Adams was an electrician at a power plant, when Chuck was an infant, and moved the family to Bannock Co., Idaho, near Pocatello, becoming superintendent of a plant there. Chuck was a junior at the University of Utah in 1942 when he entered the Army Air Corps, and in June 1943 completed his flight training as a 2nd lieutenant at Craig Field, Selma, Ala. From June 1943 to Aug. 1944 he was a flying instructor at Craig Field and at Walnut Ridge Army Air Field, in Arkansas. In 1944 he married Virginia Lee Pol. He flew the "Hump" in C-46s in 1945-46, with Jimmy Lassiter. As a lieutenant in the USAAF, he was pilot on RARE 1947-48, to Antarctica. In May 1948 he joined SAC at Andrews Air Force Base, and, as a major, flew 25 missions over North Korea in RB-45s. In 1957 he finally graduated, from the University of Omaha. After several postings he became a colonel in 1963, and brigadier general in 1970. He retired on Feb. 1, 1973, and moved to Santa Maria, Calif., where he died on May 28, 2002.

Adams, E.L. b. 1874, Cape Town. He joined the Merchant Navy as a teenager, working as a greaser on Australian vessels, and rising to the rank of seaman. On Nov. 24, 1911 he joined the *Aurora* as a seaman, for AAE 1911-14, at £5 a month, and on May 17, 1912, was promoted to bosun, at £9 a month. He also did 3 days in the galley as a cook, at an extra 2/- a day. He left the ship on March 18, 1913, dismissed because "he had been talking a good deal in Hobart," according to Capt. John King Davis. In Sept. 1913 he attempted re-engagement, but Davis wasn't having any of it, so on Sept. 8, 1913, Capt. Davis received a letter from the sailor's solicitor, demanding £30 for breach of contract. The case was settled out of court, and not to Mr. Adams' satisfaction. He continued on at sea, as a mate on merchant vessels.

Adams, Harry A. b. June 16, 1876, in NYC. In 1905 he married Augusta Frances. He was a retired naval lieutenant and deep-sea diver, with 32 years service, including the Spanish-American

War and World War I, as well as a long time at the Indian Head Naval Proving Grounds in Maryland, when he went as 2nd mate on the *Eleanor Bolling* and later chief officer of the *City of New York*, during ByrdAE 1928-30. He left for NZ on the *City of New York* on Feb. 22, 1929, and then, rather than remain idle in NZ for 6 months, he and several others chose to go back to the USA, where they arrived on April 12, 1929, in San Francisco. He went back for the 2nd half of the expedition. He lived in Bethlehem, Pa., for a while after the expedition with his wife and son, Harry Jr., who had joined the U.S. Army. His book, *Beyond the Barrier with Byrd*, was published in 1932. The family lived in Arlington, Va., in the 1940s. Augusta died in Florida in 1970, aged 95, and his son died in 1992. I have been unable to find Harry's death.

Adams, Jameson Boyd "Bill." b. May 6, 1880, Down Hall, Dunsby Lane, Rippingale, Lincs, son of Dr. George Norris Adams, MD, and his wife Priscilla Baird. He joined the Merchant Navy in 1893, and the RNVR in 1895. Lieutenant, meteorologist, and second-in-command of the shore party during BAE 1907-09, he was one of the first to climb Mount Erebus in 1908, and one of Shackleton's party which almost made it to the South Pole in 1908-09. They called him "The Mate," because that is what he called every man he met. In 1909 he entered the Civil Service, and in 1910 became manager of the North-Eastern Division of the newly established Employment Exchanges. In 1914, in Dover, he married Phoebe Carnac Thompson Fisher. During World War I he was flag lieutenant to Admiral Hood of the Dover Patrol, then did special work at the Ministry of Munitions, and in 1917 was badly wounded (and highly decorated) in Flanders while working with the siege guns at Nieuwport. He returned to the Ministry of Labour after the war, and was heavily involved in promoting Empire emigration and the Boys' Club movement. He was knighted in 1948, and died on April 30, 1962, in London.

Adams, Joseph. Captain of the Boston whaling brig *Stranger* in the South Shetlands, 1820-21. He was still sailing in the South American trade in the late 1820s.

Adams, Roman. First name possibly Robert. Midshipman appointed to von Bellingshausen's expedition of 1819-21, by the Minister of Marine, at the recommendation of von Bellngshausen himself.

Adams Bluff. 82°09' S, 159°55' E. At the head of Errant Glacier, 8 km N of Peters Peak, and 24 km SE of Hunt Mountain, in the Holyoake Range of the Churchill Mountains. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1965, for Paul L. Adams, USARP meteorologist at Byrd Station, 1961-62 and 1962-63, and at McMurdo, 1963-64 and 1964-65. NZ-APC accepted the name on Nov. 16, 1965.

Adams Crest. 80°20' S, 155°33' E. Rising to 1950 m above sea level, it is the summit of an irregular V-shaped mountain 8 km E of Saburro Peak, in the Ravens Mountains of the Britannia Range. Named by US-ACAN on Dec. 23, 2002, for Col. Jonathan E. Adams, commander of 109 Airlift Wing during the transition of LC-130 operations from the USN to the Air National Guard.

Adams Fjord. 66°50' S, 50°30' E. Also called Seven Bay, and Bukhta Semerka. Anywhere between 11 and 21 km long, it extends eastward from the NE part of Amundsen Bay, just S of Mount Riiser-Larsen. Photographed aerially by ANARE in 1956, and mapped by Australian cartographers from those photos. They plotted it in 66°49' S, 50°40' E. On Feb. 14, 1958, the *Thala Dan* sent a motor launch into the fjord, and its ANARE crew, led by Phil Law, landed at the foot of Mount Riiser-Larsen. Named by ANCA on July 22, 1959, for New Zealander Ian Leonard Adams (b. July 3, 1925), officer-in-charge at Mawson Station in 1958. He had been officer-in-charge at Macquarie Island in 1956. US-ACAN accepted the name in 1973. It was later re-plotted.

[1]**Adams Glacier**. 66°50' S, 109°40' E. A broad channel glacier 19 km wide and over 32 km long, which flows NW into the E side of the head of Vincennes Bay, just E of the Hatch Islands, off the Budd Coast of Wilkes Land. Delineated from air photos taken by OpHJ 1946-47, and mapped from these photos in 1955 by U.S. cartographer Gard Blodgett. Named by US-ACAN in 1955, as John Quincy Adams Glacier, for the U.S. president who (after his term as president, and while in Congress) greatly helped forward USEE 1838-42. Re-named by US-ACAN in 1960, as Adams Glacier.

[2]**Adams Glacier**. 78°07' S, 163°38' E. A small glacier immediately S of Miers Glacier, in Victoria Land. The heads of these 2 glaciers are separated by a low ridge, and the E end of this ridge is almost completely surrounded by the snouts of the 2 glaciers, which nearly meet in the bottom of the valley, about 1.5 km above Lake Miers, into which they drain. Named by the NZ Northern Party of BCTAE 1955-58, for Jameson Adams. US-ACAN accepted the name in 1958. It appears in the 1st supplement (1960) of the NZ provisional gazetteer.

Adams Island. 66°33' S, 92°33' E. A small rocky coastal island, in thick bay ice most of the year, on the W side of McDonald Bay, about 18 km W of Mabus Point, about 20 km W of Haswell Island, and about the same distance W of Mirnyy Station, off the coast of Queen Mary Land. Discovered and named by the Western Party of AAE 1911-14, for E.L. Adams, the bosun on the *Aurora*. US-ACAN accepted the name in 1955.

Adams Mountains. 84°30' S, 166°20' E. A small but well-defined group of mountains in the Queen Alexandra Range, bounded by the Beardmore, Berwick, Moody, and Bingley Glaciers. Discovered by BAE 1907-09, and named by Shackleton as the Adams Range, for Lt. Jameson B. Adams. Scott, during BAE 1910-13, trimmed the term to one high peak in the range, and called it Mount Adams. The term "mountains" is now considered appropriate, and in 1952, was accepted by US-ACAN, and by NZ-APC on June 28, 1962.

Adams Nunatak. 71°44' S, 68°34' W. On the S side of Neptune Glacier, 10 km W of Cannonball Cliffs, in eastern Alexander Island. Surveyed by BAS 1961-73. In association with Neptune Glacier it was named by UK-APC, on Dec. 20, 1974, for Cambridge mathematician John Couch Adams (1819-1892), the astronomer who deduced the existence of the planet Neptune in 1846. US-ACAN accepted the name in 1975. It was mapped by the (British) Directorate of Overseas Surveys from satellite imagery supplied by NASA in co-operation with USGS. The Argentines call it Nunatak Adams.

Adams Peak. 81°38' S, 160°04' E. Rising to 1540 m, on the E side of Starshot Glacier, 3 km SE of Heale Peak in the Surveyors Range. Named by NZGSAE 1960-61, for NZ surveyor and astronomer Charles William Adams (1840-1918). NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1965.

Adams Range *see* **Adams Mountains**

Adams Ridge. 71°00' S, 162°23' E. A sharp-crested rock ridge, 6 km long, and rising to 800 m, forming a part of the W margin of the Bowers Mountains, just S of where Sheehan Glacier enters Rennick Glacier. Named by NZ-APC in 1983 for Chris Adams, the NZ geologist who worked in northern Victoria Land, 1981-82. US-ACAN accepted the name. *See also* **Jordanrücken**.

Adams Rocks. 76°14' S, 145°39' W. Two large rock outcrops that overlook the inner part of Block Bay from northward, 11 km W of Mount June in the Phillips Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for James G. Adams, USN, builder at Byrd Station, 1967.

Adams Stream. 78°06' S, 163°45' E. A small melt stream flowing E for 0.8 km from the snout of Adams Glacier into Lake Miers, in Miers Valley, in the Denton Hills, on the Scott Coast of Victoria Land. Named in Dec. 1993, by UK-APC and NZ-APC together, in association with Adams Glacier. US-ACAN accepted the name in 1994.

Mount Adamson. 73°55' S, 163°00' E. Rising to 3400 m, 10 km ENE of Mount Hewson, in the Deep Freeze Range of Victoria Land. Named by the Northern Party of NZGSAE 1965-66, for Robert G. "Bob" Adamson, geologist with the party. NZ-APC accepted the name, and US-ACAN did so in 1966.

Adamson Bay. 68°38' S, 78°03' E. A bay, covered with ice in winter, and often ice-free in summer, situated in the Vestfold Hills, on the N side of Krok Fjord, just to the W of Lake Burton and S of Mule Peninsula, in Princess Elizabeth Land. Named by ANCA on April 27, 1995, for Donald Argyle "Don" Adamson (1931-2002), professor of biological sciences at Macquarie University, who spent several summer field seasons researching the history of ice-free regions

of the Bunger Hills and the Vestfold Hills. In 1986 he was in the Bunger Hills, helping to establish the Edgeworth David Summer Base there.

Adamson Spur. 70°50' S, 68°07' E. In Pagodroma Gorge, in the Prince Charles Mountains. Named by ANCA in May 2005, for Don Adamson (*see* **Adamson Bay**, above), who discovered this feature.

Cape Adare. 71°17' S, 170°14' E. A prominent cape of black basalt (in sharp contrast to the rest of the snow-covered coast at the foot of the Admiralty Mountains), it forms the N tip of Adare Peninsula, at the W edge of the Ross Sea (in fact, it forms the W side of the entrance to the Ross Sea), in Oates Land, in Victoria Land, of which it marks the NE extremity. Discovered by Ross in Jan. 1841, during RossAE 1839-43, and named by him for a friend in Wales, Edwin Richard Windham Wyndham-Quin, Viscount Adare (and later 3rd Earl of Dunraven) (1812-1871), MP for Glamorganshire. First landed on by a party from the *Antarctic* in 1895. Borchgrevink was the first to winter over here, in 1899, during BAE 1898-1900. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Adare Glacier. 77°13' S, 166°30' E. This name, given by the New Zealanders in association with Cape Adare, refers to the lobate cliffed glacier margin extending 3 km from a small ridge immediately above the Cape Bird Hut and Northern Rookery, on Ross Island, to where the glacier, which descends from Mount Bird, enters the sea (*see* **Newnes Glacier**, **Moubray Glacier**). Name also seen as Adélie Glacier and Adele Glacier.

Adare Peninsula. 71°40' S, 170°30' E. Also called Cape Adare Peninsula. High, ice-covered, and 65 km long, it extends S from Cape Adare (which is at its N tip) to Cape Roget, in Oates Land (i.e., the NE part of Victoria Land). Named by NZ-APC in association with Cape Adare. The Russians plotted it in 71°30' S. US-ACAN accepted the name in 1962.

Adare Saddle. 71°44' S, 170°12' E. An ice-saddle, at an elevation of 900 m, in the NE part of Victoria Land, where the Admiralty Mountains meet Adare Peninsula, and where Newnes Glacier meets Moubray Glacier, the two glaciers falling steeply from this saddle. Named by NZGSAE 1957-58, in association with nearby Cape Adare and Adare Peninsula. NZ-APC accepted the name, and US-ACAN did so in 1962.

Adare Seamounts. 70°00' S, 171°30' E. In Balleny Basin, in the NE part of Victoria Land. Named by international agreement in July 1997, in association with Cape Adare and Adare Peninsula. The name was accepted by US-ACAN in 1988. Actually this feature is composed of two ridges, one N and one S, separated by Adare Trough. Inevitably, there will be some renaming. The name Adare Seamounts will probably go, and one of the ridges will be named Adare Ridge.

Adare Trough. An undersea trough, part of a striking graben feature comprising 2 ridges separated by a trough, in the NW part of the Ross Sea, off NE Victoria Land, close to Cape Adare. It centers on 69°30' S, 172°00' E, but ranges from 69°00' S, 171°30' E, to 70°45' S, 173°E. Discovered by the Palmer Survey in Feb. 1997, and the name, thought of in association with Cape Adare, was proposed in June 1997 by Dr Steven C. Cande, of the Scripps Institution of Oceanography. The name was accepted by international agreement in Sept. 1997. NZ-APC approved the name on Nov. 30, 2004.

Isla Adelaïda *see* **Adelaide Island**

Adelaide *see* **Base T**

Adelaide Anchorage. 67°47' S, 68°57' W. An area of safe anchorage, W of Avian Island, off the S end of Adelaide Island. Ships normally anchor here when visiting Adelaide Station (formerly known as Base T, and later taken over by the Chileans as Teniente Carvajal Station). An RN Hydrographic Survey unit charted it in Jan.-March 1962, and named it. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Adelaide Island. 67°15' S, 68°30' W. A large, mainly ice-covered island, about 135 km long in a NNE-SSW direction, and about 33 km wide, at the N end (and on the N side) of Marguerite Bay, off the Loubet Coast and the Fallières Coast, on the W coast of the Antarctic Peninsula. Discovered and charted by Biscoe on Feb. 15, 1832, and named by him as Queen Adelaide Island, for Adelaide (1792-1849), the British Queen (i.e., the consort of William IV), and it appears as such on a British chart of 1839. It was at first thought to be only 13 km long, but Charcot, the first to survey it, in 1909, during FrAE 1908-10, proved it to be over 112 km long. There is some doubt that the peaks that Biscoe saw from afar in 1832 were, in fact, Adelaide Island, and so Charcot has really been recognized as the discoverer. The British Base T was here (it was later called Adelaide Station, and, later still, given to the Chileans, and became Teniente Carvajal Station). US-ACAN accepted the name Adelaide Island in 1947, and UK-APC followed suit on Sept. 8, 1953. The Chileans had fixed it in 67°11' S, 68°23' W, and, as such it appears in the British gazetteer of 1955, but in 1958-59 the coast was surveyed from the *John Biscoe*, by an RN Hydrographic Survey unit, and the S coast was surveyed further from the *Protector* in 1962-63 (by another such unit), and the position amended by the time the 1964 British gazetteer came out. The Argentines call it Isla Belgrano, and the Chileans call it Isla Adelaïda.

Adelaide Station *see* **Base T**

Adele Glacier *see* **Adare Glacier**

The *Adelia Chase*. An 84.65-ton sealing and whaling schooner, launched at Bath, Maine, in 1875, and operating out of New Bedford, Mass., owned by the Nickerson family. On Feb. 16, 1880, she left New Bedford, under the command of Erastus Church, Jr., bound eventually for the South Shetlands and South Orkneys and the 1880-81 sealing season. She was back there again for the 1881-82 season, again under Cap'n Church, and was one of the ships investigated by William Wiseman of the *Dwarf*, on that vessel's tour of inspection to protect the sealing industry from overcatching. The *Adelia Chase* passed the examination — she had only taken 57 fur seal skins in the South Shetlands. She was still whaling into the 20th century.

Terre Adélie *see* **Adélie Land**

Adélie Coast *see* **Adélie Land**

Adélie Cove. 74°46' S, 164°00' E. A deep bay, 1.5 km wide, and 2.5 km deep, in the Northern Foothills, overlooking Terra Nova Bay in Victoria Land. Discovered and named by NZGSAE 1959-60. NZ-APC accepted the name on Nov. 16, 1989.

Adélie Depression *see* **Mertz-Ninnis Valley**

Adélie Glacier *see* **Adare Glacier**

Adélie Land. That portion of the coast of East Antarctica that centers on 67°S, 139°E, and which lies between Pourquoi Point (136°11' E) and Point Alden (142°02' E), or, more generally, between George V Land and the Wilkes Coast, in Wilkes Land. An ice-covered plateau, it rises from the Indian Ocean, has a shore length of 350 km, and covers 166,800 sq miles. Discovered between Jan. 20 and Jan. 24, 1840 by FrAE 1837-40, and named by Dumont d'Urville as Terre Adélie or Terre d'Adélie, for his wife Adèle. In 1926, Charcot began urging the French government to claim it, and they finally did, on April 1, 1938. US-ACAN accepted the name Adélie Coast in 1947. The French did not establish a base here until the *Commandant Charcot* pulled in on Jan. 20, 1950. There is a move afoot today to eradicate the term "Adélie Land" from the record books.

Adélie penguin. This is the best known of all the penguins. Also known as the black-throated penguin, it is about 30 inches high, about 9-14 pounds in weight, and lays one or two eggs. It is distinguished by its feathered bill and white eye-ring. It lives on the coasts and islands, and feeds on krill and fish. It was discovered by Hombron and Jacquinot, and named *Pygoscelis adeliae*, after Adélie Land.

Adélie Trough *see* **Adélie Valley**

Adélie Valley. 65°30' S, 136°00' E. Also called Adélie Trough, and Dumont d'Urville Trough. A drowned fjord, or undersea valley, on the continental shelf margin of East Antarctica, off the coast of Adélie Land. Named by US-ACAN in 1971, in association with what they call the Adélie Coast (and what the French call Terre Adélie), and this name was accepted by international agreement in Dec. 1971.

The *Adeona*. A 142-ton single-deck Scottish sealing brig out of Greenock (but built in Canada in 1813), owned by Messrs. Henderson & Low, which was in the South Shetlands for the 1822-23 season, under Capt. Andrew Low. On Feb. 5, 1823, she was at the Falkland Islands, with Low proposing to leave for the Clyde at the end of the month. However, on March 29, she was in at Buenos Aires, and was there for 7 weeks. On her return to Liverpool, on July 27, 1823, she brought 3807 sealskins. On Aug. 13, 1823, she arrived in London. She was then sheathed in copper, and apparently on Sept. 8, 1823, Andrew Low was re-appointed master, and

the ship left London on Sept. 13, 1823. It is unclear if she was in the South Shetlands this season (i.e., 1823–24), but on May 17, 1824, she left the Falklands, and arrived back in the Clyde in mid-August 1824. She was back in South American waters, in 1828, during which trip she encountered the *Beagle*. The ship was broken up in 1832, in Montevideo.

Monte Ader *see* **Mount Ader**

Mount Ader. 64°10' S, 60°29' W. Rising to about 1600 m, along the N side of Breguet Glacier, on the S side of Wright Ice Piedmont, and just SE of Mount Cornu, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57. Shown, but not named, on an Argentine government chart of 1957, it was named by UK-APC on Sept. 23, 1960, for Clément Ader (1841–1925), pioneer French aviator, the first man to leave the ground in a primitive flying machine, solely on the strength of the engine. US-ACAN accepted the name in 1964. The Chileans amended its longitude from 60°31' W. The Argentines call it Monte Ader.

Caleta Adie *see* **Adie Inlet**

Ensenada Adie *see* **Adie Inlet**

Adie, Raymond John "Ray." b. Feb. 26, 1925, Pietermaritzburg, South Africa. Inspired by South African geologist Alex Du Toit while studying geology at Natal University, he joined FIDS, and went to Base D for the summer of 1946–47 and the winter of 1947. He was the first South African scientist in Antarctica. He was at Base E in the summer of 1948–49, the winter of 1948, the summer of 1948–49, and the winter of 1949. For his short trip around the islands, *see* **Croft, William Noble**. He finally got out of Antarctica in 1950, after 3 successive winters. There is a great story about Ray's dog Mutt, who fell 20 feet down a crevasse, and waited patiently without moving while Adie talked calmly to him and Fuchs let the South African down on a rope to pick up his four-legged friend. In 1953 Adie got his PhD at Cambridge, and went to work as a chemist for Allbright & Wilson, in Birmingham. From July 1956 until 1974 he was head geologist with the FIDS/BAS geology unit within the department of geography and geophysics at Birmingham University, and deputy director of BAS, 1973–85. He went back to the ice a further 22 times (for example, he was there in Nov. 1957). He would later be a professor at Birmingham University, and came up with new theories about Gondwanaland. He also discovered how to put a red stripe into toothpaste, and was an adviser to Margaret Thatcher during the Falklands War of 1982. His wife, Aileen, died in 1984, and Ray retired, spending his last years in KwaZulu with Nora Grice, his companion since the early 1990s. He died on May 14, 2006.

Adie Inlet. 66°25' S, 62°20' W. An ice-filled inlet of the Larsen Ice Shelf, 40 km long in a NNW-SSE direction, between Veier Head and Astro Cliffs, NE of Churchill Peninsula, on the Oscar II Coast, along the E coast of Graham Land. Jason Peninsula forms its N side. Photographed aerially in late 1947, by RARE 1947–48, surveyed from the ground and charted in the same season by John Francis of FIDS. The name was proposed by James Wordie and Brian Roberts in Feb. 1949, and accepted by UK-APC on Jan. 22, 1951. At that stage it referred to the U-shaped feature at the head of the inlet. US-ACAN accepted the name (with that same definition) in 1952, and it appears as such in the British gazetteer of 1955. A 1953 Argentine chart shows Caleta Feijóo (after naval captain Iván Bárcena Feijóo, b. March 13, 1907, Buenos Aires, who became a rear admiral in 1955), which is probably this feature (and probably this man, although, if it is, truly, Don Iván, then the feature should have been named Bárcena, and not Feijóo), but a 1954 Argentine chart shows it as Caleta Adie, and that name was accepted by Argentina in July 1959. However, Fids from Base D re-surveyed it in 1953 and 1955, and UK-APC redefined it on Sept. 4, 1957. The Chileans have been calling it Ensenada Adie since at least 1962, and it appears as such in their 1974 gazetteer.

Adit Nunatak. 65°54' S, 62°48' W. Rising to 800 m, 5 km WNW of Mount Alibi, on the N side of Leppard Glacier, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Surveyed by FIDS in 1955, and named by UK-APC on Sept. 4, 1957 for the adit (or opening) to a (then) unsurveyed inland area to the NW, between Leppard Glacier and Flask Glacier. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

The *Adix*. Designed by Arthur Holgate, and built in 1984, in Mallorca, as the topsail schooner *Jessica*. She was sold in 1990, and re-fitted in Falmouth as a 187-foot, 3-masted schooner. Skippered by Australian Paul Goss, she visited the Antarctic Peninsula and the South Shetlands in 1996–97. She was still sailing in 2007.

Mount Adkins. 73°03' S, 62°02' W. Rising to about 1700 m, it surmounts the NE side of Mosby Glacier, just W of the mouth of Fenton Glacier, at the point where the Black Coast and Lassiter Coast meet, on the E coast of Palmer Land. Mapped by USGS from ground surveys, and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Thomas A. Adkins, who wintered-over as cook at Palmer Station in 1965. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Adlerwand. 73°15' S, 167°11' E. A wall in the area of Mariner Glacier and Lady Newnes Bay, in Victoria Land. Named by the Germans.

Admiral Byrd Bay *see* **Byrd Bay**

The *Admiral Vladimirskiy*. A 9100-ton Russian naval research ship that took part in SovAE 1982–84. Captain that season was Roman Pantaleinovich Panchenko. In 1982–83, during that expedition, along with the *Feddey Bellingshausen*, she retraced von Bellingshausen's 1819–21 voyage, and thus circumnavigated Antarctica. One of the stops was a surprise visit to McMurdo, on Feb. 14, 1983, in company with the *Yunony*. The *Vladmirsky* stayed there only 3 hours.

Ostrov Admirala Mordvinova *see* **Elephant Island**

The *Admiralen*. The first modern floating factory whaling ship. She was built as a 1517-ton British steamer in Sunderland in 1869, for Ryde & Co., of London, and named *Ariadne*. In 1873 she was sold to the Belgian Royal Mail Co., of London, and in 1875 to John Hall, Jr. & Co., of London, and re-named *Gibraltar*. On Oct. 2, 1903, she was bought by A/S Ørnen (a company owned by Chris Christensen) for £3750, re-named the *Admiralen*, and used in the Mediterranean as a cattle ship that could also take 21 passengers. She was converted to a 2400-ton floating factory whaler by Christensen's shipyard, Framnaes Mek. (Framnaes Mekaniske Vaerksted) of Sandefjord. She could travel at 12 knots, had 8 new open boilers with accessories, and could accommodate 63 men. She also had 2 bathrooms, and a large saloon. After the 1904 and 1905 summer whaling seasons at Spitsbergen, she was forced south by the new Arctic whaling preservation laws. **Oct. 21, 1905**: The *Admiralen*, under the command of Capt. Søren Andersen, left Sandefjord with her 2 whale catchers, the *Ørnen* and the *Hauken*. Alexander Lange was whaling manager of the fleet (sometimes, but by no means always, the roles of ship's captain and fleet manager would be combined in one man). This was the first modern Norwegian whaling expedition to use a factory ship. Chris Christensen's son, Aug (*see* **Christensen, August**) was also aboard. He was only 17. **Dec. 6, 1905**: The fleet arrived at Buenos Aires. **Dec. 13, 1905**: The fleet arrived at Port Stanley, in the Falklands. **Dec. 21, 1905**: Lawrence Newing was appointed by the Falkland Islands government to be customs officer on the *Admiralen*. This was (rather unfairly) to be at the Ørnen Company's expense. **Dec. 22, 1905**: The fleet left Port Stanley, bound for New Bay, in the Falklands. **Dec. 24, 1905**: The fleet arrived at New Bay, where they anchored for a month in Ship Harbor. **Jan. 24, 1906**: The fleet left the Falklands, bound for the South Shetlands. Newing did not go with them, but returned to Stanley. **Jan. 27, 1906**: The fleet anchored in Admiralty Bay, King George Island, in the South Shetlands, from where they operated for a couple of months. However, there was too much ice and bad weather for a successful season. But the catcher *Ørnen* did set a record — the first ever harpooning of a whale in the South Shetlands. **Feb. 24, 1906**: Due to bad weather, the fleet left the South Shetlands and headed back to New Harbor, in the Falklands. **Feb. 27, 1906**: The fleet arrived back in New Harbor. **April 11, 1906**: The fleet wound up whaling operations in the Falklands. **April 14, 1906**: The fleet arrived back at Port Stanley, where the *Ørnen* and *Hauken* were laid up for the winter, to await the next season (if, indeed, there were to be one). They had taken a total of 24 blue whales, 36 fin whales, 23 humpback whales, 97 sei whales, and 3 sperm whales, yielding 4128 barrels of oil, 20 barrels of spermaceti, 89 barrels of sperm oil, and 12 tons of whale bone. Only 58 of these whales had been taken in Antarctic waters (and all of the 24 blues), the rest being caught in Falkland Islands

waters. **April 19, 1906**: The fleet left Port Stanley, bound for Norway. **June 1, 1906**: The fleet arrived back in Sandefjord. Christensen was disappointed with the results of the expedition, and tried to sell the fleet. Finding no takers for such an untried venture as Antarctic whaling, he decided to send the fleet south again the following season, a larger fleet this time. **Aug. 23, 1906**: The *Admiralen* left Sandefjord, heading south in company with the *Vesterlide*, another converted factory ship, along as a cooking ship. Alex Lange was again manager. Also accompanying the fleet was the *Nor*, with her brand new whale catcher, the *Svip*. **Oct. 15, 1906**: The fleet arrived at Port Stanley. **Oct. 17, 1906**: At Stanley, they obtained from the Falkland Islands government the first ever whaling license for the South Shetlands. Robert Hurst went aboard the *Admiralen* as customs officer, to make sure the Norwegians' reporting of caught whales was accurate. **Oct. 18, 1906**: They picked up the two catchers *Ørnen* and *Hauken* in Port Stanley, and all five vessels — the *Admiralen*, the *Vesterlide*, the *Hauken*, the *Ørnen*, and the *Svip* — left the Falklands that day (Governor Allardyce and his wife were on board the *Admiralen* for the first part of the jaunt through the Falklands, but did not go to Antarctica), bound for the South Shetlands, where they whaled for the 1906-07 season. **March 19, 1907**: The fleet was back in Falklands waters. **March 28, 1907**: The fleet was back in Port Stanley, with 336 whales (90 of them having been caught in the Falklands). **May 9, 1907**: The fleet left Port Stanley for Norway. **1907-08**: The *Admiralen* fleet was back, but without the *Vesterlide*. This time Lange had two catchers, the *Grib* and the *Hauken*. They were also in company with the Christensen-owned whaler *Nor*. This season was a success. **1908-09**: the *Admiralen* and the *Vesterlide* were back, with the *Nor*, and all the catchers, the fleet being under the management of August Christensen. **1909**: The *Admiralen,* now replaced by the *Ørn*, was sold to Bryde & Dahl's Whaling Company, and in 1912 to Lars Christensen's Alaska Whaling Company. When the company wound up in 1914, the *Admiralen* was sold to Bryde, and then in 1918 to Knud Olsvik. She disappears from the records in 1926.

Admiralen Peak. 62°06' S, 58°30' W. Rising to 305 m, just over 1 km SSW of Crépin Point, on the W side of the entrance to Mackellar Inlet, at the W side of Admiralty Bay, on King George Island, in the South Shetlands. Surveyed by Fids from Base G between 1948 and 1960, and photographed from the air by FIDASE in 1956. Named by UK-APC on Sept. 23, 1960, for the *Admiralen*. It appears on a British chart of 1962. It also appears erroneously on a 1963 British chart as Admiration Peak. US-ACAN accepted the name Admiralen Peak in 1960. The Argentines call it Pico Puño, and the Chileans call it Cerro Le Poing (both names meaning "fist peak"). This may be the peak Charcot called Le Poing in 1908-10 (there are four possibilities. *See* **Wegger Peak** for the history of this). The British were the latest to replot this feature, in late 2008.

Admirals Nunatak. 71°25' S, 69°01' W. Rising to 923 m, on the upper Uranus Glacier, 10 km SE of Oberon Peak, in the eastern-central part of Alexander Island. Named by UK-APC on Oct. 5, 1994 to commemorate FIDS and BAS sled-dog teams with that name — "The Admirals" — that served in Antarctica from 1952 until 1994. US-ACAN accepted the name in 1994.

Baie Admiralty *see* **Admiralty Bay**

Canal Admiralty *see* **Admiralty Sound**

Estrecho Admiralty *see* **Admiralty Sound**

[1]**Admiralty Bay**. 62°10' S, 58°25' W. An irregular bay, 8 km wide at its entrance between Demay Point and Martins Head, that indents the S coast of King George Island for 16 km, in the South Shetlands. The name appears on Powell's map of 1822, and it was evidently named for the British Admiralty. Dumont d'Urville, after his FrAE 1837-40, charted it as Baie Admiralty. It appears as Admiralty Bay on a British chart of 1844. The Norwegian whaler *Admiralen* anchored here in 1905-06, and Norse whaling men tended to call it Gamle Hjem (i.e., "the old home"). The British had their Base G here; the Polish have Arctowski Station; the Brazilians have Comandante Ferraz; the Americans have Pieter J. Lenie Station; and the Peruvians have Base Machu Picchu. The W side of the bay was designated SSSI #8 (*see* **Sites of Special Scientific Interest**). US-ACAN accepted the name in 1947, UK-APC followed suit on Sept. 8, 1953, and it appears in the British gazetteer of 1955. The name has been appearing on Chilean maps since 1947 as Bahía Almirantazgo (which means Admiralty Bay). The Argentines call it Bahía Laserre. In late 2008 the British amended its S coordinates to 62°06' S.

[2]**Admiralty Bay** *see* **Admiralty Sound**

Admiralty Bay Refugio *see* **Ensenada Martel Refugio** (under **E**)

Admiralty Bay Station *see* **Base G**

Admiralty Inlet *see* **Admiralty Sound**

Admiralty Island *see* **Elephant Island**

Admiralty Mountains. 71°45' S, 168°30' E. Also called the Admiralty Range. A large group of high mountains and individually named ranges and ridges at the extreme NE of Victoria Land, which are bounded by the sea, and by the Dennistoun, Ebbe and Tucker Glaciers. The major peaks are: Minto, Adam, Ajax, Sabine, Royalist, Meier Peak, Black Prince, Herschel, Peacock. First sighted on Jan. 11, 1841, by Ross, during RossAE 1839-41, and named by him for the British Admiralty who had sent him on this expedition. US-ACAN accepted the name in 1947, and NZ-APC followed suit on Nov. 17, 1964.

Admiralty Range *see* **Admiralty Mountains**

Admiralty Sound. 64°20' S, 57°10' W. This sound, extending for 56 km in a NE-SW direction, separates Snow Hill Island and Seymour Island from James Ross Island, off the NE end of the Antarctic Peninsula. Its SW mouth opens between Cape Foster and the extreme W of Snow Hill Island, and forms 2 branches separated by Lockyer Island. Ross discovered the broad NE part of this sound, which opens between Cape Gage and the extreme N point of Seymour Island, on Jan. 6, 1843, during RossAE 1839-43, and named it Admiralty Inlet (its full extent being unknown at that time; it is on an 1844 chart as such, and also on a Spanish chart, as Canal Admiralty) for the British Admiralty (*see* **Admiralty Mountains**). Nordenskjöld redefined it on March 9-10, 1902, and, following his lead, it had been re-named by 1904 as Admiralty Sound, appearing as such on a British charts of 1921 and 1928. However, Julián Irízar had charted it wrong in 1903, as Bahía Almirantazgo, and as such, it appears in the 1904 English-language version of his chart as Admiralty Bay. It appears on an American Geographical Society map of 1928 as Admiralty Strait. US-ACAN accepted the name Admiralty Sound in 1947, and UK-APC followed suit on Sept. 8, 1953. It was surveyed by Fids from Base D between 1952 and 1954, and appears in the British gazetteer of 1955. It appears on a 1949 Argentine map as Estrecho Almirantazgo, but on a 1953 map of theirs as Estrecho Thompson, and on a 1955 one as Estrecho Admiralty. However, today the Argentines tend to call it Estrecho Bouchard, for Ipólito Bouchard (q.v.). Since 1947 it has been featuring on Chilean maps as Paso Almirantazgo (a translation of the British name), and appears as such in their 1974 gazetteer.

Admiralty Strait *see* **Admiralty Sound**

Admiration Peak *see* **Admiralen Peak**

Islotes Adolph *see* **Adolph Islands**

Adolph Islands. 66°19' S, 67°11' W. A group of small islands and rocks off the NW coast of Watkins Island, S of Lewis Sound, in the Biscoe Islands. Mapped by FIDS cartographers from aerial photographs taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960 for Edward Frederick Adolph (1895-1986), professor of physiology at the University of Rochester, NY, 1948-60, who specialized in the human body's reaction to cold. US-ACAN accepted the name in 1965. The feature appears in the 1991 Argentine gazetteer as Islotes Adolph.

Adolph Ochs Glacier *see* **Ochs Glacier**

Islote Adriana. 64°40' S, 62°47' W. A little islet a few meters from the N part of the extreme W side of Rongé Island, opposite Arctowski Peninsula, off the W coast of the Antarctic Peninsula. Named by the Chileans.

Cabo Adriasola *see* **Cape Adriasola**

Cap Adriasola *see* **Cape Adriasola**

Cape Adriasola. 67°39' S, 69°11' W. A distinctive ice-cliffed cape, it forms the extreme SW point of Adelaide Island, 16 km NW of Avian Island, in the N part of Marguerite Bay, off the W coast of the Antarctic Peninsula. Discovered and charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Cap Adriasola, for a Chilean friend, J. Adriasola, of Punta Arenas, who helped the expedition. Adriasola Cape (sic) appears on a 1914 British chart, but the feature is poorly defined. A U.S. Hydrographic Office chart has it erroneously as Cape Andriasola. The name Cape Adriasola appears on a British chart of 1948, but, again, the feature is poorly defined. The name was accepted by US-ACAN in 1952,

and by UK-APC on Sept. 8, 1953. It appears in the British gazetteer of 1955. It was re-surveyed by an RN Hydrographic Survey unit on the *Protector*, in 1963. The Argentines and Chileans call it Cabo Adriasola. It appears as such on a Chilean map of 1947, and in their 1974 gazetteer. It appears on a 1958 Argentine map as Cabo Adriosola, but Argentina officially accepted the spelling Adriasola in July 1959.

Adriasola Cape *see* **Cape Adriasola**

Cabo Adriosola *see* **Cape Adriasola**

Advance Base *see* **Bolling Advance Weather Station**

Islote Advent *see* **Bauprés Rocks**

Advent Island *see* **Bauprés Rocks**

The *Adventure*. A 336-ton, 97-foot 3-inch bark, built in 1770 at the Fishburn Yard at Whitby, she was the collier *Marquis of Rockingham* when the Admiralty purchased her on Sept. 25, 1771 to be the smaller of Cook's two ships for his 2nd voyage, 1772-75. She became the sloop *Raleigh*, was fitted out with cannon and a large ship's launch, and took on board a crew of 91, commanded by Tobias Furneaux. However, bearing in mind Spanish sensitivities, the name *Raleigh* was changed to *Adventure*. After the expedition, she became a Navy storeship in North America, and was broken up in 1783.

Adventure Network International, Inc. British tour company, registered in Canada, incorporated in 1984, and set up by Giles Kershaw, Pat Morrow, and Martyn Williams, with managing director Hugh Culver. It began operating in Antarctica in 1985-86 after having formed Antarctic Airways in 1984. One of the more imaginative of the Antarctic tour operators, it built a camp at the Patriot Hills, and from there flew 20 tourists to the Pole on Jan. 11, 1988. That was a first. Another 15 came on other flights. The following year, 1988-89, the same expedition was offered at $28,500 for 8-12 days. Their Antarctic Ski Expedition was offered at $10,000 for 12 days, and the Mount Vinson climbs at $16,500 for 21 days. A party of 11 reached the Pole on skis and snow scooter, that season, from Hercules Inlet, the first commercial guided traverse to the Pole (they returned by plane). That season the company supplied logistical backup for the Mountain Travel expedition. In 1990 they claimed to be the only land operator in North America for Antarctica, and most of their programs were sold through Mountain Travel, Special Odysseys, and Lindblad Travel. They continued to operate in Antarctica every summer season, and by 1990-91 Michael Colin Sharp had taken over from Martyn Williams as chief of operations, and by 1992 Grant Gillespie had taken over the spot, and by 1994 Geoff Somers. Duncan Haigh succeeded Mr. Somers by 1996, and Steve Pinfield by 1997. In Nov. 1997 one climber was fatally injured while sledging on Mount Tyree. Blue-1 Camp was established at Henriksenskjera. They were still going in 2009, based out of Salt Lake City.

Adventure Subglacial Trench. 74°00' S, 132°00' E. A subglacial trench in the interior of Wilkes Land, running N-S, and joined to the Aurora Subglacial Basin to the W by the Vincennes Subglacial Basin. Delineated by the SPRI-NSF-TUD airborne echo radio sounding program, 1967-79, and named by US-ACAN for Cook's ship, the *Adventure*.

The *Aegean I*. Built for Zim Lines of Israel in 1973, by Santierul Naval, at Galatz, Rumania, as the cargo ship *Narcis*. In 1985 she was bought by Dolphin Hellas Shipping, of Athens, and renamed *Alkyon*. Dolphin completely rebuilt her as the 11,563-ton, 128.3-meter cruise liner *Aegean Dolphin*, with a speed of 17 knots, and she operated in the Mediterranean from 1988, carrying a crew of 190 and a maximum of 720 passengers. Occasionally she was chartered out, as the *Dolphin*, and in 1996 was refurbished and renamed *Aegean I*. In mid-November 1999 she left Piraeus for a 120-day trip around the world, under charter to World Cruise Company of Toronto, and it was on this voyage that she made her only trip into Antarctic waters, during the 1999-2000 season, when she left Ushuaia (in Chile), bound for the South Shetlands and the waters of the Antarctic Peninsula. After visiting the Argentine bases, she headed for NZ, on Feb. 2, 2000 arrived in Sydney, and on Feb. 4, 2002 in Melbourne. After that she plied the Mediterranean, operated by Golden Star Cruises (i.e., Dolphin Hellas) and in 2005 was bought by Louis Hellenic Cruise Lines of Cyprus. However the sale was impeded by a lien against Dolphin Hellas, and the deal was fraught with litigation. She was subsequently laid up.

Aegehallneset *see* **Cape Ryugu**

Mount Aeolus. 77°29' S, 161°16' E. A prominent peak rising to over 2000 m, between Mount Boreas and Mount Hercules, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Greek god of the winds. NZ-APC accepted the name, and US-ACAN did so in 1964.

Aeolus Ridge. 71°18' S, 68°34' W. A ridge rising to about 1300 m, and trending NE-SW, at the S end of Planet Heights, in the E part of Alexander Island. The NW side of the ridge has the best exposed sedimentary section in the area. Named by UK-APC on Feb. 15, 1988, in reference to the prevailing weather encountered here by BAS parties, for the Greek god of the winds. US-ACAN accepted the name.

Aerial photography. Photographs taken from the air. In the case of Antarctica, more than any other continent, aerial photography opened up much of the land, and the photos were (generally) later checked from ground controls and mapped therefrom. As far as the U.S. operation was concerned, VX-6 was responsible for aerial photography. The most notable landmarks in this field are ByrdAE 1928-30; the Wilkins-Hearst Expedition, 1928-30; LCE 1936-37, which photographed a vast amount of East Antarctica; GermAE 1938-39, which photographed about 77,000 square miles from an altitude of 10,000 feet in the course of one flight (many of these were in color, but, without ground controls, were practically useless); USAS 1939-41; OpHJ 1946-47, which took 40,000 photos; OpW 1947-48; and the ongoing ANARE, OpDF, and Norwegian expeditions. Expeditions subsequent to this have all stressed the importance of aerial photography in Antarctica.

Gora Aèrodromnaja *see* **Aerodromnaya Hill**

Aerodromnaya Hill. 70°47' S, 11°38' E. An isolated rock hill, 1.5 km S of the Schirmacher Hills, in Queen Maud Land. Discovered and photographed aerially by GerAE 1938-39, and roughly mapped from these photos. SovAE 1961 named it Gora Aèrodromnaja (i.e., "aerodrome hill") because of the airstrip here which services nearby Novolazarevskaya Station. US-ACAN accepted the name Aerodromnaya Hill in 1970.

The *Aeronaut*. A three-masted, 95-ton whaling/sealing barque from Mystic, Conn., built in 1822 at Amesbury, Mass. 94 feet 3 inches long, and 24 feet 3 inches wide, she had a draft of 12 feet 5½ inches, 2 decks, and a square stern. Under the command of part-owner Thomas Eldridge she sailed the Atlantic in the 1820s, and in 1852 (still under Eldridge), she sailed from New England, in company with her tender, the *Lion*. After a season in the South Shetlands, the two vessels returned to Mystic in May 1853. On July 28, 1853 the *Aeronaut* again left New England, on a larger sealing expedition, this time with two tenders — the *Lion* and the *Wilmington*. The fleet, commanded by Eldridge, was in company with the Stonington brig *Sarah E. Spear*. After the expedition, on their way back across the Drake Passage, the *Lion* became separated from the others. They arrived back in New England in July 1854. The *Aeronaut* was lost in 1856.

Aeronaut Glacier. 73°16' S, 163°36' E. A glacier of low gradient, about 40 km long, it flows NE from Gair Mesa into the upper part of Aviator Glacier, near Navigator Nunatak, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, for the aeronauts of VX-6 who supported their expedition that year, and also in association with Aviator Glacier. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964.

Cerro Aeronáutica Argentina *see* **Mount Shelby**

Aeroplanes *see* **Airpanes**

Aetna Island *see* **Etna Island**

AFAN McMurdo. American Forces Antarctica Network. The world's most southerly radio station, at McMurdo.

Lednik Afanasija Nikitina *see* **Nikitin Glacier**

Mount Afflick. 70°46' S, 66°11' E. A rock ridge-like mountain about 5.5 km W of Mount Bunt, in the Aramis Range of the Prince Charles Mountains, it is joined to Allison Ridge by a moraine which curves NE then E. Plotted from 1960 ANARE air photos. Named by ANCA for Gordon Maitland Afflick, who wintered-over as weather observer-in-charge at Mawson Station in 1965. US-ACAN accepted the name in 1967. Mr. Afflick retired in Queensland in 1982.

Affre, Antoine-Barthélemy. b. April 16, 1818, Agde, France. Ordinary seaman on the *Zélée* during FrAE 1837-40.

African-Antarctic Basin. 61°00' S, 15°00' E. Out to sea, beyond Queen Maud Land. Named by the Russians.

The *Africana*. A 78-meter South African Fisheries research ship, built in Durban, commissioned in 1982, and based out of Cape Town. She was in Antarctica, 1989-90, unknown skipper. She was in the South Sandwich Islands, deploying automatic weather stations for the South Africans. In March 1990, she was at Signy Island and Elephant Island. She was refitted and upgraded in 2001.

Isla Afuera *see* **Afuera Islands**

Islote Afuera. 63°45' S, 61°50' W. The name given by the Argentines to a small rocky islet off the coast of Hoseason Island, 20 miles W of Trinity Island, in the Palmer Archipelago. The name means "outer island." No other country has attempted to name it.

Islotes Afuera *see* **Afuera Islands**

Afuera Islands. 64°20' S, 61°36' W. A compact group of 3 small rocky islets N of Cape Murray (which is on Murray Island), rising to an altitude of about 12 m above sea level, and 1.7 km N of Challenger Island, just outside the S entrance point to Hughes Bay, in the Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Charted by FrAE 1908-10. The largest of the group was known for a time as Penguin Island, a name probably coined by whalers, and that name was the one used by Lester and Bagshawe during the British Imperial Antarctic Expedition of 1920-22. The largest of the islets was named by ArgAE 1952-53 as Isla Afuera "outside island," the name describing its position relative to Murray Island, and that is how it appears on their 1954 chart of the expedition. The whole group appears on a 1956 Argentine map as Islotes Afuera, and that name became official in July 1959. This naming did not suit the British, of course, so, after FIDASE had aerially photographed the group in 1956-57, UK-APC, on Sept. 23, 1960, named them Dodge Islands (the British are the only ones who use this name). The feature appears as such on a British chart of 1961. The Argentine initiative didn't suit the Chileans either, so they named it Islotes de Afuera in 1962, and it appears as such in their 1974 gazetteer. In 1965, US-ACAN accepted the name Afuera Islands.

Agalina Glacier. 64°26' S, 61°26' W. A glacier, 4.8 km long and 2.9 km wide, on Península Péfaur, E of Poduene Glacier, and W of Krapets Glacier, it flows N into both Graham Passage and the W arm of Salvesen Cove, on the Danco Coast, on the W coast of Graham Land. Mapped by the British in 1978. Named by the Bulgarians on Sept. 14, 2010, after Agalina Point, on the Black Sea coast of Bulgaria.

Mount Agamemnon. 64°38' S, 63°31' W. A snow-covered mountain rising to 2575 m (the British say 2570 m), which marks the S limit of the Achaean Range, in the central part of Anvers Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. It is part of the Mount Français Massif, but has a separate summit 2.5 km west of the main peak of the massif. Surveyed in 1944 by Operation Tabarin personnel from Port Lockroy Station, and again in Dec. 1955 by Fids from Base N, who also photographed it and climbed it. Named on Sept. 4, 1957 by UK-APC for the Achaean hero of Homeric legend. It appears in the British gazetteer of 1958, and on a British chart of 1959. US-ACAN accepted the name in 1963.

Cabo Agassiz *see* **Cape Agassiz**

Cape Agassiz. 68°29' S, 62°56' W. A narrow ice-drowned spur extending E from the main mountain axis of the Antarctic Peninsula, it is the E tip of Hollick-Kenyon Peninsula, and projects into the Larsen Ice Shelf between Mobiloil Inlet and Revelle Inlet, being, as it is, the E end of an imaginary line from Cape Jeremy, dividing Palmer Land and Graham Land, and at the same time dividing the Bowman Coast from the Wilkins Coast. Discovered and photographed aerially in Dec. 1940 by members of East Base, during USAS 1939-41, who named it Cape Joerg for W.L.G. Joerg, the geographer, cartographer, and polar specialist, and who fixed it longitudinally in 62°37' W. In 1942 it appeared as such on a map prepared by the USAAF, but Joerg insisted it be re-named for Jean-Louis-Rodolphe Agassiz (known as Louis) (1807-1873), the Swiss-American naturalist who first propounded the theory of continental glaciation. The new name was accepted by US-ACAN in 1947, and was appearing on maps by that year. A combined FIDS-RARE team surveyed it from the ground in 1947-48. UK-APC accepted the name on Jan. 28, 1953, and it appears in the British gazetteer of 1955, still with the old coordinates. However, these had been corrected by the time of the British gazetteer of 1986. The Argentines have been calling it Cabo Agassiz since at least 1952, and the name was made official in July 1959. The Chileans have followed the Argentine lead, and it appears as such in their 1974 gazetteer.

Agat Point. 62°11' S, 58°26' W. A small basaltic promontory with numerous agates (hence the name), immediately N of Staszek Cove, in Admiralty Bay, King George Island, in the South Shetlands. Discovered by the Poles, and named by them in 1980.

Agate Peak. 72°56' S, 163°47' E. At the SE end of Intention Nunataks, at the SW margin of Evans Névé, in northern Victoria Land. Named by NZ-APC on July 4, 1968, for the agate and other semi-precious stones found here in 1966-67 by the Southern Party of NZGSAE. US-ACAN accepted the name in 1969.

Punta Ageno. 68°07' S, 67°13' W. A point in the extreme NW of Millerand Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. Named by the Argentines for Engineer machinist 2nd Class Natalio Ageno, here with the *Uruguay* in 1909.

Agger, Harry Edward. b. Oct. 10, 1936, Manchester, son of textile worker Harry Agger and his wife Mary Green. After grammar school in Manchester (1948-55), he went to Imperial College, London (1955-58), to study physics. Martin Smith (q.v.), with whom Agger used to go mountain climbing, suggested he join FIDS. He did, in 1958, as a geophysicist, went to the Shetlands in the north of Scotland for training, and took the *John Biscoe* out of Southampton for Montevideo, Port Stanley, and on to South Georgia, where he took part in a hydrographic survey. He wintered-over at Base F in 1959 and 1960. He not only worked, he played the guitar. In 1961 the *John Biscoe* came to pick him up, and he stayed aboard for some months, helping to establish other bases, and in May 1961 arrived back in the UK. He, Joe Farman and Chris Horton lived in Victoria, London, until Nov. 1961, working for the Crown Agents and collating their Antarctic records. Then all three went to Edinburgh to finish up, and in May 1962 Agger left, going to work at the Atomic Research establishment at Aldermaston. In 1964 he married Valerie Hatchett, and in Nov. 1965 made the move to Chevron Oil, going to live in California for just over 5 years, then on to Houston, Texas, until he was laid off in 1992, and retired to California. In 2002 he went back to Antarctica, as a tourist, but couldn't get in to Base F because of the ice.

Agglomerate Point. 64°54' S, 62°25' W. A small, rocky promontory and islets at the SE entrance to Argentino Channel, Paradise Harbor, off the W coast of Graham Land. Named by the Poles on Sept. 1, 1999.

Aglen Point. 62°35' S, 61°09' W. A rocky point forming the E side of the entrance to Richards Cove, 2 km E of Essex Point, on the N coast of Ray Promontory, in the NE extremity of Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1992, and again by the Bulgarians in 2008-09, and named by the Bulgarians on Nov. 23, 2009, after the settlement of Aglen in northern Bulgaria.

Punta Agnese *see* **Davey Point**

Punta Agneta. 72°56' S, 60°40' W. On the N coast of Kemp Peninsula, on the E coast of the Antarctic Peninsula. Named by the Argentines in 1978 for Air Force lieutenant Alfredo Salvador Agneta (1887-1914), an aeronautics pioneer killed in an air crash.

Mount Agnew *see* **Mount Irving**

AGO. There have been (and are, as of 2010) six, almost identical, automated geophysical observatories installed by the Americans, 4 of them in remote regions of Antarctica. Typically, an AGO was a 16 foot by 8 foot box on stilts, with a ladder leading up from the ice into the box. Inside the box were various instruments — optical and radio wave auroral imagers, magnetometers, and narrow and wide band radio receivers. Not often, but sometimes, persons lived in these boxes while maintaining an AGO. The personnel would be flown in, usually by a Hercules aircraft. See below, for the individual observatories.

AGO-1. 83°53' S, 129°36' E. An American automated weather station, at an elevation of 2813 m, on the Polar Plateau. Installed in Jan. 1994.

AGO-2. 85°41' S, 46°23' W. An American

automated geophysical observatory on the Polar Plateau, at an elevation of 1859 m. Installed in Dec. 1992.

AGO-3. 82°45' S, 28°36' E. An American automated geophysical observatory, at an elevation of 2848 m, on the Polar Plateau. Installed in Jan. 1995.

AGO-4. 82°00' S, 96°45' E. An American automated weather station, at an elevation of 3597 m, on the Polar Plateau. Installed in Jan. 1994.

AGO-5. 77°13' S, 123°30°E. An American automated weather station, at an elevation of 3519 m, way inland from Victoria Land. Installed in Jan. 1996.

AGO-6. 69°30' S, 130°00' E. An American automated weather station, at an elevation of 2343 m, inland from the Wilkes Coast. Installed in Jan. 1997.

AGO-A77. 77°30' S, 23°25' W. An American automated geophysical observatory in Coats Land, at an elevation of 1545 m. Installed on Jan. 24, 1992, and still operating in 2009.

AGO-A80. 80°54' S, 22°15' W. An American automated geophysical observatory on Recovery Glacier, in the Shackleton Range, at an elevation of 1200 m. Installed on Jan. 15, 1994, to replace Recovery Glacier AWS. It was still operating in 2009.

AGO-A81. 81°30' S, 3°00' E. An American automated geophysical observatory on the Polar Plateau, at an elevation of 2410 m. Installed in Jan. 1993. It was closed in Jan. 1994, but reopened on Jan. 11, 1996, and was still operating in 2009.

AGO-A84. 84°23' S, 23°54' W. An American automated geophysical observatory on the Polar Plateau, at an elevation of 2103 m. Installed on Jan. 11, 1996, but removed in Oct. 1997.

Punta Agradable. 65°31' S, 64°08' W. A point of land forming the extreme N end of the peninsula that projects into the Grandidier Channel, and separates Beascochea Bay from Leroux Bay, off the W coast of the Antarctic Peninsula. Named by the Argentines in 1978 for the corvette *Agradable*, which formed part of Admiral Brown's famous squadron. The Chileans call it Punta Chaura, after Pedro Chaura, who was on the *Yelcho* during the 1916 rescue of Shackleton's men during BITE 1914-17.

Cabo Agrelo. 62°14' S, 59°04' W. A cape on the NW coast of Nelson Island, and the W edge of Fildes Strait, in the South Shetlands. Discovered by ArgAE on the *Bahía Aguirre* in 1972-73, and named by them in 1978 for Dr. Pedro Agrelo, patriot and journalist. The Chileans call it Cabo Cariz, after leading fireman Heriberto Cariz Cárcamo, who was on the *Yelcho* in 1916 when that ship rescued Shackleton's party during BITE 1914-17.

Punta Agrimbau. 64°08' S, 62°05' W. A point on the NE coast of Brabant Island, in the Palmer Archipelago. Named by the Argentines for Miguel Agrimbau, hydrographer there in 1933 and 1935.

Ensenada Aguayo. 66°24' S, 65°39' W. A bay, 5 km wide at its mouth, which indents the W coast of the Antarctic Peninsula for 5 km, opening about 11 km SE of Cape Bellue. Named by the Chileans for Capitán de fragata Carlos Aguayo Ávila, commander of the *Piloto Pardo* during ChilAE 1963. The Argentines call it Ensenada Pantera, in association with Panther Cliffs, the feature which dominates the head of the bay.

Montes Aguayo. 63°11' S, 55°56' W. A group of nunataks which emerge from the ice covering the central part of Joinville Island, opposite the extreme N part of the Antarctic Peninsula. Named by the Chileans for Anelio Aguayo Lobo (b. Aug. 21, 1933), veterinarian and expert in marine mammals, director of the Montemar marine biology department of the University of Chile, who participated in the first mammal census in this area during ChilAE 1965-66. He also pioneered the conservation of marine mammals in the Gulf of California. The Argentines call this feature Los Pozos (i.e., "the wells"). *See also* **Punta Aguayo**.

Punta Aguayo. 62°27' S, 60°47' W. A point directly to the SSE of Punta La Caverna, on the E coast of Cape Shirreff (the northernmost point of Livingston Island), in the South Shetlands. Named by the Chileans for Anelio Aguayo Lobo (*see* **Montes Aguayo**, above), who flew over here in a Chilean Navy helicopter during ChilAE 1965-66.

Bahía Aguda. 76°09' S, 26°45' W. At least that is the Argentines' plotting of this bay. The Russians translated it internationally as Aguda Bay, and fixed it in 76°03' S, 27°03' W. It is to be found in the Dawson-Lambton Glacier, at the south of the Weddell Sea, in Coats Land (or Costa Confín, as the Argentines call it). It appeared on a 1954 map, and was named descriptively ("sharp point") by the commander of the Argentine ice-breaker *General San Martín*, there in 1955-56. *See also* **Cape Dedo**.

Punta Aguda *see* **Aguda Point**

Aguda Bay *see* **Bahía Aguda**

Aguda Point. 65°02' S, 63°41' W. It forms the E side of the entrance to Hidden Bay, separates that bay from Azure Bay, and lies 3 km E of Cape Renard, which forms the SW side of the entrance to Flandres Bay, on the Danco Coast, on the W coast of Graham Land. BelgAE 1897-99 charted it. ChilAE 1949-50 seems to have been the first to name it, as Punta Natho, after Commodore (later Admiral) Alfredo Natho Davidson, and it appears on a Chilean chart of 1962, and in the Chilean gazetteer of 1974. It appears on a 1954 Argentine chart as Punta Larga (i.e., "long point"), but on a 1957 Argentine government chart as Punta Aguda, the descriptive name meaning "sharp" in Spanish. The Argentines still call it that. Between 1956 and 1958, a Royal Navy Hydrographic Survey unit surveyed it, from the *John Biscoe*. On July 7, 1959, UK-APC named it Eclipse Point, and they still call it that (but they are the only ones who do), because the Screen Islands, to the NW, tend to eclipse it from that direction. It appears as such on a British chart of 1960. The Americans merely translated the Argentine name, US-ACAN accepting the name Aguda Point in 1965.

Cerro Agudo *see* **Buddington Peak**

Monte Agudo *see* **Buddington Peak**

Pico Agudo *see* **Sharp Peak**

Punta Agüedo *see* **Agüedo Point**

Agüedo Point. 62°26' S, 59°47' W. On the N coast of Greenwich Island, S of Dee Island, in the South Shetlands. Named by the Chileans in 1998, as Punta Agüedo, the name was accepted by UK-APC on May 11, 2005, but as Agüedo Point. The British were the latest to replot this feature, in late 2008.

Cabo Agüero *see* **Cabo Arroyo**

Caleta Águila *see* **Eagle Cove**

Isla Águila *see* **Eagle Island**

Islas Águila. 63°40' S, 57°36' W. A group of 6 islands situated in the entrance to Duse Bay, and toward the SW of it, in the Prince Gustav Channel, in the part of that channel that separates Vega Island from the W coast of the Antarctic Peninsula. The name first appears on a Chilean chart of 1962. These may be the same islands discovered in 63°40' S, 57°29' W, by the Argentines, and named Islas Andersson. Either way, Eagle Island is the largest of this group, and for a much more detailed history of Eagle Island, and also of the group, see that entry.

Caleta Aguilera. 62°05' S, 58°29' W. An inlet, about 1.1 km wide at its mouth, which indents the W coast of Mackellar Inlet for 1.1 km immediately to the SW of Caleta Aldea, in Admiralty Bay, King George Island, in the South Shetlands. It was studied by the crew of the *Bahía Aguirre* during ArgAE 1973-74, and named by them for Don José Antonio Olmos de Aguilera (1775-1831), Catamarca's representative on the Junta Grande in 1810. The name was approved in 1978. The Chileans named it Caleta Suazo, for CapitáArn de fragata Roberto Suazo Francis, commander of the *Piloto Pardo*, which rescued the tourist ship *Lindblad Explorer*, when that vessel ran aground for the 2nd time in 1979.

Mogotes Aguilera. 67°27' S, 59°42' W. Two truncated and isolated points projecting from Canto Point (the N limit of the entrance to Discovery Bay, and the extreme NE point of Greenwich Island), in the South Shetlands, and rising to about 40 m, very close to one another, the N one being the lower. They were discovered and named by ChilAE 1947, one of whose members was hydrographer Manuel Aguilera, who was working the NE part of Greenwich Island that year, during a survey of Discovery Bay.

Isla Aguirre *see* **Islote Aguirre**

Islote Aguirre. 63°19' S, 57°56' W. An islet, immediately and directly to the W of Gándara Island, in Covadonga Harbor, just S of Cape Legoupil, in Trinity Peninsula, off the W coast of the Antarctic Peninsula. Discovered by ChilAE 1947, and named by them as Isla Cap. Aguirre, for Capt. Eneas Aguirre Sersic, of the Chilean Army, who was on the expedition. In 1951 the name was shortened to Isla Aguirre, and later, it really not being big enough to be an island, to Islote Aguirre.

Aguirre Cerda *see* **Presidente Pedro Aguirre Cerda Station**

Canal Aguirre Cerda *see* **Aguirre Passage**

Aguirre Passage. 64°49' S, 62°51' W. A marine channel, off the W coast of the Antarctic Peninsula, between Lemaire Island (it runs along the E coast of that island in a general NNE-SSW direction) and the Danco Coast, on the W coast of the Antarctic Peninsula, permitting northern access to Paradise Harbor. The passage was navigated by the *Belgica*, 1897-99, and was known to Norwegian whalers from 1913. The British Imperial Antarctic Expedition of 1920-22 named it Paradise Channel, in association with Paradise Harbor, but following ChilAE 1950-51, Chile re-named it Canal Aguirre Cerda, for Pedro Aguirre Cerda (1879-1941), president of Chile from 1938 to 1941, who, on Nov. 6, 1940, by Supreme Decree, fixed the boundaries of the Chilean Antarctic claim. It appeared thus on the expedition chart of 1951, but also appears as Canal A. Cerda. The Chilean expeditions operated a scientific station here, at Waterboat Point — Presidente Pedro Aguirre Cerda Station — from 1951 to 1973. The passage appears as Canal Aguirre Cerda in the Chilean gazetteer of 1974. UK-APC accepted the name Aguirre Passage on Feb. 7, 1978, and that name appears in the British gazetteer of 1980. US-ACAN followed the British lead. The Argentines have been somewhat frustrated with this feature, in that the Chilean name of Aguirre has become so intrenched in international usage that to call it by any other name would not only be a futile gesture but also self-defeating (no one would be able to find it). Despite that, the Argentines named it Pasaje Marinero (i.e., "mariners' passage"), for the sailors on board the *Chiriguano* during ArgAE 1949-50, and it appears as such on a 1954 Argentine chart.

Monte Aguja Ternyck *see* **Ternyck Needle**

The *Agulhas*. South Africa's 6123-ton polar oceanographic research ship of LRS Ice Class 1, built in 1977 by Mitsubishi Heavy Industries, in Shimonoseki, Japan. Steel-hulled and ice-strengthened, she was 111.95 m long, 18.05 m wide, could cruise at 12.5 knots and had a maximum speed of 14 knots. She had a crew of 40, and could take an additional 98 scientific and other staff. 1977-78 was the last year in Antarctica for the regular South African relief ship *R.S.A.*, and the *Agulhas* went to Marion Island that season (not to Antarctica proper, however). The following season, she took over from the *R.S.A.*, as supply and relief ship for Sanae Station. Her seasons in Antarctica were: 1978-79 and 1979-80 (Capt. Johann Ernst Funk both voyages), 1980-81, 1981-82, 1982-83, 1983-84, 1984-85, 1985-86 (she also helped to relieve the German expedition that season), 1986-87, and 1987-88 (Capt. William MacDonald Leith on all voyages), 1988-89, 1989-90, and 1990-91 (Capt. Henk Toxopeus and Capt. Leith on all three voyages), 1991-92 (Capt. Leith; she suffered damage in the pack-ice), 1992-93, 1993-94, and 1994-95 (Capt. Kevin Denning on all three voyages, but with Capt. Leith also on the first voyage), 1995-96 and 1996-97 (captains Leith and Robert John Pieters on both voyages), 1997-98 (captains Leith, Pieters, and M.J. van Loon), 1998-99 and 1999-2000 (Capt. William MacDonald Leith again, for both voyages; again she helped relieved the Germans), 2000-01, 2001-02, 2002-03 (Capt. Kevin Tate), 2003-04, 2004-05 (Capt. Frikkie Viljoen; his wife, Amanda, was chief officer of the *Sarah Baartman*), 2005-06, 2006-07, 2007-08 (Capt. Freddie Ligthelm; on Sept. 28, 2007 — not in Antarctica — 22 year-old Brooklyn sailor Edward Hulley was stabbed to death aboard ship, after a drunken party), 2008-09 (Capt. Ligthelm), 2009-10.

Bajo Agurto. 63°19' S, 57°54' W. The low lying shoal that encircles Agurto Rock, Silvia Rock, and Rosa Rock, in the Duroch Islands, 550 m N of the extreme NE of Cape Legoupil, off Trinity Pensinula, off the W coast of the Antarcic Peninsula. Named by ChilAE 1947-48, as Bajo Contramaestre Agurto, for the bosun named Agurto who was part of the expedition. In 1951 the Chileans shortened the name.

Islote Agurto *see* **Agurto Rock**

Agurto Rock. 63°18' S, 57°54' W. Just NW of Silvia Rock, in the Duroch Islands, off Trinity Peninsula, off the W coast of the Antarctic Peninsula. Named originally by the ChilAE 1947-48 as Isla Elena Cerda de Bulnes, for the wife of Manuel Bulnes Sanfuentes (*see* **Bulnes Island**). On 1951 Chilean maps, it figures as Isla Elena, but that very year the name was changed to Isla Agurto, in association with Bajo Agurto (q.v. above). Because it is an islet (or rock) rather than an island, the name was changed to Islote Agurto, and it appears as such on a Chilean government chart of 1959. US-ACAN accepted the name Agurto Rock in 1964.

Rocas Agustín *see* **Austin Rocks**

Mount Ahab. 65°26' S, 62°11' W. A conspicuous mountain rising to 925 m between the lower ends of Mapple Glacier and Melville Glacier, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Roughly surveyed (and wrongly fixed) by Fids from Base D in 1947, and re-surveyed by them in Oct. 1955. Named by UK-APC on Sept. 4, 1957, for the character in *Moby Dick*. It appears in the British gazetteer of 1958, but with the name erroneously applied to a peak between Melville Glacier and Pequod Glacier. This error was perpetuated on a British chart of 1961. It was re-surveyed by BAS in Aug. 1962, and the whole situation was amended. US-ACAN accepted the name (and the new situation) in 1963, and in the British gazetteer of 1964 it appears with the amended coordinates.

Aheloy Nunatak. 62°38' S, 60°08' W. Also called Aheloyski Nunatak. A rocky peak in the upper part of Huron Glacier, 1.6 km ESE of Tukhchiev Knoll, 2.55 km S of Maritsa Peak, 1.6 km NNE of Zograf Peak (to which it is linked by Lozen Saddle), and 275 m NNE of Erma Knoll, on Livingston Island, in the South Shetlands. It forms the NE extremity of a minor ridge featuring also Erma Knoll and Lozen Nunatak. The Bulgarian Tangra topographic survey of 2004-05 were the first to visit it, on Dec. 31, 2004, and they mapped it in 2005. Named by the Bulgarians on April 11, 2005, for the Black Sea settlement of Aheloy.

Aheloyski Nunatak *see* **Aheloy Nunatak**

Ahern Glacier. 81°47' S, 159°10' E. A small tributary glacier flowing E from the vicinity of Mount Massam, between Mount Lindley and Mount Hoskins, in the Churchill Mountains, to enter Starshot Glacier. Discovered by the Holyoake, Cobham, and Queen Elizabeth Ranges Party of NZGSAE 1964-65, and named by them for Brian Richard Ahern, the NZ carpenter (from Porirua) at Scott Base, who was flown in as a field assistant to the party when J.M.A. Chappell got sick. NZ-APC accepted the name on July 15, 1965, and US-ACAN followed suit in 1966, as did ANCA on Aug. 10, 1966.

Glaciar Ahlmann *see* **Ahlmann Glacier**

Ahlmann Glacier. 67°52' S, 65°45' W. The more southerly of 2 glaciers, separated by Cape Church, and flowing E into the S part of Seligman Inlet, on the Bowman Coast, on the E coast of Graham Land. Photographed aerially in 1940 by USAS 1939-41, it was surveyed from the ground in 1947 by Fids from Base D and Base E, who, in association with the names of other glaciologists who have lent their names to certain features in this area, named it on Jan. 22, 1951, for Prof. Hans Jacob Konrad Wilhelmsson Ahlmann (1889-1974), the Swedish geographer and glaciologist who was chairman of the Swedish Committee for NBSAE 1949-52. US-ACAN accepted the name in 1952. The name appears on a British chart of 1954 and in the British gazetteer of 1955, with the coordinates 67°52' S, 65°50' W. The Argentines first published the translated name Glaciar Ahlmann on a 1957 chart, and still call it that today, as do the Chileans. The feature has since been replotted.

Ahlmann Ridge. 71°50' S, 2°25' W. A large, broad, mainly ice- and snow-covered ridge, 112 km long, surmounted by scattered nunataks in the N part and low peaks in the S part. It rises between Schytt Glacier and Jutulstraumen Glacier and extends from the Borg Massif northward to the Fimbul Ice Shelf, in the easternmost part of Maudheimvidda, in the W part of Queen Maud Land. The area was first photographed aerially by GerAE 1938-39, and the features roughly plotted from those photos. The Stein Nunataks and the Witte Peaks, named by Ritscher, seem to be the same thing as the NE part of the Ahlmann Ridge, which was mapped in detail from ground surveys and air photos by NBSAE 1949-52, and again from air photos taken in 1958-59, during the long NorAE 1956-60. Named by international agreement, for Hans Ahlmann (*see* **Ahlmann Glacier**). The Norwegians and Russians call it Ahlmannryggen. US-ACAN accepted the name Ahlmann Ridge. Originally plotted in 71°50' S, 2°30' W, it has since been replotted.

Ahlmannryggen *see* **Ahlmann Ridge**

Ahlstad Hills. 71°50' S, 5°30' E. A group of rock hills, just E of Cumulus Mountain, in the Mühlig-Hofmann Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Ahlstadhottane (i.e., "the Ahlstad hills"). US-ACAN accepted the name Ahlstad Hills in 1967.

Ahlstadhottane *see* **Ahlstad Hills**

Ahmadjian Peak. 83°41' S, 168°42' E. A prominent ice-covered peak, rising to 2910 m, 7 km SW of Mount Fox, in the Queen Alexandra Range. Named by US-ACAN in 1965, for Clark University botanist, Prof. Vernon Ahmadjian (b. May 19, 1930, Whitinsville, Massachusetts), a Usarp at McMurdo in 1963-64. NZ-APC accepted the name on Nov. 16, 1965.

Ahrnsbrak Glacier. 79°48' S, 82°18' W. In the Enterprise Hills of the Heritage Range, it flows N between Sutton Peak and Shoemaker Peak to the confluent ice at the lower end of Union Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for William Frederick Ahrnsbrak (b. 1942), USARP glaciologist from Ohio State University, who was at Palmer Station in 1965.

Ahtopol Peak. 62°33' S, 60°09' W. A sharp peak rising to 510 m in Vidin Ridge, 1.2 km SE of Miziya Peak, 4.1 km NE of Leslie Hill, and 6.6 km N of Melnik Peak, in Livingston Island, in the South Shetlands. Mapped by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the Bulgarian town of Ahtopol, on the Black Sea.

Mount Aidwich *see* **Mount Aldrich**

Aiken, Alexander "Alec." b. Sept. 6, 1853, Peterhead, Aberdeenshire, son of sailor Alexander Aiken and his wife Margaret Smith. He married a Perth girl, Ann, about 1881, and moved to Dundee where they raised a family. Alec was bosun on the *Terra Nova* during the 1903-04 relief of BNAE 1901-04.

Aiken Creek. 77°36' S, 163°17' E. A glacial meltwater stream in the Taylor Valley, in Victoria Land, which flows N from the unnamed glacier W of Wales Glacier to Many Glaciers Pond, then W to Lake Fryxell. Just over 6 km long, it receives some tributary flow from Wales Glacier. The name was suggested by USGS hydrologist Diane McKnight, team leader here, 1987-94, to honor fellow USGS hydrologist George Richard Aiken, a member of the field team for 3 of those summer seasons, 1987-91, who assisted in establishing stream-gaging stations on the streams flowing into Lake Fryxell, 1990-91. US-ACAN accepted the name in 1992.

Aiken Glacier. 77°38' S, 163°24' E. A small glacier between Von Guerard Glacier and Wales Glacier, on the N slope of the Kukri Hills, in Victoria Land. Named by NZ-APC on Jan. 30, 1998, in association with Aiken Creek, which flows N from this glacier into Taylor Valley. US-ACAN accepted the name on Sept. 25, 1998.

Ailsa Craig. 60°47' S, 44°37' W. A small, precipitous island, rising to an altitude of 170 m above sea level, 1.5 km S of Point Rae, off Scotia Bay, on the S coast of Laurie Island, in the South Orkneys. Charted on Sept. 22, 1903, by ScotNAE 1902-04, and named by Bruce for its resemblance to the island in the Firth of Clyde, in Scotland. Informally, Bruce's party called it The Craig. It appears on a British chart of 1916 as Ailsa Craig Islet, and on Argentine maps of 1930, 1945, and 1947, as Isla Ailsa Craig. US-ACAN accepted the name Ailsa Craig in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955.

Isla Ailsa Craig *see* **Ailsa Craig**

Ailsa Craig Islet *see* **Ailsa Craig**

Aim Rocks. 62°42' S, 61°16' W. A group of rocks E of Cape Timblón, between Snow Island and Livingston Island, in the middle of Morton Strait, in the South Shetlands. Photographed from the air by FIDASE in 1956-57, they were named descriptively by UK-APC on Aug. 31, 1962. If you line up the rocks they are a guide through the S entrance of Morton Strait. US-ACAN accepted the name in 1965. The British were the latest to replot this feature, in late 2008.

Ainley Peak. 77°30' S, 169°02' E. A prominent peak rising to 1240 m, 4.8 km SW of Post Office Hill, in eastern Ross Island. Named by NZ on Nov. 4, 1999, for David George "Dave" Ainley (b. April 3, 1946, Bridgeport, Conn.), ornithologist at the Point Reyes Bird Observatory, Stinson Beach, Calif., who studied penguin and skua populations at Crozier Point and McMurdo Sound, in six seasons between 1969-70 and 1983-84. The name was accepted by NZ-APC on Nov. 4, 1999, and by US-ACAN on May 19, 2000.

Ainsworth Bay. 67°48' S, 146°37' E. An open bay, 8 km wide, an ice-filled recession of the coastline, between Cape Bage and Cape Webb, in George V Land. Discovered in 1912 by AAE 1911-14, and named by Mawson for George Frederick Ainsworth (1878-1950), leader and meteorologist of the expedition's party on Macquarie Island (he never made it to Antarctica proper). It has been notoriously difficult to fix its position with accuracy. US-ACAN accepted the name in 1949.

Air-Cushion Vehicles. In Jan. 1988 the Hake Hover Systems Husky 1500 ACV arrived at McMurdo and was soon re-assembled. It was the first time an ACV had been used in Antarctica by Americans as a cargo transporter. The Japanese were experimenting with ACVs at Showa Station at that time. The Husky can reach 35 mph, carry 14 people, operate in strong headwinds, and stop very suddenly. It made a trip in 47 minutes on the Ross Ice Shelf which would have taken an ordinary vehicle 3 hours.

Air National Guard. When the name Air National Guard is mentioned in terms of Antarctica, what is really meant is the 109th Airlift Wing which, since 1988, has provided airlift support to the National Science Foundation's USAP. It operated LC-130H aircraft. The unit was established in 1948 as a USAF fighter unit. They first went south in Jan. 1988, in support of VXE-6, and continued in this role for 8 years. In early 1996 it was announced that they would take over from VXE-6. Thus began a 3-year transition process, and on Feb. 20, 1998, in Christchurch, NZ, a ceremony was held whereby responsibility was officially handed over to 109 AW.

Air Operating Facility McMurdo *see* **McMurdo**

Aircraft *see* **Aerial photography**, **Airplanes**, **Autogiros, Ballooning**, **Helicopters**

Airdale. A term used in Antarctica for any fly boy or other person connected to the Air Force. It is sometimes claimed that the first airdale was Dick Patton, in late 1956, the man who parachuted over the Pole as they were building the station. His nickname was "Airdale," and the name stuck. He may have been the first airdale in Antarctica, but he wasn't the first airdale. The term had been long in use by the time Patton dropped over the Pole.

Airdevronsix Glacier. 77°31' S, 160°20' E. A major glacier flowing SE to Airdevronsix Icefalls, in Victoria Land. Named by NZ-APC on Nov. 30, 2004, for VX-6 (*see* **Airdevronsix Icefalls**). US-ACAN had proposed the name Delinski Glacier (q.v.), but, as the entire area above Airdevronsix Icefalls is called "Airdevronsix," NZ-APC decided to go with Airdevronsix Glacier.

Airdevronsix Icefalls. 77°31' S, 160°22' E. A line of icefalls at the head of (and feeding) Wright Upper Glacier, in Victoria Land. Named by OpDF 1956-57, for VX-6 (AirDevRon Six). US-ACAN accepted the name in 1960, and NZ-APC followed suit on May 24, 1961.

Airdrop Peak. 83°45' S, 172°45' E. A twin-peaked mountain rising to 890 m, at the N end of the Commonwealth Range. It is the first prominent feature in Ebony Ridge when approached from the NW. So named by the NZ Alpine Club Antarctic Expedition, 1959-60, because a VX-6 R4D airplane air-dropped a radio to them on Dec. 11, 1959, after their own had broken down while they were making observations from the higher of the two peaks. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1965.

Airdrops. Essentially airdrops stock and restock bases. They were especially significant during OpDF (which began in 1955 and continued to 1997). During IGY they were led by the 61st Troop Carrier Group headed by Col. William Forwood.

Airey, Leonard Raymond "Len." b. Feb. 25, 1948, St. Austell, Cornwall. Ionosphere physicist who joined BAS on July 7, 1980, and wintered-over at Faraday Station in 1981 and 1982, the second time as base commander. On Aug. 13, 1984 he was appointed base commander of Halley Bay Station for the winter of 1985. He wrote *On Antarctica*.

Airfields *see* **Airstrips**

Airglow. Faint luminescence of the entire upper atmosphere (*see also* **Phenomena**). Caused probably by the breakdown of air molecules by solar radiation, and their subsequent re-combination.

Airlifts. Opposite to airdrops. The first was the rescue of Balchen, June, and Gould, on March 22, 1929, by Byrd and Smith during ByrdAE 1928-30. The three men had flown out to the Rockefeller Mountains in the *Virginia*, but the plane was destroyed in a gale near Washington Ridge at 78°48' S, 155°15' W. Parts of it were salvaged by Dane, Moody, and Swan during ByrdAE 1933-35.

AirOpFac McMurdo *see* **McMurdo**

AirOpFacts. Newspaper begun at McMurdo in the winter of 1956. It would eventuually become the *Antarctic Bulletin*.

Airplanes. Airplanes revolutionized Antarctic exploration, taking only a few hours to make a trip that it would have taken the old explorers months to make by land. It also cut out a great deal of the hardship and heroics. It was not only the explorers who pioneered the use of the plane in Antarctica, but the whalers too, especially the Norwegians who had planes on their factory ships from the late 1920s. Following are some of the landmarks in Antarctic aviation history. **Dec. 2, 1912**: The first test run of an airplane in Antarctica. Mawson took a collapsible Vickers REP monoplane (cost: £900) with him on AAE 1911-14. It got damaged in Adelaide even before he left Australia, and he decided to try it as an "air tractor sledge" without the wings. It was still a failure. **Nov. 16, 1928**: The first plane to fly in Antarctica. A wheel-equipped Lockheed Vega monoplane named *Los Angeles*, flown for 20 minutes by Ben Eielson and Hubert Wilkins on Deception Island. **Nov. 23, 1928**: Joe Crosson flew the *Los Angeles* on a few short trips. **Nov. 26, 1928**: Wilkins' two Lockheed Vega monoplanes took off from Deception Island looking for a more suitable base. **Dec. 1, 1928**: The *Los Angeles* and the *San Francisco* both took off from Deception Island (*see* **Wilkins-Hearst Expedition**). **Dec. 9, 1928**: Wilkins flew over Snow Island. **Dec. 17, 1928**: The *San Francisco* went up on a scouting mission. **Dec. 19, 1928**: Wilkins and Eielson flew 1300 miles in 11 hours over Graham Land at 6000 feet at 120 mph, to as far south as 71°20' S, 64°15' W, before they turned back. **Jan. 10, 1929**: Wilkins and Eielson flew 500 miles over Graham Land. **Jan. 15, 1929**: Alton Parker and Benny Roth made the first flight during ByrdAE 1928-30, in the *Stars and Stripes*. In fact the *Stars and Stripes* made 7 flights that day, each flight averaging half an hour, with different pilots flying. Byrd flew one himself for an hour and 20 minutes. Byrd pioneered the use of the plane in Antarctica throughout his many expeditions, using ski planes more and more as time went by. On his first expedition, 1928-30, his three planes were the *Floyd Bennett*, the *Virginia*, and the *Stars and Stripes*. A fourth plane never got to Antarctica. **Jan. 27, 1929**: Balchen and Byrd flew over King Edward VII Land for 5 hours. **March 7, 1929**: Balchen, June, and Gould flew to the Rockefeller Mountains (*see* **Airlifts**, to find out what happened to them). **Nov. 29, 1929**: The first flight over the South Pole. Balchen, Byrd, June, and McKinley in the *Floyd Bennett*. Byrd had already flown over the North Pole (or, at least, so he claimed). **Dec. 5, 1929**: Byrd discovered Marie Byrd Land by plane. **Dec. 7, 1929**: Riiser-Larsen flew over the Enderby Land coast in a seaplane from his ship, the *Norvegia*. **Dec. 19, 1929**: Cheesman and Wilkins made a flight. **Dec. 22, 1929**: Riiser-Larsen discovered much territory in Queen Maud Land. He had brought two planes to Antarctica and, during the 1930s, in their exploration of Queen Maud Land, the Norwegians would use planes a great deal. **Dec. 27, 1929**: Wilkins and Cheesman flew over Charcot Land. **Dec. 29, 1929**: Wilkins and Cheesman flew over Charcot Land again, proving it to be an island, and claiming it for Britain. **1929-1931**: Mawson used planes on BANZARE where ice prevented an approach to the mainland by ship. **Jan. 5, 1930**: Parker Cramer flew from Port Lockroy to Deception Island. **Jan. 30, 1930**: Wilkins managed a local flight over the pack ice. **Feb. 1, 1930**: Wilkins and Cheesman flew 460 miles round-trip over Graham Land. **1933-1935**: Byrd took three planes and an autogiro on his expedition (*see* **Byrd's 1933-35 Expedition**). **Nov. 23-Dec. 15, 1935**: The first aerial transantarctic crossing, by Ellsworth and Hollick-Kenyon. **1936-37**: Lars Christensen used a Stinson SR.8EM Reliant, LN-BAR. **1939-41**: Much use of planes made during USAS. **1946-1947**: Operation Highjump (q.v.) took a total of 25 aircraft, including 7 helicopters (q.v.). This was the first time planes the size of Dakotas had landed on the continent. **1947-1948**: RARE took 3 planes: a twin-engine Beechcraft C-45, the photographic plane; a Noorduyn C-64 Norseman, a single-engine cargo plane developed in Canada for cold-weather operations; and a Stinson L-5, a two-seater reconnaissance plane. All three aircraft had skis. **Dec. 13, 1947**: An Argentine C-54, piloted by Gregorio Portillo, made a non-stop flight from Piedrabuena, in Santa Cruz, to Deception Island, dropped mail, then went on to the Melchior Islands, crossed the Antarctic Circle, then over Adelaide Island, and then returned to Argentina. **Feb. 7, 1952**: Two Argentine Catalinas, piloted by Guillermo J. Campbell and Edgardo S. Andrew, in a flight commanded by Pedro E. Iraolagoitía, flew from Tierra del Fuego to Deception Island, in the South Shetlands, returning to Buenos Aires on Feb. 10. A second flight was made March 2-6, 1952. **Dec. 20, 1955**: the first planes came in flown from another continent (*see* **Operation Deep Freeze I** for details). **Dec. 28, 1955**: Comandante de escuadrilla Humberto Tenorio Iturra, of Chile, flew the first non-stop return flight from Punta Arenas to Deception Island, in a Skua. **Oct. 31, 1956**: The *Que Sera Sera*, piloted by Gus Shinn, and carrying Admiral Dufek (among others), was the first plane to land at the South Pole. By the 1950s planes were a fundamental part of Antarctic life, being used as support, supply, and exploration vehicles. **Oct. 15, 1957**: The first commercial flight to visit the continent came to McMurdo and brought, among others, two stewardesses (*see* **Women in Antarctica**). **Jan. 1960**: The first Hercules flew into Antarctica (7 of them, actually), to replace the old Globemasters. **April 10, 1961**: The first nocturnal flight and landing was the American mission to take Leonid Kuperov out of Byrd Station for medical treatment. *See* **Newcomer, Loyd E.**, for details. **Oct. 2, 1963**: two ski-equipped Hercules LC-130 airplanes, BTW 318 and BTW 320, made a historic flight from Cape Town to McMurdo, opening up a new route to the great white south. Admiral Reedy conceived and led the flight. The two planes were piloted by George R. Kelly and Bill Kurlak, resp. There were 20 crewmen and 8 passengers. **Nov. 14-17, 1965**: J.L. Martins flew a Boeing 707 from Honolulu, around the world, and over the North and South Poles, the first ever such flight. **Dec. 2, 1967**: The last flight of the "Gooney Bird," the nickname of the LC-47H Dakotas, from Hallett Station to McMurdo. The Gooney Bird was replaced by the Hercules LC-130, "The Workhorse of Antarctica," which revolutionized scientific exploration on the continent. **1982**: An air route was established by the USSR between the city of Maputo (in Mozambique, Africa) and Molodezhnaya Station. **1989**: The first MAC C-58 Galaxy landed at McMurdo, from Christchurch, NZ. It was the largest plane operated by the Americans.

Airports *see* **Airstrips**

Airstrip Crater. 62°59' S, 60°35' W. An explosion crater between Kroner Lake and Kendall Crater, NW of Whalers Bay, Deception Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for a disused old airstrip there.

Airstrips. Included in this entry are airports, airfields, aerodromes, runways, etc. Most of the scientific stations in Antarctica have an airstrip of one kind or another, and by far the biggest and most used has been Williams Field ("Willy Field") at McMurdo. As of 2009, there were 32 airports in Antarctica. The original (it has gone through several metamorphoses—*see* **Williams Field** for further details) was built in two days, Dec. 18-20, 1955, and a flight came in from an outside base for the first time in Antarctic history. It was also the first time wheeled aircraft had landed on the ice (at least, Antarctic ice). The strip was 8000 feet long. But it was not the first airstrip by any means. The first was on the ice in Port Foster, Deception Island, during the Wilkins-Hearst Expedition of 1928-29. It was 880 yards long and very dangerous. The next was on the beach, a few days later. Wilkins called it Hoover Field, and he took off from here on the first Antarctic flight (*see* **Airplanes**). The first airstrip proper was built at Little America IV in 1946-47 during Operation Highjump. Many airstrips were built during IGY (1957-58). Byrd Station's airstrip was called Byrd Airfield, and Little America V's was called Kiel Field. The Russians seem to favor packed-snow airstrips—one was built at Novolazarevskaya in 1985, 2760 m long, and similar to the one already in operation at Molodezhnaya, which is 2500 m long, and had an improvised snow and ice strip. The one at Vostok Station is 3900 m long, and that at Mirnyy Station is 3000 m. The Russians also built one called Blue One, at the Henriksen

Nunataks (in 71°31' S, 8°47' E), and also one in the Patriot Hills, of 3000 m. In 1982-83 the French started a permanent, all-weather runway at Dumont d'Urville Station of 3600 feet long, and Chile's Teniente Rodolfo Marsh Station had one 1292 m in length (4238 feet). The Chileans constructed several small ones on the Antarctic Peninsula during 1982-83. In 1990 Showa Station (Japanese) had only a temporary, summer-only, runway on the ice. Argentina built a 1260-meter-long runway (4134 feet) at Vicecomodoro Marambio Station, and BAS built a gravel one at Rothera Station, 914 m (3000 feet). The Italians built theirs at what was then Baia Terra Nova Station, 2740 m long, on the sea ice. In addition to Willy Field (now gone), the Americans now have two additional runways at McMurdo. The closest one to McMurdo is called Ice Runway, or Sea-Ice Runway, and has become the most used of the three in the summer months, partly because of its closeness to McMurdo Station. Because it is on the sea-ice, it has to be built every year from scratch, and is used until the December, when the sea-ice starts to break up. At that point, traffic (was) diverted to Willy. Pegasus Field is the farthest south of the three, about 24 km from McMurdo Station. 3048 feet by 220 feet, its ice surface can take wheeled aircraft, whereas Willy Field, being snow, could take only ski-equipped planes. There is also the runway at Pole Station — the Jack F. Paulus Skiway — which is 3658 m (12,000 feet). There are other runways: Odell Glacier (2000 m), Mill Glacier (3000 m), Austhamaren Peak (2400 m), Queen Fabiola Mountains (2500 m).

Mount Airthrey. 78°02' S, 163°57' E. A prominent summit, rising to 1175 m, midway on the range that separates Garwood Valley from Marshall Valley, in the Southern Dry Valleys area. Named by one of the Scottish members of the K052 New Zealand biology team from Canterbury University (NZ), which had worked in this area. The name "ard ruigh" means "high ground" in Gaelic, and is also the name of the land upon which Stirling University was built. NZ-APC accepted the name on Aug. 14, 2002, and US-ACAN followed suit in 2005.

Airy Glacier. 69°13' S, 66°20' W. A glacier, 32 km long and almost 10 km wide, S of Anchor Crag, it flows W into the NE portion of the Forster Ice Piedmont, on the Fallières Coast, near the W coast of the Antarctic Peninsula. It was roughly surveyed by BGLE 1936-37, and fixed by them in 69°13' S, 66°01' W. It was photographed from the air by RARE on Nov. 27, 1947, and re-surveyed by Fids from Base E in Dec. 1958, and its position corrected. In keeping with the practice of naming certain features in this area after navigation pioneers, this glacier was named by UK-APC on Aug. 31, 1962, for Sir George Biddell Airy (1801-1892), British Astronomer Royal from 1835 to 1881, who in 1839 invented a method of correcting magnetic compasses for deviation that is still in use. US-ACAN accepted the name later in 1962.

Islas Aitcho *see* **Aitcho Islands**

Islotes Aitcho *see* **Aitcho Islands**

Aitcho Islands. 62°23' S, 59°47' W. A group of small islands — including Emeline Island, Barrientos Island, Cecilia Island (also known as Isla Torre), Passage Rock, Morris Rock, Bilyana Island, and Jorge Island — between Table Island and Dee Island, and extending across the central part of the NE entrance to English Strait, in the South Shetlands. Discovered by Capt. Robert Fildes in 1821. Charted for the first time by the Discovery Investigations in 1935, and named by them for the Hydrographic Office at the British Admiralty. They appear as such on a British chart of 1948. The name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. The islands appear in the British gazetteer of 1955. They were re-charted in 1967, by an RN Hydrographic Survey unit on the *Protector*, and appear on their chart of 1968. The Argentines have made various errors in mapping this group; they appear on a 1948 chart as Rocas Channel (i.e., "channel rocks"), and on a 1969 chart as Islotes Turner. As soon as they realized their mistake, they named (for themselves only) Barrientos Island (one of the group) as Islote Turner. Consequently, the islands appear on an Argentine map of 1991 as Islas Aitcho, but generally the Argentines call them Islotes Aitcho. The British were the latest to replot this feature, in late 2008.

Caleta Aitken *see* **Aitken Cove**

Puerto Aitken *see* **Aitken Cove**

Aitken, Aeneas. b. 1742, Fife, Scotland. On Feb. 13, 1772 he joined the *Resolution* as quartermaster for Cook's 2nd voyage, 1772-75. After the expedition he served on the *Favourite*, and then joined the *Discovery* as bosun on Feb. 17, 1776, for Cook's 3rd voyage. He married Mary, and they lived in Deptford. He died in 1806, while serving as bosun on the *Africa*.

Aitken, John "Antarctic Jack." b. Aug. 5, 1881, Speedwell Island, Falkland Islands, son of Scottish parents, shepherd Richard Aitken and his wife Christina McKinnon. In fact, young Jack inherited an almost impenetrable Scottish accent from his parents. Despite being a little bow-legged lad (he was only 4 foot 11, even as an adult), with brown eyes, a long drooping mustache (as an adult, that is), and a tremendously evil-smelling pipe (you could smell him coming), he became a cutter, i.e., a crewman on local boats that went around the islands. He was a crewman on the *Antarctica*, during SwedAE 1901-04, but, on the way south he left the expedition at Buenos Aires, on Dec. 15, 1901, with Frank Jenner. Jack made his way back to the Falklands, and on Aug. 29, 1902, signed on to the *Antarctic* again. On Sept. 5, 1902 the ship left Port Stanley, bound for Ushuaia, and on Nov. 5, 1902 left Ushuaia bound for Antartica, where she got trapped and then sunk, the men being marooned on Paulet Island for the 1903 winter. Jack had a memorable moment when he developed a toothache on the ice. All he had was a pair of scissors, so he worked the tooth loose with them, and then yanked it. The *Uruguay* picked him up from his frozen prison, and took him to Buenos Aires, where he transferred to the *Oravia*, which got him back into Port Stanley on Dec. 27, 1903. He went cutting again, and died on May 9, 1954. He is buried in Stanley Cemetery.

Aitken, Sydney *see* **Atkin, Sydney**

Aitken Cove. 60°45' S, 44°32' W. A cove off Fitchie Bay, immediately NE of Cape Whitson, along the S coast of Laurie Island, in the South Orkneys. Surveyed and charted on Sept. 22 and 30, 1903, by ScotNAE 1902-04, and named by Bruce that year for the secretary of the expedition, Alfred Niven Gillies Aitken (b. Jan. 15, 1858, Edinburgh), of Aitken & Methuen of Edinburgh, solicitors for the expedition. At first, Bruce wanted to call it Apedale Cove, but decided against it. Joseph Leonard A. Apedaile (sic) (b. Aug. 5, 1880, Braintree, Essex), known as Leonard, was the young accountant clerk at Whitson & Methuen, chartered accountants of Edinburgh. In 1911 Mr. Apedaile moved to Canada, becoming a well-known accountant in Quebec. The feature appears erroneously as Methuen Cove (q.v.) on a map drawn up by Harvey Pirie in 1913, and this error was perpetuated (briefly) on a 1916 British chart. The name Aitken Cove appears on the 1934 British chart prepared by the Discovery Investigations after their 1933 survey, and was accepted by UK-APC on Sept. 8, 1953. It appears in the 1955 British gazetteer. In 1945 it appeared on an Argentine chart as Caleta Aitken, and that is what the Argentines continue to call it, even though it also appeared on a 1953 Argentine chart as Puerto Aitken.

Aitken Nunatak. 85°42' S, 173°49' E. A small rock nunatak rising to 2785 m above sea level, to the immediate E of the Otway Massif, and 4.8 km SW of Mount Bumstead, in the Grosvenor Mountains. Named by US-ACAN in 1965, for William M. Aitken, USARP aurora scientist at Pole Station, 1962. NZ-APC accepted the name on Nov. 16, 1965.

Aitkenhead, Neil. b. Jan. 11, 1936, Newcastle, son of Harold Aitkenhead and his wife Mary A. Walker. After graduating from Durham University, he joined FIDS, and headed south in Oct. 1959, as geologist. In the *Shackleton*, he and Phil Nelson visited South Georgia and the islands in the Palmer Archipelago, and then he wintered-over at Base D in 1960 and 1961. In between winters, in early 1961, he made landings in the Joinville Island group, from the *Shackleton*. He mapped most of the east coast of Trinity Peninsula, being 422 days in the field. In early 1962 he was back in the Palmer Archipelago, during the summer of 1961-62. Back in the UK in 1962, he went to work at the BAS geology unit at Birmingham University, married Marion J. Bailey, in Birmingham, in 1963, and left BAS in Feb. 1965, moving to Yorkshire. In 1994 he was working with the British Geological Survey.

Aitkenhead Glacier. 63°57' S, 58°44' W. About 16 km long, it flows ESE from the Detroit Plateau, on Graham Land, to the Prince Gustav Channel, close N of Alectoria Island. Surveyed in 1960-61 by Fids from Base D, and plotted by

FIDS cartographers in 63°57' S, 58°50' W. Named by UK-APC on Feb. 12, 1964 for Neil Aitkenhead. US-ACAN accepted the name later that year. It has since been replotted.

The *Ajax*. A 7220-ton Royal Navy light cruiser, 554 feet long, built in 1934 and completed in 1935, which arrived at Port Stanley, in the Falklands, on Dec. 30, 1936, and on Jan. 9, 1937 left for South Georgia, arriving there on Jan. 11, 1937. When about 500 miles from the South Shetlands, she received a distress call to the effect that Lt. Walker and a boat crew of 5 officers and men from the *Discovery II* were missing on King George Island, in the South Shetlands, and could she come down and help the whaling ships look for them. The captain was Colin Sinclair Thomson, and the governor of the Falklands was aboard. Walker and his party had been landed at Esther Harbor and were planning to stay a week, and the *Discovery II* would come back for them. However, they had a series of adventures. The *Ajax*, capable of 32.5 knots, arrived on Jan. 18, 1937, and that evening one of her cutters, and some boats from the *Discovery II*, spotted the men about 9 miles from base. They were then taken aboard the *Discovery II*. The *Ajax* then sailed back to the Falklands. A couple of years later she took part in the Battle of the River Plate, and went down in history. She was also at Crete, Malta, Tobruk, and D-Day. She was going to be sold to Chile in 1948, but was decommissioned that year and broken up in Nov. 1949.

Mount Ajax. 71°48' S, 168°27' E. Rising to 3770 m, 1.5 km WSW of Mount Royalist, in the Admiralty Mountains. In keeping with the practice of naming certain features in this area after NZ ships, this mountain was named by NZGSAE 1957-58, for the *Ajax* (not to be confused with the British ship of the same name — *see* **The *Ajax***). US-ACAN accepted the name in 1967.

Ajax Icefall. 62°04' S, 58°21' W. An icefall that descends S between Stenhouse Bluff and Ullmann Spur to the head of Visca Anchorage, at Admiralty Bay, on King George Island, in the South Shetlands. Charted by FrAE 1908-10, surveyed by Fids from Base G in 1948, photographed aerially by FIDASE in 1956, and named by UK-APC on Sept. 23, 1960 for the *Ajax* (q.v.). US-ACAN accepted the name later that year. The British were the latest to replot this feature, in late 2008.

Ajmone-Cat, Giovanni *see* **The *San Giuseppe Due***

Ajmonecat Lake. 62°55' S, 60°40' W. A small lake, about 255 m wide, formed by the volcanic activity on Deception Island in 1967-69, about 400 m NE of Stancomb Cove, Deception Island, in the South Shetlands. Named by UK-APC on Aug. 26, 2009, for Giovanni Ajmone Cat (sic — and *see* **The *San Giuseppe Due***), who sailed into Stancomb Cove after the eruption of 1969.

The *Akademik Aleksandr Karpinskiy*. Known more popularly as the *Karpinskiy*, or "the *Karp*." A 4430-ton Russian ship, built in 1984, and named for Aleksandr Karpinskiy (*see* **Mount Karpinskiy**). She was used on RussAE 1993-95 (Capt. S. Ya. Zavgorodniy), RussAE 1994-96 (Capt. Zavgorodniy), RussAE 1995-97 (Capt. Zavgorodniy), RussAE 1997-99 (Capt. Sergey Temerev), RussAE 1998-2000 (Capt. Temerev), RussAE 1999-2001 (Capt. Temerev), RussAE 2000.

The *Akademik Boris Petrov*. Known informally as the *Boris Petrov*, or just the *Petrov*. A 4-decked, ice-strengthened Russian research vessel belonging to the V.I. Vernadskiy Institute. She was in Antarctic waters in 1991-92, visiting the South Shetlands, the South Orkneys, and the Antarctic Peninsula. She was back in 1995-96, as a tourist ship, under the command of Capt. Igor Viktorov. That same season, under Capt. Gennadiy Yusupov, she relieved the Ukrainian station. In 1999-2000 she also chartered out as a tourist ship, with Peregrine Adventures, of Melbourne, and, as such, went under the name *Peregrine Explorer*, or *Peregine Endeavour*. She could take 52 passengers from Ushuaia to the South Shetlands, the South Orkneys, and the Antarctic Peninsula, for a trip lasting between 9 and 11 days. Capt. Viktorov again. In 2005-06 she was chartered by the Indian Antarctic Expedition of that season, to conduct a detailed bathymetric survey in the Larsemann Hills, as part of the plans for establishing the Indians' third Antarctic station there.

The *Akademik Federov*. Name also seen as *Akademik Fedorov*, or (probably more correctly) *Akademik Fyodorov*. Built by Rauma-Repola, of Savonlinna, Finland, launched on Feb. 27, 1987, and completed that August, she was a 4700-ton, 141.2-meter, red-and-white Russian research and supply icebreaker, sister ship to the *Mikhail Somov*, built specifically for Antarctic voyages, and capable of 16 knots. Owned by the USSR State Committee for Hydrometeorological and Environment Control, she had 12 laboratories on board and a helicopter pad on her aft deck. She took part in SovAE 1987-89, and worked in the northern Weddell Sea in 1989. Captain that voyage was Mikhail Yermolayevich Mikhaylov. She was back for SovAE 1989-91 (Capt. Mikhaylov), SovAE 1990-92 (Capt. Mikhaylov), SovAE 1991-93 (Capt. Valeriy Aleksandrovich Viktorov; she also took down the Nordic Antarctic Research Program expedition of 1991-92), RussAE 1992-94 (Capt. Mikhaylov), RussAE 1993-95 (Capt. Mikhaylov; she helped relieve Sanae Station), RussAE 1994-96 (Capt. Viktorov), RussAE 1995-97 (Capt. Mikhaylov), RussAE 1996-98 (Capt. Viktorov), and RussAE 1997-99 (Capt. Mikhaylov). She was in the Arctic in the fall of 1998, then back in Antarctica for RussAE 1998-2000 (Capt. Mikhaylov), RussAE 1999-2001 (Capt. Mikhaylov), and every season thereafter. She was in the Arctic in the fall of 2004, and the fall of 2007.

The *Akademik Fedorov* *see* **The *Akademik Federov***

Akademik Fedorov Canyon. 72°45' S, 32°00' W. An undersea canyon in the Weddell Sea, centering on the above co-ordinates but stretching from 71°30' S to 74°00' S, and from 27°00' W to 36°00' W. Discovered in Feb. 1997 during the Palmer Survey. The name (for the *Akademik Federov*) was proposed by Heinrich Hinze, of the Alfred Wegener Institute for Polar and Marine Research, in Bremerhaven, Germany, and was approved by US-ACAN in June 1997.

The *Akademik Ioffe*. A 6450-ton, 117.04-meter Russian tourist ship with an ice-strengthened hull, built in Finland as a geophysical research vessel for the Russian Academy of Science, and completed in Feb. 1989. Sister ship of the *Akademik Sergey Vavilov* (*see* **The *Vavilov***), she was capable of 14.5 knots cruising speed in Antarctica waters. Based in Kaliningrad, during the austral summer months she was chartered by Peregrine Shipping, of Melbourne, and carried passengers from Ushuaia to the Antarctic Peninsula, the South Shetlands, and the South Orkneys, in 1993-94 (she was seized in the Falklands that season), 1994-95, 1995-96, 1996-97, 1997-98, 1998-99, 1999-2000 (all times under Capt. Nikolay Apekhtin). In 1999, a new deck of cabins was added. She was back in 2000-01 (under Capt. Poskoniy), and again in 2002-03, after which cruise she was re-fitted. She was back in 2005-06. She could accommodate 53 staff and crew, and 109 passengers. In Antarctica (only) she was often called the *Peregrine Mariner* or the *Marine Adventurer*.

The *Akademik Knipovich*. Russian ship that was fishing for krill in the South Orkneys in 1964-65. She took part in SovAE 1967-69, spending some time fishing in the Scotia Sea. She was back for SovAE 1970-72 and SovAE 1972-74, and was back in 1974-75, in the South Orkneys.

The *Akademik Krylov*. Known more popularly as the *Krylov*. A 9120-ton, 147.9-meter Russian ship, built in Stettin, Poland, in the late 1970s, she took part in SovAE 1983-85 and 1984-86. Captain both times was Marat Grigor'yevich Kobylyanskiy. Due to the high cost of operating, she was sold in 1993.

The *Akademik Sergey Vavilov* *see* **The *Vavilov***

The *Akademik Shokalskiy*. A 1753-ton, 65.09-meter Russian polar and oceanographic research vessel, built in Finland in 1982, sister ship of the *Spirit of Enderby*. In 1998 she was converted into a tourist ship, able to carry 46 passengers. Chartered by Heritage Expeditions of NZ, she was in Antarctic waters in 1994-95 and 1995-96 (Capt. Nikolay Vinogradov for both voyages), 1996-97 and 1997-98 (Sergey Glushkov for both voyages), 1998-99 and 1999-2000 (Capt. Vinogradov for both voyages), and in 2005-06.

The *Akademik Shuleykin*. A 1754-ton, 71.6-meter Russian research ship, built in Finland in 1982. She had a crew of 32, and could take 46 passengers. In 1992-93, aside from helping relieve the Russian bases, she also took PolAE to Antarctica. B.P. Ovechkin was skipper that season. She repeated that performance in 1993-94 (Capt. Vladimir Ivanovich Uzolin). In 1994 she was chartered by Marine Expeditions, rebuilt in

Germany as a passenger ship in 1995, and did non-Antarctic cruises as the *Marine Spirit*. She was back in Antarctic waters, as a cruise ship, under her real name, in 1996-97, 1997-98, 1998-99, 1999-2000, each season under the command of Capt. Viktor Ivanov. In 2007 she was renamed the *Polyarnyy Pioner* (*Polar Pioneer*) (q.v.).

Akademik Vernadsky Station. 65°15' S, 64°16' W. Ukrainian scientific station, 7 m above sea level, on a rock surface on Marina Point, 5 km from the coast, on Galíndez Island, in the Argentine Islands, off the Graham Coast, on the W coast of the Antarctic Peninsula, 50 km from Palmer Station. On Feb. 6, 1996 the British scientific station formerly known as Base F (*see* **Faraday Station**) was transferred to the Ukrainians. **1996 winter**: 12 persons, led by geophysicist Gennadiy Petrovich Milinevskiy. **1997 winter**: Vladimir Okrugin (leader). **1998 winter**: 11 men. Viktor Sytov (meteorologist and leader), Alex Bakunovsky (medical officer). **1999 winter**: Pavel Krushentskiy (leader until June 1999), Aleksandr Mikho (from June 1999). Krushentskiy had to be evacuated on the *Nathaniel B. Palmer* in June. **2000 winter**: Yaroslav Kutsenko (leader). It continues to house wintering-over parties, and is one of the longest continuously running scientific stations in Antarctica (if one ignores the name changes).

Gora Akademika Graftio. 83°58' S, 57°19' W. A mountain in the S part of the Neptune Range, in the Pensacola Mountains. Discovered by the Russians, and named by them for electrical engineer Genrikh (i.e., Heinrich) Osipovich Graftio (1869-1949).

Lednik Akademy *see* **Academy Glacier**

Aka-iwa. 68°24' S, 41°44' E. A rocky hill with a red pegmatite in Temmondai Rock, in Queen Maud Land. Discovered and named by the Japanese on Nov. 24, 1981 during a geological survey. The name means "red rock."

Aka-iwa Mountain *see* **Akaiwa-yama**

Aka-kabe. 71°36' S, 35°35' E. A W- and N-facing semi-circular bluff of Mount Derom in the S part of the Queen Fabiola Mountains. Surveyed by JARE 1960, and named by the Japanese on March 22, 1979 (name means "red wall").

Akaiwa-yama. 72°06' S, 27°47' E. Name also seen as Aka-iwa Mountain. A mountain rising to 1689 m above sea level, at the E extremity of Berrheia, on Balchen Mountain, in the Sør Rondane Mountains, in Queen Maud Land. Photographed aerially by JARE 1981-82 and JARE 1987, and surveyed from the ground by JARE 1983. The Japanese named it on Oct. 23, 1989, the name meaning "red rock" ("yama" means "mountain"). The Norwegians call it Akaiwaberget.

Akaiwaberget *see* **Akaiwa-yama**

Akar Peaks *see* **Aker Peaks**

Cape Akarui. 68°29' S, 41°23' E. Also called Cape Miho. A rocky ice-free cape of 3.3 square km in area, protruding into the sea, almost 19 km NE of Cape Omega, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-59, plotted by them in 68°27' S, 41°27' E, and named by them in Oct. 1962, as Akarui-misaki (i.e., "bright cape"). US-ACAN accepted the translated name Cape Akarui in 1964. The Norwegians call it Bjartodden, which means the same thing. A topographical map on a scale of 1:25,000 was made of this feature from geodetic surveys conducted in 1975 and 1980, and from new air photos taken in 1975, and it was re-plotted.

Akarui-misaki *see* **Cape Akarui**

Akebi-ike. 69°12' S, 39°40' E. A small lake in the NW part of the Langhovde Hills, on the E shore of Lützow-Holm Bay. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, and named by them on June 22, 1972. The name means "akebi fruit lake."

Akebono Glacier. 68°07' S, 42°53' E. A glacier flowing northwestward to the Prince Olav Coast of Queen Maud Land, between Cape Hinode (just to the SW) and Akebono Rock (just to the NE), about 50 km W of Carstensfjella. Mapped by Japanese cartographers from JARE ground surveys and air photos taken in 1962, and named by them on May 1, 1963, as Akebono-hyoga (i.e., "dawn glacier"; "hyoga" means "glacier"). US-ACAN accepted the name Akebono Glacier in 1964. The Norwegians call it Daggrybreen (which means the same thing). A topographic map on a scale of 1:25,000 was made from surveys done by JARE 1972 and JARE 1978. A small unnamed coastal rock exposes just south of the glacier.

Akebono-hyoga *see* **Akebono Glacier**

Akebono-iwa *see* **Akebono Rock**

Akebono Point. 68°05' S, 42°50' E. Just NW of Akebono Glacier, in Queen Maud Land. Discovered by the Russians, and (apparently) named by them, in association with Akebono Glacier and Akebono Rock.

Akebono Rock. 68°04' S, 42°55' E. A substantial area of exposed rock, with an area of 2.47 square km, and rising to an elevation of 137 m above sea level, just E of the mouth of Akebono Glacier, and 47 km W of Carstensfjella, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from JARE ground surveys and air photos taken in 1962, and named by them on May 1, 1963, as Akebono-iwa (i.e., "dawn rock"). US-ACAN accepted the name Akebono Rock in 1964. A topographic map on the scale of 1:25,000 was made from surveys done by JARE 1972 and JARE 1978. The Norwegians call it Daggryfjellet.

Akela Col. 63°55' S, 58°11' W. A shallow col, about 4 km S of Rink Point, between Virgin Hill and Kipling Mesa, forming the only overland route between Whisky Bay and the unnamed bay on the E side of Lagrelius Point, on the NW coast of James Ross Island. Named by UK-APC on Nov. 15, 2006, for for the wolf in Kipling's *Jungle Book*.

Aker Peaks. 66°37' S, 55°13' E. Also called Akar Peaks, Aker Range. A series of mainly snow-covered peaks, the highest being 1800 m above sea level, and extending for 14 km in a NW-SE direction, 6 km W of the Nicholas Range and about 50 km WNW of Edward VIII Bay. Discovered on Jan. 14, 1931, by Norwegian whaler Otto Borchgrevink, and named by him for the Tønsberg farm of Svend Foyn Brunn, director of the Antarctic Whaling Company. US-ACAN accepted the name in 1947, and ANCA followed suit on Nov. 28, 1955.

Aker Range *see* **Aker Peaks**

Åkerlundh, Gustaf. b. 1881, Sweden. The youngest member of SwedAE 1901-04, he was able seaman and assistant cook. He was one of Nordenskjöld's wintering party of 1903.

Åkerlundh Nunatak. 65°04' S, 60°10' W. The smallest of the Seal Nunataks, it lies 3.2 km NW of Donald Nunatak, between Bruce Nunatak and Murdoch Nunatak, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Charted in Aug. 1947 by Fids from Base D, who named it for Gustaf Åkerlundh. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952.

Akerman Island. 69°25' S, 75°55' E. A small, low-lying island about 3.5 km SW of Cook Island, off the Larsemann Hills. Named by ANCA on March 12, 1992, for Jonathan C. "Jon" Akerman, Davis Station leader in 1990, and leader of the 650-km traverse to the Larseman Hills which completed the marking of a new, safe, year-round inland route.

Bukhta Akkuratnaja *see* **Akkuratnaya Cove**

Akkuratnaya Cove. 70°45' S, 11°48' E. A small cove 4.8 km ESE of Nadezhdy Island, indenting the N side of the Schirmacher Hills, in Queen Maud Land. Discovered and photographed aerially by GerAE 1938-39, mapped by SovAE 1961, and named by them as Bukhta Akkuratnaja (i.e., "accurate cove"). US-ACAN accepted the name Akkuratnaya Cove in 1970.

Aklestadberg. 72°49' S, 166°18' E. A mountain, one of several features in the Lawrence Peaks of Victoria Land. Discovered and named by the Germans.

Nunataki Aksakova. 81°35' S, 21°46' W. One of several clusters of nunataks in the Shackleton Range, most of them (including this one) discovered and named by the Russians.

The *Alabama Packet*. Known as the *Alabama*. 147-ton sealing brig out of Mystic, Conn., part of the Fanning-Pendleton Sealing Expedition of 1821-22. She had a crew of 22 led by skipper William A. Fanning. William Pendleton was 1st mate. Mr. Coles, of New York, was 2nd mate. Robert Boltum was 3rd mate and carpenter. There were 2 boys on board as well, one of them being Alex Palmer. She left New London, Conn., on July 21, 1821, bound for the South Shetlands, and on Nov. 6, 1821 anchored at Deception Island. She lost a man in the South Shetlands. On June 17, 1823 (sic) she arrived back at Stonington, Conn. She left New London again at the end of 1823, bound for the South Seas (not Antarctica this time), under the command of Ben Pendleton. Jonas Horn was 1st mate, and Phineas Wilcox was 2nd mate. Pendleton took her back to the South Seas in 1825-27 (again, not in Antarctica), and Jonathan Pendleton took her into the Pacific in 1827-29 (Jonas Horn was 1st mate on that trip).

Aladdin Hill. 69°24' S, 76°20' E. A conical hill rising to 80 m out of the snowfields, about 2 km W of Law-Racovitza Station, in the Larsemann Hills. A range of many geological samples were taken from this site. Named by ANCA for the character of fable.

Aladdin's Cave. Supply depot set up on Aug. 9, 1912, by Mawson, Madigan, and Ninnis, in an ice shelter 9 km south of Main Base during AAE 1911-14. In September food was ferried there.

Islote Alaggia *see* **Alaggia Rock**

Alaggia Rock. 64°34' S, 62°47' W. A small rocky island, NE of Ryswyck Point, on Parker Peninsula, and immediately S of Ryswyck Island, in the SE entrance to the Schollaert Channel, between Brabant Island and Anvers Island, in the Palmer Archipelago. In 1956 Argentina officially adopted the name Islote Alaggia, in lieu of the former unofficial Islote Margalot (named for Pedro F. Margalot, for whom *see* **Janssen Peak**). Guillermo Rodolfo Alaggia was an Air Force lieutenant killed in action. On March 3, 2004, UK-APC accepted the name Alaggia Rock.

Islote Alagon. 65°50' S, 65°21' W. A small island on the NW coast of Larrouy Island, in the Grandidier Channel, off the W coast of the Antarctic Peninsula. Named in 1978 by the Argentines for soldier Manuel Alagon, who fell on board the frigate *25 de Mayo* during the naval battle of Quilmes (1826). The Chileans call this feature Islote Cabañas, for Froilán Cabañas Rodríguez, blacksmith 1st class on the *Yelcho* in Aug. 1916, when that ship rescued Shackleton's men from Elephant Island during BITE 1914-17.

Alamein Range. 72°05' S, 163°30' E. West of Canham Glacier in the Freyberg Mountains of Oates Land. Named by the Northern Party of NZGSAE 1963-64, for the battle in North Africa taken part in by Lord Freyberg (*see* **Freyberg Mountains**). NZ-APC accepted the name on Nov. 17, 1964, and US-ACAN followed suit that year.

Islote Alamode *see* **Alamode Island**

Alamode Island. 68°43' S, 67°32' W. The largest and most southeasterly of the Terra Firma Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of the Antarctic Peninsula. It is snow-capped, and has steep, rocky cliffs surmounted by a rock- and snow-cone rising to 320 m. Discovered in 1936 by BGLE 1934-37, and named by Rymill as Terra Firma Island (it is seen as such on his expedition map of 1938). Re-surveyed by Fids from Base E in 1948, and found to be one of a group rather than an isolated island. Consequently they renamed it for its resemblance in shape to the dessert. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears in the Argentine gazetteer of 1991, as Islote Alamode.

Alan Peak. 72°39' S, 0°11' E. On the SW side of the mouth of Reece Valley, in the S part of the Sverdrup Mountains of Queen Maud Land. Discovered and photographed aerially by GerAE 1938-39, and plotted from those photos. It was again photographed from the air by NBSAE 1949-52, and surveyed from the ground by them. It was also photographed aerially in 1958-59, during the long NorAE 1956-60. From all this activity in the 1950s Norwegian cartographers were able to map it with some degree of accuracy, and called it Alanpiggen, for Alan Reece (*see also* **Reecedalen**). US-ACAN accepted the translated name in 1966.

Mount Alan Thompson *see* **Mount Allan Thomson**

Alanpiggen *see* **Alan Peak**

Zaliv Alasheeva *see* **Alasheyev Bight**

Alasheyev Bight. 67°30' S, 45°40' E. Also called Alasheyev's Bay. In the W part of the coast of Enderby Land. Molodezhnaya Station is here. Photographed from the air by ANARE in 1956. Explored and charted by SovAE 1957, and named by them as Zaliv Alasheeva, for hydrographer D.A. Alasheyev. US-ACAN accepted the translated name Alasheyev Bight in 1965.

Alasheyev's Bay *see* **Alasheyev Bight**

Alaska Canyon. 86°00' S, 136°33' W. A canyon cut deep in the N face of the Michigan Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for the University of Alaska, which has sent researchers to Antarctica.

The *Alatna*. A 3450-ton, twin-screw, Diesel-electric propelled bulk petroleum products carrier, 302 feet long, with a speed of 13.2 knots, she was built for the U.S. Navy as the first of a new type of vessel for use in the Navy's Military Sea Transportation Service, and launched as *T-AOG-81*, on Sept. 6, 1956, at Bethlehem Steel's Staten Island shipyard, and delivered in July 1957. Built specifically for polar work, with a steel hull designed for limited ice breaking, she was manned by a civil service crew. She spent 1957 in the Arctic. She participated in OpDF IV (1958-59; unknown captain), OpDF 60 (1959-60; Captain Peter A. Gentile), OpDF 61 (1960-61; Capt. Gentile), OpDF 66 (1965-66; Capt. R.W. Coulter; arrived at McMurdo Dec. 19, 1965), OpDF 67 (1966-67; Capt. W.F. Martin), OpDF 68 (1967-68; Capt. Coulter), and OpDF 69 (1968-69; Capt. Coulter). She went out of service on Aug. 8, 1972, and the Japanese bought her in 2006.

Alatna Valley. 76°53' S, 161°10' E. An ice-free valley 6 km N of Mount Gran, and trending ENE for about 16 km along the SE side of the Convoy Range. U.S. geologist Parker Calkin made stratigraphic studies in the valley, 1960-61. Named by US-ACAN in 1963 for the *Alatna*. NZ-APC accepted the name on June 27, 1963.

Alb Valley. 74°47' S, 163°46' E. Part of Campbell Glacier, in Victoria Land. BAE 1907-09 so named it because of its resemblance to a Catholic priest's white vestment. Campbell's Northern Party of BAE 1910-13 re-named it Kar Terrace. However, it appears as Alb Valley in the 1958 NZ provisional gazetteer.

Gora Al'banova. 77°35' S, 146°00' W. A mountain, just S of Mount Ronne, in the Ford Ranges of Marie Byrd Land. Discovered and named by the Russians.

Albanus Glacier. 85°52' S, 151°00' W. Also called Phillips Glacier. 40 km long, it flows W between the S side of the Tapley Mountains and the N side of the Hays Mountains, feeding into Scott Glacier just N of Mount Zanuck, in the Queen Maud Mountains. Discovered in Dec. 1934 by the geological party led by Quin Blackburn during ByrdAE 1933-35, and named by Byrd for Albanus Phillips, Jr. (1902-1970), a Maryland manufacturer and patron of Byrd's first two expeditions. US-ACAN accepted the name in 1947. It appears in the 1958 NZ provisional gazetteer. *See also* **Phillips Mountains**.

Albanus Phillips Mountains *see* **Phillips Mountains**

Ostrov Al'batros *see* **Diomedea Island**

Ozero Al'batros *see* **Petrel Lake**

Lake Albatross *see* **Petrel Lake**

Albatross Cordillera. A submarine mountain range beyond the Ross Ice Shelf, centering on 45°00' S, 115°00' W, although parts of it extend south of 60°S. Also called the Antarctic Rise, Easter Island Cordillera, Easter Island Swell, Easter Island Rise, and South Pacific Cordillera.

Albatross Glacier. 77°17' S, 166°31' E. A glacier, S of Prion Glacier, on Ross Island. Originally named Quaternary Glacier, in assocation with nearby Quaternary Icefall, it was re-named Albatross Glacier by NZ-APC in 1989.

Albatrosses. The albatross is a seabird also known as the gooney. It belongs to the order Procellariiformes, and to the family Diomedeidae. To shoot one is to tempt bad luck. Albatrosses are actually a branch of the petrel family, they have a long life span and a long wing span, the longest wing span of any bird in thre world. They drink seawater, normally live on squid, and come ashore only to breed, in colonies, and lay a single white egg. The wandering albatross (*Diomedea exulans*) nests on islands near the Antarctic Circle, but really does not breed south of 54°S (South Georgia). Other albatrosses seen in Antarctic skies are the black-browed albatross or black-browed mollymawk (*Diomedea melanophris*), the light-mantled sooty albatross (*Phoebetria palpebrata*) and (rarely) the gray-headed albatross or gray-headed mollymawk (*Diomedea chrysostoma*).

Albedo. Solar energy reflected off the Earth.

Albena Peninsula. 64°08' S, 62°09' W. The peninsula that forms the E extremity of Brabant Island, in the Palmer Archipelago. It extends 13 km in an E-W direction, is 9 km wide at its base, and is bounded by the terminus of Lister Glacier to the N, by Hill Bay to the S, and ends in Spallanzani Point to the E. Named by the Bulgarians on Nov. 23, 2009, after the Bulgarian seaside resort of Albena.

Alberich Glacier. 77°36' S, 161°36' E. A small glacier flowing W from Junction Knob toward the E flank of Sykes Glacier, in the Asgard Range of Victoria Land. Named by NZ-APC on Aug. 3, 1972, for the Teutonic mythical figure. US-ACAN accepted the name in 1976.

Albert, Étienne-Victor. b. May 10, 1810, Agde. On Sept. 1, 1837, a week before the expedition sailed, he signed on to the *Zélée* as an ordinary seaman, for FrAE 1837-40. On Jan. 1,

1839 he was promoted to able seaman, and on Jan. 1, 1840 to gunner 2nd class. On May 4, 1840, in NZ, he transferred to the *Astrolabe*, and on Nov. 1, 1840 he became a gunner 1st class.

Albert, Jay Claude "Jad." b. April 25, 1894, Atlanta, but raised in Newton Co., Ga., son of salesman J.W. Albert and his wife Mamie Ellington. He was called Claude as a youngster, and that did it for him. As soon as he could, he would dispose of the name Claude forever, but that wouldn't be for some time yet. He left school at 14, and went to work as a laborer in the local guano factory, enough to dishearten anyone, and it disheartened Jad. When he was 16, he left for Augusta, and became a book keeper. Then on to Helena, Mont., working for a phone company there. During World War I, he was drafted, and chose the U.S. Navy, serving on the *Birmingham*, out of San Diego. By now he was Jay Dean Albert, known as Jad. He was cook and steward on the *Bear of Oakland*, during the first half of ByrdAE 1933-35, arrived back in California from Dunedin in June 1934, and made his way back east on a Greyhound. He moved back to California, went to work for George May & Co., out of Chicago, married an Oklahoma girl named Theresa, and they lived in San Francisco, where he died on June 6, 1957. Theresa died in Marin Co., Calif., in 1975.

Albert Bank. 77°10' S, 32°45' W. Also known as Prince Albert I Bank. A bank in the Weddell Sea, with a least depth of 250 m. Named by Heinrich Hinze of the Alfred Wegener Institute for Polar and Marine Research, in Bremerhaven, Germany, for Albert I, Prince of Monaco (1848-1922), patron of FrAE 1908-10. The name was accepted by international agreement in June 1997.

Cape Albert de Monaco *see* **Cape Monaco**

Cap Albert Lancaster *see* **Cape Lancaster**

Mount Albert Markham. 81°23' S, 158°14' E. A striking flat-topped mountain rising to 3205 m (the Australians say 3185 m), midway between Mount Nares and Pyramid Mountain, about 57 km S of Mount Field, in the Churchill Mountains, W of and overlooking the Ross Ice Shelf. Discovered by Scott during BNAE 1901-04, and named by him for Sir Albert Hastings Markham (1848-1918), a member of the Ship Committee for the expedition, and cousin of Sir Clements Markham, the main patron of the expedition. US-ACAN accepted the name in 1947.

Albert Valley. 77°23' S, 160°56' E. A hanging valley between Conway Peak and Wendler Spur, opening N into Barwick Valley, in the central part of the Apocalypse Peaks, in Victoria Land. Named by US-ACAN in 2005, for Mary Remley Albert (b. 1954), who worked for the Cold Regions Research and Engineering Laboratory (CRREL), in Hanover, NH, and who, from 1996 to 2003 conducted field and lab research to characterize ice core, firn, and snow properties from Siple Dome, from the US-ITASE traverses from West Antarctica, and from East Antarctic megadunes. NZ-APC accepted the name on Sept. 12, 2005.

Isla Alberti *see* **Epsilon Island**

Isla Alberto *see* **Sinclair Island**

Cabo Alberto de Mónaco *see* **Cape Monaco**

Punta Alberto Obrecht *see* **Obrecht Pyramid**

Mount Alberts. 73°02' S, 167°52' E. A pointed, almost completely snow-covered mountain, rising to 2320 m, 17.5 km E of Mount Phillips, on the E margin of the Malta Plateau, and immediately S of the terminus of Line Glacier, overlooking the W margin of the Ross Sea, in Victoria Land. Named by NZ-APC in 1966 for Fred G. Alberts (b. 1922. d. March 3, 2010), American toponymist, secretary of US-ACAN, 1949-80, and compiler of *Geographic Names of the Antarctic* (*see* the Bibiliography). US-ACAN accepted the name later that year.

Alberts Glacier. 66°52' S, 64°53' W. A heavily-crevassed glacier, about 13 km long, which flows E from the Avery Plateau of Graham Land, into Mill Inlet, on the Foyn Coast, between Southard Promontory and Balch Glacier, the latter of which it is south of and from where it was recognized as a separate feature following air photography by USN on Dec. 23, 1968. In 1980 it was delineated from these photos by the (British) Directorate of Overseas Surveys, and positioned from FIDS surveys conducted between 1947 and 1957. In keeping with the practice of naming certain features in this area after Antarctic historians, this glacier was named by UK-APC on Dec. 2, 1980, for Fred Alberts (*see* **Mount Alberts**). US-ACAN accepted the name.

Albino Rookery. 68°28' S, 78°10' E. An Adélie penguin rookery, 5 m high, on the coast of Langnes Pensinsula, in the Vestfold Hills. The first ever albino penguin in the Vestfold Hills was found here in Dec. 1969, by Ron McLean (*see* **McLean Point**), radio supervisor at Davis Station. Named by ANCA on May 18, 1971.

Cap de l'Albinos. 66°40' S, 140°01' E. At the extreme N of Carrell Island, in the Géologie Archipelago. In Feb. 1963 an albino Adélie penguin was discovered here, and, at the request of a museum in France, was captured. Named by the French.

Mount Albion. 70°17' S, 65°39' E. A mountain, 3 km SSE of Mount O'Shea, and 20 km E of Mount Béchervaise, in the S part of the Athos Range, in the Prince Charles Mountains. It is connected to the next peak on the E by a long snow slope and saddle 60 m above plateau level. Discovered in 1956-57 by Bill Bewsher's ANARE Southern Party, and named by ANCA on July 22, 1957, for Patrick Neil "Pat" Albion (b. March 21, 1922, Charleville, Qld), radio operator at Mawson Station in 1956. US-ACAN accepted the name in 1961. *See also* **Patrick Point**.

Glaciar Albone *see* **Albone Glacier**

Albone Glacier. 64°13' S, 59°42' W. A narrow, deeply entrenched glacier on the E side of Wolseley Buttress, flowing S from the Detroit Plateau of Graham Land to the Larsen Inlet, on the Nordenskjöld Coast, on the E coast of the Antarctic Peninsula. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1960-61, and named by UK-APC on Feb. 12, 1964, for Daniel "Dan" Albone (1860-1906), English designer of the Ivel tractor, the first successful tractor with an internal combustion engine (1897-1902). US-ACAN accepted the name later that year. It appears in the Argentine gazetteer of 1991, as Glaciar Albone. Originally plotted in 64°12' S, 59°45' W, it has since been replotted.

Punta Albornoz. 73°17' S, 60°20' W. A cape which forms the SW tip of Kemp Peninsula, near Cape Deacon, on the E coast of Palmer Land. Named in 1975 by the Argentines for 1st Sgt. Ángel C. Albornoz, pioneer aviator, who died on Dec. 20, 1917. The Chileans have their own name for it, Punta Leiva, named for José Leiva Chacón, who was on the *Yelcho* in Aug. 1916, when that ship rescued Shackleton's men from Elephant Island during BITE 1914-17.

Al'bov Rocks. 66°28' S, 126°45' E. A cluster of rock outcrops close S of Cape Spieden, on the W side of Porpoise Bay, about 37 km SE of Cape Goodenough, on the Banzare Coast of Wilkes Land. Discovered and charted by SovAE 1958, and named by them as Skala Al'bova, for Nikolay M. Al'bov (1806-1899), botanical geographer and explorer of Tierra del Fuego. On Oct. 11, 1960, ANCA accepted the name Albov Rocks (i.e., without the apostrophe). US-ACAN accepted the name Al'bov Rocks in 1962.

Skala Al'bova *see* **Al'bov Rocks**

Albrecht Penck Glacier. 76°40' S, 162°20' E. Also called Penck Glacier. Between Fry Glacier and Evans Piedmont Glacier, it flows NE toward Tripp Bay on the coast of Victoria Land. First charted by BAE 1907-09, and named by Shackleton for Albrecht Penck (*see* **Cape Penck**). US-ACAN accepted the name in 1949. It appears in the 1958 NZ provisional gazetteer.

Mount Albright. 82°49' S, 155°06' E. Surmounts the SE end of the Endurance Cliffs, N of the Worsley Icefalls, in the Geologists Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for John Carter Albright (b. 1941, Madison, Wisc.), USARP geologist on the South Pole-Queen Maud Land Traverse, 1964-65, who, when he wasn't being a geologist and hydrographer was an admiral in the U.S. Navy.

La Albufera *see* **Albufera Lagoon**

Albufera Lagoon. 62°59' S, 60°42' W. A tidal lagoon at the SW end of Fumarole Bay, Deception Island, in the South Shetlands. Known colloquially as La Albufera (i.e., a large saltwater lagoon) by Spanish scientists. UK-APC accepted the name Albufera Lagoon on March 17, 2010.

Playa Alcázar. 62°27' S, 60°47' W. A beach to the SE of Playa Pinochet de la Barra, on the N coast of Cape Shirreff, in Livingston Island, in the South Shetlands. Named by the Chileans for the *Luis Alcázar*.

Isla Alcock *see* **Alcock Island**

Alcock Island. 64°14' S, 61°08' W. An island, 1260 m long, 5.5 km W of Charles Point (the N limit of Brialmont Cove), on the central coast of Hughes Bay, off the W coast of Graham Land. Whalers were calling it Penguin Island, and that

is what Thomas Bagshaw called it in 1922, during the British Imperial Antarctic Expedition of 1920-22. ChilAE 1947 named it Isla Telegrafista Arriagada, or (for short) Isla Telegta. Arriagada, for 2nd cabo Carlos Arriagada Veas, Chilean Army telegraphist who wintered-over that year at what would become Capitán Arturo Prat Station, and it appears with the shorter version of the name on their chart of that year. Later, the name was shortened even further to Isla Arriagada, or Islote Arriagada. Following aerial photography by FIDASE in 1956-57, it was re-named by UK-APC on Sept. 23, 1960, for Sir John William Alcock (1892-1919), pioneer British aviator (of Alcock and Brown June 14-15, 1919 first non-stop transatlantic flight fame), and it appears as such on a British chart of 1961. It appears on a 1962 Chilean chart as Isla Barros, for Capitán de navío Ramón Barros González, of ChilAE 1958-59, and appears as such in their 1974 gazetteer. US-ACAN accepted the name Alcock Island in 1965. It appears in the 1991 Argentine gazetteer as Isla Alcock.

Alcorta Rocks. 77°30' S, 166°22' E. A nunatak, rising to about 100 m, 2.4 km ENE of Rocky Point on the E shore of Maumee Bight, Ross Island. It is distinctive because 3 ridges radiate from the center. Named by US-ACAN on Oct. 25, 2000, for Jesse James Alcorta (b. 1963, Manitowoc, Wisc.), hazardous waste-handling specialist for 8 seasons at McMurdo and Pole Station from 1992-93 onwards. NZ-APC accepted the name on Feb. 20, 2001.

Alcyone Cone. 72°42' S, 165°33' E. An extinct volcanic cone near the center of the Pleiades, at the W side of the head of Mariner Glacier, in Victoria Land. Named by a VUWAE field party to Evans Névé in 1971-72, for the brightest star in the Pleiades. NZ-APC and US-ACAN both accepted the name.

Aldan Rock. 62°39' S, 60°35' W. A triangular rock, the largest of a small group of rocks extending southward into South Bay, E of Hannah Point, which is the E side of the entrance to Walker Bay, on the S coast of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and named by UK-APC on Dec. 16, 2003. The British were the latest to replot this feature, in late 2008.

Mount Aldaz. 76°03' S, 124°25' W. Also seen (erroneously) as Mount Aldez. A mostly ice-covered projecting-type mountain rising to 2520 m, that barely protrudes from the ice-covered Usas Escarpment, 35 km ESE of Mount Galla, in Marie Byrd Land. It has notable rock outcropping along its N spur. Surveyed by USGS on the Executive Committee Range Traverse of 1959. Named by US-ACAN in 1962, for Luis N. Aldaz, Spanish meteorologist with the Instituto Español de Meteorología, and attached to the U.S. Weather Bureau, who wintered-over as scientific leader at Byrd Station, 1960, and at Pole Station in 1962 and 1965.

Caleta Aldea. 62°04' S, 58°23' W. Mackellar Inlet divides itself into two distinct parts as it goes inland into King George Island, in the South Shetlands. The N part is Caleta Aldea, named by the Chileans for Juan de Dios Aldea Fonseca (*see* **Aldea Island**). The Argentines call it Caleta Tarragona.

Isla Aldea *see* **Aldea Island**

Islas Aldea *see* **Büdel Islands**

Aldea Island. 69°13' S, 68°30' W. The central of the three Bugge Islands off the Wordie Ice Shelf, on the Fallières Coast, on the W coast of the Antarctic Peninsula. It was named Isla Aldea by ChilAE 1947 for Sargento Juan de Dios Aldea Fonseca (1853-1879), a hero of the 1879 naval battle of Iquique, and it appears on their chart of that year. UK-APC accepted the name Aldea Island on June 22, 1979, and US-ACAN followed suit.

Aldebaran Rock. 70°50' S, 66°41' W. A particularly conspicuous nunatak of bright red rock near the head of Bertram Glacier, on George VI Sound, 8 km NE of the Pegasus Mountains, in western Palmer Land. It was surveyed by BAS personnel from Base E in 1970-71, and on July 21, 1976 named by UK-APC for the giant red Aldebaran, the brightest star in the constellation Taurus. US-ACAN accepted the name later that year.

Point Alden. 66°48' S, 142°02' E. An ice-covered point with rock exposures along its seaward side, about 22 km NW of Cape Hunter, and marking the W side of the entrance to Commonwealth Bay, and the division between Adélie Land and George V Land. Discovered on Jan. 30, 1840, by Wilkes, who named it after James Alden. US-ACAN accepted the name in 1947.

Alden, James. b. March 31, 1810, Portland, Me. He entered the U.S. Navy in 1828, as a midshipman, and sailed on the *Vincennes* during USEE 1838-42. He transferred to the *Porpoise* at San Francisco in Oct. 1841, the same year he was promoted lieutenant. He served in the Mexican War of 1846-48, and between then and the time of the Civil War was in the coast survey, in 1855 being promoted to lieutenant commander. During the Civil War he commanded the sloop-o'-war *Richmond* at the capture of New Orleans and at the attack on Port Hudson, and was promoted to captain in 1863. He commanded the *Brooklyn* in Mobile Bay and at Fort Fisher. He was promoted to commodore in 1866, and in 1868 was placed in command of Mare Island Navy Base, in San Francisco. In 1869 he became chief of the Bureau of Navigation, and in 1871 was promoted to rear admiral, taking command of the European Squadron. He retired in 1873, and died in San Francisco, on Feb. 6, 1877.

Alderdice Peak. 68°12' S, 49°35' E. Almost 10 km SE of Mount Underwood in the E part of the Nye Mountains, about 37 km ESE of Amphitheatre Lake, in Enderby Land. Plotted by Australian cartographers from air photographs taken by ANARE in 1956, and named by ANCA on Nov. 24, 1961, for William Henry "Harry" Alderdice (b. March 21, 1926), who wintered-over as weather observer at Wilkes Station in 1959. US-ACAN accepted the name in 1965.

Cabo Alderete. 73°50' S, 60°48' W. A cape on the Lassiter Coast, on the E coast of the Antarctic Peninsula. Named by the Argentines in 1975 for Sargento Ayudante Ramón Alderete, pioneer of Argentine aviation.

Glaciar Alderete *see* **Aagaard Glacier**

The *Alderman*. British yacht, skippered by James Wakeford, which visited the Antarctic Peninsula in the period 1998-2000.

Mount Aldez *see* **Mount Aldaz**

Aldi Peak. 80°17' S, 154°50' E. Rising to 1800 m at the W end of the Ravens Mountains, in the Britannia Range. Named by US-ACAN on Dec. 23, 2002, for Louis Michael Aldi (b. 1948), 109 Airlift Wing command chief master sergeant during the transition of LC-130 operations from the USN to the Air National Guard.

Bahía Aldoney. 65°46' S, 62°08' W. A bay at Scar Inlet, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Named by the Chileans for Vice Admiral Guillermo Aldoney Hansen, director of the Naval Academy, Feb. 18, 1974-Jan. 17, 1975. The Argentines call it Bahía Berraz, for Lt. Miguel A. Berraz (*see* **Deaths**, Sept. 15, 1976).

Aldous, Charles Fellows. b. NZ. Graduate of Marine Wireless College of Wellington. In Antarctica on 2nd half of ByrdAE 1928-30.

Mount Aldrich. 80°07' S, 158°13' E. Also seen (erroneously) as Mount Aidwich, and Mount Aldwich. A massive, somewhat flat-topped mountain on the E side of Ragotzkie Glacier, in the Britannia Range. Discovered by BNAE 1901-04, and named by Scott for Pelham Aldrich. US-ACAN accepted the name in 1949.

Aldrich, Pelham. b. Dec. 8, 1844, Mildenhall, Suffolk, son of surgeon Pelham Aldrich and his wife Elizabeth. British naval lieutenant on the *Challenger*, 1872-76. He married Edith Caroline in 1875. He was promoted to commander immediately after the expedition, in 1898 was made rear admiral, and was superintendent of Portsmouth Dockyard, 1899-1902. He was a supporter of BNAE 1901-04. He was made admiral in 1907, and retired in 1908. He died on Nov. 12, 1930, in Woodbridge, Suffolk.

Aldridge, Bertram "Bert." b. July 12, 1886, Falkland Islands. In 1902 he went to Britain, returning to the Falklands in 1903. Temporary customs officer on the *Admiralen*, 1907-08.

Aldridge, Sterling James. b. Sept. 27, 1947, Falkland Islands. In 1964 he joined BAS ships as a deck hand, in 1983 becoming bosun on the *Bransfield*. He had a heart attack and retired in 1990.

Aldridge Peak. 72°27' S, 167°24' E. A peak rising to 2290 m, on the ridge between Hearfield Glacier and Trafalgar Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1969, for James A. Aldridge, VX-6 aviation machinist's mate who wintered-over at McMurdo in 1967. NZ-APC accepted the name in Nov. 1969.

Península Aldunate *see* **Coughtrey Peninsula**

Mount Aldwich *see* **Mount Aldrich**

Islote Alectoria *see* **Alectoria Island**

Alectoria Island. 63°59' S, 58°37' W. A low, cliffed, nearly ice-free island less than 1.5 km long, in the Prince Gustav Channel, about 0.75 km off the terminus of Aitkenhead Glacier, about 16 km SW of Point Pitt, close to the SE coast of Trinity Peninsula, on the Weddell Sea. Discovered and surveyed in Aug. 1945 by Fids from Base D, who named it Alectoria Islet, for the lichen *Alectoria antarctica*, which predominated there at the time. UK-APC accepted the name on Nov. 21, 1949, UK-APC followed suit, and it appears as such in the British gazetteer of 1955. It appears on a 1951 Chilean chart as Islote Alectoria, and that is how it appears in their 1974 gazetteer. On July 7, 1959, UK-APC redefined it as Alectoria Island, and, as such, it appears on a 1962 British chart. The Argentines officially accepted the name Islote Alectoria, in July 1959. US-ACAN accepted the name Alectoria Island in 1963. The island was re-surveyed by FIDS in 1959-60.

Alectoria Islet *see* **Alectoria Island**

Punta Alegre. 68°13' S, 67°03' W. In the extreme W of Neny Island, in Marguerite Bay, off the W coast of Graham Land. Named by the Argentines for Carlos Alegre, a pilot 1st class involved with the re-supplying of Órcadas Station from the *Pampa* in 1935.

Islote Alegría. 64°18' S, 62°53' W. A rock off Eta Island, in the Melchior Islands. Surveyed by the crew of the *Primero de Mayo*, during ArgAE 1942-43, and named ironically by ArgAE 1947 (it presents a far from happy appearance). The name first appears on an Argentine map of 1953.

The *Alejandro*. A 489-ton salvage tug belonging to the Compañía de Salvataje de Magallanes, in Punta Arenas, Chile, which was dispatched from that port on Jan. 25, 1918, to the South Shetlands, in order to pluck off the grounded *Solstreif*.

Cabo Alejandro *see* **Mount Alexander**

Punta Alejandro Álvarez. 67°06' S, 66°30' W. A point which, in the S, forms the limit of the inlet which opens into the E coast of Lallemand Fjord, between Arrowsmith Glacier and the W coast of Graham Land. Discovered and named by the Chileans. The name first appeared on a Chilean map of 1947, named for Alejandro Álvarez (sic; i.e., not Alvárez), of the Ministry of Foreign Affairs and member of the Comisión Antártica Chilena of 1906.

Isla Alejandro I *see* **Alexander Island**

Aleko Point *see* **Aleko Rock**

Aleko Rock. 62°37' S, 60°20' W. A rocky point midway along the NE coast of Emona Anchorage, in South Bay, Livingston Island, projecting 150 m to the WSW, 2 km NNE of Spanish Point, 3.28 km NE by N of Hespérides Point, and 6.31 km ENE of Ereby Point, in the South Shetlands. It emerged during the (then) recent retreat of a glacier. Named by the Bulgarians on Feb. 23, 1995, as Aleko Point, after Aleko Peak, in the Rila Mountains of Bulgaria, which in turn had been named for Aleko Konstantinov (1863-1897), writer and proponent of wilderness exploration. UK-APC accepted the name Aleko Rock on Dec. 11, 1995, and US-ACAN followed suit in 1996. The British were the latest to replot this feature, in late 2008.

Gora Aleksandr Nevskogo *see* **Tekubiyama**

Zemlja Aleksandr I *see* **Alexander Island**

Gora Aleksandra Busygina. 84°20' S, 63°15' W. An isolated mountain on the Polar Plateau. Discovered and named by the Russians.

Gora Aleksandra Girsa. 80°18' S, 25°25' E. An isolated mountain on the Polar Plateau. Discovered and named by the Russians.

Gora Alekseeva *see* **Mount Alekseyev**

Skaly Alekseja Leonova. 79°56' S, 159°30' E. A group of rocks on the S side of, and near the terminus of, Darwin Glacier, near Cranfield Icefalls. Named by the Russians for Aleksey Arkhipovich Leonov (b. 1934), the cosmonaut, the first man to walk in space.

The *Aleksey Maryshev*. A little, white 2000-ton, 66-meter ice-strengthened Russian research vessel, built in Finland in 1990, for the Hydrographic Institute of St. Petersburg, as sister ship to the *Grigoriy Mikheev*. Capable of 14 knots, she was converted into a 46-passenger ship in the Netherlands, and was in Antarctic waters, taking tourists, in 2005-06.

Mount Alekseyev. 67°28' S, 50°40' E. Just over 9 km NE of McNaughton Ridges, in the Scott Mountains of Enderby Land. Discovered by SovAE 1961-62, named by them as Gora Alekseev, for A.D. Alekseev (or Alekseyev), polar pilot, and fixed by them in 67°27' S, 50°33' E. ANCA accepted the name Mount Alekseyev on Oct. 22, 1968, and US-ACAN followed suit in 1971. Its position has since been re-fixed.

Pico Alencar *see* **Alencar Peak**

Alencar Peak. 65°24' S, 63°53' W. Rising to 1554 m at the head of Lind Glacier, 11 km E of Cape Pérez, on the Graham Coast, on the W side of Graham Land, it is the most easterly of the snowy peaks at the extreme NW of the mountainous chain that separates Trooz Glacier (to the NW) from Beascochea Bay (to the SW). Discovered in Oct. 1908, by FrAE 1908-10, roughly surveyed and mapped by them, and named by Charcot as Sommet de Alencar, for Adm. Alexandrino Faria de Alencar (1848-1926), Minister of Marine in Brazil, who assisted the expedition. In Aug. 1935, it was re-identified, identified accurately, and re-surveyed by BGLE 1934-37, and it appears on Rymill's expedition map of 1938, as Mount Alencar. It appears as Mount de Alencar on a 1943 U.S. Hydrographic Survey chart. US-ACAN accepted Rymill's naming, Alencar Peak, in 1950, and UK-APC followed suit on Sept. 22, 1954. It appears as such on a 1957 British chart. On July 7, 1959, after further surveys, UK-APC amended its position from 65°24' S, 63°50' W. It appears on a 1962 Chilean chart as Pico Alencar, and as such features in their 1974 gazetteer.

Alepu Rocks. 62°23' S, 59°21' W. A group of rocks, with a total diameter of 380 m, off the E coast of Robert Island, with their center 330 m NNE of Kitchen Point, and 1.36 km SE of Perelik Point, in the South Shetlands. Mapped by the British in 1968, and by the Bulgarians in 2009. Named by the Bulgarians on Sept. 14, 2010, for the seaside locality of Alepu, in southeastern Bulgaria.

Alessandra Automatic Weather Station. 73°35' S, 166°37' E. An Italian AWS, at Cape King, on the coast of Victoria Land, at an elevation of 159.58 m, installed in Feb. 1987.

Bahía Alessandri *see* **Ambush Bay**

The *Alex Lange*. A 213-ton, 109.5-meter Norwegian whale catcher, built in 1925 (launched on Sept. 1 that year) by Kaldnaes Mek., in Tønsberg, owned by the Sydhavet Company, and in Antarctic waters in 1925-26, catching for the *Svend Foyn I*. She later became the *Star VI*. In 1930-31 she was sold to A.P. Møller's Fraternitas-compagniet, of Copenhagen, and became the *Tas IV*. In 1936 she was sold again, to Kristian Gjølberg, and renamed *Haug III*. As such, she was captured by the Germans in 1940, renamed *Steinbock*, and was lost in northern Norwegian waters in 1944. *See also* **The *Scott*** (which became the *Haug II*).

Cabo Alexander *see* **Cape Alexander, Mount Alexander**

Cap Alexander *see* **Mount Alexander**

[1]**Cape Alexander**. 66°44' S, 62°37' W. Forms the SE tip of the Churchill Peninsula and the E side of the entrance to Cabinet Inlet, as it projects into the Larsen Ice Shelf from the E coast of the Antarctic Peninsula, dividing the Oscar II Coast from the Foyn Coast. Photographed from the air by RARE in Dec. 1947, and, from these photos charted that year by FIDS from Base D, who named it for Albert Victor Alexander (1885-1965), First Lord of the Admiralty throughout World War II, who was associated with Operation Tabarin in 1943. However, not everyone agreed with the naming. Finn Ronne's map of 1949 shows it as Cape Foyn. The Argentines have called it many things over the years; a 1952 map has it has Cabo Foyn; 1953 maps have it has both Cabo Alexander and Cabo Alejandro; a 1963 map has it as Cabo Suecia (i.e., "cape Sweden"; after SwedAE 1901-04); and another map, from 1970, has it as Cabo Alexander. UK-APC accepted the name Cape Alexander on May 23, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1952, and in the British gazetteer of 1955. The Chileans have always called it Cabo Alexander, and it appears as such in their gazetteer of 1974.

[2]**Cape Alexander** *see* **Mount Alexander**

Kap Alexander *see* **Mount Alexander**

Mount Alexander. 63°18' S, 55°48' W. A black stone mountain with several summits, the highest rising to 597 m above the Firth of Tay. It forms the rocky peninsula separating Gibson Bay from Haddon Bay in the central part of the S side of Joinville Island. Thomas Robertson in the *Active* discovered the cliff marking the extremity of the peninsula on Jan. 8, 1893, and named it Cape Alexander, presumably for Alexander Fairweather (skipper of the *Balaena*), fixing it in 63°19' S, 55°53' W. It appears as Cape Alexander on that expedition's 1893 chart, and, subsequently Nordenskjöld referred to it as Kap

Alexander, and Charcot referred to it as Cap Alexander. The Chileans called it Cabo Alexander, or — on a chart of 1947 — Cabo Alejandro. In 1947-48 FIDS became uncertain of its definition, and witheld any reference to it until the situation could be sorted out, and on Sept. 4, 1957, following a FIDS survey from Base E in 1953-54, UK-APC re-defined it and its position. US-ACAN also accepted the name Mount Alexander, in 1963.

Alexander, Clair D. "Alec." b. 1906, Williamstown, Pa. (so he claimed; he was actually born Clair Alexander Dietrich on March 13, 1897, in Reading, Pa., son of electrical engineer Wilson Dietrich and his wife Margaret MacAllister). He also claimed to have been a circus acrobat, to have been more than four years in Army Aviation, and been on expeditions in India and up the Amazon, but in reality he was a grocery store clerk. He married a girl named Bertha in Reading on June 22, 1920, had two children, Robert and Rita, and then in 1923 deserted them, never to be seen again — until 1928. On March 8, 1928, using the name Clair D. Alexander, he was taken on by Byrd as personnel director on ByrdAE 1928-30. It was then that Bertha saw his picture in the paper, but at that time didn't have the money to bring suit of any kind. Alec sailed down to Antarctica on the *Eleanor Bolling*, and on the return trip from Wellington to NYC, on the *C.A. Larsen*, he is auspiciously, but erronously, listed on the ship's manifest as a stowaway. This was a sign of things to come. Bertha saw another newspaper article, this one about Clair D. Alexander marrying Elinor McDonald in Centralia, Pa., on July 14, 1930. She then filed and Alec was arrested for bigamy, desertion, alimony, and child support. He died in San Diego on Dec. 3, 1980.

Alexander, John. On Aug. 8, 1821, he was appointed captain of the *George IV* and 10 days later left London for the South Shetlands and the 1821-22 sealing season. *See* **The *George IV*** for a brief history of this adventure. He took the vessel back to the South Shetlands for the 1822-23 season.

Alexander, Stephen Paul "Steve." b. 1959, Grantham, Lincs. After graduating from Swansea University in oceanography and zoology, he got his PhD from the same place in 1985, and immediately afterwards was invited by the Scripps Institution of Oceanography, to go to Antarctica as a USARP marine biologist, to study benthic foraminifera at McMurdo Sound. He wound up doing so, for 6 seasons, 1985-2001, and then joined Raytheon, as a lab manager of the Crary Science and Engineering Center, at McMurdo for 3 seasons, 2002-04, spending 5 months of each year in Antarctica, and the remaining 7 months at Raytheon's headquarters, in Denver, which is where he lives.

Alexander Cone. 81°27' S, 156°05' E. A cone-shaped feature, rising to 1978 m, in the All-Blacks Nunataks, W of the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for John Alexander, involved in operational work at Cape Hallett, Scott Base, and the Cape Roberts Project, from 1984 onwards. US-ACAN accepted the name on Jan. 22, 2004.

Alexander I Archipelago, Coast, Land, Island *see* **Alexander Island**

Alexander Hill. 77°17' S, 166°25' E. Rising to 220 m, with a prominent seaward cliff face, S of Harrison Stream and Cinder Hill, on the lower ice-free W slopes of Mount Bird, on Ross Island. Mapped by NZGSAE 1958-59, and named by NZ-APC on May 24, 1961, for Bruce Neill Alexander, of Sydenham, NZ, a surveyor with that expedition. US-ACAN accepted the name in 1964.

Alexander Humboldt Mountains *see* **Humboldt Mountains**

Alexander Island. 71°00' S, 70°00' W. A large, rugged island with quite high peaks (Mount Stephenson, Mount Egbert, Mount Paris, Mount Ethelwulf), 432 km long in a N-S direction, 80 km wide in the N and 240 km wide in the S. The island lies to the S of Marguerite Bay, in the Bellingshausen Sea, W of Palmer Land, from which it is separated by Marguerite Bay and George VI Sound. Discovered on Jan. 28, 1821 by von Bellingshausen, who named it Alexander I Coast, for the tsar who had commissioned the expedition in 1819. Bellingshausen did not know it was an island, and roughly mapped the NW coast. It later became Alexander I Archipelago (it is to be seen as such on a Russian map of 1824, fixed in 71°30' S, 71°00' W) and later still as Alexander I Land (i.e., Zemlja Alexandra I, in Russian). The N mountains of the island were sighted by Biscoe in 1832. Wilkins, in a flight over it in 1929, suspected that it was actually an island (although he was far from being the first to have these suspicions; a UK chart of 1839 has it as Alexander Island), and this was proved in Dec. 1940 by a sledge party under Finn Ronne of USAS 1939-41. Its name was changed to Alexander I Island, a name accepted by UK-APC on Sept. 22, 1954. Meanwhile Britain had claimed it in 1908. Chile claimed it in 1940, calling it Isla Alejandro I, and Argentina did the same in 1942, also with the Spanish name (it had appeared on an Argentine map of 1940). It has been appearing on Chilean maps since 1947, but on some it has been named Isla Margarita. Its position was re-defined, and UK-APC accepted the shortened name, Alexander Island, on Sept. 23, 1960, with US-ACAN following suit in 1961.

Alexander McKay Cliffs *see* **McKay Cliffs**

Alexander Nunatak *see* **Alexander Nunataks**

Alexander Nunataks. 66°30' S, 110°39' E. Two coastal rock outcrops at the S limit of the Windmill Islands, standing on the shore of Penney Bay, 0.75 km E of the base of Browning Peninsula, on the Budd Coast. Plotted from air photographs taken by OpHJ 1946-47, and at first thought to be one nunatak, and named Alexander Nunatak, after N.H. Alexander, photographer's mate in one of the two photographic units of OpW 1947-48, which also took air and ground photos of the area in Jan. 1948. US-ACAN accepted the new pluralized name in 1956, and ANCA followed suit on July 4, 1961. The northern of the two outcrops was used as an unocccupied trigonometrical station by Alan McLaren in 1965.

Alexander Peak. 77°28' S, 146°48' W. At the N end of the Haines Mountains, in the Ford Ranges of Marie Byrd Land. (Probably) first seen aerially by ByrdAE 1928-30. Named by US-ACAN in 1966, for Clair D. Alexander.

Alexander Valley. 77°17' S, 161°22' E. A valley, 2.5 km long, between Mount Leland and Sponsors Peak, in the Cruzen Range of Victoria Land. The lower end is ice-free and opens to Victoria Upper Glacier, while the upper portion is partly ice-covered and surmounted by Mount Isaac (which rises to 1250 m). Named by US-ACAN in 2005 for Steve Alexander. NZ accepted the name on Sept. 12, 2005.

The *Alexander von Humboldt* *see* **The *Explorer II***

Alexander-von-Humboldt Gebirge *see* **Humboldt Mountains**

Alexander Wetmore Glacier *see* **Wetmore Glacier**

Cabo Alexandra *see* **Cape Alexandra**

Cap Alexandra *see* **Cape Alexandra**

Cape Alexandra. 67°45' S, 68°36' W. A dark, prominent cape forming the SE extremity of Adelaide Island, to the N of Marguerite Bay, opposite the W coast of the Antarctic Peninsula. Discovered on Jan. 14, 1909 by FrAE 1908-10, and named by Charcot as Cap de la Reine Alexandra, for the (then) Queen Consort of England, Alexandra (1844-1925) and in order to honor Biscoe for his discovery of Adelaide Island in 1832. It appears (in shortened form) on Charcot's map of 1912, as Cap Alexandra, and the name Cape Alexandra appears on a British chart of 1914. It was also seen in French as Cap Alexandre, and, in a letter of Jan. 7, 1929, Charcot refers to it as Cape Queen Alexandra. The name has also been seen erroneously as Cape Alexandria (and its foreign-language equivalents). It appears on a 1946 Argentine map as Cabo Alejandra, and on one of their 1949 maps as Cabo Alexandra. On a 1957 Argentine map it appears as Cabo Teniente Modolo, after Lt. Carlos Marcos Modolo (navigator of the Avro Lincoln B019 that crashed in Chile on March 22, 1950, after completing an Antarctic flight), and this name was later shortened to Cabo Modolo. The Chileans called it Punta Yerba Buena. US-ACAN accepted the name Cape Alexandra in 1947, and UK-APC followed suit on Jan. 22, 1951. Now, everyone calls it Cape (or Cabo) Alexandra.

Mount Alexandra. 78°00' S, 163°50' E. A black, snow-free mountain with unusually good lichen growths on its S and W faces (1206 m), just left of Garwood Glacier, in southern Victoria Land. Named by NZ on Feb. 1, 1994 for Jane Alexandra, an early NZ botanist with an interest in lower plants. US-ACAN accepted the name later that year.

Zemlja Alexandra I *see* **Alexander Island**

Alexandra Mountains. 77°25' S, 153°30' W. Also erroneously called Alexandria Mountains, and not to be confused with the Queen Alexan-

dra Range. The Alexandra Mountains are a group of low, separated mountains forming the N flank of Edward VII Peninsula, just SW of Sulzberger Bay, in Marie Byrd Land. Discovered in Jan. 1902 by BNAE 1901-04 before they docked in McMurdo Sound, and named by Scott for the Queen Consort of England (*see* **Cape Alexandra**). US-ACAN accepted the name in 1947. It appears in the 1958 NZ provisional gazetteer.

Alexandra Range *see* **Queen Alexandra Range**

Cap Alexandre *see* **Cape Alexandra**

Alexandria Mountains *see* **Alexandra Mountains**

Alexandria Range *see* **Queen Alexandra Range**

Île Alexis Carrel *see* **Carrel Island**

Mount Alf. 77°55' S, 86°07' W. Rising to over 3200 m, between Mount Sharp and Mount Dalrymple, in the N part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse Party 1957-58, and named by US-ACAN in 1960, for Edward Alfred Alf (b. 1930), who wintered-over as meteorologist at Byrd Station in 1957.

Isla Alfa *see* **Alpha Island**

Paso Alfaro. 64°12' S, 60°58' W. A passage running from Tisné Point to Ensenada Duarte, between Apéndice Island and the W coast of the Antarctic Peninsula. Discovered by the Chileans, and named by ChilAE 1960-61, in Feb. 1961, for Mario Alfaro Cabrera, commander of the *Yelcho*, which did hydrographic work in this area. As a lieutenant, he had been on the *Lientur* during ChilAE 1952-53. *See also* **Hospital Point**.

Punta Alfaro *see* **Hospital Point**

Alfatar Peninsula. 62°22' S, 59°39' W. The peninsula forming the NW extremity of Robert Island, in the South Shetlands, it is 2 km wide, and extends 4 km in a NE-SW direction. It is bounded by Mitchell Cove, Carlota Cove, and Clothier Harbor, and is linked to Coppermine Peninsula in the W. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, after the town in northeastern Bulgaria.

Alférez de Navío José María Sobral Station *see* **Sobral Station**

Isla Alférez Mavaroff *see* **Pickwick Island**

Punta Alfiler *see* **Renier Point**

Roca Alfiler *see* **Pin Rock**

Alfons Island *see* **Kolven Island**

Mount Alford. 71°55' S, 161°37' E. A flat-topped, ice-free mountain rising to 1480 m, on the S end of Boggs Valley, in the Helliwell Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Montague Alford, USARP geologist at McMurdo, 1967-68.

Monte Alfred *see* **Mount Alfred**

Mount Alfred. 70°18' S, 69°14' W. An ice-capped mountain rising to about 2250 m, just under 9 km inland from the George VI Sound, 13 km S of Mount Athelstan, in the Douglas Range of Alexander Island, off the W coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from these photos by U.S. cartographer W.L.G. Joerg in 1936. Its E face was roughly surveyed in Oct. 1936, by BGLE 1934-37, and again by Fids from Base E in 1948-49, who named it for the English king of old. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It appears on a British chart of 1957. In 1959-60 Searle of the FIDS was the first to map the W face of this mountain, from air photos taken during RARE 1947-48. The mountain appears in the 1991 Argentine gazetteer as Monte Alfred.

Mont Alfred Faure. 66°40' S, 139°57' E. The main rocky summit toward the west central part of Gouverneur Island, in the S part of the Géologie Archipelago. Discovered by the French, and named by them in 1977, for Alfred Faure.

Alga Lake. 67°00' S, 142°40' E. A small, oval-shaped lake to the E of Round Lake and Long Lake and to the W of Beryl Hill, about 360 m ESE of Mawson's main hut at Cape Denison. Named by Mawson during AAE 1911-14, it appears on maps of that expedition. ANCA accepted the name on March 7, 1991.

Alga Lakes. 71°10' S, 161°50' E. Numerous small lakes found in the vicinity of the Morozumi Range, in Oates Land. So named by the Southern Party of NZGSAE 1962-63 because of the prolific algal growth found in these lakes. NZ-APC accepted the name on June 27, 1963.

Algae. Primitive plant-like organisms (*see also* **Flora** and **Diatoms**). There are 25,000 species worldwide, many of them in Antarctica. Most of them are freshwater.

Algae Inlet *see* **Algae Lake**

Algae Lake. 66°18' S, 100°48' E. A narrow, winding freshwater lake, just over 14 km long, between 300 and 1000 m wide, and at least 137 m deep, extending in an E-W direction in the S part of the ice-free Bunger Hills, on the Knox Coast of Wilkes Land. Mapped from photographs taken during OpHJ 1946-47, and first named by US-ACAN as Algae Inlet, because of the algae here which cause varying tints to the meltwater ponds overlying the Bunger Hills, and to the saline inlets and channels in the area of Highjump Archipelago, close to the N. It was re-defined as a lake, and mapped as such in 1956 by SovAE 1956-57. The Russians call it Ozero Figurnoe. US-ACAN accepted the name Algae Lake in 1961, with ANCA following suit on Oct. 22, 1968. The Poles call it Jezioro Figurowe.

Algae River. 66°18' S, 100°49' E. A draining system, with a total length of about 25 km, centered on Algae Lake, that connects a series of epiglacial lakes along the S margin of the Bunger Hills to Algae Lake and then to Transkriptsii Gulf. It is the third longest terrestrial drainage system known in Antarctica. Named by ANCA on May 23, 2003, in association with the lake.

Algal Lake. 77°38' S, 166°25' E. A small, roughly circular meltwater lake about midway between Skua Lake and Island Lake, on Cape Evans, Ross Island. Named by USARP biologists David Mason (*see* **Mason Glacier**), Charles Goldman (*see* **Goldman Glacier**), and Brian J.B. Wood, Jr., who studied it in 1961-62 and 1962-63. There are blue-green algal remains around the leeward edge of the lake. US-ACAN accepted the name in 1971, and NZ-APC followed suit on July 15, 1971.

Algie Glacier. 82°08' S, 162°05' E. About 40 km long, it flows SE into Nimrod Glacier, just W of the Nash Range. Named by the NZ Ross Sea Committee for Ronald Macmillan Algie (1888-1978), minister in charge of scientific and industrial research who, in 1957-58, strongly supported the NZ party of BCTAE. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1965. Originally plotted in 82°13' S, 162°05' E, it was later replotted.

Algie Knoll. 82°12' S, 162°09' E. A rounded, ice-covered elevation, rising to over 400 m, between Silver Ridge and the mouth of Algie Glacier, in the Churchill Mountains. Named by US-ACAN on Jan. 24, 2003, in association with the glacier. NZ-APC accepted the name on Feb. 27, 2003.

Ali Shan. 69°22' S, 76°18' E. A prominent peak on Lied Promontory, in the Larsemann Hills. Discovered by the Chinese, and named by them for the Taiwanese mountain of the same name. There is a permanent survey mark on the summit which is surmounted by a rock cairn. ANCA named it Three Man Peak, on April 24, 1987.

Mount Alibi. 65°55' S, 62°40' W. A conspicuous mountain, rising to 925 m, 5 km ESE of Adit Nunatak on the N side of Leppard Glacier, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. On Dec. 20, 1928, while flying over the Antarctic Peninsula, Hubert Wilkins discovered and photographed what he called Crane Channel. Just north of this channel he saw two conspicuous black peaks which he collectively named Mount Napier Birks, after Adelaide businessman Napier Birks. The area was surveyed by Fids from Base D in 1947, and they proved the Crane Channel to be a glacier — the Crane Glacier (as it was re-named). However, they could not find Mount Napier Birks, so the name Mount Napier Birks was given by UK-APC on Jan. 22, 1951, to another mountain 63 km to the NE (*see* **Mount Birks**). US-ACAN accepted that situation. However, a new, 1955, FIDS survey, did find Wilkins' mountain, and on Sept. 4, 1957 UK-APC appropriately named it Mount Alibi. It has also been ascertained now that on his outward flight, Wilkins identified his "Crane Channel" with what is now Leppard Glacier, and on his return flight with what is now Crane Glacier. The new situation appears on a British chart of 1961, and US-ACAN accepted it in 1963. Meanwhile, Mount Napier Birks was considered too long a name for the other mountain (the one 63 km to the NE), and on July 7, 1959, UK-APC shortened it to Mount Birks, and US-ACAN accepted the change in 1963. Mount Birks appears on a British chart of 1961.

Crique Alice *see* **Alice Creek**

Ensenada Alice. 63°19' S, 57°55' W. A little inlet close to Kopaitic Island, 1.1 km WNW of Cape Legoupil, in the Duroch Islands, on the W coast of the Antarctic Peninsula. Discovered and named by ChilAE 1947-48, the name has

been appearing as such on Chilean charts since that time. Alice Ingeborg Wilson was the wife of the commodore of that expedition, Captain Ernesto González Navarrete. Don Ernesto was also commander of the *Iquique* during ChilAE 1946-47.

Havre Alice *see* **Alice Creek**

Isla Alice *see* **Lecointe Island**

Alice Creek. 64°50' S, 63°29' W. A cove, or channel, between Jougla Point and Besnard Point, which forms the most southerly part of Port Lockroy, on Wiencke Island, in the Palmer Archipelago. Discovered and charted by FrAE 1903-05, and named by Charcot as Crique Alice, for the wife of Édouard Lockroy (*see* **Port Lockroy**). As such it appears on a French map of 1906, and on a 1929 British chart as Alice Creek. In 1937 the French were calling it Havre Alice. The name was translated as Caleta Alicia by the Chileans (it appears as such on a Chilean map of 1947, and also in their 1974 gazetteer) and as Caleta Alice by the Argentines (however, that country officially accepted the name Caleta Alicia in 1956). US-ACAN accepted the name Alice Creek in 1951, and UK-APC followed suit on Sept. 8, 1953.

Mount Alice Gade. 85°45' S, 163°40' W. A mainly ice-covered mountain rising to over 3400 m, and which marks the NE extremity of the Rawson Plateau, just to the W of the Amundsen Glacier, in the Queen Maud Mountains. It stands next to Mount Ruth Gade, and was discovered by Amundsen in Nov. 1911 during his trek to the Pole. The Gade girls were daughters of the Norwegian Minister to Brazil, a supporter of NorAE 1911-12. US-ACAN accepted the name in 1947.

Alice Glacier. 83°58' S, 170°00' E. A tributary glacier, 21 km long, flowing E from the Queen Alexandra Range to enter the Beardmore Glacier at Sirohi Point. Discovered during BAE 1907-09, and named by Shackleton for Eric Marshall's mother, the former Alice Gardner. It appears in the 1958 NZ provisional gazetteer, and US-ACAN accepted the name in 1962.

Mount Alice Wedel-Jarlsberg *see* **Mount Wedel-Jarlsberg**

Caleta Alicia *see* **Alice Creek**

Alison Ice Stream. 73°55' S, 82°04' W. An ice stream, 13 km long, flowing into Eltanin Bay, S of Wirth Peninsula in Ellsworth Land. Named by US-ACAN on Jan. 31, 2003, for Alison Cook, BAS computer specialist, part of the USA-UK cooperative project to compile glaciological and coastal-change maps of the Antarctic Peninsula during the late 1990s and early 2000s.

Nunataki Alisova. 80°50' S, 159°29' E. A cluster of nunataks in the Churchill Mountains. Discovered and named by the Russians.

Lednik Aljab'ëva *see* **Alyabiev Glacier**

All Black Peak. 71°48' S, 163°57' E. Rising to 2025 m, on the E side of the head of Johnstone Glacier, it is the main peak in the Crown Hills, in the SE end of the Lanterman Range, in the Bowers Mountains. Discovered by the New Zealanders, and descriptively named by NZ-APC in 1982, on the suggestion of geologist Malcolm Laird, for its color, and in association with Black Glacier to its S and Half Black Peak to its W. US-ACAN accepted the name in 1983.

Mount Alla *see* **Mount Allo**

The *Alla Tarasova*. A 100-meter Russian cruise ship, run by Quark Expeditions, in Antarctic waters in 1994-95, 1995-96, 1996-97, and 1997-98 (Capt. Vyacheslav Vasyuk each voyage). She would also run under the name *Marine Discoverer*. She had a crew of 75, and could take 118 passengers. In 1998 she became the *Clipper Adventurer* (q.v.).

Allaire Peak. 84°53' S, 170°54' W. A rock peak rising to 1900 m, 5 km NW of Mount Hall, between Gough Glacier and Le Couteur Glacier, in the Prince Olav Mountains. Named by US-ACAN in 1966, for Capt. (later Col.) Christopher James Allaire (b. April 1934), U.S. Army engineer (West Point graduate, 1956), on the staff of the Commander, U.S. Naval Support Force, Antarctica, during OpDF 63 (i.e., 1962-63). NZ-APC accepted the name on June 30, 1966.

Mount Allan. 69°59' S, 67°45' W. Rising to 1600 m, it is the largest massif in the Traverse Mountains, isolated to the N and S by low passes, on the Rymill Coast of NW Palmer Land, at George VI Sound. Surveyed by BAS personnel from Base E, between 1970 and 1973, and named by UK-APC on Dec. 8, 1977, for Thomas John "Tom" Allan (b. 1940) (*see* **Deaths**, 1966), BAS radio operator at Base E (Stonington Island). US-ACAN accepted the name on Feb. 7, 1978.

Allan, David Silver. b. Dec. 26, 1870, Montrose, Scotland. Petty officer, RN. A member of BNAE 1901-04, and one of the few married ones (to Elizabeth Bertie). Like Edgar Evans he had served with Scott on the *Majestic* a few years before (not in Antarctica). He was chief petty officer on his return from the expedition. In 1905 he was on the *Vernon*, and during World War I served on several ships. From Oct. 1917 to March 1918 he was attached to the RAF.

Allan, Douglas George "Doug." b. July 17, 1951, Scotland. After graduating in marine biology from Stirling University, he went into diving in different parts of the world, then became a BAS diver, wintering-over at Signy Island Station in 1976 and 1979. He pioneered many new cold-water diving and photography techniques. He was forced to winter-over at Signy in 1980 when the *John Biscoe* couldn't make it in because of the ice. He was back for the winter of 1983, as base leader at Halley Bay Station. He became a freelance cinematographer, and spent 10 months in Antarctica filming diving movies for a British TV company. He was back with BAS, for the winter of 1997, at Signy again. After BAS, he became famous as the underwater cameraman on BBC's *Blue Planet* TV show. His second wife was Sue Flood, the wildlife photographer.

Allan, Thomas Noel Kingsley. Known as Noel, or Doc. b. Dec. 25, 1933, Hexham, Northumberland, son of Thomas Kingsley Allan and his wife Doreen Dean. After graduating from Durham in 1956, he joined FIDS in 1957, as a medical officer, and wintered-over at Base D (Hope Bay) in 1958. He conducted the "kitchen table" operation on an Argentine base member's appendix. He went back to private practice in Newcastle, but in 1966 moved to Bristol. Then he moved to the USA, settling near Seattle.

The *Alan and Vi Thistlethwayte* *see* **The *Dick Smith Explorer***

Allan Hills. 76°43' S, 159°39' E. A group of hills, mostly ice free, Y-shaped in plan, and 19 km long, just NW of the Coombs Hills, and about 15 km NNW of Mount Brooke, in the most southwesterly sources of the Mawson Glacier and also near the head of the Mackay Glacier, just to the W of the Convoy Range, in southern Victoria Land. Meteorites are abundant here. Discovered by the 1957-58 NZ party of BCTAE, and named by them for Prof. Robin Sutcliffe Allan (1900-1966), of the University of Canterbury, NZ. US-ACAN accepted the name in 1962, NZ-APC followed suit on July 15, 1965, as did ANCA on Aug. 10, 1966. The Australians were the latest to replot this feature, in late 2008. *See also* **New Zealand Allan Hills Expedition**.

Allan McDonald Glacier *see* **McDonald Ice Rumples**

Allan Nunatak. 76°38' S, 159°54' E. In the Allan Hills of southern Victoria Land. Named in association with the hills. A term no longer used.

Mount Allan Thomson. 76°57' S, 161°43' E. A conspicuous mountain surmounted by a dark peak over 1400 m, it rises 5 km W of the mouth of Cleveland Glacier, overlooking the N side of Mackay Glacier, in Victoria Land. Charted during BAE 1910-13, and named by Scott for James Allan Thomson (known as J. Allan Thomson) (1881-1928), NZ geologist who helped write the scientific reports of BAE 1907-09. He was actually going to go on BAE 1910-12, as a geologist, but had to withdraw due to pulmonary tuberculosis. US-ACAN accepted the name in 1952.

Allanson Winn, Rowland *see* **Headley, Lord**

Allardyce Øyane *see* **Governor Islands**

All-Blacks Nunataks. 81°29' S, 155°45' E. A group of conspicuous nunataks lying midway between Wallabies Nunataks to the N and Wilhoite Nunataks to the S, at the SE margin of Byrd Névé, to the W of the Churchill Mountains, about 44 km W of Mount Albert Markham. Discovered by NZGSAE 1960-61, and named (without a hyphen) by them for the legendary rugby team. NZ-APC accepted the name. ANCA accepted the hyphenated name on Nov. 19, 1963, and US-ACAN followed suit in 1965.

Allegheny Mountains. 77°15' S, 143°18' W. A small group of mountains 16 km W of the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 during ByrdAE 1933-35, mapped from aerial photos and ground surveys by USAS 1939-41, and named by them for Paul Siple's alma mater, Allegheny College, Meadville, Pa. US-ACAN accepted the name in 1947. Its position has been re-fixed several times over the years.

Allegro Valley. 71°18' S, 160°10' E. A steep-sided, glacier-filled indentation into the E side of the Daniels Range, just N of White Spur, in the Usarp Mountains. So named by the Northern Party of NZGSAE 1963-64, after Milton's poem, because of the good weather they experienced here, in direct contrast to Penseroso Bluff, 22 km to the N, where the weather had been terrible. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit that year.

Allemand Peak. 78°24' S, 158°36' E. 2.5 km S of Moody Peak, in the N part of the Boomerange Range, in southern Victoria Land. Plotted from USN air photographs, and named by US-ACAN in 1965, for Lawrence Joseph Allemand (b. 1933, Louisiana), construction driver who wintered-over at Little America V in 1958. NZ-APC accepted the name on Feb. 1, 1965.

Cape Allen. 83°33' S, 171°00' E. A bare rock point, 5 km SW of Mount Hope, near the mouth of the Beardmore Glacier, it forms the W side of the S approach to The Gateway. Discovered by BAE 1907-09, and named by Shackleton for Capt. Robert Calder Allen (1812-1903), RN, of the Franklin Relief Expedition to the Arctic. US-ACAN accepted the name in 1949, and it appears in the 1958 NZ provisional gazetteer.

[1]**Mount Allen**. 77°24' S, 162°32' E. Rising to 1400 m, between Clark Glacier and the head of Greenwood Valley, in Victoria Land. Charted by VUWAE 1959-60, and named for Anthony D. "Tony" Allen (b. March 7, 1937, Napier, NZ), geologist with the party. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

[2]**Mount Allen**. 78°43' S, 84°56' W. Rising to 3430 m, 8 km SE of Mount Craddock, in the Sentinel Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and aerial photos taken by USN, 1957-59, and named by US-ACAN in 1961, for Lt. (later Cdr.) Forrest M. Allen, USNR, co-pilot on reconnaissance flights from Byrd Station, 1957-58.

Allen, Adrian. b. May 13, 1937, Leeds. He joined FIDS in 1959, as a geophysicist, and wintered-over at Base D in 1960 and 1961. He made a comprehensive study of Trinity Peninsula, being 524 days in the field. In 1967 he was working for Shell BP in Nigeria. He died in Nov. 1991, in London.

Allen, Alfred James. Name also seen as Allan (although it was actually Allen). b. June 20, 1845, Langston, near Havant, Hants, son of shipwright inspector Edward Allen. His mother died when he was a child. He joined the Royal Navy, as an engineer officer, on June 8, 1865, and was engineer on the *Challenger* Expedition, 1872-76. After the expedition, he became 2nd engineer on the Royal yacht *Victoria and Albert*, and in 1876, in Portsmouth, married Julia Mary Knight. By 1883 he was a chief engineer on RN vessels in Australian waters, and on June 1, 1891, was promoted to fleet engineer. He retired to Worthing, then later moved to Portsmouth, and died on Dec. 5, 1903, in the Royal Naval Lunatic Asylum in Great Yarmouth. He was followed to the asylum by William Abbott (q.v.).

Allen, Charles Clinton "Charley." b. Jan. 20, 1914, Resaca, Ga., son of school teacher Clinton Charles "C.C." Allen and his first wife, who died in 1919. C.C. married again, became a Baptist preacher, and, in 1924, moved to Ooltewah, Tenn., just outside Chattanooga. After a spell working in a box factory, Charley joined the U.S. Navy, and served as machinist's mate 1st class on the *Bear*, during both halves of USAS 1939-41. He died in Hillsborough, Fla., on Aug. 12, 1985.

Allen, Denise Mary. With the Australian Bureau of Meteorology, she replaced a male weather observer at the last moment at Mawson Station, for the winter of 1986 (*see* **Women in Antarctica**, 1986). She wintered-over at Davis Station in 1988, at Casey Station in 1992, and back in 1985 had wintered-over at Macquarie Island.

Allen, Keith. b. 1932, Scotland. An engineer, he did his national service with the RAF mountain rescue teams, serving in Southern Rhodesia. He lived in Colchester, Essex, then went to South Africa. He returned to England from Cape Town, on Nov. 20, 1953, and joined FIDS in 1958, as a radio operator, wintering-over at Base D in 1959 and 1960. He married Jean, and, after his return from Antarctica, went to work for Vickers for 25 years, and was working for a Norwegian company dealing with offshore gas and oil projects when he was diagnosed with mesothelioma, a deadly asbestos-related form of cancer which he had developed as a result of working at several electrical power stations. He had also worked on the design and construction of circulating water pumps in the Royal Navy's earliest nuclear submarines. He died in Scotland, on April 19, 2004, and three years later his widow was awarded £355,000 compensation.

The *Allen and Vi Thistelthwayte* *see* **The *Dick Smith Explorer***

Allen Knoll. 63°40' S, 58°35' W. A steep-sided snow dome rising to 860 m above sea level from a flat snowfield, 3 km NW of the head of Russell West Glacier, SW of the Louis-Philippe Plateau, on Trinity Peninsula. Mapped by FIDS cartographers from FIDS surveys made in 1960-61, plotted in 63°40' S, 58°37' W, and named by UK-APC on Feb. 12, 1964, for Keith Allen. US-ACAN accepted the name later that year. The feature has since been re-plotted.

Allen McDonald Glacier *see* **McDonald Ice Rumples**

Allen Peak. 77°34' S, 86°51' W. Rising to 1880 m, 8 km W of Mount Wyatt Earp, it forms the N extremity of the main ridge of the Sentinel Range. Discovered aerially by Ellsworth on Nov. 23, 1935, and named by US-ACAN in 1961, for Bob Allen (*see* **Allen Rocks**), who helped prepare the 1962 map of the Sentinel Range.

Allen Rocks. 77°33' S, 169°09' E. A small but distinctive group of rocks, 3.6 km ENE of Slattery Peak, in the Kyle Hills of Ross Island. The feature includes a central nunatak that in outline resembles the letter "A." A low ridge encloses the nunatak except on the S. Named by US-ACAN on Oct. 27, 2000, for Robert J. "Bob" Allen, Jr., USGS cartographer and authority on Antarctic aerial photography at Antarctic Resource Center, USGS, Reston, Va. He was involved in mapping Antarctica in the last half of the 20th century. NZ-APC accepted the name on Feb. 20, 2001.

Mount Allen Young. 83°27' S, 166°52' E. A prominent pyramidal mountain rising to 2755 m, just S of Fegley Glacier, and to the W of the Lennox-King Glacier, in the Holland Range. Discovered by BAE 1907-09, and named by Shackleton for Allen William Young (1830-1915; knighted 1877), Arctic explorer who led the successful search there for Benjamin Leigh Smith in 1882. US-ACAN accepted the name in 1949.

Alley Glacier. 79°58' S, 158°05' E. Flows from the N slopes of the Britannia Range in the vicinity of Ward Tower, and then N to Darwin Glacier. Named by US-ACAN on Nov. 14, 2000, for Richard Blaine Alley (b. Aug. 18, 1957, Columbus, O.), Penn State glaciologist specializing in ice streams of the West Antarctic ice sheet, and who came to fame with his daring theory that Earth's last major ice age ended abruptly over a 3-year period. NZ-APC accepted the name on Feb. 20, 2001. Professor Alley spent 3 field seasons in Antarctica.

Alley Spur. 82°32' S, 51°47' W. A rock spur rising to 870 m on the N side of the Dufek Massif, just S of Sapp Rocks, in the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from ground surveys conducted by USGS during their Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for Capt. Dalton E. Alley (b. July 17, 1923, Mass. d. Sept. 1, 1992, Renton, Wash.), navigator, a member of the USAF Electronics Test Unit, in the Pensacola Mountains, 1957-58. The name appears on a 1969 U.S. map, and UK-APC accepted the name on Nov. 3, 1971. It appears in the British gazetteer of 1974.

The *Alliance*. A whaling ship out of Newport, RI, which, on a return trip from Japan and Peru, sighted an island in 59°S, 90°W, sometime probably in April 1824. The ship probably crept above the 60°degrees south line of latitude. She arrived back in Newport with 2200 barrels of sperm oil. The skipper, variously reported as Capt. Gardiner, was, in fact, Capt. Swain.

Alligator Eyes. 81°38' S, 160°55' E. Two nunataks, close together, and rising to over 600 m on the E side of Dickey Glacier, in the Churchill Mountains, and surmounting the end of the broad ice-covered ridge that extends N from Mount Arcone. Named descriptively by US-ACAN on Jan. 24, 2003. NZ-APC accepted the name on Feb. 27, 2003.

Alligator Island. 66°34' S, 97°40' E. Also called Alligator Nunatak. A small, steep, rocky island, 200 m wide and 800 m long, rising above the Shackleton Ice Shelf to an elevation of 89 m above sea level, and looking like a nunatak, in the Bay of Winds, just over 6 km W of Jones Rocks, off the coast of Queen Mary Land. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for its shape. US-ACAN accepted the name in 1963.

Alligator Nunatak *see* **Alligator Island**

Alligator Peak. 78°28' S, 158°45' E. A prominent conical rock peak at the head of Alligator Ridge, one of the highest peaks in the N half of the Boomerang Range. So named by the 1957-58 NZ party of BCTAE because of its proximity to the ridge. US-ACAN accepted the name in 1962.

Alligator Ridge. 78°27' S, 158°48' E. A spectacular serrated rock ridge, running 3.5 km NE from Alligator Peak near the center of the Boomerang Range, into Skelton Névé. Mapped and named for its shape by the 1957-58 NZ party of BCTAE. They originally plotted this feature in 78°28' S, 158°46' E. US-ACAN accepted the name in 1962.

Alligator Rock. 66°33' S, 69°46' E. An isolated rock, out to sea beyond Mac. Robertson Land. Named (supposedly) by the Russians.

Punta Allipén *see* **Shmidt Point**

Mount Allison. 72°31' S, 162°22' E. A mountain, 5 km NE of Mount Stuart, in the Monument Nuntaks. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Richard G. Allison, biologist at McMurdo, 1965-66 and 1967-68.

Allison, Alan Johnson. b. Nov. 14, 1937, Easington, Durham. Chief engineer on the *John Biscoe*, 1971-73, and on the *Bransfield*, 1974-87. He retired in 1995.

Allison Automatic Weather Station. 89°53' S, 60°00' W. An American AWS near the South Pole, at an elevation of 2835 m, installed on Jan. 28, 1986, and removed in July 1987. Named after the daughter of AWS project researcher George Weidner.

Allison Bay. 67°30' S, 61°17' E. A small bay just W of Utstikkar Glacier, on the coast of Mac. Robertson Land. Photographed by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers, who named it Isvika ("ice bay"). Visited by ANARE parties in 1954 and 1955, and re-named by ANCA on Sept. 4, 1956, for Robert William "Bob" Allison (b. 1924, Kithduly), medical officer who wintered-over at Mawson Station in 1955. He had also been on Heard Island in 1949. The Australians plotted it in 67°30' S, 61°09' E, but it has since been replotted. US-ACAN accepted the name in 1965.

Allison Dome. 73°32' S, 70°25' E. An isolated and prominent ice feature, about 56 km E of the S end of the Mawson Escarpment, in Mac. Robertson Land. Photographed by ANARE in 1960. A fuel depot was established nearby, by the ANARE Prince Charles Mountains Survey Party of 1972. Named by ANCA for glaciologist Ian Frederick Allison, a member of that party and of one like it in 1974. He had also wintered-over at Mawson Station in 1969.

Allison Glacier. 78°16' S, 161°55' E. A glacier with its head just N of Mount Huggins, it flows from the W slopes of the Royal Society Range, into Skelton Glacier. Named by US-ACAN in 1963, for meteorologist Lt. Cdr. John Kenneth Allison, USN, of Corsicana, Tex., VX-6 commander at McMurdo, winter of 1959. NZ-APC accepted the name on June 27, 1963.

Allison Islands. 66°21' S, 110°29' E. A small chain of islands in the N side of the entrance to Sparkes Bay, in the Windmill Islands. First mapped from air photos taken in 1947, during OpHJ 1946-47, and in 1948, during OpW 1947-48. Named by US-ACAN in 1963, for William L. Allison, ionosphere physicist who wintered-over at Wilkes Station in 1958.

Allison Peninsula. 73°10' S, 85°50' W. A narrow, ice-covered peninsula that projects into the Bellingshausen Sea from Ellsworth Land, forming the E edge of the Venable Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1968, for Cdr. Paul Allison, USN, plans officer, U.S. Naval Support Force, Antarctica, during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68).

Allison Ridge. 70°45' S, 66°19' E. A partly snow-covered rock ridge, about 800 m W of Mount Bunt, in the Aramis Range, in the Prince Charles Mountains. Plotted by Australian cartographers in 70°46' S, 66°17' E, from 1960 ANARE air photos, and named by ANCA for Donald "Don" Allison, electrical engineer who wintered-over at Mawson Station in 1965. US-ACAN accepted the name in 1967. It was later re-plotted.

Mount Allo. 63°58' S, 61°48' W. A very prominent, conspicuous, sharply conical peak, completely covered in snow, rising to 285 m from a point a short distance away from Neyt Point, at the NE extremity of Liège Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Discovered and mapped during BelgAE 1897-99, and named by de Gerlache as Mont Allo, without explaining why. It was only in later years that it was learned that this feature was named for Narcisse Allô (1839-1916), naval director general at Antwerp. It figures as such on an official Belgian map of 1899, and on a British chart of 1916. However, Frederick Cook, in 1900, referred to it as Mount Allo, and that is how it appears on a British chart of 1930. UK-APC accepted that name on Sept. 8, 1953, and it appears in the British gazetteer of 1955. It appears on a 1949 Argentine map as Monte Allo, and on a 1954 Argentine map as Monte Oreja Izquierda (i.e., "mount left ear"—it does resemble such an appendage), but in July 1959 the Argentines officially accepted the name Monte Allo. It also appears as Monte Allo in the Chilean gazetteer of 1974. Note: Beware of misspellings such as Monte Alto, Mount Alto (on a British chart of 1961), and Mount Alla.

Allowitz Peak. 71°08' S, 167°39' E. Rising to 1240 m, immediately W of Mount Troubridge, in Hedgepeth Heights, in the Anare Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Ronald D. Allowitz (b. 1940), USARP biologist at Hallett Station, 1962-63.

Mount Allport. 68°01' S, 56°27' E. A snow-free mountain just W of Leslie Peak, about 9 km S of Mount Cook, in the Leckie Range of Kemp Land. Plotted by Australian cartographers in 68°01' S, 56°30' E from ANARE air photos, but since re-plotted. Named by ANCA on July 29, 1965, for Bruce H. Allport, who wintered-over as radio officer at Mawson Station in 1964, and who traversed past this mountain while a member of an ANARE tellurometer party exploring the Leckie Range, in early 1965. US-ACAN accepted the name in 1967.

Mount Allsup. 84°01' S, 159°36' E. A rock peak rising to 2580 m, and marking the SW limit of Canopy Cliffs, at the S end of the Queen Elizabeth Range. Mapped by USGS from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for Clifford C. Allsup, USN, aviation machinist's mate 2nd class, of East Greenwich, RI, injured in the Neptune crash during OpDF II, 1956-57 (*see* **Deaths**, 1956).

Allyn, Gurdon Lathrop. b. Dec. 23, 1799, Gales Ferry, Conn., son of sea captain turned oysterman Nathan Allyn and his wife Hannah Lester. At sea since childhood, he became a mate in 1819, a skipper by 1820, and, on Oct. 13, 1822, he married Sally Sherwood Bradford. He was captain of the *Talma*, out of New London, which was in the South Shetlands in 1832-34. After this, he sailed on many a ship, and co-owned several, and in 1861 became a U.S. Navy coast pilot. He took part in the Civil War, and in 1863 moved back to Gales Ferry from Salem, where he had been living since 1839. For several years after the war, he was in the coasting business, and then retired as a farmer. In 1879 his story was published, *The Old Sailor's Story: or a Short Account of the Life, Adventures, and Voyages of Capt. Gurdon L. Allyn, including Three Trips Around the World*. It was written by himself, in the 79th and 80th years of his age. Sally died in 1888, and the old captain died on Aug. 16, 1891.

Mount Alma McCoy *see* **Mount McCoy**

Promontorio Almena *see* **The Turret**

Islote Almenado. 64°18' S, 62°52' W. A little island off the E coast of Eta Island, in the Melchior Islands. Mapped by ArgAE 1946-47, and named descriptively by them (the name means "crenellated" in Spanish).

Punta Almendra *see* **Almond Point**

Bahía Almirantazgo *see* **Admiralty Bay, Admiralty Sound**

Estrecho Almirantazgo *see* **Admiralty Sound**

Paso Almirantazgo *see* **Admiralty Sound**

The *Almirante Álvaro Alberto* *see* **The *Álvaro Alberto***

The *Almirante Ary Rongel* *see* **The *Ary Rongel***

The *Almirante Brown*. A 6800-ton, 170.8-meter heavy cruiser, launched on Aug. 11, 1929, which took part in Argentine naval maneuvers in the South Shetlands in Feb. 1948 under the overall command of Contra Almirante Harald Cappus (q.v. for details of this operation). Captain of the ship was Carlos A. Garzoni. The vessel was decommissioned in 1961.

Almirante Brown Station. 64°53' S, 62°53' W. Argentine base, built on a rock surface, 7 m above sea level, on Proa Point, Coughtrey Penin-

sula, in Paradise Harbor on the Danco Coast, off the W coast of Graham Land, on the Antarctic Peninsula, 9 km from Presidente Gabriel González Videla Station. Originally it was just a refuge hut. **April 6, 1951**: It officially became a scientific station, Destacamento Naval Almirante Brown (i.e., Admiral Brown Naval Base), but more commonly known as Base Brown. Named after Guillermo Brown (q.v.), and run by a naval detachment. **1951 winter**: Antonio Vazek (leader). **July 1951**: A fire partially burned the base down. **Jan. 1952**: The station was rebuilt. **1952 winter**: César Somoza (leader). **1953 winter**: Guillermo E. Schlieper (leader; he would later write a book called *Paraíso Blanco*). **1954 winter**: Ángel Pérez (leader). **1955 winter**: Eduardo Pérez Tomás (leader). **1956 winter**: Eduardo Pérez Tomás (leader). **1957 winter**: Ernesto J. Sgandurra (leader). **1958 winter**: Teniente de corbeta Horacio A. Méndez (leader); Óscar E. Bammater (radio operator and 2nd-in-command); Mario Yamazaki (medical officer). **1959 winter**: Luis Rodríguez Varela (leader). The base was closed after the 1959 winter, transferred to the Instituto Antártico Argentino, and re-built. **Feb. 17, 1965**: It opened again, this time under the control of the Instituto Antártico Argentino. Its new name was Estación Científica Almirante Brown. **1965 winter**: Alfredo Corte (leader). **1966 winter**: César Augusto Lisignoli (leader). **1967 winter**: César A. Lisignoli (leader). **1968 winter**: Osvaldo H. Macoretta (leader). **1969 winter**: Ángel Abregú Delgado (leader). **1970 winter**: Osvaldo H. Macoretta (leader). **1971 winter**: José D. Oviedo (leader). **1972 winter**: Juan Carlos Villafañe (leader). **1973 winter**: Óscar Horacio Cao (leader). **1974 winter**: Óscar Horacio Cao (leader). **Feb. 26, 1975**: A wedding was performed. **1975 winter**: Héctor M. Benavidez (leader). **1976 winter**: Héctor M. Benavidez (leader). **1977 winter**: Rodolfo Jorge González Moreno (leader). **1978 winter**: Samuel Ikonicoff (leader). **1979 winter**: Walter Mersing (leader). **1980 winter**: Fernando Hipólito Turrado (leader). **1981 winter**: Daniel Zatz (leader). **1982 winter**: Rubén Sanso (leader). **1983 winter**: Ernesto del Prete (leader). **April 12, 1984**: It was partially destroyed by fire. **1984-85**: It was re-activated as a summer-only station.

The *Almirante Cámara*. A 1200-ton, 209-foot ship, built as the *Sands*, by Marietta Manufacturing, in Point Pleasant, W. Va., and launched on Sept. 14, 1963. She was struck from the naval register in 1970, and placed out of service in 1973. In 1990 she was sold to Brazil, and became an oceanographic vessel used on the Brazilian Antarctic Expeditions of 1986-87 (Capt. Antonio Constantino Conti de Oliveira) and 1987-88 (Capt. Daniel César).

Caleta Almirante Fliess *see* **Fliess Bay**

The *Almirante Goni*. A whale catcher built in 1911 at Framnaes Mek., in Sandefjord, Norway, for the Sociedad Ballenera de Magallanes. She was in Antarctic waters in 1911-12, 1912-13, and 1913-14, catching for the *Gobernador Bories*. In 1916, she was sold to the Hektor Whaling Company, and was catching in Antarctic waters in 1920-21, for the *Ronald*. In 1924 she was sold to Ballenera Española (same owners — N. Bugge), and in 1925 sold again to Winge, of Oslo. In 1933 she was sold again, to Blomvag, of Oslo, and became the *Veslegut*. She was used by the Norwegian navy as a patrol boat, but in 1940 was seized by the Germans and renamed *Ratte*. Returned to Blomvag in 1945, she was sold to a group of Norwegian fishermen, and renamed *Bolgagutt*. Since then she has had a string of different names, and was still afloat in the 1990s.

Almirante Ice Fringe. 64°52' S, 62°41' W. A narrow ice piedmont, between Duthiers Point and Lester Cove, and bordering the SW side of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Identified by the Poles on Sept. 1, 1999, and named by them for the Argentines' Almirante Brown Station on nearby Coughtrey Peninsula, Paradise Harbor. UK-APC accepted the name on July 8, 2003, and US-ACAN followed suit on Jan. 23, 2004.

The *Almirante Irízar*. An 11,811-ton, 121.3-meter fully-equipped Argentine Naval icebreaker/research ship, capable of 17.2 knots, built in Finland in 1977, and launched on Feb. 3, 1978. Ship's company was 123, plus room for 100 scientists. After spending 1978-79 in Finland, she underwent ice tests in Antarctic waters in 1979-80, under the command of Capt. Alejandro J. Giusti (skipper from April 17, 1979 to March 29, 1980), and then, under the same skipper, took part in ArgAE 1979-80. She was in Antarctic waters as part of ArgAE 1980-81 (Vicente Manuel Federici; skipper from March 29, 1980 to April 30, 1981); and again for ArgAE 1981-82 (Óscar Julio Barquín; skipper from April 30, 1981, to April 20, 1982). She was the principal Argentine support vessel for Antarctica, and during the Falklands War was used as a hospital transport. She took part in ArgAE 1982-83 (Luis Jorge Prado; skipper from April 20, 1982 to April 14, 1983); ArgAE 1983-84 (Manuel G. Videla; skipper from April 14, 1983 to March 14, 1984); ArgAE 1984-85 (Miguel A. Piccini; skipper from March 14, 1984 to April 10, 1985); ArgAE 1985-86 (Captain Norberto R. Varela; skipper from April 10, 1985 to March 12, 1986); ArgAE 1986-87 (Captain Leónidas Jesús Llano; skipper from March 12, 1986 to March 3, 1987); ArgAE 1987-88 (Captain Carlos Alberto Marín; skipper from April 3, 1987 to March 3, 1988); ArgAE 1988-89 (Captain Ricardo Guillermo Corbetta; skipper from March 3, 1988 to March 4, 1989); ArgAE 1989-90 (Captain José María Horton; skipper from April 4, 1989 to April 30, 1990); ArgAE 1990-91 (Captain Juan Carlos Parmigiani; skipper from April 30, 1990 to April 9, 1991); ArgAE 1991-92 (Captain Carlos Daniel Carbone; skipper from April 9, 1991 to March 18, 1992); ArgAE 1992-93 (Captain Juan Carlos Ianuzzo; skipper from March 18, 1992 to March 30, 1993); ArgAE 1993-94 (Captain Ernesto Rafael Reali; skipper from March 30, 1993 to April 7, 1994); ArgAE 1994-95 (Captain Jorge Óscar Fuster; skipper from April 7, 1994 to March 24, 1995); ArgAE 1995-96 (Captain Carlos A. Piccone; skipper from March 24, 1995 to March 15, 1996); ArgAE 1996-97 (Captain Raúl Eduardo Benmuyal; skipper from March 15, 1996 to April 3, 1997); ArgAE 1997-98 (Captain Delfor Raúl Ferraris; skipper from April 3, 1997 to March 8, 1998); ArgAE 1998-99 (Captain Eugenio Luis Facchin; skipper from March 8, 1998 to May 30, 2000); ArgAE 1999-2000 (Captain Facchin); ArgAE 2000-01 (Captain Daniel R. Della Rodolfa; skipper from May 30, 2000 to May 16, 2002); ArgAE 2001-02 (Capt. Della Rodolfa). In Sept. 2002 the vessel began a 2-year refit, and after that was used as an amphibious warfare transport for naval exercises. She took part in ArgAE 2002-03 (Captain Héctor Luis Tavecchia; skipper from May 16, 2002 to April 29, 2004); ArgAE 2003-04 (Capt. Tavecchia); ArgAE 2004-05 (Captain Ricardo Oyarbide; skipper from April 29, 2004 to April 22, 2005); ArgAE 2005-06 (Captain Guillermo M. Palet; skipper from April 22, 2005 to April 5, 2006); and ArgAE 2006-07 (Captain Guillermo A. Tarapow; skipper from April 5, 2006 to May 14, 2007). On April 11, 2007, there was a fire aboard, at Puerto Madryn, Argentina, and so she could not take part in ArgAE 2007-08.

Canal Almirante Merino *see* **Plata Passage**

The *Almirante Óscar Viel*. Her complete name was *Contra-almirante Óscar Viel Toro*, but she was more popularly known as the *Óscar Viel*, or just the *Viel*, although *Almirante Viel* is what she had written on her bow. A 6320-ton, 90.1-meter icebreaker and supply ship, capable of 15 knots, she had a crew of 33, but could take 78 persons. She was built in 1969, for the Canadian Coast Guard, as the river icebreaker *Norman McLeod Rodgers*, the last vessel built by Vickers Armstrong, in Montreal. She was bought by the Chilean government at the beginning of 1994, and commissioned into the Chilean Navy on Jan. 14, 1995. After a refit at Talcahuano, she made her first Antarctic expedition as part of ChilAE 1995-96, as the replacement vessel for the *Piloto Pardo*, to resupply Teniente Marsh and Teniente Carvajal Stations between Nov. 1995 and Feb. 1996. Her skipper that year was Capt. Germán Vera Medrano. She soon became the principal Chilean icebreaker and supply ship in Antarctica. ChilAE 1996-97 (Capt. Jorge Huerta Dunsmore), ChilAE 1997-98 (Capt. Carlos Mackenney Schmauk), ChilAE 1998-99 (Capt. Mackenney), ChilAE 1999-2000 (Capt. José Valdivia Soto), ChilAE 2001-02, ChilAE 2002-03, ChilAE 2003-04, ChilAE 2004-05 (Captain Francisco Azócar Nelson), ChilAE 2005-06 (Capt. Azócar was succeeded by Capt. Guillermo de Asmar, on Jan. 5, 2006), ChilAE 2006-07, ChilAE 2007-08.

The *Almirante Señoret*. Whale catcher acquired from Norway in 1911 by the Sociedad Ballenera de Magallanes, and which caught for the *Gobernador Bories* in Antarctic waters in 1911-12, 1912-13, and 1913-14. In 1916 she was sold to a European company.

Islotes Almirante Señoret *see* **Islotes Señoret**

Punta Almirante Solier *see* **Cape Andreas**

The *Almirante Uribe*. An 80-ton whale catcher, built in 1906 in Norway, for the Sociedad Ballenera de Magallanes, and working for the *Gobernador Bories*, in Antarctic waters, from the 1906–07 season until the 1911–12 season.

Isla Almirante Uribe *see* **Nelson Island**

The *Almirante Valenzuela*. A 100-ton whale catcher, built at Framnaes Mek., in Norway, in 1906, and belonging to the *Gobernador Bories*, in the South Shetlands, from the 1906–07 season until the 1911–12 season. In 1917 she became the *Tigre*, and then the tug *Leopardo*.

Istmo Almizclero *see* **Muskeg Gap**

Punta Almonacid. 72°17' S, 60°42' W. A point forming the extreme S of Merz Peninsula, on the E coast of the Antarctic Peninsula. Named in 1978 by the Argentines for Vicente Almandos Almonacid (1882–1953), pioneer aviator, the first to make a night flight over the Andes. Not to be confused with Flagon Point.

Almond *see* **The Almond**

The Almond. 78°19' S, 163°27' E. A bare, almond-shaped ridge of granite, which separates the two coalescing channels of Pyramid Trough, just W of The Pyramid, on the W side of Koettlitz Glacier. Named descriptively by VUWAE 1960–61, as Almond (i.e., without the definite article) although they plotted it in 78°23' S, 163°37' E. NZ-APC accepted the name on May 24, 1961. US-ACAN accepted the name The Almond, in 1973.

Almond Point. 63°53' S, 59°30' W. A rocky point, formed by an offshoot of Borovan Knoll, between Whitecloud Glacier and McNeile Glacier, at the head of Charcot Bay, on the Davis Coast, on the W coast of Graham Land. Surveyed by Fids from Base D in 1948, charted by them, and subsequently named in Oct. 1950, for its shape, by Stephen St. Clair McNeile, FIDS surveyor that season (1948–49). The name was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year, and appears in the British gazetteer of 1955. The Argentines, who plotted it in 63°51' S, 59°24' W, translated it as Punta Almendra.

Islotes Alomar *see* **Debenham Islands**

Alph Lake. 78°12' S, 163°42' E. A lake, 0.6 km long, and surrounded by steep morainic walls, it lies at the foot of Ward Valley, on the NW side of Koettlitz Glacier, on the Scott Coast of Victoria Land. The Alph River runs through it, and in 1911 Grif Taylor named it in association with that stream, while on his Western Journey, during BAE 1910–13. The name appears in the 1958 NZ provisional gazetteer, but was not accepted by US-ACAN until 1994.

Alph River. 78°12' S, 163°45' E. A small river, flowing only in the summer, rising from the ice N of Koettlitz Glacier, at the upper end of Pyramid Trough, and, heading S-N, it takes in Pyramid Ponds, Trough Lake, Walcott Lake, Howchin Lake, and Alph Lake, on the Scott Coast of Victoria Land. The portion N of Pyramid Trough was explored in 1911, by Grif Taylor's Western Journey Party, during BAE 1910–13. He reported that the stream continues N for a considerable distance under moraine, and ultimately subglacially beneath the Koettlitz Glacier to the Ross Sea. He named it perfectly, after the river in Coleridge's poem. The name appears in the 1958 NZ provisional gazetteer, but was not accepted by US-ACAN until 1994.

Isla Alpha *see* **Alpha Island**

Alpha Bluff. 78°52' S, 162°29' E. A high bluff on the W side of Shults Peninsula, in Victoria Land. Surveyed by the 1957 NZ party of BCTAE, and named by them for the first letter in the Greek alphabet, because this feature is the most southerly of all the bluffs on Skelton Glacier (it is on the E side of the glacier). The name appears in the 1958 NZ provisional gazetteer, and US-ACAN accepted it in 1962.

The *Alpha Helix*. An ice-strengthened vessel of 464 tons displacement, belonging to the University of California. 133 feet long, she could carry 10 scientists and crew of 12. Designed and equipped especially for experimental biologists, she had a large lab on the main deck. In the 1970–71 summer season, under the command of Capt. Robert W. Haines (b. Aug. 31, 1926, Vallejo, Calif.), ex-U.S. Navy (World War II) and Scripps Institution man, she visited Anvers Island and the Antarctic Peninsula, doing oceanographic work, and arrived at Palmer Station on Jan. 2, 1971. She continued as a research ship into the 1980s.

Alpha Island. 64°19' S, 63°00' W. A small island, 370 m W of Bills Point (the S end of Delta Island), between that feature and Epsilon Island and Beta Island to the W, in the Melchior Islands, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. The Discovery Investigations surveyed it in 1927 and probably named it. It was certainly named in accordance with the theme of Greek letters in this area. It appears on the DI chart of 1929, and was re-surveyed by the Argentines in 1942, 1943, and 1948, appearing on an Argentine chart of 1948 as Isla Alpha, and on a Chilean chart as Isla Alfa. UK-APC accepted the name on Sept. 8, 1953, and it appears in the British gazetteer of 1955. US-ACAN accepted the name in 1956. It appears in the 1974 Chilean gazetteer as Isla Alpha. The Argentines finally decided on Isla Huidobro, for Ruiz Pascual Huidobro (d. 1813), Argentine military hero, and it appears as such on charts of 1953 and 1957.

Alphard Island. 66°58' S, 57°25' E. About 5.5 km long and rising to a height of 150 m above sea level, N of Shaula Island in the central part of the Øygarden Group. Photographed aerially by LCE 1936–37, and mapped from these photos in 1946 by Norwegian cartographers who named it Meøya (i.e., "the middle island"). Bob Dovers' ANARE party were the first to visit it in 1954, and the island was later re-named by ANCA on Feb. 18, 1958, after the star Alphard. The Australians plotted it in 66°57' S, 57°30' E, but it was later re-plotted. US-ACAN accepted the name in 1965.

Mount Alpheratz. 70°59' S, 66°58' W. A prominent peak rising to about 1300 m on the SE ridge of the Pegasus Mountains, about 16 km ENE of Gurney Point, on the Rymill Coast, on the W coast of Palmer Land. Surveyed by BAS personnel from Base E in 1970–72, and named by them for the star Alpheratz, in the Great Square of Pegasus, which is in accordance with several other celestially named features in this area. UK-APC accepted the name on July 21, 1976, and US-ACAN followed suit later that year.

Alsop, Andrew David "Andy." b. March 10, 1941, Atherstone, Warws. In 1987 he joined Loganair, in the Orkeys, in Scotland, and became their chief pilot. He is reputed to have made over 50,000 flights in the islands, averaging 7 minutes per flight, and even got into the *Guinness Book of Records* for setting the record (58 seconds) for the world's shortest scheduled commercial flight — Westray to Papa Westray. He was BAS pilot in Antarctica for 3 seasons, and in Greenland in 1991 and 1992. He was awarded the MBE in 2001, and was later a pilot for oil men in Algeria and Dubai.

Alt Glacier. 71°06' S, 162°31' E. The name is sometimes seen (erroneously) as Art Glacier. Just over 6 km long, it flows WSW from the Explorers Range of the Bowers Mountains into Rennick Glacier, just N of Mount Soza. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1964, for Jean Alt, French observer and Weather Central meteorologist at Little America for the winter of 1958. NZ-APC accepted the name on Nov. 17, 1964.

Punta Alta *see* **Edinburgh Hill**

Alta Automatic Weather Station. 74°41' S, 164°06' E. An Italian AWS at the pond the Italians call Pozza Eneide, 300 m W of Mario Zucchelli Station, at Gerlache Inlet, in the NE corner of Terra Nova Bay, in Victoria Land. It began operating in Oct. 1993 as a need-to-use AWS, i.e., it would be assembled each year in the October, and dismantled the following February. In 2008 it was made permanent.

Cabo Altamirano. 64°23' S, 61°13' W. In Hughes Bay, in Gerlache Strait, off the W coast of the Antarctic Peninsula. It was studied by personnel on the *Zapiola*, during ArgAE 1973–74. Named officially, and with some imagination, in 1978 by the Argentines for Cabo (i.e., pfc, or lance-corporal) Ricardo Altamirano, who disappeared in the wreck of the minesweeper *Fournier* in the Straits of Magellan on Oct. 4, 1949.

Altar *see* **The Altar**

The Altar. 71°39' S, 11°22' E. A flat-topped rock summit rising to 2200 m, at the head of Grautskåla Cirque, immediately W of Altarduken Glacier, and W of Altartavla, in the N part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938–39, plotted by them from these photos, and descriptively named by Ritscher as Altar. US-ACAN accepted the name The Altar, in 1970. The Norwegians call it Altaret (i.e., "the altar").

Altar Mountain. 77°54' S, 160°51' E. A prominent mountain with a stepped profile and a flat top, rising to over 2000 m at the S end

(i.e., the head) of Arena Valley, in southern Victoria Land. Discovered probably no earlier than BAE 1907-09, it was indicated on Ferrar's map of 1907. Named by NZGSAE 1958-59 for its similarity to the shape of Mayan and Aztec pyramids. Originally plotted in 77°54' S, 160°54' E, its position has since been re-fixed. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1962.

Altar Peak. 86°04' S, 150°23' W. Rising to 1780 m, 1.5 km ESE of Mount Harkness, in the Gothic Mountains, in the Queen Maud Mountains. First visited in Dec. 1934 by Quin Blackburn's geological party during ByrdAE 1933-35. The descriptive name was suggested by Ed Stump, leader of the USARP — Arizona State University geological party of 1987-88 that studied this feature. US-ACAN accepted the name.

Altarduken *see* **Altarduken Glacier**

Altarduken Glacier. 71°39' S, 11°26' E. A small glacier just E of The Altar, between that feature and Altartavla, at the head of Grautskåla Cirque, in the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and mapped from aerial photographs taken by GerAE 1938-39. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. They plotted it in 71°38' S, 11°24' E, and named it Altarduken (i.e., "the altar cloth"), in association with The Altar. This feature was later re-plotted. US-ACAN accepted the name Altarduken Glacier in 1970.

Altaret *see* **The Altar**

Altartavla. 71°40' S, 11°29' E. East of The Altar and Altarduken, it is the southernmost mountain on Gorki Ridge, in the N part of the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named in the 1990s by the Norwegians (i.e., "the altar piece").

Althoff Seamount. A seamount off Queen Maud Land. It centers on 66°12' S, 16°35' E, but actually extends from 66°08' S to 66°16' S, and from 16°12' E to 16°59' E. Named by international agreement in April 2003, for Friedrich Althoff (1839-1909), German lawyer and patron of the German Navy Oceanographic Expedition of 1898-99 (whose ship was the *Valdivia*).

Lednik Altimir *see* **Altimir Glacier**

Altimir Glacier. 64°36' S, 63°09' W. A glacier, 4.8 km long and 5.5 km wide, flowing N from the E slopes of the Osterrieth Range, to enter Fournier Bay E of Sudena Point, on Anvers Island, in the Palmer Archipelago. Named by the Bulgarians after the town of Altamir, in northwestern Bulgaria.

The Altiplano. 78°08' S, 163°55' E. A small elevated valley between Findlay Ridge and Miers Valley, on the coast of Victoria Land. Named by NZ-APC in 1980 for the much larger intermontane basins of the Andes. US-ACAN accepted the name in 1995.

Altitude *see* **Highest points**

Mount (Monte) Alto *see* **Mount Allo**

Altsek Nunatak. 62°30' S, 59°53' W. A rocky peak rising to 170 m and projecting from Murgash Glacier, 700 m S of Lloyd Hill, 940 m E of Kotrag Nunatak, and 1.65 km W by N of Tile Ridge, on Greenwich Island, in the South Shetlands. Identified by the Bulgarian topographic survey Tangra 2004-05, and named by them on Nov. 4, 2005, after the Altsek (Alcek), Bulgar cavalry who, in the 7th century, fled Bulgaria and settled first in Ravenna, and a few decades later in the Matese Mountains of central Italy.

Cabo Alvarado *see* **Cape Shirreff**

Punta Alvárez. 65°38' S, 64°29' W. In the extreme SW of Leroux Bay, in Grandidier Channel, on the W coast of Graham Land. Named by the Argentines in 1978 for freedom fighter Colonel Ignacio Alvárez Thomas (1787-1857). The name was approved officially by Argentina in 1978.

Alvarez Glacier. 70°53' S, 162°20' E. A tributary glacier flowing from the SW side of Stanwix Peak in the Explorers Range into Rennick Glacier, to the N of Sheehan Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Cdr. José A. Alvárez, Argentine Navy, observer and Weather Central meteorologist at Little America, 1957. There is no accent mark on the name of the feature. NZ-APC accepted the name on July 16, 1964.

Caleta Alvaro *see* **Alvaro Cove**

The *Álvaro Alberto*. Full name *Almirante Álvaro Alberto*. Brazilian oceanographic vessel used in the relief of Comandante Ferraz Station in 1988-89. Skipper was Altineu Pires Miguens.

Alvaro Cove. 64°51' S, 63°01' W. Opens into the central part of the N side of Bryde Island, opposite the Danco Coast, on the W coast of Graham Land. Surveyed by ArgAE 1950-51, and named by Argentina as Caleta Alvaro for a military staff officer on the relief ship for that expedition. It appears as such on an Argentine chart of 1954, and in the Argentine gazetteer of 1970. UK-APC translated it as Alvaro Cove on Feb. 7, 1978, and it appears as such on a British map of 1979, and in the British gazetteer of 1980. The Chileans, however, call it Caleta McIntyre (or even Caleta Mc Intyre), to honor Capt. Ronald McIntyre Mendoza (b. May 2, 1927, Tocopillo), commander of the *Piloto Pardo* during ChilAE 1969-70. Subsequently, Don Ronald rose very high in the Navy.

Punta Alvear. 66°18' S, 65°44' W. A point, projecting toward the SW into Grandidier Channel by Cape Bellue, Darbel Bay, on the W coast of Graham Land. Named by the Argentines in 1978, for General Carlos María de Alvear (1789-1852), fighter for Argentine independence.

Alveberget. 72°16' S, 18°22' E. A nunatak on the E side of Borchgrevinkisen, it is the easternmost point of the Sør Rondane Mountains. Named by the Norwegians in the 1990s ("the elf mountain").

Alyabiev Glacier. 71°42' S, 72°40' W. Flows S from Gluck Peak into Boccherini Inlet, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Aljab'ëva, for Aleksandr Alyabiev (1787-1851), Russian composer. US-ACAN accepted the name Alyabiev Glacier in 2006.

Islas Alzogaray *see* **Theta Islands**

Islotes Alzogaray *see* **Theta Islands**

Am Überlauf *see* **Grautrenna**

Åma. 72°09' S, 25°00' E. A mountain ridge, 7 km long, at the S side of Urfjell Cliffs, in the central part of the Sør Rondane Mountains. The name means "caterpillar" in Norwegian.

Amadok Point. 62°41' S, 60°53' W. A cape, snow-free in the summer, that projects 400 m into Bransfield Strait, 2 km NW of Elephant Point, and 1.8 km SE of Clark Nunatak, on the S coast of Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the Thracian king Amadok (415-384 BC).

Amalthea Peak. 70°50' S, 68°34' W. At the W end of Himalia Ridge, on Alexander Island. In association with Jupiter Glacier, it was named by UK-APC on Jan. 18, 2002, after the Jovian moon.

Amanda Bay *see* **Hovde Cove**

Amanda Rookery. 69°16' S, 76°50' E. An emperor penguin rookery on sea ice, on the W side of Hovde Cove, Prydz Bay. Discovered aerially by ANARE on Aug. 26, 1957, while they were photographing Hovde Cove. ANCA renamed Hovde Cove as Amanda Bay, after the daughter of the airplane's skipper, Peter Clemence (*see* **Clemence Massif**), and the rookery was named by ANCA on April 29, 1958, in association.

Pico Amarillo *see* **Bolinder Bluff**, **Brimstone Peak**

Islote Amarra *see* **Anchorage Island**, **Isla Fondeadero**

Ambalada Peak. 75°57' S, 158°23' E. A rock peak rising to 2160 m, 3.2 km SE of Griffin Nunatak, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1967, for Cesar N. Ambalada, USN (b. Philippines), electrician who wintered-over at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

Gora Ambarcumjana. 71°01' S, 66°47' E. A hill, in the vicinity of Goodall Ridge, in the Prince Charles Mountains. Named by the Russians.

Cabo Ambas Piedras. 66°49' S, 67°15' W. A cape that forms the extreme E end of Liard Island, in Hanusse Bay, off the NE coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Named by the Argentines in 1978 for the famous battle recalled in the Argentine national anthem. This naming was, of course, unacceptable to the Chileans, who named it Cabo Valenzuela, for Jorge L. Valenzuela Mesa, chief steward on board the *Yelcho*, which rescued Shackleton's men from Elephant Island in 1916.

Isla Amberes *see* **Anvers Island**

Ambergris Glacier. 65°43' S, 62°37' W. Flows SSE (the British say SSW) into Flask Gla-

cier, just W of Fluke Ridge, and W of Daggoo Peak, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. There is an important geological unconformity on the E wall of this glacier. In keeping with whaling terms used for several features in this area (e.g. Cachalot Peak), this glacier was named by UK-APC on Feb. 15, 1988, for the waxy substance secreted by the sperm whale and used in perfumery. It appears in the British gazetteer of 1988. US-ACAN accepted the name.

Ambona. 62°09' S, 58°29' W. A small rock ledge, 85 m above sea level, in the area above Arctowski Station, in Admiralty Bay, King George Island, in the South Shetlands. The name means "pulpit" in Polish, the Poles having named it in 1980.

Ambrose Rocks. 65°16' S, 64°22' W. A small cluster of rocks on the SW side of the southern Argentine Islands, and 1.5 km NW of Gaunt Rocks, off the W coast of Graham Land. Named by UK-APC on Nov. 3, 1971, for David Anthony Ambrose (b. 1946), survey assistant of the RN Hydrographic Survey unit from the *Endurance* here in Feb. 1969. US-ACAN accepted the name in 1972. It appears in the British gazetteer of 1974, and on a British chart of that year.

Ambush Bay. 63°10' S, 55°26' W. A bay, 5.5 km wide, opening toward the NE, it indents the N coast of Joinville Island for 3 km immediately SE of King Point, off the extreme N coast of the Antarctic Peninsula. Surveyed by Fids from Base D in 1953-54, and named by UK-APC on Sept. 4, 1957, for the lurking dangers here. It appears as such in the British gazetteer of 1958, and on a British chart of 1962. US-ACAN accepted the name in 1963. As early as 1956, the Argentines were calling it Bahía Carminatti, after Gualterio Carminatti (q.v.), and it appears as such in the Argentine gazetteer of 1970. The Chileans have their own name for this bay, Bahía Alessandri, named after the *Presidente Alessandri*. Both the Chileans and the Argentines had fixed this feature in 63°11' S, 55°31' W, but that has since been corrected.

Península Ameghino *see* **Churchill Peninsula**

Ameghino Gully. 64°28' S, 58°58' W. The most geologically important of several gullies in the area, it extends E-W through the outcrops on the W side of Longing Peninsula, on the Nordenskjöld Coast of Graham Land. Named by UK-APC on May 13, 1991, in association with Ameghino Refugio. US-ACAN accepted the name.

Ameghino Refugio. 64°25' S, 58°57' W. Argentine refuge hut (official name Florentino Ameghino Refugio, but also seen as F. Ameghino) built on Oct. 10, 1960, by Army personnel during ArgAE 1960-61, in an ice-free area long used as a depot site, on the SW side of Longing Gap, on the Nordenskjöld Coast of Graham Land, and named after Florentino Ameghino (1854-1911), Argentine geologist and anthropologist, and director of the Museum of Natural History, in Buenos Aires, 1902-11. The refugio has been dismantled.

Amelang, Herbert. b. 1907, Germany. He went to sea at 15, and by the age of 25 was 4th (then 3rd) officer on the *Este*, under Capt. Suenko Kampen, plying the Atlantic and the west coast of North America for North German Lloyd. By the age of 30, now with Lufthansa, he was 2nd officer on the *Friesenland*, which he left (along with Erich Harmsen) to join the *Schwabenland*, as 1st officer for GermAE 1938-39.

Amelangplatte. 74°05' S, 5°40' W. A ledge on Gora Sejsmologov, NE of Urfjellgavlen, on the Kirwan Escarpment, in Maudheimvidda, Queen Maud Land. Named by the Germans for Herbert Amelang.

Récif Amélie. 66°41' S, 139°57' E. A reef in the Géologie Archipelago. Named by the French on Feb. 16, 2010.

Fondeadero Amenábar. 65°12' S, 64°53' W. A deep stretch of water about 5 km SE of Quintana Island, 6.5 km NE of the Betbeder Islands, and 30 km W of Cape Tuxen, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capt. Adolfo Amenábar Castro, skipper of the Chilean Navy's oiler *Rancagua*, who participated in ChilAE 1956-57.

The *America*. A sealing vessel out of Newport, R.I. commanded by William Smyley, and in the South Shetlands and the Falklands, with her tender, the *Catherine*, during the period 1845-47. The *Catherine* was smashed and wrecked against an iceberg in 1846, with Smyley on board.

Cabo América. 68°08' S, 67°09' W. In the extreme NE of Millerand Island, in Marguerite Bay, 6 km SSE of Calmette Bay, off the W coast of the Antarctic Peninsula. Named in 1978 by Argentina for a gunboat that served the Junta de Mayo (the Argentine junta of 1810). The Chileans call it Cabo Gallegos, for embarkation officer 1st class Ladislao Gallegos Trujillo, on the *Yelcho* during the rescue of Shackleton's men from Elephant Island in 1916 during BITE 1914-17.

Pico América. 68°08' S, 67°09' W. A peak on Millerand Island, in Marguerite Bay, off the W coast of the Antarctic Peninsula. Named in 1976 by the leader of General San Martín Station, to honor the continent of America, it was a name adopted officially in 1978 by the Argentines.

Punta América. 67°46' S, 68°55' W. A prominent point in the extreme S of Adelaide Island, it was discovered by Biscoe on Feb. 15, 1832, and re-visited by Charcot in 1909 during FrAE 1908-10. Until 1956 this feature had no name, and the Argentines considered naming it until the British that year established a base there. However, the British didn't name it, and in 1961 when the British established Adelaide Station here, the Argentines named it Punta América, in honor of the continent.

America-Antarctic Ridge *see* **North Weddell Ridge**

American Antarctic Mountaineering Expedition. 1966-67. Abbreviated to AAME. An expedition sponsored by the American Alpine Club and the American Geographic Society, to climb the unclimbed peaks of the Sentinel Range, in the Ellsworth Mountains. The NSF volunteered to assist, if necessary. Nick Clinch (leader, from Pasadena), J. Barry Corbet (from Jackson Hole), John P. Evans (University of Minnesota, at Minneapolis), Eiichi Fukushima (University of Washington, at Seattle), Charles Hollister (Columbia University), William E. Long (q.v.) (Alaska Methodist University, at Anchorage), Brian S. Marts, Richard W. Wahlstrom, and Peter K. Schoening (all three from Seattle), and Samuel C. Silverstein (Rockefeller University, NY). They were flown in by the U.S. Navy from Christchurch, NZ, to McMurdo, and from there in a Herc to the Sentinel Range. In Dec. 1966, they became the first to climb Mount Vinson.

American Geographical Society Bay *see* **Gardner Inlet**

American Highland. 72°30' S, 78°00' E. An ice-capped interior plateau region, with an average of about 2800 m above sea level, eastward of the Lambert Glacier, extending from Enderby Land in the W to Wilkes Land in the E, and inland from the Ingrid Christensen Coast and the Amery Ice Shelf. Its relative flatness is relieved by the Grove Mountains near 75°E. Discovered aerially by Ellsworth during a flight from the *Wyatt Earp* on Jan. 11, 1939, and named by him. It is the central part of the large area of East Antarctica claimed by Australia. It was photographed by OpHJ 1946-47, and by ANARE flights in 1956 and 1957, the latter group making a landing to obtain an astrofix near the Grove Mountains. US-ACAN accepted the name in 1947.

American Polar Society. Founded in New York on Nov. 29, 1934. Its publication, the *Polar Times*, was first published in June 1935.

American sheathbill *see* **Sheathbills**

The *American Tern*. AK-4729. An 8650-ton, 521 foot-long container ship, built in Rostok, Germany, by VEB Schiffswerft Neptun, in 1990, she has a 50 percent greater carrying capacity than her predecessor, the *Green Wave*. Operated by American Automar, who leased her in 2002 to USN Military Sealift Command on an 8-year contract. In 2002-03 (her first year in Antarctica) she became the main American supply vessel to Antarctica, replacing the *Green Wave*. Skipper was Tim Adams, who also took her south in 2003-04 and 2004-05. She was back in 2005-06, 2006-07, 2007-08, and 2008-09.

American Women's Trans-Antarctic Expedition. 1992-93. Known as AWE. Four women, under the direction of leader Ann Bancroft (q.v.), skied to the South Pole, the first women to do so. She, Liv Arnesen (b. June 1, 1953, Baerum, Norway, a former teacher), Sue Giller (b. 1948), Anne Dal Vera (b. 1954; she was of Fort Collins, Colo.), and Sunniva Sorby (b. 1971, Norway; now of San Diego), trekked the 660 miles in 67 days, reaching the Pole on Jan. 14, 1993. Miss Bancroft wrote *Four to the Pole*. In 1994, Miss Arnesen would become the first woman to ski alone and unassisted to the South Pole.

Cape Amery. Mapped on Feb. 11, 1931, by BANZARE, it was actually a prominent part of what was later known as the Amery Ice Shelf. Mawson named it for accountant William Bankes Amery (known as Bankes Amery) (1883-1951), Britain's migration representative in Australia, 1925-29. In 1947 US-ACAN interpreted this to be the coastal angle of an ice shelf in the area, and that the cape itself had broken off and floated away. So, in 1953, they called the whole ice shelf the Amery Ice Shelf (q.v.), dropping the name Cape Amery altogether.

Amery Basin. 68°15' S, 74°30' E. A large gentle depression on the sea floor of Prydz Bay to approximately 900 m deep. The feature occupies the center of the bay below 500 m, and acts as a basin collecting sedimentation from the bay itself. Named by US-ACAN in June 1988, in association with the Amery Ice Shelf. On March 7, 1991, ANCA named it Amery Depression. The Russians call it Kotlovina Lednikovaja.

Amery Depression *see* **Amery Basin**

Amery G3 Automatic Weather Station. 70°54' S, 69°52' E. An Australian AWS, in the Prince Charles Mountains, at an elevation of 84 m, installed on Feb. 4, 1999, and still running in 2009.

Amery Ice Shelf. 69°45' S, 71°00' E. The southernmost part of the Indian Ocean, this broad ice shelf lies at the head of a large embayment consisting of Prydz Bay and MacKenzie Bay, between the Lars Christensen Coast and the Ingrid Christensen Coast, E of the American Highland, in East Antarctica. It extends inland from this large embayment for more than 300 km to the foot of the Lambert Glacier, which is the primary feeding source of ice for the shelf, but other contributors are the Scylla, Charybdis, Nemesis and Kreitzer Glaciers. A prominent part of it was mapped on Feb. 11, 1931 by BANZARE, and named Cape Amery (q.v.), which Australia claimed in 1933. US-ACAN accepted the name in 1953.

[1]**Amery Ice Shelf Station**. 69°28' S, 71°25' E. In 1966, the idea was conceived in Australia to set up a base on the Amery Ice Shelf, to drill through the ice shelf, and to study it intensively with a 4-man team in the winter of 1968, perhaps the smallest-ever deliberate wintering-over party in Antarctic history. In Feb. 1968, the *Nella Dan* arrived at the uncharted SE end of the ice shelf, at Sandefjord Bay. In the space of 9 hours, 70 tons of equipment was unloaded onto the ice shelf, and hauled 3 km up the shelf. The team was: Max Corry (leader, surveyor, and glaciologist), Neville "Gringo" Collins (diesel mechanic), Alan Nickols (electronics engineer), and Sam Sansom (medical officer; *see* **Sansom Islands**). They had 2 fiberglass caravans for shelter, two RN25 tracked Nodwells (with cabins) for transportation, and 3 OMC motor toboggans. With the aid of helicopters from the ship, Max Corry chose the site for the base, and G1 was established. The Nodwells were next to useless, as it turned out, and only after the *Nella Dan* had been to Mawson Station and returned with a smaller Snowtrac was the loss even partially compensated for. On March 1, 1968, the 4 men were left on their own for the 1968 winter. They informally re-named G1 "Lower Slobbovia," and soon they became the "Amery Troglodytes," as several feet of snow buried their camp. Ice-drilling was the main exercise, and they reached 310 m. In late Feb. 1969, the *Nella Dan* arrived to pick them up.

[2]**Amery Ice Shelf Station**. 69°42' S, 73°42' E. A Soviet base on the E side of the Amery Ice Shelf, on Sandefjord Bay. This was a summer station only, during the seasons 1971-72, 1972-73, and 1973-74, and was closed permanently on Feb. 25, 1974.

Amery Peaks. 70°36' S, 67°25' E. A group of peaks, 28 km in extent, along the SE side of Nemesis Glacier, on the E end of the Aramis Range, in the Prince Charles Mountains of Mac. Robertson Land. Discovered by Bill Bewsher's ANARE Southern Party of 1956-57, and so named by ANCA on July 22, 1957, because of their proximity to the Amery Ice Shelf. US-ACAN accepted the name in 1962.

Amery Station *see* **Amery Ice Shelf Station**

Ames Glacier *see* **Boyd Glacier**

Ames Range. 75°42' S, 132°20' W. A range of snow-covered, flat-topped, steep-sided mountains, extending for 32 km in a N-S direction, and which form a northern right angle with the E end of the Flood Range, behind the Getz Ice Shelf, in Marie Byrd Land. Discovered by USAS 1939-41, and named by Byrd as the Joseph Ames Range, for his father-in-law, Joseph Ames. The name was accepted by US-ACAN in 1947, and later shortened by US-ACAN in 1966.

The *Amguyema*. A Russian icebreaker, built in 1962, and named for the Russian river. She took part in SovAE 1977-79. Skipper that year was Grigoriy Solomonovich Matusevich.

Mount Amherst. 86°32' S, 153°06' W. A peak rising to 2400 m between Holdsworth Glacier and Scott Glacier, 5 km NNE of McNally Peak, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. The geology of the peak was studied during the 1978-79 season by a USARP — Arizona State University field party. Named by US-ACAN for Amherst College, the Massachusetts alma mater of Michael F. Sheridan, a member of the party.

Ami Boué Peak. 63°25' S, 57°47' W. Rising to 1101 m in the N extremity of the Laclavère Plateau, 8.79 km SSE of Mount Jacquinot, 11.14 km NE of Dabnik Peak, 8.43 km N of Kanitz Nunatak, and 12.56 km WSW of Fidase Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for Ami Boué (1794-1881), the French explorer of the Balkans.

Arrecifes Amiot *see* **Amiot Islands**

Îles Amiot *see* **Amiot Islands**

Islas Amiot *see* **Amiot Islands**

Islotes Amiot *see* **Amiot Islands**

Amiot Islands. 67°36' S, 69°38' W. They comprise the two dangerous little semi-submerged Ward Islands and Cumbers Reef, and lie between 10 and 17 km (a mean of 14 km) W of Cape Adriasola, on the SW coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Discovered and roughly charted by FrAE 1908-10, and named by Charcot as Îles Amiot, for A. Amiot (d. 1910), engineering director of L'Enterprise Montevideo, in Uruguay, the company which, in 1910, repaired the *Pourquoi Pas?* They appear as such on Charcot's 1910 chart, as Arrecifes Amiot (i.e., "Amiot reefs") on an Argentine chart of 1912, and on a British chart of 1914 as the Amiot Islands. The Discovery Investigations re-charted the feature in 1930-31, and it appears on their chart of 1931, and on another British chart of 1940. However, following their survey of 1935-36, it appears on the chart drawn up by BGLE 1934-37, as Amiot Reef. It appears as Islas Amiot on a 1946 Argentine chart, but as Islotes Amiot on one of their 1953 charts, and as Arrecifes Amiot on one from 1958. The Argentine government officially recognized the name Arrecifes Amiot, in July 1959. US-ACAN accepted the name Amiot Reef in 1951, and UK-APC followed suit on Sept. 8, 1953, the feature appearing as such in the 1955 British gazetteer. The feature was more accurately charted in 1963 by an RN Hydrographic Survey unit, re-plotted, and was re-defined by UK-APC on Feb. 12, 1964, as Amiot Islands. As such, it appears on a British chart of that year, and the new name, definition, and coordinates were accepted by US-ACAN later in 1964. The feature appears in the 1974 Chilean gazetteer as Islas Amiot.

Amiot Reef *see* **Amiot Islands**

Ammo Col. 67°33' S, 68°09' W. A small col marking the boundary between the middle and SE sections of Reptile Ridge, on Wright Peninsula, in Adelaide Island. Photographed aerially by FIDASE in 1956-57. So named by BAS personnel from Rothera Station because this was where ammunition supplies were stored. UK-APC accepted the name on Oct. 4, 2004.

AM01. 69°27' S, 71°25' E. Australian automatic weather station on the Amery Ice Shelf, at an elevation of 65 m, installed on Feb. 12, 2002, and removed on July 28, 2005.

AM02. 69°43' S, 72°38' E. Australian automatic weather station on the Amery Ice Shelf, at an elevation of 47 m, installed in 2001, even though its number would indicate a later installation than that of AM01 (see above). It was removed in 2007.

Punta Amoroso. 70°36' S, 61°22' W. A point forming the extreme SE of Eielson Peninsula, which projects between Smith Inlet and Lehrke Inlet into the S part of the Larsen Ice Shelf, between the Wilkins Coast and the Black Coast, on the E side of the Antarctic Peninsula. Named by the Argentines in 1975 for Sgt. Adelmo Carmen Amoroso, whose B019 Avro Lincoln crashed on March 22, 1950, in Parry Fjord, Chile, after completing an Antarctic flight. The Chileans call it Punta Aris, for Hipólito Aris C., fireman 1st class on the *Yelcho* as it rescued Shackleton's party in 1916 during BITE 1914-17. *See also* **Forge Islands**.

Amorphous Glacier. 74°42' S, 163°56' E. An undulating glacier of undetermined dimensions,

which descends from Mount Abbott to a debris-covered terminus, in the Northern Foothills of Terra Nova Bay, in Victoria Land. Named by NZ-APC on Nov. 16, 1989.

Amos Glacier. 77°49' S, 163°39' E. A glacier, 5 km long, it flows SE from Bettle Peak to a junction with Blue Glacier, SE of Hannon Hill, in Victoria Land. Named by US-ACAN in 1992, for Larry Leon Amos, civil engineer, one of the two-man USGS astronomic survey team who went to Pole Station and Byrd Station in 1969-70. For the first time since 1956 they established the exact position of the South Pole.

Amos Lake. 60°42' S, 45°39' W. A small lake near the W coast of Signy Island, just over 500 m south of Thulla Point. Named by UK-APC on Dec. 20, 1974, for limnologist Stephen Christopher "Chris" Amos (b. 1946), BAS biological assistant who wintered-over at Signy Island Station in 1972 and 1973. He studied this lake in 1972-73. US-ACAN accepted the name in 1975. It appears on a 1975 British map.

Gora Amosova. 71°51' S, 14°33' E. A mountain, in the Payer Mountains, in central Queen Maud Land. Named by the Russians.

Ampfererberg. 72°48' S, 167°19' E. A mountain at the E edge of the Malta Plateau, in the vicinity of Mount Burrill, in the Victory Mountains of Victoria Land. Named by the Germans.

Amphibole Peak. 84°44' S, 173°26' W. Rising to 1660 m, it is the highest point in the Gabbro Hills, just over 6 km N of Mount Llano, in the Queen Maud Mountains. Named by the Southern Party of NZGSAE 1963-64, for the minerals of the Amphibole group found here. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Amphibolite Point. 60°41' S, 45°21' W. A conspicuous pyramidal point, 2.4 km NW of Saunders Point, on the S coast of Coronation Island in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, who proposed the name in 1950 for the large exposure of dark, metamorphic amphibolite rock found here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Punta Anfibolita (which means the same thing).

[1]**The Amphitheatre**. 68°06' S, 66°34' W. A large, bowl-shaped cirque, just over 1 km in diameter, at the S side of the head of Northeast Glacier, adjacent to the old main bases of BGLE 1934-37 and USAS 1939-41, on the Fallières Coast, on the W coast of Graham Land. It was charted by USAS sledging parties that crossed Graham Land via Northeast Glacier and Bills Gulch. Surveyed in 1946 by FIDS, who proposed this descriptive name, which was accepted by UK-APC on March 31, 1955, and by US-ACAN in 1973. Chacabuco Refugio was here.

[2]**The Amphitheatre**. 78°18' S, 163°03' E. A great cirque carved out of the N side of Mount Dromedary, whose walls rise sheer about 1700 m from the floor of Roaring Valley, on the E side of the Royal Society Range of Victoria Land. Named by VUWAE 1960-61 for its enormous size and near-perfect amphitheatrical shape. They plotted it in 78°22' S, 163°03' E. NZ-APC accepted the name, and US-ACAN followed suit in 1966. It is now occupied only by névé which has produced Amphitheatre Glacier.

Amphitheatre Glacier. 78°17' S, 163°04' E. Flows N from Mount Dromedary into Roaring Valley, on the E side of the Royal Society Range, in Victoria Land. It is a relatively new glacier, and occupies The Amphitheatre, whereas in earlier times only a névé filled that cirque [*see* [2]**The Amphitheatre**], in association with which it was named by NZ-APC. US-ACAN accepted the name in 1995.

Amphitheatre Lake. 68°06' S, 48°45' E. A smooth-surfaced meltwater lake, almost 3 km by 3 km, running E-W, in the W part of Amphitheatre Peaks, in the Nye Mountains of Enderby Land. Almost completely enclosed by rock and ice cliffs, it forms an amphitheatre, with an outlet to Rayner Glacier at the W end. Photographed aerially by ANARE in 1956, and visited by Graham Knuckey's ANARE airborne field party in Nov. 1958. Named descriptively by ANCA. US-ACAN accepted the name in 1961.

Amphitheatre Peaks. 68°06' S, 48°52' E. A group of peaks surrounding, and extending to the E of, Amphitheatre Lake, in the NW part of the Nye Mountains, in Enderby Land. Photographed aerially by ANARE in 1956, and visited by Graham Knuckey's airborne field party in Nov. 1958. Named by ANCA on Nov. 24, 1961, in association with the nearby lake. US-ACAN accepted the name in 1965.

Amphlett, Alfred John "Alf." b. March 19, 1922, London, son of Alfred John Amphlett and his wife Mary Kathleen Mansfield. He enlisted in the Worcestershire Regiment in 1937, as a boy musician (flute), and during World War II was a gunner in Europe. He joined the REME as a mechanic, for Operation Mosaic, the 1956 British atom bomb testing in the Montebello Islands. He was a warrant officer 2nd class when he wintered-over as senior diesel engineer at Halley Bay Station in 1957 and 1958, for the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, during IGY. He returned to London from Cape Town on the *Kenya Castle*, arriving on Feb. 27, 1959. He returned to the REME training wing, and retired in 1963. With BAS, he wintered-over at Signy Island Station in 1963 and at Halley Bay again in 1965, as a civilian base engineer. He became a science lab technician, and entered Chelsea Hospital in 1988, joining the band there. He died there on Dec. 18, 2009.

Amputations. **Jan. 31, 1908**: The first recorded amputation in Antarctica was the removal of Aeneas Mackintosh's eye. **April 6, 1908**: Brocklehurst had some of his frozen toes removed, after his Mount Erebus climb. **Dec. 24, 1908**: Charcot saved a Norwegian whaler's wife from gangrene by removing four of her gangrenous fingers, at Deception Island. **1916**: During BITE 1914-17, Perce Blackborow wore leather boots instead of the recommended felt ones, and Drs. McIlroy and Macklin, in a dark, grimy hut, with insufficient instruments, and no sterilization procedure, had to amputate all the toes of his left foot, just after Perce had led them all (the men, that is) on to Elephant Island. On the other side of the continent, during the same expedition, Harry Wild lost some body parts under John Cope's scalpel. **1920**: At Órcadas Station, team leader Guillermo Koppelman, lacking any better instruments, had to amputate eight of Augusto Tapia's fingers with nail clippers, after an accident. **July 2, 1934**: At Little America, Jock had to have his tail amputated. Jock was a dog, not a man. **1940**: Malcolm Douglass had to have a toe amputated after 44 hours on the ice during his suicide attempt. **July 21, 1951**: Alan Reece's eye was removed (*see* **Norwegian-British-Swedish Antarctic Expedition**). **1946**: Ralph P. LeBlanc, a victim of the Martin Mariner plane crash, was badly burned and his feet frozen. Gangrene set in and both of his legs had to be removed below the knee on board the *Philippine Sea* on the way home. **1958-59**: During the whaling season on the *Southern Harvester*, Duncan McKay, only 21, the radio officer, got caught in the harpoon line, and had to have his leg amputated below the knee.

Amsler Island. 64°46' S, 64°05' W. An irregular-shaped island, 1.5 km long, with Norsel Point forming its narrow W extremity, between Loudwater Cove and Arthur Harbor, and close off Anvers Island, in the Palmer Archipelago. It only became an island in 2005. Until then it was a peninsula of Anvers Island, with Base N (the old FIDS station, also known as Arthur Harbour Station) on it, and with Norsel Point forming its extremity. All those decades Marr Ice Piedmont had covered its E part, and therefore no-one suspected that it was actually an island. However, in 2005, the ice piedmont receded all of a sudden, revealing an eastern channel several hundred meters wide, and also revealing the insular nature of this feature. Named by US-ACAN on July 17, 2007, for Charles W. and Margaret Amsler. Chuck Amsler, a marine algal ecophysiologist and chemical ecologist, an authority on seaweed, made 11 trips to Antarctica, beginning in 1985-86, the first of 7 trips to Palmer Station. His wife Maggie is an invertebrate zoologist. In 1979-80 she made the first of 16 trips to Palmer Station. The Amslers have done 500 research dives. Their latest (at time of writing) trip to Palmer ended in June 2008. The name of the new island was accepted by UK-APC on May 20, 2008.

The *Amsterdam*. A Dutch tourist ship, operated by Holland America, with a carrying capacity of 1200 passengers, in Antarctic waters in 2002-03.

Amsterdam Island. 37°50' S, 77°32' E. Not in the Antarctic. Claimed by France.

Mount Amundsen. 67°14' S, 100°45' E. A nunatak, E of Denman Glacier, about 18 km NE of Mount Sandow, behind the Shackleton Ice Shelf. Discovered by the Western Base Party of AAE 1911-14, and named by Mawson for Amundsen. US-ACAN accepted the name.

Amundsen, Oskar. b. Nov. 23, 1883, Stokke, Norway, son of ship's mate Ole Amundsen and his wife Olava. He went to sea as a gunner, and

married Betty Paulsen, setting up home in Stokke. In 1915-16 he was in the South Shetlands, as skipper of the *Roald Amundsen*. In 1924 he was skipper of the *Montclare* (not in Antarctica).

Amundsen, Roald Engebreth Gravning. b. July 16, 1872, Borge, near Kristiania (now Oslo), Norway, son of ship-owner Jens Amundsen and his wife Hanna Henrika Gustava Sahlquist (known as Gustava). As a young man he was destined to be a doctor (his mother's wish), but when she died, Amundsen went to sea, immediately. He was 2nd mate on the *Belgica*, during BelgAE 1897-99, led by de Gerlache, and wintered-over in 1898, being the first man to ski in Antarctica, and one of the first to sledge. From 1903 he was in the Arctic, searching for the Northwest Passage. He found it in 1906. He was on his way to discover the North Pole, on a new expedition in the *Fram*, in 1910, when news arrived that Peary had beaten him to it. So, Amundsen carried on, but in the other direction, with a new Pole in mind. On Dec. 14, 1911, he became the first leader to reach the South Pole, during NorAE 1910-12. He arrived a month ahead of Scott, his rival, and he got back and Scott didn't. After 1912 he went into the shipping business, and conducted much Arctic activity. He wrote a couple of books (*see* the Bibliography), and died on or about June 18, 1928, somewhere in the Arctic, in rescue of his enemy Nobile. He never married, but there was the affair with Kristine Bennet...

Amundsen Abyssal Plain *see* **Amundsen Plain**

Amundsen Arm. 78°30' S, 164°00' W. An ice cape, the E arm of the Bay of Whales, 5.6 km S of Little America I, and just N of Framheim. Named by ByrdAE 1928-30 for the great explorer, it is no longer there (*see* **Bay of Whales** under **W**). However, it does appear in the 1958 NZ provisional gazetteer.

Amundsen Basin *see* **Southeast Pacific Basin**

Amundsen Bay. 66°55' S, 50°00' E. Also called Ice Bay, and Isfjorden. A long embayment, 44 km wide in the N, and narrowing toward the S, it indents the W coast of Enderby Land for 88 km, between Casey Bay and the Tula Mountains, being close W to the latter feature, and is the eastern of 2 adjacent bays (the other being Casey Bay). On Jan. 14, 1930 Mawson saw it as a large ice-pack-filled recession in the coastline, and named it Amundsen Bay, for Roald Amundsen. The feature was seen aerially the following day by Riiser-Larsen more for what it really is, and subsequently mapped with reasonable accuracy by Norwegian cartographers. Mapped in detail by Peter Crohn's ANARE party who landed near here by aircraft in 1956, and by Phil Law's ANARE party which landed in the bay itself by launch from the *Thala Dan* in Feb. 1958. ANCA accepted the name on April 29, 1958, and US-ACAN followed suit in 1962. *See* **Casey Bay** for more details.

Amundsen Coast. 85°30' S, 162°00' W. That portion of the Antarctic coastline to the S of the Ross Ice Shelf, lying between Morris Peak (on the E side of Liv Glacier) and the W side of Scott Glacier, between the Dufek Coast and the Gould Coast, in Victoria Land. Named by NZ-APC on May 24, 1961, for Roald Amundsen, who was here in 1911. US-ACAN accepted the name in 1964.

Amundsen Glacier. 85°35' S, 159°00' W. A major glacier, 130 km long, and between 6 and 10 km wide, originating on the Polar Plateau, and draining the area to the S and W of Nilsen Plateau, flowing down through the Queen Maud Mountains, into the Ross Ice Shelf, just W of MacDonald Nunataks. Discovered by Byrd on his flight to the Pole in Nov. 1929, and named by Larry Gould for Amundsen. US-ACAN accepted the name in 1947. It appears in the 1958 NZ provisional gazetteer.

Amundsen Glacier Camp. 86°18' S, 160°55' W. An American refuge hut, a 16' × 16' Jamesway hut, built adjacent to Amundsen Glacier, on the Faulkner Escarpment, in Nov. 1963. It was dismantled in Jan. 1964.

Amundsen Icefall. 85°28' S, 166°42' W. A steep, turbulent icefall, at the point where the Axel Heiberg Glacier comes off the Polar Plateau, between Mount Fridtjof Nansen and Mount Don Pedro Christophersen, in the Queen Maud Mountains. Named by the Southern Party of NZGSAE 1961-62 for Amundsen. US-ACAN accepted the name in 1966.

Amundsen Omega 3 South Pole Race. In Jan. 2009, six teams competed in a race to the South Pole. They flew in from Cape Town to Novolazarevskaya Station, acclimatized, and were then flown to the starting line, inland from the Weddell Sea. The race to the Pole began at 10 A.M., on Jan. 4, 2009, each person pulling a 90 kg sledge. This was the order of finishing: 1. Team Missing Link, comprising two Norwegian Army lads, Rune Materud and Stian Aker, both 27. They arrived at the Pole on Jan. 21, 2009, after doing 770 km in 17 days and 11 hours. 2. Team Qinetic (UK), comprising actress Julia Foster's son, Ben Fogle (34), Olympic oarsman James Cracknell, and Bristol-based Dr. Ed Coats. They arrived on Jan. 22, 2009, to find the Norwegians waiting there, an almost eerie repeat of the Scott-Amundsen race of 1911-12. 3. Team Danske Bank, comprising Norwegian-turned-Englishman Christian Hillkirk, long-time Royal Marine PTI Gary Bullen, and Gary Marshall. 4. Team Due South (UK), comprising Hylton James (42), Plymouth physiotherapist Rachel Andrews, and Phil Hayday-Brown. 5. Team South Pole Flag, comprising Northern Irishman Mark Pollock (32 and blind), Dubliner Simon O'Donnell, and long-time Norwegian Army man Inge Solheim. 6. Team Southern Lights, comprising the amazing Brits Peter Hammond (62) and Tess Burrows (60).

Amundsen Plain. 65°00' S, 125°00' W. A submarine feature off the Amundsen Coast, in association with which it was internationally named Amundsen Abyssal Plain in April 1985. In 1988 US-ACAN accepted the term, but without the word "abyssal."

Amundsen Ridge *see* **Amundsen Ridges**

Amundsen Ridges. 69°15' S, 123°00' W. Also called Amundsen Ridge. A submarine feature off the coast of Marie Byrd Land. Named by international agreement.

Amundsen-Scott South Pole Station *see* **South Pole Station**

Amundsen Sea. 73°00' S, 112°00' W. A marginal sea off the coast of Marie Byrd Land, between Cape Dart on Siple Island in the W, and Cape Flying Fish on Thurston Island in the E, or, more generally, between the Ross Sea and the Bellingshausen Sea. Named Amundsenhavet by Nils Larsen in Feb. 1929 for Roald Amundsen. The British called it the Roald Amundsen Sea, and later adopted the shortened version, Amundsen Sea. USAS 1939-41 and OpHJ 1946-47 both defined the sea more accurately, as did post-IGY American exploration, and in the 1940s the Americans were calling it the Franklin D. Roosevelt Sea (for the president). Note: USAS was going to call it Siple Sea at one time. However, in 1947 US-ACAN fell into line with everyone else, and accepted the name Amundsen Sea.

Amundsenhavet *see* **Amundsen Sea**

Amundsenisen. 74°30' S, 6°00' W. The ice area S of the Heimefront Range and the Kirwan Escarpment, in the S part of Maudheimvidda, in Queen Maud Land. This feature and Wegenerisen go to form a group feature that the Germans call Wegenerinlandeis. Named by the Norwegians (the name means "the Amundsen ice"). The Russians have plotted it in 73°50' S, 2°30' W.

Skaly Amurskie *see* **Rimekalvane Nunataks**

Amy, Kenneth "Ken." b. March 4, 1919, Brighton. Carpenter on the 2nd part (i.e., 1956-58) of the British Royal Society Expedition of 1957, during IGY. He wintered-over at Halley Bay in 1957. After the expedition, he left Las Palmas on the *City of Port Elizabeth*, and arrived back in Plymouth on Feb. 20, 1958, heading home to Campbelltown, Argyllshire. Deceased.

Amy Guest Island *see* **Guest Peninsula**

Cabo Ana *see* **Cape Anna**

Caleta Ana *see* **Anna Cove**

Islote Ana *see* **Ann Island**

Punta Anadón. 68°12' S, 77°00' W. At the SW of Norseman Point, in the extreme NE of Neny Island, just S of Stonington Island, in Marguerite Bay, off the W coast of Graham Land. Named by the Argentines for Fidel L. Anadón, then a naval lieutenant, but later an admiral, who orchestrated the 1925 scientific expedition of the *Primero de Mayo*.

Anagram Islands. 65°12' S, 64°20' W. A group of small islands and rocks including Maranga Island and Nob Island, SW of French Passage, and NW of the Argentine Islands, between the Argentine Islands and the Roca Islands, in the Wilhelm Archipelago, off the W coast of Graham Land. Charted by de Gerlache during BelgAE 1897-99, and roughly charted by Charcot during FrAE 1903-05 and FrAE 1908-10. The French thought it was one island, and named it Île Roca, and as such it appears on a

French chart of 1908. However, it also appears on a 1908 expedition chart of theirs, as Îles Roca. A 1908 British chart, working from Charcot, named them the Roca Islands. Various 1912 charts and maps have Île Crulls, Îles Crulls, and Cruls Islands (sic). This is where the confusion begins. Incidentally, they are not the Cruls Islands, which lie a little to the west. BGLE 1934-37 surveyed the group anew in 1934-37, and named them (in error) as the Rocca Islands, and they appear as such on Rymill's 1938 map of the expedition. In 1946, USAAF mapped this group together with the Roca Islands, and what are now the Anagram Islands appear on a 1946 Argentine map as Islas Roca, on a 1947 Chilean chart as Islas Rocca, and on a 1953 Argentine chart as Islotes Roca. But, they are not the Roca Islands or the Rocca Islands, not those groups as we know them today, anyway. The Roca Islands lie to the W (but not quite as far to the W as the Cruls Islands), and the Rocca Islands lie to the NW. There was even confusion between (what became known as) the Anagram Islands and the Argentine Islands. They appeared on a 1948 chart as Roca Islets, and that is how UK-APC accepted the name on March 31, 1955. In 1957-58 the helicopter off the *Protector* photographed the group aerially, and FIDS mapped them in detail from these photos and from information gathered by the RN Hydrographic Survey unit off the *John Biscoe*, in 1958. This enabled the confusion to be cleared up once and for all between the island groups. Named by UK-APC on July 7, 1959, as a memorial to the confusion. US-ACAN accepted the new name, later that year. It appears on a British chart of 1960. The islands appear on a Chilean chart of 1962, as Islotes Anagrama (which means the same thing), and appear as such in their 1974 gazetteer.

Islotes Anagrama *see* **Anagram Islands**

Mount Anakiwa. 73°00' S, 165°43' E. A small mountain rising to 2640 m, 5 km N of Mount Supernal, in the Mountaineer Range of Victoria Land. Named by the Northern Party of NZGSAE 1966-67, for the Cobham Outward Bound School at Anakiwa in NZ. NZ-APC accepted the name, and US-ACAN followed suit in 1968.

Mount Analogue. 85°49' S, 138°05' W. A prominent mountain, rising to 3170 m, along the Watson Escarpment, forming the highest point of the ridge that runs N from Phleger Dome, on the Stanford Plateau, in the Horlick Mountains. First visited by a USARP — Arizona State University geological party led by Ed Stump, and so named by Stump because clouds were obscuring the feature during the party's visit. The original Mount Analogue was similarly obscured in an unfinished, obscure, and bizarre novel by French writer René Daumal (1908-1944), called *Le Mont Analogue: Roman d'aventures alpines, non euclidiennes et symboliquement authentiques*. US-ACAN accepted the name.

Anandakrishnan Glacier. 75°32' S, 140°05' W. 24 km long, it flows through the Ruppert Coast, N of Strauss Glacier. Named by US-ACAN on Jan. 31, 2003, for Sridhar Anandakrishnan, Penn State geophysicist involved in ice-sheets and tectonics in Antarctica.

Mount Ananke. 70°52' S, 68°25' W. Between Mount Ganymede and Mount Elara, on the E side of Alexander Island. Named by UK-APC on Jan. 18, 2002, in association with nearby Jupiter Glacier, for one of the Jovian moons.

ANARE. Acronym for Australian National Antarctic Research Expeditions. Originally the name had periods (full stops) in between the letters. **Dec. 20, 1946**: Australia decided to fit out the ship *Wyatt Earp* for exploration, and to establish a territorial claim in Antarctica, building on Mawson's earlier explorations. This was the beginning of Australia's ongoing Antarctic effort. **March 1947**: RAAF made reconnaissance flights over the Southern Ocean, including Macquarie Island. **May 1947**: The Executive Planning Committee was established, and Stuart Campbell was named to head the first expedition. **July 7, 1947**: Phil Law was chosen as senior scientific officer. **July 9, 1947**: The name ANARE was chosen by the Executive Naming Committee. **1947-48**: The first ANARE (*see* below). There were two very distinct phases to ANARE — the first was post-war Australia, poverty-stricken (as was every other British country in the world), couldn't afford a ship to go to Antarctica proper, had to make do with the sub-Antarctic islands Heard and Macquarie. That was 1946 to 1953. The second phase, 1953 to the present, was very different. It was slow to evolve, but everything changed when the Australian government leased the *Kista Dan*. Each expedition is covered chronologically below. Even though the early ones are not Antarctic (rather they are sub-Antarctic), they are included (in only somewhat abbreviated form) to show the development of ANARE. ANARE has thrown up some of the great Antarctic explorers — Phil Law, Bob Dovers, John Béchervaise, Syd Kirkby, Bill Bewsher, Peter Crohn, to name but a few. **May 4, 1948**: The Australian government set up the Antarctic Section (re-named the Antarctic Division on May 18), within the Department of External Affairs, and this division controlled ANARE from that time. Stuart Campbell was the first officer-in-charge. **Dec. 21, 1948**: Phil Law was appointed assistant OIC (Scientific), within the Antarctic Division. **Dec. 31, 1948**: Stuart Campbell resigned as director of ANARE. **Jan. 1, 1949**: Phil Law was appointed acting officer-in-charge of the Antartic Division, including the responsibilities of leader of ANARE. **Jan. 3, 1949**: Phil Law succeeded Campbell as officer-in-charge (director) of the Antarctic Division. This was the major turning point for the fledgling organization. Trevor Heath was secretary, and Law's deputy. From 1948 to 1954 ANARE would stay in the sub-Antarctic islands, with Law as the most famous of its leaders. **July 13, 1950**: Australia decided to establish a permanent base in Antarctica, but the Korean War, and lack of a suitable ship, got in the way. **1951**: A boost to Antarctic endeavors came when Richard Casey succeeded Percy Spender as minister for external affairs. **Feb. 6, 1953**: It wasn't until the *Kista Dan* was acquired on this date, that a base was actually planned (Australia did not have a ship to take expeditioners all the way south until then, and even then the *Kista Dan* was leased, not owned, by Australia). **Feb. 1954**: They set up Mawson Station, and Phil Law continued to be the man most associated with leading ANARE. The *Kista Dan* is the vessel best remembered for taking the ANARE parties down to Antarctica every year, in those days. **1957**: Don Styles joined ANARE. **May 1963**: The Antarctic Division moved from Collins Street to St. Kilda Road, in Melbourne. **April 1966**: Phil Law resigned as director of the Antarctic Division. Don Styles, his assistant director, took over as acting director. **May 1, 1968**: The Antarctic Division was transferred from the Department of External Affairs to the Department of Supply. It would finally wind up in the Department of Science. **Oct. 2, 1970**: Colin Bull having refused the directorship of the Antarctic Division, Bryan Rofe took on the job. Don Styles, acting director for the past 4 years, was passed over. **Aug. 27, 1971**: Bryan Rofe died. Don Styles became acting director again. **May 8, 1972**: Raymond Ivan "Ray" Garrod (b. 1916, Wellingborough, Northants, England, of Australian parents) became new director of the Antarctic Division. Styles had been passed over yet again. **June 23, 1972**: Don Styles retired from the Antarctic Division. **1974**: the Australian government decided to move the Antarctic Division from Melbourne, to Kingston, Tasmania. **Jan. 19, 1976**: The first ANARE women officially to visit Antarctica (*see* **Women in Antarctica**), at Casey Station. **Oct. 16, 1978**: Construction of the new ANARE headquarters began at Kingston, Tasmania. **April 2, 1979**: Following Ray Garrod's retirement as director of the Antarctic Division, physicist Clarence Gordon "Clarrie" McCue (*see* **McCue Bluff**) became acting director. **Dec. 1980**: The move from Melbourne to Tasmania began for personnel in the Antarctic Division. **April 22, 1981**: The new Antarctic Division's headquarters were opened in Tasmania by Prince Charles. **Feb. 18, 1984**: Jim Bleasell became acting director of the Antarctic Division. **1988**: Jim Bleasell resigned as acting director of the Antarctic Division, and Rex Moncur replaced him. **Dec. 21, 1989**: Rex Moncur became director of the Antarctic Division. **1998**: Tony Press became director of the Antarctic Division.

ANARE 1947-48. There were 2 ships, the *Wyatt Earp* and the *LST 3501*. **Nov. 17, 1947**: *LST 3501*, skippered by Cdr. George Manley Dixon (q.v.), left from Melbourne, bound for Fremantle, in Western Australia. Stuart Campbell was voyage leader. **Nov. 24, 1947**: *LST 3501* arrived at Fremantle. **Nov. 28, 1947**: *LST 3501* left Fremantle, bound for Heard Island (53°S). **Dec. 11, 1947**: *LST 3501* arrived in Atlas Cove, at Heard Island, to set up the first ANARE station here. **Dec. 13, 1947**: *Wyatt Earp* left Adelaide, bound for Melbourne. **Dec. 17, 1947**: *Wyatt Earp* arrived in Melbourne. **Dec. 19, 1947**: *Wyatt Earp* left Melbourne, bound for Hobart. **Dec. 21, 1947**: The expedition's Walrus

plane was wrecked. **Dec. 22, 1947**: *Wyatt Earp* arrived in Hobart. **Dec. 26, 1947**: Heard Island was claimed for Australia. *LST 3501* (or at least, the expeditioners on the ship) would remain on Heard Island and in the Kerguélen Islands. On that very day (Dec. 26) the flagship *Wyatt Earp*, under the command of Karl Oom, left Hobart, bound for Melbourne, carrying, among others, Stuart Campbell, leader of the expedition, and Phil Law, 2nd-in-command. **Dec. 28, 1947**: *LST 3501* left Heard, bound for the Kerguélen Islands. **Dec. 30, 1947**: *LST 3501* arrived at the Kerguélens, to leave fuel in a depot for the *Wyatt Earp*. **Jan. 1, 1948**: *LST 3501* left the Kerguélens, bound for Heard again. **Jan. 2, 1948**: *LST 3501* arrived back at Heard. **Jan. 4, 1948**: *LST 3501* left Heard, bound for Melbourne. **Jan. 18, 1948**: *LST 3501* arrived back in Melbourne. **Feb. 8, 1948**: *Wyatt Earp* left Melbourne. Karl Oom was voyage leader. Their mission was to look for a base on the coast of George V Land, in Antarctica proper. They would fail, due to the ice conditons not allowing them to get into Commonwealth Bay. **Feb. 28, 1948**: Dixon and the *LST 3501* left Melbourne, bound for Hobart. **March 3, 1948**: *LST 3501* left Hobart, bound for Macquarie Island. George Dixon was voyage leader. **March 7, 1948**: Dixon and *LST 3501* arrived at Macquarie. **March 20, 1948**: *Wyatt Earp* arrived at Macquarie. **March 21, 1948**: Macquarie Island Station was opened. **March 24, 1948**: *Wyatt Earp* left Macquarie. **March 25, 1948**: *LST 3501* left Macquarie, bound for Hobart. **March 29, 1948**: *LST 3501* arrived back in Hobart. **March 31, 1948**: *LST 3501* left Hobart, bound for Melbourne. **April 1, 1948**: *Wyatt Earp* arrived back in Melbourne. **April 2, 1948**: *LST 3501* arrived back in Melbourne.

ANARE 1948-49. **Jan. 21, 1949**: The *Labuan* (until Nov. 2, 1948 called *LST 3501*), still skippered by George Dixon, left Melbourne for Heard Island, to resupply and relieve. Phil Law was voyage leader. **Feb. 5, 1949**: *Labuan* arrived at Atlas Cove, Heard Island. **Feb. 11, 1949**: *Labuan* left Heard, bound for the Kerguélen Islands. **Feb. 12, 1949**: *Labuan* arrived at the Kerguélens. **Feb. 14, 1949**: *Labuan* left the Kerguélens, bound for Melbourne. **Feb. 28, 1949**: *Labuan* arrived back in Mebourne. **March 19, 1949**: *Labuan* left Melbourne, bound for Hobart. **March 21, 1949**: *Labuan* arrived in Hobart. **March 23, 1949**: *Labuan* left Hobart, bound for Macquarie Island, to relieve the party there. Trevor G. Heath was voyage leader. **March 27, 1949**: *Labuan* arrived at Macquarie. **April 8, 1949**: *Labuan* left Macquarie, bound for Melbourne. They were bringing with them 21 king penguins and some royal penguins, for zoos in Melbourne and Sydney. **April 14, 1949**: *Labuan* arrived back in Melbourne.

ANARE 1949-50. **Nov. 20, 1949**: The *Tutira* took Lem Macey and Bob Dovers to Macquarie Island. Trevor Heath was voyage leader. **Dec. 2, 1949**: The *Tutira* arrived at Macquarie. **Jan. 31, 1950**: The *Labuan* left Albany, W.A., bound for Heard Island, with 12 huskies aboard. Trevor Heath was voyage leader. **Feb. 11, 1950**: *Labuan* arrived at Heard. **Feb. 24, 1950**: *Labuan* left Heard, bound for the Kerguélen Islands. **Feb. 25, 1950**: *Labuan* arrived at Kerguélen, to pick up Diesel oil for Macquarie Island Station. **March 1, 1950**: *Labuan* left Kerguélen, bound for Albany. **March 11, 1950**: *Labuan* arrived back in Albany. **April 6, 1950**: *Labuan* left Hobart, bound for Macquarie Island. Trevor Heath was voyage leader. **April 10, 1950**: *Labuan* arrived at Macquarie. **April 24, 1950**: *Labuan* left Macquarie, bound for Melbourne. **April 29, 1950**: *Labuan* arrived back in Melbourne, with king penguins aboard, destined for Australian zoos. **July 27, 1950**: The *Australia* (Capt. G.C. Oldham) left Melbourne, on an emergency mission to Heard Island, to replace the doctor (Serge Udovikoff) there, who was suffering from appendicitis. **Aug. 7, 1950**: The *Australia* reached Heard. **Aug. 8, 1950**: The *Australia* left Heard, bound for Fremantle, Western Australia. **Aug. 14, 1950**: The *Australia* arrived in Fremantle, where Dr. Udovikoff was met by his wife and four-year-old daughter.

ANARE 1950-51. **Jan. 16, 1951**: The *Labuan* left Melbourne, bound for Albany, W.A. Aboard were 16 huskies. Phil Law was voyage leader. **Jan. 22, 1951**: *Labuan* left Albany, bound for Heard Island. **Feb. 5, 1951**: *Labuan* arrived at Heard with the huskies. **Feb. 8, 1951**: Due to a shortage of fresh water, the *Labuan* was forced to leave Heard early, for the Kerguélens. **Feb. 9, 1951**: *Labuan* arrived at Kerguélen. **Feb. 12, 1951**: *Labuan* left Kerguélen, bound for Heard. **Feb. 13, 1951**: *Labuan* arrived back at Heard. **Feb. 17, 1951**: *Labuan* left Heard, bound for Fremantle. **Feb. 27, 1951**: What they all knew was going to happen, happened — the *Labuan* broke down, leaving them without a ship. The *Labuan* had to be towed the last 300 km to Fremantle by the *Karangi*, and was then taken out of service. **May 1, 1951**: The *River Fitzroy* was chartered by ANARE, to relieve Macquarie Island. Phil Law was voyage leader. **May 4, 1951**: The *River Fitzroy* arrived at Macquarie. **May 14, 1951**: The *River Fitzroy* left Macquarie, bound for Port Kembla. **May 19, 1951**: The *River Fitzroy* arrived at Port Kembla.

ANARE 1951-52. **Feb. 9, 1952**: The *Tottan*, chartered from the French, to relieve Heard Island, left Melbourne. Phil Law was voyage leader, and Dick Thompson was deputy. **Feb. 26, 1952**: *Tottan* arrived at Heard. **March 3, 1952**: *Tottan* left Heard, bound for the Kerguélen Islands. **March 4, 1952**: *Tottan* arrived at Kerguélen. **March 6, 1952**: *Tottan* left Kerguélen, bound for Melbourne. **March 13, 1952**: *Tottan* arrived back in Melbourne. **March 24, 1952**: *Tottan* left Melbourne, bound for Macquarie Island. Phil Law was voyage leader. **March 31, 1952**: *Tottan* arrived at Macquarie. **April 9, 1952**: *Tottan* left Macquarie, bound for Hobart. **April 16, 1952**: *Tottan* arrived at Hobart.

ANARE 1952-53. **Feb. 5, 1953**: The *Tottan* left Melbourne, bound for Heard Island. Jeremiah Donovan was voyage leader. **Feb. 21, 1953**: *Tottan* arrived at Heard. **Feb. 26, 1953**: *Tottan* left Heard, bound for the Kerguélen Islands. **Feb. 28, 1953**: *Tottan* arrived at Kerguélen. **March 1, 1953**: *Tottan* left Kerguélen, bound for Melbourne. **March 18, 1953**: *Tottan* arrived back in Melbourne. **March 23, 1953**: *Tottan* left Melbourne, bound for Macquarie Island. Jeremiah Donovan was voyage leader, and Dick Thompson was deputy. **March 30, 1953**: *Tottan* arrived at Macquarie. **April 14, 1953**: *Tottan* left Macquarie, bound for Melburne. **April 19, 1953**: *Tottan* arrived back in Melbourne. This was the last ANARE expedition that was limited to sub-Antarctic islands.

ANARE 1953-54. **Dec. 12, 1953**: The new ANARE ship *Kista Dan* left Melbourne, bound for Macquarie Island. Phil Law was voyage leader. **Dec. 17, 1953:** The *Kista Dan* arrived at Macquarie, and the station was relieved in a record 5 days, in order to have time for the ship to do all that was necessary for the big push on the Antarctic continent. **Dec. 21, 1953**: *Kista Dan* left Macquarie, bound for Melbourne. **Dec. 27, 1953**: *Kista Dan* arrived back in Melbourne. **Jan. 4, 1954**: *Kista Dan* sailed from Melbourne to look for an Antarctic site for Mawson Station. Phil Law was leader of the expedition. Hans Christian Petersen was skipper of the *Kista Dan*. This was the moment ANARE had been waiting for, for years. **Jan. 9, 1954**: *Kista Dan* arrived at Heard Island, relieving the 1952-53 party, and taking on board 27 huskies, all bred there. The RAAF had provided 2 pilots and 2 mechanics, all under the command of Doug Leckie, the senior pilot. **Jan. 21, 1954**: *Kista Dan* left Heard, bound for the Kerguélens. **Jan. 22, 1954**: *Kista Dan* arrived at Kergeúlen Island, where she took on a third Weasel (she already had two on board). She also took on board Georges Schwartz, French observer. André Migot who, unlike Schawrtz, would not winter-over at Mawson, also joined the expedition at Kerguélen. But, he did write a book. **Jan. 27, 1954**: *Kista Dan* left the Kerguélens, bound for Antarctica. **Jan. 30, 1954**: First ice sighted. **Feb. 2, 1954**: They sighted the coast of Antarctica. They lowered the first Auster (they had two) over the side of the ship, and Doug Leckie flew Phil Law out in a recce for 1 hour and 35 minutes. **Feb. 3, 1954**: *Kista Dan* began ice-breaking, to get through the 16 miles of fast ice which separated them from the coast. On that day Ray Seaver, the 2nd pilot, flew Bob Dovers to look at the coast. **Feb. 4, 1954**: Leckie flew Dovers to Horseshoe Island, where they landed, breaking a tail wheel in the process. On the next flight Capt. Petersen, skipper of the ship, went up to inspect the ice. **Feb. 5, 1954**: Law and party landed at Horseshoe Island. A smaller party — Dovers, Macey, Russell, Schwartz, and Harvey — set out from there over the ice (on foot) to get to the proposed station site. That same day the 2nd Auster was brought out. The two Austers were damaged beyond repair, but the men joined them together, to make one Auster. **Feb. 11, 1954**: *Kista Dan* arrived at Horseshoe Harbor. **Feb. 13, 1954**: Mawson Station (q.v.) was commissioned. **Feb. 17, 1954**: The joined-together Auster flew for the first time. The un-

loading of the *Kista Dan* was finished. **Feb. 23, 1954**: *Kista Dan* left for home, taking the pilots and the aircraft, and leaving behind 10 men for the winter of 1954 (*see* **Mawson Station**). **Feb. 25, 1954**: *Kista Dan* anchored about 1 km from Scullin Monolith, and a boat was lowered with Law, Jim Brooks (geophysicist, who did not winter-over), Arthur Gwynn, Bill Pedersen (2nd mate of the ship), and Dick Thompson. **March 1, 1954**: The homeward bound *Kista Dan* sighted the Vestfold Hills. **March 3, 1954**: Law led a party out to the Vestfold Hills — John Hansen (coxswain of the ship), Thompson, Gwynn, and Peter Shaw (who also did not winter-over). That day Brooks and Fred Elliot (who did not winter-over) made an astrofix on Magnetic Island. **March 4, 1954**: *Kista Dan* headed north. **March 5, 1954**: 100 mph winds over a critical 2-day period, which did not help the tension between Law and Capt. Petersen. **March 14, 1954**: *Kista Dan* arrived at Heard. **March 15, 1954**: *Kista Dan* left Heard, bound for the Kerguélens. **March 17, 1954**: *Kista Dan* arrived at the Kerguélens. **March 19, 1954**: *Kista Dan* left the Kerguélens, bound for Melbourne. **March 31, 1954**: *Kista Dan* arrived back in Melbourne.

ANARE 1954-55. **Dec. 21, 1954**: The *Kista Dan* left Melbourne, bound for Macquarie Island. Jeremiah Donovan was voyage leader. **Dec. 26, 1954**: *Kista Dan* arrived at Macquarie. **Dec. 30, 1954**: *Kista Dan* left Macquarie, bound for Melbourne. **Jan. 4, 1955**: *Kista Dan* arrived back in Melbourne. **Jan. 7, 1955**: *Kista Dan* left Melbourne on her first relief trip to Mawson Station, via Heard Island. Phil Law led the expedition, and Capt. Petersen was again in command of the vessel. Dick Thompson was 2nd-in-command of the expedition. This time they had a pretty clear run into Horseshoe Harbor. The ship carried 2 amphibious Army dukws (Lt. A.W. Hall in command of them), but no airplanes. **Jan. 23, 1955**: *Kista Dan* arrived at Heard, and picked up 15 dogs and their kennels for use at Mawson Station. **Jan. 25, 1955**: *Kista Dan* left Heard, bound for Mawson. **Jan. 30, 1955**: *Kista Dan* arrived at the Vestfold Hills. **Feb. 1, 1955**: Unable to get through the ice to relieve the Mawson Station winterers of 1954, the *Kista Dan* sailed toward the Larsemann Hills, which had beckoned Phil Law the previous year. There an astrofix was done. **Feb. 3, 1955**: Law, Béchervaise, Crohn, Lacey, and 2 others, sledged to the Bolingen Islands. **Feb. 6, 1955**: *Kista Dan* left the Larsemann Hills, surveying the coast all the way to Mawson. **Feb. 9, 1955**: *Kista Dan* was finally able to get into Horseshoe Harbor (it was now ice-free), and the Mawson party was relieved. **Feb. 19, 1955**: *Kista Dan* was blown aground, but this was only temporary. **March 1, 1955**: *Kista Dan* left Mawson, bound for Heard Island. **March 5, 1955**: *Kista Dan* arrived at Heard. **March 9, 1955**: They closed Heard Island Station. The installations there would be taken to Mawson Station to enlarge that base. The *Kista Dan* then left Heard, bound for the Kerguélens. **March 10, 1955**: *Kista Dan* arrived at Kerguélen. **March 11, 1955**: *Kista Dan* left Kerguélen, bound for Melbourne. **March 23, 1955**: *Kista Dan* arrived back in Melbourne.

ANARE 1955-56. **Dec. 5, 1955**: The *Kista Dan* arrived in Melbourne, under Capt. Petersen. **Dec. 6, 1955**: *Kista Dan* left Melbourne to relieve Macquarie Island. Jeremiah Donovan led this expedition. **Dec. 10, 1955**: *Kista Dan* arrived at Macquarie Island. 12 sheep were offloaded. **Dec. 16, 1955**: *Kista Dan* left Macquarie Island. **Dec. 22, 1955**: *Kista Dan* arrived back in Melbourne. **Dec. 27, 1955**: *Kista Dan* left Melbourne, bound for Antarctica. Phil Law led this relief expedition, and Dick Thompson was deputy leader. Capt. Hans Christian Petersen was skipper of the *Kista Dan*. Peter Clemence was leader of the RAAF Antarctic Flight. Also on board for the summer trip was Ike Schlossbach, the American observer, and Harry Ayres, NZ observer. **Jan. 5, 1956**: *Kista Dan* reached Davis Bay. The Beaver airplane was launched on floats, and Law went up with pilot Doug Leckie. They photographed 1600 miles of coastline. **Jan. 21, 1956**: *Kista Dan* visited the Windmill Islands. **Jan. 30, 1956**: *Kista Dan* visited the new Russian base, Mirnyy Station. **Jan. 31, 1956**: *Kista Dan* left Mirnyy. **Feb. 17, 1956**: *Kista Dan* reached Mawson Station. **March 1956**: The first job was to build the airplane hangar (aside from the Beaver, they had brought an Auster), the first-ever hangar in Antarctica. Don Dowie supervised construction. Due to the upcoming BCTAE, the number of huskies had been reduced for Mawson that winter (1956), leaving, according to Syd Kirkby, "Three strong mature dogs, two old, old men, a village idiot, a shiftless lurk-merchant, one old lady, and two breeding bitches." When one of the bitches gave birth, the six new puppies almost froze as they came out, and were only saved by Don Dowie going the extra mile. **March 4, 1956**: *Kista Dan* left Mawson, bound for Heard Island. **March 9, 1956**: *Kista Dan* arrived at Heard, leaving the same day for the Kerguélens. **March 11, 1956**: *Kista Dan* arrived at Kerguélen. **March 14, 1956**: *Kista Dan* left Kerguélen, bound for Melbourne. **March 26, 1956**: *Kista Dan* arrived back in Melbourne.

ANARE 1956-57. **Nov. 27, 1956**: The *Kista Dan* left Melbourne, bound for Macquarie Island, with a new skipper, Kaj Hindberg. Jeremiah Donovan was leader of the relief expedition to Macquarie that season, and Dick Thompson was deputy leader. **Dec. 2, 1956**: *Kista Dan* reached Macquarie. Six sheep and a calf were offloaded. **Dec. 6, 1956**: *Kista Dan* left Macquarie. **Dec. 11, 1956**: *Kista Dan* arrived back in Melbourne. **Dec. 17, 1956**: *Kista Dan* left Melbourne, bound for Antarctica, with Phil Law as relief expedition leader, and Lem Macey as deputy. **Jan. 12, 1957**: Offloading from the *Kista Dan* began at the new Davis Station. **Jan. 13, 1957**: Davis Station was established. **Jan. 20, 1957**: *Kista Dan* left Davis. **Jan. 25, 1957**: Glenn Dyer boarded from the *Glacier*, at Vincennes Bay, as U.S. observer. **Feb. 2, 1957**: *Kista Dan* arrived at Mawson Station. **Feb. 10, 1957**: Bill Bewsher's party arrived back at Mawson after 3 months on the trail (*see* Bewsher, for details). **Feb. 17, 1957**: *Kista Dan* left Mawson, bound for Davis. **Feb. 20, 1957**: *Kista Dan* reached Davis. **Feb. 21, 1957**: *Kista Dan* left Davis. **Feb. 27, 1957**: *Kista Dan* arrived at the Kerguélen Islands, leaving there the same day, bound for Melbourne. **March 12, 1957**: *Kista Dan* arrived back in Melbourne.

ANARE 1957-58. **Dec. 7, 1957**: The *Thala Dan* left Melbourne, bound for Macquarie Island. Phil Law was voyage leader, and Don Styles was deputy. **Dec. 11, 1957**: *Thala Dan* arrived at Macquarie. **Dec. 23, 1957**: *Thala Dan* left Macquarie, bound for Melbourne. **Dec. 28, 1957**: The *Thala Dan* arrived back in Melbourne. **Jan. 3, 1958**: *Kista Dan*, with Kaj Hindberg as skipper again, left Melbourne to relieve the Antarctic stations. **March 19, 1958**: *Kista Dan* arrived back in Melbourne.

ANARE 1958-59. **Nov. 26, 1958**: The *Thala Dan* left Melbourne, bound for Macquarie Island. Don Styles was voyage leader, and Dick Thompson was deputy. **Nov. 30, 1958**: *Thala Dan* arrived at Macquarie. **Dec. 14, 1958**: *Thala Dan* left Macquarie, bound for Melbourne. **Dec. 18, 1958**: *Thala Dan* arrived back in Melbourne. **Dec. 26, 1958**: *Thala Dan* left Melbourne, to relieve the Antarctic bases. Don Styles was voyage leader, and Dick Thompson was deputy. **Jan. 6, 1959**: The *Magga Dan* left Melbourne, to relieve Antarctic bases. Phil Law was voyage leader, and Bob Dalton was deputy. **Jan. 16, 1959**: *Thala Dan* ran into an uncharted pinnacle of rock as she approached Davis Station, and got speared. It took several days for Capt. Hans Christian Petersen to get her off. This part of the expedition was commanded by Don Styles, and his job was to relieve and supply Mawson and Davis Stations. John Béchervaise was the incoming leader at Mawson that year. The *Magga Dan*, with Phil Law aboard, brought down the wintering crew for Wilkes Station. **Feb. 2, 1959**: *Thala Dan* broke through the ice to Mawson Station. **Feb. 3, 1959**: *Magga Dan* left Wilkes Station, with Law aboard. **Feb. 4, 1959**: ANARE took over the Americans' Wilkes Station, or rather, it became a joint US-Australian station. Herbert Hansen was the senior member of the U.S. group. **Feb. 11, 1959**: Ian Widdows developed acute appendicitis at Mawson. Graham Budd, the incoming surgeon, performed the operation, Grey Channon was the anesthetist, and 4 others helped. Widdows recovered. **March 2, 1959**: *Magga Dan* arrived back in Melbourne. **March 3, 1959**: *Thala Dan* arrived back in Melbourne.

ANARE 1959-60. **Dec. 3, 1959**: An American Neptune airplane landed at Wilkes Station and took off Henry Brandt, who had run amok. **Dec. 17, 1959**: The *Thala Dan* left Melbourne, for Macquarie Island, with the first women to visit an ANARE station — scientists Susan Ingham, Isobel Bennett, Hope McPherson, and Mary Gilham. Dick Thompson was voyage leader. **Dec. 21, 1959**: *Thala Dan* arrived at Macquarie. During the 6-day relief of the station, the women conducted the ANARE seal

and bird program there. **Dec. 27, 1959**: *Thala Dan* left Macquarie, bound for Melbourne. **Jan. 1, 1960**: *Thala Dan* arrived back in Melbourne. **Jan. 5, 1960**: The *Magga Dan* left Melbourne, to relieve Antarctic bases. Phil Law was voyage leader, and Bob Dalton was deputy. **Jan. 8, 1960**: *Thala Dan* left Melbourne, to relieve Mawson Station. Don Styles was voyage leader, and Frank McMahon was deputy. Also on board was a twin-engine Dakota airplane for Mawson. **Jan. 20, 1960:** The hull of the *Magga Dan* was damaged in a backing run. **Feb. 13, 1960**: One of the airplanes crashed near Wilkes. Peter Ivanoff was the pilot. **March 11, 1960**: *Magga Dan* arrived back in Melbourne. **March 19, 1960**: *Thala Dan* arrived back in Melbourne. Helicopters were used by ANARE for the first time this season.

ANARE 1960-61. **Nov. 29, 1960**: The *Magga Dan* left Australia for Macquarie Island. Phil Law was voyage leader, and Frank Smith was deputy. There were 3 women biologists on the expedition to Macquarie. **Dec. 16, 1960**: *Magga Dan* arrived back in Australia. **Dec. 22, 1960**: *Magga Dan* left Australia, to relieve Wilkes Station, with an Indian observer on board. Phil Law was voyage leader, and M. Taylor was deputy. **Jan. 5, 1961**: The *Thala Dan* left Australia, to relieve Mawson Station and Davis Station, and to conduct surveys along the coast. Don Styles was voyage leader, and Frank McMahon was deputy. **Jan. 22, 1961**: *Magga Dan* arrived back in Australia. **Jan. 24, 1961**: *Magga Dan* left Australia. Phil Law was voyage leader, and Bob Dalton was deputy. Phil Law's wife, Nel, was aboard. **Feb. 8, 1961**: *Magga Dan* pulled in alongside the *Thala Dan*, at Mawson, thus making Nel Law the first Australian woman to visit Antarctica (*see* **Women in Antarctica**). **Feb. 11, 1961**: *Magga Dan* left Mawson. **Feb. 16, 1961**: *Magga Dan* arrived at Wilkes Station. **March 19, 1961**: *Magga Dan* arrived back in Australia. **March 22, 1961**: *Thala Dan* arrived back in Australia.

ANARE 1961-62. **Dec. 22, 1961**: The *Thala Dan* left Melbourne, bound for Lewis Island. The expedition was led by Phil Law, and Thomas R. "Tom" Harwood was deputy. The RAAF Antarctic Flight contingent aboard included Squadron Leader John R. Batchelor (commanding officer) and Squadron leader Norman F. Ashworth. The helicopter crew were: Capt. John Stanwix, Capt. John Arthurson, and Arthur Chapman (engineer). Also aboard were: Maj. Harvey Buskirk (USAF observer), Syd Kirkby, Christopher Gregory (geologist with the Bureau of Mineral Resources), Tom Gale, and Raymond Missen (automatic weather station technician with the Bureau of Meteorology). **Dec. 29, 1961**: *Thala Dan* arrived at Lewis Island. **Jan. 2, 1962**: *Thala Dan* left Lewis Island, bound for Wilkes. **Jan. 4, 1962**: *Nella Dan* left Melbourne on her first ANARE voyage to Antarctica, on the expedition led by Don Styles. Frank McMahon was deputy leader. The Army dukw team comprised: Lt. Ron M. Kelly, Lt. Maurice J. "Morrie" Keane, Sgt. Stan J. Falk, Sgt. W.J. Smith, Sgt. D.J. Evans, Sgt. Kevin L. Pledger, and Cpl. L.H. Smith (RACT). Also aboard were: Fred Jacka (physicist), John Sorrell (journalist), and Dave Carstens (surveyor). **Jan. 10, 1962**: *Thala Dan* arrived at Wilkes. **Jan. 17, 1962**: *Nella Dan* arrived at Davis. **Jan. 18, 1962**: *Thala Dan* left Wilkes, bound for the Chick Island ice edge. **Jan. 21, 1962**: *Thala Dan* arrived at the Chick Island ice edge. **Jan. 23, 1962**: *Nella Dan* left Davis, bound for Mawson. **Jan. 24, 1962**: *Thala Dan* left the Chick Island ice edge, bound for Lewis Island. **Jan. 25, 1962**: *Nella Dan* arrived at Mawson. **Jan. 27, 1962**: *Thala Dan* arrived at Lewis Island. **Jan. 28, 1962**: *Thala Dan* left Lewis Island, bound for Commonwealth Bay. **Jan. 31, 1962**: *Thala Dan* arrived at Commonwealth Bay. **Feb. 1, 1962**: *Nella Dan* left Mawson, bound for Amundsen Bay. The *Thala Dan* left Commonwealth Bay, bound for a visit to Dumont d'Urville Station. **Feb. 2, 1962**: *Thala Dan* arrived at Dumont d'Urville Station, and left the same day, bound for the Mertz Glacier Tongue. **Feb. 3, 1962**: *Thala Dan* arrived at the Mertz Glacier Tongue. **Feb. 4, 1962**: 69 km from Amundsen Bay, the *Nella Dan* became beset by ice, for 8 days. **Feb. 6, 1962**: *Thala Dan* left the Mertz Glacier Tongue, bound for George V Land. **Feb. 7, 1962**: *Thala Dan* arrived at George V Land, and left the same day, bound for Oates Land. **Feb. 11, 1962**: *Thala Dan* arrived at Oates Land. **Feb. 12, 1962**: *Nella Dan* freed from the ice. **Feb. 14, 1962**: *Nella Dan* arrived back at Mawson. **Feb. 15, 1962**: *Nella Dan* left Mawson, bound for Davis again. **Feb. 17, 1962**: *Nella Dan* arrived at Davis. **Feb. 19, 1962**: *Nella Dan* left Davis, bound for Wilkes. **Feb. 25, 1962**: *Thala Dan* left Oates Land, bound for Macquarie Island. **Feb. 28, 1962**: *Nella Dan* arrived at Wilkes. **March 1, 1962**: *Nella Dan* left Wilkes, bound for Porpoise Bay. **March 2, 1962**: *Thala Dan* arrived at Macquarie Island. **March 3, 1962**: *Thala Dan* left Macquarie, bound for Melbourne. **March 4, 1962**: *Nella Dan* arrived at Porpoise Bay, and left the same day, bound for Lewis Island. **March 7, 1962**: *Nella Dan* arrived at Lewis Island, and left the same day, bound for Macquarie Island. **March 8, 1962**: *Thala Dan* arrived back in Melbourne. **March 11, 1962**: *Nella Dan* arrived at Macquarie Island. **March 13, 1962**: *Nella Dan* left Macquarie. **March 18, 1962**: *Nella Dan* arrived back in Melbourne.

ANARE 1962-63. Phil Law (leader), Eric Macklin (deputy). The first voyage (Nov. 30-Dec. 16, 1962) was led by Walter Jones and Frank Smith to Macquarie Island, on the *Thala Dan*. The second (Dec. 21, 1962-March 11, 1963), led by Don Styles on the *Thala Dan*, visited Dumont d'Urville Station, relieved Wilkes Station, and visited Macquarie Island on the return trip. A site for a new station near Wilkes was surveyed, and the two automatic weather stations (Chick Island and Lewis Island) were reactivated. The third voyage (Jan. 9-March 24, 1963), led by Phil Law on the *Nella Dan*, went to Heard Island, then on to Mawson and Davis Stations, but had to return to Albany, Western Australia, on Jan. 14, 1963, because a passenger was suffering from appendicitis. The fourth voyage (March 25-April 5, 1963), led by Frank McMahon, on the *Nella Dan*, relieved the summer party at Macquarie.

ANARE 1963-64. **Jan. 3, 1964**: The *Nella Dan* left Melbourne, bound for Wilkes Station. Walter Leonard Jones was voyage leader, and Frank Smith was deputy. The Army dukw contingent were: Lt. Philip V. Dawe, RAASC; Sgt. L.F. McKinnon, RAASC; Sgt. S.H. Cheeseman; Cpl. E.I. Palmer; Cpl. M.P. Dacey; and Cpl. E.P. Low. The helicopter crew were: John Arthurson (captain), P. Hunt (pilot), and Arthur Chapman (engineer). Also along for the round trip were the following officers from the Antarctic Division: Alan Campbell-Drury (photographic officer), Leo Francis Rothville (supply officer), Doug Twigg (senior technical officer — radio), Norman Linton-Smith (senior technical officer — field and clothing), Geoffrey Denys Probyn Smith (senior technical officer — buildings), Frank Gunn (records officer). Also aboard were: Dr. Peter Schwerdtfeger (glaciologist from the University of Melbourne), Denis Maudslay de Mole (architect with the Department of Works), Lt. Cdr. L. Glenny (U.S. Coast Guard observer), and R.T. Smith (plumber chosen for the 1964 Wilkes winter, but had to be returned for medical reasons). **Jan. 15, 1964**: *Nella Dan* arrived at Wilkes. **Jan. 26, 1964**: *Nella Dan* left Wilkes, bound for Fremantle. **Feb. 3, 1964**: *Nella Dan* arrived in Fremantle.

ANARE 1964-65. **Dec. 2, 1964**: The *Nella Dan* left Melbourne for Macquarie Island, to relieve the base there. Phil Law led this part of the expedition, and Frank Soucek was deputy. **Dec. 17, 1964**: *Nella Dan* returned to Melbourne from Macquarie. **Dec. 22, 1964**: *Nella Dan* left Melbourne, bound for Mawson Station. Phil Law led this part of the expedition, and Eric Macklin was deputy. 14 of the Mawson crew were ferried ashore by helo, and the ship continued along the coast of Enderby Land, surveying as she went. **Jan. 8, 1965**: The *Thala Dan*, chartered from the French, left Melbourne, bound for the Dumont d'Urville Station, Davis, and Wilkes. Don Styles led the expedition, and Frank McMahon was deputy. **Jan. 23, 1965**: *Thala Dan* and *Nella Dan* both arrived at Davis at the same time. **Jan. 25, 1965**: Davis was closed by Phil Law. **Feb. 20, 1965**: *Thala Dan* returned to Melbourne. **March 15, 1965**: *Nella Dan* returned to Melbourne, then turned around and headed to Macquarie. Eric Macklin led this part of the expedition, and Norman Linton-Smith was deputy. **March 24, 1965**: *Nella Dan* returned to Melbourne. This summer was the most extensive exploration ever attempted by ANARE.

ANARE 1965-66. **Oct. 22, 1965**: The *Queenborough* had to go to Macquarie Island, to pull a sick man off. **Dec. 6, 1965**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Frank McMahon led this part of the expedition, and Frank Soucek was deputy. **Dec. 22, 1965**: *Nella Dan* returned to Melbourne. **Dec. 29, 1965**: *Nella Dan* left Melbourne. Phil Law led this part of the expedition, and Eric Macklin was deputy. On the way down to Wilkes Station, a

Beaver aircraft was damaged aboard ship during a storm, and was returned, unused, to Australia. An inspection was made of the site for the new station (which would be Casey). The Amery Ice Shelf was delineated by using radar aboard ship, and landings were made at the southern end of Prydz Bay. 2000 nautical miles of soundings were made. **Feb. 19, 1966**: The closed Davis Station was inspected. **Jan. 10, 1966**: The *Thala Dan*, chartered from the French, left Melbourne, in order to relieve Wilkes. Don Styles led this part of the expedition, and Doug Twigg was deputy. **March 1, 1966**: *Thala Dan* returned to Melbourne. **March 11, 1966**: *Nella Dan* returned to Melbourne. This was Phil Law's last ANARE voyage. That same day, the ship left Melbourne, bound for Macquarie. Frank McMahon led this part of the expedition, and Frank Soucek was deputy. **March 26, 1966**: *Nella Dan* returned to Melbourne.

ANARE 1966-67. **Dec. 26, 1966**: The *Nella Dan* left Melbourne bound for the Antarctic bases. Don Styles was voyage leader, and Doug Twigg was deputy. George Treatt was air controller. The Army dukw contingent were: Capt. Jim B. Doohan, RAASC/RACT; L/Cpl John F. Ford, L/Cpl K. Robinson, Lt. Geoffrey A. "Geoff" Bool, Cpl. K.G. Webber, Cfn P.L. Wainwright. The helicopter crew were: J. Zwozny, L.R. Rodgers (engineer-in-charge), and G.J. Tadgell. The Mawson Station construction party were: Alan M. Brown (senior engineer), Geoffrey Denys Probyn Smith, David W.G. "Dave" Bond (diesel mechanic), Peter F. Allsop (electrical fitter and mechanic), A.S. Fristad, Alan D. Parker, Geoffrey H. "Geoff" Collier, H.J. Denman, A.G. Read, Stanley J. "Stan" Minns and Robert "Bob" Hall (plumbers); John Coplant Milne (plant operator), and O. William "Bill" Macha (rigger). Ian George Bird was also along for the round trip. **Jan. 7, 1967**: *Nella Dan* was beset by ice for 24 days, 70 miles from the *Thala Dan*, which was also beset. **Jan. 31, 1967**: The American cutter *Eastwind* freed the *Nella Dan*, and then both ships headed off toward the *Thala Dan*, off the coast of Wilkes Land. **Feb. 13, 1967**: *Nella Dan* arrived at Mawson Station. **Feb. 23, 1967**: *Nella Dan* left Mawson, bound for the Wilkes ice edge. **March 1, 1967**: *Nella Dan* arrived at the Wilkes ice edge, and left the same day, bound for Hobart. **March 8, 1967**: *Nella Dan* arrrived at Hobart.

ANARE 1967-68. **Dec. 12, 1967**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Ronald Harry Weeks led this part of the expedition, and Frank Soucek was deputy. **Dec. 24, 1967**: Frank Soucek collapsed and died on Macquarie. **Dec. 31, 1967**: *Nella Dan* arrived back in Melbourne. **Jan. 5, 1968**: *Nella Dan* left Melbourne, for a topographical survey of the eastern side of the Amery Ice Shelf. Don Styles and Eric Macklin led this part of the expedition. **Jan. 8, 1968**: The *Thala Dan*, chartered from the French, left Melbourne, to relieve the Antarctic bases. Frank McMahon led this part of the expedition, and Graeme McKinnon was deputy. **Feb. 11, 1968**: *Thala Dan* arrived back in Melbourne. **Feb. 1968**: A field station was established on the Amery Ice Shelf. **March 19, 1968**: *Nella Dan* arrived back in Melbourne. **March 20, 1968**: *Nella Dan* left Melbourne, bound for Macquarie Island. Ronald Harry Weeks led this part of the expedition, and Graeme McKinnon was deputy. **April 1, 1968**: *Nella Dan* arrived back in Melbourne.

ANARE 1968-69. **Nov. 28, 1968**: The *Nella Dan* left to resupply the Macquarie Island station. Ronald Harry Weeks was voyage leader. F.A. Smith was deputy. **Dec. 15, 1968**: *Nella Dan* arrived back from Macquarie. **Dec. 20, 1968**: *Nella Dan* left for Antarctica, to collect the Amery Ice Shelf party and to resupply the bases. Don Styles was voyage leader. **Jan. 13, 1969**: *Thala Dan* left. Roy Gordon Spratt was voyage leader. Geoff Smith was deputy. **Jan. 27, 1969**: *Nella Dan* arrived back. **Jan. 29, 1969**: *Nella Dan* left. Eric Macklin was voyage leader. **Feb. 19, 1969**: Davis Station re-opened. Casey Station (Repstat) opened. **March 1, 1969**: *Thala Dan* arrived back. **March 27, 1969**: *Nella Dan* arrived back.

ANARE 1969-70. **Nov. 28, 1969**: The *Nella Dan* left to resupply the Macquarie Island station. Graeme McKinnon was voyage leader. Bill Young was deputy. **Dec. 14, 1969**: *Nella Dan* arrived back. **Dec. 19, 1969**: *Nella Dan* left to relieve Mawson Station. Don Styles was voyage leader. Eric Macklin was deputy. **Jan. 27, 1970**: *Thala Dan* left for Casey Station. Geoff Smith was voyage leader. Doug Twigg was deputy. **Feb. 3, 1970**: *Nella Dan* arrived back. **Feb. 6, 1970**: *Nella Dan* left. Eric Macklin was voyage leader. F.A. Smith was deputy. **March 7, 1970**: *Thala Dan* arrived back. **March 19, 1970**: *Nella Dan* arrived back.

ANARE 1970-71. **Nov. 20, 1970**: The *Nella Dan* left Melbourne to resupply Macquarie Island Station. Graeme McKinnon was voyage leader. **Nov. 25, 1970**: *Nella Dan* arrived at Macquarie. **Nov. 30, 1970**: *Nella Dan* left Macquarie, bound for Melbourne. **Dec. 6, 1970**: *Nella Dan* arrived back in Melbourne. **Dec. 12, 1970**: *Nella Dan* left Melbourne, bound for Mawson Station. Don Styles was voyage leader. **Dec. 28, 1970**: *Nella Dan* arrived at Mawson. **Jan. 5, 1971**: *Nella Dan* left Mawson, bound for Davis Station. **Jan. 7, 1971**: *Nella Dan* arrived at Davis. **Jan. 13, 1971**: *Nella Dan* left Davis, bound for Mawson. **Jan. 15, 1971**: *Nella Dan* arrived at Mawson, leaving the same day, bound for Heard Island. The *Thala Dan* left Melbourne, bound for Casey Station. Geoff Smith was voyage leader on that cruise. **Jan. 19, 1971**: *Nella Dan* arrived at Heard. **Jan. 20, 1971**: *Nella Dan* left Heard, bound for Fremantle. **Jan. 29, 1971**: *Nella Dan* arrived in Fremantle. **Feb. 2, 1971**: *Nella Dan* left Fremantle, bound for Davis. Eric Macklin was voyage leader. Bill Young was deputy. **Feb. 10, 1971**: *Thala Dan* arrived at Casey. **Feb. 13, 1971**: *Thala Dan* left Casey, bound for Melbourne. **Feb. 15, 1971**: *Nella Dan* arrived at Davis, picked up a physicist who had completed his summer project there, and then headed out to Mawson, to rescue Ian Holmes, stranded on Gotley Glacier with a broken leg. **Feb. 17, 1971**: *Nella Dan* arrived at Mawson, then headed for Heard Island. **Feb. 21, 1971**: *Nella Dan* arrived at Heard, dropped off three members of the Heard summer party who had been collected at Mawson, and then headed back to Mawson. **Feb. 23, 1971**: *Thala Dan* arrived back in Melbourne. **Feb. 25, 1971**: *Nella Dan* arrived at Mawson. **Feb. 28, 1971**: *Nella Dan* took aboard the Prince Charles Mountains Survey Party and their aircraft. **March 3, 1971**: *Nella Dan* left Mawson, bound for Melbourne. **March 16, 1971**: *Nella Dan* arrived back in Melbourne.

ANARE 1971-72. **Nov. 16, 1971**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Graeme McKinnon was voyage leader, and Alan D. Parker was deputy. **Nov. 20, 1971**: *Nella Dan* arrived at Macquarie. **Nov. 27, 1971**: *Nella Dan* left Macquarie, bound for Melbourne. **Dec. 2, 1971**: *Nella Dan* arrived back in Melbourne. **Dec. 9, 1971**: *Nella Dan* left Melbourne, bound for Mawson Station. Don Styles was voyage leader, and Bill Young was deputy. **Dec. 25, 1971**: *Nella Dan* arrived at Mawson. **Jan. 7, 1972**: *Thala Dan* left Melbourne, bound for Casey Station. Geoff Smith was voyage leader, and Graeme James Currie was deputy. **Jan. 10, 1972**: *Nella Dan* left Mawson, bound for Davis Station. **Jan. 13, 1972**: *Nella Dan* arrived at Davis. **Jan. 17, 1972**: *Thala Dan* arrived at Casey Station. **Jan. 19, 1972**: *Nella Dan* left Davis, bound for Fremantle. **Jan. 28, 1972**: *Thala Dan* left Casey, bound for Macquarie Island. **Jan. 29, 1972**: *Nella Dan* arrived at Fremantle. **Feb. 1, 1972**: *Nella Dan* left Fremantle, bound for Davis. Bill Young led this voyage, and Alan D. Parker was deputy. **Feb. 5, 1972**: *Thala Dan* arrived at Macquarie. **Feb. 6, 1972**: *Thala Dan* left Macquarie, bound for Melbourne. **Feb. 12, 1972**: *Thala Dan* arrived back at Melbourne. On that very day, the *Nella Dan* arrived at Davis. **Feb. 14, 1972**: *Nella Dan* left Davis, bound for Mawson. **Feb. 18, 1972**: *Nella Dan* arrived at Mawson. **Feb. 24, 1972**: *Nella Dan* left Mawson, bound for Casey, to take off an injured man. **March 1, 1972**: *Nella Dan* arrived at Casey, leaving there the same day, bound for Macquarie Island. **March 7, 1972**: *Nella Dan* arrived at Macquarie. **March 9, 1972**: *Nella Dan* left Macquarie, bound for Melbourne. **March 14, 1972**: *Nella Dan* arrived back in Melbourne.

ANARE 1972-73. **Nov. 14, 1972**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Graeme McKinnon was voyage leader, and Philip Herbert Sulzberger was deputy. **Nov. 19, 1972**: *Nella Dan* arrived at Macquarie. **Nov. 25, 1972**: *Nella Dan* left Macquarie, bound for Melbourne. **Nov. 30, 1972**: *Nella Dan* arrived back in Melbourne. **Dec. 7, 1972**: *Nella Dan* left Melbourne, bound for Mawson Station. Don Styles was voyage leader, and Eric Macklin was deputy. The ship was carrying all of the 1973 wintering-over party at Davis Station, 14 members of the Mawson Station party, as well as the Prince Charles Mountains Survey Party of 1972-73. A stowaway was discovered soon after the ship left

port, but he was put ashore. **Dec. 26, 1972**: *Nella Dan* arrived at Mawson. **Dec. 31, 1972**: *Nella Dan* left Mawson, bound for Davis. **Jan. 3, 1973**: *Nella Dan* arrived at Davis. **Jan. 11, 1973**: *Thala Dan* left Melbourne, bound for Casey. Graeme McKinnon was voyage leader, and F.A. Smith was deputy. **Jan. 16, 1973**: *Nella Dan* left Davis, bound for Fremantle, WA. **Jan. 22, 1973**: *Thala Dan* arrived at Casey. **Jan. 26, 1973**: *Nella Dan* arrived at Fremantle. **Jan. 29, 1973**: *Thala Dan* left Casey, bound for Macquarie Island. **Feb. 1, 1973**: *Nella Dan* left Melbourne, bound for Davis. Eric Macklin was voyage leader, and Garry George Cooper was deputy. **Feb. 5, 1973**: *Thala Dan* arrived at Macquarie. **Feb. 6, 1973**: *Thala Dan* left Macquarie, bound for Melbourne. **Feb. 13, 1973**: *Thala Dan* arrived back in Melbourne. **Feb. 15, 1973**: *Nella Dan* arrived at Davis. **Feb. 17, 1973**: *Nella Dan* left Davis, bound for Mawson. **Feb. 19, 1973**: *Nella Dan* arrived at Mawson. **Feb. 25, 1973**: *Nella Dan* left Mawson, bound for Melbourne. **March 10, 1973**: *Nella Dan* arrived back in Melbourne.

ANARE 1973-74. **Nov. 24, 1973**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Bill Young was voyage leader, and John Sinclair Reid was deputy. **Nov. 29, 1973**: *Nella Dan* arrived at Macquarie. **Dec. 3, 1973**: *Nella Dan* left Macquarie, bound for Melbourne. **Dec. 9, 1973**: *Nella Dan* arrived back in Melbourne. **Dec. 14, 1973**: *Nella Dan* left Melbourne, bound for Davis. Eric Macklin was voyage leader, and Geoff Smith was deputy. **Dec. 27, 1973**: *Nella Dan* arrived at Davis. **Jan. 7, 1974**: *Thala Dan* left Melbourne, bound for Cape Denison. Geoff Smith was voyage leader, and Bill Young was deputy. **Jan. 10, 1974**: *Nella Dan* left Davis, bound for Mawson. **Jan. 14, 1974**: *Thala Dan* arrived at Cape Denison. **Jan. 15, 1974**: *Nella Dan* arrived at Mawson. That day, the *Thala Dan* left Cape Denison, bound for Dumont d'Urville Station, arriving there the same day, and leaving the same day, bound for Casey. **Jan. 16, 1974**: *Nella Dan* left Mawson, bound for Fremantle, WA. **Jan. 26, 1974**: *Nella Dan* arrived at Fremantle. **Jan. 29, 1973**: *Nella Dan* left Fremantle, bound for Mawson Station. Des Lugg was voyage leader, and Alan Edward Humphreys was deputy. **Jan. 31, 1974**: *Thala Dan* arrived at Casey. **Feb. 5, 1974**: *Thala Dan* left Casey, bound for Melbourne. **Feb. 14, 1974**: *Thala Dan* arrived back at Melbourne. **Feb. 15, 1974**: *Nella Dan* arrived at Mawson. **Feb. 21, 1974**: *Nella Dan* left Mawson, bound for Edward VIII Bay. **Feb. 21, 1974**: *Nella Dan* arrived at Edward VIII Bay, leaving there the same day bound for Davis. **March 3, 1974**: *Nella Dan* arrived at Davis. **March 4, 1974**: *Nella Dan* left Davis, bound for Melbourne. **March 18, 1974**: *Nella Dan* arrived back, in Melbourne.

ANARE 1974-75. **Nov. 20, 1974**: The *Nella Dan* left Lyttelton, NZ, bound for Macquarie Island. Phillip Herbert Sulzberger was voyage leader, and Doug Twigg was deputy. **Nov. 23, 1974**: *Nella Dan* arrived at Macquarie. **Nov. 25, 1974**: *Nella Dan* left Macquarie, bound for Melbourne. **Nov. 29, 1974**: *Nella Dan* arrived at Melbourne. **Dec. 7, 1974**: *Nella Dan* left Melbourne, bound for Mawson Station. Eric Macklin was voyage leader, and Geoff Smith was deputy. **Dec. 21, 1974**: *Nella Dan* arrived at Mawson. **Dec. 23, 1974**: *Nella Dan* left Mawson, bound for Enderby Land. **Dec. 24, 1974**: *Nella Dan* arrived at Enderby Land. **Dec. 29, 1974**: *Nella Dan* left Enderby Land, bound for Davis Station. **Jan. 4, 1975**: *Nella Dan* arrived at Davis. **Jan. 10, 1975**: *Thala Dan* left Melbourne, bound for Commonwealth Bay. Geoff Smith was voyage leader, and Doug Twigg was deputy. **Jan. 11, 1975**: *Nella Dan* left Davis, bound for Fremantle, WA. **Jan. 18, 1975**: *Thala Dan* arrived at Commonwealth Bay. **Jan. 19, 1975**: *Thala Dan* left Commonwealth Bay, bound for Dumont d'Urville Station, which it achieved that day. **Jan. 20, 1975**: *Thala Dan* left Dumont d'Urville, bound for Casey Station. **Jan. 22, 1975**: *Nella Dan* arrived at Fremantle. **Jan. 23, 1975**: *Thala Dan* arrived at Casey. **Jan. 25, 1975**: *Nella Dan* left Fremantle, bound for Davis. Geoff Smith was voyage leader, and Norman Linton-Smith was deputy. **Feb. 2, 1975**: *Thala Dan* left Casey, bound for Melbourne. **Feb. 7, 1975**: *Nella Dan* arrived at Davis. **Feb. 9, 1975**: *Nella Dan* left Davis, bound for Mawson. **Feb. 11, 1975**: *Nella Dan* arrived at Mawson. **Feb. 12, 1975**: *Thala Dan* arrived back at Melbourne. **Feb. 17, 1975**: *Nella Dan* left Mawson, bound for Enderby Land. **Feb. 19, 1975**: *Nella Dan* arrived at Enderby Land. **Feb. 20, 1975**: *Nella Dan* left Enderby Land, bound for Casey. **Feb. 26, 1975**: *Nella Dan* arrived at Casey. **Feb. 27, 1975**: *Nella Dan* left Casey, bound for Macquarie Island. **March 6, 1975**: *Nella Dan* arrived at Macquarie. **March 10, 1975**: *Nella Dan* left Macquarie, bound for Melbourne. **March 15, 1975**: *Nella Dan* arrived back at Melbourne.

ANARE 1975-76. **Nov. 15, 1975**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Bill Young was voyage leader. Gavin Wildridge Johnstone was deputy on the way out, and Bretton Symmons on the way back. **Nov. 20, 1975**: *Nella Dan* arrived at Macquarie. **Nov. 26, 1975**: *Nella Dan* left Macquarie, bound for Melbourne. **Dec. 1, 1975**: *Nella Dan* arrived back at Melbourne. **Dec. 8, 1975**: *Nella Dan* left Melbourne, bound for Mawson Station. Bill Young was voyage leader. Attila Vrana was deputy. **Dec. 26, 1975**: *Nella Dan* arrived at Mawson. **Dec. 28, 1975**: *Nella Dan* left Mawson, bound for Davis. **Dec. 31, 1975**: *Nella Dan* arrived at Davis. **Jan. 8, 1976**: *Nella Dan* left Davis, bound for Fremantle, WA. **Jan. 10, 1976**: *Thala Dan* left Melbourne, bound for Casey Station. Alan Edward Humphreys was voyage leader. John Sinclair Reed was deputy. **Jan. 18, 1976**: *Nella Dan* arrived at Fremantle. **Jan. 19, 1976**: The *Thala Dan* arrived at Casey (*see* that date under **Women in Antarctica**). **Jan. 20, 1976**: *Nella Dan* left Fremantle, bound for Davis. Des Lugg was voyage leader. Harold Alan Williams was deputy. **Jan. 27, 1976**: *Thala Dan* left Casey, bound for Macquarie Island. **Jan. 31, 1976**: *Nella Dan* arrived at Davis. **Feb. 1, 1976**: *Nella Dan* left Davis, bound for Mawson. **Feb. 3, 1976**: *Thala Dan* arrived at Macquarie, and the *Nella Dan* arrived at Mawson. **Feb. 8, 1976**: *Thala Dan* left Macquarie, bound for Melbourne. **Feb. 12, 1976**: *Nella Dan* left Mawson, bound for Enderby Land. **Feb. 13, 1976**: *Thala Dan* arrived back at Melbourne. **Feb. 20, 1976**: *Nella Dan* left Enderby Land, bound for the Amery Ice Shelf. **Feb. 25, 1976**: *Nella Dan* arrived at the Amery Ice Shelf. **Feb. 27, 1976**: *Nella Dan* left the Amery Ice Shelf, bound for Melbourne. **March 9, 1976**: *Nella Dan* arrived at Melbourne.

ANARE 1976-77. **Nov. 18, 1976**: The *Nella Dan* left Melbourne, bound for Macquarie Island. Alan Edward Humphreys was voyage leader, and Terence William Weatherson was deputy. **Nov. 23, 1976**: *Nella Dan* arrived at Macquarie. **Nov. 29, 1976**: *Nella Dan* left Macquarie, bound for Melbourne. **Dec. 4, 1976**: *Nella Dan* arrived back at Mebourne. **Dec. 10, 1976**: *Nella Dan* left Melbourne, bound for Mirnyy Station. Mawson, bound for Hobart**. Feb. 5, 1984**: The *Lady Franklin* arrived at Casey. **Feb. 9, 1984**: *Nanok S* arrived at Casey. **Feb. 10, 1984**: The *Lady Franklin* left Casey, bound for Hobart. **Feb. 12, 1984**: *Nanok S* left Casey, bound for Davis Station. **Feb. 16, 1984**: *Nella Dan* arrived back at Hobart. **Feb. 17, 1984**: The *Lady Franklin* arrived back at Hobart, and the *Nanok S* arrived at Davis. **Feb. 18, 1984**: *Nella Dan* left Hobart, bound for Davis. Des Lugg was voyage leader, and Phillipa M. Foster was deputy. **Feb. 19, 1984**: *Nanok S* left Davis, bound for Mawson. **Feb. 21, 1984**: *Nanok S* arrived at Mawson. **Feb. 28, 1984**: *Nanok S* left Mawson, bound for Hobart. **Feb. 29, 1984**: *Nella Dan* arrived at Davis. **March 2, 1984**: *Nella Dan* left Davis, bound for Mawson. **March 4, 1984**: *Nella Dan* arrived at Mawson. **March 6, 1984**: *Nella Dan* left Mawson, bound for Hobart. **March 13, 1984**: *Nanok S* arrived back at Hobart. **March 19, 1984**: *Nella Dan* arrived back at Hobart.

ANARE 1984-85. **Aug. 30, 1984**: The *Nella Dan* left Horten, Norway, bound for Dover. **Aug. 31, 1984**: *Nella Dan* arrived at Dover. **Sept. 2, 1984**: *Nella Dan* left Dover, bound for Hobart. **Oct. 13, 1984**: *Nella Dan* arrived at Hobart. **Oct. 18, 1984**: *Nella Dan* left Hobart, bound for Macquarie Island. Marty Betts was voyage leader, and Rodney John "Rod" Allen was deputy. **Oct. 22, 1984**: *Nella Dan* arrived at Macquarie. **Oct. 26, 1984**: *Nella Dan* left Macquarie, bound for Hobart. **Oct. 30, 1984**: *Nella Dan* arrived back at Hobart. **Nov. 2, 1984**: *Nella Dan* left Hobart, bound for Casey Station. Marty Betts was voyage leader, and John Christopher Cox was deputy. **Nov. 4, 1984**: *Icebird* left Cape Town on her maiden voyage, bound for Mawson. This was a new ship, chartered by the Antarctic Division. Ian Thomas Marchant led the expedition (Andrew William Jackson, the deputy leader, went down on the *Nella Dan*). Also aboard the *Icebird* were German owner Guenther Schulz, and acting director of ANARE, Jim Bleasell. **Nov. 13, 1984**: *Nella Dan* arrived at Casey. **Nov. 14, 1984**: *Icebird* arrived off Mawson. **Nov. 15, 1984**: *Icebird* left Mawson, bound for Davis, and *Nella Dan* left Casey, bound for Mawson**. Nov. 19, 1984**: *Icebird* arrived at Davis, leaving there the same day, bound for Mirnyy Station. **Nov. 23, 1984**: *Icebird* arrived at Mirnyy. **Nov. 25, 1984**: They flew into Mirnyy in 3 helicopters. Several Russians visited the *Icebird*. A lot of drinking. **Nov. 28, 1984**: *Nella Dan* arrived at Mawson. **Nov. 30, 1984**: *Icebird* left Mirnyy, bound for Casey, and *Nella Dan* left Mawson, bound for Davis. **Dec. 4, 1984**: *Nella Dan* arrived at Davis. **Dec. 5, 1984**: *Icebird* arrived at Casey, and *Nella Dan* left Davis, bound for Hobart. **Dec. 6, 1984**: *Icebird* left Casey, bound for Melbourne. **Dec. 14, 1984**: *Icebird* arrived at Melbourne. **Dec. 17, 1984**: *Nella Dan* arrived back at Hobart. **Dec. 19, 1984**: *Icebird* left Melbourne, bound for Hobart. Andrew Jackson was voyage leader, and Alan Ryan was deputy. **Dec. 21, 1984**: *Icebird* arrived at Hobart. **Dec. 22, 1984**: *Nella Dan* left Hobart, bound for Davis. Harvey Marchant was voyage leader, and Ric Burbury was deputy. This was the 2nd phase of the Second International Biomass Expedition. **Dec. 23, 1984**: *Icebird* left Hobart, bound for Casey. **Dec. 30, 1984**: *Icebird* arrived at Casey. **Jan. 6, 1985**: *Icebird* left Casey, bound for Melbourne. **Jan. 12, 1985**: *Nella Dan* arrived at Davis. **Jan. 13, 1985**: *Icebird* arrived back at Melbourne. That same day the *Nella Dan* left Davis, bound for Hobart. **Jan. 16, 1985**: *Icebird* left Melbourne, bound for Hobart. **Jan. 18, 1985**: *Icebird* arrived at Hobart. **Jan. 22, 1985**: *Icebird* left Hobart, bound for Davis. Alan Ryan was voyage leader, and Brian Francis Taylor was deputy. **Jan. 31, 1985**: *Icebird* arrived at Davis. **Feb. 3, 1985**: *Icebird* left Davis, bound for Scullin Monolith. **Feb 4, 1985**: *Nella Dan* arrived back at Hobart, and *Icebird* arrived at Scullin Monolith. **Feb. 5, 1985**: *Icebird* left the area of Scullin Monolith, bound for Mawson. **Feb. 6, 1985**: *Icebird* arrived at Mawson. **Feb. 7, 1985**: *Icebird* left Mawson, bound for Hobart. **Feb. 8, 1985**: *Nella Dan* left Hobart, bound for Davis. Ian Marchant was voyage leader, and Rod Allen was deputy. **Feb. 19, 1985**: *Icebird* arrived back at Hobart. **Feb. 22, 1985**: *Icebird* left Hobart, bound for Mawson. James E. Bleasell was voyage leader, and Phillipa M. Foster was deputy. **Feb. 23, 1985**: *Nella Dan* arrived at Davis. **Feb. 25, 1985**: *Nella Dan* left Davis, bound for Mawson. **Feb. 28, 1985**: *Nella Dan* arrived at Mawson. **March 1, 1985**: *Nella Dan* left Mawson, bound for Edgeworth David Station. **March 5, 1985**: *Icebird* arrived at Mawson. **March 6, 1985**: *Nella Dan* arrived at Edgeworth David. **March 7, 1985**: *Icebird* left Mawson, bound for Casey. **March 9, 1985**: *Nella Dan* left Edgeworth David, bound for Hobart. **March 13, 1985**: *Icebird* arrived at Casey. **March 15, 1985**: *Icebird* left Casey, bound for Macquarie Island. **March 17, 1985**: *Nella Dan* arrived back at Hobart. **March 20, 1985**: *Nella Dan* left Hobart, bound for Dover. **March 23, 1985**: *Icebird* arrived at Macquarie. **March 24, 1985**: *Icebird* left *Macquarie*, bound for Hobart. **March 27, 1985**: *Icebird* arrived back at Hobart. **April 29, 1985**: *Nella Dan* arrived at Dover.

ANARE 1985-86. **Sept. 16, 1985**: The *Nella Dan* left Hobart, bound for Heard Island. Knowles Ronald Kerry was voyage leader, and Ric Burbury was deputy. Included on this voyage was Part III of BIOMASS. **Sept. 29, 1985**: *Nella Dan* arrived at Heard. **Oct. 4, 1985**: *Nella Dan* left Heard, bound for Amundsen Bay. **Oct. 20, 1985**: *Icebird* left Melbourne, bound for Casey Station. Marty Betts was voyage leader, and Warren Papworth was deputy. **Oct. 24, 1985**: *Nella Dan* arrived at Amundsen Bay. She would get trapped in the ice. **Oct. 30, 1985**: *Icebird* arrived at Casey. **Oct. 31, 1985**: *Icebird* left Casey, bound for Snyder Rocks, arriving there the same day. **Nov. 1, 1985**: *Icebird* left Snyder Rocks, bound for Casey, arriving back there the same day, then turning around and heading for Hobart. **Nov. 10, 1985**: *Icebird* arrived at Hobart. **Nov. 12, 1985**: *Icebird* left Hobart, bound for Heard. Graeme J. Manning was voyage leader, and Geoffrey Gordon Tonta was deputy. **Nov. 24, 1985**: *Icebird* arrived at Heard. **Nov. 25, 1985**: *Icebird* left Heard, bound for Amundsen Bay. **Dec. 1, 1985**: *Icebird* arrived at Amundsen Bay. **Dec. 3, 1985**: *Icebird* left Amundsen Bay, bound for Mawson. **Dec. 4, 1985**: The *Stalwart* left Hobart, bound for Macquarie. Richard Michael Mulligan was voyage leader, and Geraldine Veronica Nash was deputy. **Dec. 6, 1985**: *Icebird* arrived at Mawson, and the *Stalwart* arrived at Macquarie. **Dec. 8, 1985**: The *Stalwart* left Macquarie, bound for Sydney. **Dec. 9, 1985**: *Icebird* left Mawson, bound for Davis. **Dec. 11, 1985**: *Icebird* arrived at Davis. **Dec. 12, 1985**: *Icebird* left Davis, bound for Hobart, and the *Stalwart* arrived at Sydney. **Dec. 16, 1985**: Finally freed by the *Shirase*, the *Nella Dan* left Amundsen Bay, bound for Hobart. **Dec. 23, 1985**: *Icebird* arrived back at Hobart. **Dec. 29, 1985**: *Nella Dan* arrived back at Hobart. That day, the *Icebird* left Hobart, bound for Dumont d'Urville Station. Graeme J. Manning was voyage leader, and Geraldine Veronica Nash was deputy. **Jan. 3, 1986**: *Icebird* arrived at Dumont d'Urville. **Jan. 4, 1986**: *Icebird* left Dumont d'Urville, bound for Commonwealth Bay. That day, the *Nella Dan* left Hobart, bound for Edgeworth David Station. Tom Maggs was voyage leader, and Peter Heywood was deputy. **Jan. 5, 1986**: *Icebird* arrived at Commonwealth Bay. **Jan. 6, 1986**: *Icebird* left Commonwealth Bay, bound for Casey. **Jan. 10, 1986**: *Icebird* arrived at Casey. **Jan. 13, 1986**: *Nella Dan* arrived at Edgeworth David. **Jan. 17, 1986**: *Nella Dan* left Edgeworth David, bound for Davis, and *Icebird* left Casey, bound for Davis. **Jan. 21, 1986**: *Nella Dan* and *Icebird* both arrived at Davis. **Jan. 26, 1986**: *Nella Dan* left Davis, bound for Mawson. **Jan. 28, 1986**: *Icebird* left Davis, bound for Hobart. **Jan. 29, 1986**: *Nella Dan* arrived at Mawson. **Feb. 1, 1986**: *Nella Dan* left Mawson, bound for Davis. **Feb. 3, 1986**: *Nella Dan* arrived at Davis. **Feb. 4, 1986**: *Nella Dan* left Davis, bound for Mawson. **Feb. 6, 1986**: *Nella Dan* arrived at Mawson, leaving there the same day, bound for Davis again. **Feb. 7, 1986**: *Icebird* arrived back at Hobart. **Feb. 9, 1986**: *Nella Dan* arrived back at Davis, leaving there the same day, bound for Edgeworth David. **Feb. 13, 1986**: *Nella Dan* arrived at Edgeworth David, leaving there the same day, bound for Casey. **Feb. 14, 1986**: *Nella Dan* arrived at Casey, leaving there the same day, bound for Hobart. **Feb. 22, 1986**: *Nella Dan* arrived back at Hobart. **Feb. 24, 1986**: *Nella Dan* left Hobart, bound for Edgeworth David. Ian Thomas Marchant was voyage leader. **March 4, 1986**: *Nella Dan* arrived at Edgeworth David. **March 5, 1986**: *Nella Dan* left Edgeworth David, bound for Davis. **March 9, 1986**: *Nella Dan* arrived at Davis. **March 10, 1986**: *Nella Dan* left Davis, bound for Mawson. **March 13, 1986**: *Nella Dan* arrived at Mawson. That day, *Icebird* left Hobart, bound for Macquarie Island. Rex Moncur was voyage leader, and Vince Restuccia was deputy. **March 15, 1986**: *Nella Dan* left Mawson, bound for Albany, WA. **March 16, 1986**: *Icebird* arrived at Macquarie, leaving there the same day, bound for

Casey. **March 22, 1986**: *Icebird* arrived at Casey. **March 24, 1986**: *Icebird* left Casey, bound for Mawson. **March 26, 1986**: *Nella Dan* arrived at Albany. **March 29, 1986**: *Nella Dan* left Albany, bound for Dover, and *Icebird* left Mawson, bound for Macquarie. **April 10, 1986**: *Icebird* arrived at Macquarie. **April 12, 1986**: *Icebird* left Macquarie, bound for Hobart. **April 15, 1986**: *Icebird* arrived back at Hobart. **May 3, 1986**: *Nella Dan* arrived at Dover.

ANARE 1986-87. **Oct. 15, 1986**: The *Icebird* left Hobart, bound for Casey Station. Richard Michael Mulligan was voyage leader, and Ross Jamieson was deputy. **Oct. 26, 1986**: *Icebird* arrived at Casey. That day the *Nella Dan* left Fremantle, WA, bound for Mawson Station. Ian Thomas Marchant was voyage leader, and Peter Lawson Keage was deputy. **Oct. 27, 1986**: *Icebird* left Casey, bound for Mawson. **Nov. 6, 1986**: *Icebird* arrived at Mawson. **Nov. 9, 1986**: *Icebird* left Mawson, bound for Davis Station. That day, the *Nella Dan* arrived at Mawson. **Nov. 11, 1986**: *Nella Dan* left Mawson, bound for Heard Island. **Nov. 15, 1986**: *Icebird* arrived at Davis, and *Nella Dan* arrived at Heard. **Nov. 16, 1986**: *Icebird* left Davis, bound for Casey. **Nov. 20, 1986**: *Nella Dan* left Heard, bound for Hobart. **Nov. 23, 1986**: *Icebird* arrived at Casey. **Nov. 24, 1986**: *Icebird* left Casey, bound for Snyder Rocks, to leave fuel for the Edgeworth David party. She reached the rocks that day, leaving there that day, bound for Edgeworth David Station. **Nov. 30, 1986**: *Icebird* arrived at Edgeworth David. **Dec. 1, 1986**: *Nella Dan* arrived at Hobart. **Dec. 2, 1986**: *Icebird* left Edgeworth David, bound for Hobart. **Dec. 3, 1986**: *Nella Dan* left Hobart, bound for Macquarie Island. Des Lugg was voyage leader, and Warren Papworth was deputy. **Dec. 6, 1986**: *Nella Dan* arrived at Macquarie. **Dec, 8, 1986**: *Icebird* arrived back at Hobart. **Dec. 11, 1986**: *Nella Dan* left Macquarie, bound for Hobart. **Dec. 13, 1986**: *Icebird* left Hobart, bound for Casey. Andrew William Jackson was voyage leader, and Simon Young was deputy. **Dec. 14, 1986**: *Nella Dan* arrived back at Hobart. **Dec. 18, 1986**: *Nella Dan* left Hobart, bound for Commonwealth Bay. Jim Bleasell was voyage leader, and Marty Betts was deputy. **Dec. 20, 1986**: *Icebird* arrived at Casey. **Dec. 24, 1986**: *Nella Dan* arrived at Commonwealth Bay, to build a hut there. **Dec. 26, 1986**: *Icebird* left Casey, bound for Hobart, and the *Nella Dan* left Commonwealth Bay, bound for Dumont d'Urville Station, which she reached that day, turned around, and headed for Commonwealth Bay again. **Dec. 29, 1986**: *Nella Dan* arrived back at Commonwealth Bay, leaving there that day, bound for Casey. **Jan. 1, 1987**: *Icebird* arrived back at Hobart. **Jan. 4, 1987**: *Nella Dan* arrived at Casey, leaving there the same day, bound for Edgeworth David. **Jan. 8, 1987**: *Nella Dan* arrived at Edgeworth David. **Jan. 9, 1987**: *Icebird* left Hobart, bound for Heard. Rex Moncur was voyage leader, and James Shevlin was deputy. **Jan. 14, 1987**: *Nella Dan* left Edgeworth David, bound for Law Base. **Jan. 18, 1987**: *Nella Dan* arrived at Law Base. **Jan. 19, 1987**: *Nella Dan* left Law Base, bound for Davis, arrived there the same day, and left that day, bound for Macquarie Island. **Jan. 21, 1987**: *Icebird* arrivd at Heard, leaving there the same day, bound for Scullin Monolith. **Jan. 25, 1987**: *Icebird* arrived at Scullin Monolith, leaving there the same day, bound for Law Base. **Jan. 26, 1987**: *Icebird* arrived at Law Base, leaving there that day, bound for Davis. **Jan. 27, 1987**: *Icebird* arrived at Davis. **Jan. 29, 1987**: *Nella Dan* arrived at Macquarie, leaving there the same day, bound for Hobart. **Jan. 31, 1987**: *Icebird* left Davis, bound for Scullin Monolith. **Feb. 1, 1987**: *Icebird* arrived at Scullin Monolith, leaving there that day, bound for Mawson. **Feb. 2, 1987**: *Nella Dan* arrived back at Hobart, and the *Icebird* arrived at Mawson. **Feb. 5, 1987**: *Nella Dan* left Hobart, not only to resupply Davis, but also to conduct Australian Antarctic Marine Biological Ecosystem Research (AAMBER). Dick Williams was voyage leader, and Ric Burbury was deputy. **Feb. 6, 1987**: *Icebird* left Mawson, bound for Scullin Monolith, reaching there that day, and, later that day, heading for Mirnyy Station. **Feb. 9, 1987**: *Icebird* arrived at Mirnyy, leaving that day, bound for Hobart. **Feb. 19, 1987**: *Icebird* arrived back at Hobart. **Feb. 23, 1987**: *Icebird* left Hobart, bound for Davis. Jack Sayers was voyage leader, and Geoff Dannock was deputy. **March 5, 1987**: *Icebird* arrived at Davis. **March 6, 1987**: *Nella Dan* arrived at Davis. **March 7, 1986**: *Nella Dan* left Davis, bound for Hobart, and the *Icebird* left Davis, bound for Mawson. **March 9, 1987**: *Icebird* arrived at Mawson. **March 14, 1987**: *Icebird* left Mawson, bound for Casey. **March 20, 1987**: *Icebird* arrived at Casey. **March 21, 1987**: *Icebird* left Casey, bound for Hobart. **March 29, 1987**: *Icebird* arrived back at Hobart. **April 3, 1987**: *Nella Dan* arrived back at Hobart.

ANARE 1987-88. **Sept. 8, 1987**: The *Nella Dan* left Fremantle, WA, bound for Heard Island. Lorraine Francis was voyage leader. **Sept. 18, 1987**: *Nella Dan* arrived at Heard. **Sept. 20, 1987**: *Nella Dan* left Heard, bound for Hobart. **Sept. 30, 1987**: *Nella Dan* arrived at Hobart. **Oct. 2, 1987**: *Nella Dan* left Hobart, bound for Macquarie Island. Attila Vrana was expedition leader, and Andrew William Jackson was deputy. **Oct. 5, 1987**: *Nella Dan* arrived at Macquarie. **Oct. 6, 1987**: *Nella Dan* left Macquarie, bound for Heard. **Oct. 15, 1987**: *Icebird* left Hobart, bound for Casey. Rex Moncur was voyage leader, and James Shevlin was deputy. **Oct. 18, 1987**: *Nella Dan* arrived at Heard. **Oct. 19, 1987**: *Nella Dan* left Heard, bound for Davis. **Oct. 28, 1987**: *Nella Dan* arrived at Davis. **Oct. 24, 1987**: *Icebird* arrived at Casey. **Oct. 29, 1987**: *Nella Dan* left Davis, bound for Hobart. **Oct. 30, 1987**: *Icebird* left Casey, bound for Mawson. **Nov. 12, 1987**: *Icebird* arrived at Mawson. **Nov. 13, 1987**: *Icebird* left Mawson, bound for Davis. **Nov. 23, 1987**: *Nella Dan* arrived back at Hobart. **Nov. 25, 1987**: *Icebird* arrived at Davis. **Nov. 27, 1987**: *Icebird* left Davis, bound for Macquarie. That day, the *Nella Dan* left Hobart, bound for Macquarie. David Lyons was voyage leader, and Ric Burbury was deputy. **Dec. 1, 1987**: *Nella Dan* arrived at Macquarie. **Dec. 3, 1987**: *Nella Dan*, while transferring fuel, ran aground at Macquarie. It was her last voyage. **Dec. 8, 1987**: *Icebird* arrived at Macquarie, leaving there the same day, bound for Hobart. **Dec. 12, 1987**: *Icebird* arrived back at Hobart. **Dec. 16, 1987**: *Icebird* left Hobart, bound for Mawson. Jack Sayers was voyage leader, and Wendy Cuskelly was deputy. **Dec. 30, 1987**: *Icebird* arrived at Mawson. **Jan. 1, 1988**: *Icebird* left Mawson, bound for Davis. **Jan. 3, 1988**: *Icebird* arrived at Davis. **Jan. 6, 1988**: *Icebird* left Davis, bound for Law Base, arriving there that same day. **Jan. 7, 1988**: *Icebird* left Law Base, bound for Davis. **Jan. 9, 1988**: *Icebird* arrived at Davis, leaving there the same day, bound for Casey. **Jan. 13, 1988**: *Icebird* arrived at Casey. **Jan. 18, 1988**: *Icebird* left Casey, bound for Hobart. **Jan. 24, 1988**: *Icebird* arrived back at Hobart. **Jan. 26, 1988**: The *Lady Franklin* left Hobart, bound for Mawson. Ian Thomas Marchant was voyage leader, and Vince Restuccia was deputy. **Jan. 29, 1988**: *Icebird* left Hobart, bound for Mawson. Richard Michael Mulligan was voyage leader, and J. Ross Jamieson was deputy. **Feb. 6, 1988**: The *Lady Franklin* arrived at Mawson. **Feb. 8, 1988**: The *Lady Franklin* left Mawson, bound for Casey Station. **Feb. 10, 1988**: *Icebird* arrived at Mawson. **Feb. 12, 1988**: The *Lady Franklin* arrived at Casey, and the *Icebird* left Mawson, bound for Davis. **Feb. 14, 1988**: The *Lady Franklin* left Casey, bound for Davis, and the *Icebird* arrived at Davis. **Feb. 16, 1988**: *Icebird* left Davis, bound for Law Base, which it reached that day. **Feb. 17, 1988**: *Icebird* left Law Base, bound for Davis, which it reached that day, leaving there later that day for Hobart. **Feb. 21, 1988**: The *Lady Franklin* arrived at Davis. **Feb. 24, 1988**: The *Lady Franklin* left Davis, bound for Heard. **Feb. 26, 1988**: *Icebird* arrived back at Hobart. **Feb. 29, 1988**: The *Lady Franklin* arrived at Heard. **March 1, 1988**: *Icebird* left Hobart, bound for Casey. Des Lugg was voyage leader, and Peter Maxwell Heyward was deputy. **March 2, 1988**: The *Lady Franklin* left Heard, bound for Hobart. **March 9, 1988**: *Icebird* arrived at Casey. **March 13, 1988**: The *Lady Franklin* arrived back at Hobart, and the *Icebird* left Casey, bound for Macquarie. **March 20, 1988**: *Icebird* arrived at Macquarie. **March 21, 1988**: *Icebird* left Macquarie, bound for Hobart. **March 25, 1988**: *Icebird* arrived back at Hobart.

ANARE 1988-89. **Oct. 21, 1988**: The *Icebird* left Hobart, bound for Casey Station. Marty Betts was voyage leader, and Ross Jamieson was deputy. **Oct. 25, 1988**: The *Lady Franklin* left Hobart, bound for Macquarie Island. Graeme J. Manning was voyage leader, and Wendy Cuskelly was deputy. **Oct. 28, 1988**: The *Lady Franklin* arrived at Macquarie. **Oct. 30, 1988**: The *Lady Franklin* left Macquarie, bound for Commonwealth Bay. However, due to the ice, she could not get in, and so set sail for Macquarie. **Oct. 31, 1988**: *Icebird* arrived at Casey. **Nov. 1, 1988**: *Icebird* left Casey, bound for Davis. **Nov. 11, 1988**: *Icebird* arrived at Davis. **Nov. 12,**

1988: *Icebird* left Davis, bound for Mawson. **Nov. 13, 1988**: The *Lady Franklin* arrived back at Macquarie. **Nov. 16, 1988**: The *Lady Franklin* left Macquarie, bound for Hobart. **Nov. 19, 1988**: *Icebird* arrived at Mawson, and the *Lady Franklin* arrived back at Hobart. **Nov. 21, 1988**: *Icebird* left Mawson, bound for Hobart. **Nov. 23, 1988**: The *Lady Franklin* left Hobart for Macquarie Island. Philip Gard was voyage leader, and Gerry Nash was deputy. **Nov. 26, 1988**: The *Lady Franklin* arrived at Macquarie. **Nov. 30, 1988**: The *Lady Franklin* left Macquarie, bound for Hobart. **Dec. 2, 1988**: *Icebird* arrived back at Hobart. **Dec. 4, 1988**: The *Lady Franklin* arrived back at Hobart. **Dec. 7, 1988**: The *Lady Franklin* left Hobart, bound for Mawson. Attila Vrana was voyage leader, and Gordon Allan Bain was deputy. That same day the *Icebird* also left Hobart, but bound for Casey. Andrew Jackson was voyage leader, and Zena Hyams was deputy. **Dec. 14, 1988**: *Icebird* arrived at Casey. **Dec. 20, 1988**: *Icebird* left Casey, bound for Hobart. **Dec. 21, 1988**: The *Lady Franklin* arrived at Mawson. **Dec. 23, 1988**: The *Lady Franklin* left Mawson, bound for Davis. **Dec. 27, 1988**: *Icebird* arrived back at Hobart. **Dec. 29, 1988**: The *Lady Franklin* arrived at Davis. **Dec. 31, 1988**: The *Lady Franklin* left Davis, bound for Law Base, arriving there the same day. **Jan. 1, 1989**: The *Lady Franklin* left Law Base, bound for Hobart. **Jan. 3, 1989**: *Icebird* left Hobart, bound for Mawson Station. Des Lugg was voyage leader, and Ian Hay was deputy. **Jan. 12, 1989**: The *Lady Franklin* arrived back at Hobart. **Jan. 14, 1989**: *Icebird* arrived at Mawson. That same day the *Lady Franklin* left Hobart, bound for Davis. Ric Burbury was voyage leader, and Geraldine Veronica Nash was deputy. **Jan. 25, 1989**: The *Lady Franklin* arrived at Davis. **Jan. 27, 1989**: The *Lady Franklin* left Davis, bound for Heard. **Jan. 30, 1989**: The *Lady Franklin* arrived at Heard. **Jan. 31, 1989**: *Icebird* left Mawson, bound for Davis. **Feb. 1, 1989**: The *Lady Franklin* left Heard, bound for Davis. **Feb. 3, 1989**: *Icebird* arrived at Davis. **Feb. 6, 1989**: The *Lady Franklin* arrived at Davis. **Feb. 7, 1989**: The *Lady Franklin* left Davis, bound for Hobart. **Feb. 8, 1989**: *Icebird* left Davis, bound for Mawson. **Feb. 14, 1989**: *Icebird* arrived back at Mawson. **Feb. 18, 1989**: *Icebird* left Mawson, bound for Hobart, and the *Lady Franklin* arrived back at Hobart. **Feb. 21, 1989**: The *Lady Franklin* left Hobart, bound for Casey. Richard Michael Mulligan was voyage leader, and David Lawrence Harris was deputy. **Feb. 28, 1989**: *Icebird* arrived back at Hobart. **March 3, 1989**: The *Lady Franklin* arrived at Casey. That same day, the *Icebird* left Hobart, bound for Davis. David Lyons was voyage leader, and Kathryn J. Last was deputy. **March 7, 1989**: The *Lady Franklin* left Casey, bound for Hobart. **March 14, 1989**: The *Lady Franklin* arrived back at Hobart. **March 16, 1989**: The *Lady Franklin* left Hobart, bound for Macquarie. Gerry Nash was voyage leader, and Ric Burbury was deputy. That same day the *Icebird* arrived at Davis. **March 19, 1989**: *Icebird* left Davis, bound for Mawson. **March 21, 1989**: The *Lady Franklin* arrived at Macquarie. **March 23, 1989**: The *Lady Franklin* left Macquarie, bound for Hobart, and the *Icebird* arrived at Mawson. **March 25, 1989**: The *Icebird* left Mawson, bound for Hobart. **March 27, 1989**: The *Lady Franklin* arrived back at Hobart. **April 7, 1989**: *Icebird* arrived back at Hobart.

ANARE 1989-90. Oct. 16, 1989: The *Icebird* left Hobart, bound for Casey Station. **Oct. 28, 1989**: *Icebird* arrived at Casey. **Oct. 29, 1989**: *Icebird* left Casey, bound for Mawson. **Nov. 17, 1989**: *Icebird* arrived at Mawson. **Nov. 18, 1989**: *Icebird* left Mawson, bound for Davis. **Nov. 21, 1989**: *Polar Queen* left Hobart, bound for Macquarie Island. **Nov. 24, 1989**: *Polar Queen* arrived at Macquarie. **Nov. 29, 1989**: *Icebird* arrived at Davis, and left the same day, bound for Hobart. *Polar Queen* left Macquarie, bound for Hobart. **Dec. 2, 1989**: *Polar Queen* arrived back in Hobart. **Dec. 12, 1989**: *Icebird* arrived back in Hobart. **Dec. 19, 1989**: *Icebird* left Hobart, bound for Mawson. **Dec. 31, 1989**: *Icebird* arrived at Mawson. **Jan. 4, 1990**: *Icebird* left Mawson, bound for Davis. **Jan. 6, 1990**: *Icebird* arrived at Davis, and left later in the day, bound for Law Base. **Jan. 7, 1990**: *Icebird* arrived at Law Base, left there the same day, and arrived back at Davis that same day. **Jan. 12, 1990**: *Icebird* left Davis, bound for Casey. **Jan. 17, 1990**: *Icebird* arrived at Casey. **Jan. 21, 1990**: *Icebird* left Casey, bound for Hobart. **Jan. 27, 1990**: *Icebird* arrived back in Hobart. **Feb. 5, 1990**: *Icebird* left Hobart, bound for Davis. **Feb. 16, 1990**: *Icebird* arrived at Davis. **Feb. 18, 1990**: *Icebird* left Davis, bound for Law Base. **Feb. 19, 1990**: *Icebird* arrived at Law Base, and left the same day, bound for Mawson. **Feb. 20, 1990**: *Polar Queen* left Hobart, bound for Casey. Ian Marchant was leader of the expedition, and Zena Hyams was deputy. **Feb. 21, 1990**: *Icebird* arrived at Mawson. **Feb. 27, 1990**: *Icebird* left Mawson, bound for Davis. **March 1, 1990**: *Icebird* arrived at Davis. **March 2, 1990**: *Polar Queen* arrived at Casey. **March 3, 1990**: *Icebird* left Mawson, bound for Hobart. **March 4, 1990**: *Polar Queen* left Casey, bound for Hobart. **March 11, 1990**: *Polar Queen* arrived back in Hobart. **March 13, 1990**: *Icebird* arrived back in Hobart. That day the *Polar Queen* left Hobart, bound for Maquarie. **March 16, 1990**: *Polar Queen* arrived at Macquarie. **March 19, 1990**: *Polar Queen* left Macquarie, bound for Hobart. **March 22, 1990**: *Polar Queen* arrived back in Hobart. **May 4, 1990**: *Aurora Australis* left Hobart, bound for Heard Island, with Dick Williams leading the expedition, and Ric Burbury as 2nd-in-command. **May 16, 1990**: *Aurora Australis* arrived at Heard, leaving the same day on a marine tour of the 50th degree latitude, and for ice trials. **June 21, 1990**: *Aurora Australis* arrived back at Heard, leaving there later that day, bound for Hobart. **July 1, 1990**: *Aurora Australis* arrived back in Hobart.

ANARE 1990-91. Oct. 9, 1990: The *Aurora Australis* left Hobart, bound for Casey Station. Ian Thomas Marchant was voyage leader, and Warren Papworth was deputy. **Oct. 18, 1990**: *Aurora Australis* arrived at Casey. **Oct. 20, 1990**: *Aurora Australis* left Casey, bound for Mawson. **Oct. 30, 1990**: *Aurora Australis* arrived at Mawson. **Oct. 31, 1990**: *Aurora Australis* left Mawson, bound for Davis. **Nov. 4, 1990**: *Aurora Australis* arrived at Davis. **Nov. 8, 1990**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 18, 1990**: *Aurora Australis* arrived back at Hobart. **Nov. 21, 1990**: *Icebird* left Hobart, bound for Macquarie Island. James Shevlin was voyage leader, and John Brooks was deputy. **Nov. 23, 1990**: *Aurora Australis* left Hobart, bound for Mawson. Marty Betts was voyage leader, and Gordon Bain was deputy. **Nov. 24, 1990**: *Icebird* arrived at Macquarie. **Nov. 29, 1990**: *Icebird* left Macquarie, bound for Hobart. **Dec. 3, 1990**: *Icebird* arrived back at Hobart. **Dec. 6, 1990**: *Aurora Australis* arrived at Mawson. That day, the *Icebird* left Hobart, bound for Casey. Rod Ledingham was voyage leader, and Pud Taylor was deputy. **Dec. 11, 1990**: *Aurora Australis* left Mawson, bound for Davis. **Dec. 14, 1990**: *Aurora Australis* arrived at Davis. **Dec. 15, 1990**: *Icebird* arrived at Casey. **Dec. 18, 1990**: *Aurora Australis* left Davis, bound for Hobart. **Dec. 22, 1990**: *Icebird* left Casey, bound for Commonwealth Bay. **Dec. 28, 1990**: *Icebird* arrived at Commonwealth Bay. **Dec. 29, 1990**: *Aurora Australis* arrived back at Hobart. **Dec. 30, 1990**: *Icebird* left Commonwealth Bay, bound for Macquarie. **Jan. 2, 1991**: *Icebird* arrived at Macquarie. **Jan. 3, 1991**: *Aurora Australis* left Hobart, bound for Mawson. Dick Williams was voyage leader, and Ric Burbury was deputy. This was also part 2 of the Australian Antarctic Marine Biological Ecosystem Research (AAMBER). **Jan. 4, 1991**: *Icebird* left Macquarie, bound for Hobart. **Jan. 8, 1991**: *Icebird* arrived back at Hobart. **Jan. 12, 1991**: *Icebird* left Hobart, bound for Davis. **Jan. 16, 1991**: *Aurora Australis* arrived at Mawson. **Jan. 24, 1991**: *Icebird* arrived at Davis. **Jan. 27, 1991**: *Icebird* left Davis, bound for Heard. **Jan. 30, 1991**: *Icebird* arrived at Heard. **Feb. 1, 1991**: *Icebird* left Heard, bound for Davis. **Feb. 5, 1991**: *Icebird* arrived at Davis. **Feb. 7, 1991**: *Icebird* left Davis, bound for Mawson. **Feb. 10, 1991**: *Icebird* arrived at Mawson. **Feb. 13, 1991**: *Icebird* left Mawson, bound for Hobart. **Feb. 24, 1991**: *Icebird* arrived back at Hobart. **March 5, 1991**: *Aurora Australis* left Mawson, bound for Davis. **March 7, 1991**: *Aurora Australis* arrived at Davis. **March 8, 1991**: *Aurora Australis* left Davis, bound for Hobart. **March 18, 1991**: *Aurora Australis* arrived back at Hobart.

ANARE 1991-92. Sept. 25, 1991: The *Aurora Australis* left Hobart, bound for Macquarie Island. Marty Betts was voyage leader, and Andrew McEldowney was deputy. **Sept. 29, 1991**: *Aurora Australis* arrived at Macquarie. **Sept. 30, 1991**: *Aurora Australis* broke a winch, and had to leave Macquarie, bound for Hobart. **Oct. 3, 1991**: *Aurora Australis* arrived back at Hobart, where the winch was repaired. **Oct. 7, 1991**: *Aurora Australis* left Hobart, bound for Macquarie again. **Oct. 27, 1991**: *Aurora Australis* arrived back in Hobart from Macquarie. **Oct.**

28, 1991: *Aurora Australis* left Hobart, bound for Mawson. Rod Ledingham was voyage leader, and Gordon Bain was deputy. **Nov. 8, 1991**: *Icebird* left Hobart, bound for Casey. Rob Easther was voyage leader, and Bridget Payne was deputy. **Nov. 12, 1991**: *Aurora Australis* arrived at Mawson. **Nov. 13, 1991**: *Aurora Australis* left Mawson, bound for Davis. **Nov. 15, 1991**: *Aurora Australis* arrived at Davis. **Nov. 18, 1991**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 20, 1991**: *Icebird* arrived at Casey. **Nov. 26, 1991**: *Icebird* left Casey, bound for Hobart. **Nov. 29, 1991**: *Aurora Australis* arrived back at Hobart. **Dec. 1, 1991**: *Aurora Australis* left Hobart, bound for Mawson. Vince Restuccia was voyage leader, and John Brooks was deputy. **Dec. 3, 1991**: *Icebird* arrived back at Hobart. **Dec. 6, 1991**: *Icebird* left Hobart, bound for Casey. Brian Taylor was voyage leader, and Sandra Potter was deputy. **Dec. 13, 1991**: *Aurora Australis* arrived at Mawson. **Dec. 18, 1991**: *Aurora Australis* left Mawson, bound for Davis. **Dec. 20, 1991**: *Aurora Australis* arrived at Davis. **Dec. 22, 1991**: *Icebird* arrived at Casey. **Dec. 23, 1991**: *Aurora Australis* left Davis, bound for Hobart. **Dec. 27, 1991**: *Icebird* left Casey, bound for Macquarie. **Jan. 3, 1992**: *Aurora Australis* arrived back at Hobart. **Jan. 9, 1992**: *Aurora Australis* left Hobart, bound for Heard. Dick Williams was voyage leader, and Gerry Nash was deputy. **Jan. 16, 1992**: *Icebird* arrived at Macquarie. **Jan. 20, 1992**: *Icebird* left Macquarie, bound for Hobart. **Jan. 23, 1992**: *Icebird* arrived back at Hobart. That day, the *Aurora Australis* arrived at Heard. **Jan. 29, 1992**: *Icebird* left Hobart, bound for Davis. Graeme Manning was voyage leader, and Steven Reeve was deputy. **Feb. 9, 1992**: *Icebird* arrived at Davis. **Feb. 12, 1992**: *Icebird* left Davis, bound for Mawson. **Feb. 13, 1992**: *Aurora Australis* left Heard, bound for Mawson. **Feb. 14, 1992**: *Icebird* arrived at Mawson. **Feb. 18, 1992**: *Icebird* left Mawson, bound for Heard. **Feb. 22, 1992**: *Icebird* arrived at Heard. **Feb. 27, 1992**: *Icebird* left Heard, bound for Hobart. **March 8, 1992**: *Aurora Australis* arrived at Mawson, leaving there the same day, bound for Davis. **March 9, 1992**: *Icebird* arrived back at Hobart. **March 10, 1992**: *Aurora Australis* arrived at Davis. **March 11, 1992**: *Aurora Australis* left Davis, bound for Heard. **March 15, 1992**: *Aurora Australis* arrived at Heard, leaving there the same day, bound for Casey. **March 20, 1992**: *Aurora Australis* arrived at Casey, leaving there the same day, bound for Hobart. **March 27, 1992**: *Aurora Australis* arrived back at Hobart.

ANARE 1992-93. **Oct. 17, 1992**: The *Aurora Australis* left Hobart, bound for Mawson Station. **Nov. 2, 1992**: *Aurora Australis* arrived at Mawson. **Nov. 5, 1992**: *Aurora Australis* left Mawson, bound for Davis Station. **Nov. 6, 1992**: *Icebird* left Hobart, bound for Macquarie Island. **Nov. 9, 1992**: *Icebird* arrived at Macquarie. **Nov. 10, 1992**: *Aurora Australis* arrived at Davis. **Nov. 11, 1992**: *Icebird* left Macquarie, bound for Hobart. **Nov. 12, 1992**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 14, 1992**: *Icebird* arrived back at Hobart. **Nov. 23, 1992**: *Aurora Australis* arrived back at Hobart. **Nov. 25, 1992**: *Aurora Australis* left Hobart, bound for Mawson. **Dec. 8, 1992**: *Aurora Australis* arrived at Mawson. **Dec. 10, 1992**: *Aurora Australis* left Mawson, bound for Davis. **Dec. 12, 1992**: *Aurora Australis* arrived at Davis. **Dec. 14, 1992**: *Aurora Australis* left Davis, bound for Law Base, arriving there the same day. **Dec. 15, 1992**: *Aurora Australis* left Law Base, bound for Davis, arriving there the same day. **Dec. 16, 1992**: *Aurora Australis* left Davis, bound for Hobart. **Dec. 19, 1992**: *Icebird* left Hobart, bound for Casey. **Dec. 26, 1992**: *Icebird* arrived at Casey. **Dec. 27, 1992**: *Aurora Australis* arrived back at Hobart. **Dec. 31, 1992**: *Icebird* left Casey, bound for Hobart. **Jan. 5, 1993**: *Aurora Australis* left Hobart, bound for Law Base, and also a krill and geology tour. Graham Hosie was voyage leader, and Martin Stolp was deputy. **Jan. 8, 1993**: *Icebird* arrived back at Hobart. **Jan. 12, 1993**: *Icebird* left Hobart, bound for Mawson. **Jan. 23, 1993**: *Aurora Australis* arrived at Law Base, leaving there that same day, bound for Mawson. **Jan. 25, 1993**: *Icebird* arrived at Mawson. **Jan. 30, 1993**: *Icebird* left Mawson, bound for Davis. **Feb. 1, 1993**: *Icebird* arrived at Davis. **Feb. 6, 1993**: *Icebird* left Davis, bound for Hobart. **Feb. 12, 1993**: *Aurora Australis* arrived at Mawson, leaving there that same day, bound for Davis. **Feb. 16, 1993**: *Icebird* arrived back at Hobart. **Feb. 18, 1993**: *Aurora Australis* arrived at Davis. **Feb. 19, 1993**: *Icebird* left Hobart, bound for Casey. Ian Marchant was voyage leader and Steve Rees was deputy. **Feb. 20, 1993**: *Aurora Australis* left Davis, bound for Mawson. **Feb. 22, 1993**: *Aurora Australis* arrived at Mawson. **Feb. 25, 1993**: *Aurora Australis* left Mawson, bound for Casey. **Feb. 27, 1993**: *Icebird* arrived at Casey. **March 1, 1993**: *Icebird* left Casey, bound for Mawson. **March 2, 1993**: *Aurora Australis* arrived at Casey, leaving there that same day, bound for Hobart. **March 6, 1993**: *Icebird* arrived at Mawson. **March 7, 1993**: *Icebird* left Mawson, bound for Heard Island. **March 9, 1993**: *Aurora Australis* arrived back at Hobart. **March 10, 1993**: *Icebird* arrived at Heard. **March 17, 1993**: *Icebird* left Heard, bound for Macquarie. **March 27, 1993**: *Icebird* arrived at Macquarie. **March 28, 1993**: *Icebird* left Macquarie, bound for Hobart. **March 31, 1993**: *Icebird* arrived back at Hobart.

ANARE 1993-94. **Aug. 7, 1993**: The *Aurora Australis* left Hobart, bound for Macquarie Island. Dick Williams was voyage leader, and Andrew McEldowney was deputy. **Aug. 11, 1993**: *Aurora Australis* arrived at Macquarie, leaving there the same day, bound for Hobart. **Oct. 9, 1993**: *Aurora Australis* arrived back at Hobart, after having conducted the Third Heard Island Reseach Survey Trip (THIRST), a marine science and fish survey. **Oct. 12, 1993**: *Aurora Australis* left Hobart, bound for Mawson Station. **Oct. 28, 1993**: *Aurora Australis* arrived at Mawson. **Oct. 30, 1993**: *Aurora Australis* left Mawson, bound for Davis. **Nov. 2, 1993**: *Aurora Australis* arrived at Davis. **Nov. 5, 1993**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 17, 1993**: *Aurora Australis* arrived back at Hobart. **Nov. 19, 1993**: *Aurora Australis* left Hobart, bound for Davis. Rob Easther was voyage leader, and Pat Wilds was deputy. **Dec. 2, 1993**: *Aurora Australis* arrived at Davis. **Dec. 3, 1993**: *Aurora Australis* left Davis, bound for Law Base, leaving there that day, bound for Law Base, which it reached that day, and leaving there, still on the same day, bound for Zhong Shan Station, arriving there at the end of the day, and then turning around and heading for Sansom Island. **Dec. 4, 1993**: *Aurora Australis* arrived at Sansom Island, leaving there that day, bound for Law Base. **Dec. 5, 1993**: *Aurora Australis* arrived at Law Base. **Dec. 7, 1993**: *Aurora Australis* left Law Base, bound for Davis, arriving there the same day. **Dec. 8, 1993**: *Aurora Australis* left Davis, bound for Mawson. **Dec. 10, 1993**: *Aurora Australis* arrived at Mawson. **Dec. 15, 1993**: *Aurora Australis* left Mawson, bound for Hobart. **Dec. 28, 1993**: *Aurora Australis* arrived back at Hobart. **Jan. 1, 1994**: *Aurora Australis* left Hobart, bound for Mawson. **Feb. 4, 1994**: *Aurora Australis* arrived at Mawson, after krill fishing. **Feb. 5, 1994**: *Aurora Australis* left Mawson, bound for Law Base. **Feb. 7, 1994**: *Aurora Australis* arrived at Law Base, leaving there the same day, bound for Davis, which it reached that day. **Feb. 8, 1994**: *Aurora Australis* left Davis, bound for Casey. **Feb. 14, 1994**: *Aurora Australis* arrived at Casey. **Feb. 17, 1994**: *Aurora Australis* left Casey, bound for Dumont d'Urville Station. **Feb. 22, 1994**: *Aurora Australis* arrived at Dumont d'Urville, leaving there that day, bound for Hobart. **March 1, 1994**: *Aurora Australis* arrived back at Hobart. The *Icebird*, in her last season, also relieved Antarctic bases, but her voyage data are not available.

ANARE 1994-95. **Aug. 31, 1994**: The *Aurora Australis* left Hobart, bound for Macquarie Island. Ian Marchant was voyage leader, and Pat Wilds was deputy. **Sept. 3, 1994**: *Aurora Australis* arrived at Macquarie. **Sept. 6, 1994**: *Aurora Australis* left Macquarie, bound for Davis. **Sept. 26, 1994**: *Aurora Australis* arrived at Davis. **Sept. 28, 1994**: *Aurora Australis* left Davis, bound for Hobart. **Oct. 19, 1994**: *Aurora Australis* arrived back at Hobart. **Oct. 22, 1994**: *Aurora Australis* left Hobart, bound for Casey. **Oct. 30, 1994**: *Aurora Australis* arrived at Casey. **Nov. 5, 1994**: *Aurora Australis* left Casey, bound for Davis. **Nov. 11, 1994**: *Aurora Australis* arrived at Davis. **Nov. 15, 1994**: *Aurora Australis* left Davis, bound for Sandefjord Bay. **Nov. 16, 1994**: *Aurora Australis* arrived at Sandefjord Bay, leaving there that same day, bound for Law Base. **Nov. 17, 1994**: *Aurora Australis* arrived at Law Base, leaving there that same day, bound for Prydz Bay. **Nov. 18, 1994**: *Aurora Australis* arrived at Prydz Bay, leaving there that same day, bound for Casey. **Nov. 23, 1994**: *Aurora Australis* arrived at Casey, leaving there that same day, bound for Hobart. **Nov. 29, 1994**: *Aurora Australis* arrived back at Hobart. **Dec. 1, 1994**: *Aurora Australis* left Hobart, bound for Macquarie. **Dec. 4, 1994**: *Aurora Australis* arrived at Mac-

quarie. **Dec. 7, 1994**: *Aurora Australis* left Macquarie, bound for Hobart. **Dec. 10, 1994**: *Aurora Australis* arrived back at Hobart. **Dec. 13, 1994**: *Aurora Australis* left Hobart, bound for Casey. Rob Easther was voyage leader, and Simon Wright was deputy. **Dec. 26, 1994**: *Aurora Australis* arrived at Casey. **Jan. 2, 1995**: *Aurora Australis* left Casey, bound for Hobart. **Feb. 2, 1995**: *Aurora Australis* arrived back at Hobart. **Feb. 6, 1995**: *Aurora Australis* left Hobart, bound for Mawson. Pat Quilty was voyage leader. **Feb. 28, 1995**: *Aurora Australis* arrived at Mawson. **March 8, 1995**: *Aurora Australis* left Mawson, bound for Davis. **March 17, 1995**: *Aurora Australis* arrived at Davis, leaving there that same day bound for Mawson. **March 28, 1995**: *Aurora Australis* arrived at Mawson, leaving there that same day, bound for Hobart. **April 12, 1995**: *Aurora Australis* arrived back at Hobart. **April 14, 1995**: *Aurora Australis* left Hobart, bound for Casey. **April 23, 1995**: *Aurora Australis* arrived at Casey. **April 24, 1995**: *Aurora Australis* left Casey, bound for Macquarie. **May 2 1995**: *Aurora Australis* arrived at Macquarie. **May 5, 1995**: *Aurora Australis* left Macquarie, bound for Hobart. **May 8, 1995**: *Aurora Australis* arrived back at Hobart. It is possible that the details of one voyage are missing, but, if so, they are unavailable.

ANARE 1995-96. **Sept. 15, 1995**: The *Aurora Australis* left Hobart, bound for Macquarie Island. Phil Gard was voyage leader, and Sandra Potter was deputy. **Sept. 18, 1995**: *Aurora Australis* arrived at Macquarie. **Sept. 19, 1995**: *Aurora Australis* left Macquarie, bound for Mawson. **Oct. 9, 1995**: *Aurora Australis* arrived at Mawson. **Oct. 11, 1995**: *Aurora Australis* left Mawson, bound for Davis. **Oct. 19, 1995**: Aurora Australis arrived at Davis. **Oct. 22, 1995**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 2, 1995**: *Aurora Australis* arrived back at Hobart. **Nov. 26, 1995**: *Aurora Australis* left Fremantle, WA, bound for Casey. **Dec. 6, 1995**: *Aurora Australis* arrived at Casey. **Dec. 9, 1995**: *Aurora Australis* left Casey, bound for the Bunger Hills. **Dec. 10, 1995**: *Aurora Australis* arrived at the Bunger Hills, leaving there that same day, bound for Mawson. **Dec. 17, 1995**: *Aurora Australis* arrived at Mawson, leaving there that same day, bound for Davis. **Dec. 19, 1995**: *Aurora Australis* arrived at Davis. **Dec. 20, 1995**: *Aurora Australis* left Davis, bound for Law Base. **Dec. 21, 1995**: *Aurora Australis* arrived at Law Base, leaving there that same day, bound for Hobart. **Jan. 1, 1996**: *Aurora Australis* arrived back at Hobart. **Jan. 4, 1996**: *Polar Bird* left Hobart, bound for Macquarie. **Jan. 7, 1996**: *Polar Bird* arrived at Macquarie. **Jan. 12, 1996**: *Polar Bird* left Macquarie, bound for Hobart. **Jan. 14, 1996**: *Polar Bird* arrived back at Hobart. **Jan. 18, 1996**: *Polar Bird* left Hobart, bound for Casey. **Jan. 19, 1996**: *Aurora Australis* left Hobart, bound for Davis. Steve Nicol was voyage leader. **Jan. 25, 1996**: *Polar Bird* arrived at Casey. **Jan. 28, 1996**: *Aurora Australis* arrived at Davis, leaving there that same day, bound for Casey. That same day, *Polar Bird* left Casey, bound for Davis. **Feb. 2, 1996**: *Polar Bird* arrived at Davis. **Feb. 4, 1996**: *Polar Bird* left Davis, bound for Law Base. **Feb. 5, 1996**: *Polar Bird* arrived at Law Base, leaving there that same day, bound for Sansom Island. **Feb. 6, 1996**: *Polar Bird* arrived at Sansom Island, leaving there that same day, bound for Mawson. **Feb. 9, 1996**: *Polar Bird* arrived at Mawson. **Feb. 15, 1996**: *Polar Bird* left Mawson, bound for Davis. **Feb. 17, 1996**: *Polar Bird* arrived at Davis. **Feb. 19, 1996**: *Aurora Australis* arrived at Casey, after oceanographic and krill studies. **Feb. 20, 1996**: *Polar Bird* left Davis, bound for Casey. **Feb. 22, 1996**: *Aurora Australis* left Casey, bound for Macquarie. **Feb. 25, 1996**: *Polar Bird* arrived at Casey. **Feb. 28, 1996**: *Polar Bird* left Casey, bound for Hobart. **March 7, 1996**: *Polar Bird* arrived back at Hobart. **March 28, 1996**: *Aurora Australis* arrived at Macquarie, after continuing her studies, and leaving there that same day, bound for Hobart. **March 31, 1996**: *Aurora Australis* arrived back at Hobart. **April 2, 1996**: *Aurora Australis* left Hobart, bound for Davis. **April 14, 1996**: *Aurora Australis* arrived at Davis. **April 15, 1996**: *Aurora Australis* left Davis, bound for Casey. **April 21, 1996**: *Aurora Australis* arrived at Casey. **April 26, 1996**: *Aurora Australis* left Casey, bound for Hobart. **May 2, 1996**: *Aurora Australis* arrived back at Hobart.

ANARE 1996-97. **Aug. 22, 1996**: The *Aurora Australis* left Hobart, bound for Macquarie Island. Simon Wright was voyage leader, and Sandra Potter was deputy. **Aug. 25, 1996**: *Aurora Australis* arrived at Macquarie. **Aug. 26, 1996**: *Aurora Australis* left Macquarie, bound for Hobart. **Sept. 22, 1996**: *Aurora Australis* arrived back at Hobart, after conducting marine scientific studies. **Sept. 26, 1996**: *Aurora Australis* left Hobart, bound for Casey Station. Marty Betts was voyage leader, and Jenny Whittaker was deputy. **Oct. 4, 1996**: *Aurora Australis* arrived at Casey. **Oct. 6, 1996**: *Aurora Australis* left Casey, bound for Davis Station. **Oct. 29, 1996**: *Aurora Australis* arrived at Davis, after conducting marine scientific studies. **Oct. 31, 1996**: *Aurora Australis* left Davis, to continue her studies. **Nov. 24, 1996**: *Aurora Australis* arrived back at Hobart. **Nov. 25, 1996**: *Aurora Australis* left Hobart, bound for Macquarie. Steve Nicol was voyage leader, and Ruth Lawless was deputy. This voyage also conducted the Krill Acoustics Oceanographic Survey (KAOS). **Jan. 8, 2003**: *Polar Bird* arrived back at Hobart. **Jan. 12, 2003**: *Polar Bird* left Hobart, bound for Mawson. Richard Mulligan was voyage leader, and Jenny Whittaker was deputy. **Jan. 26, 2003**: *Polar Bird* arrived at Mawson. **Feb. 2, 2003**: *Aurora Australis* arrived at Mawson. **Feb. 4, 2003**: *Aurora Australis* left Mawson, bound for Davis. **Feb. 6, 2003**: *Aurora Australis* left Mawson, bound, eventually (after doing the survey) for Davis. **Feb. 7, 2003**: *Polar Bird* arrived at Davis. **Feb. 10, 2003**: *Polar Bird* left Davis, bound for Hobart. **Feb. 20, 2003**: *Polar Bird* arrived back at Hobart. **Feb. 22, 2003**: *Polar Bird* left Hobart, bound for Casey. Marty Betts was voyage leader, and Chris McGuire was deputy. **March 2, 2003**: *Aurora Australis* arrived at Davis, leaving there the same day, bound for Mawson. **March 3, 2003**: *Polar Bird* arrived at Casey. **March 4, 2003**: *Aurora Australis* arrived at Mawson. **March 5, 2003**: *Aurora Australis* left Mawson, bound for Hobart. **March 7, 2003**: *Polar Bird* left Casey, bound for Hobart. **March 14, 2003**: *Polar Bird* arrived back at Hobart. **March 18, 2003**: *Aurora Australis* arrived back at Hobart. **March 20, 2003**: *Aurora Australis* left Hobart, bound for Maquarie. Don Hudspeth was voyage leader, and Shane Hunniford was deputy. **March 24, 2003**: *Aurora Australis* arrived at Macquarie. **March 28, 2003**: *Aurora Australis* left Macquarie, bound for Hobart. **April 1, 2003**: *Aurora Australis* arrived back at Hobart.

ANARE 2003-04. Sept. 11, 2003: The *Aurora Australis* left Hobart, bound for Casey Station. Ian Allison was voyage leader, and Victoria Lytle was deputy. **Oct. 17, 2003**: *Aurora Australis* arrived at Casey. **Oct. 21, 2003**: *Aurora Australis* left Casey, bound for Hobart. **Oct. 30, 2003**: *Aurora Australis* arrived back at Hobart.

Nov. 3, 2003: *Aurora Australis* left Hobart, bound for Davis. Jane Wilson was voyage leader, and Nicki Chilcott was deputy. **Nov. 16, 2003**: *Aurora Australis* arrived at Davis. **Nov. 20, 2003**: The *Southern Supporter* left Thursday Island, bound for Fremantle. Robb Clifton was voyage leader. **Dec. 1, 2003**: The *Southern Supporter* arrived at Fremantle. **Nov. 22, 2003**: *Aurora Australis* left Davis, bound for Zhong Shan Station. **Nov. 23, 2003**: *Aurora Australis* arrived at Zhong Shan, and left the same day, bound for Fremantle, WA. **Dec. 2, 2003**: The *Southern Supporter* left Fremantle, bound for Bunbury, WA. **Dec. 4, 2003**: *Aurora Australis* arrived at Fremantle. **Dec. 5, 2003**: The *Southern Supporter* arrived at Bunbury, leaving there the same day, bound for Heard Island. **Dec. 8, 2003**: *Aurora Australis* left Fremantle, bound for Zhong Shan. Dick Williams was voyage leader, and Tim Lamb was deputy. **Dec. 16, 2003**: The *Southern Supporter* arrived at Heard. **Dec. 19, 2003**: The *Southern Supporter* left Heard, bound for Hobart. **Dec. 30, 2003**: The *Southern Supporter* arrived at Hobart. **Jan. 31, 2004**: *Aurora Australis* arrived at Zhong Shan, leaving there the same day, bound for Davis. **Feb. 1, 2004**: *Aurora Australis* arrived at Davis. **Feb. 2, 2004**: *Aurora Australis* left Davis, bound for Zhong Shan, and the *Southern Supporter* left Gneering Shoal, Qld, bound for Esperance, WA. Robb Clifton was voyage leader on that one. **Feb. 3, 2004**: *Aurora Australis* arrived at Zhong Shan, leaving there the same day, bound for Davis again. **Feb. 4, 2004**: *Aurora Australis* arrived at Davis, leaving there the same day, bound for Hobart. **Feb. 10, 2004**: The *Southern Supporter* arrived at Esperance. **Feb. 11, 2004**: The *Southern Supporter* left Esperance, bound for Heard Island. **Feb. 13, 2004**: *Aurora Australis* arrived at Hobart. **Feb. 17, 2004**: *Aurora Australis* left Fremantle, bound for Casey. Rob Easther was voyage leader, and Shane Hunniford was deputy. **Feb. 23, 2004**: The *Southern Supporter* arrived at Heard. **Feb. 26, 2004**: The *Southern Supporter* left Heard, bound for Fremantle, WA, and that day the *Aurora Australis* arrived at Casey. **Feb. 27, 2004**: *Aurora Australis* left Casey, bound for Macquarie Island. **March 5, 2004**: *Aurora Australis* arrived at Macquarie. **March 6, 2004**: The *Southern Supporter* arrived at Fremantle. **March 9, 2004**: *Aurora Australis* left Macquarie, bound for Hobart. **March 12, 2004**: *Aurora Australis* arrived at Hobart.

ANARE 2004-05. **Oct. 1, 2004**: The *Aurora Australis* left Hobart, bound for Casey Station. Victoria Lytle was voyage leader, and Karin Beaumont was deputy. **Oct. 19, 2004**: *Aurora Australis* arrived at Casey. **Oct. 25, 2004**: *Aurora Australis* left Casey, to conduct ice validation tests and marine science. **Nov. 3, 2004**: *Aurora Australis* arrived back at Casey. **Nov. 4, 2004**: *Aurora Australis* left Casey, bound for Hobart. **Nov. 14, 2004**: *Aurora Australis* arrived back in Hobart. **Nov. 18, 2004**: *Aurora Australis* left Hobart, bound for Casey. Jane Wilson was voyage leader, and Nicki Chilcott was deputy. **Nov. 25, 2004**: *Aurora Australis* arrived at Casey, and left later that day, bound for Davis. **Dec. 1, 2004**: *Aurora Australis* arrived at Davis. **Dec. 3, 2004**: *Aurora Australis* left Davis, bound for Mawson. **Dec. 7, 2004**: *Aurora Australis* arrived at Mawson. **Dec. 8, 2004**: *Aurora Australis* left Mawson, to return to Davis. **Dec. 10, 2004**: *Aurora Australis* arrived at Davis, and left later that day, bound for Fremantle, WA. **Dec. 19, 2004**: *Aurora Australis* arrived in Fremantle. **Dec. 23, 2004**: *Aurora Australis* left Fremantle, on an oceanographic research voyage, led by Steve Rintoul. Mark Rosenberg was deputy. **Jan. 12, 2005**: The *Vasiliy Golovnin* left Hobart, bound for Casey. Marty Betts was voyage leader, and Steven Whiteside was deputy. **Jan. 22, 2005**: The *Vasiliy Golovnin* arrived at Casey. **Jan. 27, 2005**: The *Vasiliy Golovnin* left Casey, bound for Mawson. **Feb. 2, 2005**: The *Vasiliy Golovnin* arrived at Mawson. **Feb. 5, 2005**: *Aurora Australis* arrived at Davis. **Feb. 6, 2005**: *Aurora Australis* left Davis, bound for Hobart. **Feb. 9, 2005**: The *Vasiliy Golovnin* left Mawson, bound for Davis. **Feb. 11, 2005**: The *Vasiliy Golovnin* arrived at Davis. **Feb. 16, 2005**: The *Vasiliy Golovnin* left Davis, bound for Hobart. **Feb. 17, 2005**: *Aurora Australis* arrived back in Hobart. **Feb. 20, 2005**: *Aurora Australis* left Hobart, bound for Mawson. Michael Carr was voyage leader, and Simon Cash was deputy. **Feb. 27, 2005**: The *Vasiliy Golovnin* arrived back in Hobart. **March 6, 2005**: *Aurora Australis* arrived at Mawson. **March 11, 2005**: *Aurora Australis* left Mawson, bound for Casey. **March 17, 2005**: *Aurora Australis* arrived at Casey. **March 18, 2005**: *Aurora Australis* left Casey, bound for Macquarie. **March 25, 2005**: *Aurora Australis* arrived at Macquarie. **March 30, 2005**: *Aurora Australis* left Macquarie. **April 2, 2005**: *Aurora Australis* arrived back in Hobart.

ANARE 2005-06. **Oct. 18, 2005**: The *Aurora Australis* left Hobart, bound for Casey Station. Richard Mulligan was voyage leader, and Jenny Whittaker was deputy. **Oct. 25, 2005**: *Aurora Australis* arrived at Casey. **Oct. 27, 2005**: *Aurora Australis* left Casey, bound for Davis. **Nov. 6, 2005**: *Aurora Australis* arrived at Davis. **Nov. 14, 2005**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 25, 2005**: *Aurora Australis* arrived back in Hobart. **Dec. 2, 2005**: *Aurora Australis* left Hobart, bound for Casey. Doug Thost was voyage leader. **Dec. 12, 2005**: *Aurora Australis* arrived at Casey. **Dec. 17, 2005**: *Aurora Australis* left Casey, bound for Fremantle, WA. **Dec. 28, 2005**: *Aurora Australis* arrived in Fremantle. **Jan. 2, 2006**: *Aurora Australis* left Fremantle, bound for Mawson. Steve Nicol was voyage leader, and Ruth Casper was deputy. **Jan. 12, 2006**: The *Vasiliy Golovnin* left Hobart, bound for Casey. Mickey Loedeman was voyage leader, and Brett Quinton was deputy. **Jan. 22, 2006**: The *Vasiliy Golovnin* arrived at Casey. **Jan. 27, 2006**: The *Vasiliy Golovnin* left Casey, bound for Mawson. **Feb. 2, 2006**: The *Vasiliy Golovnin* arrived at Mawson. **Feb. 9, 2006**: The *Vasiliy Golovnin* left Mawson, bound for Davis. **Feb. 11, 2006**: The *Vasiliy Golovnin* arrived at Davis. **Feb. 13, 2006**: *Aurora Australis* arrived at Mawson. **Feb. 14, 2006**: *Aurora Australis* left Mawson, bound for Davis. **Feb. 16, 2006**: The *Vasiliy Golovnin* left Davis, bound for Hobart. **Feb. 27, 2006**: The *Vasiliy Golovnin* arrived back in Hobart. **March 2, 2006**: *Aurora Australis* arrived at Davis. **March 3, 2006**: *Aurora Australis* left Davis, bound for Hobart. **March 12, 2006**: *Aurora Australis* arrived back in Hobart. **March 17, 2006**: *Aurora Australis* left Hobart, bound for Casey. Shane Hunniford was voyage leader, and Andrew Deep was deputy. **March 25, 2006**: *Aurora Australis* arrived at Casey. **March 27, 2006**: *Aurora Australis* left Casey, bound for Macquarie. **April 2, 2006**: *Aurora Australis* arrived at Macquarie. **April 9, 2006**: *Aurora Australis* left Macquarie, bound for Hobart. **April 12, 2006**: *Aurora Australis* arrived back in Hobart.

ANARE 2006-07. **Sept. 30, 2006**: The *Aurora Australis* left Hobart for 10 days of trials. **Oct. 10, 2006**: *Aurora Australis* returned to Hobart. **Oct. 12, 2006**: *Aurora Australis* left Hobart, bound for Macquarie Island. Doug Thost was voyage leader, and Nicki Chilcott was deputy. **Oct. 15, 2006**: *Aurora Australis* arrived at Macquarie, and left the same day, bound for Casey. **Oct. 24, 2006**: *Aurora Australis* arrived at Casey. **Oct. 27, 2006**: *Aurora Australis* left Casey, bound for Mawson. **Nov. 4, 2006**: *Aurora Australis* arrived at Mawson. **Nov. 14, 2006**: *Aurora Australis* left Mawson, bound for Davis. **Nov. 18, 2006**: *Aurora Australis* arrived at Davis. **Nov. 23, 2006**: *Aurora Australis* left Davis, bound for Hobart. **Dec. 1, 2006**: *Aurora Australis* arrived back in Hobart. **Dec. 8, 2006**: *Aurora Australis* left Hobart, bound for Davis. In addition they were taking down the Chinese party for that season at Zhong Shan Station. Dave Tonna was voyage leader, and Andrew Deep was deputy. **Dec. 16, 2006**: *Aurora Australis* arrived at Davis, leaving there that same day, bound for Zhong Shan. **Dec. 19, 2006**: *Aurora Australis* arrived at Zhong Shan, leaving there that same day, bound for Davis again. **Dec. 20, 2006**: *Aurora Australis* arrived back at Davis. **Dec. 23, 2006**: *Aurora Australis* left Davis, bound for Casey. **Dec. 29, 2006**: *Aurora Australis* arrived at Casey. **Jan. 4, 2007**: *Aurora Australis* left Casey, bound for Hobart. **Jan. 14, 2007**: *Aurora Australis* arrived back in Hobart. **Feb. 23, 2007**: *Aurora Australis* left Hobart, bound for Davis. Robb Clifton was voyage leader, and Simon Cash was deputy. **March 6, 2007**: *Aurora Australis* arrived at Davis. **March 8, 2007**: *Aurora Australis* left Davis, bound for Zhong Shan, to relieve the Chinese station. **March 9, 2007**: *Aurora Australis* arrived at Zhong Shan. **March 11, 2007**: *Aurora Australis* left Zhong Shan, bound for Mawson. **March 15, 2007**: *Aurora Australis* arrived at Mawson. **March 16, 2007**: *Aurora Australis* left Mawson, bound for Casey. **March 23, 2007**: *Aurora Australis* arrived at Casey. **March 25, 2007**: *Aurora Australis* left Casey, bound for Hobart. **April 1, 2007**: *Aurora Australis* arrived back in Hobart. **April 5, 2007**: *Aurora Australis* left Hobart, bound for Macquarie. Don Hudspeth was voyage leader, and Brett Quinton was deputy. **April**

8, 2007: *Aurora Australis* arrived at Macquarie. **April 18, 2007**: *Aurora Australis* left Macquarie, bound for Hobart. **April 21, 2007**: *Aurora Australis* arrived back in Hobart.

ANARE 2007-08. **Oct. 15, 2007**: The *L'Astrolabe*, while en route to Antarctica as part of the French Polar expedition of that year, left Hobart, bound for Macquarie Island, to drop off Australian summer expeditioners there. **Oct. 18, 2007**: *L'Astrolabe* arrived at Macquarie. **Oct. 19, 2007**: *L'Astrolabe* left Macquarie, bound for Antarctica. **Oct. 20, 2007**: *Aurora Australis* left Hobart, bound for Casey Station. Don Hudspeth was voyage leader, and Anthony Hull was deputy. **Oct. 30, 2007**: *Aurora Australis* arrived at Casey. **Nov. 1, 2007**: *Aurora Australis* left Casey, bound for Davis. **Nov. 9, 2007**: *Aurora Australis* arrived at Davis. **Nov. 16, 2007**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 19, 2007**: *L'Astrolabe* arrived back in Hobart. **Dec. 3, 2007**: *Aurora Australis* arrived back in Hobart. **Jan. 31, 2008**: *Aurora Australis* left Hobart, bound for Casey. Nicki Chilcott was voyage leader, and Rob Bryson was deputy. **Feb. 10, 2008**: *Aurora Australis* arrived at Casey. **Feb. 16, 2008**: *Aurora Australis* left Casey, bound for Davis. **Feb. 22, 2008**: *Aurora Australis* arrived at Davis. **Feb. 25, 2008**: *Aurora Australis* left Davis, bound for Mawson. **Feb. 29, 2008**: *Aurora Australis* arrived at Mawson. **March 6, 2008**: *Aurora Australis* left Mawson, bound for Hobart. **March 15, 2008**: *L'Astrolabe* left Hobart, to re-supply and relieve Macquarie. Robb Clifton was expedition leader, and Andrew Deep was deputy. **March 18, 2008**: *L'Astrolabe* arrived at Macquarie. **March 20, 2008**: *Aurora Australis* arrived back in Hobart. **March 28, 2008**: *L'Astrolabe* left Macquarie, bound for Hobart. **March 31, 2008**: *L'Astrolabe* arrived back in Hobart.

ANARE 2008-09. **Oct. 3, 2008**: The *Aurora Australis* left Hobart for a week of voyage trials. Jono Reeve was voyage leader. **Oct. 11, 2008**: *Aurora Australis* returned to Hobart. **Oct. 12, 2008**: *Aurora Australis* left Hobart, bound for Casey Station. Tony Worby was voyage leader, and John Prichard was deputy. **Oct. 20, 2008**: *Aurora Australis* arrived at Casey. **Oct. 25, 2008**: *Aurora Australis* left Casey, bound for Davis. **Nov. 1, 2008**: *Aurora Australis* arrived at Davis. **Nov. 10, 2008**: *Aurora Australis* left Davis, bound for Hobart. **Nov. 21, 2008**: *Aurora Australis* arrived back in Hobart. **Nov. 23, 2008**: *Aurora Australis* left Hobart, bound for Casey. Robb Clifton was expedition leader, and Andy Cianchi was deputy. **Dec. 3, 2008**: *Aurora Australis* arrived at Casey. **Dec. 9, 2008**: *Aurora Australis* left Casey, bound for Davis. **Dec. 15, 2008**: *Aurora Australis* arrived at Davis. **Dec. 17, 2008**: *Aurora Australis* left Davis, bound for Fremantle, WA. **Dec. 27, 2008**: *Aurora Australis* arrived in Fremantle.

ANARE 2009-10. Oct. 30, 2009: The *Aurora Australis* left Hobart, bound for Davis Station. Karin Beaumont was voyage leader, and Sharon Labudda was deputy. **Nov. 12, 2009:** *Aurora Australis* arrived at Davis. **Nov. 24, 2009**: *Aurora Australis* left Davis, bound for Hobart. **Dec. 2, 2009**: *Aurora Australis* arrived back in Hobart. **Dec. 5, 2009**: *Aurora Australis* left Hobart, bound for Casey. Doug Thost led the expedition, and Aaron Spurr was deputy. **Dec. 19, 2009**: *Aurora Australis* arrived at Casey. **Dec. 27, 2009**: *Aurora Australis* left Casey, bound for Davis. **Jan. 10, 2010**: *Aurora Australis* arrived at Davis. **Jan. 13, 2010**: *Aurora Australis* left Davis, bound for Hobart. **Jan. 23, 2010**: *Aurora Australis* arrived back in Hobart. **Jan. 26, 2010**: *Aurora Australis* left Hobart, bound for Davis. Rob Bryson was voyage leader, and Simon Langdon was deputy. **Feb. 5, 2010**: *Aurora Australis* arrived at Davis. **Feb. 7, 2010**: *Aurora Australis* left Davis, bound for Mawson. **Feb. 10, 2010**: *Aurora Australis* arrived at Mawson. **Feb. 16, 2010**: *Aurora Australis* left Mawson, bound for Hobart. **Feb. 28, 2010**: *Aurora Australis* arrived back in Hobart. **March 8, 2010**: *Aurora Australis* left Hobart, bound for Davis Station. Andy Cianchi was voyage leader, and Mick Stapleton was deputy. **March 18, 2010**: *Aurora Australis* arrived at Davis. **March 20, 2010**: *Aurora Australis* left Davis, bound for Hobart. **March 30, 2010**: *Aurora Australis* arrived back in Hobart. That day the ship headed for Macquarie, same voyage leaders. **April 2, 2010**: *Aurora Australis* arrived at Macquarie. **April 12, 2010**: *Aurora Australis* left Macquarie, bound for Hobart. **April 15, 2010**: *Aurora Australis* arrived back in Hobart. **May 20, 2010**: *Aurora Australis* left Hobart, bound for Macquarie. Simon Langdon was voyage leader, and Sharon Labudda was deputy. **May 25, 2010**: *Aurora Australis* arrived at Macquarie. **May 28, 2010**: *Aurora Australis* left Macquairie, bound for Hobart. **May 31, 2010**: *Aurora Australis* arrived back in Hobart.

ANARE Club. The A.N.A.R.E Ex-members Association (as it was called then) had its first meeting on Oct. 22, 1951, in J Block, Albert Park Barracks (home of the Antarctic Division at that time), with 15 members, all veterans of the first Heard Island and Macquarie Island expeditions. By 2001 there were 1100 members. In 2002 the club produced a beautiful book (*see* the Bibliography).

Anare Mountains. 70°55' S, 166°00' E. Name also seen as ANARE Mountains. Large group of mainly snow-covered peaks and ridges extending N to S inland from the Oates Coast, Victoria Land. Bounded on the N and E by the Pacific Ocean, on the W by Lillie Glacier, and on the S by Ebbe Glacier and Dennistoun Glacier. Drabek Peak is the highest, at 2090 m (6857 ft). First sighted by Ross in 1841, they were photographed during OpHJ 1946-48, and surveyed by USGS helicopter teams in 1962 and 1963. Named by the Northern Party of NZGSAE 1963-64 for the ANARE party of 1962 led by Phil Law, which conducted surveys along the coast. NZ-APC accepted the name on Nov. 17, 1964, and US-ACAN followed suit that year.

Anare Nunataks. 69°58' S, 64°37' E. A group of mainly snow- and ice-covered ridges with exposed brown rock summits rising from between 2006 m to 2036 m above sea level, 26 km S of Stinear Nunataks in Mac. Robertson Land. Visited on Nov. 30, 1955 by an ANARE party led by John Béchervaise. Named by ANCA on Sept. 4, 1956 as ANARE Nunataks, but the spelling that was accepted by US-ACAN in 1961 was Anare Nunataks.

Anare Pass. 71°13' S, 166°37' E. Broad and ice-covered, it is 1200 m above sea level. It is the highest point on the glaciers that delimit the S side of the Anare Mountains, and separates the Anare Mountains from the Admiralty Mountains and Concord Mountains to the S. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, in association with the mountains.

Skaly Anastasa Mikojana. 80°32' S, 20°30' W. Rocks in the vicinity of Sauria Buttress, in the Shackleton Range. Named by the Russians, after Anastas Ivanovich Mikoyan (1895-1978), Armenian statesman, for a while the most important man in the USSR after Kruschchev.

Nunataki Anatolija Jancelevicha. 68°48' S, 65°35' E. Nunataks in Mac. Robertson Land. Named by the Russians.

ANCA *see* **Antarctic Names Committee of Australia**

Cabo Anca de León *see* **Lions Rump**

Ancestor Pass *see* **Celebration Pass**

Paso Ancho. 62°28' S, 60°47' W. A passage between Cerro El Cóndor to the E, and Cerro Selknam to the W, on Cape Shirreff, Livingston Island, in the South Shetlands. So named by ChilAE 1990-91 because this passage constitutes a level plain. "Ancho" means "broad" in Spanish, but it also means, flat, and even tranquil.

Anchor Crag. 69°12' S, 66°12' W. A rocky crag, rising to 1210 m, on the N side of Airy Glacier, just over 6 km NNE of Mount Gilbert, on the E side of the Wordie Ice Shelf, on the Fallières Coast, in the central part of the Antarctic Peninsula. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and surveyed by Fids from Base E on Nov. 4, 1958. Named by UK-APC on Aug. 31, 1962 for an anchor-shaped snow patch on the face of the rock, seen here during the 1958 survey. US-ACAN accepted the name later that year.

Anchor ice. Also called ground ice, grounded ice, and bottom ice. Ice formed at the bottom of streams while the temperature of the water is above freezing point. It is formed only under a clear night sky, and most readily on dark rocks. The prime cause is probably radiation of heat from the stream bottom.

Anchor Island *see* **Anchorage Island**

[1]**Anchor Peak** *see* **Archer Peak**

[2]**Anchor Peak**. 71°00' S, 171°00' E. The highest point (about 90 m) and the S extremity of Svend Foyn Island, the largest of the Possession Islands. Probably named by Bull in 1895, during his cruise here in the *Antarctic*. It appears in the 1958 NZ provisional gazetteer. Not to be confused with Archer Peak.

[1]**Anchorage Island**. 67°36' S, 68°13' W. An island, 1.1 km SE of Lagoon Island in the Léonie Islands, SW of Rothera Station, and about 3 km

NW of the Mikkelsen Islands, in Marguerite Bay, off the SE coast of Adelaide Island, off the W coast of the Antarctic Peninsula. Discovered by FrAE 1908-10, and reported by them as a possible anchorage for a small ship. It was named Anchor Island by Rymill, who visited it in Feb. 1936 during BGLE 1934-37. It appears as such on the 1938 chart of that expedition. Re-surveyd by Fids from Base E in Dec. 1948, and renamed by them as Anchorage Islet. US-ACAN accepted that name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such on a 1954 British chart, and in the British gazetteer of 1955. When the term "islet" went out of fashion, UK-APC re-defined it on July 7, 1959, as Anchorage Island, and it appears as such in the 1961 British gazetteer, and on a British chart of that year. US-ACAN followed suit with the new naming and definition in 1963. The Chileans call it Islote Anchorage. It appears in the 1991 Argentine gazetteer, as Islote Amarra ("amarra" means "mooring cable"). *See also* **Isla Fondeadero**.

[2]**Anchorage Island**. 68°34' S, 77°55' E. An island, 1 km long and 0.5 km wide, about 2 km NW of Davis Station, in the Vestfold Hills. Mapped by Norwegian cartographers in 1946, from aerial photos taken by LCE 1936-37. So named by ANCA on Aug. 11, 1958 because ships relieving Davis anchored between the island and the station.

Anchorage Islet *see* [1]**Anchorage Island**

Anchorage Patch. 68°34' S, 77°55' E. A small, isolated shoal patch within the anchorage at Davis Station, almost 1 km NW of Torckler Rocks, and 1 km from Anchorage Island. The least depth of water over the patch is 11 m. Plotted in Jan. 1961 by Tom Gale, during an ANARE hydrographic survey led by Don Styles on the *Thala Dan*. Named by ANCA on July 4, 1961. US-ACAN accepted the name in 1965.

Punta Anchorena. 66°14' S, 61°30' W. A point at the extreme S of Jason Peninsula. Named by the Argentines in 1975, for Aarón Félix de Anchorena (1877-1965), early pilot, who donated the airship *Pampero*, which started a series of scientific flights.

Anckorn Nunataks. 70°14' S, 63°12' W. A group of nunataks and snow-covered hills rising to about 800 m, and 24 km in extent, between Mount Bailey and Mount Samsel, NW of Smith Inlet, on the Wilkins Coast, in the E part of Palmer Land. Photographed from the air by USN in 1966, and surveyed from the ground by BAS personnel from Base E in 1972-73. Named by UK-APC on July 21, 1976, for John Fergus Anckorn (b. Oct. 23, 1949), geologist who joined BAS in 1972, and wintered-over at Base E in 1973 and 1974. US-ACAN accepted the name later that year.

Monte Ancla *see* **Mount Ancla**

Mount Ancla. 64°49' S, 63°41' W. A mountain, snow-covered, except for a rock ridge at its S side, it rises to 815 m (the Chileans say 714 m), the highest point in the Osterrieth Range, about 3.5 km NNE of Cape Lancaster, in the extreme SE part of Anvers Island, in the Palmer Archipelago. First seen by BelgAE 1897-99, and named by Charcot during FrAE 1908-10. Surveyed in 1944 by personnel from Port Lockroy Station, during Operation Tabarin, and named by them as The Helmet. However, despite the fact that the descriptive (and somewhat ribald) name caught on among the Fids, it was considered unsuitable by the UK authorities. The name Monte Ancla (i.e., "anchor mountain") first appears on an Argentine government chart of 1950, and again on one of 1953, presumably for its use as an anchor bearing. Fids from Base N surveyed it again in 1955, and UK-APC named it on Sept. 4, 1957, as Mount Hindson, for William Hindson (q.v.), FIDS surveyor at Base N that winter. It appears as such on a British chart of 1958. The Chileans call it Monte Becar, for fireman 1st class Pedro Becar Torres, of the *Yelcho*, that saved Shackleton's men on Elephant Island in 1916 during BITE 1914-17. US-ACAN accepted the name Mount Ancla in 1967.

Andalusitgrat. 71°33' S, 160°10' E. A peak in the SW extremity of the Daniels Range, in the Usarp Mountains, in Oates Land. Named by the Germans.

Andean Chain. Geologic formation which runs from the tip of South America, through the Drake Passage and the South Shetlands, down the Antarctic Peninsula, to Marie Byrd Land.

Andean Province *see* **Geology**, **West Antarctica**

ANDEEP. Antarctic benthic deep-sea biodiversity program. There were three ANDEEPs, all conducted from the *Polarstern*, the aim being the first complete study of Antarctic deep-sea biology. ANDEEP I and ANDEEP II took place jointly in March 2002, and were benthic biology cruises to the eastern Weddell Sea, the South Shetlands, and the Drake Passage. ANDEEP III took place in 2005, in the northern Weddell Sea. The program revealed the existence of more than 700 new marine creatures.

The *Andenes*. Norwegian Coast Guard ship, named for the Norwegian town. She took NorAE 1984-85 to Antarctica (skipper of the vessel that season was Torstein Myhre) and likewise NorAE 1989-90 (skipper Geir A. Olsen).

Andenes Knoll. 72°26' S, 22°50' W. The most southeasterly of a group of 3 knolls (Andenes, Explora, and Polarstern), in the Weddell Sea. The name (in honor of the *Andenes*), was proposed by Heinrich Hinze of the Alfred Wegener Institute, and approved by international agreement in June 1997.

Anderle Knoll. 67°30' S, 9°00' W. A seamount in the Weddell Sea. The name was proposed in Jan. 1997, by Heinrch Hinze, for American mathematician Richard John Anderle (b. 1926), authority on the dynamic geodesy methods of positioning by satellite. The name was accepted by international agreement in June 1997.

The *Anders Arvesen*. A 723-ton whale catcher, 184 feet 2 inches long, built by A. & J. Inglis, in Glasgow, and launched on Aug. 23, 1951, belonging to the Union Whaling Company, of Durban. In 1953-54 she was in Antarctic waters, catching for the *Abraham Larsen*. Skipper was Elling Nilsen. That season she took 50 blue whales, 247 fin whales, and 29 sperms, for a total of 326 whales, and 21,038 barrels of oil. She was sold to the Japanese and became the *Toshi Maru III*.

Anders Peak. 71°45' S, 9°01' E. A mountain peak rising to 2135 m, 1.5 km S of Gruvletindane Crags, in the N part of the Holtedahl Peaks, in the Orvin Mountains, in the central part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from air photos taken in 1958-59 during NorAE 1956-60, and named by them as Andersnuten, for Anders Vinten-Johansen, medical officer during the 1957-58 leg of that long expedition. US-ACAN accepted the name Anders Peak in 1970. The Russians call it Pik Goreva, or Pik Gerova, presumably for Demetri Gerov (*see* **Gorev Island**). *See also* **Vinten-Johansen Ridge**.

Puerto Andersen *see* **Andersen Harbor**

Andersen, Andreas. A Norwegian whaler who died of beri beri on April 7, 1928, and is buried in the Whaler's Bay Cemetery, on Deception Island.

Andersen, Ansgar. b. 1907, Norway. He served as a seaman on a whaling ship in the Antarctic, but which one, and when, we don't know. A married man with three young children living in Norway, he decided, after his southern trip, to move by himself (i.e., sans wife) to Cardiff, and began living with Mrs. Leung, the former Kathleen Hurford who had married Chinaman Chin Leung back in 1921. Mrs Leung was 15 years older than Ansgar, had a 13-year-old son named John Leung, and Ansgar did her in in Sept. 1940. On Sept. 23, 1940, at the Old Bailey, he was given 10 years for manslaughter. After his term was up, he went back to Norway.

Andersen, Carl. Skipper of the *Solstreif* in 1918.

Andersen, David. Skipper of the *Ole Wegger* in 1932-33.

Andersen, Hans. Skipper of the *Kosmos* in 1932-33.

Andersen, Johan A. Able seaman on the *Southern Cross* during BAE 1898-1900.

Andersen, Krogh. That was the name he went by, but his full name was Bjarne Krogh Andersen. b. July 28, 1900, Sandar, Norway, son of steamship engineer Kristian Andersen and his wife Bertine. He became a whaling gunner out of Sandefjord, and was skipper of the whale catcher *Torgny* between 1928 and 1931, catching for the *Torodd* in Antarctic waters. In 1934-35, 1935-36, and during LCE 1936-37, he was skipper of the *Gribb*, working for the floating factory *Thorshavn*. In 1941 he was skipper of the catcher *Pol IX*, working for the *Ole Wegger*, when the entire fleet was captured by the Germans.

Andersen, Lars. b. 1850, Sweden (sic). Steward on the *Southern Cross* during BAE 1898-1900.

Andersen, Lars Anton. b. May 12, 1891, Sandefjord, Norway, son of fisherman Anders Larsen and his wife Karen Lovise. At 17 he left Hamburg for Buenos Aires, and was skipper and gunner of the *Fortuna* at South Georgia, in 1912-13, at the age of 21. He was gunner-manager of the *Pythia*, 1921-22, and of the *Southern Queen*,

1922-23, 1923-24, 1924-25, and 1925-26. In that last season, tired of what was generally called the "Old Folks Nursing Home" (i.e., the tried, tested, and comfortable South Shetlands), he was the first to fish along the ice of the Weddell Sea. In 1926 he moved to the Ørnen Company, and was with them in Antarctica, as manager of the *Falk*, in 1926-27, 1927-28, 1928-29, 1929-30, and 1930-31, helping Mawson with coal during BANZARE 1929-31. In 1932 he went to work for Anders Jahre, taking his new factory whaler *Kosmos II* to Antarctic waters for the 1932-33 season, and breaking all records in whale catching. He was Norway's best and most famous gunner by 1936, when the Germans took him on at $125,000 a season, on a 3-year contract. He became a notorious Nazi, and after the war was tried and fined $160,000. In 1949, he tried to get a job in Buenos Aires, with the Compañía de Pesca, but director Frithjof Jakobsen wouldn't touch him. He wound up finding a nice home with Perón, as whaling adviser to the Argentine fleet, and in 1951 Onassis took him on as gunner-manager of the *Olympic Challenger*. "He's tough, expensive, unpleasant, and an unscrupulous son of a bitch," said Onassis, "Just like me, only with a harpoon." He retired in 1955 to Sandefjord, a legend, all forgiven. They called him Lars the Devil, or Faen, or Old Nick. He died in 1967, in Sweden.

Andersen, Normann. Captain of the *Ole Wegger* when that vessel was taken over by the Nazis in 1941.

Andersen, Ole. b. Norway. Brother-in-law of Capt. Thoralf Sørlle. A whaling captain, he skippered the *Solstreif* in 1921-22, the season that ship was badly damaged off Cape Melville. That same season, now skipper of the *Svend Foyn I*, he was aboard the catcher *Graham* in Dec. 1921 when they found Lester and Bagshawe (of the British Imperial Antarctic Expedition). He was still skipper of the *Svend Foyn I* in 1928-29. Not to be confused with a Norwegian gunner on the *Sir James Clark Ross*.

Andersen, Oskar. b. April 25, 1888, Sweden, of Norwegian parents Andreas Andersen and his wife Karen. He was raised in Norderhov, Norway. A riveter on a whaling ship in the South Shetlands, who died of a fracture of the spine on Dec. 31, 1929, and was buried in the Whalers Bay Cemetery on Deception Island.

Andersen, Reidar. b. 1908, Norway. He went to sea at 16, and was 2nd officer on the Th*orshavn*, 1935-36, and also during LCE 1936-37.

Andersen, Søren. b. 1856, Veierland, in Tønsbergfjorden, Norway. First mate on the *Jason*, 1892-94, in Antarctic waters under the command of Carl Anton Larsen. In 1894 he harpooned a right whale at South Georgia, and in 1905-06 he was captain of the *Admiralen*. In 1911-12 he was skippering the whale catcher *Havfruen*, sometimes in the South Orkneys, when, on Dec. 3, 1911 she was sunk by ice in the South Sandwich Islands. He died in 1935.

Andersen, Thorvald. b. Feb. 12, 1866, Tjølling, Norway. In 1885 he married Arnalie, and they had several children in Tjølling. In 1908 he was gunner on the whale catcher *Hauken*, in Antarctic waters. Gunner and captain of the *Solstreif* from 1910 onwards, he killed an average of 264 whales per season, over 12 consecutive seasons, and once killed 8 blue whales in one day. He would make a reputed £5000 in a single season, when the basic wage of a gunner in 1915 (say) was £12 a month. In that year bonuses for a gunner were £4 for a blue whale; £2 10s for a fin whale; £1 10s for a humpback; and £10 for a right whale. In the 1920s he skippered the *Darro*, in Argentine waters.

Andersen Creek. 77°37' S, 162°54' E. A meltwater stream, 1500 m long, flowing SW along the E side of Canada Glacier, into the NE corner of Lake Hoare, in the Taylor Valley of Victoria Land. Named by US-ACAN in 1996, for Dale T. Andersen, NASA limnologist who established the camp at the base of the stream in 1978, and who conducted limnological studies in that area for many years thereafter. He took part in the first scuba diving investigations in lakes of the McMurdo Dry Valleys.

Andersen Escarpment. 85°08' S, 91°37' W. A steep rock and snow escarpment, S of Reed Ridge, on the W side of the Ford Massif, in the Thiel Mountains. Named by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains Party of 1960-61, for Bjørn G. Andersen, Norwegian professor of geology and glaciology at the University of Oslo, who was a member of the expedition, and a very similar one the following summer. US-ACAN accepted the name in 1962.

Andersen Harbor. 64°19' S, 62°56' W. A small bay formed by the concave SW side of Eta Island and the S part of the extreme N end of Omega Island, and which therefore lies between those two features, in the Melchior Islands, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Used frequently by Norwegian whalers in the 2nd and 3rd decades of the 20th century, they almost certainly named it for Captain Ole Andersen of the factory ship *Svend Foyn*. Surveyed by the Discovery Expeditions in 1927, it appears as such on their 1929 chart. It was re-charted in 1941 by USAS 1939-41, and appears on a 1943 U.S. Hydrographic Office chart. It was surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948, and appears on a 1946 Argentine chart as Puerto Andersen, which is what the Argentines still call it. UK-APC accepted the name Andersen Harbour on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. US-ACAN accepted that name (but without the "u") in 1956. It appears in the 1974 Chilean gazetteer as Puerto Andersen.

Andersen Island. 67°26' S, 63°22' E. A small island, just over 6 km W of Thorgaut Island, in the W part of the Robinson Group, off Mac. Robertson Land. Charted by BANZARE in Feb. 1931, and at about the same time by personnel from the whale catcher *Falk* (working for the factory ship *Thorgaut*). Named Lars Andersen Island, for Capt. Lars Andersen. US-ACAN accepted the shortened name in 1965.

Andersensåta. 70°57' S, 11°29' E. A mountain in the W part of Lingetoppane, S of the Schirmacher Hills, in the NE part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Sverre K. Andersen (b. 1914, Haugesund), Norwegian Resistance fighter during World War II.

Andersnuten *see* **Anders Peak**

Cabo Anderson *see* **Cape Anderson**

Cape Anderson. 60°46' S, 44°35' W. Marks the E side of the entrance to Mill Cove, on the S coast of Laurie Island, in the South Orkneys. Charted in 1903 by ScotNAE 1902-04, and named by Bruce for his Edinburgh secretary, Miss Nan Anderson. It appears as such on Bruce's chart of that year, but he also refers to it as Cape Nan Anderson. In 1930 it appears on a British chart as Anderson Point, and on an Argentine chart as Punta Anderson. It was later resurveyed by the Discovery Investigations in 1933, and appears on their chart of 1934. It appears on a 1947 Argentine map as Cabo Anderson, and that is what the Argentines still call it. US-ACAN accepted the name Cape Anderson in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955.

Glaciar Anderson *see* **Anderson Glacier**

Mount Anderson. 78°09' S, 86°13' W. Rising to 4255 m, 3 km S of Mount Bentley, in the main ridge of the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, under Charlie Bentley, and named by US-ACAN in 1960, for Vernon Hugo "Vern" Anderson (b. July 19, 1927, Chicago. d. Nov. 29, 1999, Sierra Vista, Ariz.), glaciologist at Byrd Station, 1957, and a member of the traverse party.

Punta Anderson *see* **Cape Anderson**

Anderson, A.S. *see* **Anderssen, Anton S.**

Anderson, Charles Franklin. b. May 1874, Va. He joined the government service, moved to Washington, DC, and in 1894 married Theresa. He was the stamp canceler of the U.S. Post Office Department, and in Nov. 1934 he left Washington, alerted to the miserable job Leroy Clark was doing with canceling letters at Little America. Going by train to San Francisco, he caught the *Monterey* to Hawaii, and then on to Auckland, NZ. On Jan. 2, 1935, he boarded the *Bear of Oakland* as she steamed out of Dunedin, bound for Little America, during the 2nd half of ByrdAE 1933-35. He spent 16 days correcting Clark's work. He died on July 22, 1944, in Washington, DC.

Anderson, Enoch. On Nov. 18, 1913, he signed on to the *Aurora*, as a fireman, at £5 per month, for the 3rd and last part of AAE 1911-14. Les Quartermain says he was said to be a New Zealander (but this seems unlikely), and the *Evening Post* of July 12, 1912, mentions "Mr Anderson" as one of the expedition members, which more than indicates that he joined the *Aurora* before the accepted date of Nov. 18, 1913.

Anderson, Ernst W. *see* **Andersson**

Anderson, George H. *see* **Anderson Heights**

Anderson, Henry. b. 1875, Dundee. Able seaman on the *Scotia*, during ScotNAE 1902-04.

He lived at 4 Parkers Court, a tenement block in Dundee.

Anderson, James Hugh "Hughie." b. Jan. 6, 1929, Stanley, Falkland Islands, son of laborer James Albert Anderson and his wife Sarah Mary Goss. In 1946 he joined FIDS, as a handyman, and wintered-over at Signy Island Station in 1947. On Oct. 8, 1953, in Stanley, he married Alva Ynonne (sic) Jennings. He went whaling in the 1940s and 1950s, working, for example, at Leith Harbor, in South Georgia, as a laborer for Salvesen's, and being employed on various FIDS vessels as well. He continued as a merchant seaman, and worked on RFA vessels. On Feb. 1, 1960, he, his wife, and their daughter Claudette, arrived in London on the *A.E.S.*, from Port Stanley, and moved to Dunmow, Essex. Hughie died in Southampton, in 1986.

Anderson, John. b. Newfoundland. Skipper of the Canadian sealer *Baden Powell*, in the South Shetlands and South Orkneys in 1905-06, and again in 1907-08. The ship went down off the Falkland Islands that last season.

Anderson, Robert. b. 1742, Inverness. Sailed with Cook on his first voyage, on the *Endeavour*, then Cook recommended him for gunner on the *Resolution* during his voyage of 1772-75. He was with Cook yet again on the 3rd voyage, in the *Resolution*. Notoriously free-spirited, his life after Cook remains a mystery.

Anderson, Ross McKenzie. b. March 15, 1938. Glaciologist, just graduated from Melbourne University when he wintered-over at Casey Station in 1969. He was responsible for the deep-drilling project on the ice dome east of the station.

Anderson, William. b. Dec. 28, 1750, North Berwick, Scotland, son of schoolmaster Robert Anderson and his wife Jean Melvil. After studying medicine at Edinburgh for 2 years, he joined the Navy and qualified as a surgeon's mate in 1768, in 1770 becoming surgeon on the *Barfleur*, which is where he was when he transferred, on Dec. 12, 1771, to the *Resolution* for Cook's 2nd voyage, as surgeon's mate. He was surgeon and naturalist on the *Resolution* during Cook's 3rd voyage, and died on Aug. 3, 1778, of tuberculosis, off the coast of Alaska. "A sensible young man, an agreeable companion," said Cook.

Anderson, William Ellery MacMahon. That is how he was born. No matter what arrangement of names one may see in later years, he was known as "Soldier Bill." b. June 30, 1919, Headington, Oxfordshire, son of Geoffrey B. Anderson and his wife Cassandra M. Saurin. Highly decorated Royal Artillery captain and SAS major, who fought in World War II, and subsequently served on the War Crimes Commission in Germany. He was in the Royal Ulster Rifles in Korea (Slim Willis was his batman), and he later (1960) wrote a book about it, *Banner over Pusan*. In late 1954, after retiring from the army, he joined FIDS, and wintered-over at Hope Bay as base leader and meteorologist. He was one of the best FIDS leaders, and it was a happy base that year. In 1956 he wrote *Expedition South,* and spent part of that year aiding Hungarian refugees. He was later a mountaineer (a mountain climber, as the Americans tend to call it) and prison governor (warden, as the Americans definitely call it). He died in Dec. 1992, in London.

Anderson Dome. 73°30' S, 93°54' W. A prominent ice-covered dome mountain, rising to 1475 m., on the E side of Gopher Glacier, just over 6 km E of the lookalike Bonnabeau Dome, in the Jones Mountains. Mapped by the University of Minnesota-Jones Mountain Party 1960-61, and named by them for Joe M. Anderson, USGS topographic engineer with the party. US-ACAN accepted the name in 1963.

Anderson Glacier. 66°24' S, 63°55' W. A heavily crevassed glacier, 19 km long, flowing ESE into the W coast of Cabinet Inlet between Cape Casey and Balder Point, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially by RARE in Dec. 1947, and at the same time surveyed from the ground by Fids from Base D, and plotted by them in 66°22' S, 64°06' W. Named by UK-APC on May 23, 1951, for Sir John Anderson (1882-1958; later 1st Viscount Waverley), member of the World War II British Cabinet that authorized Operation Tabarin, 1943-45. US-ACAN accepted the name in 1952. It appears on a British chart of 1954, and in the British gazetteer of 1955. It was later re-plotted. It appears on an Argentine chart of 1957, as Glaciar Anderson, and that is what the Argentines still call it. The Chileans also call it Glaciar Anderson, but, in 1974 they discontinued the name, only to reactivate it in July 1986.

Anderson Heights. 84°49' S, 178°15' W. A roughly rectangular snow-covered tableland, 11 km long by 10 km wide, and rising to over 2400 m, between Mount Bennett and Mount Butters, in the E part of the Bush Mountains. Discovered and photographed aerially by OpHJ 1946-47. Named by US-ACAN in 1962, for Lt. George H. Anderson, USN, of Holly Springs, Miss., the second man to pilot a plane over the Pole, on Feb. 15-16, 1947 (i.e., on one of the two aforementioned photographic flights). He carried Byrd and crew on Flight 8 (*see* **South Pole**). His article "I Flew Byrd to the Pole" came out in the July 1947 issue of *Flying*. NZ-APC accepted the name on June 28, 1962.

Anderson Hills. 84°30' S, 64°00' W. An irregular group of hills, ridges, and peaks, between the Mackin Table and the Thomas Hills, in the N part of the Patuxent Range, in the Pensacola Mountains. O'Connell Nunatak is its highest point, at 1210 m. Following USN air reconnaissance of the area in 1957-58, Finn Ronne suggested the name Anderson Mountains, for Robert Bernard Anderson (1910-1989), U.S. Deputy Secretary of Defense, 1954-55, who had responsibility for U.S. operations in Antarctica during IGY, and it was so named by US-ACAN. It was plotted between 83°and 84°S, and between 56°and 64°W, and appears as such on a 1961 U.S. map. However, USGS re-surveyed the feature in 1961-62, and USN took more air photos in 1964. The mountains were determined to be hills, and they were replotted. US-ACAN accepted the new name of Anderson Hills in 1968, and the feature appears as such on the 1969 USGS sketch map of Ellsworth Land — Palmer Land. UK-APC recognized the new situation on Nov. 3, 1971.

Anderson Icefalls. 71°21' S, 169°00' E. At the lower end of Pitkevich Glacier, terminating in a cliff face 30 m high, just SE of Atkinson Cliffs, along the N coast of Victoria Land. Charted in 1911 by Victor Campbell's Northern Party during BAE 1910-13. Named by the expedition for John Anderson and Sons, engineers who owned Lyttelton Foundry, and supporters of that expedition. US-ACAN accepted the name in 1949, and it appears in the 1958 NZ provisional gazetteer.

Anderson Knoll. 77°54' S, 163°26' E. The southernmost nunatak in Granite Knolls, 1.5 km S of the main massif, and marginal to Blue Glacier, in Victoria Land. Named by US-ACAN for Klaus Gote Anderson (b. Dec. 21, 1922. d. March 8, 1991, Denver, Colo.), civil engineering technician with USGS, 1960-90, and a member of the USGS field team which established geodetic control in the Hudson Mountains, the Jones Mountains, and in the Thurston Island and Farwell Island areas of the Walgreen Coast and Eights Coast in 1968-69.

Anderson Lake. 68°36' S, 78°10' E. About 2.3 km SW of Ellis Rapids, in the S part of the Vestfold Hills. Named by ANCA on Nov. 27, 1973, for Keith R. Anderson, electronics technician at Davis Station in 1971.

Anderson Massif. 79°10' S, 84°45' W. A prominent, ice-covered massif, about 16 km across and rising to 2190 m, at the junction of Splettstoesser Glacier and Minnesota Glacier, in the Heritage Range, in the Ellsworth Mountains. Named by US-ACAN in 1964, for John Jerome Anderson (b. Oct. 10, 1930, Port Arthur, Tex.), geologist, field leader of the University of Minnesota Ellsworth Mountains Party 1961-62.

Anderson Mountains *see* **Anderson Hills**

Anderson Nunataks. 75°06' S, 68°18' W. Also called Shimizu Nunatak. A group of nunataks, rising to 1635 m, and forming the NE end of the Sweeney Mountains, in Ellsworth Land. Discovered and photographed aerially by RARE 1947-48, and mapped by USGS from their own 1961-62 ground surveys, from surveys by the University of Wisconsin, 1965-66, and from USN air photos taken between 1961 and 1967. Named by US-ACAN for Richard E. Anderson, USN, aviation electronics technician on R4D flights in Antarctica in 1961, including a Nov. 4, 1961 reconnaissance flight from Byrd Station to the Eights Coast. As such, this feature appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Anderson Peninsula. 69°48' S, 160°13' E. A low, ice-covered peninsula, 11 km long, terminating in Belousov Point, between the Gillett Ice Shelf and Suvorov Glacier, on the coastal margin of the Wilson Hills. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Lt. (later Capt.) Richard Ernest An-

derson, USN, of the Civil Engineering Corps, base public works officer at McMurdo during OpDF 1 (i.e., 1955-56) and OpDF II (i.e., 1956-57), wintering-over there in 1957.

Anderson Point *see* **Cape Anderson**

Anderson Pyramid. 70°46' S, 159°56' E. A distinctive, ice-free, pyramidal peak, the most southerly of the Bigler Nunataks, about 7 km SE of the Pomerantz Tableland, in the Usarp Mountains. Plotted from air photos taken by USN in 1960-62, and named by US-ACAN in 1964, for Staff Sgt. Robert J. Anderson, U.S. Army, in charge of the enlisted detachment of the helicopter group supporting USGS's Topo East-West survey, which surveyed this feature in 1962-63. ANCA accepted the name on June 9, 1964, and NZ-APC followed suit on July 16, 1964.

Anderson Ridge. 85°47' S, 155°24' W. A ridge, 3 km long, rising above the middle of the head of Koerwitz Glacier in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Arthur J. Anderson, of the U.S. Weather Bureau, meteorologist who wintered-over at Pole Station in 1960. NZ-APC accepted the name on June 29, 1967.

Anderson Scarp. 77°33' S, 161°21' E. An acclivity and cliff, rising to 935 m, 1.3 km W of Hall Bluff, on The Dais, in Wright Valley, in the McMurdo Dry Valleys of Victoria Land. Named by US-ACAN on July 14, 2004, for Kent Anderson, of the USGS Albuquerque Seismological Laboratory from 1992, who played a key role in the installation of the VNDA seismograph station at Bull Pass, near Lake Vanda, in the early 1990s. NZ-APC accepted the name on Nov. 30, 2004.

Anderson Summit. 85°03' S, 90°53' W. A summit, snow-covered except for bare rock at the top, it is the highest mountain in the Thiel Mountains, rising to 2810 m (13,957 feet) on top of the Ford Massif, directly SE of Walker Ridge. The name was proposed by Peter Bermel and Art Ford of the USGS Thiel Mountains Party of 1960-61, for chief geologist of the USGS, Charles Alfred "Andy" Anderson (1902-1990). Ford climbed it in 1961. US-ACAN accepted the name in 1962.

Anderssen, Anton Severin. b. 1877, Norway. A whaler, he was in and out of South Georgia for years. In 1915, while he was skipper there of the *Fridtjof Nansen II*, his wife Agnes was living at the Stromness factory, when they had their child on Jan. 26, 1915. In 1926-27 he was skipper of the tanker *Thorøy*, when he was chosen to be navigator of the *Odd I*, 1926-27, which, among other things, called in at Peter I Island on Jan. 17, 1927.

Anderssenbukta. 68°47' S, 90°41' W. A bay, N of the front of Nils Larsenbreen, on the N part of the W coast of Peter I Island. Named by the Norwegians for Anton Severin Anderssen.

Islas Andersson *see* **Islas Águila**

Nunatak Andersson *see* **Andersson Nunatak**

Andersson, Axel. b. 1876, Sweden. Principal cook on SwedAE 1901-04.

Andersson, Ernst W. *see* **Órcadas Station**, 1911, 1913, 1915

Andersson, Johan Gunnar. b. July 3, 1874, Knista, Sweden. Geologist and archeologist. After two expeditions to the Arctic, he was 2nd-in-command of SwedAE 1901-04. In 1906 he was appointed professor of economic geography at Uppsala University, and 3 years later head of the Swedish Geological Institute, later spending a decade as geological adviser to the Chinese Government. In 1921 he discovered the remains of an ancient Mongolian tribe, and this find led to Peking Man. Dr. Andersson died on Oct. 29, 1960, in Stockholm.

Andersson, Karl Andreas. b. Feb. 24, 1875, Stenkyrka, Bohuslän, Sweden. Zoologist on SwedAE 1901-04. He got his PhD at Stockholm with a dissertation on Pterobranchia from the expedition. He later worked in fisheries, and wrote a two-volume book on the subject. He was a member of the Swedish parliament from 1913 to 1933, and from 1933 to 1934 was president of the Swedish Liberal party. He died on Oct. 8, 1968.

Andersson Island. 63°35' S, 56°35' W. An island, 11 km long in an E-W direction, and just over 6 km wide in a N-S direction, it lies almost 1 km S of Jonassen Island, at the W side of the S entrance to Antarctic Sound, directly off the E end of Tabarin Peninsula, and separated from it by Fridtjof Sound, on Trinity Peninsula, off the NE tip of the Antarctic Peninsula. On Feb. 27, 1838, FrAE 1837-40 charted it from a distance, and, collectively with Jonassen Island, named it Île Rosamel, and as such it appears on a French map of 1847 (these two islands were to be seen mapped together again, much later, on M.C. Lester's map of 1922, on which he calls the joint feature both Rosamel Island and Christmas Island—*see* **Rosamel Island** and **Casy Island**). Mapped again, in 1902, by SwedAE 1901-04, and named in 1904 by Nordenskjöld as Île de l'Uruguay, for the *Uruguay*. The Argentines subsequently called it Isla Uruguay. In 1904 Charcot, during FrAE 1903-05, named another island Uruguay Island, off the W coast of the Antarctic Peninsula, apparently unaware of Nordenskjöld's naming of this one. In 1908 it (i.e., Nordenskjöld's island) appears on an Argentine map as Isla Argentina; in 1921 it is seen on a British map as Uruguay Island; but, following a survey by Fids from Base D in 1945-47, it was renamed Andersson Island, for Dr J. Gunnar Andersson, in order to avoid the confusion between two islands with the same name. It was decided that, even though Nordenskjöld's naming had come first, Charcot's island should retain the name because it was better known. It appears on a 1949 British chart as such, and UK-APC accepted this name on Nov. 21, 1949. US-ACAN followed suit in 1953. It appears as such in the British gazetteer of 1955; on a French map of 1954 as Île Andersson; and on a Chilean chart of 1961 and on one of their 1966 charts, both times as Isla Andersson. It appears in the 1974 Chilean gazetteer as Isla Andersson. The most prominent feature on the island is Monte Argento (what the Chileans call Monte Franzetti).

Andersson Nunatak. 63°22' S, 57°00' W. Rising to 185 m above the coastal ice cliffs on the NW shore of Hope Bay, 1.5 km W of Sheppard Point, Trinity Peninsula, at the NE end of the Antarctic Peninsula. Discovered in 1903 by Gunnar Andersson, during SwedAE 1901-04, and named for him in 1945 by Andrew Taylor, following a FIDS survey by David James, of Base D. UK-APC accepted the name on Nov. 21, 1949, and it appears as such in the British gazetteer of 1955, and on a British chart of 1956. US-ACAN accepted the name in 1952. The Argentines call it Nunatak Andersson.

Andersson Peak. 64°52' S, 61°02' W. An ice-capped peak with rocky exposures on its E side, it rises to 1230 m (the British say about 1600 m), 14.5 km N of Mount Fairweather, on the Nordenskjöld Coast, on the E coast of Graham Land. Charted by Fids from Base D in 1947, and named by UK-APC on Jan. 22, 1951 for Karl Andreas Andersson (q.v.), who explored the Nordenskjöld Coast in 1902. US-ACAN accepted the name in 1952, and it appears as such in the British gazetteer of 1955.

Andersson Ridge. 74°43' S, 162°37' E. Just over 6 km long, it forms the N wall of Reeves Glacier, between the mouths of Anderton Glacier and Carnein Glacier, behind Terra Nova Bay, in the southern Eisenhower Range, in northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Lars E. Andersson, Swedish cosmic radiation scientist with the Bartol Research Foundation, who wintered-over at Pole Station in 1966.

Anderton Glacier. 74°41' S, 162°22' E. A tributary glacier, 11 km long, flowing down the S slopes of the Eisenhower Range to enter Reeves Glacier between Mount Matz and Andersson Ridge, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Peter Wightman Anderton, glaciologist at McMurdo, 1965-66.

Mount Andes. 85°53' S, 146°46' W. Rising to 2525 m in the SE part of the Tapley Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Cdr. (later Capt.) Paul Gowdy Andes (b. 1930), USN, pilot at McMurdo, 1962-63 and 1963-64.

Caleta Andonaegui *see* **Oviedo Cove**

Andøya *see* **Oldham Island**

Cabo Andrada *see* **Eddy Point**, **Rip Point**

Cap André Prud'homme. 66°41' S, 139°55' E. A cape at the back of Cape Pierre Lejay, in the Géologie Archipelago, it is one of the rare places where not only disembarkation is possible, but that also gives access to the continental glacial plateau, at the foot of which this feature lies. Named by the French, for André Prud'homme. Cap Prud'homme Sub Base was built here by the French in 1993.

The *Andrea*. A 2620-ton, 287-foot ice-strengthened ship, built at Trondheim, Norway, in 1960, as the *Harald Jarl*. After working the Norwegian coast for 42 years as a supply ship, she was sold in 2002 to Elegant Cruises (of New York), registered in Liberia, and refitted in Sweden as the small, elegant, black and white luxury cruise ship *Andrea*. She was in Antarctic waters in 2003-04, and every season from then until 2008-09. She could carry 105 passengers. Each summer she cruised the Adriatic.

Andreaea Plateau. 60°41' S, 45°37' W. A small plateau, with an average elevation of 180 m above sea level, SW of Robin Peak, on Signy Island, in the South Orkneys. The largest Antarctic stand of the black-brown moss Andreaea is to be found here, hence the name given by UK-APC on May 13, 1991. US-ACAN accepted the name, and it appears in the 1993 British gazetteer.

Cabo Andreas *see* **Cape Andreas**

Cape Andreas. 64°00' S, 60°43' W. The very end of a point which projects 1.5 km to the NW, it is completely ice-covered, its coast is high and formed by ice cliffs, and it marks the E side of the entrance to Curtiss Bay, 45 km SW of Cape Kater, on the Davis Coast, on the W coast of Graham Land. Discovered and charted in Nov.-Dec. 1902 by SwedAE 1901-04, and named Cape Karl Andreas by Nordenskjöld for Karl Andreas Andersson (*see* **Andersson Peak**). It appears as Cabo Karl Andreas on a Chilean map of 1947, as well as on an Argentine map of 1949, and that was the name accepted by the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Cape Andreas on Sept. 23, 1960, and US-ACAN followed suit that year. It appears as such on a British chart of 1961. The Argentines, in 1957, considered naming it either Punta Beatriz or Punta Almirante Solier, but, instead, settled on the name Cabo Andreas.

Punta Andreassen *see* **Andreassen Point**

Andreassen, Frantz Leonard "F.L." b. Nov. 12, 1858, Sundene Søndre, in Tjøme, Vestfold, Norway, and baptized in Nøtterøy on Jan. 23, 1859, son of Andreas Johannessen and his wife Berte Marie Olsdatter. He went to sea and worked his way up through the mate ranks. On Feb. 10, 1882, in the church at Nøtterøy, he married Johanne Henriette Andersen. He was first mate on the *Antarctic* during SwedAE 1901-04. His wife died in Nøtterøy in 1908, and F.L. died in a hospital in Buenos Aires, in 1920.

Andreassen Point. 63°54' S, 57°46' W. A low, ice-free point fronting on Herbert Sound, and forming the W entrance point of Croft Bay, in the extreme NNE part of James Ross Island, 13 km S of Cape Lachman, on the NE coast of the Antarctic Peninsula. Probably first seen in Oct. 1903 by SwedAE 1901-04, it was surveyed by Vic Russell, of FIDS Base D, in Nov. 1945, and named by him for F.L. Andreassen. UK-APC accepted the name on Sept. 4, 1957, and it appears as such in the British gazetteer of 1958. US-ACAN accepted the name in 1963. The Argentines call it Punta Andreassen.

Isla Andrée *see* **Andrée Island**

Andrée Island. 64°31' S, 61°31' W. In Recess Cove, Charlotte Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Portal Point between 1956 and 1959, and named by UK-APC on Sept. 23, 1960, for Salomon Auguste Andrée (1854-1897), Swedish engineer who died on Svalbard while trying to fly over the North Pole in a balloon. It appears as such on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Isla Andrée.

Mys Andreeva *see* **Cape Andreyev**

Nunataki Andreeva. 74°31' S, 7°32' W. A group of nunataks, E of Sembberget, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Russians.

Pik Andreeva *see* **Mount Andreyev**

Andreevfjellet *see* **Mount Andreyev**

Andrefallet. 72°00' S, 2°26' E. The second icefall (that's what it means in Norwegian) encountered on the trail out of Troll Station, in the N part of the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Norwegians on Oct. 12, 2007. cf **Førstefallet**.

Punta Andrés *see* **Andrews Point**

Île Andresen *see* **Andresen Island**

Isla Andresen *see* **Andresen Island**

Andresen, Adolf Amandus. First name also seen as Adolfus. b. Sept. 13, 1872, Søndre Ruklegade, Sandefjord, Norway, son of shipmaster Mathias Andresen and his wife Helle Andreasdatter. A whaling captain, he moved, in 1894, from Norway to Punta Arenas, Chile, where in 1900 he married Wilhelmine "Mina" Schrøders (b. Oct. 1867, Spornitz, Germany). In 1903, with the aid of Chilean money, he began whaling in South America, and on Nov. 25, 1903, near Cape Horn, he shot the first humpback whale in the Southern Hemisphere using modern methods. He built a factory at Bahía Águila, in the Straits of Magellan, and in 1905 founded the Sociedad Ballenera de Magallanes (Magellan Whaling Company), based out of Punta Arenas. In the summer of 1906-07 he anchored his factory whaling ship *Gobernador Bories* and 2 whale catchers (the *Almirante Valenzuela* and the *Almirante Uribe*) in the sheltered anchorage of Whalers Bay, Deception Island, in the South Shetlands, thus becoming the first whaler to establish a station in actual Antarctic waters, and, of course, the first to use the natural harbor at Deception Island as a whaling base. He was also the first man to plant the Chilean flag in Antarctica. From 1906 he and his family all lived at Deception Island for the summer seasons. In 1908-09 he gave 30 tons of coal for FrAE 1908-10, which, according to Charcot, made the difference between success and failure for his expedition. He left Antarctic waters in 1911, the Sociedad was re-structured, and Andresen went off in his own whaling business off the coast of Chile. In 1913 he bought the *Sobraon* from the Odd Company, changed her name to *Orion*, and used her as his whaling factory until 1915. He spent the rest of his life in Punta Arenas, in extreme poverty, and finally got cancer, passing his last days as a guest at the house of Delfina Andrade, who looked after him until he had to go to hospital. Ironically, here he heard news that a certain Maria "Betsy" Rasmussen had died in Oslo, leaving him a considerable amount of money. He died in Punta Arenas Hospital, on Jan. 13, 1940. Note: there has long been debate as to the name of Andresen's wife — Wilhemine Schröders or Marie Betsy Rasmussen. Genealogists and historians in Chile and Germany, to mention only two, have spent close to a century trying to figure this out. This author believes that it was Miss Schröders, based on the fact that Andresen left Hamburg on the *Memphis*, on Aug. 10, 1902, bound for Punta Arenas, in company with Wilhelmine Andresen, aged 34. They were obviously traveling as man and wife, and were, probably, man and wife.

Andresen, Hans. Norwegian captain of the *Nielsen-Alonso*, 1928-29, and of the *Kosmos*, 1929-31.

Andresen Island. 66°53' S, 66°40' W. Over 610 m above sea level and over 3 km long, it lies in the middle of the entrance to Lallemand Fjord, on the Loubet Coast, off the W coast of Graham Land. Discovered and charted on Feb. 1, 1909, by FrAE 1908-10, and named by Charcot as Île Andresen, for Adolf Amandus Andresen. It appears as such on Charcot's expedition map of 1910. Originally plotted in 66°59' S, 66°44' W, it appeared on a USAAF chart of 1946 as Andresen Island, and on a Chilean chart of 1947 as Isla Curanilahue (named after the municipality in Chile), although today, the Chileans, as well as the Argentines, call it Isla Andresen, it appearing as such on a 1953 Argentine map, and in the 1974 Chilean gazetteer. It appears as Andresen Island on a British chart of 1948. US-ACAN accepted that name in 1950, and UK-APC followed suit on Oct. 5, 1955, but with the coordinates 66°56' S, 66°36' W. It was re-surveyed by Fids from Base W in 1957-59.

Punta Andressen. 62°56' S, 60°35' W. The extreme tip of a salient of land bordered on the S by Pendulum Cove, in Deception Island, in the South Shetlands. ChilAE 1954-55 built a lighthouse here, and named this point after Adolf Amandus Andresen. The misspelling has stuck. The Chileans are the only ones who have ever given a name to this feature.

Andressen, Matthias. b. July 7, 1905, Norway. One of the four Hektor Whaling Company employees who died immediately when the whale catcher *Bransfield* capsized in Whalers Bay, Deception Island, in the South Shetlands, on March 11, 1924. He was buried in the Whalers Bay Cemetery.

Andretoppen *see* **Niban Rock**

Andrew, James Darby "Jim." b. on or around Sept. 1, 1919, Kensington, London, son of Dr. John Andrew and his wife Ruby Esther Neale. Medical officer at Base D, the FIDS station at Hope Bay, for the winter of 1946. He temporarily took over leadership of Base B, at Deception Island, for the summer of 1946-47,

bars ("barres") during IGY (1957-59) for the French geomagnetic station.

Terrasse des Belles Pierres. 66°40' S, 140°01' E. A relatively flat rocky area, in the middle of Île Le Mauguen, in the Géologie Archipelago. Named by the French in 1977, for the numerous little erratic blocks here that present a beautiful sight ("belles pierres" means "beautiful stones").

Cap des Crabiers. 66°40' S, 140°01' E. A well-marked, rocky cape, at the S extremity of Île Le Mauguen, in the Géologie Archipelago. Named by the French in 1977, for the frequent crabeater seals here, and also in association with Cap des Phoques-de-Weddell.

Cap des Dan. 66°40' S, 140°01' E. A cape forming the N extremity of Rostand Island, in the Géologie Archipelago. It was here, in 1962, that the *Magga Dan* and the *Thala Dan* moored. Named by the French ("cape of the Dans") in 1977.

Île des Dauphins *see* **Dauphin Island**

Plateau des Djinns. 66°42' S, 139°59' E. A glacial plateau forming the E boundary of Astrolabe Glacier, between Bon-Docteur Nunatak and the head of Baie Pierre Lejay, in the Géologie Archipelago. Named by the French for the Djinn helicopters, and specifically for the forced landing here in Jan. 1959, just before a huge storm broke. The name has been discontinued.

Cap des Éléphants. 66°40' S, 140°00' E. A vast, relatively flat, area of pebbles, bounded to the W by several small rocky headlands, and forming a cape at the extreme SW of Pétrel Island, in the Géologie Archipelago. So named by the French in 1958, because the feature is one often chosen by sea elephants to bask on.

Pointe des Embruns. 66°39' S, 140°01' E. A rocky point at the extreme NE of Cuvier Island, in the Géologie Archipelago. So named by the French in 1977 because this part of the island is frequently drenched by sea spray (embruns) owing to the fact that it fronts the open sea.

Baie des Empereurs. 66°40' S, 140°01' E. Between Carrel Island, Rostand Island, and Bon-Docteur Nunatak, in the Géologie Archipelago. Named by the French in 1977, for the large colony of emperor penguins on the sea ice here. The name is no longer used.

Cap des Entailles. 66°40' S, 140°02' E. A cape on Bernard Island, in the Géologie Archipelago. Named by the French on Feb. 16, 2010. The word "entaille" signifies a notch cut in a cliff, or such.

Baie des Épaves. 66°40' S, 140°01' E. A small bay indenting the NE coast of Pétrel Island, in the Géologie Archipelago. So named by the French because this was the place where the two hydrographic boats, *Evelyne* and *Christiane*, were wrecked in the big storm of 1961-62 ("épave" means "wreck').

Baie des Flandres *see* **Flandres Bay**

Mont des Géants. 66°40' S, 140°01' E. A rocky massif in the central part of Pétrel Island, in the Géologie Archieplago. So named by the French in 1977 ("giants mountain"), because it is the last refuge of the island's giant petrels.

Baie des Gémeaux. 66°40' S, 140°01' E. A bay between Lion Island, Pétrel Island, the Buffon Islands, and Bernard Island, at the SE end of the Géologie Archipelago. Named by the French in 1977, in association with Îlot Castor and Îlot Pollux ("gémeaux" means "twins"), islets to be found in this bay.

Rocher des Glaciologues. 66°41' S, 139°55' E. A rocky massif surmounting the coastal ice cliff toward the NW extremity of Cap André Prud'homme, at the back of Baie Pierre Lejay, in the Géologie Archipelago. Used by French glaciologists since 1964, hence the name given by the French in 1977. It is a term no longer used.

Baie des Glaçons. 66°40' S, 140°01' E. A bay on the E coast of Lion Island, in the Géologie Archipelago. Named by the French for the abundance of floating ice that penetrates this bay.

Île des Hydrographes. 66°40' S, 140°00' E. An island to the W of Île Le Mauguen, in the Géologie Archipelago. Named by the French in 1977, for the hydrographers who have worked here.

Cap des Léopards. 66°40' S, 140°01' E. A cape at the extreme NE of Pétrel Island, in the Géologie Archipelago. So named by the French in 1977 because this was a spot preferred by leopard seals at the time of the great emperor penguin migrations.

Passage des Martyrs. 66°40' S, 140°01' E. An arm of the sea between Carrel Island and Rostand Island, in the Géologie Archipelago. It was originally named Vallée des Martyrs, by the French in 1952, under Marret, for the great number of emperor penguin chicks swept in here by storms from the SW, only to die. The term "valley' was considered topographically inappropriate, and so the name was changed in 1977.

Vallée des Martyrs *see* **Passage des Martyrs** (above)

Colline des Mégalestris *see* **Megalestris Hill**

Île des Mirages *see* **Mirage Island**

Chenal des Orques. 66°40' S, 140°02' E. A channel between Astrolabe Glacier Tongue to the E and (to the W) Rostand Island, Lamarck Island, and Bernard Island, in the Géologie Archipelago. So named by the French in 1977, for the killer whales here (*Orcinus orca*). The term is no longer used.

Cap des Phoques-de-Weddell. 66°40' S, 140°01' E. An ice cape at the extreme SE of Carrel Island, in the Géologie Archipelago. It is a favorite place for Weddell seals because they have easy access to it from the sea, hence the name given by the French in 1977 (the word "phoque" means "seal"). The term is no longer in use.

Baie des Tempêtes. 66°40' S, 139°57' E. A bay, largely open toward the E, on the NE coast of Gouverneur Island, in the Géologie Archipelago. Named by the French in 1977 for the frequent tempêtes (tempests) in the sea here.

Anses des Tourbillons. 66°40' S, 139°57' E. A double bay, divided by a rocky tongue, in the N part of Gouverneur Island, in the Géologie Archipelago. Named by the French in 1977, for the often turbulent state of the sea at this point.

Ensenada Desamparo. 63°18' S, 57°46' W. An inlet indenting the N coast of Trinity Peninsula. Named by the Argentines.

Île Descartes *see* **Descartes Island**

Descartes Island. 66°47' S, 141°29' E. A rocky island, about 160 m long, midway between Lagrange Island and La Conchée, 1.4 km NNE of Cape Mousse. Charted by the French in 1951, and named by them as Île Descartes, for the philosopher René Descartes (1596-1650). US-ACAN accepted the name Descartes Island in 1962.

Descent Cliff. 77°43' S, 166°53' E. On the W side of Hut Point Peninsula, between Hutton Cliffs and the Erebus Glacier Tongue, on Ross Island. Charted by BAE 1910-13, and so named by them because they descended from here to the sea ice. US-ACAN accepted the name in 1964, and NZ-APC followed suit.

Descent Glacier. 77°51' S, 162°52' E. A short, steep glacier between Briggs Hill and Condit Glacier, flowing NW from Descent Pass into Ferrar Glacier, in Victoria Land. Named for the same reason as Descent Pass (q.v.), but, apparently, not until BAE 1910-13. US-ACAN accepted the name in 1962.

Descent Pass. 77°52' S, 163°05' E. A very steep pass, 5 km long, and about 0.8 km wide, leading from Blue Glacier to Ferrar Glacier, in Victoria Land. So named by Armitage on Dec. 16, 1902, because of his party's wild descent through here that day, via Descent Glacier, to the Ferrar during BNAE 1901-04. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Deschampsia Point. 60°41' S, 45°38' W. Also called Grass Point. On the NW side of Signy Island, 500 m NE of Spindrift Rocks, in the South Orkneys. Following BAS ecological research here, it was named by UK-APC on May 13, 1991, for the Antarctic hair grass (*see* **Grass**). US-ACAN accepted the name.

Sommet Deschanel *see* **Deschanel Peak**

Deschanel Mount *see* **Deschanel Peak**

Deschanel Peak. 68°55' S, 67°14' W. The summit of an isolated, partly ice-covered mountain rising to 750 m from the S part of the glacier on Rasmussen Peninsula, close SE of Cape Berteaux, on the Fallières Coast, on the W coast of Graham Land. In Jan. 1909, FrAE 1908-10 sketched it, plotted it in 69°05' S, 66°50' W, as an island completely dominated by a peak, and Charcot named it Sommet Deschanel, for Paul-Eugène-Louis Deschanel (1855-1922), member of the Académie Française (since 1899), and who replaced Clemenceau as president of France in 1920 (Deschanel became deranged later that year and was dismissed). It appears on a 1914 British chart as Deschanel Mount. Wilkins, on his 1929 map, called it Deschanel Peak. It was photographed aerially in 1936 by BGLE 1934-37, and surveyed from

in between the time John Featherstone left and John Huckle arrived. On his return he stopped off in Jamaica with Alan Reece, and finally returned to London on the *Ariguani*, on Aug. 4, 1947. In 1955 he married Joan Bush, and they lived for years in Reigate, where he died on June 8, 2006.

Andrew Glacier. 66°53' S, 59°40' W. A glacier, 5 km long, flowing NNE into Charcot Bay immediately W of Webster Peaks, on the Davis Coast, on the W coast of Graham Land. Charted by Fids from Base D in 1948, who named it for Dr. Jimmy Andrew. The name was accepted by UK-APC on Jan. 28, 1953, and appears as such in the British gazetteer of 1955. US-ACAN accepted later that year.

Monte Andrew Jackson *see* **Mount Jackson**

Mount Andrew Jackson *see* **Mount Jackson**

Andrew Jackson Massifs *see* **Mount Jackson**

Mount Andrews. 85°57' S, 149°41' W. Rising to 2480 m, between Mount Danforth and Mount Gerdel, on the S side of Albanus Glacier, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Ensign (later Lt.) Stanley Joseph Andrews (b. Jan. 11, 1920, Watertown, Conn. d. Oct. 16, 1999, Vinemont, Ala.), USN, who had enlisted in the Navy as an apprentice seaman in 1940, became a pilot, and who flew over here with Lt. George W. Warden (*see* **Mount Warden**) during OpHJ 1946–47. From 1954 to 1959 Lt. Andrews was primary flight instructor at Whiting Field, in Milton, Fla. He retired from the Navy in 1963.

Punta Andrews *see* **Andrews Point**

Andrews, Thomas Whitton. He became a doctor in 1769, and was surgeon on the *Adventure*, 1772-75, during Cook's second voyage. He became quite proficient in Tahitian, and acted as Omai's interpreter both during the cruise and after the *Adventure* returned to London in 1774. He served on several ships until 1790, when he became a country surgeon in Brompton, Kent, dying there in 1813.

Andrews Creek. 77°37' S, 163°03' E. A glacial meltwater stream flowing S along the E edge of Canada Glacier, into the W end of Lake Fryxell, in the Taylor Valley, in Victoria Land. The name was suggested by Diane McKnight (*see* **McKnight Creek**), for USGS hydrologist Edmund Andrews, a member of the field team who studied glacier hydrology here in 1987-88 and 1991-92. US-ACAN accepted the name in 1992.

Andrews Peak. 72°17' S, 165°25' E. Rising to 2400 m, it is the most prominent peak in the Destination Nunataks, 5 km W of Pyramid Peak, and N of Sphinx Peak, NNW of the Barker Range, in northern Victoria Land. Named by NZ-APC after Dr. Peter Bruce Andrews (b. 1935), geologist on the Victoria University Evans Névé field party in this area, 1971-72. US-ACAN accepted the name.

Andrews Peaks. 77°08' S, 144°03' W. A line of rock peaks, 5 km long, near the head of Arthur Glacier, between Mount Warner and Mount Crow, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Mapped again, by USGS, from ground surveys, and air photos taken by USN between 1959 and 1965. Named by US-ACAN in 1970, for Stephen T. Andrews, ionosphere physicist who wintered-over as scientific leader of Byrd Station, in 1969.

Andrews Point. 64°30' S, 62°55' W. The N point of Parker Peninsula, between Hackapike Bay and Inverleith Harbor (it marks the E side of the entrance to this harbor), on the NE coast of Anvers Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Perhaps seen by Dallmann in 1873-74, it was charted during the Discovery Investigations in 1927, by the *Discovery* personnel and named by them (presumably originally as Andrew's Point), probably for Andrew Nicol Porteous. The name appears as Punta Andrés on a Chilean chart of 1947 and on a 1949 Argentine chart of 1949 (the Argentines still call it that). US-ACAN accepted the name Andrews Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. In 1957 the Chileans changed their naming from Punta Andrés to Punta Andrews, and it appears as such in the 1974 Chilean gazetteer.

Andrews Ridge. 77°39' S, 162°50' E. A gentle ridge, the N arm of Nussbaum Riegel, which trends eastward to the S of Suess Glacier and Lake Chad, in the Taylor Valley of Victoria Land. Named by Grif Taylor during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1972.

Cape Andreyev. 68°55' S, 155°12' E. About 33 km SE of Cape Davydov, it marks the SE limit of the Slava Ice Shelf, in Oates Land, in Victoria Land. Photographed by OpHJ 1946-47 and by SovAE 1956, it was named by the Soviets in 1960 as Mys Andreeva, for Prof. Aleksandr Ignat'evich Andreyev (1887-1959), historical geographer. ANCA accepted the translated name Cape Andreyev, on May 18, 1971, and US-ACAN followed suit in 1973.

Mount Andreyev. 71°46' S, 10°13' E. A mountain rising to 2320 m above sea level, close SW of Mount Dallmann, where it forms part of the SW wall of Brattebotnen Cirque, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GerAE 1938-39. Mapped (but not named, it seems) by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and plotted by them in 71°45' S, 10°15' E. Re-mapped by SovAE 1960-61, and named Pik Andreeva by the Russians in 1963 for A.I. Andreyev (*see* **Cape Andreyev**). They plotted it in 71°46' S, 10°11' E, but it has since been re-plotted. US-ACAN accepted the name Mount Andreyev in 1970. The Norwegians call it Andreevfjellet.

Cape Andriasola *see* **Cape Adriasola**

Hrebet Andrijana Nikolaeva *see* **Nikolayev Range**

ANDRILL. Antarctic Geological Drilling Program. An international collaboration, between the USA, NZ, Italy, and Germany, one of the projects of the International Polar Year of 2007-08. Funded by the NSF, the intention was to drill through the ice to gather information about past climate changes — past periods of global warming and cooling. Based at McMurdo, the first two ANDRILL projects were drilled in 2006-07 and 2007-08. In the latter season they drilled through the ice into McMurdo Sound.

Andro, François-Ferdinand. b. 1808, Haiti. On Dec. 25, 1839, at Hobart, he embarked on the *Zélée* as steward for FrAE 1837-40, and went on that expedition's 2nd trip to Antarctica. He ran in NZ on May 3, 1840. *See also* **Blacks in Antarctica**.

The *Andromeda*. A German yacht, skippered by Joachim Scheid, which visited the South Shetlands and the Antarctic Peninsula in 1993-94.

Mount Andrus. 75°48' S, 132°14' W. A volcano 3 km SE of Mount Boennighausen in the SE extremity of the Ames Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1964 and 1968. Named by US-ACAN in 1966, for Lt. Carl Huber Andrus (b. April 11, 1935, NYC), USN, medical officer who, after becoming a doctor at Rochester, NY, in 1962, wintered-over as officer-in-charge of Byrd Station in 1964. Lichens are found here.

Andrus Point. 73°53' S, 165°48' E. A prominent, rocky, digit-like point that projects eastward into Lady Newnes Bay, toward the floating ice tongue of Parker Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Cdr. Harold Rex Andrus (b. July 20, 1924, Ann Arbor, Mich.), who joined the U.S. Navy in Aug. 1943, and was logistics officer with the staff of the commander, U.S. Naval Support Force, Antarctica, 1962-66. He retired in Sept. 1972. NZ-APC accepted the name on Dec. 4, 1968.

Andrzej Ridge. 62°02' S, 58°13' W. The westernmost ridge in the Rose Peak massif, in the Arctowski Mountains, on King George Island, in the South Shetlands. Named by the Poles in 1981, as Gran Andrzeja, for geologist Andrzej Paulo, of the Polish Academy of Sciences, in Warsaw, here with PolAE 1979-80. It appears as such on Tokarski's chart of 1981. The name has been translated.

Gran Andrzeja *see* **Andrzej Ridge**

Bahía Andvord *see* **Andvord Bay**

Baie Andvord *see* **Andvord Bay**

Andvord Bay. 64°50' S, 62°39' W. Also spelled Andword Bay. A glacier-lined bay, 5 km wide, indenting the Danco Coast for 14 km between Beneden Head and Duthiers Point, on the SW side of Arctowski Peninsula, on the Danco Coast, on the W coast of the Antarctic Peninsula. Discovered and roughly charted between

Feb. 4 and 6, 1898, by BelgAE 1897-99, and named by de Gerlache as Baie Andvord, or Baie d'Andvord, for Rolf Andvord, Belgian consul at Christiania. It appears as Andvord Bay on Frederick Cook's 1900 English language map of that expedition. US-ACAN accepted the name in 1949, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, and was photographed aerially by FIDASE in 1956-57. It appears in the Chilean gazetteer of 1974, as Bahía Andvord.

Andword Bay *see* **Andvord Bay**

Punta Anelio. 62°28' S, 60°46' W. A point, SSE of Copihue Hill, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Anelio Aguayo-Lobo (b. Aug. 21, 1933), veterinarian on ChilAE 1965-66, who flew over this area in a Chilean Navy helicopter, taking part in the first census of marine mammals.

Anemometer Hill. 68°11' S, 67°00' W. Rising to 25 m, NE of Fishtrap Cove, on Stonington Island, Marguerite Bay, off the Fallières Coast of Graham Land. Surveyed by the East Base party of USAS 1939-41, and again in 1960-61 by BAS, when the hill was used as the site for an anemometer. Named by UK-APC on Feb. 12, 1964. US-ACAN accepted the name later that year.

Punta Anfibolita *see* **Amphibolite Point**

The *Angamos*. A 3800-ton, 340-foot Chilean transport ship, built in 1940, in Aalborg, Denmark, and named after the naval battle of Angamos (she was the third Chilean transport with that name). Before she could be delivered to Chile, however, she was captured and used by the Germans during World War II. In 1946 she was finally delivered to her correct address, and was the flagship of ChilAE 1946-47, her 200 men aboard being commanded by Capitán de fragata Gabriel Rojas Parker. The ship carried the Vought Sikorsky seaplane that would be used in the first Chilean flights over Antarctica. Hydrographic officer was Lt. Fernando Ferrer Fougá. Major Raúl Silva Maturana led the Army contingent on board, and Comandante de escuadrilla (i.e., squadron leader) Ernesto Byers del Campo led the Air Force contingent. The representative of the Ministry of Foreign Relations was Óscar Pinochet de la Barra. On March 4, 1947 the *Angamos* visited Port Lockroy Station, but immediately withdrew. On March 7, 1947 she visited Stonington Island, putting a crew ashore the following day, and the day after that the ship left. In that day ashore (it has been reported that) the crew looted the old East Base. She was back in Antarctic waters as part of ChilAE 1950-51 (Captain Raúl Rudolphy Saavedra); ChilAE 1951-52 (Captain Guillermo Carvajal Musso); ChilAE 1956-57 (Captain Hernán Bravo); ChilAE 1957-58 (Captain Jorge Román Pérez); ChilAE 1962-63 (Captain Carlos Chubretovich Alvárez); ChilAE 1963-64 (Captain Adolfo Walbaum Wieber). She was struck from the naval register in 1967.

Cerro Angamos *see* **Angamos Promontory**

Monte Angamos *see* **Jabet Peak**

Promontorio Angamos *see* **Angamos Promontory**

Puerto Angamos. 64°49' S, 63°30' W. A port about 1.2 km N of Port Lockroy, from which it is separated by a peninsula which terminates in the W at Damoy Point, on the W coast of Wiencke Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Discovered by personnel on the *Iquique*, during ChilAE 1946-47, while they were looking for a suitable anchorage for the other expedition ship, the transport *Angamos*, which docked here for the first time on Feb. 4, 1947, making an aerial reconnaissance, a hydrographic survey, and a biological dredging of the bay. Named by the skipper of the *Angamos*, Gabriel Rojas Parker. It appears on a 1962 Chilean chart, and includes Dorian Bay.

Angamos Promontory. 62°28' S, 59°39' W. Rising to about 55 m above sea level, on the E side of the entrance to Discovery Bay, about 700 m SE of Ash Point, and about 350 m N of Cerro Poisson, on Greenwich Island, in the South Shetlands. Surveyed by personnel on the *Iquique*, during ChilAE 1947, and named by them as Promontorio Transporte Angamos, for their other ship, the transport *Angamos*, and plotted by them on their chart of that year in 62°29' S, 59°39' W. By 1951 the name was appearing on Chilean charts in the shortened form of Promontorio Angamos. However, later, they decided to call it Cerro Angamos, in keeping with other hills or promontories in the area that were termed "cerros." UK-APC accepted the translated name Angamos Promontory, on March 31, 2004. The British were the latest to replot this feature, in late 2008.

Lednik Angarskij. 65°55' S, 103°50' E. A glacier flowing to the Knox Coast, in Wilkes Land. Named by the Russians. Note: There are two well-defined glaciers in roughly these coordinates — Tracy Glacier and Glenzer Glacier. Lednik Angarskij is almost certainly the Russian name for one of these. *See also* **Lednik Kiselëva**.

Pik Angelinoj. 80°42' S, 22°40' W. A mountain peak in the Read Mountains of the Shackleton Range. Named by the Russians.

Angels Peak. 82°29' S, 51°12' W. Rising to 982 m above sea level, with buttressing on its W face, at the summit of Forlidas Ridge, where that ridge meets two other, unnamed, ridges, on the Dufek Massif, in the Pensacola Mountains. Named by UK-APC on July 13, 2004, for the Antarctic petrel that was seen circling the sun (so to speak) as a field party approached the summit, and which looked like an angel.

Mount Angier. 83°21' S, 161°00' E. A prominent peak in the Moore Mountains, in the S sector of the Queen Elizabeth Range. Named by NZGSAE 1961-62 for Lt. Cdr. Donald Landes "Don" Angier (b. June 27, 1928. d. Dec. 12, 2005, Ankeny, Ia.). He joined the U.S. Navy in 1951, served on a destroyer during the Korean War, and was in Antarctica as pilot of the reconnaissance, landing, and pick-up flights here (i.e., at Mount Angier) that season (i.e., 1961-62). As a lieutenant, on April 9, 1961, he had been one of the co-pilots of the Hercules that flew in to Byrd Station to evacuate Leonid Kuperov (q.v.). He retired in 1979. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Angino Buttress. 78°14' S, 158°42' E. A prominent buttress-type mountain near the center of the Skelton Icefalls. Plotted from USN air photos, and named by US-ACAN in 1965, for Ernest Edward Angino (b. Feb. 16, 1932, Winstead, Conn.), geologist at the University of Kansas, at Lawrence, who was at McMurdo, 1959-60. NZ-APC accepted the name on Feb. 1, 1965.

Angle Peak. 71°45' S, 62°03' W. A small but dominant peak rising to about 800 m from one of the main spurs on the N side of Condor Peninsula, close S of where Cline Glacier enters Odom Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed by USN in 1966, and surveyed from the ground by BAS in 1972-73. Mapped by USGS in 1974, it was named by US-ACAN in 1976, for J. Phillip "Phil" Angle, Smithsonian ornithologist aboard the *Eastwind* in the Drake Passage, the Weddell Sea, and the waters of the Antarctic Peninsula, in 1966 (*see* the Bibliography, under George E. Watson). Mr. Angle had also been in the Drake Passage in 1965, aboard the *Croatan* (not in Antarctic waters, as such). UK-APC accepted the name on July 21, 1976, and it appears as such on a British map of that year.

[1]**The *Anglo-Norse***. Built as the *Montcalm*, by Palmers Shipbuilding & Iron Co., of Jarrow-on-Tyne, for the African Steamship Company, and launched May 17, 1897. She served in the South African War, as a transport, and in 1903 was sold to the Canadian Pacific Line. She served in World War I, was converted to a tanker, and renamed the *Crenella*. After the war she was sold and re-sold, eventually winding up in Norway as the *Rey Alfonso*, a whaling depot ship. After a few more purchases, she was purchased by the Anglo-Norse Company in 1927, and renamed yet again, as the *Anglo-Norse*, and converted into a whaling factory ship, managed by Hans Borge. In 1927-28 she had a good season whaling pelagically along the ice between the South Shetlands and the South Orkneys, was back there in 1928-29, but in 1929 was sold to the Falkland Whaling Company, and renamed the *Polar Chief*. The Anglo-Norse Company replaced her with a new ship of the same name (see below). In 1929-30 and 1930-31, the *Polar Chief* operated off Bouvet Island and along the ice-edge, and after that never went whaling again, being used for local work in Falklands waters. However, she did work as a tanker, in Antarctic waters, in 1936-37 and 1938-39. She was laid up in 1939, but served in World War II, as a transport, the *Empire Chief*, and in 1946 was bought by Salvesen's South Georgia Company, and her name reverted to *Polar Chief*. She was broken up in Scotland in 1953.

[2]**The *Anglo-Norse***. Formerly the Wilhelmsen steam tanker *Maricopa*, built in 1914, she was bought by Anton von der Lippe's Falkland Shipowners Company, of London, leased to the

Anglo-Norse Company in 1929 to replace their former factory ship of the same name (see above), renamed the *Anglo-Norse*, and registered in Stanley, at 7988 tons. In 1929-30 and 1930-31 she was in Antarctic waters, between the South Sandwich Islands and the South Orkneys, and in 1931 was laid up. In 1936 a stern slip was added, and in 1936-37 she was whaling off the coasts of Australia and Peru, then she reverted to being a tanker. After World War II she continued whaling off Peru and Africa, as the *Janina*, and in 1957 caught fire off Portugal, and was abandoned.

Playa Angosta. 62°27' S, 60°48' W. A narrow beach (hence the name given by scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91), immediately NW of Playa Escondida, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands.

Canal Angosto *see* **The Narrows**

Las Angosturas *see* **The Narrows**
Paso Las Angosturas *see* **The Narrows**
Pointe Angot *see* **Angot Point**
Punta Angot *see* **Angot Point**

Angot Point. 63°48' S, 61°41' W. Marks the extreme S tip of Hoseason Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Charted by FrAE 1903-05, and named by Charcot as Pointe Angot, for Charles-Alfred Angot (1848-1924), French physician, vice president of the Bureau Central Météorologique, in Paris, 1908-14, and a member of the commission appointed by the Ministre de la Marine to publish the scientific results of Charcot's expedition. It appears as such on a French map of 1906, and as Angot Point on British charts of 1908 and 1938. For a while it was confused with Cape Barrow. It appears on an Chilean chart of 1947, as Punta Angot, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines also call it Punta Angot. US-ACAN accepted the name Angot Point in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and was photographed aerially by FIDASE in 1956.

Glaciar Anguita. 62°29' S, 60°46' W. A glacier, S of Half Moon Beach, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for 2nd Lt. Pedro Anguita Izquierdo, helicopter pilot on the *Piloto Pardo*, who participated actively in the scientific work of the Instituto Antártico Chileno, during ChilAE 1965-66.

Mount Angus *see* **Mount Argus**

Angus Nunatak. 85°22' S, 124°14' W. The more northerly of 2 nunataks which lie close N of Mount Brecher, in the Wisconsin Range of the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1960. Named by US-ACAN in 1962, for Gordon W. Angus, ionosphere physicist who wintered-over at Byrd Station in 1961. In 1961-62 he was at Camp Sky-Hi (later called Eights Station).

Cordón Angustia *see* **Louis Philippe Plateau**

Animals *see* **Fauna**

Isla Ánimas *see* **Ánimas Island**

Ánimas Island. 65°25' S, 65°26' W. An island, NNE of Snodgrass Island, in the Pitt Islands, in the Biscoe Islands, off the W coast of the Antarctic Peninsula. Charted by personnel on the *Bahía Aguirre* during ArgAE 1954-55, and named by them as Isla Ánimas, for a sealing ship that plied the coasts of Patagonia and Tierra del Fuego and sub-Antarctic waters in the 19th century. As such the name appears on an Argentine map of 1964. UK-APC accepted the name Ánimas Island on Feb. 3, 2004.

Ann *see* **Ann Island**

[1]**The *Ann*** *see* [1]**The *Anne***

[2]**The *Ann***. A 247-ton Liverpool sealer, owned by seven merchants. On July 27, 1821, Joseph Kitchen was appointed skipper, and she was in the South Shetlands for the 1821-22 season, moored at New Plymouth for the season. She took 1429 fur seal skins and 13 tons of elephant oil, and then, on her way home, visited South Georgia in March 1822. She arrived back in Liverpool in early August 1822.

Cape Ann. 66°10' S, 51°22' E. Also spelled (erroneously) Cape Anne. A projecting cape, at the foot of the Napier Mountains, 6 km N of, and surmounted by, Mount Biscoe, on the coast of Enderby Land. This is probably the cape discovered by Biscoe on March 6, 1831, and named by him probably for his mother, the former Ann Tibbs (baptized on March 23, 1757, in Enfield, daughter of Theophilus and Sarah Tibbs), who married Thomas Biscoe (the explorer's father) on July 5, 1778, in Enfield. John Biscoe described the feature as "a bluff point in the south-east, which has every appearance of a cape." Photographed aerially on Dec. 22, 1929 by Riiser-Larsen's *Norvegia* expedition, and photographed from the *Discovery* on Jan. 14, 1930 by BANZARE. During this latter expedition, Mawson described a point on the coast of Enderby Land, where the rocky peak of Mount Biscoe rises. This may or may not be the same cape that Biscoe saw. US-ACAN accepted the name Cape Ann in 1947, and ANCA followed suit. ANARE air photos taken between 1956 and 1958 showed that there was no appreciable cape in the vicinity of Mount Biscoe, and so the name Cape Ann was applied to the cape 6 km to the north, which may, after all, have been what Mawson was describing.

Islote Ann *see* **Ann Island**

Ann Island. 68°08' S, 67°06' W. A little island SE of Barbara Island, in the Debenham Islands, off the Fallières Coast, on the W coast of Graham Land. Discovered in 1936 by BGLE 1934-37, charted by them, and named by Rymill as Ann (that's it, just Ann), for Frances Ann Debenham (known as Ann; b. 1927; later Mrs. Rupert Buxton; they married in 1949, in Rhodesia; later divorced), youngest daughter of Frank Debenham (a member of the expedition's advisory committee). The name appeared as Anne on a British chart of 1947, but as Ann on another from that year. It appears on a 1950 chart as Ann Island, and as such it was accepted by US-ACAN in 1949, and by UK-APC on Sept. 8, 1953. It appears on an Argentine chart of 1952, as Islote Ana, but later they called it Islote Ann. It is Ann Island in the British gazetteer of 1955. By 1969 the island had been overrun by Northeast Glacier, which fact can be seen on a British chart of 1973.

Mount Ann Shirley *see* **Mount Shirley**

Cabo Anna *see* **Cape Anna**

Cap Anna *see* **Cape Anna**

Cape Anna. 64°35' S, 62°26' W. A prominent black craggy cape rising to 281 m above sea level, it forms the N tip of Arctowski Peninsula, to the extreme NW of Wilhelmina Bay, in the Gerlache Strait, off the Danco Coast, on the W coast of Graham Land. Charted in Feb. 1898 by BelgAE 1897-99, and named by de Gerlache as Cap Anna. The expedition landed here on Jan. 30, 1898. Anna Osterrieth (Ernest Osterrieth's wife), of Antwerp, was a financial supporter of his expedition. It was listed as such on the expedition's map of 1899, and as Cape Anna on a British chart of 1901. It also appears as Cap Anna Osterrieth, and Cape Anna Osterrieth, and even appears on a 1908 Argentine map as Cabo Gunnar, for Gunnar Andersson (this name did not catch on). On Holtedahl's map of 1929, the peninsula behind the cape was called Cape Anna Peninsula, but, again, this name did not take. Its first appearance as Cabo Anna was on a Chilean map of 1947. US-ACAN accepted the name Cape Anna in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1961. It was photographed aerially by FIDASE in 1956-57. Since 1956 the Argentines have officially been calling it Cabo Ana (which means the same thing). The Chileans, who still call it Cabo Anna (it appears as such in their 1974 gazetteer), have narrowed down its position to 64°35' 18" S, 62°25' 42" W. *See* **Osterrieth Range**.

Crique Anna *see* **Anna Cove**

Anna Cove. 64°35' S, 62°26' W. Immediately E of Cape Anna, at the NW end of Arctowksi Peninsula, in the extreme NW of Wilhelmina Bay, in the Gerlache Strait, on the Danco Coast, along the W coast of Graham Land. Charted by BelgAE 1897-99, who landed here on Jan. 30, 1898, and named by de Gerlache as Crique Anna (i.e., "Anna creek"), in association with the cape. As such it appears on their expedition map of 1899. It also appears as Crique Anna Osterrieth. The translation Caleta Ana was accepted by the Argentines in 1956. UK-APC accepted the name Anna Cove, on Sept. 23, 1960, and as such it appears on a British chart of 1961. US-ACAN followed the British naming in 1965.

Anna Glacier. 62°02' S, 58°12' W. Flows SE between Rose Peak and Rea Peak, into Polonia Piedmont Glacier, in the Arctowski Mountains, at the head of King George Bay, King George Island, in the South Shetlands. Named by the Poles in 1981, for Anna Tokarska, a geological field assistant with PolAE 1979-80, and wife of Antoni K. Tokarski (*see* **Tokarski Peak**).

US-ACAN accepted the name on July 14, 2004.

Cap Anna Osterrieth *see* **Cape Anna**

Cape Anna Osterrieth *see* **Cape Anna**

Crique Anna Osterrieth *see* **Anna Cove**

Annandags Peaks. 72°32' S, 6°18' W. A group of small, isolated nunataks, in the SW part of Giaever Ridge, about 24 km SW of Jule Peaks, in the NW portion of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, plotted by them in 72°31' S, 6°15' W, and named by them as Annandagstoppane (i.e., "Boxing Day peaks"). The Americans later re-plotted this feature, and US-ACAN accepted the name Annadags Peaks in 1966. The SCAR gazetteer says that the Russians named a feature Schulzegebirge in 72°45' S, 6°40' W. Whether or not they really did use such a German name, this feature is the same as the Annadags Peaks.

Annandagstoppane *see* **Annandags Peaks**

The *Annawan*. A 200-ton sealing brig on the Palmer-Pendleton Expedition of 1829-31. Owned by Nat Palmer, among others. Palmer was captain, and there were 28 crew and 5 scientists.

Cape Annawan. 72°20' S, 95°25' W. An ice-covered cape marking the E extremity of Thurston Island, and the NW entrance to Seraph Bay. Discovered in Feb. 1960 during helicopter flights from the *Burton Island* and the *Glacier* while part of the USN Bellingshausen Sea Expedition of that season, and plotted in 72°18' S, 95°24' W. Named by US-ACAN in 1960, for the *Annawan*. It has since been re-plotted.

Anne *see* **Ann Island**

[1]**The *Anne***. A 273-ton London sealer, built in the USA, but taken as a prize. Owned by Francis Todrig and Capt. Thomas Duell. In 1818-1819, she was in South Georgia, under the command of Capt. Duell, and accompanied by a tender. She landed in the South Sandwich Islands while there looking for fur seals, and Duell reported a volcanic eruption. The expedition took 10,000 sealskins and 2400 barrels of elephant seal oil. In 1844, Thomas W. Smith, one of the sealers, wrote an account of the voyage. After the 1818-19 expedition, Capt. Peter Kemp took command, and the *Anne* left Deal (in Kent) on Jan. 28, 1820, under the command of Capt. Kemp, bound ultimately for the South Shetlands and the 1820-21 season. She was wrecked in the South Shetlands on or around Dec. 30, 1820. The crew was saved.

[2]**The *Anne***. A 60-ton, 70-foot gaff-rigged American schooner, based on a 19th-century Gloucester fishing schooner, and named after the mother of the skipper, American artist William Reid Stowe (known as Reid; b. Jan. 7, 1952, Washington state). Built in 1978, by Mr. Stowe, in NC, the vessel visited the South Shetlands and the Antarctic Peninsula in 1986-87. Mr. Stowe has had many adventures in the *Anne* since then.

[1]**Cape Anne** *see* **Cape Ann**

[2]**Cape Anne**. 73°37' S, 169°51' E. Marks the SE extremity of Coulman Island, in the Ross Sea, near the coast of Victoria Land. Discovered by Ross in Jan. 1841, and named by him for his wife, Anne Coulman (1817-1857). US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Mount Anne. 83°48' S, 168°30' E. Rising to 3870 m, 10 km N of Mount Elizabeth, just to the W of the Beardmore Glacier, in the Queen Alexandra Range. Discovered by BAE 1907-09, and named by Shackleton for Anne Dawson-Lambton (whose name was actually Ann), a supporter of the expedition. US-ACAN accepted the name in 1949, and everyone else has accepted it too. *See* **Mount Dawson-Lambton** for a brief account of the Dawson-Lambton family.

Point Anne *see* **Camp II Point**

Anne Hill. 78°14' S, 162°43' E. Rising to 2079 m, it is the most prominent hill on Radian Ridge, at the E side of Lava Tongue Pass, in the Royal Society Range of Victoria Land. Named by NZ-APC on Nov. 4, 1999, for Anne Catherine Wright (later Anne Wright-Grassham), of the department of geoscience at the New Mexico Institute of Mining and Technology (in Socorro, NM; she would get her PhD in geology from New Mexico Tech), field party geologist here with NZGSAE 1977-78, and geologist with USARP field parties in 1982-83, 1983-84, and 1984-85, working at Ross Island, Minna Bluff, Mount Discovery, Mount Morning, and Mason Spur. Wright Hill was considered for this feature, but there were too many features in the area with the name Wright. US-ACAN accepted the name on Dec. 28, 1999. After NM, Miss Wright returned to NZ, and went into the woolcraft business.

Anne Island *see* **Ann Island**

Annelids *see* **Worms**

Annenkov, Mikhail. Lieutenant on the *Mirnyy*, during von Bellingshausen's expedition of 1819-21. He died in 1839, as a retired captain.

Lednik Annenkova. 66°38' S, 92°35' E. A glacier flowing into the Davis Sea, between Cape Torson and Cape Filchner. Named by the Russians for Mikhail Annenkov.

Annexstad Peak. 76°41' S, 125°52' W. A partially ice-free peak rising to 2610 m, on the W side of the crater rim of Mount Cumming, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN trimetrogon photos taken between 1959 and 1960. Named by US-ACAN in 1962, for John Owen Annexstad (b. Jan. 10, 1932), Minnesotan geomagnetician and seismologist who wintered-over at Byrd Station in 1958. He was later with the Meteorite Working Group, at the Johnson Space Center, in Houston.

Anniversary Bluff. 78°33' S, 164°15' E. A rock bluff, rising to about 1300 m, 2.5 km W of Birthday Bluff, on the S side of Mason Spur, on the Scott Coast of Victoria Land. The name was suggested by Anne Wright (*see* **Anne Hill**, above), whose geological field party visited this bluff on Nov. 29, 1983, her parents' wedding anniversary. NZ-APC accepted the name on Nov. 12, 1999, and US-ACAN followed suit on Dec. 28, 1999.

Anniversary Nunataks *see* **Blånabbane Nunataks**

Annual Ice. Or Sea ice. Ice that breaks up during the summer. It is distinguished from the permanent ice of glaciers, ice shelves, and the ice cap of the Polar Plateau.

Islotes Ansar *see* **Gosling Islands**

Anschütz-Kämpfe Trough. 71°30' S, 12°30' W. A submarine feature out to sea off the Princess Martha Coast of Queen Maud Land. The name was proposed by Heinrich Hinze, after Hermann Anschütz-Kämpfe (1872-1931), of Munich, who in 1901 suggested that a submarine go beneath the ice of the North Pole; his submarine, in fact. It could travel at 3 mph, and stay submerged for 15 hours at a time. That was the theory, anyway. He also developed a gyrocompass.

Ansell, William Drummond. b. Nov. 14, 1887, Wimbledon, Surrey, but raised in Kingston, and then Guildford, son of printer Walter Ansell and his wife Margaret Drummond. He left school at 14, and went to work as a clerk for a real estate company in Guildford. He soon joined the Merchant Navy, as a steward, and, as such (2nd steward; later chief steward), served on the *Nimrod* during BAE 1907-09. While in Lyttelton, NZ, he met Ruth Robinson at a dance, and then the next thing he knew he was on his way to Antarctica. He was not a part of the Antarctic shore party. On the way back, again in Lyttelton, he met Ruth again, but sailed back to England, where he informed his parents that he was moving to NZ, which he did, immediately, married Ruth on Dec. 11, 1912, in New Brighton, Christchurch, and became a telegraph linesman in Wellington, and later a conductor on a tram (streetcar), in Nelson, where he died on June 30, 1947.

Ant Hill. 78°47' S, 161°27' E. A hill rising steeply to 1310 m on the W side of Skelton Glacier, between Ant Hill Glacier and Dilemma Glacier. Surveyed in 1957 by the NZ party of the BCTAE, and named by them for the prominent anticline in the bluff below the hill. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Ant Hill Glacier. 78°49' S, 161°30' E. Between Ant Hill and Bareface Bluff, rising in the Worcester Range and flowing NE into Skelton Glacier. Surveyed and named in 1957 by the NZ party of the BCTAE in association with nearby Ant Hill. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Antarctic. The journal of the New Zealand Antarctic Society. First issue was in March 1956. James Caffin (*see* **Caffin Valley**) was editor between 1973 and 1984.

The Antarctic. The British (and their more recent derivatives) usually call it the Antarctic, whereas the Americans almost always (nowadays) refer to it as Antarctica.

[1]**The *Antarctic***. A 226-ton Norwegian steam whaling ship, built in 1872 as the *Kap Nor*, 8 whaleboats, 11 harpoon guns, and an average

crew of 31. She had been retired when Svend Foyn bought her as the expedition ship for the *Antarctic* Expedition 1893-95 (q.v.). She also took down SwedAE 1901-04 (q.v.), led by Nordenskjöld, which left Göteborg in Sweden on Oct. 16, 1901, with Carl Anton Larsen as captain. After putting ashore Nordenskjöld's party on Snow Island, the ship wintered in the Falkland Islands, returning to pick up the Swedish party in Feb. 1903. She was crushed in the pack ice on Feb. 12, 1903, and sank in 63°50' S, 57°00' W, the crew taking refuge on Paulet Island. Nordenskjöld's party was forced to winter-over again on Snow Island, until all the members of the expedition were picked up by the *Uruguay*.

[2]**The *Antarctic***. Built in England in 1906, as a 9838-ton freezer ship, and bought in 1928 by Bruun & von der Lippe's Antarctic Company (*see also* **The *Pontos*** and **The *Pelagos***), and converted by them that year into a 9593-ton Norwegian factory whaling ship, complete with stern slip. She conducted pelagic whaling in West Antarctica waters in 1928-29. For the next season, 1929-30, she left Cardiff in Sept. 1929, with Andreassen as manager. One of the gunners was Christoffersen. Francis Ommanney was a passenger, on his way to an unenviable job in South Georgia, for the Discovery Committee team. The *Antarctic* was back in 1930-31, under the command of Otto Borchgrevink. In 1934 she was sold to the Japanese, and became the 9866-ton *Tonan Maru*, the first Japanese whaling factory ship. *See* **The *Tonan Maru***.

[3]**The *Antarctic*** *see* **The *C.A. Larsen***

Estrecho Antarctic *see* **Antarctic Sound**

Paso Antarctic *see* **Antarctic Sound**

Antarctic airlift *see* **Airlifts**

Antarctic Airways. The world's first real commercial airline for Antarctica. Founded in 1984 by Adventure Travel International. Chief pilot was Giles Kershaw (*see also* **Mountain Travel**). In 1987-88 they operated a Douglas DC-4 and Twin Otters. On Jan. 11, 1988, the two Otters flew to the South Pole, with 15 passengers (8 in one and 7 in the other), for the first commercial flight to the Pole. The cost per passenger to be in the first plane to touch down was $35,000, and in the 2nd plane—$25,000.

Antarctic Anticyclone. Large atmospheric high pressure center in continual existence over Antarctica. It contains the world's coldest air.

Antarctic Archipelago *see* **Palmer Archipelago**

Antarctic bottom water. Or ABW. Produced by shelf water escaping in short periods of time, not necessarily during winter. It is produced in the Ross Sea, the Weddell Sea, and off Adélie Land.

The *Antarctic Bulletin*. It began as *AirOpFacts*.

Antarctic Canyon. 71°30' S, 41°15' W. An undersea feature in the Southern Ocean. Named by UK-APC in 2002, probably for the *Antarctic* (Bull's ship).

Antarctic Circle. Latitude 66°30' S, and called the circle because it goes all around the continent at that latitude. On Midwinter's Day (June 21) the sun reaches only this far south due to the Earth's 23.5°axial tilt to its ecliptic (*see also* **Seasons**). Only a few coastal areas of the Antarctic continent proper lie N of the Antarctic Circle, and the line crosses through such features as the Larsen Ice Shelf, the Biscoe Islands, the Balleny Islands, the Wilkes Coast, Norths Highland, the Sabrina Coast, Cape Mikhaylov, the Budd Coast, Knox Land, the Bunger Hills, Queen Mary Land, Mirnyy Station, the West Ice Shelf, and the Napier Mountains. The first ships to cross the Antarctic Circle were Cook's *Resolution* and *Adventure* on Jan. 17, 1773. Cook crossed a second time, on Dec. 20, 1773, and a third time, on Jan. 26, 1774. Von Bellingshausen was the next to cross it, on Jan. 26, 1820, and again on Dec. 24, 1820. The first steamship to cross it was the *Challenger*, on Feb. 16, 1874.

Antarctic Circumpolar Current. Also called the West Wind Drift Current. A surface oceanic current flowing from W to E, and encircling Antarctica. It is the greatest ocean current in the world, and the Earth's only circumpolar current. It flows 14,913 miles as it circles the Earth, and is between 124 and 621 miles in width. First studied properly in 1978.

Antarctic Club. On the evening of Jan. 17, 1929 (the anniversary of Scott's reaching the South Pole), at the Café Royal, in London, 33 men gathered to form the Antarctic Dinner Club. They were veterans of nine expeditions and two relief ships. Those present were (in order of expedition): Colbeck and Bernacchi (BAE 1898-1900), Skelton, Royds, Barne, Armitage, Heald (BNAE 1901-04; Bernacchi was also on that one), England, Evans, Morrison, and Sullivan (relief ship *Morning* for BNAE 1901-04; Colbeck was also on that one), Day (relief ship *Terra Nova* for BNAE 1901-04), Cuthbertson (ScotNAE 1902-04), Brocklehurst, Buckley, and Berry (BAE 1907-09), Drake, Levick, Simpson, Wright, Debenham, Cherry-Garrard, Horton, Archer, Hooper, and Mather (BAE 1910-13; Evans and Heald were also on this one), Blair (relief ship *Aurora* for BAE 1910-13), Worsley, Rickinson, Greenstreet, Hussey, Wordie, and Kerr (BITE 1914-17), Bagshawe (*Quest*; Worsley, Hussey, and Kerr were also on this one). The founder was Jack Mather, who remained secretary and treaurer until Jan. 1957. The club was restricted to those who had spent a winter in Antarctica, and only members met every Jan. 17. There were other meetings, to which guests were invited. On May 8, 1929, again at the Café Royal, the club entertained Sir Douglas Mawson and Sir Hubert Wilkins. By this time new members included Joyce, Rudmose Brown, Wilton, John King Davis, Jameson Boyd Adams, Mawson himself, Ponting, Hodgeman, Dr. Macklin, R.W. James, Wilkins himself, and Lester. They never missed a year, although the venue had changed to various restaurants by the late 1940s. By that time it was quite prestigious, and the Duke of Edinburgh attended many of the dinners.

Antarctic cod. *Notothenia nudifron*. A codlike fish of the order Gadidae, living at the sea bottom near the coasts. The giant Antarctic cod is *Dissostichus mawsoni* , but is not a cod at all (it is a perciform, not a gadiform). They just taste a bit like cod. *See also* **Toothfish**.

Antarctic Conferences. The first Antarctic Conference, as such, was held in Paris in July 1965, as a prelude to IGY. Entirely scientific, they co-ordinated plans for the expeditions. There have also been many other conferences (with a small "c," so to speak) relating to Antarctica, the most notable, perhaps, being in July 1895 when the Sixth International Geographical Congress decided that Antarctica must be investigated. It was this decision which sparked the rash of expeditions in the late 1890s/early 1900s.

Antarctic Convergence. Also called the Antarctic Polar Front and the Southern Hemisphere Polar Front, it is the easily identifiable oceanic boundary, 30-50 km wide, where the warm subtropical waters of the Indian, Pacific, and Atlantic Oceans meet the cold, polar waters of Antarctica. It lies in a staggered, zig-zagging line between 48°S and 61°S, and is very influential on climate, marine life, and the ice (*see also* **Subantarctic surface water** and **Antarctic intermediate water**). It was discovered by the Discovery Investigations.

Antarctic Derby. A 700-yard dog-team race held on June 15, 1915, by the crew of the *Endurance* while they were stuck on the ice. It was a won by Frank Wild, who had started 6-4 favorite. All 28 men had a bet of chocolate or cigarettes.

Antarctic Development Project 1947 *see* **Operation Highjump**

Antarctic Division *see* **ANARE**

Antarctic dragonfish. Family of about 15 species of fish belonging to Bathydraconidae, and to the super family of Nototheniodia.

The *Antarctic Dream* *see* **The *Piloto Pardo***

***Antarctic* Expedition 1893-95**. Svend Foyn (1809-1894), the Norwegian sealing magnate and inventor of the harpoon gun, financed this sealing and exploration expedition promoted and managed by his commercial manager in Melbourne, Henrik Johan Bull, who was also part-owner of the *Antarctic*. Captain of the *Antarctic* was going to be a whaler named Sanne, just returned from Cape Horn, but a misunderstanding led to his replacement by Leonard Kristensen. Bull and Kristensen were to quarrel over leadership of the expedition, whose main aim, aside from seals and exploration, was to find Ross's right whale. **Sept. 20, 1893**: The *Antarctic* left Tønsberg, Norway, and went via Melbourne. F. Gjertsen (1st mate); Bernhard Jensen (2nd mate), Julius Johannesen (chief engineer). **Sept. 27, 1893**: They called in at Deal, Kent, to pick up supplies. **Oct. 16, 1893**: They sighted Madeira. **Oct. 21, 1893**: They arrived at Las Palmas, Canary Islands. **Nov. 6, 1893**: They crossed the Equator at 22°W. **Nov. 24, 1893**: They sighted Tristan da Cunha. **Nov. 25, 1893**: They landed at Tristan da Cunha. **Nov. 27, 1893**: They left Tristan da Cunha. **Dec. 4, 1893**: They saw their first large icebergs, in 40°41' S, 15°E. **Dec. 12, 1893**: They sighted Marion Island and

Prince Edward's Island. **Dec. 15, 1893**: They were in the area of the Crozet Islands. **Dec. 19, 1893**: They arrived at the Kerguélen Islands. **Dec. 27, 1893**: They left Greenland Harbor, in the Kerguélen Islands, with 350 butchered elephant seals aboard, and a crew of nauseated sailors. **Dec. 28, 1893**: They anchored at Royal Sound, still in the Kerguélens. They were now bagging elephants at the rate of about 100 a day. **Feb. 3, 1894**: They left the Kerguélen Islands, with 1600 disappointingly low-grade seals. They were short on provisions, and the ship had a leak. **Feb. 23, 1894**: They arrived at Melbourne. **April 12, 1894**: The *Antarctic* left to try whaling. Bull stayed in Melbourne. **May 1, 1894**: The *Antarctic* sighted the Auckland Islands. **May 14, 1894**: The *Antarctic* sighted the Campbell Islands. **Aug. 21, 1894**: After months of almost farcical failure to capture whales, and an equally farcical "shipwreck," the *Antarctic* pulled into Melbourne. **Sept. 14, 1894**: Borchgrevink arrived in Melbourne. The captain refusing to take passengers, Borchgrevink was taken on as sealshooter and seaman, but would, before long, wind up doing whatever he wanted. **Sept. 26, 1894**: The ship left Melbourne in a hurry. It was here that Mr. Foyn had arranged for William S. Bruce and Eivind Astrup to meet the ship in order to take part in the expedition, but the two missed the boat. In addition, there had been several changes of crew. What had been a mainly Norwegian crew to start with, now had Swedes, Danes, Poles, and even an Englishman, as well as a few of the original Norwegians. As it was too early in the season to attack the pack-ice, they decided to go sperm whale hunting off the Tasmanian coasts. **Oct. 2, 1894**: They arrived at Hobart. **Oct. 3, 1894**: They left Hobart. **Oct. 13, 1894**: Bull celebrated his 50th birthday. **Oct. 18, 1894**: They experienced their first snow of the season. **Oct. 20, 1894**: They arrived at Macquarie Island. **Oct. 22, 1894**: They left the area of Macquarie Island. **Oct. 25, 1894**: They anchored at Campbell Island. **Nov. 1, 1894**: The sealing season at an end, they left Campbell Island. **Nov. 5, 1894**: Failing to find the mythical Emerald Isle, they came across their first tabular berg, in 56°57' S, 162°E. It was between 5 and 7 miles long, and between 100 and 150 feet high. **Nov. 6, 1894**: They experienced masses of icebergs in 58°14' S, 162°35' E. One of them was so big they thought it was land, and named it Sven Foyn Island. **Nov. 7, 1894**: Their propeller broke in 59°20' S, 163°50' E, 700 miles from Port Chalmers, NZ. According to Bull, Capt. Kristensen had known that the propeller was faulty. **Nov. 8, 1894**: Heading north toward NZ, they again passed the so-called Svend Foyn Island. **Nov. 15, 1894**: They sighted Stewart Island, NZ. **Nov. 26, 1894**: They arrived at Port Chalmers. **Nov. 28, 1894**: 2 men deserted during the night, a New Zealander and a Swede. **Nov. 29, 1894**: 6 men refused to carry on, and the captain let them go. The Danish steward also quit. **Nov. 30, 1894**: They headed south again, having lost a great opportunity to get to Antarctica on time. There were now 22 men all told. However, they stopped at Stewart Island, and there, four new men were taken aboard — Alexander von Tunzelman, George Lonneker, William Joss, and George Chevalier. There were now 31 men in all aboard the *Antarctic*. **Dec. 2, 1894**: They were in 56°S. Borchgrevink celebrated his 30th birthday. Rice fritters for dinner. **Dec. 3, 1894**: They saw their first iceberg of that trip, in 58°S, 166°55' E. **Dec. 4, 1894**: 61°11' S, 171°E, their most southerly yet during the entire expedition. **Dec. 7, 1894**: They reached the edge of the pack ice, and brought aboard their first seals. **Dec. 8, 1894**: They were in 63°45' S, 171°30' E. **Dec. 14, 1894**: They sighted the Balleny Islands. **Dec. 22, 1894**: They were in 66°03' S, 167°37' E. **Dec. 25, 1894**: Christmas dinner of cream porridge and Minke whale. **Dec. 26, 1894**: They crossed the Antarctic Circle. **Dec. 27, 1894**: 66°37' S, 171°15' E. **Dec. 28, 1894**: Johannesen, the chief engineer, lost the tip of his left forefinger and broke his leg in an accident. A disappointing 28th birthday present. **Dec. 29, 1894**: One of the young sailors went insane. **Dec. 31, 1894**: They were in 66°47' S, 174°08' E. **Jan. 2, 1895**: They were in 67°05' S. **Jan. 8, 1895**: They caught a king penguin. **Jan. 14, 1895**: They broke through the pack, in 68°12' S, 176°59' E, after 38 days. **Jan. 16, 1895**: They sighted Cape Adare. **Jan. 18, 1895**: A party (including Borchgrevink) made a landing in the Possession Islands, and here Borchgrevink discovered lichens, the first vegetation ever found within the Antarctic Circle. **Jan. 21, 1895**: Heading south, they spotted Coulman Island. **Jan. 22, 1895**: They were in 74°S. **Jan. 23, 1895**: They were back at Cape Adare. **Jan. 24, 1895**: They landed on the coast of the mainland itself, at Ridley Beach, Cape Adare, the first ever substantiated landing on the continent proper. Kristensen, Borchgrevink, and von Tunzelman all claim to have been the first to step out of the landing boat onto the shore (Bull was also in the landing boat). **Jan. 26, 1895**: Heading north, in 69°52' S, 169°56' E, they entered the pack ice. **Feb. 1, 1895**: In 66°S, 172°31' E, they got clear of the pack ice, after 6 days. **Feb. 5, 1895**: They sighted the Balleny Islands again. **Feb. 11, 1895**: They were in 62°51' S, 164°38' E, and heading north. **Feb. 12, 1895**: They were in 61°S. **Feb. 15, 1895**: They were in 60°10' S, 157°57' E. **Feb. 17, 1895**: In 58°15' S, 156°15' E. **Feb. 18, 1895**: A 21-year-old sailor came down with melancholia. **Feb. 19, 1895**: In 55°52' S. **Feb. 20, 1895**: In 54°17' S. **Feb. 23, 1895**: In 54°12' S, 146°44' E. **Feb. 24, 1895**: In 53°12' S, 145°03' E. They saw albatrosses. **Feb. 26, 1895**: In 51°10' S, 144°45' E. **Feb. 27, 1895**: In 50°27' S, 145°49' E. **March 2, 1895**: In 47°51' S. **March 4, 1895**: They sighted Tasmania. **March 5, 1895**: A strong gale kept them at sea for 6 days. **March 12, 1895**: They docked in Tasmania.

Antarctic Front. Semipermanent, semicontinuous front that separates continental Antarctic air from maritime polar air. The first slides underneath the second, causing violent storms moving from E to W. There is not much rain owing to the coldness of both air masses.

Antarctic Ice Sheet. The vast mass of ice that covers almost all of Antarctica, and parts of the sea around it. Average thickness is about 6900 feet.

Antarctic intermediate water. An ocean water mass found in all the southern oceans at the Antarctic Convergence, at a depth of between 1500 and 4000 feet. Temperature ranges from 37-45(F.

Antarctic Journal *see* the Bibliography

Antarctic Names Committee of Australia. Better known as ANCA. On the suggestion of Phil Law, it was established in Oct. 1952 by the Minister for External Affairs, to make decisions on place names within the Australian Antarctic Territory. The original committee comprised: Douglas Mawson, B.P. Lambert (director of National Mapping), Capt. G.D. Tancred (RAN hydrographer), A.A. Wilcock (geographer), and the chairman, Phil Law. Graeme McKinnon later became secretary, and Law was chairman until 1981. In 1982 its name was changed to the Australian Antarctic Names and Medals Committee (AANMC), to reflect its other function, which is to send nominations to the governor general for award of the Australian Antarctic Medal.

Antarctic Ocean. A term used principally by the Russians and the British, it is also called the Southern Ocean. It is the southernmost of all the oceans (*see* **Oceans**), and its existence as an individual ocean is not universally accepted. Some say it is really the southern part of the Atlantic, Pacific, and Indian Oceans, while others place the southern limit of those oceans at the Antarctic Circle (66°30' S). But those who accept the Antarctic Ocean generally place its northern limits at the Subtropical Convergence (40°S) and its southern boundary as the land mass of Antarctica itself (*see* **Subantarctic surface water** for more details). The waters are less saline than those of other oceans due to the lower temperature and lesser evaporated concentration of dissolved salts.

Antarctic Pacific Ridge *see* **Pacific-Antarctic Ridge**

Antarctic Peninsula. 69°30' S, 65°00' W. By far the biggest, most prominent peninsula in Antarctica. One can't miss it. At surface level it forms the most northerly tip of the Antarctic continental land mass (or rather, ice mass), and reaches out toward South America like a 1300-km-long stubby finger. Tierra del Fuego is only about 1000 km away across the Drake Passage, and is connected geologically with the Peninsula. Continuing to speak geologically, the Peninsula is a string of islands separated from the real continent of Antarctica at bedrock level, the ice-covering of the whole continent joining it all together at the surface as one big ice-mass. Its main features are Graham Land, Palmer Land, the Larsen Ice Shelf, and the Eternity Range. The highest point is Mount Jackson, at 10,446 feet. The Welch Mountains rise to 9892 feet. Other significant mountains are Hope, Français, Charity, Coman, and Faith, in that order. Discovered probably by the Russian, von Bellingshausen, in 1820, and reputedly named by him as Palmer's

Land (later Palmer Land) for Nat Palmer, the American navigator he met in these waters at that time. The British navigator John Biscoe called it Graham Land (at least that was the name he gave to what is now called the Graham Coast), as did many countries later on. The whole was proved to be a peninsula by Dallmann in 1874. In the next century, the Chileans called it O'Higgins Land (actually Tierra de O'Higgins), while the Argentines called it San Martín Land (actually Tierra San Martín). By 1958 more and more people were calling it the Antarctic Peninsula, and on Nov. 20, 1963, the U.S., UK, Australia, and NZ made an international agreement to make that its official name. Graham Land now refers to the N half, and Palmer Land to the S half. *See* **Graham Land** and **Palmer Land** for more history.

Antarctic Peninsula Traverse. 1961-62. Charlie Bentley had led the Ellsworth Highland Traverse in 1960-61 (a traverse that included John Molholm, Perry Parks, and Hiro Shimizu), and in 1961, back in the States, asked John Behrendt if he would lead the Antarctic Peninsula Traverse of 1961-62, as a sort of sequel. Its mission would be to collect meteorological and snow cover data. Behrendt arrived at McMurdo on Oct. 24, 1961. Lee Kreiling, who would be the traverse mechanic, was already at McMurdo (he had wintered-over there in 1961). They selected 3 black Tucker Sno-cats, which they named *Argo* (the lead cat; the one Behrendt drove and slept in), *Barbara* (the one Lee Kreiling traveled in), and *Tamare Riatia* (the seismic cat; named by Perry Parks after a schooner often seen in Tahitian waters. Parks would also be on the traverse). On Oct. 31, 1961, Behrendt flew to Byrd Station. Pete Wasilewski and Hiro Shimizu, who would also go on the traverse, were already at Byrd. The other men who went on the traverse were Con Merrick and John Molholm. The trail party set out from Camp Minesota, in the Jones Mountains, and went via George VI Sound to Camp Sky-Hi, which was being set up at that time (it would later become Eights Station), arriving there on Dec. 27, 1961. The party then went on to the Sweeney Mountains, and finally back to Sky-Hi, where the traverse ended in February 1962. It had covered over 1000 miles. The boys then flew back to McMurdo. It was later sometimes called the Ellsworth Land Traverse.

Antarctic perch. Order: Nototheniiformes. Nearly three-quarters of the 90 or so species of fish (q.v.) living at the bottom of the Antarctic waters belong to this order.

Antarctic petrels *see* **Fulmars**

Antarctic Polar Front *see* **Antarctic Convergence**

Antarctic skua *see* **Skuas**

Antarctic Sond *see* **Antarctic Sound**

Antarctic Sound. 63°20' S, 56°45' W. A sound, 50 km long and between 11 and 19 km wide, running NNW-SSE for 53 km, and separating the extreme NE of Trinity Peninsula from Joinville Island, D'Urville Island, Bransfield Island, and Dundee Island. To the N it is bounded by an imaginary line connecting Cape Dubouzet (at the NE end of the Antarctic Peninsula) with Turnbull Point (at the W end of d'Urville Island), and to the S by a line connecting Cape Scrymgeour (at the E end of Andersson Island) with Cape Purvis (at the S extremity of Dundee Island). It joins the waters of Bransfield Strait with the Weddell Sea. First sighted, at its N end, by FrAE 1837-40, it appears on Dumont d'Urville's expedition chart of 1842. Navigated and charted on Jan. 15, 1902, by SwedAE 1901-04, and named by Nordenskjöld as Antarctic-Sund, for Carl Anton Larsen's ship *Antarctic*, which, in 1902 became the first vessel to sail in this sound, and was crushed by the ice on Feb. 12, 1903. As such it appears on a Swedish map of 1904. It is also seen variously as Antarctic Strasse, Antarctics Sund, Antarktik Sund, Détroit de l'Antarctic, Antarctic Channel, Antarctic Sundet (i.e., "the Antarctic Sound") Stretto dell'Antarctic, and Antarctic-Sond, depending on which countries were publishing Nordenskjöld's maps. It appears in three separate, but related, Argentine references in 1908-09, as Estrecho de Joinville, Estrecho del Antártico, and Seno Antártico. Balch called it Antarctic Strait, in 1912, as did M.C. Lester in his 1920-22 references (during the British Imperial Antarctic Expedition), and Ellsworth in 1938. In 1921 it appears (translated) on a British map as Antarctic Sound, and US-ACAN accepted that name in 1947, with UK-APC following suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, plotted in 63°26' S, 56°39' W. It appears on a 1946 Argentine map as Estrecho de Antártico, on another Argentine map (from 1947) as Estrecho Anatártico, and on a 1949 Argentine chart as Estrecho Antarctic. It was the last-named one that the Argentines finally settled on. It appears on a 1947 Chilean chart as Paso Antártico, and that is what the Chileans called it until a 1961 chart showed it as Paso Antarctic, and that latter name is the one that appears in the 1974 Chilean gazetteer. The feature was re-charted by an RN Hydrographic Survey unit on the *John Biscoe*, in 1958-59, and it appears as Antarctic Sound on a British chart of 1961.

Antarctic Specially Managed Areas. Known as ASMAs. This concept came into force on May 24, 2002, as part of the Antarctic Treaty's Annex V (*see* **Antarctic Specially Protected Areas**). Their purpose is to assist in the planning and coordination of activities within a specified area, avoid possible conflicts, improve the cooperation between the nations in Antarctica, and to minimize environmental impacts. One does not need a permit to enter an ASMA. This is a list of the four ASMAs to date, with year of adoption, year of renewal, and the countries who sponsored the adoption: **1**. Admiralty Bay (1996, 2001, Brazil, Poland, Ecuador, Peru); **2**. McMurdo Dry Valleys (2004, 2009, U.S. & NZ); **3**. Cape Denison (2004, 2009, Australia); **4**. Deception Island (2005, 2010, Chile, Norway, UK). In 2007 a new ASMA was proposed, the SW part of Anvers Island and the Palmer Basin. It would take in ASPA 113 and ASPA 140.

Antarctic Specially Protected Areas. Known as ASPAs. On May 24, 2002 the Antarctic Treaty System, in Annex V of their Protocol on Environmental Protection (agreed in 1991 and put into force in 1998), scrapped the terminologies "specially protected areas" and "sites of special scientific interest" (qq.v.), and grouped them all together, re-numbering them all as ASPAs, i.e., ASPA 101, ASPA 102, etc. A permit is required for a person to enter an ASPA. This is the list (and each has its own entry in this book): **101**. Taylor Rookery, Mac. Robertson Land; **102**. Rookery Islands; **103**. Ardery Island and Odbert Island; **104**. Sabrina Island; **105**. Beaufort Island; **106**. Cape Hallett; **107**. An area of 6 sq km, all land and sea, within a radius of 1 km from the coast of Emperor Island, in the Dion Islands, in Marguerite Bay, about 13 km S of Adelaide Island. The only known colony of emperor penguins on the west side of the Antarctic Peninsula is here, and it is this isolation from other groups that makes the colony important. It is also the smallest and most northerly of such colonies; **108**. Green Island; **109**. Moe Island; **110**. Lynch Island; **111**. southern Powell Island and adjacent islands in the South Orkneys; **112**. Coppermine Peninsula; **113**. Litchfield Island; **114**. the northern part of Coronation Island; **115**. Lagotellerie Island; **116**. New College Valley; **117**. Avian Island; **118**. Cryptogam Ridge; **119**. Forlidas Pond and Davis Valley Ponds; **120**. Géologie Archipelago; **121**. Cape Royds; **122**. Arrival Heights; **123**. Barwick Valley; **124**. Cape Crozier; **125**. Fildes Peninsula; **126**. Byers Peninsula; **127**. Haswell Island; **128**. western shore of Admiralty Bay; **129**. Rothera Point; **130**. Tramway Ridge; **131**. Canada Glacier; **132**. Potter Peninsula; **133**. Harmony Point; **134**. Cierva Point, and nearby islands; **135**. Bailey Peninsula; **136**. Clark Peninsula; **137**. the NW part of White Island; **138**. Linnaeus Terrace; **139**. Biscoe Point; **140**. the shores of Port Foster; **141**. Yukidori Valley; **142**. Svarthamaren Mountain; **143**. Marine Plain; **144**. Chile Bay (Discovery Bay); **145**. Port Foster; **146**. South Bay, Doumer Island; **147**. Ablation Point and Ganymede Heights, Alexander Island; **148**. Mount Flora; **149**. Cape Shirreff; **150**. Ardley Island, Maxwell Bay; **151**. Lions Rump, King George Island; **152**. the western sector of Bransfield Strait, off Low Island, in the South Shetlands; **153**. the E part of Dallmann Bay, off Brabant Island; **154**. Botany Bay (this was at first #160); **155**. Cape Evans historic site (this was at first #154). Historic Sites #16 and #17 were incorporated into this ASPA; **156**. Lewis Bay tomb. This was at first Historic Site #73 (*see* **Historic sites**), then SPA #26 (*see* **Specially Protected Areas**), then ASPA #155, and finally ASPA #156); **157**. Hut Point and associated artifacts, Backdoor Bay, Cape Royds, Ross Island (this was at first #156); **158**. Discovery Point, Hut Point, Ross Island (this was at first #157). Historic Sites #15 and #18 were incorporated into this ASPA; **159**. huts and associated artifacts at Cape Adare (this was at

first Historic site #22, and was, in 2002, incorporated into ASPA #158; ASPA #159 was at first the summit of Mount Melbourne, but that latter one was subsequently incorporated into ASPA #118); **160**. Frazier Islands (#160 was at first Botany Bay, but that became ASPA #154); **161**. Terra Nova Bay; **162**. Mawson's huts; **163**. Dakshin Gangotri Glacier; **164**. Scullin and Murray Monoliths.

Antarctic Strait *see* **Antarctic Sound**

Antarctic Strasse *see* **Antarctic Sound**

Antarctic-Sund *see* **Antarctic Sound**

Antarctic Support Activities. The support staff for the USA's OpDF in Antarctica. They built, operated, repaired, doctored, etc. It was a mixture of Seabees and general Navy personnel. Synonymous with U.S. Naval Support Force, Antarctica (q.v.).

Antarctic Support Associates. Denver, Colo. company, which took over as the NSF's Antarctic support contractor on April 1, 1990, from ITT Antarctic Services, Inc. (q.v.). This was announced on Oct. 3, 1989. ASA was a joint venture, comprising EG&G (which used to operate the *Hero*), of Wellesley, Mass., and Holmes & Narver (q.v.) of Orange, Calif. In 1999 they lost the contract to Raytheon.

Antarctic surface water. Cold, north-flowing Antarctic water. At the Antarctic Convergence it sinks to about 3000 feet beneath the warmer, subantarctic surface water (q.v.) to become the subantarctic intermediate water (q.v.).

Antarctic Symphony. Vaughan Williams' seventh symphony, released in 1953, an outgrowth of his music for the 1948 film *Scott of the Antarctic*. Originally it was going to be called Sinfonia Antarctica, but that name was (quite rightly) rejected on philological grounds.

Antarctic terns. *Sterna vittata*. Also called the Wreathed tern. Similar in looks to the Arctic terns (q.v.). They breed all over Antarctica and lay 1-3 eggs apiece.

Antarctic Tetons *see* **Lyttelton Ridge**

Antarctic Treaty. The International Geophysical Year (IGY), 1957-58, had placed a successful moratorium over Antarctica, all the participating nations working together with one common aim — scientific research. On May 2, 1958 Dwight D. Eisenhower, then president of the USA, proposed a treaty which would continue this spirit. After much discussion, the Antarctic Treaty was signed in Washington, DC, on Dec. 1, 1959, by the 12 governments who at that point in time had active interest in Antarctica. The Antarctic Treaty entered into full force on June 23, 1961, after the first 12 countries had ratified it, was binding for 30 years after that date, and then renewable. This is a list of members in sequence of ratification (* means one of the 12 original signatories in 1959; C means claimant to territory. *See* **Territorial claims**). **1**. Great Britain, May 31, 1960*C; **2**. South Africa, June 21, 1960*; **3**. Belgium, July 26, 1960*; **4**. Japan, Aug. 4, 1960*; **5**. USA, Aug. 18, 1960*; **6**. Norway, Aug. 24, 1960*C; **7**. France, Sept. 16, 1960*C; **8**. NZ, Nov. 1, 1960*C; **9**. USSR, Nov. 2, 1960* (later when the USSR split up, the Russian Federation, in Dec. 1990, was deemed to have ratified on this 1960 date); **10**. Poland, June 8, 1961; **11**. Argentina, June 23, 1961*C; **12**. Australia, June 23, 1961*C; **13**. Chile, June 23, 1961*C; **14**. Czechoslovakia, June 14, 1962 (later, when Czechoslovakia split up into the Czech Republic and Slovakia, both these new countries were, on Jan. 1, 1993, deemed as having ratified on this 1962 date); **15**. Denmark, May 20, 1965; **16**. Netherlands, March 30, 1967; **17**. Rumania, Sept. 15, 1971; **18**. East Germany, Nov. 19, 1974; **19**. Brazil, May 16, 1975; **20**. Bulgaria, Sept. 11, 1978; **21**. West Germany, Feb. 5, 1979 (later a re-unified Germany was, on Oct. 3, 1990, deemed as having ratified on this 1979 date); **22**. Uruguay, Jan. 11, 1980; **23**. Papua New Guinea, March 16, 1981 (succeeded by virtue of independence from Australia; PNG made no formal move); **24**. Italy, March 18, 1981; **25**. Peru, April 10, 1981; **26**. Spain, March 31, 1982; **27**. China, June 8, 1983; **28**. India, Aug. 19, 1983; **29**. Hungary, Jan. 27, 1984; **30**. Sweden, April 24, 1984; **31**. Finland, May 15, 1984; **32**. Cuba, Aug. 16, 1984; **33**. South Korea (Republic of Korea), Nov. 28, 1986; **34**. Greece, Jan. 8, 1987; **35**. North Korea (Democratic People's Republic of Korea), Jan. 21, 1987; **36**. Austria, Aug. 25, 1987; **37**. Eduador, Sept. 15, 1987; **38.** Canada, May 4, 1988; **39**. Colombia, Jan. 31, 1989; **40**. Switzerland, Nov. 15, 1990; **41**. Guatemala, July 31, 1991; **42**. Ukraine, Oct. 28, 1992; **43**. Turkey, Jan. 25, 1996; **44**. Venezuela, March 24, 1999; **45**. Estonia, May 17, 2001. **46**. Belarus, Dec. 27, 2006. **47**. Monaco, May 31, 2008. Unprecedented in its international co-operation, it has been hugely successful, and was important as a thaw in the Cold War, and as a neutralizer of Space. A provision of the treaty requires periodic meetings, and such Consultative meetings have established the conservation of Antarctic flora and fauna, the preservation of historic sites, a code of conduct at bases and other activities while on the continent, the establishment of sites of special scientific interest, and specially protected areas. It was not long before these meetings began to look on tourism with doubtful eyes, but in the 1990s the big discussion was minerals, and what was going to happen to them when and if they were discovered in large quantities. The Consultative meetings (ATCMs) since 1961 have been: ATCM I, Canberra 1961; ATCM II, Buenos Aires, 1962; ATCM III, Brussels, 1964; ATCM IV, Santiago, 1966; ATCM V, Paris, 1968; ATCM VI, Tokyo, 1970; ATCM VII, Wellington, 1972; ATCM VIII, Oslo, 1975; ATCM IX, London, 1977; ATCM X, Washington, 1979; ATCM XI, Buenos Aires, 1981; ATCM XII, Canberra, 1983; ATCM XIII, Brussels, 1985; ATCM XIV, Rio de Janeiro, 1987; ATCM XV, Paris, 1989; ATCM XVI, Bonn, 1991; ATCM XVII, Venice, 1992; ATCM XVIII, Kyoto, 1994; ATCM XIX, Seoul, 1995; ATCM XX, Utrecht, 1996; ATCM XXI, Christchurch, 1997; ATCM XXII, Tromsø, 1998; ATCM XXIII, Lima, 1999; XXIV, St. Petersburg, 2001; ATCM XXV, Warsaw, 2002; ATCM XXVI, Madrid, 2003; ATCM XXVII, Cape Town, 2004; ATCM XXVIII, Stockholm, 2005; ATCM XXIX, Edinburgh, 2006; ATCM XXX, New Delhi, 2007; ATCM XXXI, Kiev, 2008; ATCM XXXII, Baltimore, 2009. The 12 original signatories to the Treaty are all Consultative Parties, i.e., those with a decision-making role within the Antarctic Treaty system, those carrying out substantial scientific activities in Antarctica, but this is not a closed group. There was much discontent in the late 1980s, by certain nonconsultative members, or Acceding Members, as they are called, who feared that the Consultatative powers were getting ready to divide the wealth of Antarctica among themselves. Would it not have been a logical step for these discontented parties to develop a serious activity in Antarctica, and thus become Consultative powers themselves? Other countries to have become Consultative have been: Poland, July 29, 1977; West Germany, March 3, 1981; Brazil and India, Sept. 12, 1983; Uruguay and China, Oct. 7, 1985; East Germany and Italy, Oct. 5, 1987; Sweden and Spain, Sept. 21, 1988; Finland and South Korea, Oct. 9, 1989; Ecuador and Netherlands, Nov. 19, 1990; Bulgaria, May 25, 1998; Ukraine, May 27, 2004. The main aim of the Antarctic Treaty is to prohibit military presence (as a weapon, that is) and to use the continent for scientific purposes, although there is nothing in the treaty prohibiting commercial enterprise. There are 14 articles, and they are laid out here in abridged form: Article I concerns the peaceful use of Antarctica; Article II concerns international co-operation and freedom of scientific investigation; Article III concerns free exchange of plans, scientific results, and personnel; Article IV prohibits new claims of territory, but upholds those already made; Article V prohibits nuclear explosions or waste disposal (*see* **Nuclear**); Article VI concerns the application of the Treaty to all areas south of 60°S, excluding the high seas (which come under International Law); Article VII concerns open inspection of any country's Antarctic operations by any other member country (*see* **Inspections**); Article VIII concerns the fact that observers (in Article VII) and scientists (in Article III) be under the jurisdiction of their own states; Article IX arranges for the Treaty states to meet periodically to consult; Article X is concerned with the Treaty states discouraging any improper activity by another country in Antarctica; Article XI concerns the reference of disputes to the International Court of Justice, if they cannot otherwise be peaceable settled; Article XII concerns a review of the Treaty in 1991, if such a review be requested by any contracting party; Article XIII provides that the Treaty be subject to ratification, and open for accession by any UN state or states that all signatories want in; Article XIV provides that the USA be the repository and the secretary of the Treaty. Note: The Antarctic Treaty is not a product or agency of the United Nations Organization.

Antarctic Trough. Permanent ring of pressure around Antarctica at about 60°S.

Antarctic Year. 1901-03. Brought into being by the Geographical Congress of 1900, in Berlin.

Sir Clements Markham, president of the Royal Geographical Society, in London, determined to send the British south on an expedition. He picked Scott to lead the Royal Society Expedition, also called the British National Antarctic Expedition (BNAE 1901-04). The Germans sent von Drygalski on the *Gauss*, for GerAE 1901-03, Sweden sent Otto Nordenskjöld on the *Antarctic*, for SwedAE 1901-04, and France sent Jean-Baptiste Charcot on the *Français*, for FrAE 1903-05.

Antarctica. Defined herein as all area — land, water, and, presumably air space — south of latitude 60°S. This is the most widely-held definition of Antarctica; it is the one used by the Antarctic Treaty, for example, and is the one used in this book. However, some authorities include all area south of the Antarctic Convergence, which would take in Heard Island, Bouvetøya, the South Sandwich Islands, South Georgia, and the other sub-Antarctic Islands. Antarctica is a continental mass, lying concentrically around the South Pole, and is mostly covered in ice. It is the southernmost continent, and would be roughly circular if it were not for the Antarctic Peninsula, the Ross Sea, and the Weddell Sea. The Antarctic Peninsula juts out northward like a thumb toward South America, and the two seas are deep embayments into the coast. Islands surround the giant land mass, of course, and the continent itself is composed of two unequal sized parts — East Antarctica and West Antarctica — divided by the Transantarctic Mountains. The whole continent has a volume of 7.2 million cubic miles. Antarctica has gone by other names in history. Before Cook's time it was called Southern Thule; in the early days of the sealers, in the 1820s, some called it New South Iceland; and Robert Johnson called it New South Greenland (although really these names applied only to what we now know as the South Shetlands. It's all they had, though, at that time). But the most common name applied throughout history, before "Antarctica" really caught on in the 1820s (the term had, apparently, been coined in the 1500s), was Terra Australis Incognita (i.e., the unknown southern land). Pretty much everyone referred to it as The Antarctic, until the 1950s, when the Americans began calling it Antarctica (that is a very general statement, however). The Spanish-speaking people call it Antártida, and the Scandinavians tend to call it Antarktis. If one wants to get to Antarctica, one must go by plane or ship. There are other ways to get there, but those two are the most practical. By ship, one approaches East Antarctica using one of three or four tried and tested sea passages — from New Zealand, Hobart, Heard Island, or South Africa. To get to West Antarctica, one leaves from South America.

Antarctica. Japanese movie of 1984. A spectacular commercial film, the biggest Japanese hit of the year, but didn't do so well out of Japan. 112 minutes, and in color, directed by Koreyoshi Kurahara, Akira Shiizuka was director of photography, and Vangelis provided the music. It told the story of JARE 1958 (the Japanese Antarctic Research Expedition), or more specifically, the fate of 15 sledge dogs abandoned on the ice. The players were Ken Takakura, Tsunekiko Watase, Eiji Okada, Masako Natsume, Keiko Oginome, Takeshi Kusaka, Shigeru Koyama, and So Yamamura. The film caused a bit of a stir over the issue of cruelty to animals.

The *Antarctica* *see* **The *UAP Antarctica***

Antarcticite. A new mineral, calcium chloride hexahydrate, discovered in late 1961 in Don Juan Pond, in the Wright Valley, Victoria Land, by George H. Meyer and his party.

Antarctics Sund *see* **Antarctic Sound**

Antarkos. The name often given to the Uruguayan Antarctic Expeditions (q.v.).

Estrecho Antártico *see* **Antarctic Sound**

Estrecho de Antártico *see* **Antarctic Sound**

Estrecho dell'Antártico *see* **Antarctic Sound**

Paso Antártico *see* **Antarctic Sound**

Playa Antártico. 62°27' S, 60°48' W. A small beach immediately E of Playa Pocitos, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by the scientific personnel from the Instituto Antártico Chileno, during ChilAE 1990-91, for the chinstrap penguin (what the Chileans call the Antarctic penguin) breeding colony here.

Seno Antártico *see* **Antarctic Sound**

Antártida. The Spanish name for Antarctica. The adjective is antártico, or (in the feminine form), antártica.

The *Antártida*. Argentine vessel in Antarctica in 1980-81 as part of that country's expedition of that season. She conducted krill investigations in the Scotia Sea and in South Shetlands waters.

Gora Antej. 71°46' S, 11°24' E. A mountain in the central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Russians.

Antena-jima *see* **Antenna Island**

Antena-zima *see* **Antenna Island**

Antenna Island. 69°00' S, 39°35' E. A small island, midway between Nesøya and East Ongul Island, in Lützow-Holm Bay. First mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37, but they mapped it as part of Ongul Island. Re-mapped by Japanese cartographers from surveys and air photos taken by JARE 1957, and named by them on June 22, 1972, as Antena-jima or Antena-zima (i.e., "antenna island"), for the radio antennas set on the island. US-ACAN accepted the name Antenna Island in 1975.

Glaciar Antevs *see* **Antevs Glacier**

Antevs Glacier. 67°19' S, 66°49' W. It flows N between the area of Seue Peaks and Humphreys Hill and the area of the Boyle Mountains, into the Müller Ice Shelf, at the SW side of Lallemand Fjord, on Arrowsmith Glacier, on the W coast of Graham Land. Surveyed by Fids from Base W and Base Y in 1955-57, and named by them as North Heim Glacier (i.e., the N part of Heim Glacier). That was the situation accepted by UK-APC on July 7, 1959. However, after studying the air photos taken by FIDASE in 1956-57, it became apparent that there were really two glaciers, one in the N and one in the S, and so, on the suggestion of the Americans, on Sept. 23, 1960 UK-APC re-named the N one as Antevs Glacier for Ernest Valdemar Antevs (1888-1974), U.S. glacial geologist, and kept the name Heim Glacier for the S one, doing away with the term "North Heim Glacier" altogether, it now being redundant. They plotted Antevs Glacier in 67°15' S, 66°47' W. US-ACAN accepted this situation in 1965. In 1986 Antevs Glacier was re-plotted by the Americans. The Argentines call it Glaciar Antevs.

Glaciar Anthony *see* **Anthony Glacier**

Anthony Bluff. 79°06' S, 160°07' E. A conspicuous rock bluff along the S wall of Mulock Glacier, 14 km NW of Cape Lankester. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for nuclear engineer Capt. Alexander E. Anthony, Jr., USAF, in charge of science and publications on the staff of the U.S. Antarctic Projects Officer, 1963-65. He was later much involved in Southwest American Indian pottery. NZ-APC accepted the name on May 20, 1965.

Anthony Glacier. 69°45' S, 62°54' W. Flows ESE into the Larsen Ice Shelf, terminating opposite the S tip of Hearst Island, south of Stefansson Sound, on the Wilkins Coast, on the E coast of Graham Land. The upper part was discovered and surveyed in Dec. 1936 by a sledge party of BGLE 1934-37, and the seaward side in Dec. 1940 by a sledge party from East Base during USAS 1939-41. Photographed aerially by RARE in Nov. 1947, surveyed from the ground the same month by Fids from Base E, and named by Ronne for Alexander Anthony, vice president of the J.P. Stevens Co., in NY, which contributed windproof clothing to RARE. It appears as such on an American map of 1949. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1955. The Argentines call it Glaciar Anthony.

Anthracite. Hard coal, black and brilliant, and found in Antarctica. It is the highest-ranked coal (i.e., that which has been subjected to the highest pressure for the longest period of time).

Antim Peak. 62°59' S, 62°30' W. Rises to 2100 m, with precipitous and partly ice-free SE slopes, in the Imeon Range, 3.4 km SSW of Mount Pisgah, 16 km SW of Cape Smith, and the same distance NE of Cape James, on Smith Island, in the South Shetlands. Nearby Mount Foster was always thought to be triple-peaked, but Greg Landreth's team, who made the first ascent of Mount Foster in 1996, determined it to be merely double-peaked, and the third one to be a separate peak. This third one, standing 2.4 km and 850 m respectively from the other two, was named Antim Peak by the Bulgarians on Dec. 15, 2006, for Antim I (1816-1888), the first head of the Bulgarian Exarchate that re-established autocephaly of the Bulgarian Church in 1870.

Antimony. Stibnite, symbol Sb. Metallic el-

ement belonging to the nitrogen family. It has been found in Antarctica.

Antipodes Fracture Zone. 60°00' S, 151°00' W. A submarine feature named in association with nearby Antipodes Island, it ranges between 50°S and 70°S, and between 176°W and 125°W. The name was proposed by Dr. Steven C. Cande, of the Scripps Institution of Oceanography, and UK-APC accepted that name on June 20, 1997. US-ACAN followed suit in Sept. 1997.

Anton Island. 66°02' S, 134°28' E. A small, low, ice-capped island, almost 1 km long, 8.5 km NNE of Lewis Island, just outside the E side of the entrance to Davis Bay. Discovered in 1956 by Phil Law's ANARE party off the *Kista Dan*. A helicopter party led by Law landed on the island on Jan. 18, 1960. Named by ANCA on Oct. 11, 1960, for Anton Moyell, 1st officer on the *Magga Dan* in 1960. US-ACAN accepted the name in 1962.

Antona, A. *see* **Órcadas Station**, 1922

Punta Antonelli. 63°43' S, 61°39' W. In the NE part of Hoseason Island, in the Palmer Archipelago. Named by the Argentines for 1st engineer Antonio Antonelli, on the *Pampa* during the 1938 relief of Órcadas Station.

Antoni B. Dobrowolski Station *see* **Dobrowolski Station**

The *Antoni Garnuszewski*. A 5975-ton, 121.9-meter Polish tug, built by Warskiego of Szczecin, and launched on Feb. 15, 1974. She took part in PolAE 1977-78 (Capt. Tadeusz Kalicki), PolAE 1978-79 (Capt. Wladyslaw Rymarz), PolAE 1979-80 (Capt. Tadeusz Draczkowski), PolAE 1980-81 (Capt. Draczkowski), PolAE 1984-85 (Capt. Roman Marczinowski), and PolAE 1987-88 (Capt. Andrzej Drapella). Also, during that last season, and in company with the *Río Baker*, she took down the Spanish Antarctic Expedition. In 1989 she was sold to the Chinese, and became the *Zhe Yiang*. In 1991 her name changed again, to the *Yu Mei*, and she was broken up in Calcutta on April 4, 1998.

The *Antonina Nezhdanova*. Lindblad Travel's ship, built in 1978. Very modern, she had a stabilizing and satellite system, a library, sauna, seawater pool, and 3 decks — upper, main, and second. She carried six Zodiac landing craft. All public rooms underwent extensive renovations in Hong Kong in April 1988, and she could accommodate 188 passengers (although Lindblad took 90 maximum). She had an ice classification, was 3941 gross tons, 330 feet long, 50 feet wide, had a 23-foot draft, and had two 2600 hp engines. Her cruising speed was 15 knots. Registered in the USSR, she was owned and operated by the Far Eastern Shipping Company (the largest Russian ship owner in the Pacific). Her first tour in Antarctic waters was 1988-89. On Oct. 21, 2004, she was damaged in a typhoon.

Punta Antonio. 62°28' S, 60°47' W. A point separating Playa El Remanso (to the N) from Playa Aranda (to the S), on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Capitán de corbeta Antonio Mazzei Fernández, meterologist on the *Piloto Pardo*, who assisted the air and sea operations of the Instituto Antártico Chileno during the first census of marine mammals, conducted during ChilAE 1965-66. For more on Don Antonio, *see* **Caleta Mazzei**.

Antonio Huneeus Gana Base. 80°05' S, 81°16' W. Chilean summer scientific base in the Patriot Hills, in the Ellsworth Mountains, in Ellsworth Land. The site was selected in Jan. 1995 and built in Nov. 1997. On Oct. 11, 1999 it was officially named Estación Polar Antonio Huneeus Gana, for the Chilean Minister of Foreign Affairs of a hundred years before. For more on Don Antonio, *see* **Glaciar Huneeus**.

Antonio Moro Refugio. 63°27' S, 57°02' W. Argentine refuge hut built on a rock surface, on Summit Pass, at the head of Hope Bay, on the E end of Trinity Peninsula, by Esperanza Station army personnel on June 20, 1955, and inaugurated on Aug. 20, 1955, as Refugio Antonio Moro, named for the cook at Órcadas Station in 1948 (by 1955 he was a member of the civilian staff of the secretary of the army). Destroyed by a storm in 1957, it was rebuilt in Oct. 1958, on Summit Ridge nearby, but was destroyed in another storm in March 1959. Much later (1971) Islas Malvinas Refugio was built near here.

Antonisen, Anton. b. Jan. 20, 1867, Bergen, Norway. A whaler in the South Shetlands during the 1914-15 season, who died of a broken neck in the Belgica Strait on Dec. 18, 1914, and was buried in the Whalers Bay Cemetery on Deception Island.

Antonov Peak. 63°45' S, 58°36' W. Rising to over 1300 m in the NW part of Trakiya Heights, 4.45 km E of Mount Schuyler, 4.25 km SE of Sirius Knoll, 4.9 km W by N of Mount Daimler, and 8.23 km N of Skakavitsa Peak, it surmounts Russell West Glacier to the N and Victory Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, for Rumen Antonov (b. 1944), Bulgarian automobile designer.

Antwerp Island *see* **Anvers Island**

Antwerpen Island *see* **Anvers Island**

Anu whakatoro Glacier. The "w" is small. 77°17' S, 161°42' E. A glacier, 1.1 km long, between Tukeri Peak and Spain Peak, on the headwall of Ringer Valley, in the Saint Johns Range of Victoria Land. Named by NZ-APC on Sept. 12, 2005. The expression "anu whakatoro" means "force of wind," and was applied descriptively to this peak. US-ACAN accepted the name (but with a capital W) in 2006.

Anuchin Glacier. 71°17' S, 13°31' E. Flows southward for 8 km to Lake Unter-See, in the N part of the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GerAE 1938-39, and plotted from those photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Re-mapped again by SovAE 1960-61, and named by the Russians in 1966 as Lednik Anuchina, for geographer Dmitri N. Anuchin (1843-1923). US-ACAN accepted the name Anuchin Glacier, in 1970. The Norwegians call it Anuchinbreen.

Lednik Anuchina *see* **Anuchin Glacier**

Anuchinbreen *see* **Anuchin Glacier**

Île Anvers *see* **Anvers Island**

Isla Anvers *see* **Anvers Island**

Anvers Island. 64°33' S, 63°35' W. A high, mountainous island, 74 km long and 55 km wide, and almost completely ice covered, it is the largest and most southerly island in the Palmer Archipelago, at the SW end of this group, and SW of Brabant Island, from which it is separated by the Schollaert Channel and the Melchior Islands, off the Danco Coast, on the W coast of Graham Land. The island actually lies between 64°15' S and 64°50' S, and between 62°45' W and 64°20' W. Its highest peak is Mount Français. Biscoe, on Feb. 21, 1832, made the first landing, and, thinking that it was part of the continent, called it Graham Land. Dallmann roughly charted its W and S coasts in Jan. 1874, but de Gerlache got the true geographic picture in 1898, during BelgAE 1897-99. He roughly charted its E coast between Feb. 1 and 9, 1898, proved it to be an island, and named it Île Anvers, for his home province of Anvers (i.e., Antwerp) which had contributed to the expedition. It appears as such on his expedition map of 1899, and on a British chart of 1900 as Anvers Island. For many years after its first naming, it would also be seen, occasionally, as Antwerp Island. In 1903, Julián Irízar referred to it as Isla Amberes (which means the same thing), and in 1956 that became the official Argentine name for it. The W coast was recharted by FrAE 1903-05. US-ACAN accepted the name Anvers Island in 1947 (at the expense of Antwerpen Island, which they rejected), and UK-APC followed suit on Sept. 8, 1953. It appears on a Chilean chart of 1947, as Isla Anvers, but on a Chilean map of 1947 as Isla Yelcho (named after the *Yelcho*), and in a 1948 reference as Isla Arzobispo Vicuña (after the first Archbishop of Santiago). It was first occupied in 1954-55 by the British Base N, and later the U.S. Palmer Station was built here. In 1956-58 it was photographed aerially by FIDASE, and its E side was surveyed from the ground by Fids from Base N. It appears on a British chart of 1961. It appears in the Chilean gazetteer of 1974, as Isla Anvers, and that is what the Chileans call it today.

Anvers Island Station *see* **Base N**

Roca Anvil *see* **Anvil Rock**

Anvil Crag. 62°12' S, 58°29' W. A vertical craggy hill, with 3 rock faces and a flat top, rising to 339 m at the head of a medial moraine, 1.5 km WSW of Sphinx Hill, and between Sphinx Glacier and Baranowski Glacier, on the W side of the entrance to Admiralty Bay, King George Island, in the South Shetlands. Following geological work by BAS in 1975-76, it was named on Feb. 7, 1978 by UK-APC, for its resemblance to an anvil, and as such it appears in a British gazetteer of 1980. US-ACAN accepted that name. PolAE 1977-78, however, saw it differently. They named it Zamek, for the royal castle

in Warsaw re-built after World War II, and it appears as such on a Polish map of 1979. In 1980 Poland officially accepted the name Zamek. The British were the latest to replot this feature, in late 2008.

Anvil Pond. 77°33' S, 160°48' E. A frozen freshwater pond, 1 km NW of Rodriguez Pond, and 1.3 km W of Healy Trough, in the feature they call Labyrinth, in the Wright Valley, in the McMurdo Dry Valleys of Victoria Land. A USAP field party suggested the name, because a rock in this pond resembles an anvil in shape. US-ACAN accepted the name on July 14, 2004, and NZ-APC followed suit on Nov. 30, 2004.

Anvil Rock. 65°14' S, 64°16' W. A low rock in water, 370 m W of the extreme N of Grotto Island, and between that island and the SE end of the Forge Islands, N of Faraday Station (now Vernadsky Station) in the Argentine Islands, in the Wilhelm Archipelago, off the coast of Graham Land. Charted and named descriptively in 1935, by BGLE 1934-37, and as such it appears on Rymill's 1938 map of the expedition. In the 1940s it would occasionally appear as Roca de Anvil. US-ACAN accepted the name Anvil Rock in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on an Argentine chart of 1958, as Roca Anvil, but on one of their 1960 charts as Roca Yunque (a direct translation). It appears in the Chilean gazetteer of 1974, as Roca Anvil.

Anxiety Nunataks. 68°34' S, 153°37' E. A line of nunataks on the W side of Mawson Peninsula, in George V Land. Photographed aerially by OpHJ 1946-47, by SovAE 1958, and by ANARE in 1959. During the ANARE flight, there was engine trouble, causing anxiety to the two men aboard. Named by ANCA on July 31, 1972.

Anzac Glacier. 66°52' S, 109°28' E. Due E of the Hatch Islands, on the coast of Wilkes Land. Named by ANCA on Aug. 12, 2010, for the Australian and New Zealand Army Corps, during World War I.

A028. 68°24' S, 112°13' E. Known as Loewe AWS. An Australian automatic weather station, at an elevation of 1622 m, installed in Oct. 1980, in the hinterland of Wilkes Land, behind the Budd Coast. It was re-installed on April 12, 1985, and removed on Feb. 15, 1986, being replaced with A028-A (see below). Named for Fritz Loewe (q.v.).

A028-A. 68°24' S, 112°13' E. Australian automatic weather station, at an elevation of 1622 m, installed on Feb. 19, 1986, to replace A028 (see above), in Wilkes Land. It was removed on April 26, 1986, and a new one was installed, in the same location, on Oct. 6, 1986. The new one was removed on May 30, 1990. It would eventually be replaced with A028-B (see below).

A028-B. 68°24' S, 112°13' E. Australian automatic weather station, at an elevation of 1622 m, installed on Nov. 6, 1998, in Wilkes Land, to replace the old A028-A (see above). It was removed on July 28, 2005.

Aogori Bay. 69°13' S, 39°44' E. A small but deep indentation into the W side of the Langhovde Hills, just S of Mount Futago, along the coast of Queen Maud Land. Mapped by Japanese cartographers from surveys and air photos taken by JARE between 1957 and 1962, and named by them on June 22, 1972, as Aogori-wan (i.e., "blue-ice bay"). US-ACAN accepted the name Aogori Bay in 1975.

Aogori-wan *see* **Aogori Bay**

Aomen Dao *see* **Sandercock Island**

The *Aomi*. Japanese yacht that visited the South Shetlands and the Antarctic Peninsula in 1985-86, commanded by Capt. Yoshi.

Mount Aorangi. 72°25' S, 166°22' E. Rising to 3135 m, it is the highest mountain in the Millen Range. So named by the NZ Federated Mountain Clubs Antarctic Expedition of 1962-63, as it seems to pierce the clouds, as does Mount Cook in New Zealand, which the Maoris named "aorangi" (i.e., "the cloud-piercer"). NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Aorta Ridge. 78°06' S, 163°30' E. Extends eastward toward Holiday Peak, which is between the lower ends of Miers Glacier and Adams Glacier, in Victoria Land. Holiday Peak is also known as The Heart, thus this name given by NZ-APC. US-ACAN accepted the name in 1995.

Apatite. Clear, fragile, soft series of phosphate minerals, the major source of phosphorus. Found in Antarctica.

APC. Antarctic Place Names Committee. *See also* UK-APC and NZ-APC.

Apedale Cove *see* **Aitken Cove**

Isla Apéndice *see* **Apéndice Island**

Islote Apéndice *see* **Apéndice Island**

Apéndice Island. 64°11' S, 61°02' W. An island in the shape of a hill, rising to 538 m opposite Brialmont Cove, NW of Charles Point in Hughes Bay, and 4.4 km SW of Tisné Point, off the Danco Coast, on the W coast of Graham Land. Ice-free in the summer, it is covered with abundant Antarctic vegetation, mostly mosses and lichens. On Jan. 24, 1898, BelgAE 1897-99 charted it as a cape, and de Gerlache named it Cap von Sterneck, for General Robert von Sterneck (1839-1910), of Vienna, who designed the pendulum used on the expedition. It appears as Cape Von Sterneck on Frederick Cook's 1900 English language version of the expedition's map, and also on Rymill's 1938 map of BGLE 1934-37. It was also seen as Cape V. Sterneck, and (erroneously) as Cape Van Sterneck. It appears in error on a British chart of 1909, as Cape Charles. The Chileans were the first to change the name when ChilAE 1947 defined it correctly as an island, rather than a cape, plotted it in 64°16' S, 61°02' W, and re-named it Isla Telegrafista Rivera, for Carlos Rivera T., the telegraphist on that expedition. That is what the Chileans call it to this day, except in the shortened form of Isla Rivera. For a while the Argentines referred to it as Isla Sterneck; however, ArgAE 1953-54 surveyed it, and re-named it Isla Apéndice, because from a certain angle it looks like an appendix. However, it does appear on a 1956 Argentine chart as Isla César, and on a 1957 Argentine chart as Islote Apéndice. But, today, the Argentines call it Isla Apéndice. FIDASE photographed it aerially in 1956-57, and it appears on a British map of 1959, as Andrew Island, for Jimmy Andrew, of the FIDS, but UK-APC adopted the name Sterneck Island on Sept. 23, 1960. US-ACAN accepted the name Apéndice Island in 1965. UK-APC has now followed the American naming.

Apfel Automatic Weather Station. 66°21' S, 100°49' E. An Australian AWS, at an elevation of 150 m, on Apfel Glacier. Opened on Jan. 5, 2000, it ran until July 17, 2001.

Apfel Glacier. 66°25' S, 100°35' E. A glacier, 32 km long and 8 km wide, flowing WNW along the S flank of the Bunger Hills, and terminating in the Edisto Ice Tongue, on the Knox Coast of Wilkes Land. Delineated from air photos taken by OpHJ 1946-47, and mapped by SovAE 1956, who plotted it in 66°22' S, 100°43' E. Named by US-ACAN in 1955, for Dr. Earl Taylor Apfel (b. Nov. 6, 1892, Waterloo, Ia. d. June 1973, Syracuse, NY), professor of geology at Syracuse University, who was Task Force 39's geologist during OpW 1947-48. ANCA accepted the name on Oct. 22, 1968. It has since been replotted on a number of occasions.

Glaciar Aphrodite *see* **Aphrodite Glacier**

Aphrodite Glacier. 68°47' S, 64°32' W. A glacier, 24 km long, flowing N into Bowman Inlet, near Mobiloil Inlet, 5 km W of Victory Nunatak, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially by Wilkins on Dec. 20, 1928, and by Ellsworth on Nov. 23, 1935, and from the photos of both expeditions W.L.G. Joerg plotted the lower portion of the glacier in 1936. It was photographed again by Dougie Mason of FIDS on Aug. 14, 1947 and by RARE on Dec. 22, 1947, using trimetrogon air photography. It was surveyed from the ground by Fids Peter Gibbs and Peter Forster from Base E in Dec. 1958, and by Foster again in Nov. 1960, and plotted by them in 68°54' S, 64°32' W. Named by UK-APC on Aug. 31, 1962 for the Greek goddess, it appeared in the British gazetteer of 1962. US-ACAN accepted the name later in 1962. It was later replotted in 68°50' S, 64°32' W, but has since been re-plotted yet again. It appears in the 1991 Argentine gazetteer as Glaciar Aphrodite.

Apocalypse Peaks. 77°23' S, 160°51' E. A group of peaks E of the Willett Range, between Barwick Valley and Balham Valley, in Victoria Land. The highest is 2360 m. So named by VUWAE 1958-59 because the peaks are cut by talus (scree) slopes that make them look like the Four Horsemen of the Apocalypse. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Apollo Glacier. 68°50' S, 64°45' W. A glacier, 14 km long, flowing NE to join the lower part of Aphrodite Glacier, which then flows into Bowman Inlet, on the Bowman Coast, 3 km from the E coast of the Antarctic Peninsula. Photographed aerially by Wilkins on Dec. 20, 1928, and by Ellsworth on Nov. 23, 1935, and from

the photos taken by both these expeditions W.L.G. Joerg, the American cartographer, plotted the lower portion of the glacier in 1936. It was photographed again on Dec. 22, 1947, by RARE, using trimetrogon air photography, and roughly surveyed in Nov. 1960 by Peter Foster of FIDS. Named by UK-APC on June 7, 1962, for the Greek god. US-ACAN accepted the name later in 1962. It appears in the 1991 Argentine gazetteer as Glaciar Apolo.

Apollo Ice Rise *see* **Apollo Island**

Apollo Island. 70°15' S, 1°55' W. Also called Apollo Ice Rise. A small, ice-covered island 28 km ENE of Blåskimen Island, and 16 km ENE of Sanae Station, in the NW part of the Fimbul Ice Shelf, in Queen Maud Land. It first appears on a South African map of 1969, and US-ACAN accepted the name in 1970.

Apollo Peak. 77°30' S, 160°48' E. A dolerite capped peak rising to 1900 m, W of Mount Electra, in the Olympus Range of Victoria Land. After work carried out here by NZARP, it was named by NZ-APC on Nov. 17, 1983, for the god Apollo. US-ACAN accepted the name.

Glaciar Apolo *see* **Apollo Glacier**

Mount Apolotok. 72°15' S, 164°29' E. A high, prominent, red granite peak, rising to 2555 m, in the Salamander Range of the Freyberg Mountains. It is an Eskimo word meaning "the big red one," and was named by the Northern Party of NZGSAE 1963-64. US-ACAN accepted the name in 1964.

Apostrophe Island. 73°31' S, 167°26' E. A small, ice-covered island lying close off Spatulate Ridge, in Lady Newnes Bay, in Victoria Land. So named by NZ-APC on April 19, 1966, because, in plan, the island resembles an apostrophe. US-ACAN accepted the name later in 1966.

Appalachia Nunataks. 69°44' S, 71°04' W. Rising to about 600 m, on the W side of the Elgar Uplands, in the N part of Alexander Island. Following BAS surveys, 1973-77, and in association with Delius Glacier, and with the composers theme in this area, itt was named by UK-APC on Feb. 7, 1978 for the 1902 Delius composition "Appalachia." It appears on a British map of 1978, and in the British gazetteer of 1980. US-ACAN accepted the name.

Appelman, William Henry. b. June 1, 1823, Stonington, Conn., son of John Appelman and his wife Matilda. Skipper out of New London and Mystic, who commanded the *Thomas Hunt* in the South Shetlands in the 1874-75 and 1875-76 seasons, and the *Charles Shearer*, in 1877-78, during its final and fatal voyage. He was married to Lois Noyes Palmer, who sailed around the Horn with her husband. Their eldest son, William Henry Appelman, Jr. (born 1851, in Sacramento), also a skipper in his own right, was also aboard, as was Appeleman Senior's nephew, Frederick Appelman. Errors have crept in over this man's name, errors that started when early Antarctic historian Edwin Swift Balch interviewed three old sealing captains in the very first years of the 20th century. Their memory for details was fading, and Balch set down as dogma sine caveat that which they told him (*see* **King, James A.**). They talked about the *Shearer*, and it was probably old Cap'n Tom Lynch who told Balch that the skipper's name was James Appleman. From the Balch article in the *Journal of the Franklin Institute* of Feb. 1904, pretty much everyone else derived mercilessly. The man's name was William Henry Appelman.

Point Appleby. 67°25' S, 59°36' E. It forms part of the W side of an unnamed island, about 1.3 km S of Warren Island, in the William Scoresby Archipelago. Discovered by personnel on the *William Scoresby* in Feb. 1936, and charted by them as a point on the E shore of William Scoresby Bay, and plotted in 67°24' S, 59°37' E. They also named it. In 1946 it was mapped by Norwegian cartographers using air photos taken by LCE 1936-37, and re-plotted and re-defined as above. US-ACAN accepted the name in 1970.

Aprilov Point. 62°27' S, 59°54' W. A point, 6.9 km E of Duff Point, 2.1 km ESE of Kabile Island, 2.2 km ENE of Crutch Peaks, 1.8 km S of Ongley Island, 5.5 km W of Agüedo Point, and 2.3 km NNW of Sevtopolis Peak, it forms the E side of the entrance to Haskovo Cove, on the N coast of Greenwich Island, in the South Shetlands. It was mapped by the British in 1968, and named on Dec. 15, 2006 by the Bulgarians, for Basil Aprilov (1789-1847), prominent educator.

Apstein, Karl. b. 1862. Zoologist from Kiel, who was on the German Navy Oceanographic Expedition, 1898-99. He died in 1950.

The *Aquiles*. A Chilean naval ship under charter to Lindblad Travel, for a tourist cruise to the South Shetlands and the Antarctic Peninsula, between Jan. 11 and 29, 1969. There were 112 tourists on board, and 70 of them were marooned for the night at Palmer Station. She was part of ChilAE 1976-77 (Captain Osvaldo Schwarzenberg Stegmaier; President Pinochet was aboard); ChilAE 1978-79 (Captain Sergio Cabezas Dufeu); and ChilAE 1980-81 (Captain Fernando Lazcano Jiménez).

The *Aquiles II*. Chilean ship, used during ChilAE 1990-91 (Captain Gabriel Munita Cristi); ChilAE 1991-92 (Captain Jorge Huerta Dunsmore); and ChilAE 1992-93 (Captain Huerta).

Isla Aragay *see* **Gulch Island**

Glaciar Arago *see* **Arago Glacier**

Arago Glacier. 64°51' S, 62°23' W. A glacier on Arctowski Peninsula, flowing S into Andvord Bay, just NW of Moser Glacier, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS carographers from FIDS surveys and from air photos taken by FIDASE, 1956-57, and, in keeping with the naming of features in this area for pioneers of photogrammetry, this feature was named by UK-APC on Sept. 23, 1960, for Dominque-François-Jean Arago (1786-1853), French geodesist who, in 1839, first demonstrated the application of photography to mapmaking. It appears on a British chart of 1961. US-ACAN accepted the name in 1964. The Argentines call it Glaciar Arago.

Isla Araguez *see* **Araguez Island**

Araguez Island. 62°26' S, 59°47' W. A small island on the S side of Dee Island, in the South Shetlands. Named Isla Araguez by the Chileans in 1998. UK-APC accepted the name in its translated form on May 11, 2005. It was originally plotted in 62°23' S, 59°47' W, but in late 2008 the UK amended its coordinates.

Arai Terraces. 83°12' S, 163°36' E. A series of crevassed terraces and icefalls, close southward of the Fazekas Hills, near the head of Lowery Glacier. So named by NZGSAE 1959-60 because this is a natural barrier to sledge travel which the party was unable to traverse. The Maori word for barrier is "arai." NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1966.

Cabo Aramayo. 77°40' S, 42°25' W. A cape NE of Gould Bay, in the S part of the Weddell Sea. Named by the Argentines in 1958 for Luis Miguel Aramayo, conscript of the class of 1934, who died in the anti-Perón coup of Sept. 16, 1955.

Bahía Aramburu. 63°42' S, 58°00' W. A bay indenting the S coast of Trinity Peninsula between Azimuth Hill and Botany Bay. Named by the Argentines for Lt. Gen. Pedro Eugenio Aramburu (1903-1970), one of the leaders in the coup against Perón in 1955, and provisional president of Argentina, 1956-58. He was kidnapped by terrorists in 1970, and murdered. This bay has been confused with Brandy Bay, several km to the south. There is no other name, at time of writing (2010), in any other language, for Bahía Aramburu.

Aramis Range. 70°37' S, 67°00' E. The most southerly of the 3 northern ranges of the Prince Charles Mountains, it extends for 50 km in a SW-NE direction, overlooking the Amery Ice Shelf from the W, 17 km SE of the Porthos Range, in the Prince Charles Mountains of Mac. Robertson Land. First visited in Jan. 1957 by Bill Bewsher's ANARE Southern Party, and he named it for the character in *The Three Musketeers*, the book most read on his trip. ANCA accepted the name on July 22, 1957, and US-ACAN followed suit in 1962. First plotted in 71°00' S, 67°00' E, it has since been replotted.

The *Aranda*. A 1734-ton, 59.2-meter, red and white ice-reinforced Finnish research vessel launched in Helsinki in June 1989, the first research vessel owned by the Finnish Institute of Marine Research. She took down the Finnish and Swedish Antarctic expeditions of 1989-90, and was the first Finnish vessel in Antarctic waters. Jukka Kyröhanka was skipper. She was back in 1995-96, taking down the Nordic Antarctic Research Program expedition. Skipper that year was Torsten B. Roos.

Glaciar Aranda. 62°28' S, 60°47' W. A glacier immediately S of Playa Aranda, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for 1st Lt. Óscar Aranda Valverde, naval officer on the *Piloto Pardo* during ChilAE 1965-66, who actively participated in the scientific studies conducted by the Chilean Antarctic Institute.

Playa Aranda. 62°28' S, 60°47' W. A beach between Glaciar Aranda to the S and Punta An-

tonio to the N, on the W coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by Chile in association with the glacier.

Cerro Araos. 63°45' S, 58°21' W. A hill on the NW side of Russell East Glacier, on the S side of Trinity Peninsula. Named by the Chileans for Engineer Lt. Jorge A. Araos Santibáñez, of the Chilean Army, who took part in ChilAE 1947-48 and in the establishing of General Bernardo O'Higgins Station. The Argentines call it Cerro de la Costa.

Punta Araos. 64°49' S, 62°52' W. The point forming the extreme N of Waterboat Point, 2.5 km SW of Duthiers Point, on the E coast of Aguirre Passage, which gives access from the N to Paradise Harbor, on the W coast of the Antarctic Peninsula. ChilAE 1950-51 made a complete survey of this area and named this feature after 1st Lt. Roberto Araos Tapia of the Chilean Air Force, the first commander of Presidente Gabriel González Videla Station, established near here in 1951.

Arapya Glacier. 78°12' S, 84°54' W. A glacier, 11.4 km long and 5 km wide, flowing southward along the W side of Barnes Ridge and E of Chapman Rock, and joining Ellen Glacier SW of Mount Besch, on the E side of the north-central part of the Sentinel Range, S of Young Glacier, in the Ellsworth Mountains. Mapped by the Americans in 1988. Named by the Bulgarians on Sept. 14, 2010, after the seaside locality of Arapya, in southeastern Bulgaria.

Cabo Arauco. 68°46' S, 70°32' W. A cape, formed by badly-defined ice cliffs, in the NE part of Alexander Island, and which forms the extreme S of the entrance to Marguerite Bay. Discovered by FrAE 1908-10, although left unnamed. ChilAE 1947 named it Cabo 18 de Setiembre, for Chile's independence day, and as such it appears on a Chilean map of that year. In 1962, following the suggestion that features containing numerals be re-named, the new name Cabo Arauco was picked, to honor the province of Arauco. The Russians plotted it in 68°43' S, 70°40' W, and called it Mys Russkij (i.e., "Russian cape"), and the Argentines call it Cabo Ruso (i.e., "Russian cape"), but plot it in 69°11' S, 71°19' W.

Islote Aravena *see* **Aravena Rock**

Aravena Rock. 62°30' S, 59°42' W. A large rock, or very small island, S of Canales Island, it is the central of 3 such rocks which are closest off Ferrar Point, on the SE coast of Discovery Bay, Greenwich Island, in the South Shetlands. ChilAE 1946-47 made a thorough charting of Discovery Bay in Jan. and Feb. 1947, and named this rock Islote Aravena, for a member of the hydrographic survey party. It appears as such on a 1951 Chilean chart. UK-APC translated the name on May 11, 2005. The British were the latest to replot this feature, in late 2008.

Arbanasi Nunatak. 62°32' S, 60°03' W. A rocky peak rising to 320 m in Vidin Heights, Livingston Island, in the South Shetlands, 860 m ESE of Sharp Peak, 2 km W of Kubrat Knoll, and 2.6 km NW of Edinburgh Hill. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, for the settlement and monastery of Arbanasi, near the old Bulgarian capital of Veliko Tarnovo.

Zaliv Arbatskij. 70°10' S, 2°50' E. A gulf in the area of the Fimbul Ice Shelf, along the coast of Queen Maud Land. Named by the Russians.

Arcas Rocket. U.S. atmospheric sounding rocket (*see* **Rockets**).

Nunatak Arce. 66°07' S, 61°10' W. In the extreme NE of Jason Peninsula, on the E coast of the Antarctic Peninsula. Surveyed by personnel of the Argentine Antarctic Institute during ArgAE 1989-90, and named by them for Manuel Arce, a member of the crew of the *Uruguay* who rescued Charcot's 1903-05 expedition.

Archambault Ridge. 73°42' S, 162°55' E. Descends from the Deep Freeze Range to Campbell Glacier, between Rainey Glacier and Recoil Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Lt. John Louis Archambault, USN, medical officer at McMurdo in 1967. NZ-APC accepted the name on Dec. 4, 1968.

Archangel Nunataks *see* **Arkhangel'skiy Nunataks**

The *Archangelgracht*. A 7950-ton, 130-m Dutch container ship built in 1990, and operated by Spliethoff, as part of their fleet of "gracht" ships ("gracht" means "canal"). She had 3 cranes on board, each of which could lift 40 metric tons. In Feb. 2001 she was contracted by the NSF to take cargo from Lyttelton, NZ, to Antarctica. Pieter Kampstra (b. 1964, Netherlands) was skipper. She arrived at McMurdo on Feb. 16, 2001, left on Feb. 18, and returned to NZ on Feb. 26, 2001.

Archar Peninsula. 62°27' S, 60°00' W. 3 km long, it forms the NW extremity of Greenwich Island, and is bounded by Razlog Cove to the N, and McFarlane Strait to the S, in the South Shetlands. The NW half is snow-free in summer. Named by the Bulgarians on Nov. 4, 2005 for the settlement of Archar, in NW Bulgaria, successor of the ancient town of Ratiaria.

Cape Archer. 76°51' S, 162°52' E. Marks the N side of the entrance to Granite Harbor, on the coast of Victoria Land. Named by Campbell's Northern Party during BAE 1910-13, for Walter Archer. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Mount Archer. 69°12' S, 157°39' E. A rock peak immediately S of Archer Point, on the W side of Harald Bay, on the coast of Oates Land. Discovered and photographed in Feb. 1959 on an ANARE flight from the *Magga Dan*. Named by ANCA on July 22, 1959, in association with the point, and plotted by them in 69°10' S, 157°35' E. US-ACAN accepted the name in 1969. It has since been replotted.

Archer, Walter William. b. May 25, 1869, Newington, Surrey, son of printer compositor William Charles Archer and his wife Frances Alice Orton. Late RN, he was chief steward on Scott's BAE 1910-13. He later ran a catering business in London, and then a confectionery business, and died on Jan. 28, 1944, in Edmonton.

Archer Glacier. 65°10' S, 63°05' W. Flows NW into the head of Bolsón Cove, in Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed from the air by FIDASE, 1956-57, and, in keeping with the practice of naming certain features in this area after photography pioneers, it was named by UK-APC on Sept. 23, 1960, for Frederick Scott Archer (1813-1857), British architect and, in 1849, inventor of the wet collodion process of photography, the first practical process on glass, and plotted by them in 65°12' S, 63°02' W. US-ACAN accepted the name in 1964. It has since been re-plotted.

Archer Peak. 71°52' S, 171°10' E. Rising to 110 m, on the SW extremity of Possession Island. Named by Borchgrevink in 1898-1900, for Norwegian naval architect Colin Archer (b. 1832, Laurvig, near Larvik, son of Scottish immigrants William and Julia Archer. d. 1921), designer of the *Southern Cross* (and also the *Fram*). US-ACAN accepted the name in 1962. It is also (erroneously) called Anchor Peak (there is another Anchor Peak, on Svend Foyn Island).

Archer Point. 69°11' S, 157°39' E. A rocky cape marking the W side of Harald Bay, about 9 km W of Williamson Head, on the coast of Oates Land, Victoria Land. Discovered in Feb. 1911 by Lt. Harry Pennell in the *Terra Nova*, during BAE 1910-13, plotted by him in 69°08' S, 157°35' E, and named by him for Walter Archer. US-ACAN accepted the name in 1949. It has since been replotted.

Punta Archibald *see* **Archibald Point**

Archibald Point. 63°12' S, 56°40' W. An exposed rocky point on the SW side of Bransfield Island, off Trinity Peninsula, in Antarctic Sound. Surveyed by Fids from Base D in 1958-61, and named by UK-APC on Feb. 12, 1964 for George Kenneth "Ken" Archibald (b. 1933), 1st officer on the *Shackleton* during this period. US-ACAN accepted the name later in 1964. The Argentines call it Punta Archibald.

The *Archie*. A 20-ton Chilean sealer owned by Messrs Braun and Blanchard, of Punta Arenas. In 1902, with a crew of 12 under the command of Capt. Friedrich Pasle, she visited the South Shetlands. *See also* **The *Pichincha*** and **The *Rippling Wave***.

Cerro Arcondo *see* **Passes Peak**

Glaciar Arcondo *see* **Russell West Glacier**

Nunatak Arcondo. 66°09' S, 61°09' W. On Scar Inlet, in the extreme SW part of Jason Peninsula, on the E coast of the Antarctic Peninsula. Arcondo Refugio was to be found here. Named by the Argentines for Infantry Major Pedro Pascual Arcondo (*see* **Arcondo Nunatak**).

Arcondo Nunatak. 82°08' S, 41°37' W. Rising to 780 m, 8 km S of Mount Spann, in the Panzarini Hills of the Argentina Range, at the NE end of the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from USGS ground surveys conducted during their U.S. Pensacola Mountains Project, of 1965-66. Named by US-ACAN in 1968, for

Major Pedro Pascual Arcondo, officer-in-charge at General Belgrano Station, 1959-61. Major Arcondo made the first Argentine parachute jump in Antarctica, in 1958, at General Belgrano Station, and died in Antarctica on Jan. 31, 1962 (*see* **Deaths**, 1962). The feature appears on an American map of 1968. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974. If it seems odd that the British would accept a name honoring an Argentine, then it is even odder that the Argentines refused to accept it because the British had already done so; there is a 1978 Argentine reference to a Nunatak Mendoza (named for the Argentine province), which occupies the very same coordinates as those of Arcondo Nunatak. The SCAR gazetteer has Mendoza Nunatak and Arcondo Nunatak being two different features, but, given the fact that there is nothing else out there, in that stretch of the Panzarini Hills, except perhaps Nunatak San Fernando several miles to the W, and given two different names — one given by the Americans and British and one by the Argentines — then they must really be the same feature.

Arcondo Refugio *see* **Mayor Arcondo Refugio**

Mount Arcone. 81°43' S, 161°02' E. A horseshoe-shaped mountain rising to 1350 m, in the Nash Range, at the E side of Dickey Glacier, 12 km N of Mount Canopus, in the Churchill Mountains. Named by US-ACAN on Jan. 24, 2003, for Steve Arcone. NZ accepted the name on Feb. 27, 2003.

Arcone, Steven Anthony "Steve." b. Jan. 10, 1944, Bronx, but raised in Greenwich Village, son of hairdresser Anthony Benedetto Arcone and his wife, novelist Sonya Balanoff. Geophysicist specializing in radar exploration of ice and snow. On Sept. 25, 1971, he married Penelope Ruth Hills. From Oct. 1, 1973 (part time), and from 1975 (full time) to the present, associated with the U.S. Army's CRREL (Cold Regions Research and Engineering Laboratory), studying permafrost in the Arctic. He conducted ground radar traverses and airborne radar surveys in the area of the South Pole, the Transantarctic Mountains, and the ice sheet of West Antarctica, during 10 field seasons: Jan. 1993 (crevasse detection; he made his first trip to the Pole); Nov. and Dec. 1995 (finding hidden crevasses on Leverett Glacier; went to the Pole for the 2nd time); Nov. and Dec. 1998 (using radar to study geologic features in the dry valleys); 1999, 2000, 2001, 2002 (ITASE project, drilling ice cores to study Antarctic storm history); Nov. and Dec. 2003 (studying small glaciers and dry valleys; went to the Pole for the 3rd time); in 2004 he was going to go on a South Pole traverse, but the project was canceled only 16 hours before he was due to fly out. Oct. 8-19, 2005: a quick mission to survey crevasses off McMurdo; Nov. 2006 (ITASE phase 2; a 300-km traverse from Taylor Dome toward the Pole).

The *Arctic*. A 2294-ton, 87.58-meter German tug, completed in 1969 at Bremerhaven, and owned by Bugsier Reederei. She and her sister tug, the *Oceanic* (built at the same time), were the largest and most powerful tugs in the world. She came down to the South Shetlands during the 1971-72 season, in order to tow the *Lindblad Explorer* (March 1, 1972), after that vessel had run aground at King George Island. In 1972 she towed the drilling platform *Île de France*, from Madagascar to Gabon. Mothballed in 1990, she was sold in 1993, and rebuilt as a luxury yacht.

Arctic Institute Range. 72°00' S, 160°00' E. A range of mountains, near the S end of the Daniels Range, in Oates Land, in Victoria Land. Named by the Russians. This looks supsiciously like the Russian name for the Daniels Range itself (71°15' S, 160°E). The coordinates of the two ranges are very similar, and, unfortunately, the SCAR gazetteer gives no descriptor for the Arctic Institute Range.

The *Arctic Sunrise*. A 949-ton, 49.62-meter icebreaker built in 1975 by Vaagen Werft, of Norway, as the sealing vessel *Polarbjørn* (an ironic occupation, given the subsequent use made of this vessel) and which, in 1975, was acquired by Greenpeace, becoming the *Arctic Sunrise*. In Jan. 1997, she left Ushuaia with a crew of 32, under the command of Capt. Arne Jacob Sørensen, for a month-long tour in Antarctic waters, documenting evidence of human-induced climate change, including studies of ice shelves to see if they really are unstable. In the northern summer of 1997, she headed to the Arctic. She was back in the Antarctic in 1998-99 and 1999-2000 (Capt. Peter Bouquet), taking down the Greenpeace team. On Jan. 8, 2006, she was involved in the famous contretemps with the *Nisshin-Maru* and her cargo supply ship *Oriental Bluebird*. It seems the *Arctic Sunrise* was steaming toward the two Japanese whalers, in order to protest their illegal activities, when the *Nisshin-Maru*, despite Capt. Sørensen's classic warning "Get out of the fucking way!," deliberately rammed her.

Arctic tern. *Sterna paradisaea*. The world's greatest traveler, it nests each summer in the North Pole area, and then immediately flies to Antarctica for another summer, coming down in large numbers. It has the greatest annaul migration of any bird.

Arctovski *see* **Arctowski**

Pik Arctovskogo *see* **Arctowski Peak**

Nunatak Arctowski *see* **Arctowski Nunatak**

Península Arctowski *see* **Arctowski Peninsula**

Pico Arctowski *see* **Arctowski Peak**

Roca Arctowski *see* **Arctowski Nunatak**

Arctowski, Henryk. b. July 15, 1871, Warsaw. Polish geologist and oceanographer, he was a pioneer in the field of meteorology, and proposed that wind can be as harmful as cold. He was attached to the General Institute of Chemistry when he was picked to go to Antarctica as part of BelgAE 1897-99. From 1910 to 1920 he was in the USA, and, in 1939, while he was visiting New York with his American wife, the Nazis overran Poland, and the Arctowskis lost everything. They never returned to Poland. He died on Feb. 21, 1958, in Washington, DC.

Arctowski Cove. 62°09' S, 58°28' W. A small cove at the SE side of Point Thomas, between that point and Shag Point, right at Arctowski Station, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, as Zatoka Arctowskiego, for Henryk Arctowski (and also, of course, in association with the station), and it appears as such on a Polish map of that year (it had already appeared on a 1979 map). UK-APC accepted the translated name Arctowski Cove, on April 3, 1984, and it appears as such in the British gazetteer of 1986. US-ACAN followed suit with the naming. The British were the latest to replot this feature, in late 2008.

Arctowski Dome. 62°00' S, 58°09' W. An ice cap on the N side of King George Island, in the South Shetlands, extending from Fildes Peninsula to Sherratt Bay, it is the main ice dome of the island, and actually lies between 57°45' W and 58°50' W. Named Arctowski Icefield by the Poles in 1980, for Henryk Arctowski. UK-APC accepted the name on July 8, 2003, but call it Arctowski Ice Cap. It is the Americans who call it Arctowski Dome (US-ACAN adopted this name on July 14, 2004). The center of the dome was originally plotted in 62°08' S, 58°38' W, but in late 2008 the UK replotted it.

Arctowski Ice Cap *see* **Arctowski Dome**

Arctowski Icefield *see* **Arctowski Dome**

Arctowski Mountains. 62°02' S, 58°10' W. A mountain range N of King George Bay, in the S part of King George Island, in the South Shetlands. Named by the Poles in 1981 for Henryk Arctowski.

Arctowski Nunatak. 65°06' S, 60°00' W. A bare rock peak, evidently of volcanic origin, rising to 235 m above the Larsen Ice Shelf, 3.5 km NW of Hertha Nunatak, in the Seal Nunataks, in the SW part of Robertson Island, off the SE part of the Nordenskjöld Coast of the Antarctic Peninsula. Larsen discovered the Seal Nunataks on Dec. 11, 1893, and this particular one was called Île Larsen, certainly by 1902, when it appears as such on de Gerlache's map (representing BelgAE 1897-99). SwedAE 1901-04 charted it on Oct. 8, 1902, during a sledge journey, and Nordenskjöld re-named it Nunatak Arctowski for Henryk Arctowski. As such it appears on a Swedish map of 1904. In 1905 the Swedes had it on a new map as Arctowski Nunatak. The Chileans and Argentines still call it Nunatak Arctowski, although on 1947 Chilean maps it was referred to as Roca Arctowski. In Aug. 1947, it was re-surveyed by Fids from Base D, and on Jan. 22, 1951 UK-APC accepted the name Arctowski Nunatak, and as such it appears in the 1955 British gazetteer. US-ACAN followed suit with the naming in 1952.

Arctowski Peak. 73°44' S, 61°28' W. A somewhat isolated, ice-covered peak, rising to 1410 m, 13 km WSW of the head of Howkins Inlet, on the Lassiter Coast, on the E coast of Palmer Land. Discovered and photographed from the air on Dec. 30, 1940 by USAS 1939-41. In Dec. 1947 it was photographed from the air by RARE 1947-48, and, at the same time, charted from

the ground by a combined RARE — FIDS team (the Fids being from Base E). Named by UK-APC on Jan. 28, 1953 for Henryk Arctowski. US-ACAN accepted the name later in 1953. It appears on a British chart of 1954, and in the British gazetteer of 1955. It appears as Pico Arctowski, on an Argentine chart of 1957, and that is what the Argentines still call it, as do the Chileans, although the name has occasionally been seen (erroneously) on Argentine maps as Pico Arctowsky. It appears on a Russian chart of 1961 as Gora Arktovski Pik, and on a 1966 chart from the same country as Pik Artstovskogo (sic).

Arctowski Peninsula. 64°45' S, 62°25' W. A mountainous peninsula, 24 km long in a N-S direction, between Andvord Bay and Wilhelmina Bay, and indeed running NW from Andvord Bay to Cape Anna, and forming the N side of Errera Channel, on the Danco Coast, on the W coast of Graham Land. Discovered by BelgAE 1897-99. Named by US-ACAN in 1951, for Henryk Arctowski. It was photographed from the air by FIDASE, 1956-57. On Sept. 23, 1960, UK-APC accepted the name, and it appears on a British chart of 1961. The Chileans and Argentines call it Península Arctowski (it appears as such on a 1957 Argentine chart, a 1962 Chilean map, and in the 1974 Chilean gazetteer).

Arctowski Station. 62°10' S, 58°28' W. Also called Henryk Arctowski Station, after Henryk Arctowski. Scientific station belonging to the Polish Academy of Sciences. Originaly planned for Livingston Island, it was finally located at Point Thomas, on Admiralty Bay, King George Island, in the South Shetlands. It was opened on Feb. 26, 1977, and studied mainly birds and seals. **1977 winter**: 19 men. Jozef Jersak (leader; *see* **Jersak Hills**), Leopold Dutkiewicz, Kazimierz Fedak, Czeslaw Golec, Hieronim Grabczynski, Witold Gunia, Jerzy Halter, Andrzej Kuncewicz, Antoni Kuntze, Kazimierz Mazur, Alojzy Mirski, Piotr Presler, Andrzej Radomski, Tadeusz Szczepenowski, Aleksander Szmat, Jozef Wojcik, Krzysztof Zubek, Czeslaw Zukowski, and Tomasz Zukowski. **1978 winter**: 19 men. Seweryn Maciej Zalewski (leader). **1979 winter**: 21 men. Jan Maciej Rembiszewski (leader; *see* **Rembiszewski Nunataks**), Maciej Lipski, Marek Zdanowski. **1980 winter**: 20 men. Eugeniusz Moczydlowski (leader). **1981 winter**: 19 men. Lech Rosciszewski (leader). **1982 winter**: 9 men. Ryszard J. Wroblewski (leader). Most of the work was small-scale krill research. **1983 winter**: 13 men. Marek Zdanowski (leader). **1984 winter**: 14 persons. Ryszard Stepnik (leader). Anna Kolakowska was the first woman to winter over at Arctowski, with her husband, Edward Kolakowski. **1985 winter**: 19 men. Tadeusz Wojciechowski (leader), Stanislaw Rakusa-Suszczewski. **1986 winter**: 17 persons. Edward Kolakowski (leader). Anna Kolakowska wintered-over again. **1987 winter**: 20 persons. Rajmund Jan Wisniewski (leader). Pawel Madejski wintered-over; he would be station leader in 1990. Agata Maria Olek and Elzbieta Weinzieher were the only women. The Russian, Igor Mielnikov, also wintered-over. **1988 winter**: 20 men. Piotr Presler (leader). Zbigniew Battke wintered-over; he would be station leader in 1999. Mikhail Domanov, from Russia, also wintered-over. **1989 winter**: 20 men. Henryk Gurgul (leader). **1990 winter**: 15 men. Pawel Madejski (leader). Wojciech Bart wintered-over; he would be station leader in 1994. Stuart P. Donachie, a very international biologist, also wintered-over. **1991 winter**: 12 men. Przemyslaw Gonera (leader). **1992 winter**: 11 persons. Maria Olek (leader). Tomás Holik, from Argentina, wintered-over. **1993 winter**: 12 men. Wojciech Kittel (leader). **1994 winter**: 12 men. Wojciech Bart (leader). **1995 winter**: 12 men. Krzysztof Makowski (leader). **1996 winter**: 13 men. Adam Barcikowski (leader). Pawel Loro wintered-over; he would be station leader in 2002. The Czech, Kamil Laska, also wintered-over. **1997 winter**: 13 men. Tomasz Zadrozny (leader). Wojciech Kittel wintered-over again. **1998 winter**: 16 persons. Anna Kidawa (leader). Iwona Zwolska was the other woman there. **1999 winter**: 12 men. Zbigniew Battke (leader). Adam Barcikowski wintered-over again. **2000 winter**: 12 persons. Sebastian Baranowski (leader). Anita Kozinska was the only woman. **2001 winter**: 12 persons. Tomasz Janecki (leader). Arkadiusz Nedzarek wintered-over; he would be station leader in 2005. Katarzyna Chwedorzewska was the only woman. **2002 winter**: 11 persons. Pawel Loro (leader). Irena Gielwanowska was the only woman. Michal Offierski wintered-over; he would be base leader in 2007. **2003 winter**: 12 persons. Wojciech Majewski (leader). Ruslan Szabowicz was there from the Ukraine, and Anna Delimat was the only woman. **2004 winter**: 11 persons. Wieslaw Kolodziejski (leader). Agnieszka Pociecha was the only woman. **2005 winter**: 11 persons. Arkadiusz Nedzarek (leader). Wieslaw Kolodziejski wintered-over again. Katarzyna Stepanowska was the only woman. **2006 winter**: 13 persons. Leszek Wilcynski (leader). Julita Biszczuk was the only woman. **2007 winter**: 6 men. Michal Offierski (leader). **2008 winter**: 8 men. Mikolaj Golachowski (leader).

Zatoka Arctowskiego *see* **Arctowski Cove**

Arctowsky *see* **Arctowski**

Arda Peak. 62°44' S, 60°18' W. Rising to about 470 m, in Friesland Ridge, 470 m S of Gabrovo Knoll, 850 m E by N of the summit of Veleka Ridge, and 3 km W of Yambol Peak, in the Tangra Mountains, it overlooks the lower course of Charity Glacier to the NW and Tarnovo Ice Piedmont to the SE, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, for the Arda River in Bulgaria.

Arden. 72°15' S, 24°55' E. A mountain at the E side of Dufek Mountain, in the middle part of the Sør Rondane Mountains. Name means "the plow" in Norwegian, for its shape.

Ardery. 66°22' S, 110°26' E. Australian refuge hut built on Ardery Island, 11 km S of Wilkes Station, in the Windmill Islands, on the Budd Coast. Opened in 1978. It is a breeding place for Antarctic sea birds.

Ardery Island. 66°22' S, 110°27' E. A steep, rocky island about 1 km long, and 10 km S of Wilkes Station, in Vincennes Bay, or 1.7 km W of Odbert Island, in the Windmill Islands, off the Budd Coast. First delineated and mapped from air photos taken in Jan. 1947, by OpHJ 1946-47, and in Jan. 1948, by OpW 1947-48, and named by US-ACAN in 1956, for Maj. (later Col.) Edward Rice "Ted" Ardery (b. Oct. 2, 1920, Washington, DC), a 1943 West Point graduate, veteran of the Battle of the Bulge and of the Korean War, and Army Corps of Engineers observer on OpW, who assisted parties in establishing astronomical control stations between the Wilhelm II Coast and the Budd Coast. ANCA accepted the name on July 4, 1961. The Australians established a field camp here. With Odbert Island it forms a Specially Protected Area, because of the abundant petrel life here. Col. Ardery retired in 1973, went on to build power plants for Pepco, and died of cancer on June 9, 2006, in Arlington.

The *Ardevora of Roseland*. A 22-ton, 55-foot Whisstock ketch designed by Steve Dalzell, and, under the command of skipper Timothy Hugh Trafford, she was in at the South Shetlands and the Antartcic Peninsula, in 1997-98.

Paso Ardiles *see* **San José Pass**

Caleta Ardley *see* **Ardley Cove**

Península Ardley *see* **Ardley Island**

Refugio Península Ardley *see* **Ballvé Refugio**

Ardley, Richard Arthur Blyth. b. 1906, Billericay, Essex, son of Arthur Oliver Ardley and his wife Annie Alice Blyth. Merchant seaman and hydrographer, he arrived in Southampton from Durban, on the *Kenilworth Castle*, on June 17, 1929, as a probationary sub lieutenant (RNR), transferring to the *Vivid* on Sept. 14, and thence to the *Renown* on Oct. 26, 1929, in order to complete his training. He was 3rd officer on the *Discovery II* in 1929-31, and on June 26, 1931 was transferred to Pangbourne, the naval training school. His probationary status was lifted, he was 2nd officer on the *Discovery II*'s 1931-33 tour of Antarctica, and, on Oct. 2, 1933, he was promoted to lieutenant (with seniority from Aug. 9, 1932). He married Margaret Phoebe (known as Phoebe) Bounds, and wrote a book on the birds of the South Orkneys. He retired from the RNR on Oct. 13, 1936, as chief officer (still a lieutenant), became harbor master in Haifa, Palestine, and, with the rank of lieutenant commander, was killed in action at Tobruk on Sept. 12, 1942.

Ardley Bay *see* **Ardley Cove**

Ardley Cove. 62°12' S, 58°57' W. It forms the N end of Ardley Island, and is protected by that island, in the W side of Maxwell Bay, 5 km SW of Collins Harbor, between King George Island and Nelson Island, in the South Shetlands. About 1957 it was named Caleta Ardley by the Argentines, in association with the island. It appears as such on an Argentine chart of that year, and in the Argentine gazetteer of 1970. UK-APC accepted the translated name Ardley Cove on Feb. 7, 1978, and it appears as such in their

gazetteer of 1980. US-ACAN followed suit with that naming. The Chileans also call it Caleta Ardley (it appears in their 1974 gazetteer). On a Russian map of 1971, it is seen as Ardley Inlet, and on a Chinese map of 1990, it appears as Ardley Bay. The British were the latest to replot this cove, in late 2008. Teniente Rodolfo Marsh Station and Bellingshausen Station are to be found at the head of this cove.

Ardley Inlet *see* **Ardley Cove**

Ardley Island. 62°13' S, 58°56' W. A low-lying island, 1.5 km long, 0.5 km off the E coast of Fildes Peninsula, on the W side of Maxwell Bay, just off the SW end of King George Island (in the South Shetlands), to which it is connected by a pebbly isthmus about 350 m long. Its N end is Ardley Cove. Charted as a peninsula in 1935 by the personnel on the *Discovery II*, and named that year by Lt. A.L. Nelson as Ardley Peninsula, for Richard Ardley. The Argentines and Chileans translated it as Península Ardley, or Península Hardley, and it appears as such on an Argentine map of 1949. It still appears as a peninsula in the British gazetteer of 1955, but in 1956 FIDASE aerial photos re-defined it as an island, and on Sept. 23, 1960, UK-APC renamed it Ardley Island. US-ACAN accepted that name later in 1960. The Chileans and Argentines still call it Península Ardley, in the belief that that is what it really is, whether its connector to King George Island be submerged or not. The British were the latest to replot this feature, in late 2008.

Ardley Lake. 62°13' S, 58°56' W. About 100 m long, it is the largest and only permanent lake on the W side of Ardley Island, off the E coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by UK-APC on June 6, 2007, in association with the island. The Chinese call it Yueya Hu, and, since 1984, the Chileans have called it Laguna Ripamonti, for Julio Ripamonti (*see* **Julio Ripamonti Base** and **Ripamonti Refugio**). It lies within Antarctic Specially Protected Area #50. The British were the latest to replot this feature, in late 2008.

Ardley Peninsula *see* **Ardley Island**

Ardley Refugio. 62°13' S, 58°54' W. Chilean refuge hut on Ardley Island, in Maxwell Bay, King George Island, in the South Shetlands. Opened on May 15, 2004, 7 years after the old Ardley Station had been handed over to the Chileans in Feb. 1997.

Ardley Station. 62°13' S, 58°54' W. German Democratic Republic scientific station that operated only in 1994-95, under the auspices of the Alfred Wegener Institute, and called the German Penguin Laboratory. In Feb. 1997 it was transferred to Chile, and ultimately became Ardley Refugio.

Ardus, Dennis Alexander. b. March 16, 1937, Newcastle, son of John Alexander Young Ardus and his wife Dora Hewitt. Ardus was originally Arders, a German name. He graduated from Durham, in geology, in 1959, and immediately joined FIDS, as a glaciologist, wintering-over at Halley Bay Station in 1960 and 1961, and being one of the first to visit the Heimefront Range. He arrived back in Southampton on the *Kista Dan* on March 26, 1962. In 1964 he got his master's degree from Birmingham, and then went to South West Africa (Namibia), with the Marine Diamond Corporation, a subsidiary of the Anglo-American Corporation of South Africa. In 1969 he moved to Edinburgh, working for the Institute of Geological Sciences, and from 1975, until he retired in 1997, was head of one of the units there. It was under his direction, in the 1980s, that the Institute (later called the British Geological Survey), produced a complete set of geological maps of the British continental shelf. He married twice, his second wife being Jane. He died on Feb. 1, 2008.

Ardusberget. 75°05' S, 12°51' W. A mountain in the SW part of the Tottan Hills, in the Heimefront Range, in Queen Maud Land. Named by the Norwegians for Dennis Ardus.

Area. Antarctica, roughly circular, is the fifth largest continent, covering about 5.5 million sq miles, or almost 14 million sq km. 10 percent of the area is ice shelf. The continent covers more than 9 percent of the Earth's surface. Its coastline is 18,500 square miles. The diameter of the continent is 2800 miles. There are one million square miles of ocean ice in summer, and 7.3 million square miles of it in winter.

Arelis Automatic Weather Station. 76°43' S, 162°59' E. An Italian AWS, E of Granite Harbor, on the E coast of Victoria Land, installed in Jan. 1990, at an elevation of 149.65 m.

Monte Arellano. 64°39' S, 62°32' W. A mountain rising to 696 m, about 0.8 km SW of the extreme S of the mouth of Orne Harbor, on the NW coast of Arctowski Peninsula, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capt. Luis Arellano Stark, of the Chilean Army, who traveled south on the *Rancagaua* as part of ChilAE 1953-54, to be leader of General Bernardo O'Higgins Station for the winter of 1954. The Argentines call it Monte Chico (i.e., "little mountain").

Arena Corner. 69°51' S, 68°02' W. An arcuate nunatak, or cirque, at the NE corner of the Traverse Mountains, 3 km E of McHugo Peak, on the Rymill Coast, in the NW part of Palmer Land. Surveyed by BAS, 1970-73, and so named by UK-APC on Feb. 7, 1978, for its arena shape and for the fact that it is a landmark in the area. It appears in the British gazetteer of 1980. US-ACAN accepted the name.

Arena Glacier. 63°24' S, 57°03' W. A glacier, 5 km long, it flows NE from Mount Taylor into Hope Bay, 3 km SW of Sheppard Point, at the extremity of Trinity Peninsula. Surveyed in 1948 and Feb. 1955 by FIDS, mapped by FIDS cartographers from these surveys, and named by UK-APC on Sept. 4, 1957 for the flat ice floor of the glacier's upper half which, surrounded by the steep slopes of Twin Peaks, Mount Taylor, and Blade Ridge, looks like an arena. It appears on a British chart of 1960. US-ACAN accepted the name in 1963.

Arena Saddle. 77°53' S, 160°48' E. A saddle, 1.5 km W of Altar Mountain, exactly halfway on the E-W ridge that forms the head of Arena Valley, in the Quartermain Mountains of southern Victoria Land. C.T. McElroy, G. Rose, and K.J. Whitby carried out geological work in these mountains in 1980-81, and McElroy suggested the name, in association with the valley. NZ-APC accepted the name, and US-ACAN followed suit.

Arena Valley. 77°50' S, 160°59' E. An ice-free valley between East Beacon and New Beacon, it opens to the S side of Taylor Glacier, in Victoria Land. Named descriptively by VUWAE 1958-59. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1964.

Canal Arenales *see* **Lewis Sound**

Arenite Ridge. 69°41' S, 69°32' W. A steep-sided rock and snow ridge, extending 24 km in a N-S direction, and forming the E wall of Toynbee Glacier, in the N part of Alexander Island. It includes Mount Tyrrell and Mount Tilley. Surveyed by BAS between 1973 and 1977, and named by UK-APC on Feb. 8, 1978, for the sandstone-type rocks that form this ridge. It appears in the British gazetteer of 1980. US-ACAN accepted the name.

Lednik Arenskogo *see* **Arensky Glacier**

Arensky Glacier. 71°39' S, 72°15' W. Flows S from Beethoven Peninsula, into the N end of Boccherini Inlet, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Arenskogo, for composer Anton Arensky (1861-1906). US-ACAN accepted the translated name Arensky Glacier, in 2006.

Ares Cliff. 71°49' S, 68°15' W. A cliff formed of pale-colored sandstone, and rising to 500 m above George VI Sound, E of Mars Glacier and 1.5 km N of Two Step Cliffs, on the E side of Alexander Island. Mapped from trimetrogon air photography taken by RARE 1947-48, surveyed by FIDS in 1948-50, and by BAS, 1961-73, and named by UK-APC on Dec. 20, 1974, for the Greek god of war, in association with Mars Glacier (Mars being the Roman god of war). US-ACAN followed suit with the naming in 1975.

Ares Oasis. 71°51' S, 68°13' W. An oasis of ponds and moist ground, which, considering its latitude and relative dryness, supports significant life. It is located on the W flank of Ares Cliff, on the E side of Alexander Island. Named by UK-APC on Dec. 7, 1994, in association with the cliff. It is a protected area.

Areta Rock. 82°06' S, 41°05' W. A nunatak rising to 785 m, 5 km SE of Mount Spann in the Panzarini Hills of the Argentina Range, at the NE end of the Pensacola Mountains. Mapped by USGS from 1964 USN air photos, and from ground surveys conducted by USGS during their Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for Lt. Eduardo Ferrin Areta, Argentine officer-in-charge at Ellsworth Station, 1961. It appears on an American map of 1968. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974. This may well be the feature seen during the first Argentine flight to the South Pole, and called by them Nunatak Puerto Belgrano, after the Argentine

naval base. It appears as such on an Argentine map of 1964.

Arêtes. Sharp-crested, steep-sided serrate ridges separating the heads of opposing valleys (or cirques) that were once occupied by glaciers.

ArgAE *see* **Argentine Antarctic Expedition**

Argelier, Honoré-Antoine-Étienne. b. April 4, 1791, La Ciolat, France. Pilot on the *Zélée* during FrAE 1837-40. He left sick at Hobart on Feb. 19, 1840.

Argentina. In 1904, at Bruce's invitation, the Argentines took over ScotNAE's Laurie Island station at Omond House. This was the first scientific station in Antarctica, and Argentina has maintained it ever since, calling it Órcadas Station (Órcadas is the Spanish word for Orkneys). The Argentines claimed the South Orkneys as early as 1925 (*see* **Territorial Claims**), and in 1942 and 1943 they sent expeditions to Antarctica, claiming, in the former year, the sector between 74°W and 25°W, naming it Antártida Argentina, and since then, always regarding it as part of Argentina. Officially (according to the Argentines, anyway) it forms the department of Antártida, within the province of Tierra del Fuego, Antártida e Islas del Atlántico Sur. The department, with its "capital" at Esperanza Station, includes the Antarctic Peninsula (which the Argentines call Tierra San Martín), and they have since had to dispute this area with the UK and Chile, both of whom claim roughly the same area. In a very real sense, though, if and when Antarctic claims are taken seriously, Argentina has as good, if not better, claim than anybody, having sent down relief expedition ships every year to Órcadas Station since 1904, and having maintained there a continuous presence since that time. Argentina tended to be pro-Nazi during World War II, and one of the several reasons Britain established a permanent base on Deception Island was as a counter-thrust to a possible Argentine threat. Argentine expeditions followed from 1947, and bases were built at several sites in the area as a counter-counter move to the British. On April 17, 1951, the Instituto Antártico Argentino was established and placed under the ministry of technical affairs. This instituto is at the head of all Argentine scientific programs here. In 1952 some Argentines fired on a British party at Hope Bay (*see* **Wars**), but in 1959 both countries were among the 12 original signatories of the Antarctic Treaty. The Argentines first flew to the Pole in 1962-63, and trekked there in 1965 on what they called 1965 Operación 90. In 1986 Argentina tripled its Antarctic scientific staff, and discovered dinosaur fossils (*see* **Fossils**). Other stations (*see* **Scientific stations, and Refugios**), aside from Órcadas and Esperanza, have included (alphabetically) Almirante Brown, Corbeta Uruguay, Decepción, General Belgrano, General Belgrano II, General Belgrano III, Melchior, Petrel, Primavera, San Martín, Sobral, Teniente Cámara, Jubany, Teniente Matienzo, Vicecomodoro Marambio. There were also the two refugios — Ballvé, and Francisco Gurruchaga — and the camp Base Livingston. After IGY (1957-58) Argentina operated Ellsworth Station. For their ongoing effort in Antarctica, *see* **Argentine Antarctic Expeditions**.

Caleta Argentina *see* **Argentina Cove**

Cordón Argentina. 88°S, 68' W. A ridge S of the Weddell Sea. Named for their country, by the Argentine work group operating there out of General Belgrano Station in 1968.

Îles Argentina *see* **Argentine Islands**

Isla Argentina *see* **Andersson Island**

Islas Argentina *see* **Argentine Islands**

Lóbulo Argentina *see* **Argentina Glacier**

Argentina Cove. 62°40' S, 60°24' W. Between Henry Bluff and Polish Bluff, on the E side of South Bay, Livingston Island, in the South Shetlands. The Spanish Antarctic Expedition of 1995 named it Caleta Argentina, and on Dec. 16, 2003, UK-APC accepted the translated name. The British were the latest to replot this feature, in late 2008.

Argentina Glacier. 62°40' S, 60°24' W. Flows NW from Hurd Dome and terminates near Argentina Cove, South Bay, Livingston Island, in the South Shetlands. The Spanish Antarctic Expedition of 1995 named it Lóbulo Argentina, in association with the cove. UK-APC accepted the translated name Argentina Glacier on July 8, 2003, and US-ACAN followed suit later on in the year. The British were the latest to replot this glacier, in late 2008.

Argentina Øyane *see* **Argentine Islands**

Argentina Range. 82°20' S, 42°00' W. A range of rock peaks and bluffs, 67 km long, and lying 56 km E of the N part of the Forrestal Range, in the NE portion of the Pensacola Mountains. The Panzarini Hills are here. Mount Spann is the highest peak (at 925 m). Discovered and photographed on Jan. 13, 1956, during the non-stop flight from McMurdo to the Weddell Sea and back (*see* that date under **Operation Deep Freeze I**). The Pensacola Mountains were mapped in their entirety in 1967 and 1968 by USGS from ground surveys conducted by the Pensacola Mountains Project of 1965-66, and from USN tri-camera aerial photos taken in 1967. Named by US-ACAN in 1968, for the country of Argentina. UK-APC followed suit with the naming on Feb. 3, 1971.

Argentine Antarctic Expeditions. This is a list of the expeditions (ArgAE). **ArgAE 1942**. Based in the South Shetlands. Alberto J. Oddera was captain of the *Primero de Mayo*, and they surveyed and claimed Deception Island on Feb. 8, 1942, taking formal possession. They did the same on the Melchior Islands on Feb. 20, 1942 and in the Argentine Islands on Feb. 24, 1942. It was during this expedition that the Argentines left a bronze cylinder on the island, claiming sovereignty (*see also* **The *Carnarvon Castle***). On Feb. 15, 1943, the Argentine government formally notifed the UK of their moves. They also made biological and geological observations, and conducted a hydrographic survey using an aircraft. **ArgAE 1943**. Led by the *Primero de Mayo* (Capt. Silvano Harriague), it completed the charting of the Melchior Islands in Feb. 1943. On March 1, 1943, they deposited a cylinder at Port Lockroy, and one at Marguerite Bay on March 7, 1943. They did surveying in the South Shetlands from March 1943, when they landed a party on Stonington Island. Bahía Dorián Refugio was built. **ArgAE 1947**. Left Buenos Aires on Jan. 4, 1947, led by Luis Miguel García, and ran from May through June of 1947. It was undertaken for political purposes, although surveys and lighthouse construction were effected. Órcadas Station was relieved, and Melchior Station was built as the second Argentine base in Antarctica. They also visited Deception Island, Admiralty Bay, Port Lockroy, the Argentine Islands, and Stonington Island. On this, and all subsequent expeditions, aircraft were used for ice reconnaissance and aerial photography. The ships were *King*, *Murature*, *Ministro Ezcurra*, *Don Samuel*, *Patagonia*, *Chaco*, and *Granville*. Capitán de fragata José Costa was Chilean observer on the *Patagonia*. **ArgAE 1947-48**. Led by Ricardo Hermelo until Feb. 29, 1948 (when it arrived back in Argentina), when the ArgAE 1948 took over. It was conducted primarily to build Decepción Station, do spectacular naval maneuvers, a hydrographic survey, and an aerial survey, and was very popular at home. Órcadas Station and Melchior Station were both relieved. The ships involved were *Granville*, *King*, *Pampa*, *Ministro Ezcurra*, *Murature*, *Seaver*, and *Charrúa*. The expedition was at Deception Island on Feb. 22 and 23, 1948. Two refugios were built — Caleta Péndulo and Ensenada Martel. **ArgAE 1948**. Led by Luis Miguel García, it was a continuation of ArgAE 1947-48. It arrived in March 1948, with the following ships: *King*, *Pampa*, *Ministro Ezcurra*, *Parker*, *Chiriguano*, and *Sanavirón*. **ArgAE 1948-49**. There was no (recorded) overall leader of this expedition. The ships were *Pampa*, *Chaco*, *Punta Ninfas*, *Sanavirón*, and *Chiriguano*. Stations were relieved. Thorne Refugio and Capitán Fliess Refugio were established, as well as one in Neko Harbor, the harbor there being investigated for a station site. Tidal measurements were taken here as well. The *Chiriguano* and the *Sanavirón* conducted hydrographic and geographic surveys of Schollaert Channel, Andvord Bay, and Gerlache Strait. **ArgAE 1949-50**. There was no (recorded) overall leader of this expedition. The ships were *Chaco*, *Punta Ninfas*, *Chiriguano*, and *Sanavirón*. Stations were relieved. Hydrographic surveys were conducted in Neumayer Channel and Peltier Channel. Geology was done in the South Orkneys and Neko Harbor. A seismological station was established on Deception Island. **ArgAE 1950-51**. Led by Rodolfo N. Panzarini, the ships were *Bahía Buen Suceso*, *Punta Loyola*, *Sanavirón*, *Chiriguano*, and *Santa Micaela*. This was the expedition that took down the first expeditioners who would build San Martín Station, and those who would winter-over there in 1951. The existing stations were relieved. An Argentine hut on the Danco Coast became Almirante Brown

Station. A hydrographic study was conducted in Gerlache Strait, and parts of Deception Island were surveyed aerially and topographically. **ArgAE 1951-52**. Led by Emilio L. Díaz in the *Bahía Buen Suceso*, *Bahía Aguirre*, *Punta Ninfas*, *Chiriguano*, and *Sanavirón*. Existing stations were relieved. A new station, Esperanza, was opened at Hope Bay, on Dec. 31, 1951. Petrel Refugio was opened. A hut was built on Half Moon Island, but not occupied until 1953, when it would become Teniente Cámara Station. Almirante Brown Station was repaired after the July 1951 fire. Hydrographic studies were conducted in Gerlache Strait. **ArgAE 1952-53**. Led by Rodolfo N. Panzarini in *Bahía Buen Suceso*, *Bahía Aguirre*, *Punta Ninfas*, *Chiriguano*, *Sanavirón*, and *Yamana*. The existing Argentine stations were relieved. San Martín had to be relieved by air. The refuge hut at Half Moon Island was converted into a scientific station, and named Teniente Cámara Station. Lasala Refugio was built, and several existing refugios were temporarily occupied. That winter (1953) Martín Miguel Güemes Refugio was built. **ArgAE 1953-54**. Led by Alicio E. Ogara in the ships *Bahía Buen Suceso*, *Bahía Aguirre*, *Punta Loyola*, *Chiriguano*, *Yamana*, *Sanavirón*, and *Les Éclaireurs*. The existing stations were relieved, San Martín by helicopter. The following refugios were built: Ardley, Francisco de Gurruchaga, Primavera, Bryde, Betbeder, and Suecia. Potter Refugio was expanded into Jubany Station. **ArgAE 1954-55**. Led by Alicio E. Ogara. The ships were *General San Martín*, *Bahía Buen Suceso*, *Bahía Aguirre*, *Punta Loyola*, *Sanavirón*, *Chiriguano*, and *Yamana*. The bases were relieved. General Belgrano Station was built. There was a new icebreaker, the *General San Martín*. The following refugios were built: Capitán Caillet Bois, Groussac, as well as Teniente Esquivel (on Thule Island, in the South Sandwich Islands). In the 1955 winter, personnel from Esperanza Station built the following refugios: Cristo Redentor, Antonio Morro, and Libertador, while personnel from San Martín Station built Yapeyú. **ArgAE 1955-56**. Led by Capt. Emilio L. Díaz. It spent three months in the Weddell Sea. The ships were *General San Martín*, *Bahía Aguirre*, and *Chiriguano*. Micropaleontologist was William Rex Riedel, on the *General San Martín*. The bases were relieved. Capitán Estivariz Refugio was built. During the 1956 winter the following refugios were built: San Roque, Chacabuco, and Maipú. **ArgAE 1956-57**. Led by Helvio N.A. Guozdén. It spent three months in the Bellingshausen Sea. The ships were *General San Martín*, *Bahía Aguirre*, *Bahía Thetis*, *Chiriguano*, and *Sanavirón*. William Rex Riedel was the micropaleontologist. Two Uruguayan naval officers were also on this expedition: Lt. Rubén Varela (on the *General San Martín*) and Ensign Héctor W. Bomio (on the *Bahía Aguirre*), as well as Lt. Barry Bishop (*see* **Mount Bishop**), U.S. observer. The existing bases were relieved. Cadete Guillochón Refugio was built. The Argentine vice president, Rear Admiral Isaac F. Rojas, visited in Dec. 1956. During the 1957 winter the following refugios were built: 17 de Agosto, Granaderos, Paso de los Andes, and Salta. **ArgAE 1957-58**. Led by Alberto Patrón Laplacette. The ships were: *General San Martín*, *Bahía Aguirre*, and *Chiriguano*. The bases were relieved. Nogal de Saldán Refugio was built. Three men died (*see* **Deaths**, 1958). **ArgAE 1958-59**. Led by Adolfo A.R. Schultze. The ships were: *General San Martín*, *Bahía Aguirre*, *Chiriguano*, and *Guaraní*. The bases were relieved. On Feb. 2, 1959, San Martín Station burned. On Feb. 3, 1959, Ellsworth Station was transferred by the USA to Argentina. Virgen de las Nieves Refugio was built. In the winter of 1959 the following refugios were built: San Antonio, Guaraní, San Carlos, and San Juan. **ArgAE 1959-60**. Led by Jorge A. Boffil. The ships were: *General San Martín*, *Bahía Aguirre*, and *Chiriguano*. 2 helicopters. Órcadas and Decepción were relieved, but the two Belgranos and Ellsworth couldn't be, due to ice. San Martín Station was evacuated on Feb. 28, 1960. Almirante Brown and Teniente Cámara were closed. Florentino Ameghino Refugio was built. **ArgAE 1960-61**. Led by Luis M. Iriate. The ships were: *General San Martín*, *Bahía Aguirre*, *Punta Ninfas*, and *Chiriguano*. 2 airplanes and 2 helicopters. All the bases were relieved, and 5 refugios were equipped. On March 8, 1961, President Frondizi visited Decepción on the *Bahía Aguirre*. Corrientes Refugio was built, as was a new station, Teniente Matienzo (inaugurated on March 15, 1961). **ArgAE 1961-62**. Led by Jorge E.H. Pernice. The ships were: *General San Martín*, *Bahía Aguirre*, *Chiriguano*, and *Punta Médanos*. The bases were relieved. Hermes J. Quijada led 2 planes out of Buenos Aires on Dec. 18, 1961, bound for Ellsworth Station. Assisted by the U.S. Navy, they left Ellsworth, bound for the South Pole, which they reached on Jan. 6, 1962, a first. After the flight back, they returned to Buenos Aires. **ArgAE 1962-63**. Led by Jorge A. Iriate. The ships were: *General San Martín*, *Bahía Aguirre*, and *Punta Médanos*. Bases were relieved. Ellsworth Station was closed. **ArgAE 1963-64**. There was no (recorded) overall leader for this expedition. The ships were: *General San Martín*, *Bahía Aguirre*, *Capitán Cánepa*, and the *Comandante General Zapiola* (better known as the *Zapiola*). Bases were relieved. Three new refugios were built near Teniente Matienzo Station — Virgen de Loreto, Mayor Arcondo, and Santa Teresita. **ArgAE 1964-65**. There was no (recorded) overall leader of this expedition. The ships were: *General San Martín*, *Bahía Aguirre*, and *La Argentina*. Bases were relieved. Almirante Brown was re-opened. Sobral Station was opened. **ArgAE 1965-66**. There was no (recorded) overall commander of this expedition. The ships were the *General San Martín* and the *Bahía Aguirre*. Bases were relieved. **ArgAE 1966-67**. Led by Julio Álvaro Vázquez. The ships were the *General San Martín* and the *Bahía Aguirre*. Bases were relieved. Sobral was re-opened, and a new one, Petrel, was commissioned (it had been a refugio until then). **ArgAE 1967-68**. Led by Jorge Alberto Ledesma. The ships were: *General San Martín*, *Bahía Aguirre*, *Goyena*, and *Martin Karlsen* (formerly the *Kista Dan*). **ArgAE 1968-69**. Led by Horacio Arturo Ferrari. The ships were: *General San Martín*, *Bahía Aguirre*, and *Goyena*. Bases were relieved. **ArgAE 1969-70**. Led by Gerardo F. Ojanguren. The ships were: *General San Martín*, *Bahía Aguirre*, and *Theron*. The *Theron* relieved General Belgrano Station, and installed a science station there (it had been an Army base). Sobral and Teniente Matienzo were closed, and a new scientific station, Vicecomodoro Marambio, was opened. **ArgAE 1970-71**. Alberto A. Ulloa led the expedition. The ships were the *General San Martín*, *Bahía Aguirre*, and *Zapiola*. Bases were relieved. **ArgAE 1971-72**. Justo Guillermo Padilla led the expedition. The ships were: *General San Martín*, *Bahía Aguirre*, and *Goyena*. Teniente Matienzo Station was closed. Hydrographic work was done on Peter I Island. In Feb. 1972 the *General San Martín* was employed in carrying official groups and tourists to the Antarctic Peninsula, Anvers Island, and the South Shetlands. **ArgAE 1972-73**. Led by Adriano J. Roccatagliata. The ships were: *General San Martín*, *Bahía Aguirre*, and *Goyena*. Bases were relieved. **ArgAE 1973-74**. Led by Horacio Justo Gómez Beret. The ships were: *General San Martín*, *Bahía Aguirre*, *Zapiola*, and *Comandante General Irigoyen*. **ArgAE 1974-75**. Led by Aldo de Rosso. The ships were: *General San Martín*, *Bahía Aguirre*, and *Zapiola*. **ArgAE 1975-76**. Led by Fernando Miguel Romeo. The ships were: *General San Martín*, *Bahía Aguirre*, *Cándido de Lasala*, and *Zapiola*. On Jan. 11, 1976 the *Zapiola* went down, after hitting a rock in Moreton Strait. 11 men died in a plane crash (*see* **Deaths**, 1976). **ArgAE 1976-77**. Led by Isidoro Antonio Paradelo. The ships were: *General San Martín*, *Bahía Aguirre*, *Gurruchaga*, *Cándido de Lasala*, and *Islas Órcadas* (the former American ship *Eltanin*). There were two helo crashes (*see* **Deaths**, 1976 and 1977). **ArgAE 1977-78**. Led by Carlos Alberto Barros. The ships were: *General San Martín*, *Bahía Aguirre*, *Gurruchaga*, *Cándido de Lasala*, and *Islas Órcadas* (the former *Eltanin*). Primavera Station was opened, and one in the South Sandwich Islands — Corbeta Uruguay Station. Petrel Station was closed. **ArgAE 1978-79**. Led by Alberto Óscar Casellas. The ships were: *General San Martín*, *Bahía Aguirre*, *Gurruchaga*, and *Islas Órcadas* (the former *Eltanin*). Three men were killed (*see* **Deaths**, 1979). **ArgAE 1979-80**. Led by Alberto Máximo D'Agostino. The ships were: *General San Martín*, *Bahía Aguirre*, *Almirante Irízar*, and *Gurruchaga*. **ArgAE 1980-81**. Led by César Trombetta. The ships were: *Bahía Aguirre*, *Almirante Irízar*, *Iokim Vatsiyetis*, and *Antártida*. **ArgAE 1981-82**. Led by César Trombetta. The ships were: *Bahía Paraíso*, *Almirante Irízar*, and *Bahía Buen Suceso*. Primavera Station was closed. Teniente Jubany Station was re-opened. This was the time of the Falkland Islands War. **ArgAE 1982-83**. Led by José Amauri Ferrer. The ships were: *Almirante IrÍzar*, *Bahía Paraíso*, and *Santa Rita*. **ArgAE 1983-84**. There was no actual (recorded) leader of this expedition. The ships were the *General San Martín* and the *Bahía*

Paraíso. Almirante Brown Station was re-opened, but burned on April 12, 1984. The personnel were rescued by the *Hero*. General Belgrano Station III was closed. **ArgAE 1984-85**. Led by Alfredo Claudio Febre. The ships were: *General San Martín*, *Bahía Paraíso*, and *Almirante Irízar*. **ArgAE 1985-86**. Led by Vicente Manuel Federici. The ships were the *Almirante Irízar* and the *Bahía Paraíso*. The *Bahía Paraíso* started a series of Antarctic tourist cruises to the South Shetlands and the Antarctic Peninsula. **ArgAE 1986-87**. Led by José Luciano Acuna. The ships were the *Almirante Irízar* and the *Bahía Paraíso*. The *Bahía Paraíso* made 3 tourist cruises that summer. **ArgAE 1987-88**. There was no (recorded) overall commander of this expedition. The ships were the *Almirante Irízar* and the *Bahía Paraíso*. The *Bahía Paraíso* made 4 tourist cruises this summer. A tourist hostel was opened at Esperanza Station. **ArgAE 1988-89**. Ismael Jorge García was the summer leader of the expedition, and the ships were the *Almirante Irízar*, the *Bahía Paraíso*, the *Bahía San Blas*, the *Cabo de Hornos*, and the *Francisco de Gurruchaga*. **ArgAE 1989-90**. Mario Dante Barilli led the summer expedition, on the *Almirante Irízar* and the *Francisco de Gurruchaga*. **ArgAE 1990-91**. Gustavo Adolfo Rojas led the expedition on the *Almirante Irízar*, the *Francisco de Gurruchaga*, and the *Comandante General Irigoyen*. **ArgAE 1991-92**. Raúl D. Pueyrredón led the expedition, aboard the *Almirante Irízar* and the *Irigoyen*. **ArgAE 1992-93**. Leónidas Jesús Llanos led the expedition, aboard the *Almirante Irízar*, the *Canal de Beagle*, and the *Francisco de Gurruchaga*. **ArgAE 1993-94**. Ricardo Guillermo Corbetta led the expedition, aboard the *Almirante Irízar* and the *Dóctor Eduardo Holmberg*. **ArgAE 1994-95**. Carlos Daniel Carbone led the expedition, aboard the *Almirante Irízar* and the *Dóctor Eduardo Holmberg*. **ArgAE 1995-96**. Carlos Daniel Carbone led the expedition again, aboard the *Almirante Irízar*, the *Suboficial Castillo*, the *Puerto Deseado*, and the *Dóctor Eduardo Holmberg*. **ArgAE 1996-97**. Francisco Cachaza led the expedition, aboard the *Almirante Irízar*, the *Puerto Deseado*, and the *Suboficial Castillo*. **ArgAE 1997-98**. Juan Carlos Ianuzzo led the expedition, aboard the *Almirante Irízar*, the *Suboficial Castillo*, and the *Puerto Deseado*. **ArgAE 1998-99**. Eugenio Luis Facchin led the expedition, aboard the *Almirante Irízar*, the *Francisco de Gurruchaga*, and the *Suboficial Castillo*. **ArgAE 1999-2000**. Capt. Facchin led the expedition again, aboard the *Suboficial Castillo* and the *Francisco de Gurruchaga*. Argentine has continued to send an expedition to Antarctica every year. The ships used have been the *Almirante Irízar*, the *Suboficial Castillo*, the *Francisco de Gurruchaga*, the *Canal de Beagle*, the *Teniente Olivieri*, the *Kapitan Dranitsyn*, and the chartered icebreaker *Vasiliy Golovnin*.

Argentine Islands. 65°15' S, 64°16' W. A chain of low-lying islands, islets, and rocks, extending for about 6 km in a NNE-SSW direction, 8 km SW of Petermann Island (and separated from that island by French Passage) and just over 6 km NW of Cape Tuxen, S of Lemaire Channel, in the Wilhelm Archipelago, off the W coast of Graham Land, from which they are separated by Penola Strait. Discovered and roughly charted during FrAE 1903-05, and named Îles Argentines by Charcot, for the country which had been so helpful to him. The group appears as such on Charcot's map of 1906, but Gourdon refers to them in 1908 as Îles Argentina. They were charted again in 1909, during FrAE 1908-10, and mapped by the French in 1910 and 1912 as Îles Argentine or Îles Argentines, and included what later became the Cruls Islands, Anagram Islands, and Roca Islands. The name Argentine Islands first appears on a British chart of 1914, although it is seen as Argentine Islets on a British chart of 1916. On a 1927 Norwegian chart it appears as Argentina Øyane (which means Argentina Islands). BGLE 1934-37 operated out of here, and conducted a thorough biological, geological, and cartographical survey of the islands in 1935-36. These surveys fixed the feature as we know it today. It appears on a French chart of 1937, as Îlots Argentine. The British Base F was here (*see* **Faraday Station**), and the feature appears on a British chart of 1947. US-ACAN accepted the name Argentine Islands in 1950, and UK-APC followed suit on Sept. 8, 1953. They appear in the British gazetteer of 1955. FIDS surveyed the islands in 1958-61, and an RN Hydrographic Survey unit on the *Protector* surveyed them again in 1964-65. The Argentines, not surprisingly, call them Islas Argentina, although, in 1948 they appear on a map as Islas República Argentina, and on a 1953 Argentine map as Islas Argentinas. The Chileans call them Islas Argentine. However, on a 1947 Chilean map, the feature was seen as Islas Argentina. Islands and other features in the group (from NE to SW) include: Fanfare Island, Irízar Island, Uruguay Island, Forge Islands, Anvil Rock, Grotto Island, Corner Island, Corner Rock, The Buttons, Channel Rock, Galíndez Island, Winter Island, Shelter Islands, Skua Island, Leopard Island, Black Island, and The Barchans.

Argentine Islands Station *see* **Faraday Station**

Argentine Islets *see* **Argentine Islands**

Argentine Naval Manuevers, 1948 *see* **Cappus, Harald**

Îles Argentines *see* **Argentine Islands**

Canal Argentino *see* **Argentine Channel**, **Lientur Channel**

Cerro Argentino. 63°29' S, 58°03' W. A hill rising to about 932 m above sea level, 11 km SSE of the extreme N of Cape Ducorps, and S of Lafond Bay, Trinity Peninsula, off the W coast of the Antarctic Peninsula. Named by the Argentine army in 1976, at least it was named thus for themselves. Not surprisingly, the Chileans have a different name for it — Cerro Guerrero, named for Guardián 1st class José N. Guerrero Villaroel, on the *Yelcho* in 1916.

Argentino Channel. 64°54' S, 63°01' W. A channel, 8.5 km long, and 13 km wide, between Bryde Island (to the N) and the Danco Coast, on the W coast of Graham Land. Roughly charted in Feb. 1898, during BelgAE 1897-99, it appears (unnamed) on Lecointe's expedition map of 1903. In 1913-14 David Ferguson was surveying this area from the whale catcher *Hanka*, and it appears on his 1918 geological chart of the area, as Ferguson Channel, a name UK-APC accepted on Sept. 23, 1960. It appears as such on a British chart of 1961, and in the British gazetteer of 1965. The Chileans surveyed the area during ChilAE 1948-49, and it appears on a Chilean chart of 1951, as Canal Lautaro (i.e., "Lautaro channel"), named after one of the ships on that expedition. It appears as such in the Chilean gazetteer of 1974. The Argentine situation is more complex. Their name, Canal Argentino, which was being used before 1950, refers not only to this feature but also to Lientur Channel. What the Americans today call Argentino Channel (and that the British call Ferguson Channel), the Argentines call Canal Argentino Brazo Sur (i.e., "south arm"), and what the Americans call Lientur Channel (and that the British call Bryde Channel) the Argentines call Canal Argentino Brazo Norte (i.e., "north arm"). Photographed aerially by FIDASE 1956-57. In 1965, US-ACAN accepted the name Argentino Channel for the south arm. This feature is not to be confused with Paso Lautaro.

Monte Argento. 63°36' S, 56°40' W. The most prominent feature on Andersson Island (it is on the S coast of the island, W of Cape Betbeder), S of Jonassen Island, at the W side of the S entrance to Antarctic Sound, to the E of Tabarin Peninsula, Trinity Peninsula, off the E coast of the Antarctic Peninsula. Studied by personnel on the *Bahía Aguirre* during ArgAE 1974-75, and later named by the Argentines for Cabo primero de mar Federico Argento Prat, crew member on the *Uruguay* in 1903. Argentina accepted the name officially in 1978. The Chileans call it Monte Franzetti, for 1st Lt. Tomás Franzetti Padlina, of the Chilean Air Force, air communications officer on the *Angamos* during ChilAE 1947.

Argles, Harold Arthur. Known as Arthur. b. Dec. 15, 1899, Omaha, Neb., son of Canadian parents Guy Arthur Leslie Argles and Lillie Darling Taylor. He joined the Infantry during World War I, became an air ace with the Canadian Flying Corps in 1917, and was wounded in Nov. 1918. In 1921, at South Georgia, he joined Shackleton's *Quest* expedition. In 1923 he held a short service commission with the RAF, and was mustered out in 1924, moved to Toronto, and became a commercial pilot. In 1928 he was the proposed navigator in the *Miss Columbia* for Mabel Boll, "The Queen of Diamonds," in her attempt to be the first woman to fly the Atlantic (when Amelia Earhart beat her to it, the plan was abandoned). Later that year Capt. Argles was involved with Douglas Jeffrey in an abortive mission to Antarctica (see Jeffrey). He died on May 20, 1929, while teaching a pupil how to do a tail spin at Roosevelt Field, NY. He lived for a couple of hours after the crash, but never regained consciousness.

The *Argo*. Ship belonging to the Scripps In-

stitution of Oceanography, in the Ross Sea in 1961, on an oceanographic voyage, led by Barnes Collinson. She also investigated the area around Scott Island.

Nunatak Argo *see* **Argo Nunatak**

Punta Argo *see* **Argo Point**

Argo Glacier. 83°22' S, 157°30' E. A small glacier, the southernmost in the Miller Range, it flows NE from the S end of that range, for 16 km into Marsh Glacier, just S of McDonald Bluffs. Discovered by NZGSAE 1961-62, and named by them for Jason's ship in Greek mythology. US-ACAN accepted the name in 1966. Originally thought to be 28 km long, and plotted in 83°17' S, 157°38' E, it has since been re-measured and re-plotted.

Argo Nunatak. 66°15' S, 60°55' W. Rising behind (i.e., to the NW), and named in association with, Argo Point, on the E side of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. Studied by Argentine geologists during ArgAE 1989-90, and the name was approved, as Nunatak Argo, by Argentina in 1990. UK-APC approved the name, as Argo Nunatak, on March 31, 2004.

Argo Point. 66°15' S, 60°55' W. A prominent rock point rising steeply to 260 m above the Larsen Ice Shelf, on the SE side of Jason Peninsula, 33 km NE of Veier Head, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Probably first seen by Carl Anton Larsen in Nov.-Dec. 1893, from his ship the *Jason*. Surveyed by FIDS under Dave Stratton from Base D, in May 1953, and named by UK-APC on Sept. 4, 1957 for Jason's ship in Greek mythology. It appears as such in a British gazetteer of 1958. US-ACAN followed suit with the naming, in 1963. The Argentines accepted the translated name of Punta Argo, in 1991.

Argonaut Glacier. 73°13' S, 166°42' E. A small tributary glacier about 15 km long, it flows E into Mariner Glacier, just N of Engberg Bluff, in the Mountaineers Range of Victoria Land. Named by the Northern Party of NZGSAE 1962-63, in association with the nearby glaciers — Astronaut, Aeronaut, Aviator, Cosmonaut, and Cosmonette. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1967.

Argosy Glacier. 83°08' S, 157°35' E. It flows E for about 24 km through the central part of the Miller Range to enter Marsh Glacier N of Kreiling Mesa. Discovered and named by the Northern Party of NZGSAE 1961-62, who plotted it in 83°08' S, 157°40' E. US-ACAN accepted the name in 1966. At first though to be 37 km long, it has since been re-measured and re-plotted.

Nunatak Argüello. 66°17' S, 60°59' W. On the NE coast of Stratton Inlet, on the S side of Jason Peninsula, on the E coast of Graham Land. Studied by personnel of ArgAE 1989-90, and named by the Argentines in 1990 for Pastor Paz Argüello, ship's carpenter on the *Uruguay* in 1903.

Estrecho Arguindeguy *see* **Picnic Passage**

Dome Argus. 81°00' S, 77°00' E. The highest point on the Antarctic ice sheet, and the highest ice feature in Antarctica, it is an ice dome or eminence rising to 4093 m above sea level, and overlies the Gamburtsev Subglacial Mountains, in Princess Elizabeth Land, near the center of East Antarctica, and near the western boundary of the Australian Antartic Territory with Queen Maud Land, just about midway between the head of the Lambert Glacier and the South Pole. Mapped in detail by airborne radio echo-sounding by, among others, the Scott Polar Research Institute and the National Science Foundation, between 1967 and 1969. It was designated Dome A, and plotted in 80°22' S, 77°21' E. It was later replotted, and re-named by SPRI for Argus, the builder of Jason's ship *Argo*, in Greek mythology. ANCA accepted the name Argus Dome on Dec. 3, 1982.

Mount Argus. 68°53' S, 63°52' W. Also seen spelled (erroneously) as Mount Angus. A large, isolated mountain mass, surmounted by 3 separate peaks, the highest being 1220 m, between Poseidon Pass and Athene Glacier, 15 km WNW of Miller Point, and N of Casey Inlet, on the Wilkins Coast, in the NE part of Palmer Land. Photographed aerially on Sept. 28, 1940, by USAS 1939-41. Between 1958 and 1961, FIDS (notably Arthur Fraser in 1961) studied its geological composition. Named by UK-APC on Feb. 12, 1964, for the son of Zeus in Greek mythology. US-ACAN accepted the name later that year.

Argus Dome *see* **Dome Argus**

Gora Arhangel'skogo. 69°32' S, 156°20' E. Name also seen as Gora Arkhangel'skogo The largest of the Arkhangel'skiy Nunataks, in Oates Land, in Victoria Land. This particular nunatak, named by SovAE 1958, was named before the group itself. The name commemorates geologist Andrey Dmitriyevich Arkhangel'skiy (1879-1940). *See also* **Arkhangel'skiy Nunataks**.

Cerro Ariel *see* **Spiro Hill**

Mount Ariel. 71°22' S, 68°40' W. Rising to 1250 m, it marks the S limit of Planet Heights, and overlooks the N side of Uranus Glacier, in the E part of Alexander Island. Ellsworth aerially saw and photographed this section of the coast, on Nov. 23, 1935. In 1960 Searle of the FIDS mapped this feature from aerial photos taken by RARE 1947-48, and plotted it in 71°21' S, 68°33' W. Named by UK-APC on March 2, 1961, for Ariel, one of the satellites of the planet Uranus. US-ACAN accepted the name in 1962. It has since been replotted.

Aripleri Passage. 63°38' S, 57°35' W. A marine passage, 1.77 km wide, between Eagle Island and Yatrus Promontory, on the S coast of Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the medieval fortress of Aripleri, in southeastern Bulgaria.

Punta Aris *see* **Punta Amoroso**

The *Ariston*. The first oil tanker to be ordered and owned by a Greek — Onassis — built in 1938, by Giitaverken of Gothenburg, the largest tanker of its day, at 15,360 tons, 515 feet 10 inches long, capable of 13 knots. Under the command of Capt. Otto Bohnemann, and in company with Onassis' whaler *Olympic Challenger*, she made a 7-month trip from Sept. 1951 to April 1952, during which, in Feb. 1952 she left Wellington, NZ, for a voyage to the Ross Sea, partly to accommodate the studies of oceanic ichthyologist Gerhard Krefft (b. March 30, 1912, Hamburg, son of a neurologist and a concert singer. d. March 20, 1993, Hamburg). This was the *Ariston*'s only voyage to Antarctic waters.

Banka Aristova. 74°25' S, 138°12' W. A submarine bank, out to sea beyond the Hobbs Coast. Named by the Russians.

Nunatak Arizaga. 66°08' S, 61°04' W. Almost in the middle of Jason Peninsula, on the E coast of the Antarctic Peninsula. Named by the Argentines for Mayordomo de 2° clase Antonio Arizaga, who served on the *Uruguay* in 1904-05, while that vessel was searching for the lost FrAE 1903-05. The nunatak was studied by Argentine geologists during ArgAE 1989-90, and the name was officially accepted by the Argentines in 1990.

The Ark. 80°43' S, 24°47' W. A rock mountain summit rising to 1790 m in the central part of the Read Mountains, in the Shackleton Range of Coats Land. Surveyed and mapped in 1957 by BCTAE, and so named by them because from the W it looks like an ark. UK-APC accepted the name on July 31, 1962, and US-ACAN followed suit later that year.

Arkell Cirque. 80°41' S, 24°08' W. A large cirque on the S face of the central part of the Read Mountains, in the E part of the Shackleton Range, in Coats Land. Photographed aerially by USN in 1967, and surveyed from the ground by BAS, 1968-71. Named by UK-APC on Jan. 5, 1972 for William Jocelyn Arkell (1904-1958), English geologist, a specialist in Jurassic stratigraphy and paleontology. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Arkhangel'skiy Nunataks. 69°28' S, 156°30' E. Also formerly called White Nunataks. A group of scattered rock outcrops 24 km W of the central part of the Lazarev Mountains, and about 37 km SSW of Magga Peak, in Oates Land, in Victoria Land. Photographed aerially by OpHJ 1946-47, and later by SovAE 1958, the latter plotting the largest of these nunataks in 69°32' S, 156°20' E, and naming it Gora Arkhangel'skogo or Gora Arhangel'skogo (Arkhangel'skiy Nunatak), for geologist Andrey Dmitriyevich Arkhangel'skiy (1879-1940), professor at Moscow State University. The group was photographed again in 1959, by ANARE, and ANCA broadened the application of the name, calling them the Archangel Nunataks, on Nov. 19, 1963. In 1967, US-ACAN accepted the name Arkhangel'skiy Nunataks. *See also* **Gora Arhangel'skogo**.

Gora Arkhangel'skogo *see* **Gora Arhangel'skogo**, **Arkhangel'skiy Nunataks**

Arkticheskiy Institut Rocks. 71°18' S, 11°27' E. A group of rocks, 13 km N of the Nordwestliche Insel Mountains, at the NW extremity of the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped

by SovAE 1960-61, and named by them as Skaly Arkticheskogo Instituta, for the Arctic Institute. US-ACAN accepted the English-language translation in 1970.

Skaly Arkticheskogo Instituta *see* **Arkticheskiy Institut Rocks**

Arkutino Beach. 62°45' S, 60°20' W. Snow-free in summer, it stretches for 1.8 km on the E coast of False Bay, bounded by Charity Glacier to the N, Barnard Point to the S, and Veleka Ridge to the E, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for the coastal lagoon of Arkutino, in southeastern Bulgaria.

Macizo Armada Argentina *see* **Patuxent Range**

Armadillo Hill. 68°07' S, 66°22' W. An ice-covered hill, rising to 1760 m, with tumbled ice-blocks on the summit, and projecting 120 m above the surrounding ice shelf, 6 km ESE of the head of Northeast Glacier, 13 km NE of the head of Neny Fjord, and ENE of Stonington Island, on the Graham Land plateau, by the Fallières Coast. BGLE 1934-37 surveyed it roughly, and USAS 1939-41 re-surveyed it on sledging parties in 1940. It appears on their field charts as Sawtooth, named for its appearance. Fids from Base E conducted another survey in 1946-47, and so re-named it because, when viewed from the NE, it does resemble the side view of an armadillo. UK-APC accepted the newer name on March 31, 1955, and US-ACAN followed suit later that year.

Mount Armagost. 71°38' S, 166°01' E. Rising to 2040 m, 14 km SW of Mount LeResche, it is one of a series of peaks between the Mirabito Range and the Homerun Range, in northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Harry M. Armagost, USN, chief equipment operator who wintered-over at McMurdo in 1963 and 1967.

Årmålsryggen. 73°12' S, 2°08' W. A ridge at the W end of Neumayer Cliffs, on the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them ("the year's goal ridge"). US-ACAN accepted the name without modification in 1966.

Armanini Nunatak *see* **Armonini Nunatak**

Armbruster Rocks. 73°57' S, 116°49' W. Exposed rocks on the W side of Wright Island, 14 km SW of Cape Felt, in the Amundsen Sea, just off the Bakutis Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1967. Named by US-ACAN for Lt. (later Cdr.) Robert Bernard Armbruster (b. Aug. 17, 1924, Port Clinton, Ohio. d. April 24, 2008, Port Clinton), who joined the U.S. Navy in Dec. 1942, was communications officer at Christchurch, NZ, during OpDF 1963 and OpDF 1964, served in Vietnam, and retired in Feb. 1973.

Armbrustspitze. 73°25' S, 166°56' E. A peak in the Mountaineer Range of Victoria Land. Named by the Germans.

Armira Glacier. 63°01' S, 62°33' W. Flows southeastward for 3 km from the SE slopes of Imeon Ridge, SE of Sleveykov Peak, and E of Neofit Peak, into Bransfield Strait, SW of Ivan Asen Point, on Smith Island, in the South Shetlands. Mapped by the Bulgarians, and named by them on Sept. 4, 2008, after the Armira, a river in southeastern Bulgaria.

Cape Armitage. 77°51' S, 166°40' E. The southernmost cape on Ross Island, at the S tip of Hut Point Peninsula, where lie Scott Base, Hut Point, and McMurdo Station. Discovered by BNAE 1901-04, and named by Scott for Albert Armitage. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Mount Armitage *see* **Mount Armytage**

Armitage, Albert Borlase. b. July 2, 1864, Balquhidder, Perthshire, but raised in Scarborough, Yorks, son of physician Samuel Harris Armitage and his wife Alice Lees. After being a cadet on the *Worcester*, he joined the P & O Line in 1886, and the Royal Naval Reserve in 1892. From 1894 to 1897 he was in the Arctic, as scientific observer and 2nd-in-command of the Jackson-Harmsworth Expedition (in charge of magnetic observations), and, on his return, he married Beatrice Letitia Whitehead in London, in 1898. He was asked to lead BNAE 1901-04. However, Scott was finally picked as the leader, and Armitage was relegated to navigator and 2nd-in-command of the expedition, becoming mate of the *Discovery* on Jan. 27, 1901, at the salary of a shilling a month. Nicknamed "The Pilot," he was the first onto the polar ice cap itself, and in 1903 discovered and named Ferrar Glacier, Taylor Glacier, and Blue Glacier, during his western trip from McMurdo Sound. Promoted to commander in 1907, he skippered several ships during and after World War I, became a captain (retired) in 1923, and retired from P & O to Hampshire in 1924 with their rank of commodore. He wrote a couple of books (*see* Bibliography), was an air raid warden in World War II, and died on Oct. 31, 1943, at Epsom Hospital.

Armitage Saddle. 78°09' S, 163°15' E. The saddle at the head of Blue Glacier, overlooking Howchin Glacier and Walcott Glacier, it is the S end of Snow Valley (the upper part of Blue Glacier). Mapped by Albert Armitage in 1902, but omitted from maps drawn by BAE 1910-13. The New Zealand Blue Glacier Party of BCTAE established a survey station here in Sept. 1957, and they named it for Armitage. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1974.

Armlenet *see* **Armlenet Ridge**, **Mayr Ridge**

Armlenet Ridge. 71°59' S, 2°52' E. A mountain ridge trending N-S for 5 km between Stabben Mountain and Jutulhogget Peak, and forming the E arm of Jutulsessen Mountain, in the Gjelsvik Mountains of Queen Maud Land. It was surveyed from the ground and photographed aerially by NBSAE 1949-52, photographed aerially again in 1958-59, as part of the long NorAE 1956-60, and mapped from these efforts by Norwegian cartographers, who called it Armlenet (i.e., "the arm rest"). US-ACAN accepted the name Armlenet Ridge in 1971. This feature was once often confused with Mayr Ridge, a similar ridge to the SW.

Refugio Armonía *see* **Francisco de Gurruchaga Refugio**

Caleta Armonía *see* **Harmony Cove**

Punta Armonía *see* **Harmony Point**

Armonini Nunatak. 71°11' S, 65°51' E. A partly snow-covered rock outcrop, about 8 km ESE of Mount Reu, about 31 km SE of Husky Massif, and about 37 km E of Mount Hicks, in the Prince Charles Mountains of Mac. Robertson Land. There is an area of moraine on the NW side of this feature. Plotted from ANARE air photos taken in 1960, and named by ANCA for Giovanni C. "John" Armanini, weather observer at Davis Station in 1962. US-ACAN accepted the name in 1967. Somehow Mr. Armanini's name became corrupted.

Armonini Nunataks *see* **Armonini Nunatak**

Armour Inlet. 73°38' S, 124°39' W. An ice-filled indentation in the N side of Siple Island, just W of Armour Peninsula, along the coast of Marie Byrd Land. First delineated from air photos taken in Jan. 1947, by OpHJ 1946-47. Named by US-ACAN in 1967, for the Armour Institute of Technology in Chicago, whose funds for USAS 1939-41 purchased the Snowcruiser (q.v.). NZ-APC accepted the name on June 29, 1967.

Armour Peninsula. 73°42' S, 124°10' W. An ice-covered peninsula, immediately E of Armour Inlet, on Siple Island, along the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, in association with the inlet. NZ-APC accepted the name on June 29, 1967.

Islotes Armstrong *see* **Armstrong Reef**

Mount Armstrong. 85°50' S, 157°12' W. Rising to 2330 m, 8 km SSE of Mount Goodale, in the Hays Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Thomas B. Armstrong, USARP representative at Palmer Station, 1966-67.

Armstrong, Robert D. b. July 14, 1910, Cincinnati, son of lead (later sand and gravel) dealer S. Edward Armstrong and his wife Jessie. Crew member of the *Bear of Oakland*, during ByrdAE 1933-35. He died on April 6, 2003, in Gainesville, Tex.

Armstrong, W.J. b. NZ. Seaman on the *City of New York*, during the 2nd half of ByrdAE 1928-30.

Armstrong Glacier. 71°31' S, 67°30' W. Flows SW from the S side of Mount Bagshawe (the southernmost and highest of the Batterbee Mountains) into George VI Sound. It is the only known safe route for mechanical vehicles from the George VI Sound to the Palmer Land plateau. Surveyed between 1962 and 1972 by

BAS personnel from Base E and Fossil Bluff, it was named by UK-APC on July 21, 1976, for Edward Barry Armstrong (b. 1937), BAS surveyor who wintered-over at Base T in 1964, and then summered at Base E in 1964-65. US-ACAN accepted the name in 1978. It is also known as Otter Glacier, for the Otter aircraft used here, and appears as such on a British map of 1979.

Armstrong Peak. 66°24' S, 53°23' E. Rising to 1470 m above sea level, it is the highest peak of the group the Norwegians call Vesthøgdnutane, 28 km SE of Mount Codrington, in Enderby Land. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Austnuten (i.e., "the east peak"). Photographed aerially by ANARE in 1956, it was renamed by ANCA on Oct. 11, 1960, for J. Christopher "Chris" Armstrong, ANARE surveyor at Mawson Station, who obtained an astrofix near here in Dec. 1959, toward the end of his wintering-over stint at Mawson in 1959. US-ACAN accepted the name Armstrong Peak in 1965.

Armstrong Platform. 70°32' S, 160°10' E. A small, mainly ice-covered plateau, or "height," 8 km long, and rising to between 1200 and 1800 m, it is a northeastward extension of the Pomerantz Tableland, directly N of Hellferich Glacier, in the Usarp Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1969, for Richard Lee Armstrong (b. Aug. 4, 1937, Seattle), USARP geologist at McMurdo, 1967-68. NZ-APC accepted the name in Nov. 1969.

Armstrong Reef. 65°54' S, 66°18' W. A reef encompassing a large number of small islands and rocks, extending for 8 km from the SW end of Renaud Island, in the Biscoe Islands, off the W side of the Antarctic Peninsula. Photographed aerially by FIDASE between 1955 and 1957, it was first accurately shown on a 1957 Argentine government map. Surveyed by an RN Hydrographic Survey unit between 1957 and 1959. Named by UK-APC on July 7, 1959, for Terence Edward Armstrong (1920-1996), British sea-ice specialist, reader in Arctic studies, at Cambridge, 1977-83, and acting director of the Scott Polar Research Institute, 1982-83. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. It appears on a 1962 Chilean chart, as Arrecife Espinosa (i.e., "Espinosa reef"), having been named by ChilAE 1949-50, after Mario Espinoza Gazitúa, skipper of the *Maipo* during that expedition. On a 1963 Chilean chart it appears as Arrecife Espinoza, but in their 1974 gazetteer, the Chileans call it Arrecife Espinosa. It appears in the 1991 Argentine gazetteer as Islotes Armstrong (i.e., "Armstrong islets").

Army Range *see* **LeMay Range**

Mount Armytage. 76°02' S, 160°45' E. A dome-shaped mountain rising to 1855 m, N of Mawson Glacier and 22 km W of Mount Smith, in Victoria Land. Charted by Shackleton's 1907-09 expedition, who named it for Bertram Armytage. US-ACAN accepted the name in 1949.

Armytage, Bertram. b. 1869, Lara, NSW, son of hugely wealthy Australian businessman Frederick William Armytage and his wife Mary Susan Staughton. After Geelong Grammar School, he was sent to Kingston-on-Thames, to live with and study under Henry Wilson, curate of St. Mark's, Surbiton, private tutor and ex-Cambridge man, and graduated from Cambridge in 1887. In 1895, in Victoria, he married Blanch Dunn Watson. He served in the South African War, after which he was back in Corio, Vic., living with his wife and his parents. He was in charge of the ponies on the shore party of BAE 1907-09. He committed suicide in Melbourne in 1910.

Mount Arnaudo. 84°04' S, 172°40' E. A mound-shaped, ice-covered mountain, rising to 1500 m, between Hood Glacier and the E margin of the lower part of the Beardmore Glacier, 3 km S of Mount Cyril, in the N part of the Commonwealth Range, between the Ross Ice Shelf and the South Pole. Named by US-ACAN in 2005, for Raymond Vincent "Ray" Arnaudo (b. May 9, 1948, San Francisco), deputy director of the Office of Oceans Affairs and International Environmental and Scientific Affairs, U.S. State Department, who was involved with Antarctic and other polar-related issues from 1986 onwards. He led two U.S. inspection teams to Antarctica (*see* **Inspections**), one in 1989, to the George V Coast and the Ross Sea, and one in 2000, to the Antarctic Peninsula. NZ-APC accepted the name on Sept. 12, 2005.

Arne Nunatak. 71°43' S, 8°20' E. The largest of the Hemmestad Nunataks, in the Drygalski Mountains, in the N part of the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39, and plotted from these photos by Norwegian cartographers. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Arnesteinen, for Arne Hemmestad (b. 1920), mechanic who wintered-over at Norway Station for the first year (1957) of NorAE 1956-60. US-ACAN accepted the translated name Arne Nunatak in 1967. *See also* **Hemmestad Nunataks**.

The *Arneb*. A 459 foot-2 inch U.S. attack cargo ship, launched on July 6, 1943, in Oakland, Calif., as the *Mischief*, and served in World War II. On March 16, 1948, she was placed in reserves at Philadelphia, and rebuilt for polar work. On March 19, 1949, she was re-commissioned, and renamed *Arneb*, working for several seasons in the Arctic. As flagship for OpDF I (1955-56), she left Davisville, RI, on Nov. 10, 1955, under the command of Capt. Lawrence T. Smyth, bound for Norfolk, Va., and, in company with the *Wyandot*, left Newport on Nov. 14, 1955, carrying Admiral Dufek. Exec was Joseph Hulings (ex-Merchant Marine), Cliff Bekkedahl was navigator, and Archie Owens was chief engineer. She arrived in Christchurch, NZ, on Dec. 12, 1955, and on Dec. 17 left for Antarctica. She was back again in 1956-57 (Captain Nels Claus Johnson), again as flagship for OpDF II, during IGY. Fred P. McDaniel was exec. **Oct. 27, 1956**: She left Davisville, fully loaded. **Oct. 28, 1956**: She arrived in Norfolk, where last minute repairs were made. **Nov. 2, 1956**: She steamed out of Norfolk, bound for the Panama Canal. **Nov. 8, 1956**: She arrived at Colón. **Nov. 11, 1956**: After transiting the Canal, she left Panama, bound for Wellington, NZ. **Nov. 30, 1956**: She arrived in Wellington. **Dec. 10, 1956**: She left Wellington, bound for Cape Hallett. **Dec. 16, 1956**: She crossed the Antarctic Circle, meeting the Ross Sea pack-ice, following behind the cutter *Northwind*. **Dec. 17, 1956**: Ice ripped a 30-inch gash in her hull, at the waterline on her starboard side. Heavy landing craft were swung over the port side to create a 10 degree list, and after 5 hours of repairs, the ship was on her way. **Dec. 19, 1956**: Within shouting distance of Hallett Station, she was ordered to McMurdo to drop off a D-8 tractor there, for eventual use at Little America (to build a landing strip there). **Dec. 24, 1956**: The *Arneb* arrived at McMurdo. The *Glacier* and the *Greenville Victory* were already there. They unloaded the huge tractor, transferring it two days later to the *Greenville Vic*, which would later take it to Little America. Christmas wouldn't be complete without a religious service on the ice, Christmas dinner, and penguin-chasing. Then the *Arneb* left to return to Cape Hallett. **Dec. 29, 1956**: She arrived off Cape Hallett, but for 2 days was trapped in the pack, damaging her propeller. The *Northwind* finally got her out. **Jan. 2, 1957**: She limped into Hallett. Unloading took place at (what was then called) Adare Station, the first U.S. amphibious unloading expedition in Antarctic history, and in two 12-hour shifts around the clock, 2600 tons of cargo was transferred into the huge landing crafts, and from there onto the beach. **Jan. 9, 1957**: Job done, she left, bound again for McMurdo. **Jan. 12, 1957**: She arrived back at McMurdo. **Jan. 15, 1957**: The *Arneb* (refueled with 216,223 gallons), together with the *Greenville Vic* and the *Glacier*, left for Vincennes Bay. **Jan. 25, 1957**: The ships arrived at Vincennes Bay. It took 6 days before they got through the pack to Clark Island, in the Windmill Islands (and the *Arneb* being again damaged), where the Seabees began work on Wilkes Station. **Feb. 16, 1957**: The *Arneb* left for Sydney. **Feb. 28, 1957**: She arrived in Sydney. **March 13, 1957**: She left Sydney for Melbourne. **March 18, 1957**: She left Melbourne, bound for Cape Town. **April 6, 1957**: She arrived in Cape Town. **April 9, 1957**: She left Cape Town, bound for home. **April 27, 1957**: She arrived at Davisville. **April 29, 1957**: She left Davisville. **April 30, 1957**: She arrived back in Norfolk. She was back for OpDF III (1957-58; Captain Robert O. Hinckley, Jr.), OpDF IV (1958-59; Capt. Henry Carl "Dutch" Schwaner, Jr.—born Aug. 23, 1913, Saratoga Springs, NY), OpDF 60 (1959-60; Captain Edward A. Schumann); OpDF 61 (1960-61; Captain James L. Hunnicutt; skipper until Sept. 7, 1961), OpDF 62 (1961-62; Captain Sigmund Albert "Bobo" Bobczynski, Jr.; b. Aug. 15, 1915,

Flint, Mich.; skipper from Sept. 7, 1961 until Sept. 22, 1962). Walter J. Czerwinski was exec, from July 28, 1961. On Oct. 25, 1961, she left Norfolk, bound for Davisville, to load. Included in the cargo was the nuclear power plant bound for McMurdo. Going through the Panama Canal, and via Easter Island, to NZ, and on to Antarctica, where, with the aid of the icebreakers *Eastwind* and *Glacier*, she arrived at McMurdo in mid-Dec. 1961, and unloaded. During the season she made two return trips to NZ, to get more cargo for McMurdo. They also relieved Hallett Station. She was back for OpDF 63 (1962-63; Captain Edward Garris Rifenburgh; b. Dec. 29, 1915, NYC. d. Dec. 22, 1976; skipper from Sept. 22, 1962). Walter Czerwinski was still exec. She was decommissioned on Aug. 12, 1971, and sold for scrap in 1973.

Arneb Glacier. 72°25' S, 170°02' E. A glacier, 5 km long and 3 km wide, situated in a cliff-walled bay between Hallett Peninsula and Redcastle Ridge, it flows NW into Edisto Inlet as a floating ice tongue. Named by NZGSAE 1957-58, for the *Arneb*. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Arnel Bluffs. 68°07' S, 56°12' E. A series of rock outcrops in a steeply falling ice scarp S of the Leckie Range. Plotted (in 68°09' S, 56°15' E) in Dec. 1958 by an ANARE dog-sledge party led by Graham Knuckey. Named by ANCA on July 22, 1959, for Royston Reginald "Roy" Arnel (b. Oct. 21, 1927), who wintered-over as radio operator at Mawson Station in 1957, and as geophysical assistant at the same station in 1958. US-ACAN accepted the name in 1965.

Arnes, Everett A. b. Oct. 3, 1915, Northwood, ND, son of Edon Arnes and his wife Emma Olson. After high school he briefly attended Asbury Seminary, then moved with his family to East Stanwood, Wash. In 1939 he rode his motorcycle to the Chicago World's Fair, returning by way of the southern states. He was on the *North Star* for the 2nd half of USAS 1939-41, as a civilian photographer, and actually made one flight in Antarctica (his first and only flight ever). Immediately upon his return, he married Rosemary Thurmond, in June 1942, in Stanwood. In 1949 he moved to Sedro-Woolley, Wash, and stayed there, working as a dispatcher for Puget Sound Power & Light until he retired. Rosemary died in 1997, and he died on Feb. 19, 2007.

Arnesen, Liv *see* **Bancroft, Ann**

Arnesteinen *see* **Arne Nunatak**

Arnold Cove. 77°25' S, 163°46' E. Along the W margin of McMurdo Sound, between Marble Point and Gneiss Point, in southern Victoria Land. Named by US-ACAN in 1976, for Charles L. Arnold, leader of a USARP team that made an engineer study of Marble Point, McMurdo Station, and Williams Field, in 1971-72.

Arnoldy Nunatak. 74°54' S, 71°12' W. Rising to about 1450 m in the E part of the Sky-Hi Nunataks, 1 km S of Mount Cahill, in Ellsworth Land. Named by US-ACAN in 1988, for Roger Lee Arnoldy (b. May 30, 1934, LaCrosse, Wisc.), physicist at the University of New Hampshire, in Durham, USARP principal investigator in upper atmospheric physics at Siple Station and Pole Station for many years from 1973. UK-APC accepted the name on Feb. 15, 1988.

Arnouse, Arnov *see* **Kristiansen, Olav A.**

The *Arnt Karlsen*. South African whale catcher, belonging to the Union Whaling Company, of Durban. She was in Antarctic waters in 1953-54, catching for the *Abraham Larsen*. Skipper was Nils Martinsen. That season, she took 45 blues, 176 fins, and 10 sperms, for a total of 228 whales, and 15,400 barrels of oil.

Arntzenrustene. 74°19' S, 9°22' W. Crags, mostly snow-covered, in the northeastermost part of Milorgfjella, in the N portion of the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Sven Arntzen (1897-1976), the Norwegian attorney who prosecuted the traitor Quisling.

Aronson Corner. 80°29' S, 20°56' W. The cliffed extremity of a snow-capped ridge rising to 1260 m, between Mummery Cliff and Chevreul Cliffs, at the E end of the Pioneers Escarpment, just to the E of the Shackleton Range. Phototographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay, 1968-71. Named by UK-APC on Jan. 5, 1972, for Louis V. Aronson (1870-1940), American founder of the Ronson Corporation, who, about 1910, invented the first practical petrol lighter (using serrocerrium), known originally as the "trench match," and modified in 1927 to become the "one-motion lighter." The feature appears in the UK gazetteer of 1974. US-ACAN accepted the name.

Rocas Arpón *see* **Harpun Rocks**

Glaciar Arquitecto Ripamonti Barros *see* **Fuerza Aérea Glacier**

Isla Arriagada *see* **Alcock Island**

Islote Arriagada *see* **Alcock Island**

Arriagada Rock. 62°29' S, 59°40' W. A small island E of Maipó Shoal, and S of González Island, in Discovery Bay, Greenwich Island, in the South Shetlands. Named by the Chileans, it appears on one of their 1998 charts. The name Arriagada Rock was accepted by UK-APC on May 11, 2005. The British were the latest to replot this feature, in late 2008.

Punta Arribista *see* **Parvenu Point**

Arriens, Pieter. Australian geologist. He was the geochronologist with the ANARE Prince Charles Mountains Survey party of 1973, led the 1976 wintering-over party at Davis Station in 1976, and was on David Lewis's *Solo* expedition of 1977-78.

Arriens Glacier. 73°28' S, 68°25' E. A small glacier in the Mawson Escarpment, between Casey Point and Gibbs Bluff. Plotted from ANARE air photos taken in 1956, 1960, and 1973, and named by ANCA for Pieter Arriens.

Arrival Bay. 77°33' S, 166°10' E. The little bay to the E of Cape Royds, between Derrick Point and Flagstaff Point, on Ross Island. Discovered and named by Scott in Feb. 1902, during BNAE 1901-04, for the place where the *Discovery* arrived. BAE 1907-09 also arrived here. It appears in the 1958 NZ provisional gazetteer.

Arrival Heights. 77°49' S, 166°39' E. Also called Harbour Heights. Cliff-like heights, rising to about 620 feet, and extending in a NE-SW direction, overlooking Arrival Bay, 2.5 km N of Hut Point, along the W side of Hut Point Peninsula, Ross Island. Discovered in 1902 by BNAE 1901-04, and named by Scott for the arrival of the *Discovery* at its winter quarters at Hut Point. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer. It was made into an SSSI, and there was an AWS there — Fogle (q.v.).

Arroll Icefall. 64°35' S, 60°40' W. A steep icefall, about 5 km long, that flows from the S side of the Detroit Plateau, about 13 km NW of Mount Worsley, on the Nordenskjöld Coast of Graham Land. Mapped from surveys conducted by Fids from Base D in 1960-61, and named by UK-APC on Feb. 12, 1964, for the Arrol-Johnston automobile (*see* **Automobiles**). US-ACAN accepted the name later in 1964.

Monte Arronax *see* **Mount Arronax**

Mount Arronax. 67°40' S, 67°22' W. A pointed, ice-covered peak rising to 1585 m, 10 km WSW of Nautilus Head, it dominates the N part of Pourquoi Pas Island (it is the 2nd highest peak on the island), in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. First surveyed in July-Aug. 1936 by Alfred Stephenson of BGLE 1934-37, and re-surveyed in Dec. 1948 by a Fids team from Base E led by Ken Blaiklock, who named it for the Jules Verne character Pierre Arronax, in *20,000 Leagues Under the Sea*. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. It appears in the 1991 Argentine gazetteer as Monte Arronax.

Arrow Island *see* **Pila Island**

Arrowhead Nunatak. 82°34' S, 157°22' E. A long, narrow nunatak, 11 km SE of Sullivan Nunatak, near the head of Nimrod Glacier. In plan, it resembles an arrowhead, hence the name given by NZGSAE 1960-61, who also discovered and mapped it. ANCA accepted the name on Nov. 19, 1963, and US-ACAN followed suit in 1966.

Arrowhead Range. 73°24' S, 164°10' E. A range, 30 km long, just N of Cosmonaut Glacier and W of Aviator Glacier, in the Southern Cross Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. In plan, the range resembles an arrowhead, the E end forming the head, hence the name given by US-ACAN in 1968. NZ-APC accepted the name on Dec. 4, 1968.

Mount Arrowsmith. 76°46' S, 162°18' E. A jagged rock peak near Mount Perseverance, 3 km along a ridge extending NE from that mountain, and 3 km E of Mount Whitcombe, in Victoria Land. Mapped in 1957 by the NZ Northern Survey Party of BCTAE 1957-58, and named by them for the mountain of that name in NZ. US-ACAN accepted the name in 1962.

Península Arrowsmith *see* **Arrowsmith Peninsula**

Arrowsmith, Noble. b. Feb. 16, 1749, in St. Dionis Backchurch, London, son of butcher Robert Arrowsmith and his wife Elizabeth. On Feb. 11, 1772 he joined the *Adventure* as an able seaman, for Cook's 2nd voyage, 1772-75. He died, unmarried, in 1781, while serving on the *Resource*.

Arrowsmith Peninsula. 67°15' S, 67°15' W. A peninsula, 60 km long, between Hanusse Bay and Lallemand Fjord, on the Loubet Coast, on the W coast of Graham Land, W of Forel Glacier and Sharp Glacier, across from Adelaide Island. Discovered by FrAE 1908-10, and thought by them to be an island. BGLE 1934-37 mapped it as a peninsula, but seem not to have named it. Surveyed in Dec. 1948 by a Fids team from Base E led by Ken Blaiklock, and again between 1955 and 1958 by Fids from Base W and Base Y, confirmed by them as a peninsula, and named by them for Edwin Porter Arrowsmith (1909-1992), governor of the Falkland Islands, 1957-64. UK-APC accepted the name on July 7, 1959, and US-ACAN followed suit in 1960. It appears on a British chart of 1961. It appears in the 1991 Argentine gazetteer as Península Arrowsmith.

Cabo Arroyo. 62°32' S, 60°41' W. A cape about 3 km SSE of Point Black, on the W coast of Hero Bay, in the N part of Livingston Island, in the South Shetlands. The Argentines named it in 1978 for Jesús Arroyo, who died near here (*see* **Deaths**, 1976). The Chileans have their own name for it, Cabo Agüero, for cook 1st class Clodomiro Agüero Soto, who was on the *Yelcho* in 1916 when that ship rescued Shackleton's men from Elephant Island during BITE 1914-17.

Arruiz Glacier. 70°39' S, 162°09' E. Flows WNW from Stanwix Peak in the Explorers Range of the Bowers Mountains, to enter Rennick Glacier N of Frolov Ridge. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Lt. Alberto José Arruiz, Argentine IGY meteorologist, an observer at Weather Central (q.v.), at Little America in 1958. NZ-APC accepted the name on July 16, 1964.

Gora Arsen'eva *see* **Deromfjellet**

Skaly Arsen'eva *see* **Arsen'yev Rocks**

Arsen'evskorva *see* **Arsen'yev Rocks**

Arsen'yev Rocks. 71°51' S, 11°12' E. Rock outcrops lying among the morainal deposits 4 km W of Mount Deryugin, in the Liebknecht Range of the Humboldt Mountains, in Queen Maud Land. Mapped from air photos and ground surveys conducted by SovAE 1960-61, and named by the USSR in 1966 as Skaly Arsen'eva, for geographer Konstantin Ivanovich Arsen'yev (1789-1865). US-ACAN accepted the name Arsen'yev Rocks in 1970. The Norwegians call them Arsen'evskorva.

Gora Arshinova. 73°27' S, 65°03' E. One of a large, rather scattered group of nunataks in the Prince Charles Mountains. Named by the Russians.

Art. Antarctic art, painting, drawing, etc. William Hodges was an artist in Antarctica during Cook's 2nd voyage, 1772-75, and was almost certainly the first artist in Antarctic waters. Von Bellingshausen's Russian voyage of 1819-21 had Pavel Mikhaylov, artist, on board the *Vostok*. Edward Kendall made paintings of Antarctica while on the *Chanticleer* Expedition of 1828-31. Ernest Goupil was artist on FrAE 1837-40. John McNab was a mate on the *Eliza Scott* during the Balleny Expedition of 1838-39, but he was also the artist. J.J. Wild was the official artist on the *Challenger* expedition of 1872-76. Edward Wilson was the artist (among other things) on BNAE 1901-04, and again on BAE 1910-13. William Cuthbertson was the artist on the *Scotia*, during ScotNAE 1902-04. David Abbey Paige was the official artist of ByrdAE 1933-35. Leland Curtis was the expedition artist on USAS 1939-41 (he did not winter-over), and was back in 1957-58 as artist for OpDF III. In the 1950s Edward Seago, Robert E. Hogue, Robert Haun, Standish Backus, and Fids John R. Noble and Roger Banks all did artwork in Antarctica. Commander Backus was famous as a World War II combat artist, and in Antarctica he did not get to do actual oil painting, rather he took photos and when he got back home did the paintings from those. In 1961, Nel Law (Phil Law's wife), visited Antarctica and did some paintings. Sidney Nolan visited Antarctica in 1964 for a brief while, and did a series of landscapes. In 1987 Bea Maddocks, Jan Senbergs, and John Caldwell went down as official artists of the Australian government. This entry, of course, only scratches the surface of what could be a small book in itself.

Art Glacier *see* **Alt Glacier**

Artemis Ridge. 77°27' S, 162°14' E. Immediately NW of Chinn Glacier, in the E part of the Olympus Range, in Victoria Land. Named by US-ACAN in 1998, for the Greek goddess (cf. nearby Mount Helios). NZ-APC accepted the name on Jan. 30, 1998.

Arthropods. The only native form of terrestrial microfauna in Antarctica. They consist of 130 species, 44 being parasitic on birds and seals. There are 67 species of mites (q.v.), 19 of springtails (q.v.), 37 of biting lice, 4 of sucking lice (*see* Lice), 2 of midges (q.v.), and 1 of fleas (q.v.). Arthropoda is the largest phylum in the animal kingdom (spiders, insects, crustaceans, etc., are all members).

Bahía Arthur *see* **Arthur Harbour**, **Wylie Bay**

Mount Arthur. 67°39' S, 49°52' E. Rising to 1290 m, just W of Mount Douglas, and 6 km NW of Simpson Peak, at the W end of the Scott Mountains, in Enderby Land. Plotted by Australian cartographers from ANARE aerial photos taken in 1956, and named by ANCA on Nov. 24, 1961, for John T. Arthur, electrical fitter who wintered-over at Mawson Station, 1960. US-ACAN accepted the name in 1965.

Puerto Arthur *see* **Arthur Harbour**

Arthur Davis Glacier *see* **Davis Glacier**

Arthur Glacier. 77°03' S, 145°15' W. Also called Arthur Davis Glacier, Davis Glacier, and Warpasgiljo Glacier. A valley glacier about 40 km long, it flows W to the Sulzberger Ice Shelf between the Swanson Mountains on the N and Mount Rea and Mount Cooper on the S, in the Ford Ranges of Marie Byrd Land. Discovered aerially and from ground surveys in Nov.-Dec. 1940 by members of West Base, during USAS 1939-41, and named by US-ACAN in 1966 for Vice Admiral Arthur Cayley Davis (1893-1965), USN, a leader in aviation and pioneer of dive-bombing.

Arthur Harbor. 64°46' S, 64°04' W. Also spelled Arthur Harbour (especially by the British). A small harbor SE of Cape Monaco, entered between Bonaparte Point and Norsel Point, on the SW coast of Anvers Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Roughly charted by FrAE 1903-05. First entered by the *Norsel* on Feb. 28, 1955, and that year surveyed by Jim Rennie of FIDS from Base N, which was built that year near the head of the harbor. Later the Americans built Palmer Station here. Named by UK-APC on Sept. 4, 1957 for Oswald Raynor Arthur (known as Sir Raynor Arthur) (1905-1973), governor of the Falkland Islands, 1954-57. It appears on a British chart of 1958. US-ACAN accepted the name in 1963. The Argentines call it Puerto Arthur. It appears on a 1962 Chilean map as Bahía Arthur, and that is how it is listed in the 1974 Chilean gazetteer.

Arthur Harbour Station *see* **Base N**

Mount Arthur Owen *see* **Mount Owen**

Arthur Sulzberger Bay *see* **Sulzberger Bay**

Arthurson Bluff. 70°45' S, 166°05' E. Mostly ice-covered, it overlooks the confluence of Ludvig Glacier and Kirkby Glacier from the W, near the N coast of Victoria Land. Phil Law, of ANARE, headed a party that landed here in 1962 by helicopter, and he named it for the Australian pilot of the helo, Capt. John Arthurson (b. 1919. d. Aug. 25, 2006). ANCA accepted the name, and NZ-APC followed suit on June 27, 1963, as did US-ACAN in 1964.

Arthurson Ridge. 69°22' S, 158°30' E. A short coastal ridge or promontory extending N from the Wilson Hills, between Cook Ridge and the terminus of McLeod Glacier (it is on the E side of that glacier), at the head of Davies Bay, in Oates Land. Photographed aerially by OpHJ 1946-47, first visited by an ANARE airborne field party in March 1961, and named by ANCA on Nov. 24, 1961, for the pilot of the helicopter off the *Magga Dan*, Capt. John Arthurson (*see* **Arthurson Bluff**). The name was accepted by US-ACAN in 1967.

Islas Articuladas *see* **Wednesday Island**

Artigas Beach. 62°11' S, 58°54' W. A series of single, raised beaches immediately SE of Artigas Station (in association with which this feature was named on June 6, 2007 by UK-APC), at the N end of Fildes Peninsula, King George Island, in the South Shetlands. The British were the latest to replot this feature, in late 2008.

Artigas Station. 62°11' S, 58°54' W. More fully known as General José Artigas Station. Uruguayan scientific station opened on Dec. 22, 1984, 17 m above sea level, near Profound Lake, Collins Harbor, on Fildes Peninsula, King George Island, in the South Shetlands, 100 m

from the coast. It is very near to the Great Wall Station of the Chinese, and is 5 km NE of Frei Station. Started as a summer station in 1984-85, its first leader was Lt. Col. Omar Porciúncula (also leader of the first Uruguayan Antarctic Expedition, sometimes known as Antarkos I). It became a year-round station in 1986. The 13 buildings can accommodate 60 persons in the summer and 9 in the winter. The first studies conducted here were meteorological observations, then the following year human biology. **1986 winter**: Lt. Col. Heber Cappi (leader). Geodesy and mapping were conducted that year. **1987 winter**: Lt. Col. Orosmán Pereyra (leader). **1988 winter**: Lt. Col. Emilio Alvárez (leader). **1988-89 summer**: Lt. Col. Heber Cappi (leader). **1989 winter**: Maj. Mario Zerpa (leader). Tide measurements were conducted beginning this year. **1990 winter**: Lt. Col. Néstor Rosadilla. **Nov. 27, 1990**: the first Uruguayan Antarctic ship, the *Comandante Pedro Campbell* (more familiarly known as the *Pedro Campbell*) arrived, bringing supplies. **1991 winter**: Maj. Mario Menyou (leader). The glaciology program was begun this year. **1992 winter**: Lt. Col. Alejandro Varela (leader). **Jan. 10, 1993**: the *Vanguardia* arrived for the first time, with the president of Uruguay aboard, Don Luis Albert Lacalle Herrera. **1993 winter**: Lt. Col. Carlos Pagola (leader). **1994 winter**: Lt. Col. Óscar Grané (leader). **1995 winter**: Lt. Col. José Unzurruzaga (leader). Ionosphere and aurora observations were begun this year. **1996 winter**: Maj. Walter Subiza (leader). **Feb. 18, 1997**: President Julio María Sanguinetti of Uruguay, visited the base. **1997 winter**: Maj. Luis Castro (leader). **1998 winter**: Maj. Enrique Mangini (leader). They began to monitor the ozone this year. **1999 winter**: Lt. Col. Robert Terra (leader). **2000 winter**: Maj. Waldemar Fontes (leader), Capt. Gustavo Dal Monte (2nd-in-command), Hilda Prieto (doctor), Hilmo Núñez (personnel and supply officer), Luis Viera (radio chief), Walter Cornejo and Ricardo Ibáñez (radio operators), Victor Maneiro (electrician), Alfredo Villanueva (in charge of generators), Nery Andino (mechanic), Óscar Perdomo (diver), and Juan Furtado and Miguel Andrada (cooks). **2001 winter**: Maj. Carlos Cabara (leader). **2002 winter**: Maj. Héctor de Rebolledo (leader). **2003 winter**: Lt. Col. Héctor Volpe (leader). **2004 winter**: Lt. Col. Ángel Cedrés (leader). **2005 winter**: Maj. Gustavo Allende (leader), Bernardo de los Santos, Jorge Belén, Fernando Torena, and Blanca Giménez (meteorologists), Carla Galluzzi, Marcelo Álvez, and Capt. Silvia Peruggia (doctors), Juan Alvárez (electrician), Waldemar Muiño, José Suárez, Alfredo Silveira, Jaime Vega, Julio Vázquez, Héctor Rodríguez, Arturo Bethencourt. **2006 winter**: Lt. Col. Longino Sosa (leader). The station was modernized this year. There is a medical suite with a doctor and 2 patient beds. **2007 winter**: Lt. Col. Waldemar Fontes (leader), Emir Amaral and Daniel Bonora (meteorologists), Rodrigo Sosa and Paola Borges (doctors), Jorge Presa, Ángel Careno, and Luis Colli (radio operators), Rubén López and Manuel Fernández (electricians), Walter Carrión (mechanic), Jorge García (diver), and Lilián Silvera (cook). **2008 winter**: Maj. Juan Núñez (leader). **2009 winter**: Waldemar Fontes (leader).

Artists *see* **Art**

Arturo Parodi Station *see* **Teniente Arturo Parodi Station**

Artz, Gordon Martin. b. South Africa. South African Air Force. He joined FIDS in 1958, as a meteorologist, and wintered-over at Halley Bay Station in 1959.

The *Ary Rongel*. In March 1994, the Brazilian Navy bought the *Polar Queen* [see (i) ***Polar Queen***], to be the successor to the *Barão de Teffé*, as the principal relief ship for Comandante Ferraz Station. Renamed *Almirante Ary Rongel* (*Ary Rongel* for short), she was 3670 tons, 75.02 meters long, capable of 12 knots, and could take 99 crew and scientists. Her first trip in her new capacity was in 1994-95 (Capt. Herz Aquino de Queiros). She was back in 1995-96 (Capt. Marcos de Andrade Pinto), 1996-97 (Capt. Andrade Pinto), 1997-98 (Capt. André Luiz Macedo Fernandes Más), 1998-99 (Capt. Fernandes Más), 1999-2000 (Capt. Wagner Lázaro Ribeiro Junior), 2000-01 (Capt. Lázaro Ribeira), 2001-02 (Capt. Jorge Guimarães Dias), 2002-03 (Capt. Guimarães Dias), 2003-04 (Capt. José de Andrade Bandeira Leandro), 2004-05 (Capt. de Andrade Bandeira Leandro), 2005-06 (Capt. José Carlos dos Santos Parente), 2006-07 (Capt. José dos Santos Parente), 2007-08 (Capt. Arlindo Moreira Serrado), 2008-09 (Capt. Moreira Serrado).

Isla Arzobispo Vicuña *see* **Anvers Island**

ASA *see* **Antarctic Support Associates**

Lednik Asaf'eva *see* **Asafiev Glacier**

Asafiev Glacier. 71°05' S, 70°45' W. Flows NW into Schubert Inlet from the W side of the Walton Mountains, on Alexander Island. Named by the USSR Academy of Sciences in 1987, as Lednik Asaf'eva, for Boris Asafiev (1884-1949) Russian composer. US-ACAN accepted the translated name in 2006.

Ascent Glacier. 83°13' S, 156°24' E. A small glacier, 3 km wide, flowing N from the Polar Plateau into the upper part of Aurora Glacier, and then into Argosy Glacier, just E of Milan Ridge, in the Miller Range. Named by the Northern Party of NZGSAE 1961-62, who used it to get to the central Miller Range. NZ-APC accepted the name, and US-ACAN followed suit in 1966.

Punta Asconapé *see* **Cape Hooker**

Asconapé, Domingo. b. Argentina. Captain of the *Primero de Mayo*, 1930-31.

Asemus Beach. 62°23' S, 59°39' W. A beach, snow-free in summer, it extends 2.2 km on the NW side of Mitchell Cove, Robert Island, in the South Shetlands. It is bounded by Debelyanov Point to the SW, the undulating interior of Alfatar Peninsula to the NW, and Divotino Point to the NE. Mapped by the British in 1968, by the Chileans in 1971, by the Argentines in 1980, and by the Bulgarians in 2009. Named by the Bulgarians on Dec. 6, 2010, for the ancient Roman town of Asemus, in northern Bulgaria.

Asen Peak. 62°39' S, 59°57' W. Rising to over 800 m, on Delchev Ridge, 900 m SW by S of Tangra Peak, 1.1 km S of Peter Peak, and 600 m E by N of Ruse Peak, in the Tangra Mountains, it overlooks Iskar Glacier and Bruix Cove to the NW, Ropotamo Glacier to the ESE, and Dobrudzha Glacier to the S, in the E part of Livingston Island, in the South Shetlands. Named by the Bulgarians on Feb. 17, 2004, as Vrah Asenov, for Czar Ivan Asen II of Bulgaria, 1218-41. Known internationally as Asen Peak.

Punta Asencio. 63°54' S, 60°53' W. A point on the SE side of Belimel Bay, on the SW coast of Trinity Peninsula. Named by the Argentines for Ensign Salvador Asencio, who was on board the *Uruguay* during the 1911 relief expedition to Órcadas Station.

Vrah Asenov *see* **Asen Peak**

Asgard Automatic Weather Station. 77°36' S, 161°06' E. American AWS in the Asgard Range, in the dry valleys of Victoria Land, at an elevation of 1750 m. It operated from Feb. 5, 1980 until Dec. 31, 1982.

Asgard Range. 77°37' S, 161°30' E. It divides Wright Valley on the one hand from Taylor Valley and Taylor Glacier on the other, in southern Victoria Land. Named by VUWAE 1958-59, for the home of the Norse gods. US-ACAN accepted the name in 1962, and NZ-APC followed suit on Aug. 3, 1972.

Mount Ash. 79°57' S, 156°40' E. Rising to 2024 m above sea level, it overlooks the N side of Hatherton Glacier, about 18.5 km WSW of Junction Spur, in the Darwin Mountains. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1965, for mechanic Ralph E. Ash, a member of the U.S. McMurdo-Pole Traverse Party of 1960-61. ANCA accepted the name on Aug. 27, 1975.

Punta Ash *see* **Ash Point**

Ash Point. 62°28' S, 59°39' W. Marks the SE side of the entrance to Discovery Bay, in Greenwich Island, in the South Shetlands. Charted in 1934-35 by personnel on the *Discovery II*, and apparently named by them (for the feature's color), it also appears on British charts of 1942 and 1948, and on an Argentine chart of 1947, as Punta Ash. ChilAE 1947 named it Punta Teniente Bascopé (*see* **Point Bascopé**), and that is how it appears in the 1974 Chilean gazetteer (actually in the shortened version, Punta Bascopé, which was introduced in 1951). UK-APC accepted the name Ash Point on Sept. 8, 1953, and US-ACAN followed suit that year. It appears as such in the British gazetteer of 1955. It appears on a 1953 Argentine map as Punta Ceniza (which means the same thing), and that is how it appears in the 1970 Argentine gazetteer. Once, therefore, a synonym for Punta Bascopé, the Chileans have re-defined this latter term to mean the very tip of Ash Point, and in 2004 the British went along with this (*see* **Punta Bascopé**). The British were the latest to replot this feature, in late 2008.

Asher Peak. 75°44' S, 129°11' W. Rising to 2480 m, in the SW portion of Mount Flint, in

the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Bill F. Asher, USN, senior chief construction electrician at Little America in 1958, and nuclear power plant operator at McMurdo in 1969.

Mount Ashford. 68°54' S, 53°32' E. The largest and most prominent of the Knuckey Peaks, in Enderby Land. It was used as a geodetic survey station by the ANARE Enderby Land Survey Party of 1974-75. Named by ANCA on Aug. 27, 1975, for Anthony Raymond "Tony" Ashford (b. Oct. 2, 1939), meteorological observer who wintered-over at Mawson Station in 1974, and who was a member of that survey party.

Ashley, John. He joined FIDS in 1958, as a geophysicist, and wintered over at Hope Bay (Base D) in 1959.

Cape Ashley Snow *see* **Smyley Island**

Ashley Snow Island *see* **Cape Smyley**

Ashley Snow Nunataks *see* **Snow Nunataks**

Glaciar Ashton *see* **Ashton Glacier**

Ashton, Lewis "Chippy." b. May 10, 1898. Carpenter who wintered-over at at Port Lockroy in 1944 and at Base D (Hope Bay), in 1945, during Operation Tabarin. He made ships in bottles. He died in 1956, in the Falklands.

Ashton Glacier. 70°44' S, 61°57' W. Just over 14 km long, it flows ESE from Mount Thompson to the NW side of Lehrke Inlet, on the Black Coast, on the E coast of Palmer Land. Photographed aerially on Dec. 30, 1940, by USAS 1939-41, and probably seen by a ground party of this expedition, which surveyed this coast. It appears on a 1943 U.S. Hydrographic Office chart. Charted in Nov. 1947 by a combined sledging team of Fids from Base E and members of Finn Ronne's RARE 1947-48. Named by FIDS for carpenter Lewis "Chippy" Ashton. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955. The Argentines call it Glaciar Ashton.

Ashtray Basin. 77°52' S, 160°58' E. A small basin near the head of Arena Valley, in Victoria Land. Named descriptively (certain features here resemble ashtrays) by a field party from the University of New South Wales, which worked in this area in 1966-67. US-ACAN accepted the name in 1969.

Mount Ashworth. 70°56' S, 163°05' E. Rising to 2060 m, 6 km ENE of Mount Ford, in the Bowers Mountains. Named by ANARE for Squadron Leader (later Air Commodore) Norman F. Ashworth, RAAF, ANARE officer-in-charge of the Antarctic Flight off the *Thala Dan*, here in 1962. He retired in 1988, after 37 years in the service, and in 1994 wrote *The Anzac Squadron*. US-ACAN accepted the name in 1964.

Ashworth Glacier. 85°02' S, 169°16' E. A glacier with sharply delineated sides, flowing WSW from the Supporters Range, in the Transantarctic Mountains, into Mill Glacier, NE of Plunket Point, and 5 km N of Mount Iveagh. Named by US-ACAN on July 17, 2007, for Allan Charles Ashworth, professor of paleontology and stratigraphy at North Dakota State University. He discovered the only known Antarctic fly fossils, in the nearby Dominion Range. NZ-APC had already accepted the name on April 20, 2007.

Asiato-zima. 68°27' S, 41°26' E. A low, flat islet off Cape Akarui, on the Prince Olav Coast of Queen Maud Land. Named by the Japanese on Nov. 24, 1981, the name meaning "footprint island," for its shape.

Dolina Asimmetrichnaja. 73°25' S, 61°21' E. A valley in the S part of the Prince Charles Mountains. Named by the Russians.

Asimutbreen *see* **Asimutbreen Glacier**

Asimutbreen Glacier. 71°23' S, 13°42' E. A small, steep glacier descending SE then NE between Solhøgdene Heights and Skuggekammen Ridge, and feeding into Vangemgeym Glacier, in the E part of the Gruber Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered by GermAE 1938-39, photographed aerially by them, and first plotted from these photos. It was more accurately plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Asimutbreen (i.e., "the azimuth glacier"). US-ACAN accepted the rather tautologous translation of Asimutbreen Glacier in 1970.

Asimutodden. 68°51' S, 90°26' W. A small point, 1.5 km N of Mikhailow Hukk, at the southernmost part of the Von Bellingshausen Coast, on the E coast of Peter I Island. Named by the Norwegians ("azimuth point") for the azimuth used during observations at the hukk.

Mount Askin. 80°10' S, 157°53' E. A high, flat-topped mountain, rising to about 3000 m, between Mount McClintock and Mount Aldrich, on the main ridge of the Britannia Range. Named by US-ACAN in 2000, for Rosemary A. "Rosie" Askin (b. 1949), NZ-born geologist at the Colorado School of Mines, 1980-86; University of California at Riverside, 1986-94; and, from 1995, at the Byrd Polar Research Center, at Ohio State University, who, between 1970 and 2000, worked in various parts of Antarctica, including the general vicinity of this mountain.

Aslin, W.C. *see* **South Pole**, Jan. 3, 1956

ASMA *see* **Antarctic Specially Managed Areas**

The *Asma*. German yacht, skippered by Clark Stede, which visited the South Shetlands and the Antarctic Peninsula in 1991-92. Mr. Stede wrote *Rund Amerika*.

Asman, Adam "Sarge." They also called him "Nibble" or "Nib." b. Aug. 10, 1907, Danzig, son of Lena Asman. A U.S. Army tank driver, a sergeant, he was tractor driver at West Base during USAS 1939-41. On June 23, 1941, in Boston, he became a U.S. citizen, and during World War II went on a special assignment to the Arctic, testing tanks under extreme conditions. He fought in the Korean War. He was widowed when he died at home, on April 25, 1971, in Richland Co., Ohio.

Asman Ridge. 77°10' S, 144°48' W. A serrate ridge, about 10 km long, on the S side of Arthur Glacier, just north of Bailey Ridge, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 by Byrd 1933-35, and named by USAS 1939-41 for Adam Asman. US-ACAN accepted the name in 1947.

The *Aso Maru*. Japanese krill-catching ship off Enderby Land in 1974-75. Captain was Noboyuki Yamamoto.

ASPA *see* **Antarctic Specially Protected Areas**

Asparuh Peak. 62°37' S, 60°09' W. Rising to 760 m on Bowles Ridge, 2.4 km E of the summit of Mount Bowles, 1.25 km S of Melnik Ridge (with which it is linked by the 575 meter-high Yankov Saddle), and 1.75 km W of Atanasoff Nunatak. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on April 11, 2005, as Vrah Asparuhov (which means "Asparuh Peak"), for Khan Asparuh of Bulgaria, 668-700, who incorporated, by treaty in 681, the territory between the Balkans and the Danube.

Vrah Asparuhov *see* **Asparuh Peak**

The *Aspirante Isaza*. A 525-ton, 42.5-meter Chilean general service patrol boat, built in 1994 as the *ASMAR (T)*. She was renamed *Aspirante Isaza* after an older Chilean ship (decommissioned in 1964), and used as a general purpose vessel on ChilAE 1995-96 (Captain Francisco Azócar); ChilAE 1996-97 (Captain Pedro Torres A.); ChilAE 1997-98 (Captain Jorge Rojas Larraín); and ChilAE 1998-99 (Captain Eduardo Díaz).

Aspis Island. 62°28' S, 60°09' W. A small, low-lying, rocky island, rising to about 15 m above sea level, it is the easternmost island in the Dunbar Islands, in the South Shetlands. In keeping with the theme of naming certain features in this area after mythical beasts, UK-APC named this island on Dec. 12, 1997, for the Aspis, a small musical dragon often portrayed in medieval literature. US-ACAN accepted the name in 1998. The British were the latest to replot this island, in late 2008.

Cap Aspland *see* **Aspland Island**

Île Aspland *see* **Aspland Island**

Isla Aspland *see* **Aspland Island**

Aspland Island. 61°28' S, 55°54' W. A small, rugged, mountainous island rising to an elevation of about 735 m above sea level, 6 km W of the extreme W of Gibbs Island, and 40 km SW of Elephant Island, it is one of the easterly group (what the Chileans call Islas Piloto Pardo) of the South Shetlands. Roughly charted by Bransfield in Feb.-March 1820, and grouped together with (what later became known as) O'Brien Island and Eadie Island, and charted as O'Brien's Islands. In Dec. 1821, Powell individualized this one as Aspland's Island, and another as O'Brien's Island (later called O'Brien Island), leaving the third one unnamed (this would later become Eadie Island). Aspland's Island he named possibly for Robert Aspland (1782-1845), Unitarian minister at Hackney. It appears on Powell's 1822 chart, as Aspland's Island, but erroneously

on a French chart of 1823, as Cap Aspland. It appears for the first time as Aspland Island, on an 1839 British chart. On a 1937 British chart it appears joined with Aspland Island, and is named Sugarloaf Peninsula. However, it was recharted by the Discovery Investigations in Jan.-Feb. 1937, and Eadie Island was named individually. US-ACAN accepted the name Aspland Island in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. It appears in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer as Isla Aspland. In Jan. 1977 it was visited by the British Joint Services Expedition. Originally plotted in 61°30' S, 55°49' W, it was replotted by the British in late 2008.

Mount Asquith *see* **Asquith Bluff**

Asquith Bluff. 83°30' S, 167°21' E. A prominent wedge-shaped rock bluff, on the W side of Lennox-King Glacier, 6 km SE of Mount Allen Young. Discovered during BAE 1907-09, and named by Shackleton as Mount Asquith, for Herbert Asquith, 1st Earl of Oxford and Asquith (1852-1928), prime minister, 1908-16, who helped get Shackleton's expedition debts paid off. The feature was later re-defined. US-ACAN accepted the name in 1966.

Assender Glacier. 67°36' S, 46°25' E. Flows W into Spooner Bay, in Enderby Land. Plotted by Australian cartographers from ANARE air photos taken in 1956, and named by ANCA for Pilot Officer Kenneth J. "Ken" Assender, pilot at Mawson Station in the winter of 1960. US-ACAN accepted the name in 1965.

The *Assent*. British yacht, skippered by William Kerr, which visited the South Shetlands and the Antarctic Peninsula in 1991-92.

Asses Ears. 62°19' S, 59°45' W. Three small islands of regular height and abrupt relief, which form the N portion of the Potmess Rocks, in English Strait, 3 km SE of The Watchkeeper and 5.4 km NNW of Fort William (the W end of Robert Island), in the South Shetlands. The old sealers of 1819-21 almost certainly discovered them, but do not seem to have named, charted, or defined them. In 1934-35 the personnel on the *Discovery II* descriptively named the group The Asses Ears, for the fact that the most northerly one is a twin-peaked rock in the water, resembling an ass's ears. As such it appears on their expedition chart of 1935, and also on British charts of 1942 and 1948. That was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year, and it appears as such in the British gazetteer of 1955. However, by the 1960 British gazetteer and a British chart of 1962 the definite article had been removed and it was called Asses Ears, which is the name we know today. It appears on a 1948 Argentine chart as Islas Asses Ears, and on a Chilean chart of the same year, as Roca Orejas de Burro (i.e., "asses ears rock"). It appears as Islas Orejas de Burro on a 1953 Argentine chart, and on one of their 1958 charts as simply Orejas de Burro. It appears in the 1974 Chilean gazetteer as Islas Orejas de Burro. It was replotted by the British in late 2008.

Islas Asses Ears *see* **Asses Ears**

Astakhov Glacier. 70°45' S, 163°21' E. The glacier next S of Chugunov Glacier, it flows NE from Mount Hager, and enters Ob' Bay just W of Platypus Ridge, in the Explorers Range of the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Pyotr Astakhov, Soviet exchange student at Pole Station in 1967.

Astapenko Glacier. 70°40' S, 163°00' E. About 17.5 km long, it drains the N and NE slopes of Stanwix Peak, in the Bowers Mountains, and flows ENE into Ob' Bay. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for Pavel D. Astapenko, Soviet observer at Weather Central, at Little America, in 1958. NZ-APC accepted the name on July 16, 1964.

Astarte Horn. 71°40' S, 68°52' W. A pyramidal peak, rising to about 1400 m, WSW of Venus Glacier, and at the S end of the N-S range extending to Mount Umbriel, in the E part of Alexander Island. Mapped from trimetrogon air photography taken by RARE 1947-48, and from ground surveys by FIDS, 1948-50 and again 1961-73 (FIDS changing its name to BAS during this period). Named, in association with Venus Glacier, by UK-APC on Dec. 20, 1974 for the goddess Astarte, the Phoenician equivalent of Venus. US-ACAN accepted the name in 1975.

Aster Glacier. 78°35' S, 85°00' W. Flows from the E slope of Craddock Massif, between Elfring Peak and Willis Ridge, to enter Thomas Glacier, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN on Nov. 1, 2006, for Richard Craig Aster (b. 1960), geophysicist from the New Mexico Institute of Mining and Technology, who was involved in seismic studies at the Mount Erebus volcano observatory on Ross Island, 1996-2000.

Asterozoan Buttress. 64°02' S, 58°21' W. A prominent vertical cliff-faced spur rising to 650 m, and forming the east-pointing SE corner of Patalamon Mesa, W of Hidden Lake, on James Ross Island. Named by UK-APC on Nov. 15, 2006 for a locality close to the base of the spur from which fossil asterozoan impressions are to be found, the only ones on the island.

Isla Astor *see* **Astor Island**

Mount Astor. 86°01' S, 155°30' W. A prominent peak rising to 3710 m (12,175 feet), 3 km N of Mount Bowser, in the Hays Mountains of the Queen Maud Mountains. Discovered by Byrd on the Nov. 1929 flight to the Pole, and named by him as Mount Vincent Astor, for William Vincent Astor (1891-1959), known as Vincent Astor, a contributor to ByrdAE 1928-30. The name was later shortened, and accepted by US-ACAN in 1956.

Astor, B. Crew member of the *Jane Maria* in 1819 who, on the instructions of Donald McKay, brought back rocks and minerals to be studied in New York by geologist, chemist, and politician Dr. Samuel Latham Mitchell (1764-1831), of the Lyceum of Natural History (forerunner of the American Museum of Natural History). The samples, partly primitive and partly volcanic, included quartz in compact and crystallized forms, amethyst in crystals, porphyry in small masses, rough onyx in pebbles, lumps of coarse flint, elegant zealite (like that of the Ferro group in the North Atlantic), pumice stone, and pyrites surcharged with silver. One would think it would be easy to identify a man by the name of Astor, especially that early on in history, but, so far, this gentleman's identity remains absolutely oscure.

Astor Island. 62°38' S, 61°10' W. Off the W side of Byers Peninsula, Livingston Island, between that island and Rugged Island, which it lies to the S of, in the South Shetlands. Photographed aerially by FIDASE between 1955 and 1957, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for B. Astor, it appears in the British gazetteer of 1959. US-ACAN accepted the name in 1960. It appears in the Argentine gazetteer of 1991, as Isla Astor. It was replotted by the British in late 2008.

Astor Rocks. 71°48' S, 12°44' E. Two small rock outcrops, 6 km SE of Mount Ramenskiy, and S of Ernstsenskjera, in the SE extremity of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Astorhortane, for Astor Ernstsen, meteorologist with NorAE during the 1958-59 season. US-ACAN accepted the translated name Astor Rocks in 1970.

Astorhortane *see* **Astor Rocks**

Astraea Nunatak. 71°59' S, 70°25' W. Rising to about 620 m, 10 km S of Staccato Peaks, E of Williams Inlet, in the S part of Alexander Island. Mapped from trimetrogon air photography taken by RARE 1947-48, and from surveys conducted by FIDS in 1948-50, it was also surveyed by BAS from 1962 to 1973, and named by UK-APC on Dec. 20, 1974 for the asteroid. US-ACAN accepted the name in 1975. It appears in the British gazetteer of 1975.

Astrid Ridge. 68°00' S, 12°00' E. An undersea ridge named by international agreement in June 1987, for Queen Astrid (1905-1935) of the Belgians, wife of King Leopold III. She died in a car crash, aged 29.

Astro Cliffs. 66°40' S, 66°26' W. Rock cliffs rising to about 60 m above the Larsen Ice Shelf, at the SE extremity of Churchill Peninsula, 10 km NE of Cape Alexander, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. They mark the southernmost point of a survey conducted by Fids from Base D in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for the FIDS astrofix taken here. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Astro Glacier. 82°54' S, 157°20' E. A small glacier, 28 km long, it is the northernmost of the glaciers in the Miller Range (draining the N end of this range), and flows NE into Marsh

Glacier, between the Turner Hills and Tricorn Peak. It is separated from the main flow of the Nimrod Glacier by a line of nunataks. Discovered by the Northern Party of NZGSAE 1961-62, who named it for the fact that they set up and occupied an astro station on a bluff at the mouth of the glacier in Dec. 1961. US-ACAN accepted the name in 1966.

Astro Peak. 83°29' S, 57°00' W. Rising to 835 m, 1.5 km off the W end of Berquist Ridge, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964. Named by US-ACAN in 1968, for the astro control station built by USGS on this peak in 1965-66, during their Pensacola Mountains Project. UK-APC accepted the name on Nov. 3, 1971.

ASTRO Point. 66°17' S, 100°45' E. A stabilized main geodetic point, with astrometrically determined coordinates (set by Dr. Jan Cisak), in the Bunger Hills, of Wilkes Land. Named by the Poles in 1985.

Hrebet Astrofizikov. 73°10' S, 63°49' E. A group of mountains, immediately S of Gora Tihova, and SE of Mount McCauley, on the N side of Fisher Glacier, in the Prince Charles Mountains. Named by the Russians.

[1]**The *Astrolabe***. A small, old, French corvette of 380 tons displacement, built in France in 1811, as the *Coquille* (name changed to *Astrolabe* in 1825), she was 94 feet long, 29 feet in the beam, and 13 feet deep in the hold. She carried 10 guns, 17 officers, and 85 men. In the 1820s she twice sailed around the world, the 2nd time under Dumont d'Urville. She was not equipped for the ice, nevertheless she became Dumont d'Urville's flagship during FrAE 1837-40.

[2]**The *Astrolabe*** *see* **The *L'Astrolabe***

Île (de l') Astrolabe *see* **Astrolabe Island**

Isla Astrolabe *see* **Astrolabe Island**

Islote Astrolabe *see* **Dobrowolski Island**

Astrolabe Glacier. 66°45' S, 139°55' E. Also called Glacier Géologie, Glacier Terra-Nova. A glacier, 6 km wide and 16 km long, flowing NNE from the continental ice of Adélie Land, feeding Commonwealth Bay, and terminating at the coast at the E side of Géologie Archipelago, as the prominent Astrolabe Glacier Tongue. Probably first sighted in 1840 by FrAE 1837-40, although no glaciers in this area were marked on their maps. Photographed aerially during OpHJ 1946-47, it was charted by the French in 1950, who named it Glacier de l'Astrolabe, for the *Astrolabe*. US-ACAN accepted the translated name in 1955.

Astrolabe Glacier Tongue. 66°42' S, 140°05' E. A prominent glacier tongue, about 5 km wide and 6 km long, it is the NE seaward extension of Astrolabe Glacier, at the E end of the Géologie Archipelago. Delineated from air photos taken by OpHJ 1946-47. Named by the French as Langue Glaciaire de l'Astrolabe, in association with the glacier. US-ACAN accepted the translated name in 1956.

Astrolabe Island. 63°17' S, 58°40' W. An isolated island, 5 km long, rising to an elevation of 560 m above sea level, 22 km NW of Cape Ducorps, Trinity Peninsula, in the Bransfield Strait, off the N tip of the Antarctic Peninsula. Discovered by FrAE 1837-40, and named by Dumont d'Urville as Île de l'Astrolabe, for his ship, the *Astrolabe*. It appears on an 1839 British chart as Astrolabe Island, and on another French map of 1842 as Île Astrolabe. All other interested countries translated it accordingly. The Argentines first called it Isla Astrolabe, in 1908, but on a 1957 chart of theirs, it appears as Islote Astrolabio. However today, they call it Isla Astrolabe. The island was re-charted by the Discovery Investigations in 1930-31. The Chileans called it Isla Astrolabio on one of their 1947 charts, and that is how it appears in their 1974 gazetteer. FIDASE photographed it aerially in 1956-57. US-ACAN accepted the name Astrolabe Island in 1950, and UK-APC followed suit on Sept. 8, 1953.

Astrolabe Islet *see* **Dobrowolski Island**

Astrolabe Needle. 64°08' S, 62°36' W. A conspicuous pointed monolith in the water, rising to 46 m (it used to be 105 m), 1.5 km S of Claude Point, opposite the NW coast of Brabant Island, in the Palmer Archipelago. Discovered by FrAE 1903-05, and name descriptively by Charcot as Aiguille de l'Astrolabe, for Dumont d'Urville's ship. It appears with the French name on British charts of 1916, 1948, and 1949. On Jan. 22, 1951, UK-APC accepted the translated name Astolabe Needle, and US-ACAN followed suit that year. It appears thus on a UK chart of 1954, and in the British gazetteer of 1955. It appears on a 1953 Argentine chart as Aguja del Astrolabio (which is a translated name), on one of their 1954 charts as Aguja Astrolabio, in their 1970 gazetteer as both Aguja del Astrolabio and Monolito Astrolabio, and in their 1991 gazetteer as Monolito Aguja del Astrolabio. The Chileans simply translated Astrolabe Needle into Aguja Astrolabio (it appears as such in their 1974 gazetteer). It was photographed aerially by FIDASE in 1956-57.

Astrolabe Subglacial Basin. 70°00' S, 136°00' E. A subglacial basin to the S of the Adélie Coast, and E of the Porpoise Subglacial Highlands, trending N-S and containing the thickest ice (abut 4700 meters of it) ever recorded in Antarctica. Discovered and delineated by the SPRI-NSF-TUD radio echo-sounding program of 1967-79, and named after Dumont d'Urville's ship, the *Astrolabe*. ANCA accepted the name on July 26, 1983. US-ACAN has also accepted it.

Aguja Astrolabio *see* **Astrolabe Needle**

Isla Astrolabio *see* **Astrolabe Island**, **Dobrowolski Island**

Monolito Astrolabio *see* **Astrolabe Needle**

Astronaut Glacier. 73°05' S, 164°05' E. A broad glacier, flowing SW into the upper part of Aviator Glacier, just W of Parasite Cone, in Victoria Land. Named by the Northern Party of NZGSAE 1962-63, in association with nearby Aeronaut Glacier. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964. First plotted in 73°00' S, 164°30' E, it has since been replotted.

Gora Astronomicheskaja. 67°31' S, 98°55' E. A hill, close NW of Mount Garan, near the head of Denman Glacier, in Queen Mary Land. Named by the Russians.

Lednik Astronomicheskij. 67°24' S, 98°50' E. A glacier, near the head of Denman Glacier, in Queen Mary Land. Named by the Russians.

Astrónomo Cruls Refugio. 62°14' S, 58°59' W. Brazilian scientific refuge hut built in Jan. 1985, at Harmony Cove, on Nelson Island, in the South Shetlands. It has been open most summer seasons since then (*see* **Brazilian Antarctic Expeditions**).

Islote Astrónomo Romero *see* **Romero Rock**

Gory Astronomov. 71°01' S, 67°05' E. A group of hills, close NE of Mount Beck, in the Prince Charles Mountains. Named by the Russians.

Cabo Astrup *see* **Cape Astrup**

Cape Astrup. 64°43' S, 63°11' W. A bold, dark-colored bluff, marking the NE end of Wiencke Island, in the Palmer Archipelago, off the Danco Coast, on the W coast of the Antarctic Peninsula. Discovered by BelgAE 1897-99, roughly charted by them on Feb. 7, 1898, and named at that time by de Gerlache, as Cap Eivind Astrup, for his friend, the Arctic explorer Eivind Astrup (1871-1895). It appears on Frederick Cook's 1900 English language version of the expedition map as Cape Eivind Astrup, on a 1903 French map as Cap Astrup, and on a 1909 British chart as Cape Astrup, which was the name accepted by US-ACAN in 1951 and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, and on a British chart of 1956. It appears on a Chilean chart of 1947 as Cabo Astrup, and as such in their 1974 gazetteer, as well as in the 1970 Argentine gazetteer.

Ventisquero Astudillo *see* **Astudillo Glacier**

Astudillo Glacier. 64°53' S, 62°51' W. A small glacier flowing NW into Paradise Harbor, about 1.3 km NE of Skontorp Cove, between that cove and Leith Cove, on the Danco Coast, on the W coast of Graham Land. This whole area was completely surveyed by ChilAE 1950-51, who named this feature Ventisquero Astudillo (a ventisquero is really an icy area exposed to violent winds, but it can be used to mean "small glacier"), perhaps for a member of the expedition. It appears as such on their chart of 1951, and again in the 1974 Chilean gazetteer. It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Astudillo Glacier, on Feb. 7, 1978, and US-ACAN followed suit.

The *Asuka*. Japanese tourist vessel, in Antarctic waters in 2003-04. She could carry 618 passengers. In 2005 she was sold to Phoenix Reisen, a German company, and became the *Amadea*.

Asuka Station. 71°31' S, 24°08' E. Formerly Asuka Camp. The third Japanese scientific station in Antarctica (*see* **Showa** and **Mizuho**). The camp was built in Dec. 1984, on snow and ice, 930 m above sea level, inland from Breid Bay, in the northernmost part of the Sør Rondane Mountains, on the Princess Ragnhild

Coast of Queen Maud Land, 670 km from Showa Station. It was open until Feb. 1985. The Japanese accidentally found a meteorite here in Nov. 1986, and this led to the Asuka meteorite program. The camp was re-opened as a summer station by JARE 28 in Feb. 1987, and even had a wintering-over party of 10 there in 1987, led by Masaru Ayukawa, collecting meteorites. On Dec. 28, 1987, they were relieved by the new meteorite-collecting party, 10 men led by the great meteorite hunter Keizo Yanai (b. July 25, 1941), who wintered-over in 1988. Shigemi Meshida led the 1989 wintering party. There was a third wintering-over party in 1990, led by Kazuyuki Shiraishi. Kazuo Makita led the 1991 wintering party, and then, on Dec. 22, 1991, the station was closed. The personnel had collected over 2400 meteorites since 1986.

Islote Atalaya. 64°19' S, 62°53' W. A little island, about 175 m long, lying about 175 m E of the extreme E point of Eta Island, in the Melchior Islands, in the Palmer Archipelago. Charted by ArgAE 1947, and so named by them because from this island one has an exceptional view of the coast of Brabant Island ("atalaya" means "lookout," or "watchtower"). The Chileans call it Islote Colin, after Guardián de primera clase Antonio Colin Paredes (i.e., his surname was Colin), who was on the *Yelcho* in 1916.

Atanasoff Nunatak. 62°37' S, 60°07' W. Name also seen as Atanasov Nunatak. A sharp peak rising to 550 m, surmounting Huron Glacier to the S and E, in the E extremity of Bowles Ridge, 4.1 km E of the summit of Mount Bowles, 3.37 km NE of Tukhchiev Knoll, and 6.45 km NNW of Falsa Aguja Peak. Named by the Bulgarians on March 15, 2002, for John Atanasoff (1903-1995), the Bulgarian-American who constructed the first digital electronic computer.

Atanasov Nunatak *see* **Atanasoff Nunatak**

Punta Atención *see* **Caution Point**

Monte Athelstan *see* **Mount Athelstan**

Mount Athelstan. 70°10' S, 69°16' W. A prominent, partly ice-covered mountain rising to 1615 m, at the N side of Trench Glacier, on a spur which extends E from the Douglas Range, on the E coast of Alexander Island, on the W shore of the George VI Sound, on the W coast of the Antarctic Peninsula. The E side of the Douglas Range was photographed by Ellsworth on his fly-over of Nov. 23, 1935, and, in 1936, from these photos, U.S. cartographer W.L.G. Joerg mapped this mountain. Roughly surveyed in 1936 by BGLE 1934-37, and more accurately in 1948 and 1949 by Fids from Base E, and named by them for Athelstan (895-939), the Saxon king of England, 924-939. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The Argentines call it Monte Athelstan.

Athene Glacier. 68°56' S, 64°07' W. A glacier, 16 km long, it flows SE and merges with the terminus of Casey Glacier, where it flows into Casey Inlet, on the E coast of the Antarctic Peninsula. Photographed aerially on Aug. 14, 1947, by FIDS, and again on Dec. 22, 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in Nov. 1960, and named by UK-APC on Aug. 31, 1962, for the Greek goddess. US-ACAN accepted the name later that year.

The *Athenian*. On Aug. 20, 1836, this whaling brig left New York bound for the South Shetlands, on a whaling and sealing voyage, under the command of Capt. Roland Sears Hallett. Silas Enoch Burrows was a passenger. On the return trip, at Rio, the vessel was sold, and became the Brazilian brig *Fluminense*. On May 19, 1839, now under the command of Capt. James S. Nash, and despite false rumors that she had been lost, she left Rio, and on June 23, 1839 put in at Martinique, eventually heading for New York. However, on July 28, 1839, she was towed into New London, in breach of the revenue laws, which really embarrassed three of the passengers from Rio, Pennsylvania missionaries Mr. McNurdy, his wife and child. The *Fluminense*, still under Nash, was wrecked in the Prince Edward Islands, in Aug. 1841. Nash and twelve of the crew were drowned. A mate and four sailors were found by shipwrecked sailors from the *Uxor*.

Islas Atherton *see* **Atherton Islands**

Atherton Islands. 62°05' S, 58°57' W. Two small islands, 3 km WNW of Bell Point (on the W side of King George Island), and 13 km SW of Stigant Point, in the South Shetlands. Notable for their height, they reach elevations of 42 and 44 m above sea level respectively. Charted in 1935 by personnel on the *Discovery II*, and named by them for Noel Atherton (b. May 8, 1899, Bradford, Yorks. d. Sept. 1987, Croydon), cartographer in the Admiralty Hydrographic Office at that time, and chief civil hydrographic officer, 1951-62. It appears on their 1935 chart, on a British chart of 1937, and on Argentine charts of 1946 and 1949, on the latter two as Islas Atherton. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1955, and, as Islas Atherton, in the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57. Originally plotted in 62°06' S, 58°59' W, this feature was replotted by the British in late 2008.

Mount Atholl. 78°00' S, 163°44' E. A gently sloping mountain, rising to 1087 m above sea level, with good views over Joyce Glacier and Blue Glacier. There is a large number of lichens on the SW side of this mountain. Named by NZ-APC on Feb. 1, 1994, after Sarah Atholl (d. 1873), NZ botanist, specializing in lichens. US-ACAN accepted the name in 1995.

Athos Range. 70°13' S, 65°50' E. The most northerly of the ranges in the Prince Charles Mountains, it consists of a large number of individual mountains and nunataks that trend E-W for 60 km along the N side of Scylla Glacier, on the W side of the Amery Ice Shelf, in Mac. Robertson Land. First seen aerially during OpHJ 1946-47. The W side of the range was first visited by John Béchervaise's ANARE party in Nov. 1955, and again in Dec. 1956, by Bill Bewsher's ANARE Southern Party, who established a depot at the E extremity. Bewsher named it Moonlight Range, but the name was later changed for the *Three Musketeers* character. US-ACAN accepted the name in 1961.

The *Atka*. A 6000-ton U.S. Coast Guard icebreaker, launched on March 7, 1943, at San Pedro, Calif., as the *Southwind* (AGB-3), and commissioned on July 16, 1944. She had a 296-foot hull, and 6 diesel engines giving 10,000 hp. From 1945 to 1949, under the terms of lend-lease, she operated as a Russian ship, the *Admiral Makarov*. Back in the USA, she was re-named *Atka* on April 28, 1950, and commissioned into the USN on Oct. 1, 1950. Under the command of Cdr. Glen Jacobsen, she was the principal element of USNAE 1954-55, during which she scouted the Antarctic coast for potential U.S. bases for the upcoming IGY. The men on the ship found that Little America had been calved off into the sea in Feb. 1955. The ship returned to the USA in April 1955. She also took part in OpDF II (1956-57; skipper was Cdr. Charles Bulfinch. Lt. Cdr. William F. Harris was exec), as part of Task Force 43, OpDF III (1957-58; Cdr. Bulfinch), OpDF 60 (1959-60; Captain Buster E. Toon, from Dec. 1959), OpDF 62 (1961-62; Captain Toon, but he was replaced by Cdr. Murray Edmond Draper), OpDF 64 (1963-64; Captain J.J. Judith), OpDF 66 (1965-66; Cdr. John Sanborn Blake). On Oct. 31, 1966 she was transferred from USN back to the Coast Guard, as *WAGB-280*, and on Jan. 18, 1967 her name reverted to *Southwind*. As the *Southwind*, she was back in Antarctic waters in 1967-68 and 1968-69 (both times under Capt. Sumner Raymond Dolber), and again in 1971-72 (under Capt. W.S. Schwab). She also spent several seasons in the Arctic, and was decommissioned and sold in 1976.

Atka Bank. 70°30' S, 9°00' W. An undersea feature, at least 200 m deep, off the Ekström Ice Shelf. Named in 1997 for the *Atka*.

Atka Bay *see* **Atka Iceport**

Atka Glacier. 76°41' S, 161°33' E. The glacier immediately E of Flagship Mountain, flowing N into Fry Glacier, in Victoria Land. Discovered in 1957 by the NZ Northern Survey Party of BCTAE, and named by them for the *Atka*. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Atka Iceport. 70°35' S, 7°51' W. About 16 km long and wide, it is a more or less permanent indentation in the front of the Ekström Ice Shelf, at the easternmost part of the Princess Martha Coast, in Queen Maud Land. Photographed from the air and mapped from these photos by NBSAE 1951-52, and named by them (unofficially) as Byrd Bay, after Admiral Byrd. Renamed by Cdr. Glen Jacobsen of the *Atka*, which moored here in Feb. 1955, while investigating possible IGY base sites. The Norwegians call it Atkabukta (i.e., "Atka bay"). In 1956, US-ACAN suggested the term "iceport" for such ice shelf embayments which may change configuration over the years but which will offer anchorage for ships and ease of access to the interior, and so the feature was re-defined. Originally plotted

in 70°35' S, 7°45' W, it has since been re-plotted.

Atkabukta *see* **Atka Iceport**

Atka-Eiskuppel *see* **Atkakuppelen**

Atkakuppelen. 70°42' S, 7°52' W. An ice rise in the Ekström Ice Shelf, in the inner part of Atka Iceport, on the Princess Martha Coast. The name means "Atka dome" in Norwegian, for the *Atka*. The Germans call it Atka-Eiskuppel.

Atkin, Aeneas *see* **Aitken, Aeneas**

Atkin, Sydney. b. 1879, Newtown, Sydney, son of Edward T. Atkin and his wife Margaret Jane. He became a merchant seaman, and in 1906, in Woollahra, Sydney, he married Edith Margaret (known, for some reason, as Henrietta) Muller. Partly in order to escape his marriage, he signed on at Hobart in Oct. 1914, on the *Aurora,* for Shackleton's BITE 1914-17, and suffered from lumbago while in Antarctica. The incoming passenger lists for the port of Sydney, on the *Aurora*, Nov. 1, 1914, describe him as "S. Atkin," able seaman, aged 40, born in Sydney. He simply lied about his age, or they got it wrong. He was 35. He was seriously wounded during World War I. He and Henrietta were divorced in 1919. In 1935, he married again, in North Sydney, to Roseline Ellen F. Johnson, and they lived at the apt 176 Sydney St., Willoughby. He died in 1950, in Randwick. Roseline died in Wollongong, in 1954. His name is also seen (erroneously) as Aitken, but either way he never had a feature named after him.

Atkins, Ian Edward. b. Nov. 8, 1958, Newcastle. RAF corporal who took part in the British Joint Services Expedition to Brabant Island in 1984, as mountain climber, maintenance engineer, and surveyor.

Atkins, Joseph R. *see* **USEE 1838-42**

Atkins, Silas *see* **USEE 1838-42**

Mount Atkinson. 78°39' S, 85°29' W. A prominent mountain, rising to 3300 m, 5.5 km WSW of Mount Craddock, in the Sentinel Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1960. Named by US-ACAN for Richard Chatham Atkinson (b. 1929), director of the NSF, 1977-80.

Atkinson, Donald "Don." b. Jan. 12, 1924, in Aspatria, Cumberland, son of colliery cashier Joseph Atkinson and his wife Mary Jane Bland. He served an engineering apprenticeship at Vickers-Armstrong, in Barrow-on-Furness, did a stint in the RAF, as a flight engineer, and trained as a mountain climber in the Lake District under Jim Cameron, climbing in the Alps in 1950. He was working at Distington Engineering, in Workington, in 1954, when a colleague passed across the newspaper, and, referring to a FIDS ad, said, "Sounds like you, Don." Although technically too old, he was selected, as a diesel electric mechanic, and wintered-over at Base Y in 1955 and 1956. Despite being (or perhaps because he was) the oldest man on the base, he would dive naked into the water every morning. During his second winter he made a kayak out of sealskin, using the Eskimo method. It is now in a museum in Scotland. From 1957 to 1959 he worked for the National Coal Board, developing underground machinery. There he met Doreen Catherine Rowley, married her on Sept. 1, 1960, and started his own business, Atkinson Electrical & Engineering, in Penryn, Cornwall. His wife died in 1983, and Don moved to Spain. In 2006 he had a stroke, and returned to live in Newark, Notts, where he died in Dec. 2008.

Atkinson, Edward Leicester "Aitch." b. Nov. 23, 1881, Kingston, St. Vincent, in the West Indies. He became a doctor in 1906, was an amateur boxer, and in May 1908 joined the RN as a surgeon. He was bacteriologist and parasitologist on BAE 1910-13, was in command of Cape Evans during the last year of the expedition, after Scott's death, and led the relief sledging party that found Scott, Wilson, and Bowers in their tent out on the Ross Ice Shelf. He had various nicknames during the expedition, Atch, Aitch, and Helmin being three of them. The British have the somewhat unnerving tendency to nickname boys with girls' names ("Come on, girls!"), and so Atkinson became Jane (*see also* **Pennell, Harry**, and **Nelson, Edward**, as a further illustration of this phenomenon). He served in the RN during World War I, being with the Naval Division at Gallipoli, rising to the rank of commander. He was also a formidable name in medical research. He lost partial sight in an eye when a shell burst near him while he was with the Howitzer Brigade in France. He was in the north of Russia, with Shackleton, in 1918, and in September of that year exhibited enormous bravery on the *Glatton*, (later) being awarded the Albert Medal. In 1921 he was in Greece, and then posted to the Royal Naval College, in Greenwich. His first wife died in 1928, and he married again, almost immediately, to Mary Flint Hunter, lived in Glasgow, and died aboard ship in the Mediterranean, on his way back from India, on Feb. 20, 1929.

Atkinson Cliffs. 71°18' S, 168°55' E. High coastal cliffs, 6 km long, between the lower ends of Fendley Glacier and Pitkevich Glacier, on the N coast of Victoria Land. Mapped in 1911 by Campbell's Northern Party of BAE 1910-13, and named by them for Aitch Atkinson. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Atkinson Glacier. 71°30' S, 167°25' E. Between the Findlay Range and the Lyttelton Range, in the Admiralty Mountains, it flows northward into Dennistoun Glacier and NW into Fowlie Glacier. Named by NZ-APC in 1982, for William Atkinson, field assistant with the NZ Antarctic Division, a mechanic with the NZARP Geological Party in this area in 1981-82, led by Rob Findlay. US-ACAN accepted the name.

Atlantic-Antarctic Basin *see* **Atlantic-Indian Basin**

Atlantic Club Glacier *see* **Atlantic Club Ridge, Contell Glacier**

Atlantic Club Ridge. 62°39' S, 60°22' W. Rising to 161 m above sea level, trending for a length of 600 m in an ENE-WSW direction, 300 m wide, snow-free in summer, and with a steep N slope connected to Hespérides Hill by a saddle 52 m above sea level, 810 m SE of Hespérides Point, 950 m S by W of Sinemorets Hill, and 1.28 km NW of the highest point of Charrúa Ridge, on Livingston Island, in the South Shetlands. Bounded to the S by the lower course of Contell Glacier, to the E by the foot of Balkan Snowfield sloping up toward Krum Rock, and to the NW by Sea Lion Tarn. To the W it surmounts the coast of South Bay to the N of Johnsons Dock. The higher rocky ground on this ridge, as on the hills surrounding Bulgarian Beach, is noted for its lichens, while mosses and Antarctic hair-grass grow abundantly in the guano-enriched soil on top of the larger rocks at the base of the seaward hill. Mapped in detail by the Spanish in 1991. In 1994 the Bulgarians, unaware that the Spanish had just named Contell Glacier (Glaciar Contell), named the glacier as Lednik Atlanticheski Klub (i.e., "Atlantic Club glacier"), in honor of the principal organizers of the Bulgarian Antarctic Expedition of 1993-94 (and, later, also of the expeditions of 1994-95 and 1995-96). However, on Feb. 23, 1995, the Bulgarians re-applied their name to this ridge (Vrah Atlanticheski Klub). On Dec. 11, 1995, UK-APC, fearing (quite rightly) that the name might appear too flippant, re-named it (for themselves, anyway) Sarah Ridge, after the *Sarah*. In 1996 the Americans went with the Bulgarian naming, but in the translated form. The Bulgarians surveyed it in great detail in 1995-96. Last plotted by the UK in late 2008.

Lednik Atlanticheski Klub *see* **Atlantic Club Ridge, Contell Glacier**

Vrah Atlanticheski Klub *see* **Atlantic Club Ridge**

Atlantic-Indian Basin. 60°00' S, 15°00' E. Its actual longitude ranges between 5°E and 70°E. Also called the Atlantic-Antarctic Basin, Western Indian Antarctic Basin, Atlantic-Indian Antarctic Basin, and Valdivia Basin. A submarine depression off the coast of Antarctica, between the Indian Ocean and the Atlantic Ocean. Named by the Americans in July 1963, after looking at a globe belonging to the National Geographic Society.

Atlantic Ocean. Second largest ocean (*see* **Oceans**) in the world, it extends down to Antarctic waters. If one dismisses the notion of the Antarctic Ocean (q.v.), then the Atlantic's southern boundaries are the Antarctic Peninsula, the Weddell Sea, and New Schwabenland.

Fondeadero Atlas. 66°28' S, 67°12' W. An anchorage, W of Watkins Island, in the Biscoe Islands, off the W coast of the Antarctic Peninsula. Named during ArgAE 1955-56.

Mount Atlas. 72°44' S, 165°30' E. An extinct volcanic cone at the NE side of Mount Pleiones, in The Pleiades, in Victoria Land. Named by NZ-APC after the Greek mythological character Atlas. US-ACAN accepted the name.

The Atlas Company. Norwegian whaling company owned by Chris Nielsen. It owned the *Solglimt*. The company merged with the Odd Company in 1931.

Nunataki Atlasova. 72°10' S, 20°15' E. A

group of nunataks immediately and due S of Fnugget, between Knøttet and Tonyknausane, NE of Tussebreen, in the W part of the Sør Rondane Mountains. Named by the Russians.

Atmosphere. The Antarctic atmosphere has a low temperature and contains about one-tenth of the water vapor found in more temperate latitudes. It comes from the ice-free regions of the southern oceans, and is transported to Antarctica in the troposphere. Most of it comes down as snow around the margin of the continent. Rainfall is almost unknown. Because of the lack of a water layer present in most atmospheres (which absorbs and radiates to Earth long-wave solar radiation) Antarctica loses much heat energy into space.

Atoll Nunataks. 71°21' S, 68°47 W. A group of nunataks rising to about 900 m, on the N side of Uranus Glacier, 5 km W of Mount Ariel, in eastern Alexander Island. Mapped from trimetrogon air photos taken by RARE 1947-48, and from ground surveys conducted by FIDS between 1948 and 1950. Later surveyed by BAS, 1961-73, and so named by UK-APC on Dec. 20, 1974 because the nunataks are arranged in a ring formation, like an atoll. US-ACAN accepted the name in 1975.

Atom Rock. 66°28' S, 66°26' W. An insular rock, 0.8 km NE of Rambler Island, in the Bragg Islands (see that entry for the reason for the name of this rock), lying in Crystal Sound, off the Loubet Coast, on the W coast of Graham Land. Surveyed by Fids from Base W between 1956 and 1959, mapped from these surveys by FIDS cartographers, and named by UK-APC on Sept. 23, 1960. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Atomic energy *see* **Nuclear power**

Punta de la Atrevida *see* ***under*** **L**

Atriceps Island. 60°47' S, 45°09' W. The most southerly of the Robertson Islands, 5 km S of the SE end of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station in 1948-49, and named Atriceps Islet by UK-APC on March 31, 1955, for the colony of blue-eyed shags (*Phalacrocorax atriceps*) found on the island. US-ACAN followed suit with the naming in 1956. However, on July 7, 1959, UK-APC redefined it as Atriceps Island, and US-ACAN followed suit with this naming in 1963. The Argentines call it Isla Larga (i.e., "long island").

Atriceps Islet *see* **Atriceps Island**

Attenborough Strait. 70°30' S, 75°00' W. Running for about 60 km in an E-W direction between Charcot Island and Latady Island, it links Wilkins Sound with the Bellingshausen Sea. The E end of the strait opened up following the partial break-up of the Wilkins Ice Shelf in 2009. Named by UK-APC on April 30, 2010, for David Attenborough (b. 1926), British naturalist and TV pesonality.

Glaciar Attlee *see* **Attlee Glacier**

Attlee Glacier. 66°13' S, 63°46' W. A glacier, 13 km long, flowing ESE from the plateau escarpment on the E side of Graham Land to the head of Cabinet Inlet, to the N of Bevin Glacier, and between the mouth of Bevin Glacier and the mouth of Morrison Glacier, on the Foyn Coast. Surveyed from the ground by FIDS in Dec. 1947 and charted by them, and photographed aerially on Dec. 22, 1947 by RARE 1947-48. Named by FIDS for Clement Richard Attlee (1883-1967), British prime minister, 1945-51, and also, earlier, during the war, a member of the cabinet that had authorized Operation Tabarin. UK-APC accepted the name on May 23, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the British gazetteer of 1955. It appears on a 1957 Argentine chart as Glaciar Attlee, which is what the Argentines call it today, and in 1994 the Chileans re-activated the same name — Glaciar Attlee — which had been conspicuously absent from their maps for years.

Atwater Hill. 66°11' S, 66°38' W. Rising to about 125 m, 4 km S of Benedict Point, on the E side of Lavoisier Island, in the Biscoe Islands. Surveyed by Fids from Base W between 1956 and 1959, photographed aerially by FIDASE in 1956-57, mapped by FIDS in 1959 from all these efforts, and named by UK-APC on Sept. 23, 1960 for Wilbur Olin Atwater (1844-1907), U.S. physiologist who worked with F.G. Benedict on the calorimetric measurement of metabolism. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Mount Atwood. 77°16' S, 142°17' W. Rising to 1180 m, at the W edge of the Clark Mountains, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1940 by personnel from West Base during USAS 1939-41, and named by Byrd for Wallace Walter "W.W." Atwood (1872-1949) and his son W.W. Atwood, Jr. (1906-1992), geologists and glaciologists of Clark University. US-ACAN accepted the name in 1947.

Aubertisen. 74°29' S, 10°37' W. A glaciated area about 27 km long, between Milorgfjella and Sivorgfjella, in the Heimefront Range, in the S part of Maudheimvidda, the westernmost sector of Queen Maud Land. Named by the Norwegians for Kristian Aubert (b. 1909), fire brigade constable who did more than his share to fight the Nazis, and who paid the worst penalty.

Aude, Antoine-Henri. b. July 2, 1807, Toulon. Caulker on the *Astrolabe* during FrAE 1837-40.

Isla Audrey *see* **Audrey Island**

Islote Audrey *see* **Audrey Island**

Audrey Island. 68°08' S, 67°07' W. The most southerly of the Debenham Islands, between Millerand Island and the Fallières Coast, in Marguerite Bay, off the W coast of Graham Land. Discovered and charted in Feb. 1936 by BGLE 1934-37, and named by Rymill as Audrey (that's it, just Audrey), for Frank Debenham's second daughter, Audrey Margaret (b. 1922; she became Mrs. Cyril Hugh Kinder). It appears as such on a 1947 British chart. It appears as Audrey Island on a U.S. Hydrographic Office chart of 1946, and on a British chart of 1950. US-ACAN accepted that name in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on an Argentine chart of 1952 as Islote Audrey, and also, as such, in the 1970 Argentine gazetteer. It appears as Isla Audrey on a Chilean chart of 1962, and also, as such, in their 1974 gazetteer.

Audunfjellet. 73°55' S, 15°38' W. A mountain in Utpostane, in the S part of the Kraul Mountains, in the W part of Maudheimvidda, the westernmost sector of Queen Maud Land. Named by the Norwegians for Audun Hjelle, a member of NorAE 1968-69.

Augen Bluffs. 83°30' S, 157°40' E. Rock bluffs, between Orr Peak and Isocline Hill, along the W side of Marsh Glacier, in the Miller Range. So named by the Ohio State Geological Party of 1967-68 for the augengneiss in the rocks here. NZ-APC accepted the name in Nov. 1969, and US-ACAN followed suit in 1970.

Auger Hill. 78°00' S, 164°16' E. A small hill rising to 1009 m, within a group of hills in the E part of the Keble Hills, N of Garwood Valley, in the area of Wright Valley, in southern Victoria Land. Shallow soil deposits occur on its summit, and an auger was used by a NZ field party to obtain deep samples. Named by NZ-APC on Feb. 1, 1994. US-ACAN accepted the name in 1995.

Aughenbaugh Peak. 82°37' S, 52°49' W. A sharp peak rising to over 1800 m, 1.1 km NE of Neuburg Peak, in the SW part of the Dufek Massif, in the Pensacola Mountains. Surveyed between 1956 and 1965, and photographed from the air by USN in 1964, and mapped from these surveys and photos by USGS. Named by US-ACAN in 1968, for Nolan Blaine Aughenbaugh (b. 1928, Akron, Ohio), USARP glaciologist at Ellsworth Station, chief geologist on the first party to visit the Dufek Massif, in Dec. 1957. He wintered-over in 1957, and was a member of the Ross Ice Shelf Traverse of 1958-59, led by James H. Zumberge. It appears on an American map of 1969, and UK-APC accepted the name on Nov. 3, 1971. It appears in the British gazetteer of 1974.

Augias, Pierre Joseph. b. March 20, 1798, Toulon, France. Coxswain 1st class on the *Zélée* during FrAE 1837-40.

August Island *see* **Auguste Island**

Mount Augusta. 84°48' S, 163°06' E. A mountain, 4 km E of Mount Wild, at the S end of the Queen Alexandra Range. Discovered by BAE 1907-09, and named by Shackleton for "Mrs. Swinford Edwards, a relative of Shackleton." US-ACAN accepted the name in 1966. The Swinford Edwards in question is Frederick Swinford Edwards (1853-1939), a Harley Street doctor, a highly respected anus man, and first cousin of Shackleton's wife, Emily Mary Dorman, whose father was Charles Dorman and whose mother was Jennie Swinford, sister of Frances Swinford, who had married Dr. Edwards' father. However, Dr. Edwards was not married to an Augusta, rather to Constance Evelyn Jeannette Dudley Driver (they had married on June 14, 1890), known to the world as "Mrs. Swinford Edwards," but to her friends as "Evelyn." If she was somehow known as Augusta, then this author has been unable to find such a reference.

Mount Augustana. 85°14' S, 174°21' W. Rising to over 2800 m, between the heads of La-Prade Valley and Cheu Valley, in the N part of the Cumulus Hills, in the Queen Maud Mountains. The N slopes of the mountain comprise rugged, largely ice-free terrain that descends 1500 m to McGregor Glacier, while the S part is ice-covered and descends gradually to the head of Logie Glacier. Named by US-ACAN on Oct. 21, 2008, for Augustana College, Rock Island, Ill., which has a long history of polar and glacial geology, with strong ties to Antarctic research. Their Fryxell Geology Museum is the home of the only fossils of Cryolophosaurus, the largest carnivorous dinosaur found to date in Antarctica.

Île Auguste *see* **Auguste Island**

Îlot Auguste *see* **Auguste Island**

Isla Auguste *see* **Auguste Island**

Auguste Island. 64°03' S, 61°37' W. A small, flat-topped island, 1.3 km long, and rising to 42 m above sea level, it lies E of Liège Island, 5.4 km NE of Wauters Point (the N end of Two Hummock Island), and immediately NW of Lobodon Island, in the Gerlache Strait, in the Palmer Archipelago. Discovered and charted on Jan. 23, 1898 (when a landing was made) by BelgAE 1897-99, and named by de Gerlache as Île Auguste, for his father, Col. Théophile Adrien Auguste de Gerlache (1832-1901). It appears as such on his expedition map of 1899, but on one of his 1902 maps as Îlot Auguste. It appears on Frederick Cook's 1900 English language version of the expedition's map as Auguste Island, and again, as such, on a British chart of 1901. It appears on a 1908 Argentine map as Isla Moreno (i.e., "brown island"). In 1935 Jimmy Marr, during the Discovery Investigations, referred to it erroneously as August Island. It appears on a 1949 Argentine chart as Isla Auguste, but on their charts of 1953 and 1954, as well as in their 1970 gazetteer, it appears as Isla Augusto. It was photographed aerially in Dec. 1956, by FIDASE. US-ACAN accepted the name Auguste Island in 1951, and UK-APC followed suit on Sept. 23, 1960. It appears on a British chart of 1961. On some Chilean charts from 1957 onwards, it figures as Islote Manuel Rodríguez, or Islote M. Rodríguez, but since 1962 Chile has been translating it as Islote Augusto (as the Argentines do). It appears as such in the 1974 Chilean gazetteer.

Islote Augusto *see* **Auguste Island**, **Lobodon Island**

Macizo Augusto Pinochet *see* **Dufek Massif**

Ault, James Percy. b. Oct. 29, 1881, Olathe, Kansas, son of stenography teacher Addison O. Ault and his wife Mary. In 1904 he joined the Carnegie Institution, in Washington, as a magnetic observer with the Department of Terrestrial Magnetism, and in March 1907 he married Mamie Totten, and they moved to Washington, DC. He was skipper and magnetician on the 1915-16 cruise of the *Carnegie*, which took him into Antarctic waters. He was back on the *Carnegie*, and in 1920, his daughter Ruth died, and he almost resigned in desperation. He was killed in an accident while refueling the *Carnegie* in Samoa, in 1929.

Aurdalen *see* **Aurdalen Valley**

Aurdalen Valley. 71°42' S, 12°22' E. A small, moraine-covered mountain pass between Gråkammen Ridge and Aurdalsegga Ridge, and between the Südliche Petermann Range and the Westliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Aurdalen (i.e., "the gravel valley"). US-ACAN accepted the name Aurdalen Valley in 1970.

Aurdalsegga *see* **Aurdalsegga Ridge**

Aurdalsegga Ridge. 71°44' S, 12°23' E. An irregular ridge-like massif, 8 km long, surmounted by Mount Nikolayev, immediately SE of Aurdalen Valley, in the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Aurdalsegga (i.e., "the gravel valley ridge"). US-ACAN accepted the name Aurdalsegga Ridge in 1970.

Isla Aurelio Celedón *see* **Isla Celedón**

Aureole Hills. 63°46' S, 58°54' W. Two smooth, conical, ice-covered hills, rising to 1015 m and 1080 m respectively, close W of the N end of the Detroit Plateau, on Trinity Peninsula. Surveyed by Fids from Base D in Nov. 1948, and named descriptively by them. UK-APC accepted the name on Jan. 28, 1953, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1955. The Argentines call it Cerro Camello (i.e., "camel hill"), because of its two humps.

Aurhø *see* **Aurhø Peak**

Aurhø Peak. 72°08' S, 3°11' W. A partly snow-capped peak with gravel moraine on the NW side of it, 1.5 km E of Slettfjell, in the S part of Ahlmann Ridge, in Maudheimvidda, the westernmost sector of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos taken by NBSAE 1949-52, and named by them as Aurhø (i.e., "gravel height"). US-ACAN accepted the name Aurhø Peak in 1966.

Auriga Nunataks. 70°42' S, 66°38' W. A small group of nunataks, rising to about 1500 m, in the NW part of Palmer Land, 35 km E of Wade Point, at the head of Bertram Glacier, at George VI Sound. The highest rises to a sharp peak and is visible from a great distance. Surveyed by BAS, 1962-72, and named by UK-APC on July 21, 1976, for the constellation. They plotted it in 70°43' S, 66°39' W, but it has since been re-plotted. US-ACAN accepted the name in 1978.

Aurkjosen *see* **Aurkjosen Cirque**

Aurkjosen Cirque. 71°21' S, 13°33' E. A mainly ice-free cirque, or corrie, with several old gravel moraines in the area, between Mount Bastei and Mount Mentzel, on the E side of Lake Unter-See, in the E part of the Gruber Mountains, in the Wohlthat Mountains, in the NE part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Aurkjosen (i.e., "the gravel cove"). US-ACAN accepted the name Aurkjosen Cirque in 1970.

Aurkleven *see* **Aurkleven Cirque**

Aurkleven Cirque. 71°58' S, 7°31' E. A large cirque or snowfield, whose bottom is partially covered with moraine, between Kubus Mountain and Klevekampen Mountain, in the Filchner Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Aurkleven (i.e., "the gravel closet"). US-ACAN accepted the name Aurkleven Cirque in 1967.

Aurkvaevane *see* **Aurkvaevane Cirques**

Aurkvaevane Cirques. 71°52' S, 14°26' E. Three small cirques with moraine-covered floors, indenting the W side of Kvaevefjellet Mountain, in the Payer Mountains, in the Hoel Mountains of Fimbulheimen, in Queen Maud Land. Discovered and plotted from air photos taken by GermAE 1938-39. Re-plotted by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Aurkvaevane (i.e., "the gravel cirques"). US-ACAN accepted the name Aurkvaevane Cirques in 1970.

Aurnupen *see* **Aurnupen Peak**

Aurnupen Peak. 71°59' S, 3°22' W. A peak with gravel moraine on its NW side, 1.5 km N of Flårjuven Bluff, in the W part of Ahlmann Ridge, it is the easternmost peak in Maudheimvidda, itself the westernmost sector of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them as Aurnupen (i.e., "the gravel peak"). US-ACAN accepted the name Aurnupen Peak in 1966.

Aurora. Australia's Antarctic magazine.

[1]**The *Aurora***. U.S. sealing brig built at Saybrook, Conn., in 1815. **July 1, 1820**: She was registered, at 190 tons and 82 feet long. **July 5, 1820**: She left Sandy Hook, NY, under the command of Capt. Robert Macy, and formed part of the New York Sealing Expedition of 1820-21. Donald MacKay was on this voyage. Other crew members were: Cook, Clendenning, and John Hardon. **July 30, 1820**: She arrived at the Azores. **Aug. 6, 1820**: She left the Azores. **Aug. 17, 1820**: She arrived at Cape Verde. **Sept. 27, 1820**: She sighted Cape Frio, Brazil. **Oct. 28,**

1820: She arrived at the Falkland Islands. **Nov. 4, 1820**: Hamilton fell overboard, the 3rd time on the trip. **Nov. 7, 1820**: She left the Falklands. **Nov. 11, 1820**: She sighted Tierra del Fuego. **Nov. 18, 1820**: She sighted the South Shetlands. **Jan. 6, 1821**: She spoke the *Emerald*, out of Boston. **Jan. 27, 1821**: She spoke the *Esther*, out of Boston, and her tender, the *Hermaphrodite*; the *Jane Maria*; the *King George*; and the *Henry*. **Jan. 29, 1821**: She spoke the *O'Cain*, out of Boston, and anchored at Potter Cove, in the South Shetlands. **Feb. 4, 1821**: The captain received copies of local charts from the *O'Cain*. **Feb. 7, 1821**: She left Potter Cove. **Feb. 9, 1821**: She spoke the *Huron*, out of New Haven, and anchored at Yankee Harbor, in the South Shetlands. **Feb. 28, 1821**: She spoke the *Samuel*, out of Nantucket. That day MacKay transferred to the *Charity*, which was just as well, considering the feud between him and Capt. Macy. **March 6, 1821**: She spoke the *Nancy*, out of Salem. **March 8, 1821**: She left Yankee Harbor, with 1000 seal skins. **March 21, 1821**: The vessel was accidentally beached by a storm. **March 24, 1821**: After she was lightened, she was freed, with the help of the *Huron*, but she was in bad shape. **Aug. 1, 1821**: She was sold for salvage in the Falklands, for $1,100.

[2]**The *Aurora***. A 600-ton Newfoundland sealer, built in 1876 in Dundee, she had a 98 hp auxiliary engine and a single-screw propeller. In 1911 John King Davis took her from London to Hobart to pick up AAE 1911-14. She was this expedition's ship throughout. Afterwards she stayed in NZ, and was next used by the Ross Sea Party of BITE 1914-17, after which she again returned to NZ. Her captain from 1911 to 1914 was John King Davis; from 1914 to 1915 it was Aeneas Mackintosh; from 1915 to 1916 J.R. Stenhouse; and from 1916 to 1917 John King Davis. In June 1917 the *Aurora* left Newcastle, NSW, with, among other crew, Scotty Paton, and disappeared. Her anchor is still embedded in the ground at Cape Evans, in Antarctica.

[3]**The *Aurora***. Ship chartered by the Norsk Polarinstitutt to take NorAE 1986-87 to Peter I Island. Skipper that season was Bernt Einar Steinsland. The vessel conveyed not only this expedition, but also the 90 Degrees South Expedition (*see* **Kristensen, Monika**). The *Aurora* was back in 1991-92 and 1992-93, under the command of Capt. Leif Barane (first season) and Capt. Steinsland (2nd season), and transporting Monika Kristensen's expedition.

[1]**Mount Aurora**. 78°14' S, 166°21' E. A round-topped, volcanic summit rising to 1040 m, the highest point on Black Island, in the Ross Archipelago. Named by NZGSAE 1958-59 for Shackleton's ship. US-ACAN accepted the name in 1963. Not to be confused with Aurora Peak or Aurora Heights.

[2]**Mount Aurora** *see* **Aurora Peak**

Aurora Australis. Display of light patterns filling the sky during the Antarctic night. Electric particles emitted by the sun speed through space and are caught by the Earth's magnetic field, and, as they are, they excite the tenuous, ionized gases that form the high layers of the atmosphere. They can be seen every clear night within 20 degrees of the South Magnetic Pole, and occur most frequently around 70°S. Aurorae range in height from 45 miles to 620 miles above the Earth, with an average height of 62 miles. Discovered and named by Cook in 1773, they are the counterpart of that other polar lights phenomenon, the Aurora Borealis, in the Arctic.

Aurora Australis. Shackleton's magazine, produced during BAE 1907-09. At first it was was to be called *Antarctic Ice Flowers* (*see also* the Bibliography).

The *Aurora Australis*. Australia's first home-owned Antarctic research ship, 94.91-meters long, and 3911 tons, she was a purpose-built research and supply icebreaker, designed by Wartsila Marine Industries, of Finland, and built at Carrington Slipways, in Newcastle, NSW, by P & O Polar Australia. There was a nationwide contest to name her, and of the 2500 entries received (some really amazing names came in), 108 suggested *Aurora Australis*, and that was it. There was already a small craft registered with the name, however, but the government took care of that. She was operated by P & O Polar, and based out of Hobart. She was launched (by Prime Minister Bob Hawke's wife, Hazel) on Sept. 18, 1989, with Roger Russling as skipper. She replaced the *Nella Dan* in 1990, and in May and June of 1990, she went to Heard Island, on trials, and from the 1990-91 season was in Antarctica every season, as the main support vessel for the relief of Australian stations. Roger Russling was skipper in 1990-91 and 1991-92. In 1992-93 Capt. Russling and Peter Bain were skippers, and in 1993-94 they were joined by Peter Liley. In 1994-95 it was Bain and Liley, and in 1995-96 it was Bain, Liley, and Peter Klausen. In 1996-97 the skippers were Klausen, Tim Archer, Richard Burgess, and Peter Pearson. In 1997-98 it was Pearson and Anthony Hansen. Peter Pearson was skipper for many years. She was back for 1998-99 and 1999-2000. *See* **ANARE** for details of the voyages.

Aurora Canyon. 65°00' S, 49°30' W. A submarine feature N of the Weddell Sea.

Aurora Gap *see* **Wörner Gap**

Aurora Glacier. 77°37' S, 167°38' E. A large glacier, one of the 3 major glaciers on Ross Island (the others being Terror Glacier and Barne Glacier), it flows S between Mount Erebus and Mount Terra Nova into Windless Bight, at the McMurdo Ice Shelf. Named by A.J. Heine (*see* **Mount Heine**) in 1963 for Shackleton's ship. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964.

Aurora Heights. 83°07' S, 157°05' E. Prominent heights 8 km long, bordering the N side of Argosy Glacier, in the Miller Range. Discovered by the Northern Party of NZGSAE 1961-62, and named by them for Shackleton's ship. US-ACAN accepted the name in 1966. Also called Aurora Peak, but not to be confused with the other Aurora Peak.

Aurora Nunataks. 85°34' S, 177°30' E. A group of five nunataks in the Grosvenor Mountains, between the Beardmore Glacier and the Amundsen Glacier, in the Queen Maud Mountains. The group and the five individual nunataks were all named in 1960, by NZ-APC, for the ship and 5 of the men on board as that vessel drifted away from her moorings during BITE 1914-17. The 5 were Larkman, Mauger, Donnelly, Stenhouse, and Ninnis. It very soon became apparent that there was an embarrassing problem with this collective feature, or rather with the individual nunataks themselves. First, Stenhouse Nunatak had already been named Mount Pratt, years before, by Byrd. Two of the others — Donnelly and Ninnis — don't seem to exist. Which really leaves only two — Larkman and Mauger. So, the name Aurora Nunataks was allowed to disappear quietly. All the men except Donnelly have been honored by the naming of other Antarctic features.

[1]**Aurora Peak**. 67°23' S, 144°12' E. Rising to 533 m above sea level, on the W side of Mertz Glacier, 6.5 km SSW of Mount Murchison, in George V Land. Discovered in 1912 by AAE 1911-14, and named by Mawson for his ship, the *Aurora*. US-ACAN accepted the name in 1949. Also called Mount Aurora, and not to be confused with the other Mount Aurora, or with Aurora Heights.

[2]**Aurora Peak** *see* **Aurora Heights**

Aurora Subglacial Basin. 74°00' S, 114°00' E. A large subglacial feature, to the W and S of Dome C, and trending E-NW toward the coast in the vicinity of the Shackleton Ice Shelf, on the coast of Wilkes Land. Delineated by a RES (airborne radio echo-sounding program), conducted by SPRI-NSF-TUD in 1967-79, and named after Shackleton's ship. ANCA accepted the name on Dec. 3, 1982, and US-ACAN has also accepted it.

Aurora Substation *see* **Byrd Aurora Substation**

Auroraholmen. 68°46' S, 90°39' W. An island on the Mirnyjkusten (i.e., the Mirnyy coast), 1 km E of the E point of Cape Eva, the northernmost point of Peter I Island. Named by the Norwegians for the *Aurora*, the vessel used by NorAE 1986-87 to Peter I Island. Name means "Aurora island."

Austaasen Bank. 70°48' S, 10°30' W. Name also seen as Auståsen Bank. A submarine feature, at least 200 m deep, off the Princess Martha Coast, it was named by Heinrich Hinze in June 1997, in association with Auståsen.

Auståsen. 70°59' S, 9°58' W. A dome, E of Maudheim, on the Princess Martha Coast. Name means "the east hill" in Norwegian.

Auståsen Bank *see* **Austaasen Bank**

Austbanen *see* **Austbanen Moraine**

Austbanen Moraine. 71°32' S, 12°21' E. A medial moraine in the glacier between the Westliche Petermann Range and the Mittlere Petermann Range, in the Wohlthat Mountains, originating at Svarttindane Peaks, and trending N for 20 km. First roughly plotted from air photos taken by GermAE 1938-39, and mapped by the Norwegians from their own ground surveys and new 1958-59 air photos taken during the long

NorAE 1956-60. They plotted it in 71°35' S, 12°23' E, and named it Austbanen (i.e., "the east path") (cf. **Vestbanen**, 11 km to the W). It was later re-plotted. US-ACAN accepted the name Austbanen Moraine in 1970.

Austbotnen. 68°50' S, 90°33' W. A corrie between Austryggen and Botnryggen, on the E side of Lars Christensen Peak, in the NE part of Peter I Island. Name means "the east cirque" in Norwegian.

Austen, H. Crew member on the *Eleanor Bolling*, 1929-30, during the 4th and 5th voyages to Antarctica during ByrdAE 1928-30, i.e., Feb. 11, 1930-March 10, 1930.

Austen, Kingsley "Bunny." b. 1934, Bromley, London, but raised partly in Gloucester, son of Charles Lewis Austen and his second wife Dorothy Alice Brister. He joined FIDS in 1959, as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1960 and 1961.

Punta Auster *see* **Auster Point**

Auster Glacier. 67°12' S, 50°45' E. About 3 km wide, it flows NNW into the SE extremity of Amundsen Bay, E of Reference Peak. Sighted in Oct. 1956 by an ANARE party led by Peter Crohn, and named by ANCA on July 22, 1957, for the Auster aircraft used by ANARE in coastal exploration. US-ACAN accepted the name in 1961.

Auster Islands. 67°25' S, 63°50' E. A group of small islands at the NE end of the Robinson Group, 8.5 km N of Cape Daly, and 20 km ESE of the Douglas Islands, off the coast of Mac. Robertson Land. Mapped and plotted by Australian cartographers from ANARE ground surveys and air photos taken in 1959, and from further such observations made in the early 1960s, and named by ANCA on Aug. 10, 1966, for the islands' nearness to Auster Rookery, and the fact that the islands have provided a campsite for parties studying the penguin rookery. US-ACAN accepted the name in 1970.

Auster Pass. 78°18' S, 162°38' E. A high pass between Mount Huggins and Mount Kempe, leading into the area of the Skelton Glacier from McMurdo Sound, in the Royal Society Range. Named by the NZ Northern Survey Party of BCTAE 1957-58, for the RNZAF Antarctic Flight's Auster aircraft. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Auster Point. 63°49' S, 59°28' W. Midway along the E shore of Charcot Bay, on Trinity Peninsula, on the Davis Coast. Following air photos taken by FIDASE 1956-57, it was named by UK-APC on Sept. 23, 1960, for the Auster aircraft used here by FIDASE. US-ACAN accepted the name later that year. It appears on a British chart of 1962. It appears in the 1991 Argentine gazetteer as Punta Auster.

Auster Rookery. 67°24' S, 63°57' E. An emperor penguin rookery on sea ice, sheltered by grounded icebergs, about 51 km ENE of Mawson Station. Discovered in Aug. 1957 by Flying Officer Doug Johnston, RAAF, from his ANARE Auster aircraft, after which it was named by ANCA on April 29, 1958.

Austhamaren *see* **Austhamaren Peak**

Austhamaren Peak. 71°44' S, 26°42' E. Rising to 2060 m, close E of Byrdbreen, between Hette Glacier and Bulkisen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37, plotted by them in 71°44' S, 26°51' E, and named by them as Austhamaren (i.e., "the east hammer"). It was re-plotted by the Americans in 1957 from air photos taken by OpHJ 1946-47, and the name Austhamaren Peak was accepted by US-ACAN in 1965.

Austhjelmen *see* **Austhjelmen Peak**

Austhjelmen Peak. 71°42' S, 26°28' E. Rising to 1740 m, 3 km E of Vesthjelmen Peak, between Byrdbreen and Hette Glacier, in the Sør Rondane Mountains. Mapped in 1946 by Norwegian cartographers from air photos taken by LCE 1936-37, plotted by them in 71°41' S, 26°36' E, and named by them as Austhjelmen (i.e., "the east helmet"). It was re-plotted in 1957 by the Americans from air photos taken by OpHJ 1946-47, and US-ACAN accepted the name Austhjelmen Peak in 1966.

Austhovde *see* **Austhovde Headland**

Austhovde Headland. 69°42' S, 37°46' E. An icy headland, marked by several rock exposures or nunataks (*see* **Austhovde-kita-iwa**, **Austhovde-minami-iwa**, and **Austhovde-naka-iwa**, below), and which forms the NE, elevated, portion of Botnneset Peninsula, on the S side of Lützow-Holm Bay, on the Prince Harald Coast of Queen Maud Land. Mapped by Norwegian cartographers in 1946 from aerial photographs taken by LCE 1936-37, and named by them as Austhovde (i.e., "east knoll"). US-ACAN accepted the name Austhovde Headland in 1968.

Austhovde-kita-iwa. 69°41' S, 37°45' E. The N rock exposures of Austhovde Headland, at the NE extremity of Botnneset Peninsula, on the S side of Lützow-Holm Bay, on the Prince Harald Coast of Queen Maud Land. Accurately mapped from ground surveys, and air photos taken by JARE between 1969 and 1984, and named on March 26, 1985 by the Japanese. Name means "Austhovde north rocks."

Austhovde-minami-iwa. 69°43' S, 37°47' E. The S rock exposures of Austhovde Headland, at the NE extremity of Botnneset Peninsula (*see* **Austhovde-kita-iwa**, above). Accurately mapped from ground surveys, and air photos taken by JARE between 1969 and 1984, and named by the Japanese on March 26, 1985. The name means "Austhovde south rocks."

Austhovde-naka-iwa. 69°41' S, 37°45' E. Rock exposures in the middle of Austhovde Headland (*see* **Austovde-kita-iwa**, above). Accurately mapped by the Japanese from ground surveys, and air photos taken by JARE between 1969 and 1984, and named by them on March 26, 1985. Name means "Austhovde middle rocks."

Monte Austin *see* **Mount Austin**

Mount Austin. 74°53' S, 63°10' W. A conspicuous rock mass, rising to 955 m, at the S end of the Lassiter Coast, and projecting into the head of Gardner Inlet, on the Orville Coast, where the E side of the Antarctic Peninsula meets the Ronne Ice Shelf. Discovered and photographed aerially on Dec. 21, 1947, by RARE 1947-48, surveyed by a joint FIDS-RARE team, and named by Finn Ronne as Mount Stephen Austin, for Stephen Fuller Austin (1793-1836), great Texas patriot (Ronne's expedition ship was the *Port of Beaumont, Texas*). It appears as such on an American Geographical Society map of 1948, but later that year another American map (one of Finn Ronne's) had shortened the name to Mount Austin, a name that US-ACAN accepted in 1949, and which UK-APC accepted on Jan. 28, 1953. It appears in its shortened form in the British gazetteers of 1955 and 1958. It also appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. It appears on a 1966 Chilean map as Monte Austin.

Rocas Austin *see* **Austin Rocks**

Austin, Craig Raymond. b. Aug. 3, 1945. Glaciologist who wintered-over at Casey Station in 1972. In 1974-75 he led the 2nd traverse to Enderby Land.

Austin, Horatio Thomas. b. March 1800, Brompton, Kent, son of Michael Austin, an official in Chatham Dockyard, and his wife Mary Ann. Michael Austin had been a bosun on the *Vanguard* under Hardy, and had lost an arm at the Battle of the Nile in 1798. With benefit of Hardy's influence, Horatio Austin joined the RN on April 1, 1813 as a 3rd class boy, and during the War of 1812 was a midshipman on the *Ramillies*, under Hardy, and also on the *Creole*. He worked his way up through the ranks, on various ships, and in 1824-25 accompanied Parry (and Lt. Henry Foster) north on the British Naval Northwest Passage Expedition, as a lieutenant. He was 2nd-in-command of Foster's *Chanticleer* expedition to Antarctic waters, 1828-31, becoming acting commander after Foster's death in 1831. Promoted to commander in 1831 he skippered the steam frigates *Salamander* and *Medea* (not in Antarctic waters), and, promoted to captain in 1838, he commanded the *Cyclops* during the Syrian War. He was then appointed to superintend the equipment of a naval steam force to work in the St. Lawrence, in Canada. In 1849 he was in charge of Woolwich Dockyard, and in 1850, while commanding the *Resolute*, he led the second unsuccessful expedition to find John Franklin, who had been lost while searching for the Northwest Passage. He headed the Deptford and Malta Dockyards and retired as rear admiral in 1864, being knighted in March 1865. He died in London on Nov. 16, 1875.

Austin, Oliver Luther, Jr. b. May 24, 1903, Tuckahoe, NY, son of physician Oliver Luther Austin and his English wife Elizabeth. In the 1920s he became an ornithologist working for the U.S. government. He married Elizabeth, and they had a family, living in Wellfleet, Mass. He was associate professor of zoology at the University of Florida, and was with the Research Studies Institute, at Maxwell Air Force Base, at Montgomery, Ala., when he went down on the *Glacier* in 1955 to McMurdo Sound as ornithologist and observer, as part of OpDF I. He wrote

many books on birds, and died on Dec. 31, 1988, in Alachua, Fla.

Austin Group *see* **Austin Rocks**

Austin Islands *see* **Austin Rocks**

Austin Peak. 71°37' S, 165°29' E. In the E central sector of the Mirabito Range. Named by the Northern Party of NZGSAE 1963-64, for William T. "Bill" Austin (b. Sept. 26, 1927, Louisville, Ky. d. Sept. 2, 2003, Glasgow, Ky.), American engineer, and co-ordinator with the Office of Antarctic Programs, NSF, who, as USARP representative at McMurdo that season, organized support for the NZ field parties, and would later be at Plateau Station for its building in the summer of 1965-66. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit later that year.

Austin Rocks. 63°26' S, 61°04' W. A group of rocks rising to 32 m above sea level, and extending for 5 km in an ENE-WSW direction, off the SW of Spert Island, in the Bransfield Strait, 23 km NW of Cape Wollaston, Trinity Island. Roughly charted by Foster in Jan.-March 1829, during the *Chanticleer* Expedition of 1828-31, and named by him as the Austin Group, or Austin's Group, for Horatio Austin (q.v.), who first sighted them. They appear as such on the expedition chart of 1829, but on an 1838 British chart they appear as Austin Islands, and by 1839 a British chart was calling them Austin Rocks. All the other interested countries translated that name according to their language. In Feb. 1927 the rocks were re-charted by the Discovery Investigations, and their position fixed. They appear as Austin Rocks on the DI chart of 1929, and that is the name that was accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953, and by which they were seen in the British gazetteer of 1955. They appear as such on a British chart of 1962. They appear as Rocas Austin on a 1949 Argentine chart, and in the 1970 Argentine gazetteer, as well as in the 1974 Chilean gazetteer, although on some early Chilean maps they figured as Rocas Agustín (Agustín being the usual way of translating the name "Austin").

Austin Valley. 73°30' S, 93°21' W. A small, ice-filled valley at the E side of Avalanche Ridge, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by US-ACAN in 1963, for Jerry W. Austin, aviation machinist's mate with VX-6, a crew member on pioneering flights in LC-47 Dakota aircraft from Byrd Station to the area of the Eights Coast in Nov. 1961.

Austin's Group *see* **Austin Rocks**

Austkampane *see* **Austkampane Hills**

Austkampane Hills. 71°47' S, 25°15' E. A group of hills rising to 2210 m, amid the area comprising Gjel Glacier, Nipe Glacier, and Kamp Glacier, 8 km N of Menipa Peak, in the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Photographed aerially again by OpHJ 1946-47, and using these new photos the feature was plotted again by the Norwegians in 1957, and named by them as Austkampane (i.e., "the east crags"). US-ACAN accepted the name Austkampane Hills in 1965.

Austnes *see* **Austnes Peninsula**

Austnes Peninsula. 66°42' S, 57°17' E. Also called Austnes Point. A short, broad, ice-covered peninsula, forming the SE end of Edward VIII Plateau, and the N side of the entrance to Edward VIII Bay, in Kemp Land. Cape Gotley marks the extreme end of this peninsula. Photographed aerially in Jan.-Feb. 1937 by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Austnes (i.e., "east point"), because of its eastward projection. US-ACAN accepted the name Austnes Peninsula in 1965, and ANCA followed suit on July 31, 1972.

Austnes Point *see* **Austnes Peninsula**

Austnes Skerries. 66°44' S, 57°15' E. A group of skerries 5.6 km SSW of Cape Gotley, which forms the extremity of Austnes Peninsula, at the SE end of Edward VIII Plateau, in Kemp Land. Photographed aerially by LCE 1936-37, and from these photos the feature was mapped in 1946 by Norwegian cartographers, who called one of the skerries Austnesskjera (i.e., "the east point skerry"). ANCA named the group on July 31, 1972, in association with this (now defunct) singular term.

Austnesskjera *see* **Austnes Skerries**

Austnestangen *see* **Cape Gotley**

Austnuten *see* **Armstrong Peak**

Austpynten. 69°37' S, 38°23' E. A point forming the NE extremity of Padda Island, in the inner part of Lützow-Holm Bay, on the Prince Harald Coast. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it ("the east point"). US-ACAN accepted the name without modification in 1968.

Austrabbane. 72°00' S, 28°00' E. A group of nunataks E of the N part of the Balchen Mountains, in the E part of the Sør Rondane Mountains. Name means "the east hills" in Norwegian.

The *Austral*. Formerly Charcot's famous ship, the *Français*, she was bought by Argentina as the ship to relieve Órcadas Station in 1905-06 (Charcot felt she couldn't cross the Atlantic, so he had sold her in Argentina). Her captain that year was Lorenzo Saborido. She was wrecked in the Río de la Plata, on Dec. 21, 1907, just after leaving Buenos Aires for Booth Island (off the west coast of Graham Land). All passengers were saved by the *Amazone*. *See also* **The *Français***.

Bahía Austral *see* **Gould Bay**

Manchón Austral. 60°45' S, 44°44' W. A large dark patch of land on the W coast of Uruguay Cove, on Laurie Island, in the South Orkneys. Named by the Argentines, probably for the *Austral* (formerly Charcot's ship, the *Français*). The pinnacle Peñasco Manchón Austral (*see under* **M**) rises from this feature.

Austral Island. 66°30' S, 110°39' E. A small island in the extreme S lobe of Penney Bay in the Windmill Islands, of which it is the southernmost (hence the name given by US-ACAN in 1963). The island appears on air photos taken by OpHJ 1946-47, but was not charted on subsequent maps.

Australasian Antarctic Expedition. 1911-14. Abbreviated as AAE 1911-14. This was geologist Douglas Mawson's famous expedition. He began putting it together in 1910, with the intention of exploring and charting 2000 miles of the Antarctic coastline due south of Australia. At first, he wanted it to be part of Scott's BAE 1910-13, but Scott was having no part of that. However, he did want Mawson on his team, but Mawson decided to go it alone. **Jan. 14, 1911**: The expedition got a £1000 donation from the Australasian Association for the Advancement of Science. **Jan. 16, 1911**: The expedition got £1000 each from 3 private citizens in Australia. With these, and other privately raised funds, Mawson was able to get an expedition together. The AAE's ship was the *Aurora*, skippered by John King Davis, who was also 2nd-in-command of the expedition. The expeditioners themselves (distinct from, say, the ship's crew) were mostly from Australian and New Zealand universities (hence the official name of the expedition): Mawson, Charles Hoadley, Frank Stillwell, and Andrew Watson (geologists), George F. Ainsworth, Cecil Madigan, and Morton Moyes (meteorologists), George Dovers and Alexander Kennedy (cartographers and surveyors), Leslie Russell Blake (cartographer and geologist), Alfie Hodgeman (cartographer, assistant meteorologist, and sketch artist), Azi Webb (chief magnetician), Bob Bage (astronomer, assistant magnetician, and recorder of tides), John Hunter (chief biologist), Harold Hamilton (biologist), Archie McLean (chief medical officer and bacteriologist), Charles Harrisson (biologist and artist), Evan Jones (medical officer), Leslie Whetter (surgeon), Charles Laseron (taxidermist and biological collector), Walter Hannam and Charles A. Sandell (both radiomen and mechanics), Arthur John Sawyer (radioman), Frank Hurley (official photographer and film maker), Frank Bickerton (motor engineer in charge of the airplane and sledge), Cherub Ninnis (dog handler), Xavier Mertz (dog handler and ski expert), Frank Wild (very experienced Antarctic explorer), John Close (assistant collector), and Herbert Murphy (storekeeper). **April 11, 1911**: The Royal Geographical Society donated £500. **May 1911**: Lt. Hugh E. Watkins was chosen to pilot the plane they were going to take. **June 13, 1911**: H. McKenzie joined the *Aurora* as chief engineer. **July 17, 1911**: 48 dogs, led by Wolf, arrived on the *Louise*, from Copenhagen. Two had not survived the crossing. **July 27, 1911**: The *Aurora* left London, bound for Cardiff, where Norman Toutcher joined the *Aurora* as chief officer, Percy Gray as 2nd officer, W.F. Sullivan as bosun, James Forbes as sailmaker, W. Morrison, Harry Wigzell, and A. Pond as able seamen, and George Hoare as cook. There the ship took on coal. Mertz and Ninnis were the only two expeditioners on the ship, with the dogs, 30 Norwegian sledges, and a mass of oceanographical equipment loaned to the expedition by the Prince of Monaco. **Aug. 2, 1911**: In London, Frederick Gillies replaced McKenzie

as chief engineer of the *Aurora*. **Aug. 3, 1911**: In London, F.E. Evans was taken on as engineer on the *Aurora*. **Aug. 4, 1911**: Harry Corner joined the *Aurora* as 2nd engineer, W. Pope as carpenter, H. Bethell as cook (replacing Hoare, who was promoted to steward), C. Simonson, T. Taylor, and J. Smith as able seamen, J. Rushforth as an ordinary seaman, and F. Burney, H. Doyle, and G. Crossley as firemen. **Aug. 14, 1911**: South Australia donated £5000. **Aug. 28, 1911**: T. Taylor was made a cook on the *Aurora*. **Sept. 3, 1911**: Bethell left the *Aurora*. **Sept. 12, 1911**: NSW donated £7000, bringing the kitty to £19,100. **Sept. 19, 1911**: The state of Victoria donated £6000, bringing the net total to £22,000. **Sept. 27, 1911**: In Cape Town, Rushforth left the *Aurora*. **Oct. 2, 1911**: Wigzell went on 2 months leave from the *Aurora*. R. Campbell was taken on as co-2nd engineer, and John Reid as fireman, from Adelaide to Hobart. **Oct. 11, 1911**: The kitty was now at £43,000. **Oct. 30, 1911**: The airplane was damaged at Adelaide, and Watkins returned to England. **Nov. 2, 1911**: F.E. Evans left the *Aurora*. **Nov. 3, 1911**: Smith left the *Aurora*. **Nov. 4, 1911**: The *Aurora* arrived at Hobart after a 100-day trip. Morrison left the ship. **Nov. 8, 1911**: At Hobart, Burney, Simonson, Pond, Hoare, T. Taylor (able seaman/cook), Sullivan, Pope, and Doyle left the *Aurora*. **Nov. 13, 1911**: Leslie Joss joined the *Aurora* as able seaman. **Nov. 18, 1911**: B.L. McGrath and Adolf Schroder joined the *Aurora* as able seamen. **Nov. 20, 1911**: P. McArthur joined the *Aurora* as 3rd engineer. **Nov. 22, 1911**: Thomas Percival McMahon joined the *Aurora* as chief steward. **Nov. 23, 1911**: Harry Coombe joined the *Aurora* as a fireman. **Nov. 24, 1911**: E.L. Adams joined the *Aurora* as a seaman. **Nov. 25, 1911**: Edward Dodds joined the *Aurora* as a fireman. **Nov. 26, 1911**: W. Cooper joined the *Aurora* as steward's boy. **Nov. 27, 1911**: Oswald MacNeice joined the *Aurora* as an able seaman, and Leonard Pettit as 2nd steward. **Nov. 28, 1911**: Duncan T. Peers joined the *Aurora* as bosun, and J.H. Rust as cook. **Dec. 2, 1911**: At Hobart, Frank Desmond joined the *Aurora*, Clarence de la Motte joined as 3rd officer, and Harry Wigzell came back from leave. The *Aurora* left Hobart at 4 P.M. **Dec. 11, 1911**: The *Aurora* arrived at Macquarie Island, about halfway to Antarctica. On Macquarie they established a station of 5 men who would remain there — Ainsworth (the leader), Blake, Sawyer, Sandell, and Hamilton. **Dec. 23, 1911**: After rescuing a shipwrecked group of sailors from the doomed *Clyde*, and sending them back to Australia on the expedition's auxiliary vessel, the *Toroa* (Captain Thomas Holyman), the main expedition left Macquarie. However, the *Aurora* was short of a chief cook, so they took on Jimmy Fifoot from the *Clyde*. **Jan. 8, 1912**: The expedition set up their main base, the Adélie Land station, at Cape Denison, in Commonwealth Bay. **Jan. 19, 1912**: Unloading was finished, and the *Aurora* took the Western Base Party of 8, led by Frank Wild (also with Watson, Jones, Harrisson, Moyes, Kennedy, Hoadley, and Dovers), to the Shackleton Ice Shelf, where they set up Queen Mary Land Base, nicknamed "The Grottoes." The *Aurora* then set out on its own mission — to explore the coast as far as Cape Adare, in Victoria Land. **March 12, 1912**: The *Aurora* arrived back in Hobart, where Fifoot, Toutcher, and McArthur left the ship. Meanwhile, back at the Adélie Land station (known as Main Base), on Cape Denison, Mawson and his remaining 17 men tried the useless airplane (*see* **Airplanes**). **March 13, 1912**: Coombe left the *Aurora*. **March 14, 1912**: Desmond left the *Aurora*. **March 15, 1912**: Crossley left the *Aurora*. **March 30, 1912**: The *Aurora* arrived in Sydney from Hobart. **April 1, 1912**: At Sydney, McGrath injured himself on board ship, and, for £111 10s 0d, signed a waiver of claim. **April 2, 1912**: A. Dawson taken on the *Aurora*. **April 4, 1912**: At Main Base, they began construction of the radio masts. This was the first Antarctic expedition to use radio. **April 9, 1912**: Pettit left the *Aurora*. **April 10, 1912**: Rust left the *Aurora*. **April 16, 1912**: McMahon left the *Aurora*. **April 18, 1912**: Frank D. Fletcher taken on the *Aurora* as chief officer, and H. Haugan as a fireman. **April 22, 1912**: S. Hasot taken on the *Aurora* for 2 days only, as a cook. **April 24, 1912**: W.H. Boyce taken on the *Aurora* as a steward, and Hasot and Joss left. **April 26, 1912**: J. Saliba joined the *Aurora* as cook. **April 30, 1912**: J. Doherty, an aviator, taken on the *Aurora* as an able seaman. **May 1, 1912**: Peers left the *Aurora*, and Patrick Peel was taken on as a general hand. **May 2, 1912**: A. Thompson joined the *Aurora* as fireman. **May 3, 1912**: Boyce left the *Aurora*. **May 6, 1912**: C. Hackworth taken on the *Aurora* as able seaman. **May 7, 1912**: B.C. Lincoln and L. Vince taken on the *Aurora* as able seamen. **May 8, 1912**: O.F. Royal joined the *Aurora* as chief steward, and D. Whittle as 2nd steward. **May 9, 1912**: Peel left the *Aurora*. **May 14, 1912**: At Hobart A. Kohler taken on the *Aurora*. **May 17, 1912**: On the *Aurora* E.L. Adams promoted to bosun and H. Haugan promoted to donkeyman (3rd engineer). **July 14, 1912**: Saliba left the *Aurora*. **July 18, 1912**: E. Marck joined the *Aurora* as cook. **July 29, 1912**: Whittle left the *Aurora*. **July 30, 1912**: E. Pentony replaced Whittle as 2nd steward on the *Aurora*. **Aug. 3, 1912**: Dawson left the *Aurora*. **Aug. 9, 1912**: In Antarctica, Mawson, Madigan, and Ninnis headed south, and set up a supply depot at Aladdin's Cave. Several sledging parties went out. **Aug. 27, 1912**: Haugan left the *Aurora*. **Aug. 29, 1912**: Pentony left the *Aurora*, and Williams, the 2nd steward, joined. He seems to have been on the ship earlier in the year. **Sept. 1, 1912**: At Main Base, the radio masts were finally finished, the job having been delayed by the strong winds. **Sept. 2, 1912**: James Baxter taken on the *Aurora* as fireman. **Sept. 10, 1912**: Corner left the *Aurora*. **Sept. 17, 1912**: Marck left the *Aurora*. **Sept. 18, 1912**: Baxter and Vince left the *Aurora*. **Sept. 23, 1912**: C.C. Dobbs and Frank McClure taken on the *Aurora* as cooks. **Oct. 8, 1912**: Dobbs, McClure, and Royal left the *Aurora*, and Williams was promoted to chief steward. **Oct. 16, 1912**: Arthur Maxfield joined the *Aurora* as 2nd engineer. **Oct. 30, 1912**: G.R. Taylor joined the *Aurora* as fireman. **Nov. 1, 1912**: R. Bradley taken on the *Aurora*, and Thompson promoted to donkeyman (3rd engineer). **Nov. 10, 1912**: In Antarctica, Mawson, Mertz, and Ninnis set out as the Far Eastern Party. The conditions were terrifying, and they knew they had to be back by Jan. 15, 1913, when the *Aurora* would be waiting to take them back home. Bob Bage, the leader of the Southern Party, which also consisted of Webb and Hurley, headed toward the South Magnetic Pole. The Near Eastern Party supported both the Far Eastern Party and the Eastern Coastal Party, for the first few miles of those parties' trips. **Nov. 12, 1912**: McGrath left the *Aurora*. **Nov. 17, 1912**: The Far Eastern Party — Mawson, Ninnis, and Mertz — left Aladdin's Cave with 18 Greenland dogs and 3 sledges. They crossed an incredible number of crevasses in desperate weather. **Nov. 19, 1912**: S.E. Gibbon taken on the *Aurora* as 2nd steward. **Dec. 2, 1912**: The first test run of the airplane. **Dec. 14, 1912**: On the Far Eastern Party, Ninnis disappeared down a crevasse, taking with him one sledge, the tent, most of the food and spare clothing, and the 6 fittest dogs. At this point, having crossed Mertz Glacier and Ninnis Glacier into George V Land, they were 315 miles from Main Base, and this was their farthest east. There was 10 days food for the two survivors, and none at all for the dogs. They turned back. The dogs were fed worn-out finnesko shoes, rawhide straps, and mitts. **Dec. 15, 1912**: Mawson and Mertz killed the weakest of the dogs, in order to feed the remaining dogs and themselves. **Dec. 18, 1912**: Madigan's Eastern Coastal Party reached their farthest east, 270 miles from Main Base. **Dec. 24, 1912**: G. Taylor joined the *Aurora* as able seaman. **Dec. 25, 1912**: Mawson and Mertz's last animal collapsed, and they killed it, and ate it. **Dec. 21, 1912**: Bage's Southern Party got to within 50 miles of the South Magnetic Pole before returning. **Dec. 25, 1912**: Frank Bickerton, who was leading the Western Party to the highlands west of Main Base, and who had discovered the first meteorite in Antarctica, reached 158 miles west of Main Base. The Far Eastern Party were still 160 miles from Main Base, and conditions were disastrous. **Jan. 1, 1913**: Mertz was in a bad way. **Jan. 7, 1913**: Mertz died, 100 miles from Main Base, and Mawson buried him. Mawson's hair was falling out, the soles of his feet (i.e., not his shoes, but his feet) were coming off, and he bandaged them back on. His fingers and toes were festered with frostbite. And he was alone. **Jan. 15, 1913**: Everyone was back at Main Base, waiting for Mawson's Far Eastern Party. **Jan. 15, 1913**: His deadline for being back at the *Aurora*, Mawson covered only one mile. **Jan. 17, 1913**: Mawson fell into a crevasse. He managed to haul himself out, but then he fell back in. Finally, after a considerable time, he dragged himself out again. **Jan. 29, 1913**: Mawson arrived at a cairn built by McLean, Hodgeman, and Hurley. It had food in it, and a note, left only a few hours before. Mawson was now only 23 miles from Aladdin's Cave, itself only 5½ miles S of Main Base. **Feb.**

1, 1913: Mawson arrived at the cave, at 7 P.M., but was trapped in it for a week due to very bad weather. He finally arrived back at Cape Denison. The *Aurora* had sailed. Meanwhile, the Western Base Party, led by Wild, on the Shackleton Ice Shelf, had done 5 exploratory journeys in 1912-13, including a 215-mile trip from Scott Glacier to Gaussberg and back. They had wintered over in 1912. **Feb. 23, 1913**: Wild's Western Base Party were relieved by the *Aurora*. Six men had stayed at Main Base (Sydney Jeffryes had replaced Hannam) when the *Aurora* had left to pick up Wild's party, in the hope that Mawson's Far Eastern Party was still alive. After Mawson staggered into Main Base, the 7 men wintered over in comparative comfort. E. Ereckson was taken on the *Aurora* for the run from Adelaide to Hobart. **March 9, 1913**: Bradley left the *Aurora*. **March 10, 1913**: Gray left the *Aurora*. **March 14, 1913**: Thompson left the *Aurora*. **March 15, 1913**: Maxfield left the *Aurora*. **March 18, 1913**: Gibbon, Fletcher, G. Taylor (seaman), Schroder, Hackworth, Lincoln, Doherty, MacNeice, and de la Motte left the *Aurora* at Lyttelton, NZ. E.L. Adams, the bosun, was also dismissed at Lyttelton, for "talking too much" (according to John King Davis). This would cause problems (*see* **Adams, E.L.**). **March 19, 1913**: Gillies, Kohler, and G.R. Taylor (fireman) left the *Aurora*. This was the end of the first part of the expedition. **March 20, 1913**: Williams taken back on the *Aurora* as chief steward again. **Aug. 29, 1913**: Gillies taken back on the *Aurora* as chief engineer. **Sept. 1, 1913**: Dobbs re-hired on the *Aurora*, as cook, and Lincoln and MacNeice re-hired as able seaman. Lincoln was keeping a diary of the trip. **Sept. 2, 1913**: Arthur Hardy taken on the *Aurora* as a fireman, and Vince re-hired as an able seaman. **Sept. 4, 1913**: Charles Harrisson was given the additional job of expedition secretary. **Sept. 10, 1913**: J. Blake joined the *Aurora* as a fireman, and Anders Folvik and C. Martin as able seamen. **Sept. 17, 1913**: John H. Blair replaced Fletcher as chief officer of the *Aurora*. **Sept. 23, 1913**: De la Motte re-hired as 3rd officer of the *Aurora*. **Sept. 29, 1913**: H.E. Manders joined the *Aurora* as 2nd engineer. **Oct. 9, 1913**: Martin left the *Aurora*, and A. Beverley joined, as donkey man (3rd engineer). **Oct. 10, 1913**: M. Foley taken on the *Aurora* as an able seaman. **Oct. 20, 1913**: J. Doherty re-hired, this time as bosun, on the *Aurora*. **Oct. 24, 1913**: Vince left the *Aurora* for the last time. **Oct. 25, 1913**: Lincoln left the *Aurora*. **Oct. 27, 1913**: Percy Gray re-hired as 2nd mate of the *Aurora*. **Oct. 28, 1913**: Manders left the *Aurora*. **Oct. 31, 1913**: Folvik and Harrisson left the *Aurora*. **Nov. 4, 1913**: J. Potter joined the *Aurora*. **Nov. 5, 1913**: A. De May, J.P. Maher, James Offin, and Thomas Liddiard taken on the *Aurora* as able seamen. **Nov. 10, 1913**: D. Kelly taken on the *Aurora*. **Nov. 11, 1913**: At Melbourne, C.C. Dobbs left the *Aurora* for the last time, Potter deserted, and John Rymer was taken on as cook. **Nov. 17, 1913**: Hardy and Kelly left the *Aurora*, and Jacob Mort was taken on as a fireman. **Nov. 18, 1913**: Enoch Anderson taken on the *Aurora* as a fireman, and Percy C. Correll as mechanic and assistant physicist. **Nov. 19, 1913**: At Hobart, De May left the *Aurora*, and Max Fritze was taken on as 2nd engineer, as were Herbert Goddard as 2nd steward and J. Hansen as an able seaman. The *Aurora* sailed later in the day. Harold Hamilton, who had been at Macquarie Island, went on this trip. **Dec. 12, 1913**: The *Aurora* returned to Main Base. **Feb. 5, 1914**: The *Aurora* headed for Australia, with all aboard. **Feb. 25, 1914**: The *Aurora* arrived in Australia. **Feb. 27, 1914**: Fritze and Mort left the *Aurora*. **Feb. 28, 1914**: Blair and Blake left the *Aurora*. **March 19, 1914**: Gray, Rymer, Gillies, MacNeice, Hansen, Beverley, Williams, Maher, Offin, Goddard, Foley, Doherty, Liddiard, and de la Motte left the *Aurora*. AAE made more scientific and geographical discoveries than any previous Antarctic expedition. It discovered 1320 miles of land, including Mertz Glacier, Denman Glacier, Scott Glacier, and the Davis Sea. It mapped 800 miles of coastline between 89°E and 153°E, i.e., between Gaussberg and Cape Adare, all along the Adélie Land coast and beyond. And, as mentioned above, it was the first expedition to take an airplane (although it didn't work) and the first expedition to use radio.

Australia. Australia claims 42 percent of Antarctica, all in the east (*see* **Australian Antarctic Territory**), and bases that claim upon the explorations of Douglas Mawson. In 1947 ANARE (q.v.), i.e., the Australian National Antarctic Research Expeditions, were created, and in 1947-48 the first ANARE party went down to Antarctica (sub-Antarctica, actually). In 1954 Mawson Station was built as a substantive basis for Australia's outrageous claim. During IGY they built Davis Station. After IGY, Australia operated the former American station, Wilkes. Other stations include Casey, Law Dome, and Edgeworth David. In 1969 Kay Lindsay became the first Australian woman to reach the South Pole. By the 1980s the Australian Antarctic effort was headquartered in Kingston, Tasmania.

Australian Antarctic Basin *see* **South Indian Basin**

Australian Antarctic Expedition 1891-93. Never happened. In late 1887 the Australasian Geographical Society approached the very rich Baron Oscar Dickson of Gothenburg, Sweden, with the idea of sponsoring an Australian Antarctic Expedition. Dickson agreed that if Australia put up £5000 he would match that sum and get the rest from other sources in Scandinavia, in order to make a total of £15,000 necessary for the expedition. Two good Norwegian ice vessels could be bought for £7000 and most of the scientific equipment for £1000, although Dickson felt the Swedish government would take care of that part. Baron Nordenskjöld had agreed to lead the expedition, and to take his son (who would soon become the most famous explorer of that name). The plan was for the 2-year expedition to set out in the fall of 1891, for one ship to go as far south as possible, perhaps to the area of Mount Erebus, and explore and observe scientifically. The other ship would remain in South Georgia, ready for an emergency. The colonies of Victoria, Queensland, and New South Wales agreed to put up £5000 if Britain would match it. The proposal was supported by the Colonial Office, the Royal Society, and the the Royal Geographical Society, so it should have been effected, but the British government announced in Jan. 1888 that they didn't think it was worth while, but that there might well be plans in the very near future for a very expensive expedition to Antarctica. This last statement took some of the sting out of the disappointment, but, nevertheless, it all fell through. However, by 1890 the idea was back on the boards. By early 1891, despite the fact that everyone in the world seemed to be rooting for the expedition, Australia hadn't come up with the money. Even as late as July 1891 Queensland was still talking about contributing £2000, Sir Henry Parkes said he had undertaken to get £2000 from New South Wales, and Victoria was also going to contribute something. Sir Thomas Elder promised a conditional £5000 and Baron Dickson was still prepared to go to £10,000 to make it all a success. But Queensland backed out, and, finally, so did all the others.

Australian Antarctic Exploration Committee. Founded in Melbourne on June 10, 1886 by the Royal Society of Victoria and the Victoria branch of the Royal Geographical Society of Australasia, to promote interest in getting to Antarctica. The board comprised 5 members from each of those bodies. Nothing ever happened, at least as far as sending an expedition down.

Australian Antarctic Territory. Created in 1933 by the Australian Antarctic Territory Acceptance Act, by which territory was transferred from Great Britain to Australia. Also called the Australian Dependency, it is formed from 2 sectors of the continent, and covers 2,400,000 square miles (excluding ice shelves), and encompasses all land and islands between 60°S and the Pole, and between the longitudes of 160°E and 45°E, with the exception of Adélie Land, which is claimed by France. It includes Enderby Land, Wilkes Land, Mac. Robertson Land, George V Land, Kemp Land, Princess Elizabeth Land, Wilhelm II Land, and Queen Mary Land. Its only human inhabitants are the personnel of the research stations.

Australian Dependency *see* **Australian Antarctic Territory**

Australian National Antarctic Research Expeditions *see* **ANARE**

Austranten *see* **Austranten Rock**

Austranten Rock. 71°24' S, 14°02' E. A small isolated nunatak, 3 km SE of Todt Ridge, it is the most easterly rock outcrop of the Gruber Mountains, in the extreme NE part of the Wohlthat Mountains, in Queen Maud Land. Discovered and plotted from air photos taken by GermAE 1938-39. Re-plotted in 71°24' S, 14°22' W, by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them

as Austranten (i.e., "the east ridge"). US-ACAN accepted the name Austranten Rock in 1970. The feature has since been re-plotted.

Austre Høgskeidet. 71°50' S, 12°10' E. An ice-covered area between (to the W) Skeidshornet, Søkkhornet, and Zwieselhøgda, and (to the E) the Südliche Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians ("the eastern high mountain"). The Germans call it Östliches Hochfeld (which means the same thing). *See also* **Vestre Høgskeidet**.

Austre Petermannkjeda *see* **Östliche Petermann Range**

Austre Skorvebreen *see* **Austreskorve Glacier**

Austre Svarthornbreen. 71°30' S, 12°40' E. A glacier between the Östliche Petermann Range and the Mittlere Petermann Range, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. Name means "eastern Svarthorna glacier," and was named by the Norwegians in association with nearby Svarthorna Peaks.

Austreskorve Glacier. 71°50' S, 5°40' E. A large, broad glacier draining N from a position just E of the head of Vestreskorve Glacier, and passing along the E side of Breplogen Mountain in the middle of the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Austre Skorvebreen. They plotted it in 71°57' S, 5°46' E, but it has since been re-plotted. US-ACAN accepted the translated name Austreskorve Glacier in 1967.

Austreskorvebreen *see* **Austreskorve Glacier**

Austria. The first Austrian in Antarctica may have been Leo Pucher de Kroll, the archeologist, who became a Bolivian and who took part in ChilAE 1948-49. In 1985-86 Bruno Klausbruckner led an Austrian expedition on the *Southern Quest*. Its intention was to climb mountains, and to survey inland from Cape Hallett, but the ship sank and the expedition lost its supplies and equipment, and had to be abandoned. Austria took part in the Filchner Ice Shelf Program, in 1983-84, and the country was the 36th signatory of the Antarctic Treaty, ratified on Aug. 25, 1987.

Austryggen. 68°51' S, 90°30' W. A mountain ridge extending E for about 5.5 km from Lars Christensen Peak, in the NE part of Peter I Island. Name means "the east ridge" in Norwegian.

Austskjaera *see* **Austskjera**

Austskjera. 67°31' S, 64°00' E. Name also seen as Austskjaera. A group of rocks in water, lying close to the coast, 8 km E of Cape Daly, and 3 km ESE of Safety Island, on the Mawson Coast of Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers, who named it ("the east skerry"). ANCA accepted the name without modification on Aug. 20, 1957, and US-ACAN followed suit in 1961.

Austskotet *see* **East Stack**

Austslaet. 71°55' S, 27°40' E. An ice slope, 20 km long, at the N side of Balchen Mountain, in the E part of the Sør Rondane Mountains. Name means "east slope" in Norwegian.

Auststeinen. 72°12' S, 17°34' E. A small mountain in Borchgrevinkisen, 28 km E of Sarkofagen Mountain in the Russkiye Mountains. Name means "the east stone" in Norwegian, and it was given that name because it is the easternmost mountain in Fimbulheimen, in Queen Maud Land.

Auststupet. 68°50' S, 90°31' W. About 7 km long, it is the cliff formed by the steep N side of Austryggen and the steep E side of Botnryggen, in the NE part of Peter I Island. Name means "the east cliff" in Norwegian.

Austvollen *see* **Austvollen Bluff**

Austvollen Bluff. 72°06' S, 3°48' E. A steep rock bluff forming the E side of Festninga Mountain, in the westernmost part of the Mühlig-Hofmann Mountains of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Austvollen (i.e., "the east wall"). US-ACAN accepted the name Austvollen Bluff in 1966.

Austvorren *see* **Austvorren Ridge**

Austvorren Ridge. 73°06' S, 1°35' W. The more easterly of 2 nunatak-like rock ridges in a row, that trend N from Neumayer Cliffs, on the E side of Isstøa, on the Kirwan Escarpment, in Maudheimvidda, the most westerly part of Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NBSAE 1949-52, and from new air photos taken in 1958-59, during the long NorAE 1956-60. Named Austvorren (i.e., "the east jetty") by the Norwegians (*cf.* **Vestvorren**). US-ACAN accepted the name Austvorren Ridge in 1966.

Autobahnmoräne. 71°22' S, 162°28' E. A moraine, just E of Griffith Ridge, in the Bowers Mountains. Named by the Germans.

Autogiros. Also spelled autogyros, and also known as gyroplanes. Rotary-winged aircraft, designed by Juan de la Cierva (*see* **Cierva Cove**) in 1923. First used in Antarctica by Byrd, during ByrdAE 1933-35. His Kellett Autogiro was called *Pep Boy's Snowman!*, and first flew on Sept. 1, 1934. After 10 flights, it crashed on Sept. 25, 1934. They were superseded after 1945 by helicopters.

Automated Geophysical Observatories *see* **AGO**

Automatic weather stations. There are two types of weather stations — manned and automatic. The manned ones are usually an integral part of scientific stations (q.v.). The invention and use of automatic weather stations in Antarctica was accurately predicted in the 1930s by Willis R. Gregg of the U.S. Weather Bureau. Alan Peterson of Stanford finally designed the AWS, and the first one began operating at the South Pole in Dec. 1975, although there were experimental Australian ones on Lewis Island and Chick Island between 1959 and 1961. The Pole AWS was moved to Ross Island in Dec. 1975, and in Jan. 1976 to Marble Point, operating here until May 1977. Until July 1980 they (American ones, anyway) were maintained by members of the Radio Science Laboratory of Stanford University, but since then the department of meteorology, University of Wisconsin, has seen to them, with Dr. Charles Stearns founding his famous AWS program. Australia began their program proper in Oct. 1984, and Italy, and several other countries followed suit. The Russians are begining to get involved too. The average AWS cost about $21,000 in 1990. They provide year-round data via polar-orbiting satellites to researchers in the home country, and they run on solar-powered batteries buried in the snow. Each one has a 3-meter tower, anchored with ropes and chains, with, on top of the tower, a horizontal boom that supports the antenna. They measure air temperature, air pressure, relative humidity, and wind speed at 10 feet above the surface. The AWS is a successful Antarctic project, although not all the individual units function flawlessly, by any means. Each of the following automatic weather stations has a separate entry in this book. **USA**: AGO, AGO-1, AGO-2, AGO-3, AGO-4, AGO-5, AGO-6, AGO-A81, AGO-A77, AGO-A80, AGO-A81, AGO-A84, Allison, Arrival Heights (*see* **Fogle**), Asgard, B-15J (*see* **Daughter** and **Mother**), B-15K, BAS-AGO, Bonaparte Point, Bowers, Brianna, Buckle Island, Butler Island, Byrd Glacier (*see* **Marilyn**), Byrd Station, C-16 (*see* **Mark II**), Cape Adams, Cape Bird, Cape Crozier (*see* **Laurie**), Cape Denison, Cape Hallet, Cape Spencer, Cape Webb, Carolyn, Clean Air, D-10 (Dumont d'Urville), D-17, D-47, D-57, D66-A (*see* **E-66**), D-80, D-85, Daughter 1 (B15-A), Daughter 1 (sic) (B15-J), Dismal Island, Dolleman Island, Dome C, Dome C II, Dome F, Dome Fuji, Doug, Drygalski (*see* **Fountain**), Dumont d'Urville (*see* **D-10**), E-66, Elaine, Elizabeth, Emilia, Eric, Erin, Ferrell, Fogle (Arrival Heights), Fossil Bluff, Fountain (Drygalski), Franklin Island (*see* **Whitlock**), Friis Hills, Gill, Halley (Halley Bay), Harry, Henry, Herbie Alley, Inexpressible Island (*see* **Manuela**), J.C., Jimmy, Katie (Windless Bight), Kelly, Kirkwood Island, Kominko-Slade, Larsen Ice, Laurie (Cape Crozier), Laurie II, Lettau, Limbert, Linda, Lindsay, Little Mac (*see* **Megadunes B**), Lorne, Lynn, Manning, Manuela (Inexpressible Island), Marble Point, Margaret (Roosevelt Island), Marilyn (Byrd Glacier), Mark II (C-16), Martha, Martha II, Mary, Meeley, Mega (*see* **Megadunes**), Megadunes A (Zoe), Megadunes B (Little Mac), Minna Bluff, Mizuho, Mother 1 (B15J), Mother 2 (B-15J), Mount Erebus, Mount Howe, Mount Siple, Mulock, Nancy, Nascent, Nico, Noel, Odell Glacier, 172.5 West, Pat, Patrick, Penguin Point, Pegasus, Pegasus North, Pegasus South, Penguin Point, Peter I Island, Port Martin, Possession Island, Racer Rock, Recovery Glacier, Roosevelt Island (*see* **Margaret**), Ross Island, Rothera, Sabrina, Sandra, Santa Claus Island, Schwerdtfeger, Scott Island, Shristi, Siple, Siple Dome, Siple Station,

Ski-Hi, Sky-Blu, South Pole, Spine, Sushila, Sutton, Swithinbank, Theresa, Tiffany (White Island), Uranus Glacier, Vito, Wanderer, White Island, White Out, Whitlock (Franklin Island), Willie Field, Windless Bight (*see* **Katie**), Young Island, Zoe (*see* **Megadunes A**). **Australia**: A028 (Loewe), A028-A, A028-B, AM01, AM02, Amery G3, Apfel, Casey Air Strip, Dome A (with the Chinese), DSS (Law Dome Summit South), DSS-A, Eagle (with the Chinese), Eder Island, GC41 (Radok), GC46 (P. Schwerdtfeger; not to be confused with the American Schwerdtfeger AWS), GE03 (Phillpot), GF08, GF08-A, Heard Island, Lanyon, Lanyon-A, Law Dome, Law Dome-A, Law Dome Summit, LGB00, LGB00-A, LGB00-B, LGB00-C, LGB10, LGB10-A, LGB20, LGB35, LGB46, LGB59, LGB69, LGB69-A, Loewe (*see* **A028**), Mount Brown, Mount Brown-A, Panda, Radok (*see* **GC41**), P. Schwerdtfeger (*see* **GC46**), Ranvik, Rumdoodle. **Italy**: Alessandra, Alfa, Arelis, Bravo, Cape King, Cape Phillips, Cape Ross, Concordia, Eneide, Enigma, Giulia, Hi Priestley Glacier, Irene, Italica, Itase, Jennica, Lola, Lucia, Maria, Minni, Modesta, Nansen Ice Sheet, November, Paola, Penguin, Priestley Glacier, Rita, Silvia, Sofia, Sofia-B, Terra Nova Bay, Tourmaline Plateau, Zoraida. **Peru**: Hualcan, Pucajirca. **Brazil**: Biscoe Islands, Joinville Island, King George Island. **Netherlands**: Berkner Island, Rothera, Signy Island (operated by BAS), and 3 unnamed in Queen Maud Land. **Germany**: Drescher, Filchner. **Belgium**: Berkner Island, WASA Fosilryggen, Svea Cross, Kohnen Base. **Argentina**: Lachman, Riscos. **China**: Panda South. **Britain**: Peninsula, Baldrick (M83), M83 (*see* **Baldrick**). **Japan**: JASE 2007, JASE 2008, Relay Station.

Automobiles. *See also* **Tractors**. Shackleton tried an auto on skis in 1908, at Cape Royds, Ross Island, during BAE 1907-09. The new 12-15 hp, 4-cylinder engine Arrol-Johnston, with an air-cooling system, was unloaded from the *Nimrod* on Jan. 3, 1908. It wouldn't ride the snow, kept getting bogged down, but, after its final trial run on Sept. 19, 1908, it proved to be a success. It did serviceable work around the base, but then, on Dec. 1, 1908, fell into a crevasse. It was rescued, but was out of commission. Remains of some of the wheels can (or at least could, until recently) still be seen at Cape Royds. In 1928 Wilkins took down an Austin, to haul fuel from the ship to the plane during the Wilkins-Hearst Expedition of 1928-30. During IGY (1957-59), the USSR used the GAZ 69, a wheeled car made by the Gorki Automobile Works, weighing 3350 pounds, with 55 hp. It was used for light haulage. The Z1S 151 was also used by the USSR as a repair truck. It weighed 5½ tons. For years in the late 1900s and early 21st century, in order to simplify the spare parts situation, the Americans used Ford pickups at McMurdo. Now that the super highway has been built to the Pole, it will be only a very short time before Cadillacs and Expeditions start rolling down that road, and then, who knows!

Bahía Auvert *see* **Auvert Bay**

Baie Auvert *see* **Auvert Bay**

Auvert Bay. 66°14' S, 65°45' W. Also called Auvert Fjord, and Evensen Bay. A bay, 13 km wide, indenting the W coast of Graham Land for 5 km between Cape Evensen and Cape Bellue. Discovered and roughly charted by FrAE 1908-10, and named by Charcot as Baie Auvert (i.e., "bay far from anywhere"), and it appears as such on Charcot's 1912 map. It appears as Auvert Bay on a British chart of 1914. In 1950, US-ACAN accepted that name, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. The Chileans and Argentines call it Bahía Auvert. The bay was photographed from the air by FIDASE in 1956-57.

Auvert Fjord *see* **Auvert Bay**

Avalanche Bay. 77°01' S, 162°44' E. A little bay, 1.5 km wide, on the S shore of Granite Harbor, just SE of Discovery Bluff, in Victoria Land. Mapped by BAE 1910-13, and named by that expedition's Granite Harbor party for the avalanches heard nearby, while they were sledging in this area. US-ACAN accepted the name in 1949, and it appears in the 1958 NZ provisional gazetteer.

Avalanche Col *see* **Pardo Ridge**

Avalanche Corrie. 60°40' S, 45°22' W. An ice-filled cirque, or corrie, close N of Amphibolite Point, on the S coast of Coronation Island, in the South Orkneys. Surveyed in 1948-49 by Fids from Signy Island Station, and named by them for the constant avalanches from the hanging glaciers above this corrie. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Avalanche Glacier. 64°55' S, 62°50' W. A dangerous, strongly crevassed tidewater glacier, fed by avalanches, which flows NW into Skontorp Cove, NW of Mount Inverleith, between that mountain and Porphyry Ridge, at Paradise Harbor, on the Danco Coast, on the W coast of Graham Land. Named by the Polish Antarctic Expedition on Sept. 1, 1999. UK-APC accepted the name on Dec. 16, 2003.

Avalanche Ridge. 73°30' S, 94°22' W. A linear rock ridge, extending 1.5 km N from Pillsbury Tower, and separating Basecamp Valley from Austin Valley, in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party here in 1960-61, and so named by them for the constant avalanching of snow off the flanks of the ridge. US-ACAN accepted the name in 1963.

Avalanche Rocks. 66°31' S, 98°02' E. A rock outcrop, 366 m long, and with a vertical face rising to 185 m, midway between Delay Point and Jones Rocks, on the W side of Melba Peninsula, on the coast of Queen Maud Land. Discovered in Sept. 1912 by the Western Base Party of AAE 1911-14. While the men were camped nearby a huge avalanche took place. US-ACAN accepted the name in 1949, and ANCA followed suit on Oct. 22, 1968. Originally plotted in 66°28' S, 98°01' E, this feature has since been re-plotted.

Aveline. Crew member on the *Pourquoi Pas?* during FrAE 1908-10. Antarctic historians have never been able to come up with this man's first name, let alone any biographical information on him, and have been reduced to calling him "Monsieur Aveline," or "Sailor Aveline." It is with regret that this author has to admit that he is similarly embarrassed. However, there was a French sailor plying the seas in the 1890s by name of Thomas Aveline. He was born in 1863.

Islas Avellaneda *see* **Pitt Islands**

The *Aventura III*. An 8.5-ton, 13.1-meter British yacht, designed by Philippe Briand, built by Alubat, at Sables d'Olonnes, France, for Jimmy Cornell, and launched in May 1998. In 1998-99, she was in Antarctic waters. Mr. Cornell was born in Rumania in 1940 as Dragos Corneliu Cismasiu, graduated from Bucharest University, was in Britain from 1969, became a BBC reporter, had three yachts name *Aventura*, sailed around the world several times with his wife and children, and wrote the book *A Passion for the Sea*. This was not his first book, by any means.

The *L'Aventure* *see* under **L**

Mount Avers. 76°29' S, 145°21' W. A mountain, 3 km N of Mount Ferranto, in the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Discovered in Dec. 1929 during ByrdAE 1928-30, and named by Byrd for Henry Godfrey Avers (1886-1947), chief mathematician with the Division of Geodesy, U.S. Coast and Geodetic Survey, who helped determine that Byrd had, in fact, reached the North Pole (1926) and the South Pole (1929) by plane. US-ACAN accepted the name in 1947. Originally plotted in 76°30' S, 148°18' W, it has since been re-plotted.

Meseta Avery *see* **Avery Plateau**

Avery, George. Commander of the *Lively* during Biscoe's expedition of 1830-32. He took over from Captain Magnus Smith in the Falklands on the way south, probably in Nov. 1830. A plain sailor-like man, but extremely intelligent and well-informed. He was the only one on the *Lively* who could read or write.

Avery Plateau. 66°50' S, 65°30' W. An ice-covered plateau, 63 km long and rising to 1830 m., midway between the Loubet Coast and the Foyn Coast, in Graham Land, it extends from the heads of Erskine Glacier and Gould Glacier in the NE, to the heads of Finsterwalder Glacier and Demorest Glacier in the SW. Probably first seen by Biscoe in Feb. 1832, and presumably in Jan. and Feb. 1909 from various positions in Matha Strait, by FrAE 1908-10. Surveyed in 1946-47 by Fids from Base E, and named by UK-APC on Sept. 22, 1954 for George Avery. It appears in the British gazetteer of 1955, plotted in 66°53' S, 65°26' W, but refers only to the central part of the feature we know today as Avery Plateau. US-ACAN accepted the name in 1956. It appears on a British chart of 1957, but was re-plotted by FIDS from Base W later that year, and these new co-ordinates (and its greater size) were accepted by UK-APC on July 7, 1959. It appears in the 1991 Argentine gazetteer with the translated name of Meseta Avery.

Pik Avgevicha. 71°54' S, 9°41' E. A peak on

Sandegga Ridge, in the Conrad Mountains, in the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians.

Islote Aviador Tenorio *see* **Tenorio Rock**

Avian Island. 67°46' S, 68°54' W. A small island, 1.2 km long and 0.5 km wide, and rising to an elevation of 40 m above sea level, close off the extreme SW tip of Adelaide Island, just out to sea from Adelaide Station, and separated from Adelaide by a small navigable channel which, if it wasn't there would prove Avian Island to be merely a part of the big island (which it is, really, geologically). Discovered by FrAE 1908-10. Visited and surveyed by FIDS in Oct. 1948, and they named it Avian Islet, for the large number and variety of birds here. On March 31, 1955, UK-APC accepted this name, and US-ACAN followed suit in 1956. On Oct. 26, 1957, the Argentines built their refugio Paso de los Andes here. On July 7, 1959 the islet was re-defined by UK-APC, as Avian Island, and as such it appears on a British chart of 1961. US-ACAN followed suit with the change. In 1962-63 a camp was established here for the joint BAS-RN survey of the S coast of Adelaide Island that season. The Hydrographic Institute of the Chilean Navy named it in 1963 (for Chileans only) as Islote Bories, for the whaler *Gobernador Bories* (q.v.), and they established Guesalaga Refugio on the island, on Feb. 28, 1963. The island appears as Islote Bories on a Chilean chart of 1963, and in their gazetteer of 1974.

Avian Islet *see* **Avian Island**

Aviation *see* **Airplanes**

Aviation Islands. 69°16' S, 158°47' E. A group of small rocky islands, 5 km N of Cape Kinsey and the Wilson Hills, and 5 km NNE of Davies Bay, in Oates Land, on the coast of Victoria Land. Discovered and mapped by SovAE 1958, and named by them as Ostrova Poljarnoj Aviacii (there are variant spellings of this transliteration in English, of course). Photographed aerially on Feb. 20, 1959 by Phil Law of ANARE, in a flight off the *Magga Dan*, and a party from that ship, led by Law, landed on the southernmost island on March 6, 1961. They plotted it in 69°16' S, 158°45' E, but it has subsequently been re-plotted. For a while the British and Americans called them the Polar Aviation Islands (a simple translation from the Russian), but the name was subsequently shortened by ANCA on Oct. 11, 1960, and then by everyone else. US-ACAN accepted the shortened name in 1964. There is an Adélie penguin rookery here.

Aviator Glacier. 73°50' S, 165°03' E. Also called Lady Newnes Glacier. A major valley glacier, about 100 km long and 8 km wide, it flows generally S from the plateau of Victoria Land along the W side of the Mountaineer Range and enters Lady Newnes Bay between Cape Sibbald and Hayes Head, where it forms Aviator Glacier Tongue. Photographed from the air on Dec. 17, 1955 by Trigger Hawkes during the first flight from NZ to Antarctica. Named by NZGSAE 1958-59 for the airmen who have served in Antarctica. In Dec. 1958 an attempt to reconnoiter it by helicopter and to land a NZGSAE party on it had to be abandoned when the icebreaker *Glacier* was damaged by the pack-ice. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1964. Originally plotted in 73°55' S, 165°15' E, it has since been replotted.

Aviator Glacier Tongue. 74°00' S, 165°50' E. The seaward extension of Aviator Glacier into the Ross Sea between Wood Bay and Lady Newnes Bay, along the coast of Victoria Land. Named by US-ACAN in 1969, in association with the glacier.

Aviator Nunatak. 85°11' S, 168°58' W. A nunatak, 6 km E of Mount Wells, it is the most northerly of 3 large nunataks in the upper Liv Glacier. Named by the Southern Party of NZGSAE 1961-62 for the aviators on Byrd's 1929 flight to the Pole. NZ-APC accepted the name on June 28, 1962, and US-ACAN followed suit in 1966.

Gora Aviatorov. 70°30' S, 71°46' E. One of the rock exposures in the Bain Crags, along the S part of the W side of Gillock Island, on the Amery Ice Shelf. Named by the Russians, for all Antarctic aviators.

Poluostrov Aviatorov *see* **Aviatorov Peninsula**

Proliv Aviatorov. 66°28' S, 110°31' E. A strait running along the SE side of Peterson Island (the easternmost of the Windmill Islands), thus separating the Windmill Islands from the Bragg Islands, off the Budd Coast. Named by the Russians for all Antarctic aviators.

Aviatorov Peninsula. 66°13' S, 101°02' E. In the Bunger Hills. Charted by SovAE 1956, and named by them as Poluostrov Aviatorov, a named translated by ANCA on Jan. 19, 1989.

Bahía Avicena *see* **Avicenna Bay**

Bahía Avicenna *see* **Avicenna Bay**

Avicenna Bay. 64°26' S, 62°23' W. A small bay, 2.5 km SW of D'Ursel Point, along the SE coast of Brabant Island, in the Palmer Archipelago. Roughly charted by BelgAE 1897-99. Photographed aerially by FIDASE 1956-57, and mapped from these photos by FIDS cartographers in 1959, being plotted in 64°26' S, 62°21' W. In keeping with the naming of other features in this area after physicians, this bay was named on Sept. 23, 1960 by UK-APC, for the great Arabian physician Avicenna (980-1037). US-ACAN accepted the name later that year. It appears on a British chart of 1961. It was later replotted. It appears (erroneously) on a U.S. chart of 1963 as Avicenza Bay, and in the Argentine gazetteer of 1991, as Bahía Avicena (Avicena being what the Spanish call the physician).

Avicenza Bay *see* **Avicenna Bay**

Islotes Avión *see* **Sigma Islands**

Montes Avión Cruz del Sur *see* **Batterbee Mountains**

Grupo Avión V. Sikorski (308) *see* **Lajarte Islands**

Avitohol Point. 62°34' S, 37°05' W. It projects 700 m into Hero Bay, 3 km NE of Snow Peak, 9.6 km W by SW of Siddons Point, and 14.6 km SE of Cape Shirreff, on the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2005, and named by them on April 11, 2005 for Khan Avitohol, ancient Bulgarian ruler.

Aviza Black Glacier *see* **Gruening Glacier**

Avren Rocks. 62°27' S, 59°31' W. Three adjacent rocks, extending 260 m in a N-S direction, and 150 m wide, in the interior of Micalvi Cove, at the S extremity of Robert Island, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Aug. 12, 2008, for the two settlements named Avren, one in northeastern Bulgaria, and the other in southwestern Bulgaria.

Avril, Pierre. b. April 21, 1812, Bordeaux. Ordinary seaman on the *Astrolabe* during FrAE 1837-40. On Jan. 1, 1839 he became a sailmaker, and died on board, on Aug. 5, 1839.

Bukhta Avrora. 66°28' S, 94°42' E. A bay in Queen Mary Land. Named by the Russians, (name means "aurora bay").

Kupol Avrora. 70°08' S, 2°25' E. A dome along the ice shelf that fringes Queen Maud Land. Named by the Russians (name means "aurora dome").

Glaciar Avsyuk *see* **Avsyuk Glacier**

Avsyuk Glacier. 67°07' S, 67°15' W. Flows NW into Shumskiy Cove, Hanusse Bay, on Arrowsmsith Peninsula, on the Loubet Coast of Graham Land. Surveyed by Fids from Base Y in 1956-57, photographed aerially by FIDASE in 1956-57, and plotted by FIDS cartographers in 69°09' S, 67°13' W. In keeping with the naming of features in this area after glaciologists, this glacier was named by UK-APC on Sept. 23, 1960 for Soviet glaciologist Gregori Aleksandrovich Avsyuk (1906-1986), specialist in the glaciers of central Asia. US-ACAN accepted the name in 1965. It appears in the Argentine gazetteer of 1991 with the translated name Glaciar Avsyuk. It has since been re-plotted.

The *Awahnee II*. The *Awahnee I*, designed by Uffa Fox, and owned by Dr. Robert Lyle Griffith (b. Jan. 1917), had been lost in the Pacific. The *Awahnee II* was a 53-foot ferro cement-hulled, blue and buff high-masted sailing yacht out of Honolulu, built and operated by Dr. Griffith, and flying the U.S. flag. Griffith, a retired veterinarian from California, then living in NZ, decided to take the summer of 1970-71 and sail around Antarctica with his wife Nancy, their 16-year-old son Reid, and Pat Treston (a lawyer from Auckland), Ash Loudon (a student at Otago University), and John O'Brien (a businessman from Auckland). They visited the South Shetlands, the South Orkneys, and the Antarctic Peninsula, and were in at Palmer Station, Jan. 22-29, 1971, for radio repairs, much to the astonishment of the American station members. At Bellingshausen Station they learned that Mrs. Griffith was pregnant. The *Awahnee II* was the first vessel of her type to circumvigate the world in 60°S (she did it in 111 days).

Punta Awl *see* **Awl Point**

Awl Point. 63°49' S, 60°37' W. Just over 6 km NE of Borge Point, about 15 km NNE of Cape Andreas, and about 16.5 km SSW of Cape Wollaston, it forms the extreme SE point of

Trinity Island, in the Palmer Archipelago. The Argentines named it Cabo Wallaston [sic] in error (*see* **Cape Wollaston**), and as such it appears on an Argentine government map of 1954. Photographed from the air in 1956 by FIDASE, UK-APC re-named it descriptively on Sept. 23, 1960 as Awl Point, because the point is low in elevation but very sharply pointed in plan, and as such it appears on a British chart of 1961. US-ACAN accepted the name later in 1960. The Argentines translated this as Punta Punzón. It appears in the Chilean gazetteer of 1974 as Punta Awl.

AWS *see* **Automatic weather stations**

Axel Heiberg Glacier. 85°25' S, 163°00' W. Also called Heiberg Glacier. One of the most famous glaciers in the world, it is a 50 km-long valley glacier flowing from the Polar Plateau between the Herbert Range and Mount Don Pedro Christophersen, in the Queen Maud Mountains, on the E coast of the Ross Ice Shelf, which it feeds. Amundsen discovered and pioneered this glacier as a short, steep route to the Polar Plateau in Nov. 1911 (Scott used the longer, gentler Beardmore Glacier). Amundsen first named this glacier on Nov. 17, 1911, as Folgefonni, but shortly therafter re-named it for Consul Axel Heiberg (1848-1932), Oslo businessman and polar contributor. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer. The Norwegians refer to it as Axel Heibergbreen.

Axel Heiberg Icefalls. Icefalls on the Axel Heiberg Glacier. Not an official name.

Axel Heibergbreen *see* **Axel Heiberg Glacier**

Mount Axtell. 81°18' S, 85°06' W. A low but distinctive rock peak, 2.5 km SE of Mount Tidd, in the Pirrit Hills. Positioned by the U.S. Ellsworth-Byrd Traverse Party, on Dec. 7, 1958, and named by US-ACAN in 1964, for William R. Axtell, Jr. (b. July 8, 1924, La Porte, Iowa. d. April 7, 1974, San Francisco), USN, cook who wintered-over at Ellsworth Station in 1958, and who volunteered to accompany the traverse party.

Axtell, Francis George "Joe." b. Nov. 29, 1916, Chipping Sodbury, Glos. On April 29, 1939, he was granted a short service commission as an acting pilot officer in the RAF, and on Nov. 6, 1939, was appointed pilot officer, flying Spitfires during World War II. He joined FIDS in 1955, as a meteorologist (he was still flying), and left Southampton on the *John Biscoe* in October of that year, bound for Port Stanley, and wintering-over at Signy Island Station in 1956. On Sept. 14, 1958, he returned to London from Australia, on the *Orion*. He died in 1961, in Woolwich.

Axthelm Ridge. 69°33' S, 159°02' E. A narrow rock ridge, 6 km long, and about 1.85 km SE of Parkinson Peak, in the Wilson Hills of Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 an 1963, and plotted in 69°35' S, 159°03' E. Named by US-ACAN in 1970, for Cdr. Charles E. Axthelm (b. Nov. 30, 1928, Marion, Ohio), USN, flag secretary to the commander of U.S. Naval Support Force, Antarctica, during OpDF 69 (i.e., 1968-69) and OpDF 70 (i.e., 1969-70). He had joined the U.S. Navy in March 1951, and had been executive officer on the *Glacier* during OpDF 65 and 66. He retired from the Navy in Dec. 1977. ANCA accepted the name on July 31, 1972. The feature has since been re-plotted.

Axthelm Seamount. 65°30' S, 168°00' E. An undersea feature of the Ross Sea. Named in 1995.

Mount Axworthy. 73°06' S, 62°44' W. Rising to 1640 m, in the NW part of the Dana Mountains, on the Lassiter Coast of Palmer Land. Named by US-ACAN in 1968, for Charles Sheldon "Charlie" Axworthy (b. 1930), USN, hospital corpsman and officer-in-charge at Palmer Station, winter of 1965. The name appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Islote Ayala. 68°12' S, 66°57' W. A tiny island, no more than a rock, lying off Beaumont Island, in Neny Bay, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Named by ChilAE 1947 for Captain Arturo Ayala Arce (1928-2010), a member of the Army delegation on the *Angamos*, during that expedition. The Argentines have included this island (and Beaumont Island) under the collective name of Islotes Beaumont.

Ayekliff. 64°24' S, 58°08' W. A prominent ice-free cliff on the SW tip of James Ross Island, it forms the W boundary of Carlsson Bay. Named by the Germans on June 2, 2005 for Heinz Aye (b. 1936, Hamburg), captain of the Hapag-Lloyd Cruising Company, who cruised the Antarctic about 100 times, and who circumnavigated the island in the *Bremen* on Jan. 29-30, 2000. He was 10 years on the *Bremen*, and was also skipper of the *World Discoverer* and the *Society Explorer*. Some have called him "the Captain Cook of the 20th century."

The *Ayesha*. A 36-foot fiberglass ketch out of Falmouth, England, skippered by businessman Miles Quitmann, which visited the South Shetlands and the Antarctic Peninsula in 1996-97.

Rocas Aylman. 68°07' S, 67°07' W. Group of rocks to the NE of Millerand Island, on the Fallières Coast. Named by the Argentines for Miguel Aylman, naval lieutenant on the *Uruguay* during the 1910 relief of Órcadas Station.

Aylward, William. b. 1894, Auckland. At 16, he apprenticed as a seaman with the Union Steam Ship Company, serving on a variety of ships until he became 3rd mate of the *Whangape* in 1915. He was 3rd mate on the *Aurora* in 1916-17, when that vessel sailed south to Cape Evans, to relieve the Ross Sea Party, at the end of BITE 1914-17. When the time came to award him the Polar Medal, he could not be traced, and the medal was returned.

Cerro Aymara. 62°27' S, 60°47' W. A hill immediately to the NE of Lago Oculto, and to the ESE of Cerro Pehuenche, on Cape Shirreff, Livingston Island, in the South Shetlands. Named by the scientific personnel on ChilAE 1990-91, for the Aymara, an indigenous people of Chile.

Ayotte, Sally Bradford. b. 1963. Trained as a nutritionist, and worked in hospitals and nursing homes. In the early 1990s, she began cooking for employees in vacation venues, such as Honduras, Alaska, and on sailboats. In 1996 she became McMurdo's head chef for 6 summer seasons, and also served at Pole Station for 6 years.

Mount Ayres. 79°20' S, 156°28' E. A prominent mountain, rising to 2600 m above sea level, 16 km S of the W end of Finger Ridges in the Cook Mountains, and S of the Mulock Glacier névé, into which it falls away steeply. Climbed in Dec. 1957 by the Darwin Glacier Party of BCTAE, who also discovered it and established a survey station at its highest point. Named by ANCA on Oct. 11, 1960, for Harry H. Ayres (q.v.), one of the 2 men who comprised this party. US-ACAN accepted the name in 1962.

Ayres, George. b. Nov. 4, 1891, 70 Ealing Road, Hounslow, London (east of Aldgate Pump, says Frank Ommannney in his book *South Latitude*, but Ommanney was wrong), son of grocer George Ayres and his wife Emily. He was an able seaman on the *Discovery* during both halves of BANZARE 1929-31. He was back in Antarctic waters on the *Discovery II* for the Discovery Investigations of the 1930s, and worked the nets pulling the fish in, going to the ice for a total of 11 seasons. Ommanney describes him as "a huge man with sandy hair, little china-blue eyes, and a smile of rare good humour which enlivened his countenance." In the 1950s he was married and living in Twickenham, in London, and was still sailing. He died in April 1985, in Portsmouth.

Ayres, Harry Herbert. b. July 31, 1912, Christchurch, NZ, as Horace Henry Ayres (or Ayers), son of gardener, carpenter, and plasterer Henry Ayres by his wife Ellen Matthews. After a tough start in life, he became a mountain guide and married Catherine May Guise in Christchurch in 1939. He was NZ's leading mountain climber of the 1940s (Sir Edmund Hillary's predecessor, as it were), and fought in the Pacific during World War II. Almost as noted a womanizer as a climber, as well as a gambler and gold prospector, Harry, naturally, had a troubled domestic life, and his marriage ended in 1948. The following year he married Jeanne Ette Cammock in Christchurch. Various factors prevented him from climbing Everest after World War II, and from going on the famous 1953 expedition that culminated in Hillary reaching the top. He became chief ranger of the Mount Cook National Park Board (1953-61), and during this period was NZ observer on the ANARE 1955-56 summer trip to Mawson Station, dog-handler in the NZ depot-laying party under Hillary during BCTAE, 1957-58, and one of the 2 men in the Darwin Glacier Party that year, wintering-over at Scott Base in 1957. He ran a motor camp (1961-72), was a professional gardener (1972-82), and then retired. On July 16, 1987 he went missing, and his body turned up in Lyttelton Harbour on Aug. 11. The coroner ruled suicide.

Michael Mahoney wrote his biography (*see* the Bibliography).

Nos Aytos *see* **Aytos Point**

Aytos Point. 62°42' S, 60°03' W. A point, 5.6 km ENE of Samuel Point, and 2.6 km SW of M'Kean Point, on the coast of Bransfield Strait, on the SE side of Livingston Island, in the South Shetlands, it is formed by an offshoot of Serdica Peak. Roughly mapped by the British in 1968, it was named by the Bulgarians on March 15, 2002, as Nos Aytos (i.e., "Aytos point"), for the Bulgarian town of Aytos. UK-APC accepted the English translation on Dec. 16, 2003. The British were the latest to replot this feature, in late 2008.

The *Azamara Journey*. A 30,277-ton, 181-meter luxury tourist ship, originally the *Renaissance R6*, one of a fleet of 8 ships built for Renaissance Cruises, and completed in 2000, the year she began in service. After Renaissance went bust, she was sold to Cruiseinvest, and laid up until 2003, when she was chartered to Pullmantur Cruises, as the *Blue Star*. In 2005, she was renamed the *Blue Dream*, and in 2006 Pullmantur bought her. On May 5, 2007 she was transferred to the fleet of Azamara Cruises, and renamed the *Azamara Journey*. Her first voyage to Antarctica was in 2007-08.

Roca Azar *see* **Hazard Rock**

Azarashi Rock. 70°01' S, 38°54' E. Name also seen as Azarasi Rock. A bare rock exposure, or small nunatak, lying 1.5 km N of the Insteklеppane Hills, and 5 km SE of Strandnebba, near the E side of Shirase Glacier, on the Prince Olav Coast of Queen Maud Land. Mapped by Japanese cartographers from surveys and air photos taken by JARE, 1957-62, and by them on Oct. 1, 1962, as Azarasi-iwa (seal rock). US-ACAN accepted the spelling Azarashi Rock in 1968. The Norwegians translated it as Selsteinen (i.e., "the seal rock").

Azarasi-ike *see* **Azarasi-irie**

Azarasi-irie. 69°00' S, 39°35' E. A cove, usually covered with perennial ice and snow, which indents the NW side of East Ongul Island, in the NE part of Lützow-Holm Bay, on the Prince Olav Coast. Named by the Japanese on Feb. 26, 1988 as Azarasi-ike (i.e., "seal lake"), because they thought it was a lake. In 1996 they redefined it as a cove, and re-named it, but by that time the Norwegians had translated it as Selvatnet.

Azarasi-iwa *see* **Azarashi Rock**

Azarasi Rock *see* **Azarashi Rock**

Punta Azcuénaga. 64°38' S, 62°21' W. The extreme N of the little peninsula that extends E out of Arctowski Peninsula, on the W coast of Wilhelmina Bay, off the W coast of the Antarctic Peninsula. Named by the Argentines in 1978 for Miguel de Azcuénaga (1754-1831), Argentine fighter for independence. The Chileans call it Punta Marín, for Guillermo Marín Marín, bosun on the *Yelcho* during the time that vessel rescued Shackleton's men from Elephant Island in 1916.

Punta Azcurra. 64°23' S, 61°30' W. The extreme SE of Murray Island, at the SW side of Hughes Bay, separated from the W coast of Graham Land by Graham Passage. Named by the Argentines in 1978 for Corporal Timonel Azcurra, crew member on the *Uruguay* during her second trip to Órcadas Station in 1904-05. The Chileans call it Cabo Léniz, for Clorindo Léniz Gallego, stoker on the *Yelcho* at the time that ship rescued Shackleton's men from Elephant Island in 1916.

Azerbaijan. According to press releases, Azerbaijan sent its first expedition to Antarctica in 2008-09. The expedition, consisting of two Azerbaijanis — Prof. Huseyngulu Bagirov (minister of ecology and natural resources, and president of the air and extreme sports federation of Azerbaijan) and his assistant Tarlan Ramazanov (chairman of the Baku Mountain Sports Club) — after special cold-weather training in Chile, left Baku on Dec. 24, 2008, and arrived at the Patriot Hills base, from where, on Jan. 11, 2009, they climbed Mount Vinson, planting a flag and some other propaganda ("I am proud to be Azerbaijani") at the the summit. Apparently they took 459 meteorological measurements, and collected 2 kilos of geologic samples. Then they set out for the Pole, arriving on Jan. 26, 2009. The expedition ended on Feb. 1, 2009, and cost between 200 and 250 thousand manats, most of which came from Western University, but some of which came out of the pockets of the two expeditioners. Prof. Bagirov wrote a book about this landmark expedition. Later in 2009, the team was off to conquer Kilimanjaro, in Africa.

Caleta Azimut *see* **Azimuth Hill**

Punta Azimut *see* **Azimuth Hill**

[1]**Azimuth Hill**. 63°45' S, 58°16' W. A low, rocky outcrop rising to 85 m, and extending to the Prince Gustav Channel, just S of the mouth of Russell East Glacier, opposite Long Island, on Trinity Peninsula, on the E coast of the Antarctic Peninsula. Surveyed by Fids from Base D in July 1946, the name was proposed in June 1948 by Vic Russell for the sun azimuth obtained from a cairn built near the E end of the outcrop. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1950. It appears in the British gazetteer of 1955, and on a British chart of 1962. The Argentines accepted the name Punta Azimut, in 1991, although it is seen on some Argentine charts as Caleta Azimut.

[2]**Azimuth Hill**. 66°59' S, 142°39' E. Rising to 25 m, at the NE end of a steep, narrow, rocky ridge which trends NW, about 230 m WNW of, and overlooking Mawson's Main Hut at Cape Denison. Named by Mawson during AAE 1911-14, it appears on his expedition maps. ANCA accepted the name on March 7, 1991.

Azimuth Island. 67°32' S, 62°44' E. The largest of the Azimuth Islands in Holme Bay. In plan the island somewhat resembles a closed left hand, with the palm facing the viewer. Mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37, and named by ANCA on Oct. 11, 1960, for the reasons given under Azimuth Islands (q.v.). US-ACAN accepted the name in 1965.

Azimuth Islands. 67°32' S, 62°44' E. A group of 4 small islands, the largest being Azimuth Island itself, 1.5 km NW of the Parallactic Islands in Holme Bay, Mac. Robertson Land, and about 11 km NW of Mawson Station. Mapped by Norwegian cartographers in 1946 from aerial photos taken by LCE 1936-37, and so named by ANCA on July 4, 1961, because the largest island was included in a triangulation survey made here by ANARE in 1959 (the azimuth is a term used in this survey). US-ACAN accepted the name in 1965.

Estrecho Azopardo *see* **Herbert Sound**

Aztec Mountain. 77°48' S, 160°31' E. A small pyramidal mountain, rising to over 2000 m, just SW of Maya Mountain, and W of Beacon Valley, in Victoria Land. So named by NZGSAE 1958-59 for the resemblance here to ceremonial platforms in Aztec and Mayan temple structures. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Punta Azufre *see* **Azufre Point**

Azufre Point. 65°03' S, 63°39' W. A point, 5 km SE of Cape Renard, it separates Azure Cove from Bahía Chávez, on the S side of Flandres Bay, on the W coast of Graham Land. Charted by BelgAE 1897-99. Re-surveyed by ArgAE 1953-54, and named by them as Punta Azufre (i.e., "brimstone point"). It appears as such on their 1954 chart, and on another Argentine chart of 1957. It was photographed aerially by FIDASE in 1956-57, and surveyed by an RN Hydrographic Survey unit between 1956 and 1958. On Sept. 23, 1960, UK-APC named it Wedgwood Point, after Thomas Wedgwood (1771-1805), British artist and pioneer photographer who first attempted to fix images with a camera obscura, about 1794. It appears as such on a British chart of 1961. The Chileans call it Punta Pedro, for Capitan de corbeta Pedro Fernando González Pacheco, leader at Captitán Arturo Prat Station in 1961, who fell to his death from López Nunatak, on Greenwich Island, on April 9, 1961. US-ACAN accepted the name Azufre Point in 1965.

Azuki Island. 69°53' S, 38°56' E. An islet, in the E part of Havsbotn, 1.5 km west of Rundvågs Head, in the SE part of Lützow-Holm Bay, between the Prince Harald Coast and the Prince Olav Coast. Mapped by Japanese cartographers from JARE ground surveys and air photos, 1957-62, plotted by them in 69°54' S, 38°58' E, and named by them on Oct. 1, 1962, as Azuki-shima or Azuki-zima (i.e., "Azuki bean island"). US-ACAN accepted the name Azuki Island in 1968. The Norwegians call it Bauna ("the bean"). It has since been re-plotted.

Azuki-zima *see* **Azuki Island**

Baie Azur or **Baie d'Azure** *see* **Azure Cove**

Punta Azurduy *see* **Clapp Point**

Bahía Azure *see* **Azure Cove**

Bahía d'Azure *see* **Azure Cove**

Azure Bay *see* **Azure Cove**

Azure Cove. 65°04' S, 63°35' W. Also known as Azure Bay. Just over 1.5 km long, immediately to the E of Cangrejo Cove (from which it is sep-

arated by Azufre Point), and E of Cape Renard, in the SW part of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. A rock, in the form of a truncated cylinder, emerges from the glacier which discharges into the rear of the cove. Discovered by BelgAE 1897-99, and named Baie d'Azur by Captain Georges Lecointe, 2nd-in-command of the expedition, because it reminded him of Swiss caves of that name, tinting everything around it with blue, as it did here in the evening light. The expedition charted it in Feb. 1898, and it appeared as such on their map of 1899. Photographed from the air by FIDASE in 1956-57. UK-APC accepted the name Azure Cove on Sept. 23, 1960, and it appears as such in the British gazetteer of 1960. US-ACAN accepted the name in 1965. The Argentines call it Bahía Azure, although they used to call it Bahía Zapiola, for José Matías Zapiola (1780-1874), Argentine patriot who fought with San Martín. The Chileans call it Bahía Riquelme, for Ernesto Riquelme, of the *Esmeralda*, a hero of the naval battle of Iquique (1879). They also call it Bahía González Pacheco, for Pedro González Pacheco (*see* **Azufre Point**).

B-9. A massive iceberg that broke away from the Ross Ice Shelf in early Oct. 1987. 98 miles long and 25 miles wide, it was, at 2540 sq miles, considerably bigger than Delaware and twice the size of Rhode Island. It was 750 feet thick, and represented two to three times the annual ice discharge of the entire Antarctic continent. The breakaway occurred near the Bay of Whales, and, in fact, in the process, eliminated the Bay of Whales as a geographical feature. Terry Cooke of McMurdo Station was the first to observe it. By Nov. 1987 it was 53 miles away, and heading north, as all icebergs do from Antarctica, and it was shrinking as it went. It did not pose a threat. By 1989 it had broken into two pieces, B-9A and B-9B, "A" being the parent chunk. The parent finally disintegrated in 2003, but B-9B was still floating north in early 2007. B-9B had the distinction of having an automatic weather station installed on it from Nov. 5, 2002 until July 7, 2005.

B-15. A massive iceberg, named by the National Ice Center, that broke away from the Ross Ice Shelf on March 20, 1990, from a point about 300 km E of McMurdo Station. It measured 183 miles long and 23 miles wide, and, at 4250 square miles (11,000 sq km), was the largest recorded iceberg of all time. As it cruised westward toward Ross Island, B-15 smashed into and removed other chunks of the Ross Ice Shelf. To give an idea of the dimensions (if not quite the impact) of this piece of ice, it would be like the island of Jamaica suddenly floating around the Caribbean, bumping into things. B-15 soon broke up into several smaller pieces, many of which are still afloat. For example, B-15A, which had an American automatic weather station operating on it (Daughter 1) from Jan. 2001 to Oct. 2003, when it was removed, replaced by one on B-15J that month (also called Daughter 1). Another two, Mother I and Mother II, were installed on the berg that month, by the first-ever all-female flight crew.

B-16. An iceberg calved off the Ross Ice Shelf in April 2000 after the Ross Ice Shelf was hit by B-15. It was still afloat in early 2007, near the Antarctic Circle.

B-17. One of two giant icebergs that was calved off the Ross Ice Shelf in early May 2000 as a result of the peregrinations of its big brother, B-15. 960 square miles in area, it started to break up almost immediately, into 2 chunks, both of which were still afloat in early 2007. *See also* **B-18**.

B-18. Along with B-17, one of two giant icebergs calved off the Ross Ice Shelf after that shelf was hit by the floating giant B-15 in early May 2000. It soon broke up.

Baalsrudfjellet. 70°54' S, 12°03' E. A mountain to the E of Lingetoppane, in the NE part of Fimbulheimen, in Queen Maud Land. Named by the Norwegians for Lt. Jan Baalsrud (1917-1988), commando and resistance fighter during World War II.

Bab Island *see* **Bob Island**

Baba Tonka Cove. 62°36' S, 61°04' W. A cove, 900 m wide, indenting the N coast of Byers Peninsula for 700 m between Villard Point and Varadero Point, on Livingston Island, in the South Shetlands. The British mapped it in 1968, and the Bulgarians named it on Dec. 15, 2006 for Tonka Obretenova (1812-1893), Bulgarian revolutionary and national hero known as Grandmother ("Baba") Tonka.

Ledjanaja Bukhta Babakina. 79°35' S, 160°20' E. A small bay in the area of Cape Murray, at the W side of the Ross Ice Shelf. Named by the Russians.

Babb, Philip *see* **USEE 1838-42**

Roca Babel *see* **Babel Rock**

Babel Rock. 63°53' S, 61°24' W. An off-shore rock rising 60 m above sea level, the larger, more conspicuous, and northerly of a group of 2 rocks just off the N tip of Intercurrence Island, in the Palmer Archipelago. James Hoseason, mate of the *Sprightly*, in 1824, named the 2 rocks as the Penguin Islands, and as such, they appear on a British chart of 1828. They were photographed by FIDASE in 1956, and, since, for years now, the name Penguin Islands had not been used for this feature, and because there are too many other features with the name Penguin, UK-APC changed the name of this particular rock, on Sept. 23, 1960, to Babel Rock, for the noise from the penguin colony here. Later that year, US-ACAN followed suit with the naming. It appears in the 1991 Argentine gazetteer as Roca Babel.

Babis Spur. 82°13' S, 163°03' E. A rocky spur in the S part of the Nash Range, almost 10 km W of Cape Wilson. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1965, for William A. Babis, of the University of Miami, at Coral Gables, USARP oceanographer on the *Eastwind*, 1962-63, and on the *Burton Island*, 1963-64. NZ-APC accepted the name on Nov. 16, 1965.

Babordsranten *see* **Babordsranten Ridge**

Babordsranten Ridge. 72°17' S, 3°26' W. A small, snow-covered mountain, on the E side of Basissletta, and 1.6 km S of Stamnen Peak, at the very SW end of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and aerial photographs taken by NBSAE 1949-52, and named by them as Babordsranten (i.e., "the port side ridge"). US-ACAN accepted the name Babordsranten Ridge in 1966.

Babushkin Island. 69°06' S, 157°36' E. Also spelled Babuskin Island. A small island 7.5 km NNW of Archer Point, and 8 km E of Matusevich Glacier Tongue, in Oates Land, Victoria Land. Discovered and mapped by SovAE 1958, and named by them as Ostrov Babushkina, for Mikhail S. Babushkin (1893-1938), polar aviator lost in the Arctic. They plotted it in 69°04' S, 157°25' E, but, in Feb. 1959, from a running survey conducted from the *Magga Dan*, the Australians re-plotted it in 69°05' S, 157°30' E. It was finally re-plotted by the Americans, and ANCA accepted the name Babushkin Island on Oct. 11, 1960, with US-ACAN following suit in 1961.

Ostrov Babushkina *see* **Babushkin Island**

Babuskin Island *see* **Babushkin Island**

Babylon Peak *see* **Mount Birkenmajer**

Punta Bacacay. 66°00' S, 65°46' W. A point on Dodman Island, 16 km W of Ferin Head, off the W coast of Graham Land. Named by the Argentines.

Barrera de Hielos Bach *see* **Bach Ice Shelf**

Bach, Lt. b. ca. 1890. Nazi raider-commando reserve officer on the *Pinguin*, who took over the Norwegian factory ship *Ole Wegger* on Jan. 13, 1941, not far out from the coast of Queen Maud Land. We know extraordinarily little about Bach. We know his rough age, that he was married, and that his hair was graying. He was agile, too, as he was able to jump off his boat, grab the ladder hanging over the side of the *Ole Wegger*, and climb up. He skippered the *Solglimt* back to France, while Oberleutnant Küster took the *Pelagos*, and Lt. Blaue took the *Ole Wegger*.

Bach Ice Front. 72°15' S, 73°10' W. The ice front at the seaward face of the Bach Ice Shelf, in the SW part of Alexander Island. Named by UK-APC on March 2, 1961 in association with the ice shelf.

Bach Ice Shelf. 72°00' S, 72°00' W. Irregular in shape, but basically semi-circular, about 40 km wide at the mouth, and indenting for 56 km, thus occupying a large embayment (Bach Inlet) in the SW side of Alexander Island, between Berlioz Point and Rossini Point, and opening at its SW into Ronne Entrance. It is bounded on the W by Beethoven Peninsula. In 1940 USAS 1939-41 explored the S side of Alexander Island by air and from the ground, and that year mapped the area. On their charts appears a minor embayment in the position where the Bach Ice Shelf is now. In 1959-60 Searle of the FIDS delineated and mapped the ice shelf from air photos taken by RARE 1947-48, and it was named by UK-APC on March 2, 1961, for Johan Sebastian Bach (1685-1750), the German composer. It appears as such in the British gazetteer of 1961. US-ACAN accepted the name later in

1961. It appears in the 1991 Argentine gazetteer as Barrera de Hielos Bach, the phrase "barrera de hielos" meaning "ice shelf or ice barrier," while the Chileans call it Barrera de Hielos Flores, for geologist Eusebio Flores Silva, professor at the School of Mines, who participated in the collection of geological samples while on the *Angamos* during ChilAE 1946-47.

Bach Inlet. 72°02' S, 72°20' W. An inlet mostly covered by the Bach Ice Shelf, between Berlioz Point and Rossini Point, on the SW side of Alexander Island. Named by UK-APC on Feb. 7, 1978, in association with the ice shelf, the name appears in the British gazetteer of 1980, but erroneously plotted in 72°17' S, 73°25' W.

Bach Quartet. 61°54' S, 59°03' W. A group of 4 off-shore stacks, at Corsair Bight, off the N coast of King George Island, in the South Shetlands, and facing Drake Passage. Named by the Poles in 1984, for Johan Sebastian Bach (*see* **Bach Ice Shelf**).

Bacharach Nunatak. 66°41' S, 65°11' W. A conspicuous nunatak, rising to about 2000 m, overlooking the N arm of Drummond Glacier, E of Darbel Bay, on the Loubet Coast, on the W coast of Graham Land. Photographed by FIDASE between 1955 and 1957, surveyed by Fids from Base W, and mapped from these efforts by FIDS. Named by UK-APC on July 7, 1959 for Alfred Louis Bacharach (1891-1966), British nutritionist, president of the British Nutrition Society in 1959, who advised polar expeditions on sledging rations. US-ACAN accepted the name in 1964.

Bache-Wiig, Hartvig. b. 1886, Eidsvoll, Norway, but grew up in Kristiania (later called Oslo), son of pulp mill worker Hartvig Bache-Wiig and his wife Amalie Holt. In 1910 he came to Pittsburgh, and made his way to Argentina, where he was with the Servicio Meteorológico Nacional de Argentina. While leading the wintering-over party at Órcadas Station, he disappeared on April 30, 1915, presumably after a skiing accident. His elder brother, Olai, a chemist, moved to Canada, then Wisconsin, and died in Kentucky, in 1924.

Bachmann, Martin. Physician and bacteriologist from Breslau, who went on the *Valdivia*, during the German Navy Oceanographic Expedition, 1898-99. He died on Jan. 14, 1899, near Sumatra, during the voyage.

Punta Bachstrom *see* **Bachstrom Point**

Bachstrom Point. 65°29' S, 63°51' W. On the NE side of Beascochea Bay, 13 km SE of Cape Pérez, on the W coast of Graham Land. Charted by BGLE, 1934-37, photographed aerially by FIDASE in 1956-57, surveyed from the ground by FIDS in 1957, and named by UK-APC on July 7, 1959, for Johan Friedrich Bachstrom (1686-1742), Dutch physician who wrote a pamphlet in 1734 exposing scurvy as a nutritional deficiency disease and prescribing the necessary measures for its prevention and cure. It appears on a British chart of 1960. US-ACAN accepted the name in 1971. It appears in the 1991 Argentine gazetteer as Punta Bachstrom.

Bachtold Glacier. 77°07' S, 162°00' E. Flows N from Mount Chaudoin, drains the broad slopes between Killer Ridge and Red Ridge, in the Gonville and Caius Range, and enters the lower part of Cotton Glacier, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Construction Electrician 2nd Class Harry Wesley Bachtold (b. Sept. 19, 1926, Siskiyou, Calif.), one of the Seabees who helped build Little America V in 1955-56 and and Byrd Station in 1956-57. NZ-APC accepted the name on April 7, 2008.

Bahía Back *see* **Back Bay**

Back, Eric Hatfeild. Note the spelling of the name Hatfeild. b. Jan. 30, 1920, Rochester, Kent, only son of Capt. Geoffrey Robert Bensly Back, RN, and his wife Olive Maitland. After Cambridge, he qualified as a doctor in 1943, and was a lieutenant in the RNVR when he became medical officer and meteorological observer on Operation Tabarin at Port Lockroy Station for the winter of 1944, and at Base D for the winter of 1945, where he wound up being senior meteorologist. At the end of his tour he returned to Port Stanley, then to Montevideo, where he caught the *Marquesa* going back to Avonmouth, in England, arriving there on June 9, 1946. On his return to Watersedge, Emsworth, Hants, he went into pediatrics, and married Christina Hermione Travers on May 1, 1948, at Yelling, Hunts, and they lived in Gorleston, and later Jamaica. He died in Dec. 1992, in Great Yarmouth.

Back, Eric Kenneth Prentice "Kenn." b. Feb. 23, 1942, Southport, Lancs, son of Lt. Eric F.S. Back, RN, and his wife Janet Prentice, and 3rd cousin once removed of Eric Back (see above entry). An RN commander, he joined BAS in 1963, and was meteorological observer at Base T for the winters of 1964 and 1965, spending the summers at Grytviken (in South Georgia). He served as BAS commander at Signy Island Station, 1974-75, Halley Bay Station, 1975-76, Faraday Station, 1977-78, and Rothera Station, 1978-79. He also spent time in the Arctic. On July 22, 1982 he married Felicity Elphinstone in Exeter, and they moved to Uruguay.

Back Bay. 68°11' S, 67°00' W. The little bay, 0.8 km wide, the head of which is formed by Northeast Glacier, lying on the NE (landward) side of Stonington Island (behind it, as it were), and which is entered between Boulder Point (the S extremity of Stonington Island) and Fitzroy Island, N of Neny Bay, in Marguerite Bay, along the Fallières Coast, on the W coast of Graham Land. Surveyed by USAS in 1940-41, and named descriptively by them in relation to Stonington Island. It appears on their map of 1941. It was re-surveyed by FIDS in 1946-47, and appears on one of Finn Ronne's maps of 1949, as Back Bay Cove. UK-APC accepted the name Back Bay on March 31, 1955, and it appears as such in the British gazetteer of that year, and on a British chart of 1956. US-ACAN accepted the same name in 1956. It appears on a Chilean chart of 1969, as Bahía Back.

Back Bay Cove *see* **Back Bay**

Back Cirque. 67°39' S, 68°28' W. An east-facing cirque, NE of Sloman Glacier, in the SE part of Adelaide Island, indenting the S side of the ridge that extends from the SE part of Mount Liotard. Surveyed by FIDS in 1961-62. BAS did geological work here in 1980-81, and named it on Dec. 15, 1982, for Kenn Back. UK-APC accepted the name on April 3, 1984, and it appears as such in the British gazetteer of 1986. US-ACAN accepted the name.

Back Drop Ridge *see* **Backdrop Ridge**

Back Mesa. 64°02' S, 58°12' W. An ice-covered, flat-topped mountain with excellent exposure of structures within volcanic rock, it rises to 740 m, E of Hidden Lake on Ulu Peninsula, James Ross Island. Following BAS geological work done there in 1985-86, it was named by UK-APC on Feb. 15, 1988, for Eric Back. It appears in the British gazetteer of 1993. US-ACAN accepted the name.

Back Rock *see* **Sack Island**

Backdoor Bay. 77°34' S, 166°12' E. The small bay immediately S of Flagstaff Point, at the E (back) side of Cape Royds, opposite Front Door Bay (the small cove on the W side of Flagstaff Point), on the W side of Ross Island. BAE 1907-09 unloaded supplies here, and it was named descriptively by them. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer.

Backdrop Ridge. 78°21' S, 163°18' E. Running in an E-W direction to the N of The Stage, on the N side of the lower Renegar Glacier, linking the N ends of West Ridge, Central Ridge, and Aisle Ridge, in Victoria Land. Named by NZ-APC in 1980 as Backdrop Ridge, for its position relative to The Stage. The name was acceped by US-ACAN in 1995, as Back Drop Ridge, but in 2008 changed to Backdrop Ridge.

Backer Islands. 74°25' S, 102°40' W. A chain of small islands at the S side of Cranton Bay, trending NW for 20 km from the ice shelf that forms the S limit of the bay, off the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Walter K. Backer (b. 1925, Butte, Mont.), USN, chief construction mechanic who wintered-over at Byrd Station in 1967.

The Backslope. 60°43' S, 45°36' W. A hillside immediately SE of Signy Island Station, at Factory Cove, Signy Island, in the South Orkneys. Surveyed by Fids from Signy between 1947 and 1950, and photographed aerially by the RN in 1968. So named by UK-APC on Sept. 29, 2004, because it appears behind the station when seen from the sea.

Backstairs Passage *see* **Backstairs Passage Glacier**

Backstairs Passage Glacier. 75°02' S, 162°36' E. Also called Backstairs Passage. A steep glacier, 3 km long and 0.6 km wide, it flows E from Mount Larsen along the N side of Mount Crummer, and NE between that mountain and Mount Gerlache, into the Ross Sea, behind Terra Nova Bay, on the coast of Victoria Land. David, Mawson, and Mackay used this long route to get to the Larsen Glacier on their way to the South

Magnetic Pole in 1908-09, during BAE 1907-09, and thus named it. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Backus, Standish. b. April 5, 1910, Detroit, son of lawyer Standish Backus and his wife Lotta Boyer. He graduated from Princeton in 1933 with a degree in architecture, and in 1934 went to Munich to study painting. He then studied in Maine, moved out to California to become a full-time watercolorist, and married Barbara Babcock. He joined the Naval Reserve in 1940, and went active for World War II. In the latter part of the war he was a combat artist in the Pacific, and retired, as a commander, in May 1946. He went on OpDF I (1955-56) as an artist, his paintings including *Life and Death in the Antarctic*, *One-Mile Pump Station*, *Mt. Erebus*, *Emergency on the Flight Deck*, *Cold and Fatigue*, *Ice-Mooring*, and *The Fatal Hazard*. He died on Oct. 12, 1989, in Santa Barbara.

Backwater Glacier. 74°42' S, 162°33' E. A valley glacier, 7 km long, at the S end of the Eisenhower Range, between Anderson Glacier and Carnein Glacier. It is ponded in its valley by the ice from Reeves Glacier. Named descriptively by Trevor Chinn in 1985. NZ-APC accepted the name on Nov. 16, 1989. *See also* **Jenagletscher**.

Bacon, Frederick Asa. b. Oct. 15, 1812, Litchfield, Conn., son of lawyer Asa Bacon and his wife Lucretia Champion, and brother of General Francis Bacon. He was a passed midshipman on the *Sea Gull*, when that vessel went to Deception Island in March 1839, during USEE 1838-42, and he disappeared with the ship on April 29, 1839, off the Chilean coast.

Bacteria. Micro-organisms of the class Scizomycetes. There are 1500 species throughout the world, many of them in Antarctica (*see also* **Flora**). Many bacteriologists have studied in Antarctica.

Bad Lands. 78°30' S, 164°00' W. To the E of Amundsen Arm, at the Bay of Whales, on the Ross Ice Shelf. So named by ByrdAE 1928-30 because of the bad traveling in this area. This feature almost certainly disappeared when the Bay of Whales changed its configuration drastically. However, it does appear in the 1958 NZ provisional gazetteer.

Bada Ling. 62°13' S, 58°58' W. A peak on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese after their mountain near Peking.

The *Baden Powell*. A 94-ton Nova Scotia sealing schooner, built in Lunenburg in 1900. She was in the South Orkneys and South Shetlands in 1905-06, under the command of John Anderson, and again in 1906-07, under Capt. Edgar F. Robbins. Her third voyage would be her last, as it turned out. After being delayed a day due to several desertions, she left Nova Scotia on the evening of Sept. 6, 1907, for the 1907-08 season in the South Shetlands, accompanied by the *E.B. Marvin*. Anderson was her skipper again. The crew included Clement B. Christian (1st mate), G.W. Spears (2nd mate), C.E. Mader (cook and steward), John Morrow (cabin boy). Also on board were the seal hunters and boat steerers (the vessel carried sealing boats aboard): E. Misener, Francis Faulkner, Oswald Christian, Douglas Henneberry, Lindsay Baker, Fred Hartling, Albert Potter, Edward Linden, Robert Hirtle, Orlando Bushen, Love Dauphinée, Fred Boutilier, Charlie White, Walter Strum, Simon Clatteburg, and George Oates. The vessel was wrecked, with a valuable cargo of seal skins, in the Falklands on Nov. 22, 1907. The crew rowed 70 miles to Pebble Island, where they remained 3 weeks, enduring the greatest hardships, until they were spotted by the steamer *Orissa*, on her way from Montevideo to Liverpool. Four of the men married and settled in the Falklands. On Jan. 28, 1908 the rest of the crew arrived in Liverpool.

Bader Glacier. 67°37' S, 66°45' W. A small glacier flowing WSW into Bourgeois Fjord, just S of Thomson Head, on the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS in 1948, and named by UK-APC on July 7, 1959, for Henri Bader (b. 1907, Brugg, Switzerland. d. 1998, Miami), geologist and glaciologist of Rutgers, specialist in the snowflake, and chief scientist of the U.S. Army's Snow Ice and Permafrost Research Establishment, 1952-60. US-ACAN accepted the name in 1960.

The *Badger*. A 34-foot double-ended dory, with two masts like a schooner, designed by Jay Benford, and built and skippered by Peter and Annie Hill (b. 1955, Liverpool), which visited the South Shetlands and the Antarctic Peninsula in 1994-95. Annie wrote the books, *Voyaging on a Small Income*, and *Brazil and Beyond*, the former referring to the £1300 a year income they had. Annie and Pete divorced, and Annie later sailed the *Iron Bark* to Greenland.

Badger Buttress. 67°32' S, 68°13' W. A lone, spiky peak that rises up from Ryder Bay, NW of Reptile Ridge, on Adelaide Island. Photographed aerially by FIDASE in 1956-57, and named descriptively by UK-APC on Oct. 14, 2004, after the white snow gullies.

BAE *see* **British Antarctic Expedition**

Bae, Rolf. b. Jan. 9, 1975, Norway. He operated a tour company called Fram, that specialized in mountain climbing and polar travel. In 2000-01 he crossed Antarctica with Erik Sønneland, in what was then the world's longest ski journey (3800 km in 105 days). This record would be beaten in 2005-06, by Rune Gjeldnes. On Dec. 27, 2005, Mr. Bae and Cecilie Skog reached the South Pole after skiing from the ice shelf, and on April 24, 2006 he and Miss Skog reached the North Pole unsupported. He married Miss Skog, and died on Aug. 2, 2008, in an accident on K2, in the Himalayas.

Baeyer Canyon. 69°17' S, 0°32' E. A submarine feature off the Princess Martha Coast of Queen Maud Land. It actually runs between 68°52' S and 69°42' S, and between 0°30' E and 0°35' E. The name was proposed by Heinrich Hinze in Jan. 1997, and accepted internationally in June 1997, to honor Johann Jacob Baeyer (1794-1885), who initiated the European longitude measuring project Europäische Gradmessung.

Arrecife Baeza *see* **Herald Reef**

Roca Baffle *see* **Baffle Rock**

Baffle Rock. 68°12' S, 67°05' W. A tiny islet, lying in the deep water channel approach to Stonington Island, of which it is 2.5 km west, and 1.3 km NW of the W tip of Neny Island, and the same distance NE of Runaway Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS in 1947, and so named by UK-APC on March 31, 1955 because it is only just visible at the surface at high-tide, and is therefore an obstacle to shipping. It appears as such on a British chart of 1956. US-ACAN accepted the name in 1956. It appears on a Chilean chart of 1969, as Roca Baffle, but the Argentines call it Roca Confusión.

Cape Bage. 67°43' S, 146°34' E. A prominent point on the coast of George V Land, between Mertz Glacier and Ninnis Glacier, and between Murphy Bay and Ainsworth Bay. Discovered in 1912 by AAE 1911-14, and named by Mawson for Bob Bage. US-ACAN accepted the name, and ANCA followed suit.

Bage, Edward Frederick Robert "Bob." b. April 17, 1888, St. Kilda, Victoria, son of merchant Edward Bage and his wife Mary Charlotte Lange. Australian army lieutenant, civil engineer and surveyor, he was engineer, astronomer, assistant magnetician, and recorder of tides on AAE 1911-14. He led the heroic Southern Party in the area of the South Magnetic Pole in 1912, accompanied by Webb and Hurley. Captain Bage, Royal Australian Engineers, died in action at Gallipoli on May 7, 1915. He contributed the chapter "The Quest of the Southern Magnetic Pole" to Mawson's book *Home of the Blizzard*.

Baggott Ridge. 70°19' S, 64°19' E. A low ridge, mostly snow-covered, extending in an E-W direction, just N of Mount Bensley, 2.5 km W of Baldwin Nunatak, and 11 km SWW of Mount Starlight, in the W extension of the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Recorded on ground photos taken by Rob Lacey (*see* **Mount Lacey**), surveyor at Mawson Station in 1955, and on ANARE air photos taken in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for Peter James Baggott (b. July 1, 1936, Penshurst, NSW), radio officer at Mawson in 1965, and at Wilkes Station in 1967. US-ACAN accepted the name in 1970.

Bagliani Point. 66°38' S, 57°17' E. A promontory projecting from the Polar Plateau, about 0.5 km from the Kloa penguin rookery. The 1977 Kloa party spent two nights camped at this site. Named by ANCA on Sept. 26, 1978, for geophysicist Fulvio Bagliani, who wintered over at Mawson Station in 1975 and 1977.

Punta Bagnold *see* **Bagnold Point**

Bagnold Point. 67°02' S, 67°29' W. On the S side of Hanusse Bay, between Gunnel Channel and Shumskiy Cove, on Arrowsmith Peninsula, on the Loubet Coast, on the W coast of Graham Land. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by

FIDS. Named by UK-APC on Sept. 23, 1960 for Brigadier Ralph Alger Bagnold (1896-1990), Royal Engineers, expert on deserts, founder and first commander of the Long Range Desert Group in North Africa during World War II, and brother of novelist Enid Bagnold. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Punta Bagnold.

Bagpipes. W.G. Burn Murdoch was the first piper in Antarctica, as far as we know. Not only that, he was quite accomplished. That was during DWE 1892-93. It was inevitable that ScotNAE 1902-04 would have a piper — Alexander Kerr. Kenneth Kent, at Ellsworth Station in 1957, had a set of pipes with him. Major Dick Pattison frightened a few beasties during the British Army Antarctic Expedition of 2001-02.

Gora Bagrickogo *see* **Ormehausen Peak**

Mount Bagritskogo *see* **Ormehausen Peak**

Mount Bagshawe. 71°25' S, 67°14' W. Rising to 2225 m, it is the southernmost and highest of the Batterbee Mountains, standing 13 km inland from George VI Sound, on the W coast of Palmer Land. First seen and photographed aerially on Nov. 23, 1935, by Ellsworth, and surveyed from the ground in Oct. 1936 by BGLE 1934-37. It was mapped from Ellsworth's photographs by W.L.G. Joerg and originally plotted in 71°27' S, 67°06' W. Named by UK-APC on March 31, 1955 for Sir Arthur William Garrard Bagshawe (1871-1950), expert on sleeping sickness, and supporter of BGLE 1934-37, during which time he was president of the Royal Society of Tropical Medicine and Hygiene. He raised a special fund to defray the expedition's expenses for biological equipment. US-ACAN accepted the name later in 1955. The Russians accepted the name on May 20, 2008.

Bagshawe, Thomas Wyatt. b. April 18, 1901, at 80 Norwood Road, Lambeth, London, as Leslie Wyatt Bagshawe, the younger son of Sheffield-born mechanical engineer Arthur Bagshawe, and his Paraguay-born wife Eliza Parkinson. Arthur Bagshawe had added the "e" to Bagshaw before he married. T.W. Bagshawe was the Cambridge "geologist" on the British Imperial Antarctic Expedition 1920-22, during which, at the age of 19, he stayed behind to winter-over with his enemy, M.C. Lester. Frank Debenham persuaded him to write *Two Men in the Antarctic*, in 1939, and Bagshawe also wrote articles on penguins. He became an antiquarian and museum director in Dunstable, served in World War II with the RAFVR and Combined Operations, was High Sheriff of Bedfordshire in 1949, married Grace Geering, and died on Jan. 28, 1976, at Worthing.

Bagshawe Glacier. 64°56' S, 62°35' W. Flows N from the NE side of Mount Theodore into Lester Cove, in Andvord Bay, on the Danco Coast, on the W coast of Graham Land. The mouth of this glacier was discovered and sketched in Feb. 1898 by BelgAE 1897-99. First roughly surveyed by Ken Blaiklock from the *Norsel* and a FIDS team in April 1955, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 4, 1957 for Thomas Bagshawe. It appears on a British chart of 1959. US-ACAN accepted the name in 1963.

Bagua Zui. 69°22' S, 76°20' E. A slope in the Larsemann Hills. Named by the Chinese.

Playa Bahamonde. 62°27' S, 60°47' W. A beach immediately S of Punta Este, on the N coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the Chileans for Jorge Nibaldo Bahamonde Navarro (b. 1924, Ancud, Chiloé, Chile), professor of zoology, hydrology, and marine ecology, from the University of Chile, who, while with ChilAE 1965-66, took part in the first census-taking of Antarctic pinnipeds.

Punta Bahamonde *see* **Bahamonde Point**

Bahamonde Point. 63°19' S, 57°55' W. Marks the W end of Schmidt Peninsula, Cape Legoupil, on Trinity Peninsula, on the W coast of the Antarctic Peninsula. Charted by ChilAE 1947-48, and named by them as Punta Teniente Bahamonde, for 1st Lt. Arturo Bahamonde Calderón (b. July 8, 1916. d. March 5, 2004), engineer of the expedition that year. However, on a Chilean chart of 1948 it appears erroneously as Punta Teniente Bahamondes. The name was shortened, naturally, but, again erroneously, showing on Chilean maps of 1951 and 1959 as Punta Bahamondes. By 1974, in the Chilean gazetteer, it appears correctly as Punta Bahamonde. It appears in the American gazetteer of 1981 as Bahamonde Point, and UK-APC accepted this name on Dec. 15, 1982, it appearing as such in their gazetteer of 1986.

Punta Bahamondes *see* **Bahamonde Point**

Punta Bahía *see* **Bay Point**

The *Bahía Aguirre*. A 3100-ton motor twin-screw transport vessel, built for the Argentine government at Halifax Shipyards (Nova Scotia) in 1949, and launched on May 20 of that year. Sister ship of the *Bahía Buen Suceso* and the *Bahía Thetis*, she was capable of 14.5 knots, and could take 46 crew and 100 passengers. She was commissioned into the Argentine Navy on March 29, 1950, and arrived in Buenos Aires on May 12, 1950, made two trips to Ushuaia, and took part in various Argentine expeditions: 1951-52 (Captain Alberto J. Spríngolo); 1952-53 (Capt. Eugenio Fuenterrosa; he was later vice-admiral and head of the Naval Center); 1953-54 (Captain Luis Tristán de Villalobos); 1954-55 (Captain Benigno Ignacio M. Varela); 1955-56 (Capt. David O. Funcia); 1956-57 (Capt. José C.T. Carbone); 1957-58 (Captain Luis C. Fernández); 1958-59 (Captain Tomás A. Suárez del Cerro); 1959-60 (Captain Óscar Danglade); 1960-61 (Captain Atilio S. Porretti); 1961-62 (Captain Marcos A. Bengoa); 1962-63 (Captain Julio C. Sánchez Maragiños); 1963-64 (Captain Victor Horacio Pereyra); 1964-65 (Captain Carlos Roberto Uhalde); 1965-66 (Captain Jorge Anselmo Magnoni); 1966-67 (Captain León Resio); 1967-68 (Captain Luis María Palacios Córdoba); 1968-69 (Captain Heli Saint-Jean); 1969-70 (Captain Héctor Silva); 1970-71 (Captain Ricardo Barretavén; the vessel put in at Palmer Station that season); 1971-72 (Captain Mario Noriega); 1972-73 (Captain Carlos Alberto Barros); 1973-74 (Captain Gualter C. Allara); 1974-75 (Captain José A. Morales); 1975-76 (Captain Luis N. Boeri); 1976-77 (Captain César Trombetta); 1977-78 (Captain Guillermo Estrada); 1978-79 (Captain Néstor Carbonetti); 1979-80 (Captain Héctor E. Moreno); 1980-81 (Captain Ricardo Luis Dávila). She was decommissioned in Aug. 1981, after 600,000 miles, most of it in Antarctic waters. On Oct. 19, 1987, she was sent to be broken up.

Bahía Almirantazgo Refugio. 62°05' S, 58°25' W. An Argentine refuge hut built on rock at Admiralty Bay (the Spanish name for Admiralty Bay is Bahía Almirantazgo), King George Island, in the South Shetlands, in Jan. 1946. It lasted until 1948.

The *Bahía Buen Suceso*. A 3100-ton ice-strengthened twin-screw motor transport vessel, 334.7 feet long, built for the Argentine government at Halifax Shipyards (Canada) in 1950, sister ship of the *Bahía Aguirre*, and the *Bahía Thetis*, she was capable of 14.5 knots, and could take 46 crew and 100 passengers. She was commissioned into the Argentine Navy in June 1950, arrived in Buenos Aires on July 8, 1950, and took part in various Antarctic expeditions: 1950-51 (Capt. Enrique Sánchez Moreno), 1951-52 (Capt. Luis M. Iriate), 1952-53 (Capt. Juan C. Balcázar), 1953-54 (Captain Héctor V. Iglesias), 1954-55 (Capt. Aurelio C. López de Bertodano). In 1952 she took the Argentine Olympic team to Helsinki. Between Feb. 10 and March 10, 1978 she took a group of tourists to the South Shetlands and the Antarctic Peninsula. Skipper that season was Miguel Ángel Martín. She was part of ArgAE 1981-82 (Captain Osvaldo M. Niella). On May 16, 1982 she was attacked by the British, and sunk by a torpedo.

Glaciar Bahía Buen Suceso *see* **Foundation Ice Stream, Support Force Glacier**

Bahía Dorian Refugio. 64°49' S, 63°30' W. More commonly known as Dorian Refugio, or just as Dorian. Argentine Navy refuge hut built on a rock surface at Dorian Bay, on the NW side of Wiencke Island. In use from Feb. 23, 1953 until 1954.

Bahía Duse Refugio *see* **Martín Güemes Refugio**

Bahía Luna Station *see* **Teniente Cámara Station**

Fondeadero Bahía Neny. 68°12' S, 66°58' W. An anchorage in Neny Bay, in Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Named by the Argentines, in association with the bay.

The *Bahía Paraíso*. Built at a cost of $50 million in 1979 for the Argentine Antarctic Institute (IAA), and operated by the Argentine Navy as a polar research/supply vessel, her main purpose being to supply fuel and food to the Argentine scientific stations on the Antarctic Peninsula. She was chartered by the American tour company, Mountain Travel, and used as a tourist ship to Antarctic waters until 1989, even though she was not a tourist ship as such. She had a reinforced twin steel hull, was 10,000 tons, 433

feet long, and 63½ feet wide. She had a 23½-foot draft, 2 diesel engines of 8 cylinders — 6000 hp each. Maximum speed 17 knots. She could carry up to 80 passengers and had modern equipment — 3 landing craft-type launches (EDPVs), 2 Zodiacs, 2 rowboats, 2 rescue power boats, 2 Sikorsky Sea King helicopters, and life rafts. She was part of ArgAE 1981-82 (Captain Ismael Jorge García), and on March 25, 1982 she arrived at South Georgia with a team of Argentine special forces to build a garrison at Leith Harbor. On April 3, 1982 she and the *Guerrico* attacked the BAS station at King Edward Point, a base defended from March 31, 1982 by Marines landed from the *Endurance*. The Argentines won this fight, captured the Marines, and took them and the British civilians to Argentina on the *Bahía Paraíso*, later releasing them in Uruguay. This was the beginning of the Falkland Islands War. She was part of ArgAE 1982-83 (Captain García); ArgAE 1983-84 (Captain Héctor Raúl Barrio); ArgAE 1984-85 (Captain Fernando C. Amarante); ArgAE 1985-86 (Captain Gustavo Adolfo Rojas; that season the vessel left Ushuaia on Feb. 7, 1986, with some descendants of members of SwedAE 1901-04 aboard); ArgAE 1986-87 (Captain Raúl Pueyrredón); ArgAE 1987-88 (Captain Herberto José Rubarrino); and ArgAE 1988-89 (Capt. Juan Carlos Sampietro). On Jan. 28, 1989, just after visiting Palmer Station to let the tourists see an American base, she ran aground off Janus Island and DeLaca Island, 3 km from Palmer, and spilled oil (*see* **Pollution**), then capsized and sank. No one died.

Bahía Péndulo Refugio *see* **Péndulo Refugio**

The *Bahía San Blas*. A 7838-ton, 119.9-meter Argentine Navy transport ship, built by Príncipe, Menghi & Penco, in Buenos Aires, for Patagonian coastal work (*see also* **The *Canal de Beagle*** and **The *Cabo de Hornos***), and launched on April 29, 1978. She took part in ArgAE 1988-89 (Capt. Juan Carlos Rolón).

Monte de Bahía Telefono *see* **Telefon Ridge**

Bahía Telefono Refugio *see* **Péndulo Refugio**

The *Bahía Thetis*. A 3100-ton twin-screw motor transport vessel, built for the Argentine government at the Halifax Shipyards (Nova Scotia) in 1949, originally as a combat transport, launched on May 20, 1949, and named for the bay in Tierra del Fuego. She could take 46 crew and 100 passengers, and could travel at 14.5 knots. She arrived in Buenos Aires in 1950, and between 1952 and 1960 she traveled the world as a training ship for the Argentine Naval School. She was used on ArgAE 1956-57 (Captain Alberto de Marotte). Decommissioned on Feb. 28, 1974, after 600,000 miles, and broken up in Campana in 1975.

Bahía Yankee Refugio *see* **Yankee Bay Station**

Bähr, Gustav. b. Jan. 10, 1877, Elbing, Germany. Able seaman on the *Gauss* during GermAE 1901-03.

Gora Bahrushina. 71°27' S, 12°28' E. A mountain in the Mittlere Petermann Range, in the Petermann Ranges of Queen Maud Land. Named by the Russians on May 20, 2008.

Gora Bahurina. 80°53' S, 159°15' E. A mountain in the area of the Darley Hills, in the Churchill Mountains. Named by the Russians.

Baia Terra Nova Station. 74°42' S, 164°07' E. The first Italian scientific station in Antarctica, established 15 m above sea level, on a granitic rock surface along the coast of the Northern Foothills, south of Gerlache Inlet, at Terra Nova Bay, in the shadow of Mount Melbourne, and 6 km from Gondwana Station, in Victoria Land, as a summer station (Oct.-Feb.), 100 m from the coast. Built between Dec. 1986 and Feb. 1987, it was popularly known as BTN. On Feb. 12, 2004 it was re-named Stazione Mario Zuchelli, or (in English) Mario Zucchelli Station, after Mario Zucchelli (q.v.). It is also known as MZS. There were 7 main buildings and an annex. In Jan. 2005, a new incinerator plant was installed. The station manager from Oct. 15, 2004 to Feb. 27, 2005, was Alberto Della Rovere.

The *Baikal*. Name also seen spelled as *Baykal*. Soviet passenger liner, built in 1962, and based out of Vladivostok, that took part in the expeditions of 1983-85 (Capt. Gennadiy Sergeyevich Buyanov), 1984-86 (Capt. Nikolay Mikhaylovich Myshov), 1985-87 (Capt. Buyanov), and 1986-88 (Capt. Aleksandr Aleksandrovich Shinkarev).

The *Baikal Maru*. A 4744-ton Japanese whaler, mostly in the Arctic. She was in Antarctic waters only in 1951-52. She was back in the North Pacific until 1954.

Isla Bailey *see* **Bob Island**

Mount Bailey. 70°00' S, 63°13' W. Rising to 1445 m, it stands SW of Anthony Glacier, 10 km WSW of Lewis Point, in the Eternity Range, on the Wilkins Coast, on the E coast of Graham Land. Surveyed and charted in Dec. 1936 by a BGLE sledge party, photographed from the air by USAS 1939-41 and by RARE 1947-48, and surveyed from the ground again by the Weddell Coast Sledge Party (q.v.). Named by Finn Ronne for Clay Bailey. UK-APC accepted the name on Jan. 28, 1953, and it appears in the British gazetteer of 1955. US-ACAN accepted the name later in 1953. Originally plotted in 69°58' S, 63°13' W, it was subsequently re-plotted.

Bailey, Arthur Samuel. b. Dec. 25, 1878, Prinsted, near Westbourne, Sussex, son of George Bailey, baker and landlord of the *Harvest Home*, by his wife Alice Ann Evans (George's father, George, had, in turn, run the pub before him). He joined the Navy, worked his way through the ranks, married Alice Maud O'Hagan in Prinsted in 1908, and was petty officer 2nd class, RN, on the *Terra Nova* during BAE 1910-13, and a member of the shore party. In 1917, during World War I, he was with the RNR. He died in Portsmouth, on Dec. 24, 1925.

Bailey, Bill *see* **Bailey, Roy**

Bailey, Claude Fenn. b. Nov. 28, 1910, Miss., son of blacksmith Claude C. Bailey, who worked in the railroad shops, and his wife Verna. He entered Annapolis on Sept. 23, 1930, and graduated in 1934. On Oct. 11, 1946, as a commander, he became the second skipper of the *Henderson,* during OpHJ, 1946-47. On June 12, 1948 he left the *Henderson*. He married Mary Alice, and died on April 22, 2003, in San Diego.

Bailey, Clay Wilson. USN. b. March 8, 1906, Sebree, Ky. He married Reba. He was living in Revere, Mass., when he went to Antarctica as assistant chief radio engineer on the *Jacob Ruppert* for ByrdAE 1933-35, becoming chief radio operator on the shore party during that expedition. One worrying moment on March 18, 1934, when he and pilot Bill Bowlin were forced to land their Pilgrim monoplane *Miss American Airways* miles away from help during a blizzard. They were rescued 2 days later. He won the DSM. He was a radio operator at Little America III (West Base) during USAS 1939-41, and helped to outline the radio requirements of RARE 1947-48 (although he did not go on that expedition). He died on Jan. 21, 1994, in Sedona, Arizona, and is buried in Arlington National Cemetery.

Bailey, Dana Kavanagh. b. Nov. 22, 1916, Clarendon Hills, Pa., son of private school teacher Dorothy Kavanagh Bailey. A Rhodes scholar, he succeeded Eric T. Clarke as physicist for the second, i.e., 1940-41, season of USAS 1939-41, and became a major in the Signal Corps, during World War II. After the war he went to work for Douglas Aircraft, in California, and, from 1949, was with the U.S. Bureau of Standards. He died on Aug. 27, 1999, in Boulder, Colo.

Bailey, Jeremy Thomas. b. June 9, 1941, Watford, Herts, son of Alec William Bailey and his wife Dulcie Drakes. BAS field geophysicist and glaciologist from 1964, he wintered-over at Halley Bay Station, and, with two companions, was killed in a crevasse nearby (*see* **Deaths**, 1965) on Oct. 12, 1965.

Bailey, Roy "Bill." b. March 10, 1922, Langfield, Kent, son of gardener Edward Bailey and his wife Beatrice Longhurst. In 1941 he went to work at the National Physics Laboratory in Slough, and while there did part-time courses at the University of London and at Burbeck College, to get his physics degree. He was the inventor of the "Beastie," an improved machine that sent signals to the ionosphere and back. There were six of these Beasties manufactured by the government, and one wound up in Stanley, in the Falkland Islands, where Mr. Bailey went in 1947 for a year, to revive the ionospherics station that had closed there just after the war. While there he talked to the governor of the Falklands, and to Vivien Fuchs, and then hitched a ride on the *John Biscoe* to all the FIDS bases except Hope Bay (which was frozen in), to find a suitable place to erect his ionospherics antennae, finally selecting Port Lockroy. This was the summer of 1947-48, and he planned to stay at Port Lockroy for only 2 weeks, while he briefed George Barry on the use of the equipment. However, the *John Biscoe* developed engine troble, and couldn't make it back to Lockroy, and it looked as if Bailey was going to become the 5th Fid on a 4-man base. However, just in time, the *Fitzroy* managed to get in and

take him of. They set out for the Argentine Islands, but couldn't get in, due to pancake ice, so it was back to Stanley. On his return to England, he left Slough, and went into the radio manufacturing business, in 1952 marrying Margaret McNaughton. He finally retired to Matlock, Derbyshire.

Bailey Glacier *see* **Friederichsen Glacier**

Bailey Ice Stream. 79°00' S, 30°00' W. On the N margin of the Theron Mountains, it flows WSW from the high plateau of Coats Land to the Filchner Ice Shelf, S of the Touchdown Hills. Mapped aerially by radio echo-sounding flights between 1969 and 1979 (conducted jointly by the NSF, SPRI, and the Technical University of Denmark), it was originally named Main Glacier, and appears as such in a British text of 1972. Re-named by UK-APC on Dec. 15, 1982 for Jeremy Bailey (q.v.), who had studied the upper portion of this feature in April 1965 while based at Halley Bay Station for the winter of 1965. It appears with the new name on a British map of 1983, and in the British gazetteer of 1986, UK-APC having accepted the name on April 3, 1984. US-ACAN also accepted the name.

Bailey Island *see* **Bailey Peninsula**

Bailey Nunatak. 75°40' S, 140°02' W. Rising to 1010 m, along the N flank of White Glacier, midway between Partridge Nunatak and Wilkins Nunatak, near the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Andrew M. Bailey, meteorologist who wintered-over at Byrd Station in 1963.

Bailey Peninsula. 66°17' S, 110°32' E. A rocky, ice-free peninsula, almost 3 km long, and 1.5 km wide, between Newcomb Bay and O'Brien Bay, and 2.5 km S of Clark Peninsula, at the E side of the Windmill Islands, close to Casey Station, in Wilkes Land. Cartographers working from photos taken in Feb. 1947 by OpHJ, delineated it as an island connected by a steep snow ramp to the continental ice overlying the Budd Coast, and named it Bailey Island, for Claude Bailey. This name was accepted by US-ACAN in 1956. It was re-defined by the Wilkes Station party in 1957, and re-named by US-ACAN. ANCA accepted the new name on July 4, 1961, and the Russians followed suit on May 20, 2008.

[1]**Bailey Ridge**. 77°12' S, 145°02' W. A serrate ridge, 6.5 km long, between Mount Blades and Fleming Peaks, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 during ByrdAE 1933-35, and named by USAS 1939-41 for Clay Bailey. US-ACAN accepted the name in 1947.

[2]**Bailey Ridge** *see* **Bailey Window**

Bailey Rocks. 66°17' S, 110°32' E. A small chain of rocks, including Nicholson Island, extending NE from the N side of Bailey Peninsula into Newcomb Bay, S of Kilby Island, in the Windmill Islands. Photographed by OpHJ 1946-47, by SovAE 1956, and by ANARE in 1956. In 1957 this feature was observed by Carl Eklund, who named it for Carl Thomas Bailey, USN, aerographer's mate 1st class at Wilkes Station in 1957. US-ACAN accepted the name in 1960. In 1962 the rocks were photographed by ANARE again, and were included in a hydrographic survey of Newcomb Bay conducted by Tom Gale from the *Thala Dan*.

Bailey Window. 71°20' S, 68°19' W. A prominent cleft in the short N-S ridge joining Khufu Peak and the westernmost end of Elephant Ridge, near Fossil Bluff, on Alexander Island. The British called it Bailey Ridge, after David Bailey, BAS cook, 1994-95, who assisted with the survey of the area. A such it appears in a British text of early 1998, but on April 23, 1998 the name was changed to Bailey Window, in order to avoid confusion with the Bailey Ridge (q.v.) in the Ford Ranges of Marie Byrd Land. The new name appears in a British text of 1999.

Baileyranten. 74°37' S, 14°45' W. The westernmost of three rows of ridges in Mannefallknausane, in Maudheimvidda, in the westernmost sector of Queen Maud Land. Named by the Norwegians for Jeremy Bailey (q.v.; *see also* **Deaths**, 1965). *See also* **Wildskorvene**, and **Wilsonberga**.

Baillie Peak. 83°22' S, 161°00' E. Rising to over 2800 m, 3 km SSE of Mount Angier, in the Moore Mountains of the Queen Elizabeth Range. Observed by the Ohio State University Geological Party of 1967-68, and named by them for Ralph J. Baillie, field assistant with the party. He and Peter Barrett found the fossil bone (*see* **Fossils**). NZ-APC accepted the name in Nov. 1969, and US-ACAN followed suit in 1970.

Baillieu Peak. 67°51' S, 60°46' E. Rising above the ice sheet to an elevation of 1380 m above sea level, 48 km S of Cape Bruce, and 16 km WSW of Pearce Peak, in Mac. Robertson Land. Discovered on Feb. 8, 1931 by BANZARE 1929-31, and named by Mawson for Clive Latham Baillieu (1889-1967; from 1953 Baron Baillieu), a patron of the expedition. US-ACAN accepted the name in 1947.

Bailong Gou. 69°40' S, 76°50' E. A valley, next to Xiaoshanghai Tan, in the area of the Publications Ice Shelf and Sandefjord Bay, on the Ingrid Christensen Coast of Queen Maud Land. Named by the Chinese.

Baily Head. 62°58' W, 60°30' W. An indentation in the E side of Deception Island, between South East Point and Rancho Point. It was surveyed (as was the general area) by FIDS in 1953-54, and on Sept. 4, 1957 UK-APC named it for Francis Baily (1774-1844), British astronomer who, in 1834, reported on Foster's pendulum observations taken on Deception Island in 1829, during the *Chanticleer* Expedition of 1828-31. This feature is *not* synonymous with Rancho Point, despite information to the contrary in gazetteers.

Bailys Island *see* **Ohlin Island**

Monte Bain *see* **Mount Bain**

Mount Bain. 66°33' S, 65°26' W. Rising to 2090 m, between Hopkins Glacier and Erskine Glacier, E of Darbel Bay, on the Loubet Coast, on the W coast of Graham Land. It appears on a Chilean chart of 1947 as Monte Villarrica, after the volcano in Chile, and the Chileans still call it that. The British and Americans called it Mount Villarrica. Surveyed by FIDS in 1957, and re-named Mount Bain by UK-APC on July 7, 1959, for nutritionist James Stuart Bain (b. 1923), 1950s polar food and rationing specialist in London, who emphasized plastic and vacuum packaging. US-ACAN accepted the new name in 1965. The Argentines call it Monte Bain.

Bain Crags. 70°30' S, 71°45' E. A number of rock exposures, many of which are banded, in the face of, or projecting from, the ice cliffs along the S part of the W side of Gillock Island, in the Amery Ice Shelf. Visited in Jan. 1969 by John H.C. Bain, ANARE geologist with the Prince Charles Mountains Survey Party, and for whom ANCA named this feature on May 18, 1971. Mr. Bain plotted it in 70°34' S, 71°47' E, but it has since been re-plotted. US-ACAN accepted the name in 1973. The Russians call it Utësy Opasnye. *See also* **Bainmedart Cove**.

Bain Nunatak. 71°06' S, 71°35' E. One of the Manning Nunataks, on the E side of the Amery Ice Shelf. Photographed aerially by OpHJ 1946-47 and by ANARE in 1957. The feature was visited by SovAE 1965, and by the ANARE Prince Charles Mountains Survey Party in 1969. Named by ANCA on May 18, 1971, for Christopher R. "Chris" Bain, weather observer at Mawson Station for the winter of 1969, and a member of the ANARE survey party of that year. US-ACAN accepted the name in 1973.

Bainbridge, Sydney Austin. b. 1914, Liverpool, son of Thomas E. Bainbridge and his wife Jessie Strain. A Royal Navy writer, he spent 5 seasons, summer and winter, on the *Discovery II*, in Antarctic waters, between 1935 and 1939.

Baines Nunatak. 80°19' S, 23°58' W. Rising to 1020 m, to the E of Bernhardi Heights, E of the Herbert Mountains, and 16 km NW of Jackson Tooth, on the Pioneers Escarpment, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS in 1968-71. Named on Jan. 5, 1972 by UK-APC, for Thomas Baines (1822-1875), British painter, naturalist, and explorer, famous for his work in Australia. It appears in the British gazetteer of 1974. US-ACAN accepted the name. *See also* **Lord Nunatak**.

Bainmedart Cove. 70°51' S, 68°03' E. Between 1.5 and 2 km long, and between 400 and 1000 m wide, it lies in the E part of Radok Lake, and leads to the narrow Pagodroma Gorge, which joins Radok Lake and Beaver Lake, in the E part of the Prince Charles Mountains. Three ANARE geologists — John Bain (*see* **Bain Crags**), Alex Medvecky (*see* **Medvecky Peaks**), and Jack Dart (q.v.) — spent a month surveying and studying the geology of the Radok Lake and Beaver Lake area, as members of the Prince Charles Mountains Survey Party of Jan.-Feb. 1969, and the name given by ANCA to this feature is a compound of all their names. US-ACAN accepted the name in 1971.

Baisha Zhou. 69°23' S, 76°10' E. An island in the Larsemann Hills. Named by the Chinese.

Baixian Ling. 69°25' S, 76°13' E. A peak in the Larsemann Hills. Named by the Chinese.

Baiyun Shan. 69°23' S, 76°25' E. A hill in the Larsemann Hills. Named by the Chinese.

Isla Baja *see* **Low Island**

Punta Baja *see* **Penfold Point**

Roca Baja *see* **Low Rock, Humble Point**

Punta Bajada *see* **Punta Melian**

Ostrov Bajan *see* **Bajan Island**

Bajan Island. 66°08' S, 101°04' E. In the Bunger Hills. Discovered, charted, and named Ostrov Bajan by SovAE 1956, and translated by ANCA on Jan. 19, 1989.

Bajat, Gilles-Lazare. b. Sept. 1, 1817, Bandol, France. Ordinary seaman on the *Zélée* during FrAE 1837-40. He died on board on Nov. 6, 1839.

Nunatak Bajdukova. 82°26' S, 50°32' W. On the Boyd Escarpment, on the Dufek Massif, in the Pensacola Mountains. Named by the Russians for Soviet test pilot and Arctic flyer Georgiy Bajdukov (or Baydukov) (1904-1994).

Bajean, Julien-François. b. Dec. 26, 1815, Belfort, France. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Nunatak Bajo. 62°27' S, 59°32' W. A nunatak, 3 km NW of Edwards Point, next to the SW coast of Robert Island, in the South Shetlands. Charted, along with English Strait, by ChilAE 1948-49 and ChilAE 1949-50, and named by them. Chile accepted the name in 1963. It means "low nunatak."

Punta Bajos. 63°28' S, 56°19' W. A point on the extreme W part of Welchness, on Dundee Island, in the Joinville Island group, in the Weddell Sea. It appears on a 1957 Argentine chart, and the 1970 Argentine gazetteer accepted the name.

Båken *see* **Båken Nunatak**

Båken Nunatak. 71°18' S, 2°57' W. A small, isolated nunatak, the most northwesterly on Ahlmann Ridge, and surmounting the N part of Båkeneset Headland in Maudheimvidda, the westernmost sector of Queen Maud Land. Surveyed from the ground by NBSAE 1949-52, who also made aerial photos, and photographed again, aerially, in 1958-59 during the long NorAE 1956-60. Mapped from these photos by Norwegian cartographers, who called this feature Båken (i.e., "the beacon"). US-ACAN accepted the name Båken Nunatak in 1966.

Båkenesdokka *see* **Båkenesdokka Valley**

Båkenesdokka Valley. 71°26' S, 3°03' W. An ice-filled depression, on the E side of Roberts Knoll, between that knoll and Båkeneset Headland, in the NW part of Ahlmann Ridge, it runs N into the Jelbart Ice Shelf, in Maudheimvidda, the westernmost sector of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Båkenesdokka (i.e., "the beacon cape depression"). US-ACAN accepted the name Båkenesdokka Valley in 1966.

Båkeneset *see* **Båkeneset Headland**

Båkeneset Headland. 71°23' S, 2°48' W. The ice-covered NW end of Ahlmann Ridge, in Maudheimvidda, the westernmost sector of Queen Maud Land. Båken Nunatak stands on the seaward end. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and from new air photos taken in 1958-59 during the long NorAE 1956-60, and named by them as Båkeneset (i.e., "the beacon cape"). US-ACAN accepted the name Båkeneset Headland in 1966.

Mount Baker. 84°44' S, 172°21' W. Rising to 1480 m, on the W side of Gough Glacier, 10 km E of Amphibole Peak, in the SE part of the Gabbro Hills, in the foothills of the Prince Olav Mountains, near the edge of the Ross Ice Shelf. Discovered by Bert Crary's Ross Ice Shelf Traverse Party of 1957-58, and named by him for mycologist Gladys Elizabeth Baker (1908-2007), who analyzed, classified, and reported upon the lichens brought back by ByrdAE 1933-35. Dr. Baker taught at Vassar from 1941 to 1961. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Baker, Andrew Colin. b. Dec. 12, 1948. Chief officer on the *John Biscoe*, 1975-83, and on the *Bransfield*, 1983-87.

Baker, Billy-Ace. b. Nov. 8, 1936, Oklahoma City, as Billy Asa Baker, son of Ohio builder Asa Bushnell Baker and his wife Goldie Irene Nelson. He joined the U.S. Navy in 1954 and was on a submarine when he was drafted into OpDF as radioman at McMurdo in 1962-63. He wintered-over in 1963, leaving Antarctica in Jan. 1964 for Christchurch, NZ, where he married that year to Florence Swindley. Back and forth between the U.S. and NZ, he returned for a second tour in 1966-67, wintering-over in 1967, until October, then off to Guam. He was back in Antarctica for 1970-71 and the winter of 1971, and for 1974-75 and the winter of 1975. He is one of the few to have wintered-over at McMurdo four times, as well a total of 14 summers. In 1986 he retired as a chief petty officer. In 1996, in Pensacola, he changed his name to Billy-Ace Penguin Baker. A founding member of the Old Antarctic Explorers' Association in 1999, he is one of the world's leading experts on Antarctica.

Baker, David Everett "Dave." b. June 9, 1932, Providence, RI, son of Unitarian minister Everett Moore Baker and his Nova Scotian wife Helena Campbell Macdonald. Raised partly in Wellesley, Mass., and Cleveland, O., he grew up fascinated by Antarctica, as his father preached sermons about Scott. He attended MIT and graduated from Yale. He had been a mountain climber and skier, joined the Navy in Jan. 1955, and was at Officer Candidate School at Newport, RI, when he read the notice for volunteers for the Antarctic. Through the offices of Dick Black and Admiral Dufek he was selected to go on OpDF I, as an ensign. He trained as a dog handler under Dutch Dolleman in Wonalancet, NH, and as a freefall parachutist at Lakehurst, NJ (with Jack Tuck), until Oct. 28, 1955, when he and Tuck took the dogs down to Boston, from where they (and the dogs) went south on the *Edisto*. He wintered-over as the youngest officer at McMurdo in 1956, and gave cold-weather survival training to those Seabees scheduled for the Pole trip. He was also communications officer. In Feb. 1957 he left McMurdo on the *Towle*, for NZ, and flew back to Davisville, RI, to requisition better clothing and safety gear for OpDF III. On April 27, 1957, in Philadelphia he married Katharine Kane. From 1957 to 1961 he was in Pensacola, with the Naval Air Training Command, teaching survival and later flight physiology, and from there into Naval Intelligence in Hawaii. In 1964, as intelligence officer on the *Kearsarge* he chased supposed Chinese and Korean subs in the South China Sea, and was promoted to lieutenant commander. He was re-assigned to the *Enterprise*, but resigned in 1967 over the issue of the Vietnam War. He went back to Hawaii, working for the Hawaiian Electric Company for 7 years, and was also commanding officer of the Naval Reserve Intelligence Division at Pearl Harbor, during which time he was promoted to commander. In 1974 he went to work for Bechtel in San Francisco, and on June 8, 1979, in Ross, Calif., married Jacquelyn Bullard. He retired from the Navy as a captain in 1981, and that year from Bechtel, and started his own consulting company, from which he retired in 2004.

Baker, Francis *see* **USEE 1838-42**

Baker, William. b. March 22, 1817, Sandwich, Kent. On Dec. 28, 1839, at Hobart, he embarked on the *Astrolabe* as a six-piaster sailor just in time to go south on FrAE 1837-40's second trip to Antarctica.

Baker Glacier. 72°46' S, 169°15' E. A small tributary glacier that enters Whitehall Glacier just N of Martin Hill, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1969, for John R. Baker, Iowa State University biologist at Hallett Station in 1967-68 and 1968-69. NZ-APC accepted the name in Nov. 1969.

Baker Knob. 72°30' S, 96°01' W. A small, rounded coastal elevation with an abrupt E face, 3 km N of Harrison Nunatak, at the E end of Thurston Island. Named by US-ACAN in 2003 for T.W. Baker, photographer's mate in the Eastern Group of OpHJ 1946-47, which took aerial photos of eastern Thurston Island and adjacent coastal areas.

Baker Nunatak. 85°23' S, 124°40' W. 1.5 km NW of Mount Brecher in the N part of the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1960. Named by US-ACAN in 1962, for Travis L. Baker, meteorologist at Byrd Station in 1961.

Baker Point. 77°34' S, 163°33' E. At the S side of the entrance to Explorers Cove, New Harbor, in McMurdo Sound, on the Scott Coast of Victoria Land. Named by US-ACAN in 1997 for Bill James Baker, associate professor of chemistry at the Florida Institute of Technology, in Melbourne, Fla., who conducted underwater research in several areas of McMurdo Sound during the 1992-93, 1993-94, and 1996-97 field seasons, including work at Cape Evans, the Razor-

back Islands, Hutton Cliffs, Arrival Heights, and New Harbor. NZ-APC accepted the name on Jan. 30, 1998.

Baker Ridge. 83°20' S, 55°40' W. Rising to about 1150 m, and extending W for 8 km from the N part of Washington Escarpment, in the Neptune Range of the Pensacola Mountains. Photographed from the air in 1964 by USN, surveyed from the ground by USGS in 1965-66, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Clifford E. Baker, USN, aviation electronics technician at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Baker Rocks. 74°14' S, 164°45' E. A spurlike rock exposure, 3 km W of Wood Bay, and 11 km N of Mount Melbourne, on the coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Billy-Ace Baker.

Baker Three Glacier *see* **Lambert Glacier**

Bakewell, William Lincoln "Bill." b. Nov. 26, 1888, Joliet, Ill., son of English immigrant steel worker Thurman Bakewell and his wife Elizabeth. He left home at 11, wandered the country doing odd jobs for 15 years, including being a hand on a sheep ranch in Montana, and finally went to sea. In 1914 he was in Newport, Wales, where he signed on to the *Golden Gate* heading for South America. Another young (Welsh) lad who signed on was Perce Blackborow. In Buenos Aires the two of them found themselves stranded, and without a vessel, and then the *Endurance* arrived in port on its way south for BITE 1914-17, under Shackleton. Bakewell, posing as a Canadian in order to get on the trip, was the only American on the expedition, serving as an able seaman, at a salary of £8 a month. He and How helped smuggle Blackborow on board as a stowaway. After the expedition he became manager of a sheep ranch in Argentina, then joined the British Merchant Navy, in which he served out World War I, being torpedoed twice. In 1921 he was about to join Shackleton on his *Quest* expedition, but changed his mind, went into the Merchant Marine again, and by 1925 had married and settled down in the USA, working for the railroad. In 1945 he became a farmer in Michigan, where he died on May 21, 1969, at Marquette. "He was a cut above the rest of the seamen," said Shackleton. His biography was published in 2003 (*see* the Bibliography, under Bakewell).

Bakewell Island. 75°40' S, 18°55' W. A small, ice-covered island E of Lyddan Island, in the S part of the Riiser-Larsen Ice Shelf, near the Princess Martha Coast, in the W part of Maudheimvidda, in Queen Maud Land. Discovered aerially on Dec. 5, 1967 by a VX-6 LC-130 Hercules, and plotted by USGS from air photos taken during that flight. Named by US-ACAN in 1970, for Bill Bakewell. The Norwegians call it Bakewelløya.

Bakewelløya *see* **Bakewell Island**

Bakhallet *see* **Bakhallet Slope**

Bakhallet Slope. 72°08' S, 2°56' E. An ice slope between Terningskarvet Mountain on the one hand and Brugda Ridge and the E part of Jutulsessen Mountain on the other, in the Gjelsvik Mountains, in Fimbulheimen, in Queen Maud Land. Photographed aerially by GermAE 1938-39. Mapped by Norwegians cartographers from surveys and air photos taken during NBSAE 1949-52, and further plotted from air photos taken in 1958-59 during the long NorAE 1956-60. Named by them as Bakhallet (i.e., "the back slope"). US-ACAN accepted the name Bakhallet Slope in 1966.

Bakhornet. 72°21' S, 25°53' E. A small peak at the uppermost part of Mjell Glacier, in the SE part of the Sør Rondane Mountains. Name means "the back horn" in Norwegian.

Bakke, Johannes O. b. Sept. 18, 1903, Ålesund, Norway, but raised in Lillehammer, son of Ole Larsen Bakke and his wife Klara Paulsen. He went to sea in 1929, and was an able seaman on the *Wyatt Earp* during Ellsworth's last Antarctic expedition, 1938-39.

Mount Bakker. 70°19' S, 64°36' E. An isolated mountain, marked by a snow-covered N face, about 12.5 km SSE of Mount Starlight, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Mapped by Australian cartographers from Rob Lacey's 1955 ANARE ground survey, and from ANARE air photos taken in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for Frederick C.R. "Fred" Bakker, radio supervisor who wintered-over at Davis Station in 1964. US-ACAN accepted the name in 1970.

Bakkesvodene *see* **Bakkesvodene Crags**

Bakkesvodene Crags. 71°56' S, 6°32' E. High rock crags forming the SW part of Jøkulkyrkja Mountain, and overlooking the E side of Lunde Glacier, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Bakkesvodene (i.e., "the hill slopes"). US-ACAN accepted the name Bakkesvodene Crags in 1967. The Russians call them Gora Grekova.

Bakshev Ridge. 62°38' S, 61°13' W. The rugged, rocky ridge rising to 210 m, and extending 900 m in a SE-NW direction, 0.8 km E of San Stefano Peak, 1.1 km W of Vund Point, and 1.05 km NW of Radev Point, on Rugged Island, off the W coast of Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1993, and named by the Bulgarians on Dec. 15, 2006 for Petar Bogdan Bakshev (1601-1674), Catholic archbishop of Sofia, and author of a Bulgarian historiography published in 1667.

Bakutis, Fred Edward. b. Nov. 4, 1912, Brockton, Mass., son of Frank Bakutis and his wife Annie, originally from Lithuania and Poland respectively. On June 16, 1931 he entered the Naval Academy at Annapolis, where he was a javelin champion, and graduated in June 1935, becoming an ensign. During World War II, as a lieutenant, he was an air ace, and was shot down while bombing a Japanese convoy in 1944, being forced to float in the sea for 7 days in his raft. He served in the Korean War, and in July 1961 was promoted to rear admiral. In 1965 he succeeded Admiral Reedy as commander of U.S. Naval Support Force, Antarctica, a post he held until 1967, also serving in the Vietnam War. In 1968-69 he was commandant of the 14th Naval District (Hawaii), and commanded the task force that recovered the Apollo 10 astronauts. He retired in 1969, to Hawaii, where he surfed well into his 80s, and on Oct. 4, 2009, he died, one month short of his 97th birthday.

Bakutis Coast. 74°45' S, 120°00' W. Between the Hobbs Coast and the Kohler Range, it is bounded by several ice-covered islands and by the Getz Ice Shelf, on the coast of Marie Byrd Land. It actually extends from 74°42' S, 127°05' W (opposite the E part of Dean Island) to Cape Herlacher (73°51' S, 113°56' W), facing the Amundsen Sea. Discovered by USAS 1939-41, and charted in part from air photos taken by OpHJ 1946-47. The coast was completely mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1966, for Fred Bakutis.

Bakveggen. 72°21' S, 25°48' E. A crag at the uppermost part of Mjell Glacier, in the Sør Rondane Mountains. Name means "the back wall" in Norwegian.

[1]**The *Balaena***. A 417-ton wooden Dundee whaler, originally the *Mjolnar*, built for ice work in 1872 in Drammen, she became part of the Dundee whaling fleet in 1891. She led DWE 1892-93, and was considerably the largest of the four ships of the expedition. She had a 65 hp engine, and was 141 feet long. Captain was Alexander Fairweather. *See* **Dundee Whaling Expedition**. In 1914, with the outbreak of World War I, she was loaned to the Hudson Bay Company, for transporting munitions to Russia, but sank in a tempest in the White Sea, on her first voyage there.

[2]**The *Balaena.*** A 15,715-ton factory whaling ship, built by Harland & Wolff of Belfast for Rupert Trouton's London company United Whalers, Ltd., and completed in Sept. 1946. Named for the original *Balaena*, she replaced Trouton's old *Terje Viken*, which had been sunk by the Germans in 1941. The *Balaena* and her fleet of catchers and other vessels went down to Antarctica, hunting whales every season from 1946-47 until 1959-60. **The 1946-47 expedition**. The most famous of the *Balaena* expeditions, partly because it was the first, partly because Trouton himself led it in person, but also because it was the first expedition of its kind to be fitted with aircraft for whale spotting, 3 Supermarine amphibious Walrus aircraft for reconnaissance and meteorological work — the *Moby Dick*, the *Snark,* and the *Boojum*, (named thus in a ceremony at East Cowes in July 1946) with Squadron-Leader John Grierson, famous flyer, flight commodore in charge of all air operations. Nigel "Mac" McLean and Geoff Collyer, both

ex-Fleet Air Arm, were flight captains. Martin Routh and Jock Milroy, also both ex-Fleet Air Arm, were flight navigation officers. Leslie Holmes (ex-Fleet Air Arm) and Arne Horgen were flight radio operators, and ex-Navy man Bill Mitchell was catapult engineer officer. Leading seaman Rogerson, reckoned to be the best crane driver in the Royal Navy, was loaned by the Admiralty to the expedition in that capacity. There had been over 200 applicants for the flying jobs, and the men who were accepted averaged 25 years of age. The *Balaena* also had one of the largest oil producing plants ever installed on a ship, as well as refrigeration machinery. Reiner Pedersen was skipper of the ship, and Hugh H. Lamb, meteorologist from the Air Ministry, was also on board, as was Dr. Michael Begg, who was collecting information and specimens for the Discovery Committee. Curiously Bernard Quinn (father of Tony Quinn, later a Fid) was an engineer on board (*see* **Quinn, Joseph Anthony**). The *Balaena* was accompanied by 11 whale catchers, including the 7 re-conditioned *Terje* catchers of Trouton's pre-war fleet, 3 chartered from the British government, and one old catcher. The ship ran trials at Belfast on Sept. 28, 1946, then, on Oct. 15, the fleet left England, headed down to Cape Town. Michael Daunt, air adviser to United Whalers, accompanied the ship only as far as Southampton. They left the *Moby Dick* at Cape Town as a spare. By November they were on their way to the Antarctic for the kick-off of the whaling season, which was Dec. 4, 1946. The expedition not only hunted baleen whales off the coast of East Antarctica, but also conducted scientific work and aerial spotting. The ship operated off the coast from Jan. to March 1947, and then went back to Cape Town, leaving there on April 23, 1947, bound for England, where they arrived on May 13, 1947, only to run aground on shoals off the Essex and Norfolk coasts. 23 flights had been made from the *Balaena* in Antarctica, and 96 hours flying time, flights being made up to a 115-mile radius. There was only one forced landing, in the sea, but no one was hurt. More to the point, as this was a commercial venture, the expedition brought home a phenomenal 185,000 barrels of edible oil extracted from 2615 whales taken, as well as meat meal for cattle fodder, a total of £2 million worth of product. Net profit to the company was £310,954. **The 1947-48 expedition.** Again with Trouton in charge. 500 Norwegians and 70 British. Dr. J.G. Benstead and 2 other Cambridge scientists working for the Department of Scientific and Industrial Research were also aboard. They arrived back in Southampton on May 10, 1948 after 4 months in the Antarctic, during which time they took 3000 whales, including one of 94 feet and 180 tons. This time they brought back £3 million worth of product, including 163,000 barrels of edible oil, 10,000 barrels of sperm oil, 4500 tons of meat, 170 tons of meat extract, and 3200 tons of meat for cattle fodder. **The 1948-49 expedition**. This time the *Balaena* was accompanied by two new refrigeration ships, the *Bransfield* and the *Ketos*, as well as the tanker *Thule* (which had a canning plant aboard), and two new whale catchers, *Setter I* and *Setter II*. Finn A. Bugge, the Norwegian whaling company owner, was also aboard. On Nov. 17, 1948 they reached the whaling grounds of the Antarctic. **The 1949-50 expedition**. All their whale oil catch was pre-sold to the Ministry of Food at £80 a ton. The crew of 500 left Liverpool on Oct. 18, 1949 bound for Cape Town, where the vessels rendezvoused on Nov. 27, 1949. There were two new tankers (used to supply and relieve the fleet, and take off excess product)—the *Biscoe* and the *Powell*. The Norwegian skipper, at 39, was the youngest in the fleet. The *Bransfield* was along again, with 10 catchers (including four new *Setters*, *III-VI*), 4 towing boats (with which to tow dead whales to the factory ship), 2 transfer ships, and a store and supply ship. 21 vessels in all. On Dec. 22, 1949 the whaling season began in Antarctic waters. On March 15, 1950 the whaling season ended, and on April 20, 1950 the fleet arrived back at Liverpool, after a trip of 30,000 miles. 2759 whales had been taken, including 1250 blue whales. 203,000 barrels of whale oil. **The 1950-51 expedition**. The *Balaena*, with 12 whale catchers, 2 towing vessels, 2 ferry boats, but no refrigeration vessels this time, left Cape Town on Nov. 6, 1950, to be attended through the season by 3 tankers. Due to shockingly bad conditions in the early part of the season, they took only 152,700 barrels of whale and sperm oil combined, about 25,500 tons. Fortunately, they had pre-sold to the Ministry of Food for £100 a ton. The season ended on March 9, 1951. **The 1951-52 expedition**. The whale catchers *Setter VII* and *Setter VIII* were added to the fleet, and a former company corvette, *Terje XI* was converted into a whale catcher. They pre-sold their oil catch to the Ministry of Food for a record £110 a ton. So, with 9 catchers (including 6 older *Terje* catchers), one towing vessel, 2 ferry boats, a total fleet of 13 vessels left Cape Town on Nov. 14, 1951, bound for the Ross Sea. Captain Per Virik was skipper of the *Balaena*. The tanker *Thule* and 4 *Terje* catchers and the *Bransfield* would join the fleet later, to be supplied and relieved by the tankers *Powell* and *Biscoe* through the season. The season ended on March 5, 1952, and the fleet headed to the Falkland Islands, then on into the Atlantic. They had taken 161,000 barrels of whale oil and sperm oil combined, or 26,900 tons, and, during the season, had pretty much circumnavigated Antarctica. **The 1952-53 expedition.** They pre-sold their oil catch to the Ministry of Food for £76 2s 11d a ton. The *Balaena* left Norway for Antarctica at the end of Aug. 1952. During the Antarctic season they took 166,000 barrels of whale and sperm oil (or 27,600 tons). **The 1953-54 expedition**. They pre-sold to the Ministry of Food for £67 10s per ton, and brought in 28,700 tons of whale and sperm oil combined, which represented 151,000 barrels of whale and 20,800 of sperm. Dick Laws was junior whaling inspector on this trip. **The 1954-55 expedition**. With the Ministry of Food no longer buying whale oil, they were forced to pre-sell to the private market, which they did, at £75 a ton. They took 148,000 barrels of whale oil and 38,950 of sperm, or a total of 31,400 tons. **The 1955-56 expedition**. 16 catching and towing vessels, and 2 ferry boats, as well as the *Bransfield* and the *Thule*, left for Antarctica. The *Biscoe* and the *Powell* would be their tankers again. The season ended on March 4, 1956, and they took 11,622 tons of whale oil, and 6036 of sperm. It was a bad year. That was the season that soon-to-be Fid Eddie Dagless worked in the lab aboard ship, with Chris Ash, Jimmy Clifton, and Hugh Simons. **The 1956-57 expedition**. They pre-sold their oil at £90 a ton, and took in 16,959 tons of whale oil and 2284 tons of sperm. The *Powell* was sold in October 1957, and the *Biscoe* a couple of months later. **The 1957-58 expedition**. They pre-sold at £73 10s a ton, and left Cape Town with 9 catchers and towing vessels. They took in 22,075 tons of whale oil and 2841 of sperm. They scrapped the *Bransfield* in 1958, and acquired the bigger freezing ship *Enderby*. **The 1958-59 expedition**. The season closed on March 15, 1959. It was yet another bad season. **The 1959-60 expedition**. This was the *Balaena*'s last season. She was sold on Aug. 15, 1960, along with the fleet, to the Japanese, and became the *Kyokuyo Maru 3*.

Balaena Islands. 66°01' S, 111°06' E. A small group of rocky islands off the Budd Coast, 16 km NE of Cape Folger. They include Grierson Island, Thompson Island, McLean Island, Collyer Island, Ostrov Bezymjannyj, and Holmes Rock. First mapped from air photos taken on Feb. 2, 1947, during OpHJ 1946-47. However, on Feb. 12, 1947, flyers off the whaler *Balaena* sketched the Knox Coast and Budd Coast, including these islands, which they thought were peaks. First visited by an ANARE party led by Phil Law in Jan. 1956. Named by US-ACAN in 1963, for the 1947 British whaling ship *Balaena* (q.v.).

Balaena Valley. 63°20' S, 56°23' W. A gently sloping valley filled with ice, at the head of Kinnes Cove, E of Suspiros Bay, and 6 km NE of Cape Kinnes, in the W part of Joinville Island. Surveyed by Fids from Base D in 1953-54, and named by UK-APC on Sept. 4, 1957 for the original *Balaena*. US-ACAN accepted the name in 1963.

Balakirev Glacier. 71°25' S, 70°10' W. A glacier flowing NE into Schubert Inlet from the S part of the Walton Mountains, in the central part of Alexander Island. Named by the Russians in 1987, as Lednik Balakireva, for Mily Balakirev (1837-1910), Russian composer and pianist. US-ACAN accepted the name Balakirev Glacier in 2006, and UK-APC followed suit on March 17, 2010.

Lednik Balakireva *see* **Balakirev Glacier**

Gory Balakshina. 79°56' S, 155°15' E. A group of mountains in the area of Bellum Valley, in the NW part of the Britannia Range, in the Transantarctic Mountains. Named by the Russians.

Balan Ridge. 69°26' S, 71°22' W. A ridge, 1.4 km wide, 800 m above sea level, and extending

4.5 km in a N-S direction, in the Sofia University Mountains, on Alexander Island. It is bounded by Poste Valley to the E, Palestrina Glacier to the N, and Yozola Glacier (a tributary to the Palestrina) to the W. Named by the Bulgarians on Nov. 23, 2009, for linguist, historian, and bibliographer Aleksandar Teodorov-Balan (1859-1959), first rector of Sofia University, and one of the founders of Bulgarian tourism.

La Balance *see* ***under*** **L**

Bahía Balaresque. 65°03' S, 63°45' W. A bay between Cape Renard and Aguda Point, on the W coast of Graham Land. Named by the Chileans for Teniente de fragata Jorge Balaresque Buchanan, commander of the *Iquique* during ChilAE 1949-50. Don Jorge was later a vice admiral. The Argentines call it Bahía Chavarría.

Cabo Balcarce *see* **Cape Freeman**

Punta Balcarce *see* **Fildes Point**

Monte Balch *see* **Mount Balch**

Mount Balch. 65°16' S, 63°59' W. An E-W trending mountain with numerous sharp peaks, the highest rising to about 1105 m above sea level, between Mount Peary and Mount Mill, NE of Waddington Bay, and 5 km E of Rasmussen Island, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Sommet Swift Balch, for Edwin Swift Balch (1856-1927), U.S. mountain climber, glaciologist, and authority on Antarctic exploration (*see also* the Bibliography). It was Balch who named East Antarctica and West Antarctica. The British and Americans translated Charcot's naming as Mount Swift Balch, and the South Americans as Monte Swift Balch (for example, it appears on a 1943 U.S. Hydrographic Office chart as Mount Swift Balch). US-ACAN accepted the name Mount Swift Balch in 1950, but in 1956 shortened it to Mount Balch, and UK-APC followed suit on July 7, 1959. It appears as such on a British chart of 1960. FIDASE photographed it aerially in 1956-57. The Chileans and Argentines now call it Monte Balch.

Balch Glacier. 66°50' S, 64°48' W. A glacier, 14 km long, flowing SE into Mill Inlet, on the Foyn Coast, on the E coast of Graham Land, to the S of Gould Glacier. Surveyed from the ground by FIDS in 1946-47, photographed aerially in late 1947 by RARE 1947-48, and named by FIDS as East Balch Glacier, for Edwin Swift Balch (*see* **Mount Balch**). Another feature nearby was called West Balch Glacier, a connection being supposed between the two, the entire system reported to be filling a transverse depression across Graham Land. This state of affairs is reflected on a British chart of 1954, and in the British gazetteer of 1955. UK-APC accepted the names on Oct. 5, 1955. However, a 1957 survey showed no connection between the two glaciers, and on July 7, 1959, UK-APC made some changes — East Balch Glacier became Balch Glacier, and the W one became Drummond Glacier, but with Balch Glacier plotted in 66°49' S, 64°55' W. US-ACAN accepted that situation in 1960. It has since been re-plotted. The Chileans call it Glaciar de Hoz, and it first appears as such in a 1963 map prepared by the Chilean Naval Hydrographic Institute of that year. Don Pedro Sancho de Hoz was a conquistador whom King Carlos V made governor of all lands S of the Magellan Strait. What makes it more complicated is that in 1948, just after RARE, Finn Ronne, unaware that the British had already named it, named it Martin Glacier, for Orville Martin, of BUSHIPS, Navy Department. When he became aware of the situation, Ronne dropped the name, and re-applied Mr. Martin's name to Mount Martin (q.v.).

Mount Balchen. 85°22' S, 166°12' W. A prominent and very impressive mountain, rising to 3087 m, 10.5 km E of the summit of Mount Fridtjof Nansen, it can be seen from the Axel Heiberg Glacier, overlooking the Axel Heiberg Icefalls, in the Herbert Range, in the Queen Maud Mountains. Surveyed by the Southern Party of NZGSAE 1961-62, and named by them for Bernt Balchen. US-ACAN accepted the name in 1966. Not to be confused with Balchen Mountain.

Balchen, Bernt. The boys in the Antarctic couldn't wrap their names around Bernt, so they called him Bert. Balchen is pronounced like "Balkan." b. Oct. 23, 1899, in Tveit, Vest-Agder, Norway, son of Lauritz Balchen and his wife Dagny, and nephew of Capt. David G. Dedrick, former commander of the *City of New York* at the very moment that that ship was being brought to America from Norway (she had still been the *Samson* then). Middleweight boxing champion of Norway in 1920, and a lieutenant in the Royal Norwegian Naval Air Force, he went on two Amundsen-Ellsworth Arctic aerial explorations, and was on the transatlantic flight of Byrd's *America*— all before 1928. In that year he became chief pilot on ByrdAE 1928-30. On Jan. 27, 1929 he and Byrd crossed the Ross Ice Shelf by plane, Balchen piloting, and between March 7 and 10, 1929 he, June, and Gould were trapped in the Rockefeller Mountains (*see* **Byrd's 1928-30 Expedition,** and **Airlifts**). He and Byrd took off from Little America at 3.29 A.M., on Nov. 28, 1929, and at 1.15 P.M. reached the Pole (they didn't land). They were back at Little America at 8.20 P.M. The historic flight took 15 hours and 51 minutes. (Of the two previous leaders to reach the Pole — necessarily by land — Amundsen had taken 99 days for the round trip; Scott had never made it back). On Oct. 18, 1930 Balchen married Emmy Soerlle of Brooklyn. He became a U.S. citizen in 1931, and was Ellsworth's chief pilot on his first two Antarctic expeditions, 1933-34 and 1934-35. During World War II he was in Greenland, and on July 5, 1942, with Joe Healy and Dutch Dolleman, he rescued 13 downed crew of the B-17 bomber *My Gal Sal*. One of the leading experts on polar flying, he helped build Scandinavian Airlines after World War II, a war in which he was an OSS operative. In 1948 he divorced his wife, and married again, in Oslo, to Bess Engelbrechtsen, a much younger lady, who had been a Norwegian Resistance fighter in the war. He retired as a colonel in the USAF, and died on Oct. 18, 1973, at Mount Kisco, NY.

Balchen Glacier. 76°23' S, 145°10' W. A crevassed glacier between the Phillips Mountains and the Fosdick Mountains, that flows W into Block Bay, on the Ruppert Coast, between the Hobbs Coast and Guest Peninsula, Marie Byrd Land. Discovered on Dec. 5, 1929, by ByrdAE 1928-29, and named by Byrd as Bernt Balchen Glacier, for Bernt Balchen. It was also seen as Bernt Balchen Valley. US-ACAN accepted the name in 1947, later shortening it. Originally plotted in 76°26' S, 145°30' W, it has since been replotted.

Balchen Mountain. 72°00' S, 27°12' E. Rising to 2820 m, at the E side of Byrdbreen, in the easternmost part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, plotted by them in 72°02' S, 27°30' E, and named by them as Balchenfjella (i.e., "Balchen mountain"), for Bernt Balchen. US-ACAN accepted the name Balchen Mountain in 1962. The feature has since been re-plotted. Not to be confused with Mount Balchen.

Balchenfjella *see* **Balchen Mountain**

Balchik Ridge. 62°42' S, 60°06' W. A narrow ridge, 1.3 km long, and surmounting Boyana Glacier to the SW, S, and E, and centered 900 m S of Silistra Knoll, 1.6 km E of the summit of Peshev Ridge, 2 km NNE of Vazov Point, 2.45 km WNW of Aytos Point, and 1.7 km W of Christoff Peak, it descends in a NNW-SSE direction, with its highest point at about 550 m located at its N extremity, adjoining the col linking Silistra Knoll and Peshev Ridge. Named by the Bulgarians on Feb. 17, 2004, for their town of Balchik.

Balchunas Pass. 75°46' S, 128°45' W. A broad pass between Mount Flint and Mount Petras, in the McCuddin Mountains of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Cdr. Robert Charles Balchunas (b. June 26, 1929, Ranshaw, Pa. d. Nov. 24, 2010), USN, executive officer for Antarctic Support Activities during OpDF 1971, OpDF 1972, and OpDF 1973.

Balcom, Reuben. b. 1855, Sheet Harbor, Nova Scotia, son of seaman Samuel Balcom and Nancy McCarthy. He went to sea at 12, and was a skipper before he was 21. He married Jessie Maria Dunn. He sailed for years out of Nova Scotia, and was wrecked off Cuba in 1893, barely surviving a horrendous adventure. In 1894 he moved to Victoria, BC, and engaged in sealing with his brother Sprott. In 1897 he went up to Alaska for a couple of years, during the gold rush, returned to Nova Scotia, and was captain of the Nova Scotia sealer *Beatrice L. Corkum*, in the South Shetlands in 1901-02. He was in the South Shetlands and South Orkneys in the *Edith R. Balcom*, in 1905-06. He died on Feb. 15, 1929, in Victoria, BC.

Punta Balcón. 64°21' S, 62°57' W. A point on Omega Island, in the Melchior Islands, in the Palmer Archipelago. Named by the Argentines.

Cabo Bald *see* **Bald Head**

Bald Head. 63°38' S, 57°36' W. A bare, ice-free headland, rising to about 150 m above sea

level, 13 km SW of View Point, and 21 km W of Cape Burd (the extreme SW point of Tabarin Peninsula), on the N side of Prince Gustav Channel, on the SE side of Trinity Peninsula. First seen probably in 1902–03 by Dr. J. Gunnar Andersson's party during SwedAE 1901–04. Surveyed and mapped by Fids from Base D in Nov. 1945, and named descriptively by them. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the British gazetteer of 1955. The Chileans call it Cabo Bald, and it appears as such on one of their charts of 1962, and in their gazetteer of 1974. The Argentines call it Cabo Circular, it appearing as such in the Argentine gazetteer of 1970.

Punta Balder *see* **Balder Point**

Balder Point. 66°27' S, 63°45' W. It marks the E tip of a narrow, rocky "coxscomb" ridge, which extends from Frigga Peak for 10 km in an ESE direction to the W side of Cabinet Inlet, 10 km SW of Cape Casey, on the Foyn Coast, on the E coast of Graham Land. In Dec. 1947 it was photographed from the air by RARE 1947–48, and at the same time surveyed from the ground by Fids from Base D. FIDS mapped it, and named it for the Norse god (son of Odin and Frigga; *see also* **Mount Odin**). UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears in the British gazetteer of 1955. It appears as Punta Balder on an Argentine chart of 1957, and that is also how it is represented in the Chilean gazetteer of 1974.

Baldoni, Emilio *see* **Órcadas Station**, 1927

Mount Baldr. 77°35' S, 160°34' E. Also called Mount Baldur. A prominent peak, rising to 2200 m above sea level, W of Mount Thor, and S of Wright Upper Glacier, in the Asgard Range of Victoria Land. Named by VUWAE 1958–59, for the Norse god. NZ-APC accepted the name, and US-ACAN followed suit in 1962.

Baldred Rock. 60°44' S, 44°26' W. Close off the S side of Ferrier Peninsula, 1.2 km ESE of Graptolite Island, in Fitchie Bay, Laurie Island, in the South Orkneys. Mapped in 1903 by ScotNAE 1902–04. It appears on a British map of 1913 as Bass Rock, named thus (almost certainly by Bruce) due to its similarity to the Scottish feature of that name. It was surveyed from the ground by Fids from Signy Island Station between 1947 and 1952. Another rock, in the Eden Rocks of the Joinville Island group, was also going by the name Bass Rock, so, in order to avoid confusion, UK-APC, on March 31, 1955, following the FIDS suggestion, gave a completely new name to the one in Fitchie Bay — Baldred Rock, named for the hermit saint who lived on the original Bass Rock in the 6th century, and died in 606. US-ACAN accepted this name in 1956.

Baldrick Automatic Weather Station. 85°S. British Antarctic Survey (BAS) AWS on the Polar Plateau, at an elevation of 1968 m. It began operating in Jan. 2008. Also known as M83.

Balduino Rambo Refugio *see* **Padre Balduino Rambo Refugio**

Mount Baldur *see* **Mount Baldr**

Mount Baldwin. 72°15' S, 163°18' E. A mountain, 8 km SE of Smiths Bench, and 11 km N of Mount Jackman, in the W part of the Freyberg Mountains of Oates Land. Named by US-ACAN in 1964, for Thomas T. "T.T." Baldwin (b. Jan. 4, 1937. d. Dec. 15, 1992), USARP transport specialist, a member of the Victoria Land Traverse party that surveyed this area in 1959–60. NZ-APC accepted the name.

Baldwin, Augustus S. b. New Jersey. He was appointed to the Navy on Feb. 2, 1829, and from 1830 to 1834 was a midshipman in the Brazil Squadron, serving on the sloop *Warren* for the first 3 years, and then, in 1834, on the *Peacock*. He was based at the Navy Yard in New York in 1835; and from 1835–36 served aboard the frigate *Constellation*, in the West Indies Squadron. In the 1830s he fought a duel with William May (q.v.). On June 4, 1836, he was promoted to passed midshipman (equivalent to today's rank of ensign), and, as such, took part in USEE 1838–42, on which he was, ironically, a good friend of Mr. May. He was acting master of the *Porpoise*, and transferred to the *Peacock* at Callao, leaving the expedition at the Columbia River, when he joined the *Oregon*. He was promoted to lieutenant on Sept. 8, 1841, was wounded at the siege of Vera Cruz, during the Mexican War, 1846–48, and was with the Coast Survey, 1848–52, retiring from the Navy in 1855. However, he was reinstated on the active list in 1859, and served aboard the steam sloop *Lancaster*, with the Pacific Squadron, 1859–60. On April 24, 1861, just after the outbreak of the Civil War, he was promoted to commander, and took command of the steamer *Wyandotte*, part of the Potomac Flotilla. In 1862 he was skipper of the store ship *Vermont*, in the South Atlantic Squadron, and, from 1862 to 1866, was inspector of the Navy Yard in New York. He was promoted to captain in 1865, and was a lighthouse inspector in 1867. He died in 1876, in Princeton, NJ.

Baldwin, George E., Jr. He enlisted as a private in the U.S. Marines in Jan. 1932, in San Francisco, and was posted to San Diego. In Oct. 1933 he was posted to the Naval Ammunition Depot, in Portsmouth, Va., being promoted to pfc on Feb. 1, 1934. On Nov. 23, 1935, he was promoted to corporal, and transferred to Mare Island, in San Francisco. He had just been promoted to sergeant when he became photographer on Flight 8A which flew over the South Pole (q.v. for further details) on Feb. 16, 1947, during OpHJ 1946–47.

Baldwin Bluff. 72°06' S, 169°27' E. A rock bluff along the SW side of Ironside Glacier, about 8 km SW of the summit of Mount Whewell, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Howard Arthur Baldwin, biologist at McMurdo, 1966–67. NZ-APC accepted the name in Nov. 1969.

Baldwin Glacier. 85°05' S, 177°10' W. A short, broad glacier flowing generally northeastward from large icefalls at the escarpment E of Mount Rosenwald, it enters the W side of Shackleton Glacier S of Mount Heekin and N of Bennett Platform. Discovered and photographed aerially on Feb. 16, 1947, during OpHJ 1946–47 (*see* **South Pole** for details of that flight). Named by US-ACAN in 1962, for George E. Baldwin. NZ-APC accepted the name on June 28, 1962. Originally plotted in 85°05' S, 177°00' W, it has since been replotted.

Baldwin Nunatak. 70°19' S, 64°24' E. A nunatak, 2 km NE of Mount Bensley, and 10.5 km SSW of Mount Starlight, in the W extension of the Athos Range, in the Prince Charles Mountains of Mac. Robertson Land. While with ANARE in 1955, Rob Lacey surveyed the area from the ground, and took photos of this feature. ANARE photographed it aerially in 1959 and 1965, and from these efforts it was plotted by Australian cartographers, and named by ANCA on Aug. 10, 1966, for John W. Baldwin, weather observer (radio) who wintered-over at Mawson Station in 1965. US-ACAN accepted the name in 1970.

Baldwin Peak. 64°23' S, 60°45' W. Rising to 2100 m, S of Brialmont Cove, between Lilienthal Glacier and Mount Berry, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57, and surveyed from the ground by Fids from Portal Point between 1957 and 1959. In 1959–60, FIDS cartographers mapped this feature from all these efforts. In keeping with the naming of other features in this area that honored aviation pioneers, this peak was named by UK-APC on Sept. 23, 1960, for Thomas Scott Baldwin (1860–1923), American inventor of the parachute vent (about 1880), that gives control and stability to a parachute when it is in operation. US-ACAN accepted the name in 1964.

Baldwin Point. 66°40' S, 121°13' E. On the Sabrina Coast of Wilkes Land. Originally plotted in 66°50' S, 120°48' E, it has since been replotted. Apparently named by the Russians. Why the Russians should name a feature Baldwin Point is a mystery. It does not seem to be the Russian name for a feature known by anyone else as something else.

Baldwin Rocks. 66°24' S, 98°45' E. A group of rock outcrops, about 7 km NW of Watson Bluff, on the N side of David Island, off Queen Mary Land. Discovered and charted by the Western Base Party of AAE 1911–14, and named by Mawson for Joseph Mason Baldwin (1878–1945) of the Melbourne Observatory. US-ACAN accepted the name in 1953.

Baldwin Valley. 77°18' S, 162°20' E. A low-gradient, ice-filled valley, NW of Pond Peak, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 1964, for Russel Rowe Baldwin (b. July 5, 1930, Heber, Ariz.), who joined the U.S. Navy in Sept. 1947, was in charge of the airfield maintenance branch at McMurdo in 1962, and retired from the Navy in Sept. 1967. NZ-APC accepted the name on July 16, 1964.

Mount Baleen. 65°36' S, 62°12' W. A prominent peak, pyramidal when viewed from the Larsen Ice Shelf, rising to 910 m between Rachel

Glacier and Starbuck Glacier, NW of Scar Inlet, on the Oscar II Coast, on the E coast of the Antarctic Peninsula. Surveyed by BAS personnel from Base D between 1961 and 1965, and named by UK-APC on July 21, 1976, for the baleen whales. US-ACAN accepted the name later in 1976.

Baleen whales. Also known as whalebone whales. Order: Cetacea (whales); sub-order: Mysticeti (baleen whales). The baleen is a structure in the mouth of a toothless whale, used for straining plankton and krill. Only about 15 percent of all whales in the world are baleen whales (the others are toothed whales), representing 11 species, 7 of which inhabit Antarctic waters. Baleen whales are much bigger than toothed whales (generally speaking; the exception being the toothed Sperm whale). Baleen whales are divided into 2 groups: right whales (q.v.) and rorquals (q.v.), the difference being that rorquals have grooved or tubed throats that enable the throat to expand during feeding (however, *see also* the **Pygmy right whale**, which is an anomaly).

La Baleine *see* ***under*** **L**

Anse de la Baleinière *see* **under D**

Anse des Baleiniers *see* **Whalers Bay**

Baley Nunatak. 63°57' S, 58°47' W. A rocky hill, rising to 495 m on the N side of Aitkenhead Glacier, in the SE foothills of Mancho Buttress, 4.69 km NW of Hitar Petar Nunatak, 6.45 km NNW of Mount Roberts, and 10.25 km SW of Mount Bradley, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Baley, in northwestern Bulgaria.

Monte Balfour *see* **Mount Balfour**

Mount Balfour. 69°19' S, 67°13' W. A bastion-like, rocky mountain, rising to 1010 m, at the mouth of Fleming Glacier, on the SE side of Wordie Bay, close to the junction with the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in Sept. 1936, by BGLE 1934-37, and again, more accurately, in 1948 by Fids from Base E, it was named by UK-APC on March 31, 1955, for Henry Balfour (1863-1939), president of the Royal Geographic Society, 1936-38. US-ACAN accepted the name later in 1955. The Argentines call it Monte Balfour.

Balfour, Andrew Francis. b. May 25, 1851, Edinburgh, son of professor of medicine and botany, John Hutton Balfour and his wife Marion Spottiswood. After Edinburgh Academy, he became a naval cadet on Dec. 14, 1864, and in Aug. 1866, while still a cadet, was posted aboard the *Ocean*. On Jan. 26, 1867 he became a midshipman, and on Nov. 26, 1870, was appointed to the *Hercules*. He was promoted to sub lieutenant on Oct. 27, 1871, and went on the *Challenger* Expedition, 1872-76. He was promoted to lieutenant on July 2, 1875, and in 1877 joined the *Nassau*, serving on the China Station. He continued in China, from 1878 to 1884, on the *Magpie*, and on Oct. 30, 1884 was transferred to the *Rambler*. He was back in China for three years aboard the *Rambler*, then returned to England, where, in 1889, in Hastings, he married Mabelle Alice Truman. On May 1, 1889 he was transferred to the *Stork*, as skipper, and during his time aboard that ship was promoted to commander, on Aug. 23, 1890. In Feb. 1891 he left the *Stork* at Malta, and on March 1, 1893 was transferred to the survey ship *Penguin*, which he skippered until 1895. On July 17, 1897 he was transferred to the *Melampus*, for coast guard duties at Kinsale. He retired as a captain, to Farlington, Hampshire, and died in March 1906, in Portsmouth.

Kraybrezhie Balgarsko *see* **Bulgarian Beach**

Lake Balham *see* **Balham Lake**

Balham, Ronald Walter "Ron." b. 1921, NZ, son of Walter Frederick Charles Balham and his wife Kathleen Frances Bigg-Wither. In 1952 he married Jean Goodall. He was a marine biologist in the NZ party of BCTAE 1957-58, wintered-over at Scott Base in 1957, and in Jan. 1958 helped Peter Webb and Barrie McKelvey complete the first VUWAE (Victoria University of Wellington Antarctic Expedition). He conducted the first freshwater biology studies in the area of what became known as Balham Valley. By 1959 he was zoologist at VUW, and led the third VUWAE (1959-60). In 1961 he married Helen Burr, and died on Aug. 10, 1999, in Wellington.

Balham Lake. 77°26' S, 160°57' E. Also called Lake Balham. A small lake near the center of Balham Valley, in Victoria Land. Named in 1964 by American geologist here, Parker Calkin, for its location in the valley. US-ACAN accepted the name in 1970, and NZ-APC followed suit on July 15, 1971.

Balham Valley. 77°24' S, 161°06' E. A dry valley between the Insel Range and Apocalypse Peaks, in southern Victoria Land. Named by VUWAE 1958-59 for Ron Balham. NZ-APC accepted the name (it appears in the 1960 1st supplement of the NZ provisional gazetteer), and US-ACAN followed suit in 1964.

Balidaan. 71°45' S, 11°12' E. An Indian field camp in the S part of the Humboldt Mountains. Four Indian expeditioners were lost here (*see* **Deaths**, 1990).

Punta Balija. 64°03' S, 61°55' W. A point immediately S of the Brugmann Mountains, on the E coast of Liège Island, in the Palmer Archipelago. Named by the Argentines.

Rocas Balin *see* **Balin Rocks**

Balin Point. 60°42' S, 45°36' W. Marks the N side of the entrance to Borge Bay, on the E side of Signy Island, in the South Orkneys. Charted by the Discovery Investigations in 1933, and therefore it reflects a name probably given before that time (i.e., rather than being named by the DI themselves), and certainly in association with Balin Rocks. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1955. It appears on a 1953 Argentine chart, as Punta Balin.

Balin Rocks. 60°42' S, 45°36' W. A small group of rocks close S of Balin Point, on the E side of Signy Island, in the South Orkneys. Named and charted in 1912-13 by whaling captains Petter Sørlle and Hans Borge. In 1933 the feature was re-charted by personnel of the Discovery Investigations. UK-APC accepted the name on Sept. 8, 1953, and US-ACAN followed suit later that year. It appears in the British gazetteer of 1955. The Argentines call them Rocas Balin.

Balish Glacier. 79°25' S, 84°30' W. A glacier, 28 km long, flowing N from the Soholt Peaks to enter Splettstoesser Glacier just NE of Springer Peak, in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Cdr. Daniel Balish (b. May 12, 1924, Scranton, Pa. d. Jan. 18, 1990, Palm Beach, Fla. Buried in Arlington National Cemetery), VX-6 executive officer during OpDF 1965 (i.e., 1964-65), and commanding officer of VX-6 for OpDF 1967 (i.e., 1966-67).

Baliza. 62°59' S, 60°40' W. A geodetic point on Deception Island, in the South Shetlands, 92 m above sea level, serving as a signal reference. Named by Spain. The name means "buoy."

Plato Balkan *see* **Balkan Snowfield**

Balkan Snowfield. 62°39' S, 60°21' W. An ice-covered plateau, 2 km wide, with an altitude of between 150 and 280 m above sea level, running in a SW-NE direction for 3 km, in the E part of Livingston Island, in the South Shetlands. Bounded to the SW by Velchev Rock, Krum Rock, and the upper part of Contell Glacier; to the SE and E by the foothills of Castillo Nunatak and Burdick Ridge; to the N by the lower course of Perunika Glacier; while its NW portion slopes gently down to the hills along Bulgarian Beach. Mapped by the Spanish in 1991, it was named by the Bulgarians on March 16, 1994, as Plato Balkan. The name was translated into English, and as such, was accepted by UK-APC on April 29, 1997, and by US-ACAN later that year. The British were the latest to re-plot this feature, in late 2008.

Ball, James Lewis. b. June 8, 1920, Anson, Tex. He joined the U.S. Navy in Sept. 1939, and was a lieutenant (jg), when he became co-pilot of the plane which found the survivors of the crashed Martin Mariner, *George-I*, in 1947, during OpHJ. He operated off the *Pine Island*. He retired from the Navy in July 1973, as a captain, amd retired to San Antonio.

[1]**Ball Glacier**. 64°20' S, 57°22' W. A small glacier flowing NE to Markham Bay, and separating Redshaw Point from Hamilton Point, on the SE side of James Ross Island. Named by UK-APC on April 23, 1995, for Dr. Harold William Ball (b. 1926; known as William), keeper of Paleontology at the Natural History Museum in London, 1966-86, and author of FIDS scientific report #24, on fossils of the James Ross Island area. US-ACAN accepted the name in 1996.

[2]**Ball Glacier**. 78°03' S, 162°50' E. On the SE side of Mount Lister, below Craw Ridge, in the Royal Society Range of Victoria Land. Named by the NZ-APC on Dec. 1, 1993, for famous mountain climber Gary Ball, who was a member of the field party to this area, led by Rob Findlay

during NZARP 1980-81. Ball had climbed Mount Lister with an Italian party in 1976-77, and camped on this glacier. He would die in a climbing accident in the Himalayas, in 1993. US-ACAN accepted the name in 1995.

Ball Peak. 77°34' S, 162°47' E. At the N head of Canada Glacier, in the Asgard Range of Victoria Land. The name was proposed by NZ-APC on Jan. 30, 1978, and accepted officially by them on Oct. 7, 1998, named for Gary Ball (*see* [2]**Ball Glacier**). US-ACAN accepted the name later in 1998.

Ball Peninsula. 72°08' S, 98°03' W. A broad, ice-covered peninsula, extending into Murphy Inlet, between Noville Peninsula and Edwards Peninsula, on the N side of Thurston Island. Named by US-ACAN in 2003, for James L. Ball (q.v.), of the Eastern Group of OpHJ 1946-47, which obtained aerial photos of this peninsula and adjacent areas.

Ball Stream. 77°26' S, 163°43' E. A meltwater stream, 3 km W of Marble Point, which issues from the front of Wilson Piedmont Glacier and flows NE to Surko Stream, just W of where the latter enters Arnold Cove, in southern Victoria Land. Named by visiting Metcalf & Eddy (Boston engineering company) geologist Robert L. Nichols in 1957-58 for Donald G. Ball, solar physicist also with Metcalf and Eddy, who made studies here in 1957-58, while under contract to the U.S. Navy. US-ACAN accepted the name in 1968, and NZ-APC followed suit on March 28, 1968.

Ballance Peak. 76°47' S, 159°29' E. The highest peak at the S end of the Allan Hills, in Victoria Land. Discovered by the New Zealand Allan Hills Expedition of 1964, and named by them for Peter Frederick Ballance (b. May 15, 1936, Stoke-on-Trent, England), NZ geologist with the expedition. NZ-APC accepted the name on July 15, 1965, US-ACAN followed suit later that year, and ANCA accepted the name on Aug. 10, 1966. The peak was replotted by the Australians in late 2008.

Mount Ballard. 75°12' S, 70°05' W. Rising to about 1600 m, in the W part of the Sweeney Mountains, on the Orville Coast of Ellsworth Land. Mapped by USGS from their own ground surveys conducted in 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Gordon E. Ballard, USARP equipment operator who wintered-over at Pole Station in 1963. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Ballard Spur. 82°08' S, 163°40' E. A spur, 8 km N of Cape Wilson, on the E side of the Nash Range. Mapped by USGS from tellurometer surveys, and USN air photos taken betwen 1960 and 1962. Named by US-ACAN in 1965, for Thomas B. Ballard, USARP aurora scientist who wintered-over at Hallett Station in 1961. NZ-APC accepted the name on Nov. 16, 1965.

Islote Ballena. 64°19' S, 62°53' W. A small island in the Melchior Islands. Named by the Argentines. Name means "whale island."

Punta Ballena. 62°27' S, 60°47' W. The point separating Playa Ballena Norte (to the N) from Playa Ballena Sur (to the S), inside Bahía Mansa, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. So named by personnel of the Instituto Antártico Chileno, during ChilAE 1990-91, because it is near the place they found whale skeletons ("ballena" meaning "whale").

Playa Ballena Norte. 62°27' S, 60°47' W. A beach in the N part of Bahía Mansa, and which extends to the S toward Punta Ballena. Indeed Punta Ballena separates Playa Ballena Norte from Playa Ballena Sur, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. Named by the same people, and for the same reason, as for Punta Ballena.

Playa Ballena Sur. 62°27' S, 60°47' W. A beach, S of Playa Ballena Norte, and separated from its northern neighbor by Punta Ballena, inside Bahía Mansa, on the E coast of Cape Shirreff, Livingston Island, in the South Shetlands. It lies between Punta Ballena (to the N) and Roca Granito (to the S). Named by the same people, and for the same reason, as for Punta Ballena.

Bahía Ballenas. 65°11' S, 64°10' W. A bay in the extreme S of Petermann Island, in the Wilhelm Archipelago, off the W coast of the Antarctic Peninsula. Named by the Argentines ("bay of whales").

Caleta Balleneros *see* **Whalers Bay**

Balleny, John. b. 1770, Northumberland, eldest child of John Balleny and Isabel Scott. He grew up in South Shields, Durham, and in 1798 was part owner of the cargo ship *Blenheim*. In 1814 he was skipper of the *Lord Cathcart*, trading between Liverpool and Marenham. In 1820 he was captain of the brig *Peace*, trading out of the Tyne, and that year, on Aug. 20, in Tynemouth, he married a South Shields girl, Marianne Green. In 1822 he was trading between Hull and Memel, and by 1824 was also part owner of the Scottish whaling bark *Caledonia*. In 1826 he was a voter in Northumberland, owning one-sixth of a house in the Castle Ward of Tynemouth. He was skipper of the *Peace* until 1831, when he gave up the sea, and began a farming career in South Shields. On April 7, 1835, he went bankrupt (he is described as a farmer and ship owner), lost everything, and was forced to go back to sea, in 1838-39 working for Enderby Brothers, the famous whaling firm, when he was given command of the Balleny Expedition. After that expedition, he went to work for Fenwick's, of London & Newcastle, and unexpectedly took over from John Ryle as skipper of the eight-year-old *Acasta*, just before that bark sailed from London on Feb. 26 of that year, bound for Madras, where she arrived on July 15. She then ran up to Calcutta, and on the return passage, on Oct. 2, 1842, off the Juggernaut Pagoda, on the coast of Cuttack, the *Acasta* foundered in a tremendous gale, and sank in 18 feet of water, Balleny with her. In a letter to the *Times*, written on Aug. 7, 1845, Charles Enderby lamented Balleny's death.

Balleny Basin. 66°30' S, 175°00' E. A minor submarine basin, in the Pacific Ocean, beyond the Ross Sea, almost an appendage to the Southeast Pacific Basin. Named by US-ACAN in 1972, in association with the Balleny Islands.

Balleny Expedition. 1838-39. A well-equipped sealing and exploring expedition sent to Antarctica by Enderby Brothers, under the command of John Balleny. **July 16, 1838**: The two ships, *Eliza Scott* and *Sabrina*, left London, the first under the command of expedition leader Balleny, and the second under Capt. Thomas Freeman. Crew of the *Eliza Scott* included: William Moore (1st mate), John McNab (2nd mate and artist), and a boy named Smith. The crew of the *Sabrina* included a boy named Juggins. **Mid-Nov. 1838**: The *Sabrina* arrived in NZ. **Dec. 3, 1838**: The *Eliza Scott* arrived in NZ, meeting up with the *Sabrina*. **Dec. 19, 1838**: A whaleboat went missing from the *Eliza Scott*, with five deserters aboard — David Hellom, Henry Long, Tom Rosarie, Roderick McPeal, and Dennis Driscoll. **Jan. 7, 1839**: Both ships left NZ with mutinous crews. **Jan. 10, 1839**: They arrived at Campbell Island, where they met up with John Biscoe, also an Enderby man. **Jan. 17, 1839**: The ships left Campbell Island for Antarctica. **Jan. 21, 1839**: In 55°55' S, 172°52' E. **Jan. 22, 1839**: In 57°59' S, 172°39' E. The two ships were sailing within half a mile of one another. **Jan. 23, 1839**: In 59°16' S, 174°43' E. **Jan. 24, 1839**: In 60°33' S, 175°53' E. **Jan. 25, 1839**: In 61°45' S, 176°37' E. **Jan. 26, 1839**: In 62°28' S, 177°58' E. They saw several whales and a sea leopard. **Jan. 27, 1839**: In 63°35' S, 177°55' E. Both vessels were together. They saw the ice and icebergs. **Jan. 28, 1839**: In 65°35' S, 179°48' E. Both ships were surrounded by icebergs. **Jan. 29, 1839**: They crossed the Antarctic Circle in 178°E. **Jan. 30, 1839**: In 66°52' S, 178°07' E. Ice, snow, and whales all around both vessels. **Jan. 31, 1839**: In 67°13' S, 176°14' E. They saw several penguins, petrels, and other birds. **Feb. 1, 1839**: They were stopped by pack-ice in 69°02' S, 174°E, the farthest south in those longitudes up to that time. **Feb. 2, 1839**: In 68°11' S, 173°39' E. **Feb. 3, 1839**: In 67°34' S, 171°58' E. **Feb. 4, 1839**: In 67°24' S, 170°51' E. **Feb. 5, 1839**: In 67°40' S, 168°18' E. **Feb. 6, 1839**: In 67°36' S, 166°34' E. **Feb. 8, 1839**: In 67°07' S, 166°43' E. **Feb. 9, 1839**: In 66°37' S, 166°03' E. At 4 A.M. they saw a young seal, and at 11.30 A.M. they saw land. At 4 P.M. they distinctly saw two large islands and several smaller ones. At 6 P.M. they saw a third large island. At 8 P.M. they hove to. They had discovered the Balleny Islands. **Feb. 10, 1839**: At 2 A.M. they steered toward the middle island, and by 4 P.M. they were about half a mile from it, but couldn't land, the island being icebound and no harbor in sight. **Feb. 12, 1839**: Both captains made an attempt to land on Young Island, in the *Sabrina*'s boat. The best that could be achieved was Freeman standing in water up to his waist, and bringing back some stones. **Feb. 13, 1839**: In 65°45' S, 164°51' E. **Feb. 14, 1839**: In 64°21' S, 163°35' E. Both vessels together. **Feb. 15, 1839**: In 63°54' S, 162°56' E. **Feb. 16, 1839**: In 63°15' S, 160°56' E. **Feb. 17, 1839**: In

63°40' S, 159°25' E. **Feb. 18, 1839**: In 64°24' S, 155°41' E. **Feb. 19, 1839**: In 64°24' S, 152°55' E. **Feb. 20, 1839**: In 64°15' S, 148°54' E. They repaired the mainsail of the *Eliza Scott*. **Feb. 21, 1839**: In 64°06' S, 144°38' E. **Feb. 22, 1839**: In 63°30' S, 142°53' E. They saw 3 icebergs at daylight, and repaired the foresail of the *Eliza Scott*. **Feb. 23, 1839**: In 63°36' S, 140°55' E. **Feb. 24, 1839**: In 63°46' S, 139°17' E. **Feb. 25, 1839**: In 63°40' S, 134°50' E. **Feb. 26, 1839**: They thought they saw land, but it turned out to be fog hanging over an iceberg. In 64°40' S, 131°35' E. They saw a huge number of penguins. **Feb. 27, 1839**: In 64°37' S, 132°22' E. **Feb. 28, 1839**: In 64°19' S, 128°50' E. **March 1, 1839**: In 64°05' S, 124°47' E. **March 2, 1839**: In 65°S, 122°44' E. At 8 P.M., in 65°S, 121' E, they may have seen land a mile away which may have been the Sabrina Coast. **March 3, 1839**: They spotted terra firma again at 8 A.M. and at 11 A.M., tried to land, but the terra they had seen may not have been so firma. Even the crew was undecided on this issue. They steered along the edge of the pack-ice. **March 4, 1839**: In 63°56' S, 116°11' E, and later in the day in 63°44' S, 115°30' E. That night they were in thick snow squalls and surrounded by icebergs. **March 5, 1839**: In 63°01' S, 114°46' E. **March 6, 1839**: In 62°20' S, 113°34' E. **March 7, 1839**: In 61°30' S, 11°43' E. **March 8, 1839**: In 61°39' S, 111°27' E. **March 9, 1839**: In 61°01' S, 108°30' E. **March 10, 1839**: In 61°13' S, 107°40' E. They saw a magnificent aurora australis that night. **March 11, 1839**: In 61°27' S, 105°44' E**. March 12, 1839**: They traveled from 61°45' S, 104°42' E to 61°34' S, 104°19' E. They saw their first albatross since leaving Campbell Island. **March 13, 1839**: They were surrounded by icebergs. They passed one, with a piece of rock attached to it. Capt. Freeman came on board the *Eliza Scott* and brought Smith with him. He took Juggins back to the *Sabrina*. **March 14, 1839**: In 60°40' S, 108°11' E. **March 15, 1839**: In 59°30' S, 99°29' E, surrounded by icebergs, many of them over 300 feet high. The aurora was very vivid that night. **March 16, 1839**: In 59°14' S, 95°50' E. The aurora was still very vivid. Smith, the boy on the *Eliza Scott*, formed a one-man mutiny and refused to man the tiller any longer. The captain took a tremendous amount of abuse before suppressing the lad. **March 17, 1839**: In 58°24' S, 95°50' E. Balleny called Smith to the deck and asked him if he was prepared to carry out his duties. Smith refused. He was suppressed again. **March 18, 1839**: In 57°27' S, 95°04' E. Smith was not well. **March 19, 1839**: In 56°42' S, 94°55' E. **March 20, 1839**: In 56°10' S, 94°19' E. **March 21, 1839**: In 55°02' S, 93°10' E. Both ships together. **March 24, 1839**: The *Sabrina*, in distress in a gale, and flashing blue lights, was lost at midnight in a storm. **Sept. 17, 1839**: The *Eliza Scott* returned safely to London, with 178 seal skins.

Balleny Fracture Zone. Centers on 62°S, 156°E. A fracture zone under the ocean, out to sea from the Oates Coast, and extending S toward the Balleny Islands, in association with which it was named in 1971, by US-ACAN.

Balleny Islands. Group of heavily glaciated islands, centering on 66°55' S, 163°20' E, 240 km NNE of Cape Kinsey, Oates Land but extending NW to SE for 160 km on and near the Antarctic Circle, from 66°15' S to 67°35' S, and from 162°30' E to 165°E. They are volcanic in origin, and consist of 3 larger islands — Sturge, Young, and Buckle, and attendant satellites. Sturge Island is the biggest, and has no satellite islets. Young Island is the next biggest, and has the following satellite islets: Borradaile Island, Row Island, Beale Pinnacle, Seal Rocks, and Pillar. Buckle Island is the smallest of the three bigger ones, and has the following satellite islets: Sabrina Island, The Monolith, Chinstrap Islet, Scott Cone, and Eliza Cone. Discovered by John Balleny on Feb. 9, 1839. Capt. Freeman, from the *Sabrina*, landed on the islands during this expedition. Named for Balleny by Captain Beaufort, hydrographer to the Admiralty. On March 2, 1903 Scott proved that they were the same feature as the Russell Islands. On Feb. 29, 1948, Phil Law and Able Seaman Wallace became the first men to land on the Ballenys since 1839. US-ACAN accepted the name Balleny Islands in 1947, and the name appears in the 1958 NZ provisional gazetteer.

Balleny Seamounts. 61°00' S, 161°30' E. An undersea feature in the area of the Balleny Islands, after which it was named. The name was approved internationally, in June 1988.

Balleny Trough. A submarine trough centering on 66°' 00' S, 158°00' E, off the coast of Oates Land. Named in association with the Balleny Islands, the name was approved in Feb. 1972.

Nos Ballester *see* **Ballester Point**

Punta Ballester *see* **Ballester Point**

Ballester Point. 62°39' S, 60°23' W. Forms the S side of the entrance to Johnsons Dock, Livingston Island, in the South Shetlands. First visited by sealers in the early 1820s, it was charted by Powell in 1822, but not named as such. BAS re-charted it in 1968, and the Spanish did the most accurate charting, in 1991. Named by the Bulgarians on Aug. 12, 2008, as Nos Ballester, for chemist Antonio Ballester Nolla, a major figure in the Spanish Antarctic program (he had been leader at Juan Carlos Station). The Bulgarian name translates as Ballester Point. The Spanish call it Punta Ballester.

Islotes Ballesteros *see* **Psi Islands**

Ballgletscher. 70°52' S, 162°56' E. A glacier in the area of Shardickrücken, in the Explorers Range of the Bowers Mountains. Name means "ball glacier" in German, or, possibly "Ball glacier."

Balloon Bight. In the area where the Bay of Whales used to be. Thomas Williamson named it Discovery Nook in 1902 during the early stages of BNAE 1901-04. It disappeared in the calving process sometime after 1904.

Balloons. **Feb. 4, 1902**: Scott was the first person to see Antarctica from the air, when he went up in a captive army hydrogen balloon named *Eva*, to a height of 790 feet, at the Bay of Whales. Shackleton went up next, to take photos. On the *Discovery* were 6 enormous gas tanks from which to fill *Eva*, as well as the other models of the army's captive balloons. *Eva* was inflated with 8500 cubic feet of gas from 19 cylinders. Scott's balloon section consisted of Skelton, Shackleton, Lashly, Kennar, and Heald, and they had been trained at Aldershot, Hants, under Col. Templar. **March 29, 1902:** Von Drygalski, Philippi, and Ruser, went up in a balloon during GermAE 1901-04. **Jan. 28, 1940**: The first USAS balloon went up. **1947-48**: Finn Ronne used balloons. **April 10, 1956**: The first weather balloon was released at Little America V. **Jan. 8, 1988**: During the Supernova Observer Project, just after noon, the Antarctic's largest ever high-altitude, helium-filled balloon went up from Williams Field, McMurdo, to a height of 115,000 feet, carrying a gamma ray detector to study emissions from Supernova 1987A in outer space. It also tested the detector. The balloon, 11.6 million cubic feet, and made of very thin plastic, rose at 1000 feet per minute, and after 3 days it came down 300 km from Vostok Station (it had been due to stay up 21 days). U.S. pilots went out to retrieve the information from its gondola on Jan. 13, 1988. **1990-91**: Another hydrogen balloon released from McMurdo. This one circumnavigated the continent. **Jan. 8, 2000**: The firt manned balloon flight over the South Pole (Anulfo González, Faustino Mortera, and Ivan Trifonov).

Mount Ballou. 73°14' S, 163°03' E. A pinnacle-type mountain, rising to 2900 m, forming the S end of Pain Mesa, and the N side of the entrance to Pinnacle Gap, in the Mesa Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Cdr. Justin Guy Ballou (b. Dec. 25, 1916. d. Feb. 28, 2003, Orange Park, Fla.), USN, commanding officer of Detachment A, VX-6, at McMurdo in the winter of 1966.

Ballrücken. 71°06' S, 162°29' E. A ridge in the Explorers Range of the Bowers Mountains. Named by the Germans.

Base Ballvé *see* **Ballvé Refugio**

Península Ballvé *see* **Península Behn**

Ballvé, Horacio. b. 1873, Buenos Aires. Argentine naval lieutenant and meteorologist, who established the first magnetic and meteorological observation post in Antarctica, in 1902, on Observatory Island, in the South Shetlands. He was the inventor of the Ballvé Deflector, and retired from the Navy as capitán de navío. He died on May 5 (cinco de mayo), 1925.

Ballvé Refugio. 62°13' S, 58°56' W. A refuge hut built on Dec. 6, 1953 by the Argentine Navy, on rock, on what was then called Ardley Peninsula, in Maxwell Bay, King George Island, in the South Shetlands, very close to where Ripamonti Refugio is today. Originally inaugurated as Refugio Naval Península Ardley, it was used during the 1953-54 season, then closed. It was reopened for the 1954-55 and 1955-56 seasons, under the name Refugio Naval Teniente Ballvé, named for Horacio Ballvé. It was used again in 1958-59 (the last season of IGY), and then closed

again. In 1996-97 it was used as a temporary station, and called Base Ballvé, and then closed.

Bally Glacier. 81°22' S, 159°12' E. A glacier, 10 km long, occupying the central part of the Carlstrom Foothills, in the Churchill Mountains, and flowing N along the E side of Mount Blick, into Jorda Glacier. Named by US-ACAN in 2003, for John Bally, of the University of Colorado Center for Astrophysics and Space Astronomy, USAP principal investigator and field team member of the Advanced Telescope Project, South Pole Center for Astrophysical Research in Antarctica, 1992-95. NZ-APC accepted the name on Feb. 27, 2003. The Russians call it Lednik Shcheglova.

Baloo Col. 63°52' S, 58°06' W. A narrow col, about 250 m above sea level, on the SE side of Kaa Bluff, and 5 km NW of Davies Dome, it is the only accessible route between Brandy Bay and Whisky Bay, on James Ross Island. In keeping with several other features in this area named for characters in Kipling's *Jungle Book*, this feature was named by UK-APC, on Nov. 15, 2006, for the bear.

Balsha Island. 62°28' S, 60°12' W. An island, 600 m by 300 m, in the Dunbar Islands, 1.5 km NW of Slab Point, and 2.8 km N of Kotis Point, off the N coast of Livingston Island, in the South Shetlands. Mapped by the Bulgarians in 2008-09, and named by them on Nov. 23, 2009, for Balsha, a settlement in western Bulgaria.

Balsley, James Robinson "Jim," Jr. b. Dec. 27, 1916, Pittsburgh, but grew up partly in Los Angeles, son of motion picture radio engineer James Robinson Balsley and his wife Harriet L. Stoner. After the California Institute of Technology and Harvard, he joined USGS in 1941, as a geophysicist, and went on OpHJ 1946-47. He was an airborne geophysicist, 1947-53, and from 1953 to 1959 was chief of geophysics at USGS, and chief geologist, 1959-62. After that he became professor of geology at Wesleyan University. He died on Aug. 23, 1994, in Dover-Foxcroft, Maine.

Balsley Peak. 77°38' S, 153°36' W. A distinctive peak, rising to about 1100 m, 2.2 km SE of La Gorce Peak, in the Alexandra Mountains of Marie Byrd Land. Named by US-ACAN on July 14, 2004, for James Balsley (q.v.), of USGS, who conducted airborne magnetometer surveys near this peak during OpHJ 1946-47. NZ-APC accepted the name on Nov. 30, 2004.

Balson, Albert. b. Feb. 12, 1885, West Allington, near Bridport, Dorset, son of baker Charles Frederick Balson and his wife Martha Larcombe. His father, who was much older than his mother, died in 1888, when Albert was an infant. He joined the Royal Navy, and was a leading seaman on the *Terra Nova*, during BAE 1910-13. Just after the return of the expedition, he married Edith J. Matthews in Christchurch, Hants. During World War I he served as a chief petty officer on the *Prince of Wales*, and then on the Royal Fleet auxiliary vessel *Racer*, being awarded the DSM for his services. He became a diver, and moved to South Africa. He returned to England, and died in Upton, Dorset, on Dec. 20, 1950.

The *Balthazar*. A French yacht, skippered by Bertrand Dubois, which visited the Antarctic Peninsula in 1990-91, 1991-92, 1997-98, 1998-99, and 1999-2000.

Kupol Baltijskij. 80°37' S, 25°02' W. A dome on the N side of the Read Mountains, in the Shackleton Range. Named by the Russians.

The *Bam*. A 12,000-ton Soviet Samotlor-class tanker, built in Finland. The rather peculiar name was for the Bayka-Amur Main railroad line. With a crew of 40, she took part in SovAE 1978-80, 1980-82, and 1982-84 (skipper in all three seasons was Anatoliy Dmitriyevich Demidenko), SovAE 1984-86 (Capt. Gennadiy Alekseyevich Yarkov), and SovAE 1986-88 (Capt. Demidenko).

Bamse Mountain. 72°15' S, 22°18' E. Rising to 2500 m, 18 km W of Mount Nils Larsen, between Kreitzerisen and Hansenbreen, in the W part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by the Americans during OpHJ 1946-47, and named by them as Bamsefjell (i.e., "bear mountain"). They plotted it in 72°16' S, 21°55' W. US-ACAN accepted the name Bamse Mountain in 1966. It has since been re-plotted. The name is also seen as Bamsenfjell.

Bamsefjell *see* **Bamse Mountain**

Bamsenfjell *see* **Bamse Mountain**

Bamseungen. 72°13' S, 21°57' S. A small mountain at the N side of Bamse Mountain, between Kreitzerisen and Hansenbreen, in the W part of the Sør Rondane Mountains. Named descriptively by the Norwegians (name means "the bear's cub"). The Russians call it Gora Habarova.

Banana belt. A humorous name for the coastal regions of Antarctica.

Banbian Shan. 62°12' S, 58°57' W. A hill on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Île Banck *see* **Mount Banck**

Isla Banck *see* **Mount Banck, Bruce Island**

Mount Banck. 64°54' S, 63°03' W. A conspicuous conical red rock mountain, rising to 675 m, dominating the small peninsula just W of Mascías Cove, in the entrance to Argentino Channel, almost 1200 m SSW of Rudolphy Point (the extreme SW of Bryde Island), opposite Paradise Bay, on the Danco Coast, on the W coast of Graham Land. On Feb. 21, 1832 Biscoe discovered a mountain very near here, which he thought was on the mainland, and which he called Mount William (q.v.), after the new king of England. Consequently, the Chileans called it Monte William and the Argentines called it Monte Guillermo ("Guillermo" being Spanish for "William"). In Feb. 1898 BelgAE 1897-99 found that the red mountain (which they assumed was Biscoe's Mount William) stood on an island separated from the mainland by a small channel. After having made a landing on Feb. 10, 1898, de Gerlache named the island Île Banck, after a supporter of the expedition. As such it appears on the expedition map of 1899. In other words, Mount William now stood on Île Banck. Frederick Cook's 1900 English language map of de Gerlache's expedition shows it as Banck Island. Much later it was found that Biscoe's Mount William was not the red mountain, after all that. The mountain Biscoe had named Mount William was, in fact, on Anvers Island. So, the red mountain on Île Banck suddenly lost its name when the name Mount William was transferred to the mountain on Anvers Island. The island with the red mountain on it appears on Chilean maps between 1951 and 1957 as Isla Banck. It appears on a 1953 Argentine chart as Monte Contreras, but on a 1957 Argentine chart as Monte Laprida, after Francisco Narciso Laprida (1780-1829), Argentine statesman (and that is the name the Argentines use to this day). However, FIDASE air photos of 1956-57 proved Île Banck (i.e., the island with the red mountain as its main feature) to be a small peninsula, not an island at all, as de Gerlache had thought. The British re-named the mountain as Mount Banck on Sept. 23, 1960. US-ACAN followed suit with the new naming in 1965. It was first climbed in 2001-02, by the British Army Antarctic Expedition. *See also* **Bruce Island**.

Banck Island *see* **Mount Banck, Bruce Island**

Punta Banco *see* **Spit Point**

Bahía Bancroft *see* **Bancroft Bay**

Bancroft, Ann. b. Sept. 29, 1955, Mendota Heights, Minn. She left the teaching profession in 1986, to go with Will Steger's expedition to the North Pole, and became the first woman to reach that pole on foot. In 1992-93 she led a four-woman team skiing to the South Pole, the first women to achieve this feat (*see* **American Women's Trans-Antarctic Expedition**). In Feb. 2001, she and Liv Arnesen (b. June 1, 1953, Baerum, Norway) became the first women to sail and ski across the Antarctic, 1717 miles in 94 days. In 2005, the two ladies attempted to cross the entire Arctic ice-pack, but the expedition was halted after 20 days. Two of the great polar explorers, they started an exploration company in Minnesota, and wrote *No Horizon Is So Far*.

Bancroft Bay. 64°34' S, 61°52' W. Between Charlotte Bay and Wilhelmina Bay, on the SW side of Reclus Peninsula, on the Danco Coast, along the W coast of Graham Land. First roughly indicated by BelgAE 1897-99, it was photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Portal Point between 1957 and 1959, and named by UK-APC on Sept. 23, 1960, for Anthony David "Tony" Bancroft (b. 1927, Burnley, Lancs), senior surveyor during FIDASE. The name appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1990 Argentine gazetteer as Bahía Bancroft.

Mount Band. 78°03' S, 163°58' E. A flat-topped sumit, rising to 1173 m, in the area of Garwood Valley, in the Denton Hills, to the E of the Royal Society Range of Victoria Land. So named by NZ-APC because of the profusion of colored lichens appearing in bands on brown rocks. US-ACAN accepted the name in 1995.

Banded Bluff. 85°20' S, 169°30' W. A prominent bluff about 6 km long, rising 5 km SE of

McKinley Nunatak, where it forms part of the E wall of Liv Glacier. Named by US-ACAN in 1965, for the alternating bands of snow and rock which mark the steep face of the bluff. NZ-APC accepted the name on Nov. 16, 1965.

Banded Peak. 85°03' S, 166°05' W. A small peak, rising to over 1400 m, 5 km NE of Mount Fairweather, in the Duncan Mountains. It has a distinctive snow band across the S face, and for this reason was named by the Southern Party of NZGSAE 1963-64. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Bahía Bandera *see* **Bahía Malle**

Banding birds. Birds are banded to study their movements. Studies show that some Antarctic birds travel the world. Others cross the Antarctic continent. Some skuas are banded with colored, plastic anklets, while some are dyed scarlet. Giant fulmars and penguins are banded too.

Bandits Bluff. 68°25' S, 78°23' E. A striking black bluff about 40 m above sea level, on an unnamed island about 1 km NW of Barrier Island, in the Tryne Islands, off the N part of the Vestfold Hills. Visited by an ANARE party which established a field hut at the foot of the bluff in July 1983. The people involved in building the hut were referred to at Davis Station as The Bandits, hence the name given by ANCA on March 15, 1984.

Bandstone Block. 71°40' S, 68°12' W. An almost rectangular sandstone rock on land, which rises to an elevation of about 300 m above sea level, 3 km N of Triton Point, S of (i.e., at the mouth of) Venus Glacier, on the E coast of Alexander Island. The coast in the vicinity was first seen and photographed by Lincoln Ellsworth during his flight of Nov. 23, 1935, and roughly mapped from these photos in 1936, by U.S. cartographer W.L.G. Joerg. Surveyed in 1948-49 by Fids from Base E, who so named it for its display of conspicuous sedimentary bands. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Bandy Island. 75°04' S, 137°49' W. A small, ice-covered island in Hull Bay, 2.5 km W of Lynch Point, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1962 and 1967. Named by US-ACAN in 1975, for Orville Lee Bandy (b. March 31, 1917, Redfield, Iowa. d. Aug. 2, 1973, Inglewood, Calif.), geologist with the University of California at Los Angeles, several times in Antarctica with USARP from 1961 onwards. In 1964 and 1966 resp., he was chief scientist on Cruises 7 and 17 of the *Anton Bruun* (in sub-Antarctic waters) and was also several times on the *Eltanin*.

Bandy Nunataks. 66°55' S, 53°36' E. A group of nunataks about 15 km E of Mount Stadler, in Enderby Land. Named by ANCA on Dec. 7, 1976, for Robert Charles Seymour "Bob" Bandy (b. March 11, 1948), senior diesel mechanic who wintered-over at Mawson Station in 1975, and who was a member of the ANARE Enderby Land Survey Party of 1975-76. He wintered-over at Casey Station in 1978, and at Davis Station in 1984, both times again as senior diesel mechanic.

Mount Banfield *see* **Mount Gjeita**

Isla Bank *see* **Bruce Island**

[1]**Banks**. Or marine banks. Rocky or sandy submerged elevations of the sea floor with a summit not more than 650 feet below the surface but not so high as to endanger navigation (if they become dangerous they are called shoals). The main ones in Antarctic waters are: Albert, Aristova, Atka, Austaasen, Barker, Behm, Belgrano, Berkner, Bråtegg, Crary, Da Vinci, Dalmor, Defant, Doggers, Domashnyaya, Drescher, Ellsworth, Four Ladies, Fram, Freeden, Gunnerus, Hayes, Helmert, Hobbs, Houtz, Iceberg, Iselin, Ives, Jenluise, Kloitik, Koljuchka, Krevetka, Kritkuven, Larsen, Letelier, Lord, Lyddan, Mathys, Maud, Mawson, McDonald, Møller, Norsel, Norvegia, Oates, Oreshek, Pennell, Petersen, Philippibank, Prestrud, Ross, Sanae, Saunders, Scotia, Scott Island, Shirase, Storegg, Tressler, Trevozhnaja, Umitaka, Vaughan, Wikitoria.

[2]**Banks**. Money banks, that is. The first one opened at Villa las Estrellas, at Frei Station, on King George Island, in the summer of 1984-85, a branch of the Chilean Banco de Crédito y Inversiones.

Banks, Roger James. b. April 18, 1928, Croydon, Surrey, from an upper crust family. At least that's what he told people. He was actually the youngest son of fishmonger Joseph Charles R. Banks and his wife Kathleen Mary G. Harvey (his parents had married as long ago as 1905), and was born in Romford, Essex, on April 18, 1929. But he did grow up in Croydon, and his father was not exactly poor. After Epsom College and St Andrew's University (where he studied history, and also visited Spain), he embarked on a career of eccentricity. He became notorious for his dinners, which often consisted of paté de foie gras de dead seal, followed by road-kill; he would often go to dinners accompanied by his pet hen, or take a tapestry with him in case he got bored; and he would drive with his pet pug on his shoulder. In 1952 he joined FIDS, as a meteorologist, and wintered-over at Base G in 1953, and at Argentine Islands Station in 1954. He was really only there so he could paint, and do needlepoint. A well-known watercolorist and writer, he wrote *The Unrelenting Ice*, in 1962. On Jan. 10, 1963, he married, at Kirkby Malzeard, Yorks, Isobel Mary Bonsall "Jane" Ledgard. They moved to Cupar, Fife, and then to Crail in 1985, in the same county, where he was the harbormaster for 10 years, and where he died on Feb. 4, 2008.

Bankya Peak. 63°53' S, 59°53' W. Rising to 840 m E of Lanchester Bay, and W of Sabine Glacier, 5.28 km SSE of Wennersgaard Point, 6 km NE of Milkov Point, 4.36 km N of Chanute Peak, and 6.55 km WNW of Velichkov Knoll, on the Davis Coast, on the W coast of Graham Land. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, after the town of Bankya, in western Bulgaria.

Banna Peak. 79°55' S, 155°03' E. Rising to 2420 m, it surmounts the S end of Banna Ridge, in the NW part of the Britannia Range. Named in association with Britannia (the old Roman name for Britain) by a NZ geological party from the University of Waikato, led by Mike Selby, in 1978-79. Banna was a placename in Britain, named by the Romans. US-ACAN accepted the name.

Banna Ridge. 79°54' S, 155°06' E. A rock ridge, at an elevation of over 2000 m above sea level, running NE from Banna Peak toward the head of Hatherton Glacier, and forming the SE wall of Abus Valley, in the NW part of the Britannia Range. Named in association with the peak, by Mike Selby's NZ geological team from the University of Waikato, here in 1978-79.

Banshan Jiao. 62°14' S, 58°56' W. A reef off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Bansko Peak. 62°37' S, 59°49' W. A rocky peak rising to 280 m in the E extremity of Delchev Ridge, 740 m NE of Karlovo Peak, and 480 m SW of Lyulin Peak, in the Tangra Mountains, on Livingston Island, in the South Shetlands. Mapped by the Bulgarians as part of their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the town of Bansko, in southwestern Bulgaria.

BANZARE *see* **British, Australian and New Zealand Antarctic Research Expedition 1929-31**

Banzare Coast. 67°00' S, 126°00' E. Also called Banzare Land. That portion of the Antarctic coastline lying between Cape Southard (122°05' E) and Cape Morse (130°10' E), just S of the Voyeykov Ice Shelf, in Wilkes Land. Discovered aerially by BANZARE on Jan. 15 and 16, 1931, and named by Mawson for his expedition. US-ACAN accepted the name in 1947.

Banzare Glacier. 66°45' S, 108°17' E. A glacier which flows into Vincennes Bay due W of Brooks Point. Named by ANCA on Aug. 12, 2010, for BANZARE 1929-31.

Banzare Land *see* **Banzare Coast**

Baoshi Jiao. 69°25' S, 76°03' E. A reef in the Larsemann Hills. Named by the Chinese.

Baptiste, John *see* **USEE 1838-42**

The *Baquedano*. Chilean frigate, named for Manuel Baquedano, 19th-century military hero (*see* **Jason Peninsula**). She took part in two Antarctic expeditions sent by that country: 1955-56 (Capt. Wilfredo Bravo S.) and 1956-57 (Capt. Jorge Paredes). On the first voyage she visited Peter I Island, landing in Sandefjord Cove, in order to look into the possibility of setting up an automatic weather station there. Not to be confused with the late 20th-century ship, *General Baquedano* (ex-RN frigate *Ariadne*).

Baquiano Vargas *see* **Bills Gulch**

Bar Island. 68°17' S, 67°12' W. A long, low, rocky islet, about 0.4 km off the W end of Red Rock Ridge, between Neny Fjord and Rymill Bay, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37, it appears on Stephenson's 1940 map from that expedition, but is not named. It was surveyed again, by Fids

from Base E in 1948-49, and named by them as Bar Islet, for its shape. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit later that year. On July 7, 1959, UK-APC redefined it as Bar Island, and it appears as such on a British chart of 1961. US-ACAN accepted the name change in 1963.

Bar Islet *see* **Bar Island**

Treshchiny Baranova. 81°12' S, 31°00' W. A stream in the Shackleton Range. Named by the Russians.

Baranowski Glacier. 62°12' S, 58°28' W. A large, well-defined outlet glacier flowing E from the Warszawa Icefield, between Zamek Hill and Brama Hill, into Admiralty Bay, NW of Demay Point, on King George Island, in the South Shetlands. Named by the Poles in 1984, for associate professor Stanislaw Baranowski (b. March 25, 1935, Gdynia. d. Aug. 27, 1978), of the University of Wroclaw, member and leader of many Polish and foreign expeditions to Spitsbergen (in the Arctic) and to Antarctica. He died 8 months after an accidental gassing at Arctowski Station, during PolAE 1977-78. UK-APC accepted the name on April 3, 1984, and US-ACAN followed suit.

Skaly Baranskogo. 71°57' S, 14°35' E. A group of rocks, in the Payer Mountains, in Fimbulheimen, in Queen Maud Land. Named by the Russians.

The *Barão de Teffe*. This was the old *Thala Dan* (q.v.), sold to Brazil as a research ship in 1982-83 and re-named. She was the sister ship of the *Professor Wladimir Besnard*. On Jan. 18, 1983, the *Barão de Teffe*, which had been in Antarctic waters that season (1982-83) as part of the first Brazilian Antarctic expedition, was in South America's Beagle Channel, skippered by Fernando Andrade Pastor de Almeida, when she was intercepted by an Argentine patrol boat and threatened. There was an incident (diplomatically; nothing else happened physically). It was all a misunderstanding, and the Argentines apologized. The *Barão de Teffe* was back as part of the next several Brazilian expeditions, 1983-84 (skipper: Paulo César de Aguiar Adrião), 1984-85 (Capt. de Aguiar Adrião), 1985-86 (skipper: Paulo Roberto da Silva Fetal), 1986-87 (skipper: Fernando Manoel Fontes Diégues), 1987-88 (Capt. Fontes Diégues), 1988-89 (Capt. Fontes Diegues), 1989-90 (skipper: Nelio da Silva), 1990-91 (Capt. da Silva again), 1991-92 (skipper: Alberto Cardoso Blois), 1992-93 (Capt. Cardoso Blois), 1993-94 (skipper: Marco Antonio Gonçalves Bompet). She was then succeeded by the *Ary Rongel*.

Mount Barbakan. 62°08' S, 58°10' W. An ice-covered mountain rising to over 300 m, between Legru Bay and King George Bay, on the S coast of King George Island, in the South Shetlands. Named by the Poles in 1980, for the medieval barbican of the city of Cracow.

Barbara *see* **Barbara Island**

Isla Bárbara *see* **Barbara Island**

Islote Bárbara *see* **Barbara Island**

Barbara Island. 68°08' S, 67°06' W. The largest and most northerly of the Debenham Islands, in the area of Stonington Island, off the Fallières Coast, on the W coast of Graham Land. Curiously, this island does not figure on Charcot's FrAE 1908-10 map. It was discovered in Feb. 1936, by BGLE 1934-37, and named by Rymill as Barbara (that's it, just Barbara), for the eldest of Frank Debenham's daughters, Barbara Lempriere Debenham (b. 1917, London) (*see* **Debenham Islands**). It appears as such on a British chart of 1947. It appears as Barbara Island on a 1946 U.S. Hydrographic Office chart, and that name was accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. It appears on a 1952 Argentine chart as Islote Bárbara, and on a 1959 chart as Isla Bárbara. By 1969 Northeast Glacier had advanced to cover half the island, and the personnel from the Royal Navy ship *Endurance* noted in 1972 that most of the island was thus covered, and the island's insularity destroyed. This fact is reflected in a British chart of 1973. However, by 1989 it was an island again. The Chileans call it Isla Bárbara (it is listed thus in their 1974 gazetteer) and the Argentines today tend to call it Islote Bárbara.

Punta Barbaro *see* **Leniz Point**

Barbaro Point *see* **Leniz Point**

Barbedes, Peter. b. NZ. Crewman on the *Jacob Ruppert*, 1933-34, i.e., during the first half of ByrdAE 1933-35. This is how the name is listed, but it may well not be right. The NZ paper, the *Evening Post*, of Dec. 11, 1933, says Peter Berdehus.

Barber, John Arthur. b. 1930, Egypt, son of British clerk Alfred Barber and his Egyptian wife Farida (he looked somewhat Middle Eastern, because of his mother, and would joke about his father being an Arab prince). As a child, he traveled back and forth between London and Egypt. He was in Germany in 1953, working as a radioman, when he joined FIDS in that capacity, wintering-over at Base D in 1954. He cut his right hand badly on steel, and, Doc Turner being away on a sledging trip, Ian Clarke had to put five stitches in the hand, and also learn the radio while Barber was out of commission. No one seems to know what became of John Barber.

Barber, Noel. b. Sept. 9, 1909, Hawarden, Flintshire, as John Lysberg Noel Barber, son of John Barber (a JP) and Ellen Katty J. Lysberg. He grew up in Hull, and traveled the world on a tramp steamer, then became editor of the *Malaya Tribune*. Back in England, he was a provincial journalist, joined the RAF for World War II, and, in 1953, became correspondent for the London *Daily Mail.* In 1954, in Morocco, while covering the Algerian war, he was stabbed five times, and he was wounded in the head when the Russian tanks rolled into Budapest in 1956. While covering BCTAE 1955-58, he became the first Englishman to reach the South Pole since Scott's party, the first Englishman ever to reach the Pole and get back alive, and one of the first 50 people ever to stand at the Pole. Altogether he made 3 trips to the South Pole, and wrote *White Desert* (*see* the Bibliography), an account of his experiences during IGY. He wrote many other books too. He died on July 10, 1988, in London.

Barber, Robert. b. 1749, Kilkenny, Ireland. On Dec. 17, 1771 he joined the *Adventure* as quartermaster, for Cook's 2nd voyage, 1772-75. On Jan. 1, 1773 he was rated able seaman. He was still in the Navy when he died in 1783.

Barber Glacier. 70°26' S, 162°45' E. Rises just E of Mount Bruce, in the Bowers Mountains, and flows N to the coast between Stuhlinger Ice Piedmont and Rosenau Head. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1965. Named by US-ACAN in 1970, for Capt. Don W. Barber, in Antarctica in 1967 and 1968 as construction and equipment officer.

Île Barbière *see* **Barbière Island**

Islote Barbière *see* **Barbière Island**

Barbière Island. 65°11' S, 64°10' W. A small island, the most southerly of the islands lying off the S end of Petermann Island, in the Wilhelm Archipelago. Discovered and charted by FrAE 1908-10, and named by Charcot as Île Barbière, for Monsieur Barbière, one of the port engineers at Pernambuco, Brazil, who was helpful to the expedition in 1910. It appears on a 1943 U.S. Hydrographic Office chart as Barbière Islet, and on a 1953 Argentine chart as Islote Barbière (which is what the Argentines still call it). It was photographed aerially in 1956-57 by FIDASE. On July 7, 1959, UK-APC named it Barbière Island. US-ACAN accepted the name in 1971.

Barbière Islet *see* **Barbière Island**

Barbieri, M. *see* **Órcadas Station**, 1934

The Barchans. 65°14' S, 64°20' W. Pronounced as if it were spelled "barkans." A group of small, snow-capped islands, the westernmost island group in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and so named by Rymill because the snow-caps resembles barchans (a barchan, or barkhan, is an isolated and migrating, crescent-shaped sand hill or dune found in several very dry regions of the world). The name was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the British gazetteer of 1955. It appears in the 1991 Argentine gazetteer as Islas Barchans.

Islas Barchans *see* **The Barchans**

Bahía Barclay *see* **Barclay Bay**

Barclay, Leslie William "Les." b. Sept. 26, 1933, Rochford, Essex, son of William H. Barclay and his wife Dorothy E. Jarvis. He began his professional radio career with E.K. Cole, of Southend-on-Sea, in 1950, as a student apprentice, and later worked in the TV research lab. He was a member of the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, a member of the ionospheric group. He wintered-over at Halley Bay in 1957 and 1958, and at the end of the expedition left Cape Town on the *Carnarvon Castle*, arriving in London on Feb. 27, 1959. Then he worked for a year at the Radio Research Station, in Slough, preparing the reports of the expedition. His entire career was in radio; from 1960 to 1977 he

worked for Marconi, and from 1977 with the British government. In 1994 he established Barclay Associates, Ltd. He won the OBE.

Barclay Bay. 62°34' S, 60°58' W. An extensive bay between Cape Shirreff and Essex Point, on the NW side of Livingston Island, in the South Shetlands. Roughly charted by Bransfield on Jan. 17, 1820, the name Barclay's Bay appears on Weddell's 1825 chart, and that naming reflects his voyage of a couple of years earlier. No one knows why it was named Barclay. Some have said it might be for the 16th-century Scottish writer, Alexander Barclay, but that is only a guess. It appears on a Spanish map of 1861, as Bahía de Barclay, but that map is a mere translation of existing maps (i.e., it is not based on any new Spanish exploration). It appears as Barclay Bay on a 1901 British chart, and Charcot refers to it as Baie de Barclay, in 1912. It was recharted in 1935-37, by the Discovery Investigations. It appears on a 1947 Argentine map as Bahía Barclay, and that is what the Argentines still call it. US-ACAN accepted the name Barclay Bay in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears in the 1974 Chilean gazetteer, as Bahía Barclay. The British were the latest to plot this feature, in late 2008.

Barclay's Bay *see* **Barclay Bay**

Islas Barcroft *see* **Barcroft Islands**

Barcroft Islands. 66°27' S, 67°10' W. A group of small islands and rocks, about 8 km in extent, the southernmost group of the Biscoe Islands, including Bedford Island and Irving Island, close S of Watkins Island. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Sir Joseph Barcroft (1872-1947), Irish physiologist and specialist in cold, professor of physiology at Cambridge, 1925-47. They appear on a British chart of 1961. US-ACAN accepted the name in 1965. They appear in the 1991 Argentine gazetteer, as Islas Barcroft.

Barcus Glacier. 74°15' S, 62°00' W. In the Hutton Mountains, it flows ESE to the N of Mount Nash and Mount Light, into Keller Inlet, to the W of Cape Fiske, at the S end of the Lassiter Coast, on the E coast of Palmer Land. Mapped by USGS from their own ground surveys conducted in 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for James Roy Barcus (b. Oct. 1933), of the University of Denver, USARP ionosphere physicist at Byrd Station in 1966-67 and 1967-68. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer land. UK-APC accepted the name on Dec. 20, 1974. The Chileans call it Glaciar Hervé, for Francisco Hervé Allamand, geologist at the University of Chile, who was with the Chilean Antarctic Institute, and who took part in ChilAE 1963-64. It appears in the 1978 Argentine gazetteer, as Glaciar Reconquista (i.e., "reconquest glacier"), named after events in the mother country in 1807-08.

Bardarevo Hill. 63°31' S, 58°32' W. An ice-covered hill, rising to 660 m, in the N part of Marescot Ridge, 5.1 km NNE of Crown Peak, 4.1 km SE of Marescot Point, and 11.32 km W by S of Ogled Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Bardarevo, in northeastern Bulgaria.

Monte Bardas Coloradas *see* **Brown Bluff**

Bardell Rock. 65°20' S, 65°23' W. A rock, awash, 1.3 km S of Dickens Rocks, in the N part of the the Pitt Islands, in the N portion of the Biscoe Islands. Charted by an RN Hydrographic Survey unit from the *Endurance*, in 1969. Named by UK-APC on Nov. 3, 1971 for Mrs. Bardell, the Dickens character in *Pickwick Papers*. US-ACAN accepted the name in 1972. It appears in the British gazetteer of 1974, and on a British chart of the same year.

Mount Barden. 77°51' S, 86°13' W. Rising to 2910 m, 4 km NW of Mount Sharp, in the N part of the Sentinel Range. Named by US-ACAN in 1960, for Virgil W. Barden, ionosphere physicist with the National Bureau of Standards, who wintered-over at Byrd Station in 1957.

Bardin Bluffs. 70°49' S, 68°08' E. Imposing bluffs on the N side of Pagodroma Gorge, about 3 km SW of the entrance of the gorge into Beaver Lake, in the Prince Charles Mountains. Named by ANCA for Prof. V.I. Bardin, who spent several seasons with SovAE in the Prince Charles Mountains, and who carried out pioneering studies in the glacial geology of the region.

Bardin Knoll. 70°49' S, 68°09' E. A small knoll at the NE end of a spur separating Pagodroma Gorge from the Bardin Bluffs, being the first gully to the SE of the Australian camp at Beaver Lake. When compared to the massive bluffs, this diminutive but clear-standing feature warrants the term "knoll." Named by ANCA in association with the bluffs. The Russians call it Gora Ploskaja.

Hrebet Bardina *see* **Westliche Petermann Range**

Bardsdell Nunatak. 70°16' S, 63°54' W. A mainly ice-free nunatak, rising to about 2000 m, just N of Dalziel Ridge, and E of Dyer Plateau, in the Columbia Mountains of central Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Mark Barsdell (sic), Columbia University geologist who studied the structure of the Scotia Ridge area, 1970-71. Mr. Barsdell was later with the New Hebrides Geological Survey, was on the faculty of the University of Tasmania, and also of the University of Auckland. UK-APC followed suit with the naming on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land. Note: It would be nice if Mr. Barsdell's name were spelled correctly.

Bare Rock. 60°43' S, 45°36' W. Rising to 6 m above sea level, 170 m NE of Berntsen Point, in the entrance to Borge Bay, off the E side of Signy Island, in the South Orkneys. Charted and named descriptively by personnel on the *Discovery* in 1927. It appears on the Discovery Expeditions charts of 1929 and 1934, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year.

Bareface Bluff. 78°50' S, 161°40' E. A large, sheer, prominent snow-free bluff rising to 940 m above Skelton Glacier, between Ant Hill Glacier on the one side and Mason Glacier and Trepidation Glacier on the other. Surveyed and named descriptively by the NZ party of BCTAE in Feb. 1957. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Barela Rock. 77°01' S, 148°52' W. A rock outcrop in the S part of Przybyszewsi Island, in the Marshall Archipelago. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Ruben E. Barela, USN, aviation structural mechanic at McMurdo in 1967.

Grjada Bar'ernaja. 70°40' S, 68°55' E. A ridge in the Prince Charles Mountains. Named by the Russians.

Barger, Robert Newton "Bob" III. b. Oct. 29, 1938, Peoria, Ill., son of Caterpillar welder Robert Newton Barger, Sr. [sic] and his wife Catherine Marie O'Brien. He was an exchange student in Denmark in 1956, then joined the Illinois wing of the Civil Air Patrol Cadets, from which he was chosen to go south. He was a crew member on various flights over the South Pole, including Chet McCarty's flight of Oct. 26, 1956 (*see* **South Pole**), and was in C.J. Ellen's Globemaster as it flew over the South Pole in attendance on Gus Shinn's R4D, on Oct. 31, 1956. On his return to the USA, he reported personally to President Eisenhower. He married, on Aug. 6, 1976, Josephine C. Disser. He was a professor for 17 years at Eastern Illnois, then at Notre Dame from 1994. *See also* **Swimming**.

Bargh Glacier. 73°05' S, 168°46' E. A glacier, 10 km long, in the SW part of Daniell Peninsula, in Victoria Land, it flows for about 3 km to the N of, and parallel with, Langevad Glacier, and then SW into Borchgrevink Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Kenneth Alexander "Ken" Bargh, seismologist who wintered-over at Hallett Station in 1958. NZ-APC accepted the name on Dec. 4, 1968.

Gora Barhan. 72°08' S, 14°28' E. A nunatak, in the S part of the Payer Mountains, in Queen Maud Land. Named by the Russians.

Lednik Barhatistyj. 73°15' S, 68°23' E. A glacier on the Mawson Escarpment. Named by the Russians.

Bahía Barilari *see* **Barilari Bay**

Baie Barilari *see* **Barilari Bay**

Barilari Bay. 65°55' S, 64°43' W. A bay, 10 km wide, and 20 km long in a NW-SE direction, it lies between Cape García and Loqui Point, N of the Biscoe Islands, off the Graham Coast, on the W coast of the Antarctic Peninsula. Discovered by FrAE 1903-05, and named by Charcot as Baie Barilari, for Rear Admiral Atilio Sixto Barilari (b. April 6, 1857. d. May 10, 1928) of the Argentine Navy, the war minister who assisted the expedition in 1904. It appears

on a British chart of 1908, as Barilari Bay, and was re-charted by BGLE 1934-37. It appears (underspelled) on a 1942 USAAF chart, as Barilar Bay. It appears on a 1946 Argentine map of 1946, as Bahía Barilari, and that is the name the Argentines still use today. US-ACAN accepted the name Barilari Bay in 1951, and UK-APC followed suit on Sept. 8, 1953. Photographed aerially by FIDASE in 1956-57. It appears in the 1974 Chilean gazetteer, as Bahía Barilari.

Península Barison. 65°33' S, 64°05' W. Separates Beascochea Bay from Leroux Bay, opposite Lahille Island, on the W coast of the Antarctic Peninsula. Possibly first sighted by BelgAE 1897-99, and again by FrAE 1903-05. Named by ChilAE 1973-74, for Capitán de corbeta Eduardo Barison Roberts, naval commander of the *Yelcho* during this expedition. He was later head of the Chilean Hydrographic Institute. The Argentines call it Península Ruiz Huidobro, presumably for Argentine geologist Óscar José Ruiz Huidobro (1917-2004).

The *Bark Europa*. Dutch tourist ship, actually a splendid-looking tall ship, complete with sails, which could take 36 passengers. In Antarctic waters in 1990-91, 1992-93, and 1994-95. She was back in Antarctic waters in 2000-01, with Robert Voss and Klaas Gaastra as skippers, and was back again in 2005-06, 2006-07.

Lake Barkell. 67°28' S, 60°57' E. A freshwater lake on Chapman Ridge, about 2 km W of Lake Reynolds, in Kemp Land, in Enderby Land. This lake was surveyed by ANARE scientists in 1978-79, and the crustacean *Daphniopsis studeri* was found here, the first example of such a find W of the Vestfold Hills. Vic Barkell (q.v.) was the helo pilot who assisted the party. Named by ANCA on July 26, 1983.

Barkell, Victor George "Vic." b. Nov. 23, 1925, Yenda, NSW, son of Victor James Barkell and Olga M. Marshall. He joined the RAAF in 1943, as a fighter pilot during World War II, and, in 1950, became an instructor, retiring as squadron leader in 1967. He became a commercial helicopter pilot, and between 1970 and 1982 completed 2000 flying hours in Antarctica, over 13 summer seasons. He died on Aug. 19, 1995. *See* **Lake Barkell** and **Barkell Platform** for more details of his Antarctic involvement.

Barkell Nunatak. 67°34' S, 50°00' E. A nunatak, 7 km N of Mount Douglas, in the Scott Mountains of Enderby land. Named by ANCA on Dec. 7, 1976, for Vic Barkell.

Barkell Platform. 72°40' S, 68°16' E. A narrow, level rock platform, 100 m wide, and 1285 m high, at the N end of the Mawson Escarpment. There was a geodetic survey station here during the 1971 ANARE Prince Charles Mountains Survey. Named by ANCA for Vic Barkell (q.v.), helicopter pilot with the survey. He was also with the ANARE Enderby Land Survey Party of 1976. US-ACAN accepted the name in 1973.

The *Barken*. Took part in the Italian Antarctic Expeditions of 1988-89 and 1989-90. Skipper both seasons was Joop Van Luijk. In the latter year she undertook oceanographic research in the Ross Sea.

Barker, James Richard Millton. b. March 16, 1926, Christchurch, NZ. An Army major, he was 2nd-in-command at Scott Base during the summer of 1970-71, and wintered-over there in 1972. In 1984 he became project manager for the NZ Antarctic Division.

Barker, Peter Frank. b. June 12, 1939, Stoke-on-Trent, son of Frank Barker and his wife Lily Morgan. While he was on the staff at Birmingham University, 1964-83, he made several trips to Antarctica as a marine geophysicist, mostly on board ships in the Scotia Sea and Weddell Sea, and would continue to do so until 1989. On Aug. 1, 1983 he joined BAS as a geologist.

Barker Bank. 64°01' S, 57°01' W. A marine bank in Erebus and Terror Gulf, reaching depths of at least 20 m. It extends NE from Ula Point, on James Ross Island, but its limits are not precisely defined. Charted from the *Endurance* in 1981-82, and named by UK-APC on Nov. 13, 1986, for Captain Nicholas John Barker (b. 1933), RN, in command of the ship, 1980-82, including the period of the Falklands War. US-ACAN accepted the name.

Barker Channel. 68°27' S, 78°18' E. A tidal race, a rushing turmoil at tidal extremes during the summer (but believed to be ice-dammed in winter), about 1 km long and less than 50 m wide at several points, linking Prydz Bay with Taynaya Bay, in the Vestfold Hills. Named by ANCA on July 26, 1983, for Roger Barker, aquatic biologist who wintered-over at Davis Station in 1975, and who worked in this area, sampling water, and tagging seals. In Jan. 1979, Mr. Barker was doing research on nest sites of the light-mantled sooty albatross on Macquarie Island, when he fell from a cliff and severely injured himself. It was only the skuas pecking at him on the beach below that woke him up, and kept him awake. However, he died on Feb. 6, 1979.

Barker Nunatak. 74°53' S, 72°42' W. Rising to about 1500 m, it is one of the Grossman Nunataks, E of the Lyon Nunataks, and about 3.3 km NE of the Fletcher Nunataks, in Ellsworth Land. Named by US-ACAN in 1988, for Kenneth Barker, USGS cartographic technician who, with James B. Fletcher (*see* **Fletcher Nunataks**), formed the USGS satellite surveying team at Pole Station for the winter of 1977. UK-APC accepted the name on Feb. 15, 1988.

Barker Peak. 77°30' S, 168°18' E. Rising to about 2200 m, 5.5 km WNW of Mount Terror, it is the western of 2 peaks near the S end of Giggenbach Ridge, on Ross Island. Named by the New Zealanders in the field, on June 19, 2000, for Maj. James Barker (q.v.). US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 21, 2001.

Barker Range. 72°32' S, 166°10' E. A mountain range trending NNW-SSE from about 72°22' S, 165°50' E to about 72°38°S, 166°27' E, at the SW side of the Millen Range, in the Victory Mountains of Victoria Land. It includes Jato Nunatak, Mount Watt, Mount McCarthy, and Mount Burton. Named by NZ-APC in 1972, for Maj. James Barker. US-ACAN accepted the name.

Barkley, Erich. b. Aug. 19, 1912, Hamburg. Biologist on GermAE 1938-39. During World War II he was commanding officer of SturmgeschützBrigade 341 (abbreviated to StuGBrig 341), and died on Dec. 8, 1944, in Bedburg, near Cologne.

Barkley Mountains. 72°22' S, 1°00' E. A small group of mountains that includes Kvitkjølen Ridge and Isingen Mountain, between Kvitsvodene Valley and Rogstad Glacier, in the Sverdrup Mountains of Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and named by Ritscher as Barkleyberge, for Erich Barkley. This feature was surveyed by NBSAE 1949-52. US-ACAN accepted the translated name Barkley Mountains in 1966.

Barkleyberge *see* **Barkley Mountains**

Barkov Glacier. 71°46' S, 10°27' E. About 8 km long, it flows NE between Mount Dallmann and Småskeidrista, in the central part of the Shcherbakov Range, in the easternmost part of the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. First photographed aerially, by GermAE 1938-39, and roughly plotted from these photos. Mapped by Norwegian cartographers (but not named), from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. Remapped by SovAE 1960-61, and named by the USSR in 1966 as Lednik Barkova, for geographer Aleksandr Sergeyevich Barkov (1873-1953), of Moscow University. US-ACAN accepted the translated name Barkov Glacier in 1970. The Norwegians now call it Barkovbreen (which means the same thing).

Lednik Barkova *see* **Barkov Glacier**

Barkovbreen *see* **Barkov Glacier**

Monte Barkow *see* **Mount Barkow**

Mount Barkow. 73°22' S, 62°48' W. Rising to 1395 m, 30 km W of Court Nunatak and New Bedford Inlet, it marks the E end of the ridge separating Haines Glacier from Meinardus Glacier, in the SW part of the Dana Mountains, on the Lassiter Coast, on the E coast of Palmer Land. Discovered aerially on Dec. 30, 1940, by USAS 1939-41, and photographed by them. In Nov. 1947 it was photographed aerially by RARE 1947-48, and a combined team of RARE personnel and Fids from Base E surveyed it from the ground at about that same time. Named by FIDS in 1947 for Erich Barkow. UK-APC accepted the name on Jan 28, 1953, and US-ACAN followed suit later that year. It appears on a British chart of 1954, and in the British gazetteer of 1955. It appears on a 1957 Argentine chart as Monte Barkow, and that is what the Argentines still call it.

Barkow, Erich Karl Otto. b. March 10, 1882, Elberfeld, Germany, son of Johann Heinrich Barkow and his wife Anna. Meteorologist on GermAE 1911-12. He later worked at the meteorological observatory in Potsdam, and was professor of meteorology in Berlin. He died in Berlin on Jan. 7, 1923.

Cabo Barlas *see* **Cape Barlas**

Canal Barlas *see* **Barlas Channel**

Cape Barlas. 60°43' S, 45°00' W. Marks the N end of Fredriksen Island, in the South Orkneys. Discovered and roughly charted in Dec. 1821 by Palmer and Powell. It appears on Petter Sørlle's chart of 1912, but does not appear to be named. It was further charted by the Discovery Investigations, in Jan. 1933, and named for William Barlas. If it was not named by the DI, they were certainly the first to record its name on a chart (1935; however, it appears, erroneously, on their 1934 chart, as Cape Barles). US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 20, 1955. It appears on a 1953 Argentine chart as Cabo Barlas, and that is what the Argentines call it to this day.

Barlas, William "Wullie." b. May 8, 1888, Matlock, Derbyshire, son of Scottish gardener William Barlas and his wife Betsy. Educated in Scotland, mostly at Pitlochry, where he married Christina Scott Robertson. He came to the Falklands in Feb. 1908 as a traveling schoolteacher, and by 1913 was headmaster of the Government School in Stanley. He was the postmaster for the South Shetland Islands, 1914-15, and was at Deception Island to protect the British claim to Antarctica. In 1920-21 he was aboard the whaler *Teie*. Between 1928 and 1941 he spent several seasons as magistrate at South Georgia (54°S) (cf Arthur G. Bennett), and during that period was of great help to BGLE 1934-37. On Sept. 2, 1941 he was killed by an avalanche which knocked him off the track into the sea between King Edward Point and the whaling station at Grytviken, and is buried in Grytviken Cemetery (as is Shackleton).

Barlas Channel. 67°13' S, 67°45' W. A channel, 13 km long and 3 km wide, in the N part of Laubeuf Fjord, joining that fjord to the N with Hanusse Bay to the S, and extending SW from The Gullet, it separates Day Island from Adelaide Island, off the Loubet Coast, on the W coast of Graham Land. First roughly surveyed by FrAE 1908-10, although they did not determine its true morphology. It was again roughly surveyed in July 1936 by BGLE 1934-37, and yet again, in more detail, in Sept. 1948 by Fids from Base E, who named it for William Barlas. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957, and, as Canal Barlas, on a Chilean chart of 1962. It appears in the 1974 Chilean gazetteer, as Canal Barlas, and also as such in the 1991 Argentine gazetteer.

Barlatier de Mas, François-Edmond-Eugène. Named often spelled erroneously as Barlatier-Demas, or even as de Barlatier de Mas. b. Nov. 22, 1810, in the town of Saussay, in the department of Eure-et-Loire, 30 miles from Paris (Dumont d'Urville says he was born in Dunkirk, but he wasn't, although his parents were married there), eldest child of manufacturer Auguste Barlatier de Mas and his wife Sophie-Joséphine Archdeacon (an Irish name), and grandson of Capt. Paul-François-Ignace Barlatier de Mas, who fought with the Americans against the British, in the Revolutionary War. He joined the French Navy as an "aspirant," on Oct. 16, 1827, and was promoted to ensign on Jan. 31, 1832, and to lieutenant on April 10, 1837. He was 2nd officer on the *Astrolabe* during FrAE 1837-40. On March 5, 1842, in Paris, he married Thérèse-Armande Santerre. On Jan. 9, 1852, he was promoted to commander. His wife died in 1880, in Cherbourg, and he died on Dec. 31, 1888, in Paris. He is buried in the cemetery at Montparnasse.

Cape Barles *see* **Cape Barlas**

Cabo Barlow *see* **Barlow Island**

Cape Barlow *see* **Barlow Island**

Islote Barlow *see* **Barlow Island**

Roca Barlow *see* **Barlow Island**

Barlow Island. 62°52' S, 62°21' W. A small island 1.5 km WNW of Cape Smith (the northernmost tip of Smith Island), in the South Shetlands. Henry Foster, during the *Chanticleer* Expedition of 1828-31, named a cape on the NE side of Smith Island, as Cape Barlow, for Peter Barlow (1776-1862), British physicist, mathematician, and optician, whose investigations on magnetism led to the discovery of a means of rectifying or compensating compass errors in ships. It appears as Cape Barlow on an 1839 Britsh chart, and all countries who cared to, copied it thus in their own languages. In 1951-52 an RN Hydrographic Survey unit decided that no significant cape existed on the E side of the island (at least, not by that point in time), and accordingly applied the name "Barlow" to this island, calling it Barlow Islet. US-ACAN accepted this name in 1953, and UK-APC followed suit on Sept. 22, 1954. It appears as such in the British gazetteer of 1955, and on a British chart of 1957. However, on July 7, 1959, UK-APC, with the term "islet" fast going out of fashion, changed the name to Barlow Island. US-ACAN followed suit, and it appears as such on British charts of 1961 and 1962. It appears on a Chilean chart of 1962, as Roca Barlow, and that was the name rejected for inclusion in the 1974 Chilean gazetteer, in favor of Cabo Barlow (notwithstanding the fact that the rest of the world knew this feature to be an island). In their gazetteer, the Chileans put their "cape" 8 km SSW of Cape Smith. It appears in the 1991 Argentine gazetteer as Islote Barlow (i.e., "Barlow islet").

Barlow Islet *see* **Barlow Island**

Barlow Rocks. 78°29' S, 163°24' E. A group of rocks standing below the NW slopes of Mount Morning, on the S margin of the upper Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1995, for Roger A. Barlow, USGS cartographer, a member of the satellite surveying team who wintered-over at Pole Station in 1992. *See also* **Starbuck Cirque**.

Barn Rock. 68°41' S, 67°32' W. A prominent rock, rising to 92 m above sea level, near the N end of the Terra Firma Islands, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Visited and surveyed in 1936 by BGLE 1934-37, and re-surveyed in 1948 by Fids from Base E, who so named it for its appearance when seen from the west. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Barnaart, Willem Philip "Phil." Leader of Davis Station for the winter of 1978, then of Casey Station in 1980, and at Mawson Station in 1988. He also led the team for several winters on Macquarie Island.

Barnacle Valley. 76°47' S, 161°12' E. A significant ice-free valley depression, immediately under Forecastle Summit, bounded by ice from The Flight Deck, and 5 km WSW of Dotson Ridge, in the Convoy Range of Victoria Land. Named by the NZARP field party of 1989-90, for the low and blocky floor of this valley, which has unusually large ice wedge polygon hummocks. US-ACAN accepted the name in 1993.

Barnacles. 85 species of cirripeds have been taken in Antarctic waters. This represets 29 genera, or 9 families. Of these, 20 species, 9 genera, and 1 family were newly discovered in Antarctica.

Monte Barnard *see* **Mount Friesland**

Mount Barnard *see* **Mount Friesland**

Pic Barnard *see* **Needle Peak**

Punta Barnard *see* **Barnard Point**

Barnard, Charles H. b. 1781, Nantucket, Mass., son of Valentine Barnard and his wife Ann Coffin. On April 6, 1812 the John B. Murray sealing brig *Nanina* left New York bound for the Falkland Islands, captain Charles H. Barnard. His father sailed with him, and was to take the *Nanina* back to New York after the expedition, while the son stayed in the Falklands sealing with a small crew. Edmund Fanning also sailed on the *Nanina*. War broke out between the United States and Britain, and the British members of the crew marooned Barnard for 2 years. In 1829 he would write his account of this, *Marooned: A Narrative of the Adventures of Capt. Charles H. Barnard of New York, during a Voyage Round the World (1812-16), with an Account of His Abandonment and Solitary Life for Two Years on One of the Falkland Islands*. He bought the *Charity* at Pernambuco, Brazil, on June 2, 1820, and sailed it as captain/sole owner to the Falklands, where he teamed up with the New York Sealing Expedition on their South Shetlands cruise of 1820-21. He was back again, with the *Charity*, in 1821-22. That season he and Weddell (q.v.) took a tour on the *Beaufoy of London* together, under McLeod. Barnard died in 1840.

Barnard Peak *see* **Mount Friesland**

Barnard Point. 62°46' S, 60°21' W. Marks the SE side of the entrance to False Bay, on the S coast of Livingston Island, in the South Shetlands. Known to sealers as early as 1820. Palmer refers to it both as Freesland Point (a variation of Friesland Point) and as Point of Freeseland. This may be the point that Capt. Davis called Penguin Point, in 1821. In 1934-35 it was charted by the Discovery Investigations, as Barnard Point, in association with Mount Barnard (now called Mount Friesland), which surmounts this point to the NE. It appears on a British chart of 1945 with that name, on a 1946 Argentine map as Punta Barnard (and that is the name the Argentines use today), and on a French chart of

1951, as Pointe Bernard (sic). The name Barnard Point was accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. It appears in the 1974 Chilean gazetteer as Punta Barnard.

Barnards Peak *see* **Needle Peak**

Cape Barne. 77°35' S, 166°14' E. A steep, rocky bluff, rising to 120 m (the New Zealanders say about 91 m), S of Cape Royds and N of Cape Evans, it is the westernmost cape on Ross Island. Discovered in 1902 by BNAE 1901-04, and named by Scott for Michael Barne. US-ACAN accepted the name, and it appears in the 1958 NZ provional gazetteer.

Barne, Michael. b. Oct. 15, 1877, Sotterley Hall, Beccles, Suffolk, son of Lt. Col. Frederick St. John Newdegate Barne, Scots Guards, MP, JP, alderman, and his wife, Lady Constance Seymour (sister of the Marquess of Hertford). He joined the Royal Navy in 1893, and was a 2nd Lieutenant, and had just spent the winter at the Ben Nevis Observatory, when he became assistant magnetic observer on BNAE 1901-04, and was leader of the supporting party during Scott's (unsuccessful) push to the Pole in 1902. He entertained ideas of taking motorized sledges to the Antarctic, on his own expedition, but that never materialized. On April 12, 1910, in London, he married Gwendoline Marjorie Gray. He later commanded the *Porcupine* and the *Coquette*, and was promoted to captain during World War I, retiring with a DSO in 1919. In World War II he was at Dunkirk, was with an anti-submarine naval patrol, later lost a leg, and died on May 31, 1961.

[1]**Barne Glacier**. 77°36' S, 166°26' E. Also called Cape Barne Glacier. A steep glacier, between 3 and 5 km across, that flows WSW from the W slopes of Mount Erebus, and forms a steep ice cliff on the W coast of Ross Island, between Cape Evans and Cape Barne, where it calves into McMurdo Sound. Discovered in 1902 by BNAE 1901-04, and named by Shackleton in 1908 (during his BAE 1907-09) in association with the cape. US-ACAN accepted the name in 1952. It appears in the 1958 NZ provisional gazetteer.

[2]**Barne Glacier** *see* [1]**Byrd Glacier**

Barne Inlet. 80°15' S, 160°15' E. A Ross Ice Shelf inlet (it is actually a re-entrant) into the Transantarctic Mountains, between 20 and 27 km wide, between Cape Kerr and Cape Selborne, at the foot of Mount Albert Markham, S of the Britannia Range. It is occupied by the lower part of Byrd Glacier. Discovered in Dec. 1902, during BNAE 1901-04. Michael Barne and George Mulock mapped the coastline this far south, in 1903. US-ACAN accepted the name in 1947. It appears in the 1958 NZ provisional gazetteer.

[1]**Mount Barnes** *see* **Cheeks Nunatak**

[2]**Mount Barnes**. 77°38' S, 163°35' E. A peak, rising to 985 m (the New Zealanders call it a promontory, rising to about 1200 m), it surmounts the west-central side of New Harbor, and marks the E extremity of the Kukri Hills, in Victoria Land. Discovered during BNAE 1901-04, and named by Scott as New Harbour Heights, it appears that way on the expedition charts. However, Scott re-named it in 1910-12, during BAE 1910-13, for Canadian ice physicist Howard Turner Barnes (1873-1950), Macdonald professor of physics at McGill University, in Montreal, 1908-33. US-ACAN accepted the name in 1953.

Barnes, Amos. b. Feb. 13, 1799, Westerly, RI, son of Nathaniel Barnes and his wife Nancy Pendleton. He was a cabinet maker until he was 19, at which point he threw it all up and went to sea, first as a cook on a fishing smack. In 1820-21 he sailed on the *Frederick*, as part of the Palmer-Pendleton Expedition to the South Shetlands, and in the northern summer of 1821 he was near the Arctic, on the *Alonzo*. After this trip, on Jan. 13, 1822, he married a Westerly girl, Margaret Dickens, and they would have 11 children. In 1833 they moved to Westmoreland, in Oneida County, NY, and Barnes rose to be a captain. He retired from the sea and became a farmer in Westmoreland. Margaret died on Jan. 27, 1872, and the old skipper continued to live on the farm with two of his daughters, until he died on May 30, 1894, aged 95.

Barnes, Haldor. b. June 7, 1894, Ryde, Denmark. He graduated from the University of Denmark, and from 1913 to 1916 was in the Danish infantry. He moved to the USA, to Detroit, and became medical officer on the *Eleanor Bolling* during ByrdAE 1928-30. On Feb. 28, 1930 he transferred to the Norwegian whaler *Kosmos*, because they had lost their doctor. He was back in New York by early June 1930, and was awarded American citizenship. While in NZ, he had met Phyllis M. Creig, of New Plymouth, and she arrived in Vancouver on Jan. 1, 1932, heading for Chicago. She and Dr. Barnes were married in Detroit on Jan. 9, 1932. He died on Sept. 13, 1943, in Toledo, Ohio.

Barnes, Stephen Sherwood "Steve." b. April 1915 (Easter Day), Philadelphia, as Sherwood Arthur Barnes, son of Midvale Steel Company electrician Arthur Sherwood Barns (in the 1920s he went over to Westinghouse) and his wife Elizabeth Brownback. He spent the first few years of his life on Bailey Street, then the family moved to his great grandfather's farm in Valley Forge. He married Louise, taught school and played pro baseball in the minor leagues for five years. His first season was 1937, for the Crisfield Crabbers (an Eastern Shores League affiliate of the New York Giants; his father had come from Crisfield). Then he went to the Federalsburg A's (an affiliate of the Philadelphia A's; same league, still in Maryland), for 1938, then to the Virginia League (no affiliated teams), first with the Lynchburg Grays, in 1939 and 1940, and finally to the Petersburg Rebels, in 1941. He never got to play in the majors, for World War II intervened, and he joined the U.S. Navy, serving as a radar man. He changed his name to Stephen S. Barnes, in honor of said great grandfather, Stephen Sylvester Brownback. His expertise with electronics took him to the National Bureau of Standards, for whom he worked in various overseas postings, and was the ionosphere scientist who set up various scientific stations in the Arctic. On Nov. 7, 1957, he arrived at McMurdo, in Antarctica, and took over as scientific leader at Byrd Station from George Toney, on Dec. 8, 1957, serving as such through the 1958 winter. He left Byrd on Nov. 22, 1958, and, via NZ, went back to the States. Then he was back to the Arctic, and in 1961-62 he set up conjugate ionospheric observation stations at Camp Sky-Hi (*see* **Eights Station**) in Antarctica. He retired from the Bureau in 1973, but re-joined in 1979, finally retiring in 1994.

Barnes Bluff. 74°46' S, 110°19' W. A projecting portion of Jones Bluffs, 2.5 km NNE of Eckman Bluff, on the E side of Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken in 1966. Named by US-ACAN in 1978, for Lt. Cdr. John O. Barnes, USN, air operations officer during OpDF 76 (i.e., 1975-76) and OpDF 77 (i.e., 1976-77), and officer in charge of the NSFA detachment at McMurdo in the winter of 1977.

Barnes Glacier. 67°32' S, 66°25' W. Flows into Blind Bay, at the head of Bourgeois Fjord, on the Fallières Coast, on the SW coast of Graham Land. Surveyed by Fids from Base E in 1948. Named by UK-APC on July 7, 1959, for Howard T. Barnes (*see* **Mount Barnes**). US-ACAN accepted the name in 1960, and it appears on a British chart of 1961, with the coordinates 67°32' S, 66°19' W. It has since been replotted.

Barnes Icefalls. 83°49' S, 55°53' W. The icefalls along the Washington Escarpment, between Mount Dover and Bennett Spires, in the Neptune Range of the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from USGS ground surveys conducted in 1965-66, during their Pensacola Mountains Project. Named by US-ACAN in 1965, for James Clarkson Barnes (b. Feb. 25, 1938, Bristol, Conn.), U.S. Weather Bureau meteorologist who wintered-over as scientific leader at Ellsworth Station in 1962. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Barnes Nunatak *see* **Cheeks Nunatak**

Barnes Peak. 84°23' S, 167°34' E. Rising to 3360 m, 6 km SE of Mount Dickerson, in the Queen Alexandra Range. Named by US-ACAN in 1965, for Elwood E. Barnes, USARP cosmic ray scientist who wintered-over at Hallett Station in 1963. NZ-APC accepted the name on Nov. 16, 1965.

Barnes Ridge. 78°08' S, 84°50' W. A ridge, 11 km long, between Young Glacier and Ellen Glacier, on the E side of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Steve Barnes.

Barnett Glacier. 70°59' S, 167°30' E. A large glacier in the Anare Mountains, it flows E along the S side of Tapsell Foreland into Smith Inlet, in northern Victoria Land. Mapped by USGS

from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Donald C. Barnett, USGS topographic engineer photographer, here in 1961-62, and again with USGS Topo East and West in 1962-63. NZ-APC accepted the name on Nov. 17, 1964. Originally plotted in 70°59' S, 167°40' E, it has since been replotted.

Barney, David *see* **Burney, David**

Barnum, John Sanford. b. May 13, 1803, Shoreham, Vermont, son of Jabez Barnum and his wife Polly Sanford. Out of Stonington, Conn., he sailed as 2nd mate on the *Bogota*, to the Pacific, in 1828, just after marrying Hannah Hobart (widow of Capt. Sterrett, who had died at sea), on June 20 of that year. He was captain of the *Courier*, in the South Shetlands, 1831-32, in company with the *Charles Adams*, and in 1833 was skipper of the sealing schooner *Swift*, in the South Atlantic. He was in the same place in 1838, as skipper of the whaler *Atlas*, in 1839 with the *Bingham*, in 1839 of the *Rebecca Groves*, and in 1842 of the bark *United States*. He died on July 7, 1852.

Barnum Peak. 85°23' S, 171°40' W. Rising to 2940 m, it surmounts the E end of a prominent snow-covered rock divide near the head of Liv Glacier, just S of the mouth of LaVergne Glacier. Discovered by Byrd during his flight to the Pole in Nov. 1929, and named by him for supporter Jerome DeWitt "J.D." Barnum (1888-1965), publisher of the *Syracuse Post-Standard*. US-ACAN accepted the name in 1949.

Barnum Trail. 78°30' S, 164°00' W. The trail behind Framheim and Little America, at the Bay of Whales. Named by ByrdAE 1928-30, for J.D. Barnum (*see* **Barnum Peak**). It has gone now, the Bay of Whales having been transfigured. However, it does appear in the 1958 NZ provisional gazetteer.

Baron, David Simmons "Dave." Ex-Marine. He joined FIDS in 1959, as a meteorologist, and wintered-over at Base D in 1960. Managing the dogs proved difficult for Mr. Baron, and he was fired by base leader, Neil Orr, the only man Doc Orr ever fired. Baron then wintered-over at Base B in 1961.

Baronick, Michael P. "Mike." b. June 20, 1923, Brooklyn. A veteran of World War II and Korea, he was an aviation ordnance man and line chief with VX-6. He flew to McMurdo Sound in Dec. 1955, from Christchurch, NZ, on the first R5D flight, and wintered-over there in 1956 as aviation ordnance chief, that season establishing Beardmore Glacier Camp (q.v. for more details). He was baptized at Chapel of the Snows, by Father Condit, during the 1956 winter at McMurdo. He was in Antarctica every year from then until 1960, as aircrew. He was living in Largo, Fla., when he died on July 1, 2000, at the Medical Center, at Bay Pines.

Baronick Glacier. 78°36' S, 161°50' E. A glacier, 10 km SW of Mount Cocks, flowing into Skelton Glacier to the W, in the Royal Society Range of southern Victoria Land. Named by US-ACAN in 1963, for Mike Baronick. NZ-APC accepted the name on June 27, 1963.

Baronnet. b. Oct. 13, 1818, Bordeaux. On May 1, 1838, at Talcahuano, he joined the *Zélée* as replacement medical attendant for Zoïle Worms, who had jumped the scurvy ship earlier that day, during FrAE 1837-40.

Mount Barr Smith. 67°10' S, 99°12' E. A striking rock peak, rising to 1310 m (the Australians say about 1252 m) above sea level, it is the most northerly of a line of peaks along the W side of Denman Glacier, in Queen Mary Land. Discovered in Dec. 1912 by the Western Base Party of AAE 1911-14, and named by Mawson for a patron of the expedition, Robert Barr Smith (1824-1915), one of the richest men in Australia. US-ACAN accepted the name in 1947.

Caleta Barra. 64°22' S, 61°25' W. A cove to the SW of Valdivia Point, on the S coast of Hughes Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Carlos Barra von Kretschmann (*see* **Punta Barra**). The Argentines call it Caleta Heroína, named for the *Heroína*.

Punta Barra. 62°14' S, 58°38' W. A sandy point on the S shore of Potter Cove, in Maxwell Bay, King George Island, in the South Shetlands. Named by the Hydrographic Institute of the Chilean Navy, for Capt. Carlos Barra von Kretschmann, skipper of the *Piloto Pardo* during ChilAE 1971. The Argentines, who plotted it in the same degree of latitude, but in 58°42' W, call it Cabo Chiclana.

Cabo Barracas *see* **Bongrain Point**

Barracouta Ridge. 85°20' S, 166°35' W. A long, jagged ridge that ends at Webster Knob in the N. It is an extension from the base of Mount Fridtjof Nansen into the head of Strom Glacier, in the Queen Maud Mountains. Discovered by Gould's Dec. 1929 geological party during ByrdAE 1928-30. Climbed by geologists of the Southern Party of NZGSAE 1963-64, and descriptively named by them for the toothlike pinnacles along the ridge. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Barracuda. Order: Perciformes. Family: Sphyraenidae. One type of this deep sea fish is found in Antarctic waters (*see also* **Fish**).

Barratt Island. 68°33' S, 77°52' E. A small island off the Vestfold Hills, about 1.8 km W of Bluff Island. Mapped by Norwegian cartographers in 1947, from aerial photographs taken by LCE 1936-37. Named by ANCA for Noel R. Barratt, weather observer who wintered-over at Davis Station in 1960. US-ACAN accepted the name in 1960.

Rada Barraza. 63°00' S, 60°42' W. A harbor on the SW side of Deception Island, near New Rock, in the South Shetlands. Named by the Chileans for submariner Capitán de navío Federico Barraza Pizarro (later captain of the port of Arica), who led ChilAE 1963-64. In 1970 Don Federico's son, then a 27-year-old cadet, disappeared in Chile, never to be seen again.

Monte Barré *see* **Mount Barré**

Mount Barré. 67°30' S, 68°33' W. Rising to 2195 m, it has an ice-covered pyramidal peak, and stands 3 km NE of Mount Gaudry, in the SE part of Adelaide Island. Discovered and roughly surveyed in Jan. 1909 by FrAE 1909-10, and re-surveyed by Fids from Base E in 1948. Named by UK-APC on March 31, 1955, for Michel Barré. US-ACAN accepted the name in 1956. It appears on a British chart of 1961. It was first climbed by a BAS party on Feb. 9, 1963. It appears in the 1991 Argentine gazetteer as Monte Barré.

Barré, Michel. b. May 8, 1919, Paris. He entered Naval school in 1938, and served on a destroyer in 1940. When the French fleet was scuttled in Toulon, he went to Spain, and in 1943 joined the Free French. He was communications lieutenant in charge of scientific observations on the aborted French Polar Expedition 1948-49, under Liotard. He was back for the French Polar Expedition 1949-52, first as part of the crew who took Liotard and his men down south in 1949-50, and then as the man who relieved Liotard as leader on Jan. 9, 1951. He then led the 1951 wintering-over party at Port-Martin. On June 10, 1951 he was the first person to *see* emperor penguins incubating, and early in 1952 suffered through the Port-Martin fire. He and his party were taken off by the *Tottan* on Feb. 2, 1952, being succeeded as leader by Mario Marret.

Barré Glacier. 66°35' S, 138°40' E. A channel glacier, 8 km wide and 8 km long, it flows N from the continental ice to the coast of East Antarctica, close E of Cape Pépin. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Michel Barré (q.v.), leader of the French team in Antarctica in 1951, whose party extended reconnaissance of the coastal features as far westward as this glacier.

Barrel Point. 62°10' S, 58°35' W. The E point of Pond Hill, on Rhyolite Head, which separates Cardozo Cove from Goulden Cove, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. A wooden barrel, dating back to the early 20th-century whaling days, was found here. Local scientists began calling it Barrel Point in 1977-78, and that was the name officially accepted by the Poles on Sept. 1, 1999.

Barren Bluff. 73°04' S, 161°18' E. A prominent rock bluff in the S part of the Sequence Hills, along the W side of the upper Rennick Glacier, in Victoria Land. Named descriptively by the Northern Party of NZGSAE 1962-63, from the extremely bare and exposed nature of the surface. Because there was so little loose rock, the party had a problem finding enough stones with which to build a survey beacon. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1964.

Estrecho Barrera *see* **Yalour Sound**

Islote Barrera *see* **Surf Rock**

Monte Barrera *see* **Mount Pénaud**

Cap des Barres *see* under **D**

Barrett, David. Wintered over at Davis Station in 1976, at Mawson Station in 1978 and again in 1992. He also wintered-over a couple of times at Macquarie Island in the 1980s.

Barrett, David Alfred. His last name is often seen (erroneously) as Barratt. b. 1933. In 1952 he joined FIDS as a meteorologist, and left

Southampton later that year, bound for Montevideo, and from there to Port Lockroy Station for the winter of 1952, and as leader at Argentine Islands Station for the winter of 1953. He died in 2001.

Barrett, Peter John. b. Aug. 11, 1940, Wellington, NZ. Geologist with the University of Minnesota Ellsworth Mountains Party of 1962-63, and with the Southern Party of NZGSAE 1963-64, in the Queen Maud Mountains, working to a height of 11,000 feet above sea level. He moved to Ohio State University, and on Dec. 28, 1967, while working at 9000 feet on Granite Peak, at the edge of the Polar Plateau, with a party from his university, he discovered the fossilized jawbone of a primitive lizard. This was a labyrinthodont, about 220 million years old. Other labyrinthodonts have been found in other continents, and this made Gondwanaland (q.v.) into an acceptable theory. In 1970 Barrett led an expedition into the Darwin Mountains, and in 1974-75 and 1975-76 he was a geologist with the Dry Valley Drilling Project. He spent 8 summers in Antarctica between 1962 and 1978. In 1995 he was at the University of Wellington.

Barrett Bluff. 76°42' S, 161°18' E. A massive bluff of Beacon Sandstone, capped by a prominent knob of dolerite, it rises a sheer 350 m from Gentle Valley, and is backed to the S by the ice and snow of Flight Deck Névé. Named by NZ-APC for geologist Peter Barrett (q.v.), who has worked extensively on Beacon Supergroup rocks.

Barrett Buttress. 72°13' S, 65°36' W. A nunatak rising to 1600 m at the SE margin of the Goodenough Glacier, 14 km SW of the Blanchard Nunataks, in the area of George VI Sound, on the W side of Palmer Land. It has a sheer NW face 150 m high, while the SE side is level with the snow plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1966 and 1969. Surveyed from the ground between 1974 and 1976, by BAS personnel from Base E, a group that included BAS surveyor Richard Giles Barrett (b. 1950), who wintered-over at Base E in 1974. He was also at Base T. Named by UK-APC on Feb. 7, 1978, for Mr. Barrett. US-ACAN accepted the name.

Barrett Glacier. 84°37' S, 174°10' W. A glacier, immediately E of Massam Glacier, flowing from the vicinity of Mount Llano, on the N slopes of the Prince Olav Mountains, in a NW then a NE direction, for a distance of between 24 and 30 km, between Longhorn Spurs and the Gabbro Hills, to the Ross Ice Shelf. Named by the Northern Party of NZGSAE 1963-64, for Peter Barrett (q.v.), who was with the party. NZ-APC accepted the name on June 16, 1964, and US-ACAN followed suit in 1966.

Barrett Island. 72°12' S, 95°33' W. An ice-covered island, 3 km long, just within the N part of the mouth of Morgan Inlet, Thurston Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Lt. (jg) Barry B. Barrett, VX-6 pilot on photographic flights during OpDF 64 (i.e., 1963-64). Originally plotted in 72°09' S, 95°33' W, it has since been replotted.

Barrett Nunataks. 79°20' S, 81°24' W. A group of nunataks on the E side of Dott Ice Rise, overlooking Constellation Inlet, in the Heritage Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Peter Barrett (q.v.) geologist with the party. US-ACAN accepted the name in 1964.

Isla Barrientos *see* **Barrientos Island**

Barrientos Island. 62°24' S, 59°45' W. One of the Aitcho Islands, it lies NW of Cecilia Island (which is the most southerly of the group), 3.5 km NNW of Canto Point (which is on Livingston Island), and NE of Dee Island, from which it is separated by about 1000 m of water. Named Isla Barrientos by ChilAE 1948-49, while they were surveying English Strait. UK-APC accepted the name Barrientos Island, on March 31, 2004.

Barrier *see* **Ice Shelf**

Barrier Bay. 67°45' S, 81°15' E. An open bay in the coastal angle formed by the coast and the W end of the West Ice Shelf, in the E part of Prydz Bay, at the W end of the Leopold and Astrid Coast, and in the vicinity of the Chelyuskintsy Ice Tongue. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946 by Norwegian cartographers, who named it Barrierevika (i.e., "barrier bay"), because of its proximity to the West Ice Shelf (the old name for an ice shelf was "barrier"). ANCA accepted the name Barrier Bay on Aug. 20, 1957, and US-ACAN followed suit in 1961.

Barrier Cache. 78°30' S, 164°00' W. A point on the W side of the Bay of Whales where the *Eleanor Bolling* unloaded supplies in Feb. 1929, for ByrdAE 1928-30. Named by Byrd. It was connected to the Kit Carson Trail out of Little America (*see also* **Barnum Trail**). It is gone, now that the Bay of Whales re-configured. However, it does appear in the 1958 NZ provisional gazetteer.

Barrier Island. 68°26' S, 78°23' E. An island, 0.8 km long (the Australians say 1.5 km), elongated N-S, just N of the entrance to Tryne Fjord, in Tryne Sound, at the N end of the Vestfold Hills. Photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers working from these photos in 1947. First visited in April 1957 by Bruce Stinear's ANARE sledging party, and so named by them because the island seemed to form a barrier to the passage of icebergs up Tryne Fjord. ANCA accepted the name on April 29, 1958, and US-ACAN followed suit in 1965.

Barrier Slope. 77°48' S, 166°47' E. The slope where the land descends to the Ross Ice Shelf, near Castle Rock, at Hut Point, on Ross Island. It appears in the 1958 NZ provisional gazetteer.

Barrier Wind Phenomenon. The barrier wind develops when a stable air stream blows against a mountain barrier, which causes strong mountain-parallel winds. Werner Schwerdtfeger identified it in 1970 in Vol. 14, "Climates of Polar Regions" of the *World Survey of Climatology* (Ed. H.E. Landsberg — Elsevier Science Publishers, Amsterdam). Schwerdtfeger was an authority on Antarctic meteorology and died in Jan. 1985.

Barrierevika *see* **Barrier Bay**

Islote Barrios *see* **Barrios Rocks**

Barrios Rock *see* **Barrios Rocks**

Barrios Rocks. 63°19' S, 57°57' W. A group of 3 small rocks in water, 1.5 km W of Toro Point, and 1.5 km SW of Kopaitic Island, in the Duroch Islands, W of Cape Legoupil, Trinity Peninsula, off the W coast of the Antarctic Peninsula. Charted as a single feature by ChilAE 1947-48, and named by them as Islote Ministro General Barrios Tirado, for General Guillermo Barrios Tirado (*see* **Distinguished visitors**), and it appears as such on a Chilean chart of 1948. It is also seen in its (slightly) abbreviated form of Islote Ministro Gral. Barrios Tirado. Even for the Chileans this was a mouthful, and it appears on a 1951 chart as Islote Barrios Tirado. Aerial photography by FIDASE in 1956-57 showed the feature to be 3 small rocks closely juxtaposed, yet, despite this discovery, it still appears on a 1959 Chilean chart as Islote Barrios T., and as Islote Barrios, in the Chilean gazetteer of 1974 (one presumes that the Chileans have named only the major of the 3 rocks, as they say it is a little islet, approximately 180 m in diameter). It appears on an American chart of 1963 as Barrios Rock, but US-ACAN accepted the name Barrios Rocks (in the plural) in 1964. UK-APC accepted the name Barrios Rocks, on Dec. 15, 1982, and it appears as such in the British gazetteer of 1986.

Islote Barrios Tirado *see* **Barrios Rocks**

Barron, Alexander *see* **USEE 1838-42**

Caleta Barros. 64 43 S, 62 10 W. A cove which opens to the SW of the peninsula that projects toward the NNW from the SE coast of Wilhelmina Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Capt. Ramón Barros González, skipper of the tanker *Maipo* during ChilAE 1952-53. The Argentines call it Caleta Esquitines.

Îles Barros *see* **Barros Rocks**

Isla Barros *see* **Alcock Island**

Punta Barros. 62°56' S, 60°36' W. A point which marks the N limit of Pendulum Cove, in Port Foster, Deception Island, in the South Shetlands. The *Maipo* conducted a hydrographic survey of Pendulum Cove during ChilAE 1958-59, and named this point for Capitán de navío Ramón Barros González, commodore on the expedition.

Rocas Barros *see* **Barros Rocks**

Barros Rocks. 65°17' S, 64°12' W. A group of rocks between the Berthelot Islands and the Argentine Islands (to the NW), 3 km SW of Cape Tuxen, off the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Îles Barros, for Capt. Barros Cobra, Brazilian naval officer at Rio, who helped the expedition. They appear as Barros Rocks on Rymill's 1938 chart of BGLE 1934-37, and as Rocas Barros on a 1946 Argentine chart (that is what the Argentines still call them). US-ACAN accepted the name Barros Rocks in 1950, and UK-APC followed suit on Sept. 8, 1953. They appear as such in the British

gazetteer of 1955. The feature was further charted by a team of Fids and RN Hydrographic Survey unit personnel between 1956 and 1958, and appears on British charts of 1958 and 1960. This feature appears in the 1974 Chilean gazetteer, as Rocas Barros.

Cabo Barrow *see* [1]**Cape Barrow**

Cap Barrow *see* [1]**Cape Barrow**

[1]**Cape Barrow**. 63°42' S, 61°43' W. A cape in the form of a steep cliff, it forms the N end of Hoseason Island, in the Palmer Archipelago. It appears in rough outline on an 1828 map prepared by R.H. Laurie (*see* **Laurie Island**), in London, based on the *Sprightly*'s expedition of 1824-25. Named by Henry Foster in 1828-31, during the *Chanticleer* Expedition, for Sir John Barrow (1764-1848), Secretary of the Admiralty, 1804-45, and founder of the Royal Geographical Society in 1830. It appears on the *Chanticleer*'s expedition chart of 1829, and on a British chart of 1839. It appears on de Gerlache's map of 1902 as Cap Barrow, and that is also what Charcot called it when he re-charted it during FrAE 1903-05. It appears on a Chilean chart of 1947, as Cabo Barrow, and also, as such, in their 1974 gazetteer. US-ACAN accepted the name Cape Barrow in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears on a British chart of 1962. In 1953 it appeared on an Argentine chart as Cabo Soler (*see* **Rho Islands** for the probable reason for this naming), and on one of their 1957 charts as Cabo Capitán Lafalce, but today, the Argentines tend to call it Cabo Barrow.

[2]**Cape Barrow**. 71°22' S, 169°17' E. The high N extremity of Flat Island, it marks the W side of the entrance to Robertson Bay, in Victoria Land. In Jan. 1840, Ross applied the name, for Sir John Barrow (see the other Cape Barrow, above), to a mainland cape. BAE 1910-13 mapped it where it is now. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

The *Barrowby*. A 182-ton whale catcher, launched in 1912, and belonging to the Southern Whaling and Sealing Company, she worked for the *Southern Queen* in Antarctic waters in 1922-23. Alf Skontorp was her gunner.

Barrows Isle *see* **Elephant Island**

Barry *see* **Barry Island**

Isla Barry *see* **Barry Island**

Islote Barry *see* **Barry Island**

Barry, George Patrick John Bounal. b. March 18, 1906, Chertsey, Surrey, son of Edward John Barry. He was an ex-RAF radio officer, and had traveled extensively in India, when he joined FIDS in 1947, as a radio operator. He married Bettie Vickerstaff in Colchester just before sailing south on the *John Biscoe* from Tilbury, on Dec. 19, 1947, and wintered-over as base leader at Port Lockroy Station in 1948. He did only one year, and then quit, to return to England to see his first son, John, who had been born while George was on the ice (he would have four more children after that). This raised a few eyebrows (not to mention resentments) among other Fids. On his return to England, he worked for Marconi. He died on Dec. 9, 1972, in Colchester, Essex.

Barry Hill. 85°10' S, 174°44' W. An ice-free hill, just W of the mouth of LaPrade Valley, about 1.5 km NNW of Mount Kenyon, in the Cumulus Hills. Named by US-ACAN in 1965, for Lt. Richard P. Barry, USN, communications officer at McMurdo during OpDF I (i.e., 1955-56), OpDF II (i.e., 1956-57), the winter of 1957, and OpDF III (i.e., 1957-58). NZ-APC accepted the name on Nov. 16, 1965.

Barry Island. 68°08' S, 67°07' W. The central of the Debenham Islands, immediately SW of Barbara Island, between the extreme NE of Millerand Island and the Fallières Coast, in Marguerite Bay, off the W coast of Graham Land. It does not appear on Charcot's 1908-10 expedition chart. Charted in Feb. 1936 by BGLE 1934-37, who used this island as their southern base between Feb. 29, 1936 and March 12, 1937. Named by Rymill as Barry (that's it, just Barry), for Frank Debenham's eldest son, Kenneth Barry Lempriere Debenham (1920-1943; known as Barry). It appears as such on Rymill's 1938 map of the expedition. It appears as Barry Islet on a 1943 U.S. Hydrographic Office chart of 1943, but on their 1946 chart it is Barry Island, which it is also on British charts of 1947 and 1950. The BGLE hut was repaired by FIDS in 1946, but not re-occupied, and it was dismantled by the Argentines, who, on March 21, 1951, built their own station on the site, San Martín Station. UK-APC accepted the name Barry Island on Sept. 8, 1953, and US-ACAN followed suit. It appears on a 1949 Argentine chart as Islote Barry, and that is what the Argentines still call it (they also tend to call it Isla San Martín). It appears on a 1962 Chilean chart as Isla Barry, and as such in the 1974 Chilean gazetteer.

Barry Islet *see* **Barry Island**

Barry Jones Bay. 69°25' S, 76°03' E. Between Priddy Promontory and Stornes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Barry Owen Jones (b. 1932), minister responsible for Australian Antarctic matters, 1983-87.

Barsdell *see* **Bardsdell**

Mount Barsoum. 82°04' S, 88°07' W. Pointed and partly snow-free, on the W end of the Martin Hills. Positioned on Nov. 10, 1958, by the U.S. Ellsworth-Byrd Traverse Party, and named by US-ACAN in 1964, for Lt. Adib Hanna Barsoum, USN, (b. 1931, Egypt), medical officer at Ellsworth Station in 1959. He was later a neurosurgeon in Latrobe, Pa., and is now retired.

Barstadvika. 70°10' S, 2°27' W. A small bay in the Fimbul Ice Shelf, on the Princess Martha Coast. Named by the Norwegians.

Barsukov Seamount. 61°03' S, 29°12' W. An undersaea feature, immediately S of the Vinogradov Fracture Zone, E of the South Orkneys. The name was proposed by Dr G. D. Udintsev, of the Vernadsky Institute of Geochemistry, for Russian scientist Valeriy Leonidovich Barsukov (1928-1992) (also of VIG), and was approved internationally in June 1995.

Barter, Leland Lasater. They called him "Bart." b. Aug. 26, 1897, Evansville, Ind., but grew up in Kentucky, Colorado, and Kansas, son of dentist/real estate salesman William Easterbrook Barter and his wife Addie Lasater. He moved to New York City, where he got a job as an assembler at the Curtis Engineering Company, in Garden City. After World War I he returned to his parents' home in Eldorado, Kans., and at the rather advanced age of 29, joined the merchant marine, as a wiper, and took part, as ship's crew only, on ByrdAE 1928-30 and ByrdAE 1933-35. On the first one he was an ordinary seaman on the *Eleanor Bolling*, for the first half of the expedition, and then in 1929 he stepped up to 2nd assistant engineer, replacing Elbert Thawley. In between expeditions, he married Helen, and they lived in New York City. By the time of the 2nd expedition, he was living in McLeansville, Ill., and was assistant engineer on the *Bear of Oakland* from 1933 to 1934, and 1st assistant engineer on the *Jacob Ruppert* from 1934 to 1935. Then he went back to sea, as a 2nd assistant engineer. In other ways, too, he was rather unusual, in that he didn't smoke or drink, or chew tobacco, or carry matches, but he was a church-goer. He was living in Ludlow, Vt., when he died at Mount Holly, Vt., on Feb. 28, 1986.

Barter Bluff. 75°10' S, 114°00' W. A prominent rock bluff, 2.5 km W of Leister Peak, it forms part of the steep wall along the E side of Kohler Glacier, in the Kohler Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1978, for Leland L. Barter.

Barth Seamount. 63°00' S, 44°00' W. A submarine feature, just S of the South Orkneys. Named by the Russians.

Bartho, Lauritz. In 1942, while skipper of the *Cold Harbour*, he was torpedoed by a U-Boat. After World War II, he went to work for Salvesen, as a whaling captain, and was skipper of the *Southern Harvester*, in 1958-59.

Pico Bartholin *see* **Bartholin Peak**

Bartholin Peak. 67°17' S, 66°42' W. A conspicuous peak rising to about 2100 m, on the E side of Arrowsmith Peninsula, near the N end of the Boyle Mountains, on the Loubet Coast, on the W coast of Graham Land. Surveyed in 1957 by Fids from Base W. Named by UK-APC on July 7, 1959, for Danish physician, mathematician, and physicist Erasmus Bartholin (1625-1698), professor of medicine at the University of Copenhagen, 1657-98, the first man to write about snow crystals (in 1661). It appears on a British chart of 1961. US-ACAN accepted the name in 1964. It appears in the Argentine gazetteer of 1991, as Pico Bartholin.

[1]**Mount Bartlett**. 66°57' S, 51°07' E. A mountain, 5 km SE of Mount Storer, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956 and 1957. Named by ANCA for Allan J. Bartlett. US-ACAN accepted the name in 1965.

[2]**Mount Bartlett**. 84°56' S, 163°56' E. An ice-free mountain rising to 2560 m (the New Zealanders say 2398 m), 3 km NE of Mount Buckley, at the head of the Beardmore Glacier.

Discovered by Shackleton in 1908, during BAE 1907-09, and named by him for Sir Herbert Henry Bartlett (1842-1921; created 1st Baronet Bartlett in 1913), commodore of the Royal London Yacht Club, who assisted in fitting out the expedition. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Bartlett, Allan James. b. Jan. 7, 1912, Whitstable, Kent, son of George Bartlett and his wife Nellie Winifred Hadler. Pretty much all references to him give his name as Allan, but he was born Alan and died as Alan. He was the cook's mate on the *Discovery* for the first half of BANZARE 1929-31, and 2nd steward for the 2nd half. On July 31, 1934, he was received by the King at Cowes, on board the royal yacht *Victoria and Albert*, to receive his Polar Medal. He died in Merton, Surrey, in 1989.

Bartlett, David *see* **USEE 1838-42**

Bartlett Bench. 86°24' S, 152°18' W. A bare, flat, benchlike elevation overlooking Bartlett Glacier from the E, and 10 km SSW of Mount Ruth, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by the Scott Glacier Party of NZGSAE 1969-70, in association with the glacier. US-ACAN accepted the name in 1971.

Bartlett Glacier. 86°15' S, 152°00' W. A tributary glacier, about 50 km long, and 8 km wide at its terminus, flowing NE from Nilsen Plateau, and joining Scott Glacier close N of Mount Gardner, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd as Bob Bartlett Glacier, for Capt. Robert Abram Bartlett (1875-1946) of Brigus, Newfoundland, Arctic explorer who recommended the purchase of the *Bear of Oakland*. The name was later shortened, and that shortened name was accepted by US-ACAN in 1956.

Bartlett Inlet. 77°13' S, 156°40' W. A largely ice-filled inlet, about 24 km wide, indenting the N coast of Edward VII Peninsula, with Cape Colbeck forming its W fringe. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Lt. (later Capt.) Eugene F. Bartlett, USN, who wintered-over as officer-in-charge of Byrd Station in 1960.

Bartley Glacier. 77°32' S, 162°13' E. One of the 5 hanging glaciers on the S wall of Wright Valley, just W of Meserve Glacier, in Victoria Land. Named by OpDF III (i.e., 1957-58) for Ollie Barrett Bartley, 22-year-old construction driver 3rd class from Slaughters, Ky. (*see* **Deaths**, 1957). NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1962.

Bartók Glacier. 69°38' S, 71°00' W. A glacier, 11 km long and 5 km wide, flowing SW from the S end of the Elgar Uplands, in the N part of Alexander Island. First photographed aerially, on Feb. 1, 1937, by BGLE 1934-37, and roughly mapped from these photos. Mapped more accurately by Searle of the FIDS, in 1959-60, from aerial photos taken in Nov. 1947 by RARE 1947-48. Named by UK-APC on March 2, 1961, for the Hungarian composer Béla Bartók (1881-1945). It appears on a British chart of 1961. US-ACAN accepted the name later in 1961.

Punta Barton *see* **Barton Peninsula**

Barton, Colin Munroe "Dick." His nickname came from *Dick Barton*, the phenomenally successful — and very good — radio thriller of those golden days of yesteryear. b. Dec. 5, 1934, Newport, Monmouthshire. After graduating in geology and botany at University College, Cardiff, he joined FIDS on July 14, 1958, as a geologist. On his way to his base, he visited the Danco Coast with Peter Grimley, and then wintered-over at Base G in 1959 and 1960. In between winters, i.e., for the summer of 1959-60, he and Grimley worked in the Falkland Islands. In Feb. 1961 he returned to the UK, and his FIDS contract was extended so he could write his report and do research at the FIDS geology unit at Birmingham University, which is where he got his PhD in 1964. In 1962, in Birmingham, he married Patricia Hunt, and left FIDS on Dec. 31, 1963.

Barton Buttress. 62°04' S, 58°24' W. A buttress of Tyrrell Ridge, in the S part of Keller Peninsula, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1984, for Colin Barton (q.v.), who, in 1965, wrote a geological monograph on King George Island.

Barton Mountains. 85°02' S, 173°00' E. A group in Queen Maud Land, S of the Commonwealth Range and the Hughes Range, and consisting of Mount Usher, Graphite Peak, Tricorn Mountain, and Mount Clarke. The group is bounded by 4 glaciers — Keltie, Brandau, Leigh Hunt, and Snakeskin. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1963. Named by US-ACAN in 1989, for Lt. Cdr. Walter Hurt Barton, USN, officer in charge of the VXE-6 detachment at Beardmore South Camp, 1985-86. NZ-APC accepted the name on Nov. 16, 1989.

Barton Peninsula. 62°14' S, 58°44' W. A small peninsula separating Marian Cove from Potter Cove, on the NE side of Maxwell Bay, on King George Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and named by UK-APC on Feb. 12, 1964, for Colin Barton (q.v.), FIDS geologist here in 1959-61. US-ACAN accepted the name later that year. The Argentines call it Punta Barton. The British were the latest to re-plot this feature, in late 2008.

Bartrum Glacier. 79°44' S, 158°44' E. A small, steep, highly crevassed glacier in the Brown Hills, rising from the same névé as Foggydog Glacier, from which it is separated by Blank Peninsula, and flowing W between Bowling Green Plateau and Blank Peaks. Mapped by VUWAE 1962-63, and named by NZ-APC on July 16, 1964, for John Arthur Bartrum (1885-1949), professor of geology at the University of Auckland. US-ACAN accepted the name in 1965.

Bartrum Plateau. 83°06' S, 160°06' E. An ice- and snow-covered plateau, 17 km long and 10 km wide, on the E side of Marsh Glacier, to the W of Mount Bonaparte, in the Queen Elizabeth Range. It is separated from Cotton Glacier by the Princess Anne Glacier. Named by the Northern Party of NZGSAE 1961-62, for Prof. John A. Bartrum (*see* **Bartrum Glacier**). NZ-APC accepted the name on June 28, 1962, and US-ACAN followed suit in 1966. Originally plotted in 83°10' S, 159°55' E, it has since been replotted.

Barwick Valley. 77°21' S, 161°10' E. A dry valley N of Apocalypse Peaks, opening into Victoria Valley, in Victoria Land. Named by the New Zealanders in 1958-59 for Richard Essex "Dick" Barwick, summer biologist on the NZ party of BCTAE 1957-58, who worked here that season, and again, as deputy leader of VUWAE 1958-59. He later worked at the Australian National University, Canberra. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962. The valley was designated SSSI #3.

BAS *see* **British Antarctic Survey**

Basalt Lake. 62°39' S, 61°04' W. Located in one of 3 basalt outcrops, with "organ-pipe" formations in the rocks surrounding the lake, 1.9 km E of Usnea Plug and 1.5 km SE of Chester Cone, on Byers Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on Dec. 2, 1993.

Basalt Peak *see* **Haslum Crag**

Basalt Point. 62°08' S, 58°23' W. The SW tip of Point Hennequin, Admiralty Bay, King George Island, South Shetlands. Named by local scientists in 1977-78 after a basalt plug. It appears that way on Krzysztof Birkenmajer's 1980 map. The name was officially adopted by the Poles on Sept. 1, 1999.

Basaltbach. 62°10' S, 58°58' W. A little stream flowing into Bothy Bay, on the NW coast of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Basaltspitze *see* **Haslum Crag**

Basberg, Lorens R. b. 1895, Norway. He went to sea as a whaler in 1923, became a famous gunner, and was skipper of the *Torlyn*, 1932-33, in Antarctic waters. In 1944 he was skippering the *Ottern* in South Georgia waters.

Båsbolken *see* **Båsbolken Spur**

Båsbolken Spur. 71°54' S, 5°17' E. A rocky spur near the head of Tvibåsen Valley, between Svarthamaren Mountain and Breplogen Mountain, in the Mühlig-Hofmann Mountains of Fimbulheimen, in Queen Maud Land. It divides the upper valley into two equal parts. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Båsbolken (bås means "box"). US-ACAN accepted the name Båsbolken Spur in 1967.

Point Bascopé. 62°28' S, 59°40' W. It forms the extreme W tip of Ash Point, which in turn forms the extreme N of the SE side of the entrance to Discovery Bay, in Greenwich Island, in the South Shetlands. ChilAE 1947 made a very thorough charting of Discovery Bay, and

named Ash Point (q.v.) as Punta Teniente Bascopé, for 1st Lt. Juan Bascopé Guzmán, meteorologist with the expedition. As such it appears on Chilean maps until 1951, when the name was shortened to Punta Bascopé. The British, Americans and Argentines all had this feature as being the same as Ash Point (q.v.), but on March 31, 2004 UK-APC offically accepted the Chilean stance, that the two features are separate, and called it Point Bascopé. US-ACAN still calls this Ash Point, but they will, inevitably, accept the verdict of the UK. *See also* **González Island**.

Punta Bascopé *see* **Ash Point**, **Point Bascopé**

La Base *see* ***under*** **L**

Base A *see* **Port Lockroy Station**

Base B. 62°59' S, 60°34' W. Also known as Deception Island Station. British military station built in Feb. 1944, at Whaler's Bay, Port Foster, Deception Island, in the South Shetlands, by the personnel of Operation Tabarin, to guard British interests in the South Shetlands. This was the first ever permanent British station built in Antarctica. The Hektor Whaling Company had had a station there, and Base B used several of its buildings, including the dormitory which they converted into the main accommodation and office building, and which they called Bleak House. **Feb. 3, 1944**: The *William Scoresby* and the *Fitzroy* landed the Operation Tabarin personnel at Deception Island. **Feb. 7, 1944**: The base was completed. **1944 winter**: The first wintering-over party consisted of: William Flett (geologist and leader), Gordon Howkins (meteorologist and "medical officer"), Norman Layther (radioman), Jock Matheson (handyman), and Charlie Smith (cook). **Late Jan. 1945**: The winterers were relieved by the *William Scoresby*, the *Fitzroy*, and the *Eagle*. **Feb. 11, 1945**: The *Eagle* left Deception Island in order to establish the Hope Bay Station (Base D). **1945 winter**: Alan Reece (meteorologist and leader), Fram Farrington (radioman), Sam Bonner (handyman), and Charlie Smith (cook). It became a FIDS scientific station that July. **Jan. 14, 1946**: E.W. Bingham, the new FIDS leader, arrived on the *Fitzroy*, to relieve the 1945 winterers. **1946 winter**: John Featherstone (meteorologist and leader), Dennis Crutchley (radioman), Bert Reive (handyman), and Silas Newman (cook). **Sept. 8, 1946**: The station was destroyed by fire, and the men were forced to live in a hut on emergency supplies. **Jan. 5, 1947**: The *Trepassey* arrived with several new Fids aboard. Feeling that the British government had not been sufficiently concerned over their plight, Featherstone and Crutchley resigned. **Jan. 6, 1947**: The *Trepassey* left, and Stonehouse and Dick Butson, two of the new Fids, remained at Deception. **Jan. 19, 1947**: The *Trepassey* returned, and left the same day, with Featherstone and Crutchley aboard. They would go back to the Falklands. Stonehouse and Butson were left alone on Deception Island. **Jan. 21, 1947**: The *Iquique* paid a visit. **Jan. 22, 1947**: The *Iquique* left. **Jan. 28, 1947**: James Wordie arrived on the *Fitzroy*. Later that day the *Trepassey* arrived, with mail. **Jan. 29, 1947**: The *Patagonia* came to visit. A pleasant drinking session on the *Fitzroy* improved international relations. **Jan. 30, 1947**: The *Don Samuel* arrived for a visit, and she and the *Patagonia* left later that day. The *Trepassey* left even later, with Butson on board. **1946-47 summer**: Dr. Jimmy Andrew took over temporarily as base leader. The station was rebuilt later that year, when John Huckle was leader, and another old whaling dormitory was used for the same purpose Bleak House had been used for, and was named Biscoe House, after John Biscoe. The old Magistrate's Villa, which the Norwegians had used for the very purpose implicit in the name, was now used as a store. **1947 winter**: John Huckle (leader), Jack Ewer and Eric Massey (meteorologists), Edmund Cummings (radioman), and Frank Buse (handyman). **1948 winter**: Adrian Scadding (meteorologist and leader), Ted Gutteridge (meteorologist), Jimmy Knox (radioman), and Pat Biggs (handyman). **1949 winter**: Gordon Stock (meteorologist and leader), Jimmy Knox (radioman), Pat Peck and Bill Richards (handymen). **1950 winter**: Johnny Green (leader), Alex Hewat and Jock Walker (meteorologists), and Bill Calder (radioman). **1951 winter**: Ralph Lenton (leader), Eric Salmon and Nevil Walton (meteorologists), and Bill Calder (radioman). **1952 winter**: Dacre Stroud (meteorologist and leader), Ray Berry, Ben Ellis, and Roger Todd-White (meteorologists), Jock Christie (radioman), and Arthur Farrant (diesel electric mechanic). **1953 winter**: Ian Clarke (meteorologist and leader), John George and Frank Hall (meteorologists), Bernie Taylor (radioman), Arthur Farrant (diesel electric mechanic). **1954 winter**: George Hemmen (meteorologist and leader), Derek Parsons and Jim Shirtcliffe (meteorologists), Doug Mumford (radioman), John E. Smith (diesel electric mechanic). **1955 winter**: Pidge Palmer (radioman and leader), Richard Clark, Brian Gilpin, Bill McDowell, and Paul Phipps (meteorologists), and Ray Cooper (diesel electric mechanic). **Dec. 13, 1955**: The Hunting Lodge was built, to accommodate the employees of Hunting Aerosurveys Ltd., who were there to conduct aerial surveys as part of FIDASE 1955-57. At the end of their stay the hut became known as FIDASE Hut, and it became FIDS property. The station conducted meteorological studies during IGY. **1956 winter**: Percy Guyver (diesel electric mechanic and leader), Jim Fellows, Colin Johnstone, Len Maloney, and John P. Smith (meteorologists), and Jack Hill (radioman). **Jan. 1957**: The Duke of Edinburgh visited, in the *Britannia*. **1957 winter**: John Paisley (meteorologist and leader), Eddie Dagless, Paddy White, and John Witcombe (meteorologists), Colin Johnson (radioman), and Clem Clements (diesel electric mechanic). **1958 winter**: Eddie Dagless (meteorologist and leader), Ken Gibson, Peter Hodkinson, and John Witcombe (meteorologists), Peter Rowe and Vince O'Neill (radiomen), and Clem Clements (diesel electric mechanic). **1959 winter**: Peter Hodkinson (meteorologist and leader), Ian Jackson and Paul Woodall (meteorologists), Eric Jones and Peter Rowe (radiomen), and Mike Kershaw (diesel electric mechanic). **1960 winter**: Ian Jackson (meteorologist and leader), Roger Matthews, Brian Westlake, and Cliff Pearce (meteorologists), Fraser Whyte and Frank Fitton (radiomen), Mike Tween (diesel electric mechanic), Paddy English and Ron Lord (pilots), and Peter Bates and Tom Sumner (air fitters). **Dec. 1960**: Work began on the hangar. **Jan. 11, 1961**: The *Kista Dan* arrived with an Otter airplane. **Jan. 12, 1961**: The *Kista Dan* left for Base G. **1961 winter**: John Killingbeck (leader), Dave Baron, Jim Ferrar, and Graham Kyte (meteorologists), Chris Lehen (radioman), Dave Tegerdine (diesel electric mechanic), Ben Hodges (general assistant), Bob Bond and Ron Lord (pilots), and Roy Brand and Tom Sumner (air fitters). **March 1962**: an aircraft hangar was completed. **1962 winter**: Ricky Chinn (leader), Mike Cousins, Graham Kyte, and Brendan Lynch (meteorologists), David Bridgen and Ron Lewis (radiomen), Terry Tallis (diesel electric mechanic), M.J. Byrne and Joe Sutherland (carpenters), Bob Bond and Warren Lincoln (pilots), and Roy Brand and Ken Boulter (air fitters). **1963 winter**: Brendan Lynch (meteorologist and leader), Harry Ashworth and Alec Bottomley (meteorologists), Willie Gilchrist and Ron Lewis (radiomen), John Tait (diesel electric mechanic), David Blair and George Stutt (pilots), and Geoff Barrett and William Pennock (air fitters). **1964 winter**: Len Mole (meteorologist and leader), Charles Howie and Mike Warr (meteorologists), John Leigh and Don Parnell (radiomen), Jim Wilson (diesel electric mechanic), Flight Lt. Bill Mills and Flight Lt. Edward Skinner (pilots), and Geoff Barrett and Mac McDermott (air fitters). **1965 winter**: Twiggy Walter (meteorologist and leader), Peter Bird and Bernie Chappel (meteorologists), Bill Geddes (radio operator), Geoff Hodson (diesel electric mechanic), Julian Brett (pilot), and Hugh Field and Mac McDermott (air fitters). **Jan. 1966**: A plastic accommodation building known as Priestley Building (after Ray Priestley) was built. **1966 winter**: Twiggy Walter (meteorologist and leader), John Barlow and Phil Myers (meteorologists), Mike Whitbread (radio operator), Graham Jones (diesel electric mechanic), Michael Purbrick (carpenter), Flight Lt. Bob Burgess (pilot), and Roy Brand and Alf Coggles (air fitters). **1967 winter**: Phil Myers (meteorologist and leader), Shaun Norman (meteorologist), Nicol McLaren (radioman), Graham Seear (diesel electric mechanic), Flight Lt. John Ayers and Flying Officer Robert Vere (pilots), and David McLoughlin and Raymond Perren (air fitters). **Dec. 5, 1967**: The station was temporarily evacuated after volcanic eruptions, and personnel were taken off on the Chilean ship *Piloto Pardo*. **Dec. 4, 1968**: Occupation was resumed. **Feb. 21, 1969**: Further eruptions destroyed parts of the buildings, and the *Piloto Pardo* came in again to take off the personnel. **Feb. 23, 1969**: They came back to get their personal possessions, and the station was abandoned. The old whaling station next to it is now partially buried under mud and volcanic

ash, as is the Whaler's Graveyard, where Arthur Farrant of FIDS was buried on Nov. 17, 1953 after he committed suicide. **1990-91**: BAS began cleaning up the site. **1991-92**: BAS finished cleaning up the site. **May 19, 1995**: It became Historic Site #71.

Base Ballvé *see* **Ballvé Refugio**

Base Beach. 62°38' S, 60°22' W. Local name for the main beach of four beaches that go to form Bulgarian Beach, in the E part of Livingston Island, in the South Shetlands. It is partly occupied by Grand Lagoon, which is formed by Rezovski Creek. Dinghies can come in here, through the shallow waters, from ships supplying St. Kliment Ohridski Station.

Base Belgrano *see* **General Belgrano Station**

Base Brown *see* **Almirante Brown Station**

[1]**Base C.** 60°41' S, 44°34' W. Also known as Cape Geddes Station, and Station C. British scientific station established by FIDS at Cape Geddes, on Ferguslie Peninsula, Laurie Island, in the South Orkneys. **Jan. 18, 1946**: The base was started. **Jan. 21, 1946**: The base was ready for occupation. There was already a (never used) Base C on Sandefjord Bay and that one was redesignated Base P, leaving the way clear for the new Base C, to conduct surveying and meteorology. The hut was named Cardinall House, for Sir Alan Cardinall, Governor of the Falklands that year. **1946 winter**: Mac Choyce (leader), Edmund Cummings (radioman), Derry Nicholson and Billy Watson (handymen). **1946-47 summer**: Jack Ewer was there that summer (in Jan.-March 1947). **March 17, 1947**: The station closed, to make way for the new Base H (*see* **Signy Island Station**), and all personnel were transferred there. Base C has been used periodically since by the Argentines from Órcadas Station as a bird hide and field refuge.

[2]**Base C** *see* **Base P**

Base Cámara *see* **Teniente Cámara Station**

Base Corbeta Uruguay *see* **Corbeta Uruguay Station**

Base D. 63°24' S, 56°59' W. Also called Hope Bay Station. British military base built by personnel of Operation Tabarin, on a rock surface 82 m above sea level at Hope Bay, Trinity Peninsula, the very northernmost part of the Antarctic continent. **Feb. 7, 1944**: The British tried to establish this base as the main base for Tabarin, but sea-ice conditions prevented the unloading of supplies from the ship. **Feb. 12, 1945**: The *Eagle* transported the personnel to Hope Bay. **Feb. 13, 1945**: Work began on the construction of the new station, also called Hope Bay Station and Station D, the hut to be known as Eagle House. It was the third ever permanent British station in Antarctica (*see* **Base B** and **Port Lockroy Station**). **1945 winter**: Andrew Taylor (surveyor and leader), Finkle Flett (geologist), Ivan Mackenzie Lamb (botanist), Freddy Marshall (zoologist), Eric Back (surgeon and meteorologist), Vic Russell (surveyor), Taff Davies (handyman and scientific assistant), David James (surveyor), Tommy Donnachie (radio operator), Tom Berry (stores), Jock Matheson (handyman and bosun), Chippy Ashton (carpenter), Johnny Blyth (cook). After the war was over it became a FIDS station, and the missions of Base D became surveying, geophysics, meterology, glaciology, geology, and human and dog physiology. **June 22, 1945**: The *Hope Bay Howler* (q.v.) appeared. **Jan. 14, 1946**: The *William Scoresby* reached Base D on her 2nd attempt, to relieve the winterers. **1946 winter**: Vic Russell (surveyor and leader), Jimmy Andrew (medical officer), Bill Croft (geologist), Alan Reece (meteorologist), John Francis (surveyor), Stuart Small (radio telegraphist), Dick Wallin (handyman), and Tom O'Sullivan (assistant). **1947 winter**: Frank Elliott (leader), Ray Adie (geologist), Mac Choyce (meteorologist), Michael Roberts (medical officer), John Francis (surveyor), Jimmy Smith, Dick Wallin, and Derry Nicholson (handymen). **1948 winter**: Frank Elliott (leader), Dick Burd (meteorologist), Mike Green (geologist), Brian Jefford and Stephen McNeile (surveyors), John O'Hare (radio telegraphist), Bill Sladen (medical officer). **Nov. 8, 1948**: Eagle House was destroyed by fire (as were Messrs Burd and Green). The station personnel had, for some time, been hanging Tilly lamps on two bolts sticking out of the wooden building, and despite warnings that the wood was being singed, they kept up the practice, until the house burned down. Trinity House would eventually replace Eagle House. **Feb. 4, 1949**: The station closed. **Early 1952**: When Fids attempted to land at Hope Bay from the *John Biscoe* to re-open Base D, they were repulsed by the Argentines (*see* **Wars**). **Feb. 4, 1952**: FIDS re-established their base after the Argentine fracas, when Trinity House was re-located to a new position. **1952 winter**: George Marsh (leader and medical officer), Alan Coley, Brian Hunt, Brian Kemp, Murdo Tait, and Max Unwin (meteorologists), Bob Stoneley (geologist), David Stratton and Ken Blaiklock (surveyors), Pete King (radioman), and Ernest Hill (diesel electric mechanic). **1953 winter**: George Marsh (leader and medical officer), Alan Coley, Geoff Brookfield, Brian Kemp, and Murdo Tait (meteorologists), John Standring (geologist), Ken Blaiklock and David Stratton (surveyors), Pete King (radioman), Ken Powell (diesel electric mechanic). **1954 winter**: Bill Turner (medical officer and leader), Geoff Brookfield, Ian Clarke, Joe Lewis, Ron Mottershead, and Alan Precious (meteorologists), John Standring (geologist), Dick Kenney and Norman Leppard (surveyors), Julian Taylor (dog physiologist). **1955 winter**: Bill Anderson (leader and meteorologist), Joe Lewis, Phil Mander, Alan Precious, Murdo Tait, and Ron Worswick (meteorologists), Paul Massey (medical officer), Dick Kenney and Norman Leppard (surveyors), Julian Taylor (dog physiologist), Don Willis (radioman), and Derek Clarke (diesel electric mechanic). **1956 winter**: Ron Worswick (meteorologist and leader), Laurie Catherall, George Larmour, John Noble, Pat Thompson, and Dick Walcott (meteorologists), Hugh Simpson (medical officer), Jim Madell and Wally Herbert (surveyors), Ken Hill (radioman), Derek Clarke (diesel electric mechanic), Bill Nicholls (general assistant and mountain climber). **1957 winter**: Lee Rice (surveyor and leader), Ken Brown, Colin Johnstone, Mike Reuby, Pat Thompson, Roger Tufft, and Dick Walcott (meteorologists), Hugh Simpson (medical officer), Wally Herbert (surveyor), Sam Blake and Harry Dangerfield (radiomen), John Walsh (diesel electric mechanic). **1957-58**: During IGY the station conducted primarily meteorological studies. **1958 winter**: Don McCalman (surveyor and leader), Fritz Koerner, Mike Reuby, Mike Rhodes, Tony Richardson, Roger Tufft, Denis Wildridge, and Paul Woodall (meteorologists), Selwyn Bibby (geologist), Noel Allan (medical officer), Sam Blake and Harry Dangerfield (radiomen), and John Walsh (diesel electric mechanic). **1959 winter**: Don McCalman (surveyor and base leader), Allan Gill, Fritz Koerner, Len Maloney, Mike Rhodes, Tony Richardson, and Denis Wildridge (meteorologists), John Ashley (geophysicist), Selwyn Bibby (geologist), Neil Orr (medical officer), Ian Hampton (physiologist), Chris Brading, Bill Murray, and Tony Hanson (surveyors), John Cheek and Ted Clapp (radiomen), Chris Souter (diesel electric mechanic), Keith Allen and Ron Tindal (general assistants and mountain climbers). **1960 winter**: Neil Orr (medical officer and leader), Dave Baron, Ian Fothergill, Jim Smith, Bill Tracy, and John Winham (meteorologists), Adrian Allen (geophysicist), Phil Nelson (geologist), Chris Brading, Neil Aitkenhead, and Dick Harbour (surveyors), Ian Hampton (physiologist), John Cheek (radioman), Bill Mitchell (diesel electric mechanic), Keith Allen, Ron Miller, and Ron Tindal (general assistants and mountain climbers). **1961 winter**: Ian Fothergill (meteorologist and leader), John Winham and Dick Wright (meteorologists), Adrian Allen (geophysicist), Neil Aitkenhead and Phil Nelson (geologists), Rob Catty (medical officer), Tony Edwards and Dick Harbour (surveyors), John Cheek (radioman), John Collings (builder), George White (diesel electric mechanic), Mike Smith and Noel Downham (general assistants). **1962 winter**: Ian Fothergill (leader), Mike Cox (geophysicist), Dave Elliot and Mike Fleet (geologists), Tony Edwards (surveyor), Roger Robson (radioman), Jim Franks, Georgie McLeod, and Mike Wilkinson (general assistants and mountain climbers). **1963 winter**: Noel Downham (leader), Rod Walker (meteorologist), John Mansfield (geophysicist), Roger Robson and Charlie Le Feuvre (radiomen), Mike Smith (general assistant), Mike Wilkinson (general assistant, mountain climber, and diesel electric mechanic). **Feb. 13, 1964**: The station closed. **Dec. 8, 1997**: It was transferred to Uruguay, and became Teniente Ruperto Elichiribehety Station.

Base Decepción *see* **Decepción Station**

Base E. 68°11' S, 67°00' W. British scientific base in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Also known as Stonington Island Station, Marguerite Bay Station, or as Station E. It is not pronounced Stonington, as one would expect, but "stonnington." **1944-45**: The personnel of Operation Tabarin

were going to build a new base on Stonington Island, but Jimmy Marr, the operation leader, postponed it. **Feb. 24, 1946**: Building was begun by E.W. Bingham and his FIDS crew on Stonington Island, in Marguerite Bay, 250 yards south of the old USAS East Base (FIDS used the old East Base buildings over the years—"Passion Flower Hotel," "Jenny's Roost," and "Finn Ronne"). **March 13, 1946**: The base was completed. The main building was called Trepassey House, after the ship that brought them there. **1946 winter**: E.W. Bingham (leader), Ken Butler (radioman), J.J. Joyce (geologist), Stewart Slessor (medical officer), Willoughy Salter (meteorologist), Reg Freeman and Dougie Mason (surveyors), Mike Sadler, John Tonkin, and Kevin Walton (general assistants). **Feb. 5, 1947**: The *Trepassey* arrived, with an Auster airplane aboard. **Feb. 12, 1947**: The *Don Samuel* arrived for a visit. **Feb. 14, 1947**: Razzle, the dog, was found dead. **Feb. 20, 1947**: The *Iquique* came by for a visit. Much drinking. **March 2, 1947**: Butson and Tonkin left base on a reconnaissance sledging trip of the glaciers on the east coast of Graham Land. **March 31, 1947**: The *Fitzroy* and the *Trepassey* arrived. **April 5, 1947**: The *Trepassey* and the *Fitzroy* left. **April 12, 1947**: The last flight of the Auster for the season. **April 14, 1947**: Butson and Tonkin returned to base. **April 19, 1947**: Several of Ronne's party came over for dinner. Much drinking. **April 28, 1947**: Hugh, the dog, died. **1947 winter**: Ken Butler (leader and meteorologist), Dougie Mason (surveyor), Dick Butson (medical officer), Kenny McLeod (meteorologist), Tommy Thomson (pilot), Dave Jones (aircraft mechanic), Terry Randall (radio telegraphist), Kevin Walton (engineer), John Tonkin (navigator, who wound up as deputy leader), Reg Freeman (surveyor), Bernard Stonehouse (meteorologist and biologist). **June 1, 1947**: Finn and Jackie Ronne came over for tea. **July 22, 1947**: The Auster airplane flew. **Feb. 22, 1948**: Vivian Fuchs arrived on the *John Biscoe* to relieve Ken Butler. **1948 and 1949 winters**: Vivian Fuchs (leader and geologist), Ray Adie (geologist), Ken Blaiklock and Colin Brown (surveyors), David Dalgliesh (medical officer), John Huckle and Bob Spivey (general assistants), Dave Jones (air fitter), Bernard Stonehouse (meteorologist), Terry Randall (radioman), Pat Toynbee (pilot). **Oct. 22, 1948**: Fuchs, Huckle, Adie, and Brown set out on a sledging expedition. **Jan. 20, 1949**: The sledging party returned, having covered 940 miles in 90 days, and getting as far south as 71°35' S. **March 30, 1949:** The *John Biscoe* made one last attempt to push through the ice to get to the men, but relief was impossible at the end of their stint. Consequently they were forced to winter-over again in 1949. This made an unprecedented 3rd winter for 5 of the men, and Randall and Stonehouse became sick. **Oct. 11, 1949**: The *John Biscoe* sailed from Southampton. **Dec. 3, 1949:** The *John Biscoe* reached Deception Island. **Jan. 30, 1950**: Peter Borden St. Louis, a Canadian pilot, flew in from the Argentine base 200 miles in his Norseman amphibian aircraft and landed about 8 or 10 miles from the stranded FIDS team, in a fjord, to which Stonehouse, Randall and Huckle rowed in a small boat. Also on the plane was FIDS secretary (SecFIDS) Ken Butler, and he rowed back to base with Huckle as Stonehouse and Randall were flown to the Argentine base, just making it before the fog closed them out. There, waiting for them, was Sir Miles Clifford, governor of the Falklands, on board the *John Biscoe*. The *Bigbury Bay* was on hand too, for insurance. **Feb. 6, 1950**: The 2 other three-year boys were taken off. **Feb. 10, 1950**: Fuchs and his 5 remaining companions were finally flown out of the base. **Feb. 12, 1950:** The *John Biscoe* left for home, and the base was closed. **March 16, 1950**: Randall, Stonehouse, and Jones arrived in London. Base E was discontinued as a year-round base (until then it had been the only and first permanently inhabited settlement in Antarctica). For a few years it carried on as a summer-only station, but was then abandoned. **March 6, 1958**: After repeated tries to get through the pack-ice, the *John Biscoe* finally arrived at Base E. They found the old station iced over, with a foot of ice on the floors of the main building. **March 9, 1958**: The base was re-opened, with new buildings, in time for some participation in IGY. **1958 winter**: Peter Gibbs (surveyor and leader), Arthur Hoskins and Nigel Procter (geologists), Peter Forster (surveyor), Henry Wyatt (physiologist and medical officer), Brin Roberts (radioman). **March 7, 1959**: It was closed again, because the ice was so bad the ship couldn't get in. **Aug. 14, 1960**: It was opened again by Fids who had sledged in from Base Y. All they found when they got there was the stove pipe of the chimney. The rest had been covered. This was a week before Base Y closed, and Base E became the center for field work in the area of the southern Antarctic Peninsula. **March 4, 1961**: The main hut was re-sited, and re-built as FIDS' first two-story building (unnamed) on Antarctica. **1961 winter**: John Cunningham (leader), Roger Matthews and Brian Wigglesworth (meteorologists), Arthur Fraser (geologist), Brian Sparke (medical officer), Howard Chapman and Bob Metcalfe (surveyors), Tony Quinn (radioman), Mike Tween (diesel electric mechanic), Bill Tracy (general assistant), Bryan Bowler (general assistant and tractorman). **1962 winter**: John Cunningham (leader), Bob Metcalfe and Ivor Morgan (surveyors), Willie Gilchrist (radioman), Jim Wilson (diesel electric mechanic), Ian McMorrin and Ben Hodges (general assistants), Jon Clennell (general assistant and mountain climber), Bryan Bowler and Ron Gill (general assistants and tractormen). **1963 winter**: Jon Clennell (leader), Peter Kennett (geophysicist), Mike Fleet, Ralph Horne, and Tony Marsh (geologists), Dave Beynon (dentist), Sam Blake (radioman), Ben Hodges, Ian McMorrin, and Ron Tindal (general assistants), Georgie McLeod (general assistant and mountain climber). **1964 winter**: Noel Downham (leader), Geoff Renner (geophysicist), Garik Grikurov, Tony Marsh, and Guy Stubbs (geologists), Sandy Muir (medical officer), John Cheek (radioman), Tony Schärer, James Steen, and Ed Thornton (general assistants), David Vaughan (general assistant and tractorman). **1965**: A single-story extension was added. **1965 winter**: Mike Cousins (leader), Keith Holmes, Dave Matthews, and Mike Thomson (geologists), Neil Marsden and Tony Rider (surveyors), Don Parnell (radioman), David Vaughan (diesel electric mechanic), James Gardner, James Steen, John Tait, Ed Thornton, and David Todd (general assistants). **1966 winter**: Terry Tallis (leader), Keith Holmes, Dave Matthews, and John Ross (geologists), Dick Boulding and Neil Marsden (surveyors), John Noel (radioman), Alec Bottomley (diesel electric mechanic), Ken Doyle, Dennis Horley, and John Noble (general assistants), Tom Allan (general assistant and tractorman). **1967 winter**: Alistair McArthur (base commander), Lawrence Willey (geologist), Dick Williams (medical officer and bacteriologist), Dick Boulding and Derek Postlethwaite (surveyors), Chris Madders (radioman), John Collings (carpenter), Walt Dawson (diesel electric mechanic), Robert England, Dennis Horley, and John Noble (general assistants), Georgie McLeod (general assistant and mountain climber). **1968 winter**: Alistair McArthur (base commander), Ian Flavell-Smith (geophysicist), Lawrence Willey (geologist), Michael Holmes (medical officer and physiologist), Derek Postlethwaite, Mike Fielding, and Phil Wainwright (surveyors), Chris Madders (radioman), William Keith (diesel electric mechanic), Jack Donaldson, Shaun Norman, and Ian Sykes (general assistants), Ken Doyle (general assistant and explosives man). **1969 winter**: Shaun Norman (base commander), Mike Burns and Ian Flavell-Smith (geophysicists), Peter Rowe and Alexander Skinner (geologists), Paul Bentley and Mike Fielding (surveyors), Tony Feenan (radioman), William Keith (diesel electric mechanic), Tony Bushell, Jack Donaldson, Ian Sykes, Ernest Sheldon, Brian Gargate, and Mick Pawley (general assistants). **1970 winter**: Tony Bushell (base commander), Mike Burns and Peter Butler (geophysicists), Thomas Davies, Alexander Skinner, and Alistair Linn (geologists), Paul Bentley and Timothy Christie (surveyors), Ron Smith (radioman), John Newman (diesel electric mechanic), Henry Blakley, Neil MacAllister, Mick Pawley, James Woodhouse, and Steve Wormald (general assistants). **1971 winter:** Phil Wainwright (base commander), Malcolm McArthur (geophysicist), Nicholas Culshaw, Thomas Davies, and Bob Wyeth (geologists), Michael Holmes (physiologist and medical officer), Timothy Christie and Paul Gurling (surveyors), Nick Meades (radioman), William Keith (diesel electric mechanic), Rob Collister, Paul Finigan, Brian Hill, Neil MacAllister, Miles Mosley, Drummy Small, and James Woodhouse (general assistants). **Jan. 27, 1972**: Another extension was added. **1972 winter**: Mick Pawley (base commander), Malcolm McArthur and Neil McNaughton (geophysicists), Dave Singleton and Bob Wyeth (geologists), Paul Gurling and John Yates (surveyors), Nick Meades (radioman), Brian Hudson (diesel electric mechanic), Alistair

Thomson (builder), Paul Finigan, Brian Jones, Miles Mosley, Drummy Small, and Graham Wright (general assistants), Denis McConnell (general assistant and dentist). **1973 winter**: Steve Wormald (base commander), Adrian Almond and Peter Butler (geophysicists), Fergy Anckorn, Dave Singleton, and Chris Edwards (geologists), Bob Bostelmann (veterinary officer), John Yates and Roger Scott (surveyors), Chris Walker (radioman), Malky Macrae and John Newman (diesel electric mechanics), Tony Gannon (builder), Dave Burkitt, Eric Lawther, and Neil MacAllister (general assistants). **Jan. 1974**: Trepassey House, which had become a derelict liability, was burned down. **1974 winter**: Graham Wright (base commander), Bernard Care, Chris Edwards, and Fergy Anckorn (geologists), Richard Barrett and Roger Scott (surveyors), Paul Kirby (radioman), Stephen Wellington (diesel electric mechanic), Tony Gannon (builder), Dog Holden and Chris Knott (general assistants). **Feb. 23, 1975**: The station finally closed, and was later used for emergency and summer work only. **1991-92**. The site was cleaned up by BAS. **May 19, 1995**: It became Historic Site #64.

Lóbulo de la Base Española *see* **Española Glacier**

Base Esperanza *see* **Esperanza Station**

Base F *see* **Faraday Station**

Base G. 62°05' S, 58°25' W. Also called Admiralty Bay Station, and Station G. British scientific station on Martel Inlet, on the Keller Peninsula, in Admiralty Bay, King George Island, in the South Shetlands. **Jan. 1947**: The site was reconnoitered. **Jan. 18, 1947**: A small wooden hut and a Nissen hut were built. **Jan. 25, 1947**: The new base was opened. **March 23, 1947**: Construction work finished, and the new station was vacated. **Jan. 18, 1948**: It was established as a permanent meteorological station, when the first builders arrived — Pat Davis and Ian Biggs, who arrived on the *Snipe*. **Feb. 14, 1948**: The new FIDS wintering-over team arrived on the *John Biscoe*. **Feb. 16, 1948**: A second wooden hut was built. **1948 winter**: Eric Platt (geologist and leader), Jack Reid (meteorologist), Dennis Farmer (radioman), Ian Biggs and Pat Davis (handymen). **Nov. 10, 1948**: Eric Platt died. *See* **Platt, Eric** for the circumstances. It was a tough winter. One man went snow blind. Another fell down a crevasse when he went looking for Platt and Reid, but was not hurt (again, *see* **Platt, Eric** for details). **Jan. 28, 1949**: A third hut, Sparrow House (named after the *Sparrow*, which brought it in), was erected, 300 yards south of the second hut. **1949 winter**: Geoff Hattersley-Smith (glaciologist and leader), Brian Jefford (surveyor and deputy leader), J.H. Chaplin (meteorologist), Dan Jardine (geologist), Ralph Lenton (radioman), and Ken Pawson (general assistant). **Dec. 9, 1949**: The *John Biscoe* arrived at 6.20 A.M. **Dec. 13, 1949**: The *John Biscoe* left, with Hattersley-Smith, Chaplin, and Jefford aboard. Ralph Lenton was sworn in as new base leader (for the summer only). **1950**: The second hut was removed, and re-erected at Signy Island Station. **March 24, 1950**: John Kendall replaced Ralph Lenton as leader. **1950 winter**: John Kendall (radio operator and leader), Alan Burton and Roy Crampton (meteorologists), Joe Gallacher (handyman). **1951 winter**: Ken Gooden (leader), Alan Burton, Phil Mander, and Roger Todd-White (meteorologists), Tommy Burgess (radioman). **1952 winter**: Bill Meehan (radioman and leader), Fred Burns, Joe Lewis, and Tony Vernum (meteorologists), Reg Edwards (diesel electric mechanic). **1953 winter**: Ron Worswick (meteorologist and leader), Roger Banks and George Hemmen (meteorologists), Jeffrey Turnbull (radioman), Barry Golborne (diesel electric mechanic). Arthur Farrant had arrived to take over as diesel electric mechanic and base leader, but the lads didn't want him. So Worswick became leader by popular acclaim. **1954 winter**: John George (meteorologist and leader), Graham Rumsey and Ron Tapp (meteorologists), Rick Nalder (radioman), Barry Golborne (diesel electric mechanic). **1955 winter**: John Noble (meteorologist and leader), Graham Rumsey and Norman Hedderley (meteorologists), Graham Davis (radioman), John Pearce (diesel electric mechanic). **Jan. 6, 1956**: Another hut was built. **March 24, 1956**: Ron Napier (q.v.) died (*see* **Deaths**, 1956). **1956 winter**: Colin Clement (diesel mechanic and leader), Eric Broome, Ken Brown, and Roger Tufft (meteorologists), Mike Royle (radioman), Arthur Shewry (general assistant and carpenter). **1957 winter**: Alan Precious (meteorologist and leader), Dick Hillson and Robin Stephens (meteorologists), Hugh Noble (glaciologist), Graham Davey (surveyor), Geoff Monk and Peter Bunch (radiomen), Adrian Wensley Walker (diesel electric mechanic). **1957-58**: During IGY, meteorology and glaciology were studied. **1958 winter**: Robin Stephens (meteorologist and leader), Tink Bell, Jim Franks, and Allan Gill (meteorologists), Graham Davey (surveyor), Geoff Monk (radioman), Chris Souter (diesel electric mechanic). **April 23, 1959**: Alan Sharman died after a fall. **1959 winter**: Mike Stansbury (glaciologist and leader), Tink Bell, Ken Gibson, and Russell Thompson (meteorologists), Dick Barton (geologist), Jeff Stokes (surveyor), Barry Williamson (radioman), Evan Watson and Jim Wilson (diesel electric mechanics). **July 26, 1959**: Tink Bell fell down a crevassse and died. **1960 winter**: Mike Kershaw (diesel electric mechanic and leader), Noel Downham, Jim Ferrar, Nev Jones, and Dick Wright (meteorologists), Dick Barton (geologist), Joe Elliot (radioman), Jim Wilson (diesel electric mechanic). **Jan. 12, 1961**: The *Kista Dan* arrived. **Jan. 19, 1961**: The station closed. **July 1995**: Official demolition of the site was begun by Brazilian personnel from Comandante Ferraz Station. **Feb. 1996:** The demolition was completed. Only the concrete foundations remain.

Base Gurruchaga *see* **Francisco de Gurruchaga Refugio**

Base H *see* **Signy Island Station**

Base J. 66°00' S, 65°24' W. Also called Graham Coast Station, and (after it had closed) Prospect Point Station. British IGY station built on a rock surface 10 m above sea level at Ferin Head, Prospect Point, at the W end of what is now called Velingrad Peninsula, on the W coast of Graham Land. **Feb. 1, 1957**: The men arrived to open the station. **Feb. 2, 1957**: The station opened. **1957 winter**: Ron Miller (leader and general assistant), David Chalmers (meteorologist), Robin Curtis (geologist), Bryan Holmes and Fred Wooden (surveyors), and Arthur Rumbelow (radioman). Surveying and geology were its missions, and meteorology was studied during IGY. Robin Curtis broke his ankle during the winter. **1958 winter**: Georgie McLeod (leader, general assistant, and mountain climber), Tony Hanson and John Martin (surveyors), Peter Catlow (radioman), Kenny Kenyon (general assistant). **Mid-April 1957**: The hut was ready for occupation. **March 14, 1958**: The new *John Biscoe* came to relieve the winterers. **Feb. 23, 1959**: The station closed, when local work was completed. The letter J was originally intended for a station on Alexander Island in the 1948-49 season, but it was never built.

Base Jubany *see* **Jubany Station**

Base K. The designation for a British scientific station to be set up on Snow Hill Island or on Joinville Island, in the 1948-49 season, but it was called off when sea-ice prevented access. The term Base K, or Station K, was used for a while to signify Fossil Bluff Station, which became operative in 1961, but generally its letters have become KG.

Base K *see also* **Fossil Bluff Station**

Base KG *see* **Fossil Bluff Station**

Base Livingston *see* ***under*** **L**

Base Marambio *see* **Vicecomodoro Marambio Station**

Base Marret *see* **Marret**

Base Matienzo *see* **Teniente Matienzo Station**

Base Melchior *see* **Melchior Station**

Base N. 64°46' S, 64°05' W. Also called Arthur Harbour Station, and Anvers Island Station, as well as Station N. British scientific station built on a rock surface 5 m above sea level by the personnel of the *Norsel* in 1955, at the NW corner of Arthur Harbour, on Anvers Island, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula (now it is on Amsler Island, that island having been formed in 2005, when Marr Ice Piedmont receded). Its mission was surveying and geology. **Feb. 27, 1955**: The station was occupied. **1955 winter**: Peter Hooper (geologist and leader), Bill Hindson and Jim Rennie (surveyors), John Canty (radioman), Doug Litchfield (general assistant and mountain climber), Arthur Shewry (general assistant and carpenter). **1956 winter**: Peter Hooper (geologist and leader), Dennis Kershaw and Pete Wylie (surveyors), John Bull (diesel electric mechanic), Len Harlow and John Thompson (general assistants and mountain climbers). **Jan. 1957**: The Duke of Edinburgh arrived (*see* **Philip, Prince**, and **The *Britannia***), and the lads shook his hand, gave him a sledge ride, and took him to a bird colony. **1957 winter**: John Thompson

(leader, general assistant and mountain climber), John Ketley and Pete Wylie (surveyors), Brian Foote (radioman), Georgie McLeod (general assistant and mountain climber). **Jan. 10, 1958**: The station closed, when local work was completed. It was not an IGY station. **July 2, 1963**: The hut was loaned to the US. **Jan. 1965**: The U.S. converted it into a biological laboratory for use at Palmer Station. **1969**: Base N opened again, with its skiway being used as a support air facility. **Dec. 28, 1971**: The base was destroyed by fire, while BAS were renovating it. The skiway remained open. **1973**: The skiway finally deteriorated, air operations being transferred to Adelaide Station. However, N's skiway remained open intermittently. **1990-91**: The station was destroyed and the debris was removed by USAP. Only the concrete foundations remain. **Nov. 15, 1993**: The skiway was finally closed down.

Base O. 64°44' S, 62°36' W. British scientific station, also called Danco Coast Station, Danco Island Station, Paradise Harbour Station, and Station O. Built by FIDS personnel off the *Shackleton* in 1956, on Danco Island, in Errera Channel, off the Danco Coast, on the W coast of Graham Land. The original plan had been to build the hut on Brabant Island, but they could not find a suitable site. **Feb. 26, 1956**: The station was ready. **March 2, 1956**: The station was officially opened. It would conduct survey and geological programs. **1956 winter**: Dick Foster (leader and general assistant), Brian Bayly (geologist), John Ketley and Fred Wooden (surveyors), Pidge Palmer (radioman), and Les Harris (general assistant and carpenter). **1957 winter**: Dick Foster (leader and general assistant), Graham Hobbs (geologist), Dave Evans and Dennis Kershaw (surveyors), Ray McGowan and Vince O'Neill (radiomen). **1958 winter**: Duncan Boston (leader, general assistant and mountain climber), Graham Hobbs (geologist), Dave Evans (surveyor), Eric Jones (radioman), and Jim Malden (diesel electric mechanic). It was not an IGY station. **Feb. 22, 1959**: The station closed, when local work was completed. It is still used occasionally by various countries' Antarctic programs.

Base Órcadas *see* **Órcadas Station**

[1]**Base P**. 60°37' S, 46°02' W. British scientific station at Moreton Point, on Sandefjord Bay, Coronation Island, in the South Orkneys. The hut was built on Feb. 19, 1945. This was the original Base C (Station C), but it was never occupied, there being insufficient personnel at the time. A year later a new base was built at Cape Geddes and called Base C, so the Sandefjord station became known (to history) as Base P (or Station P, or Sandefjord Bay Station). It was visited on Sept. 6, 1950, but had gone by Feb. 1, 1955, probably blown away.

[2]**Base P**. 62°40' S, 61°00' W (approx.). A temporary British mobile camp, also known as Station P, or Livingston Island Station, ready on Dec. 29, 1957, for use by field parties on Livingston Island for surveying, geology and biology. Normally a letter would not have been assigned to it, being a camp, but the original intention had been to build a hut. The *Shackleton* sustained a hole driven into her when transporting the hut, and pieces of the hut were used to repair the ship. It was closed on March 15, 1958. It was located at the head of what would (much later) be called Mateev Cove.

Base Petrel *see* **Petrel Station**

Base Primavera *see* **Primavera Station**

Base R *see* **Rothera Station**

Base Ridge. 69°23' S, 76°23' E. Just E of Law Base, in the Larsemann Hills, it shelters the base from strong winds, and is a haven for breeding snow petrels. Named by ANCA on Nov. 24, 1987. The Chinese call it Dongtaiping Shan.

Base San Martín *see* **San Martín Station**

Base Sobral *see* **Sobral Station**

Base T. 67°46' S, 68°55' W. Also known as Adelaide Island Station, and Station T. FIDS (then BAS) scientific base at the SW tip of Adelaide Island. **Feb. 2, 1961**: The Fids arrived to open the base. **Feb. 3, 1961**: The FIDS station was opened, as Base T, with the mission of surveying, glaciology, geology, and meteorology. This site was chosen over Rothera Point as it had a better skiway and less sea-ice to hinder supply by ship. The original building was called Stephenson House, after Alfred Stephenson. **1961 winter**: Frank Preston (surveyor and leader), Alan Crouch (meteorologist), Graham Dewar (geologist), Alan Wright (surveyor), Frank Fitton (radioman), and Hugh McCallum (general assistant and mountain climber). **March 1962**: An additional hut was built, Rymill House, named for John Rymill. **1962 winter**: Graham Dewar (geologist and leader), Rorke Bryan, Harry Leckie, and Stan Woolley (meteorologists), Dave Nash and Alan Wright (surveyors), Edward Smith (radioman), Dave Hounsell (diesel electric mechanic), Fred Gibbs, John Killingbeck, and Brian Nixon (general assistants). **June 7, 1962**: The British officially re-named it Adelaide Station—"Adelaide" for short. **Jan. 1, 1963**: The garage at Fossil Bluff Station was brought over and re-erected at Adelaide as a separate accommodation hut named Hampton House, after Wilfred E. Hampton. **1963 winter**: Harry Leckie (meteorologist and leader), Rorke Bryan, Mike Cousins, Stan Woolley (meteorologists), Ivor Morgan and Dave Nash (surveyors), Bill Geddes (radioman), Ken Lambert (diesel electric mechanic), Ron Gill and Dick Palmer (general assistants and tractormen), Jim Shirtcliffe (general assistant and builder), and Fred Gibbs (general assistant). **1964 winter**: John Cunningham (leader), Harry Ashworth, Kenn Back, Alec Bottomley, Roger Owen, Brian Smith (meteorologists), Mike Thomson, Michael Ayling, Ralph Horne, Julian Pagella (geologists), Edward Armstrong and Tony Rider (surveyors), Michael Rice (medical officer), Bill Geddes (radioman), John Tait (diesel electric mechanic), Jim Common (general assistant and stores), Dick Palmer (general assistant and tractorman), David Todd, James Gardner, and Bill Smith (general assistants), and Ken Darnell (cook). **1965 winter**: Len Mole (meteorologist and leader), Kenn Back, Roger Owen, and Mike Warr (meteorologists), Tom Davies (physiologist and medical officer), John Noel (radioman), George Green (diesel electric mechanic, general assistant, and tractorman), Jim Common (general assistant and stores), and Tom Miller (cook). **1966 winter**: George Green (leader, general assistant, and tractorman), Peter Bird, Bernie Chappel, Paul Hay, and Fred Wilkinson (meteorologists), Neil McLaren (radioman), and Tom Miller (cook). **March 3, 1967**: A plastic accommodation building was established. **1967 winter**: Alec Bottomley (base commander), John Barlow, David Salter, Rod Ledingham, and Fred Wilkinson (meteorologists), David Darroch (radioman), Frank Meeds (diesel electric mechanic, general assistant, and tractorman), John Beard (general assistant and tractorman), David Bowen (builder), and Bryan Gibson (cook). **1968 winter**: Don Parnell (base commander and radioman), Ernest Sheldon and Ian Willey (meteorologists), Michael Elliott (geologist), Frank Meeds (diesel electric mechanic), David Bowen (builder), John Collings (carpenter), Alastair McKeith (general assistant), Dave Rinning (general assistant and tractorman), and Bryan Gibson (cook). **1969 winter**: Ian Willey (base commander and meteorologist), Martyn Bramwell, Bill Taylor, and Steve Wormald (meteorologists), Terry Allen (physiologist and medical officer), David Snell and Bob Davidson (radiomen), Barrie Whittaker (diesel electric mechanic), Henry Blakley and Dave Hill (builders), Ian Curphey and Rod Pashley (general assistants), John Newman (general assistant and tractorman), and Richard Bird (cook). **1970 winter**: Richy Hesbrook (base commander), Kenn Back, Robin Chambers, Edwin Mickleburgh, and Richard Scoffom (meteorologists), Charles Bell (geologist), Alan Milne (physiologist and medical officer), Chris Walker (radioman), Dick Walker (diesel electric mechanic), Rod Pashley (general assistant), and Richard Bird (cook). **1971 winter**: Richard Scoffom (meteorologist and base commander), Kenn Back and Adrian Apps (meteorologists), Ron Smith (radioman), David Williams (diesel electric mechanic), Paul Burton (builder), and Robert Cook (cook). **1972 winter**: Frank Lines (diesel electric mechanic and base commander), Colin Kynaston, Max Merson, and Roger Wilkins (meteorologists), Steve Vallance (physiologist and medical officer), Mike Jozefiak (radioman), Ron James (builder), and Al Wearden (cook). **1973 winter**: Kevin Roberts (base commander), Keith Avery, Ian Taylor, and Roger Wilkins (meteorologists), Chris Andrews (physiologist and medical officer), Mike Jozefiak (radioman), Gordon Ramage (general assistant and tractorman), and Jon Barker (cook). **1973-74 summer**: Steve Wormald (base commander). **1974 winter**: Kevin Roberts (base commander), Clive Jackman, John Killick, and Ian Taylor (meteorologists), Adrian Almond and Barry Dikstra (geophysicists), Alistair MacLeod (medical officer), Mike Harris (radioman), John Carter (diesel electric mechanic), Steve Wroe (builder), Ian Henderson and Simon Hobbs

(general assistants), and Ian Bury (cook). **1974-75 summer**: Steve Wormald (base commander). **1975 winter**: Ernest Sheldon (base commander), Clive Jackman (meteorologist and physicist), Anthony Lipscomb (medical officer), Mike Harris (radioman), David Bravington (diesel mechanic), Robin Davies (tractor mechanic), Ian Henderson, Chris Knott, and Dog Holden (general assistants), and Alan McManus (cook). **1975-76 summer**: Steve Wormald (base commander). **1976 winter**: Robin Davies (mechanic and base commander), Montague Hadley (medical officer), Ric Airey (radioman), William Park (diesel mechanic), Tony Salmon (tractor mechanic), Rick Atkinson, Trevor Phillips, and Michael Chantrey (general assistants), and David Ball (cook). **March 1, 1977**: The station was closed, primarily because its skiway had deteriorated (crevasses). Its functions were taken over by Rothera Station, which had opened the year before. **Aug. 14, 1984**: Chile took it over as Teniente Carvajal Station. **Jan. 1985**: It began a new life as a summer station.

Base V. 63°32' S, 57°23' W. Also called View Point Station, and Station V. British scientific base on View Point, in Duse Bay, on Trinity Peninsula, with missions of surveying, geology and meteorology. Built as a satellite hut between Dec. 1952 and March 1953 by FIDS personnel from nearby Base D at Hope Bay, occupied by the builders from Feb. 8, 1953, and opened officially on May 11, 1953. It was occupied semi-permanently by scientific personnel from June 3, 1953 to Nov. 1953, again from Jan. 1955 to Nov. 1955, and then intermittently until Nov. 25, 1963. A second hut was built on March 20, 1956, principally by Dick Kenney, but also helped by Jim Madell, George Larmour, Wally Herbert, and Bill Nicholls. They called it "the Seal-catchers Arms," or View Point Hut. It was occupied intermittently until Nov. 25, 1963. On July 29, 1996 it was transferred to Chile, and took the name General Ramón Cañas Montalva Station. On Sept. 11, 1997 its name was changed to General Jorge Boonen Rivera Station.

Base W. 66°52' S, 66°48' W. British scientific station, also known as Detaille Island Station, Loubet Coast Station, and Station W, it was situated on Detaille Island, in Lallemand Fjord, off the Loubet Coast of the Antarctic Peninsula. **Feb. 21, 1956:** The base, known as Base W or Loubet Coast Station, was selected by FIDS surveyors off the *John Biscoe*. The men lived in tents for 7 weeks until the hut was completed. *See* **Detaille Island** for a note on the naming of the island. **1956 winter**: Tom Murphy (surveyor and leader), Eric Salmon and John Thorne (meteorologists; Salmon was 2nd-in-command of the base), Hedley Wright (geologist), Mike Orford (surveyor), David Moore (radioman), Ray Cooper (diesel electric mechanic), and Ron Miller (general assistant and mountain climber). There was a refuge hut built nearby in early 1957, Orford Cliff Refuge (q.v.). **Jan. 1, 1957**: The famous tennis match played by the visiting Crawford Brooks and Ray Priestley, and even Prince Philip (see **The *Britannia***, and **Tennis**). **Feb. 8, 1957**: The new *John Biscoe* arrived to take Ron Miller to Prospect Point. **March 3, 1957**: The new *John Biscoe* arrived with the 1957 wintering-over crew. **1957 winter**: Angus Erskine (surveyor and leader), Bill McDowell, John P. Smith, and John Thorne (meteorologists), Denis Goldring (geologist), Henry Wyatt (physiologist and medical officer), Jim Madell (surveyor), Ossie Connochie (radioman), Frank Oliver (diesel electric mechanic), and Martyn Scarffe (general assistant and mountain climber). It conducted surveying and geology, and, during the first part of IGY, meteorological studies, until it closed later in 1957. However, it soon re-opened. **1958 winter**: Brian Foote (surveyor and leader), Robin Perry, Paddy White, and Jim Young (meteorologists), Denis Goldring (geologists), John Graham (medical officer), John Rothera (surveyor), Colin Johnson (radioman), and Frank Oliver (diesel electric mechanic). When Stride, Black, and Statham disappeared from Base Y in late May 1958, four men from Base W formed a team to look for them. The team of 4 were: Dick Hillson and Jim Young (met men), John Rothera (surveyor), and Frank Oliver (mechanic). They never found the 3 lads, but Hillson was seconded to Base Y for the rest of the winter, to make up the short crew over there. **March 31, 1959**: When time came to relieve the station, the ship couldn't get in through the very thick pack-ice, so the American cutter *Northwind* came in as far as she could, which was about 40 miles from Base W. The 1958 winterers (including Dick Hillson, who was now back at Base W) formed 2 sledges and 2 dog teams, and sledged the distance across the ice, and with the aid of massive searchlights sweeping the ice from the great icebreaker, they sledged right up to the ship. A helicopter flew some of the incoming boys (including Dr. Alec Cumming) in to the base, and there they stayed for a few days, tidying up, killing off some of the dogs, and then were helicoptered back to the *Northwind*. Even then, getting out was a slow business, but finally the *Northwind* took them all to the *John Biscoe* (the new *John Biscoe*, that is), and from there the boys made it to Port Stanley. It was decided, after this run-in with the ice, to close the station. Base W was also called Loubet Coast Station until late 1959, when it became generally known as Detaille Island Station (it couldn't have been known as Detaille Island Station while it was operating for the simple reason that the name Detaille Island didn't come into existence until July 7, 1959). The site was cleaned up by BAS in 1996-97.

Base Y. 67°49' S, 67°17' W. British scientific station established in 1955 in Bourgeois Fjord, on Horseshoe Island (it is sometimes referred to as Horseshoe Island Station), in Marguerite Bay, off the coast of the Antarctic Peninsula, by FIDS personnel off the *Norsel*. **March 11, 1955**: The base opened. Ken Gaul (leader). **1955 winter**: Ken Gaul (leader), Brian Kemp, Trevor Vine-Lott, and Dick Taylor (meteorologists), Jim Exley (geologist), Gordon Farquhar (radioman), and Don Atkinson (diesel electric mechanic). **1956 winter**: Derek Searle (surveyor and leader), David Chalmers, Frank Ryan, Cecil Scotland, and Trevor Vine-Lott (meteorologists), Jim Exley (geologist), Malcolm Evans (medical officer), Geoff Cumming (general assistant), Gene Donnelly (radioman), and Don Atkinson (diesel electric mechanic). **1957 winter**: Percy Guyver (diesel electric mechanic and leader), Jim Fellows, George Larmour, and Len Maloney (meteorologists), Nigel Procter (geologist), Peter Gibbs and John Rothera (surveyors), Sandy Imray (medical officer), and Brin Roberts (radioman). **1957-58**: During IGY, meteorological studies were conducted. **1958 winter**: John Paisley (meteorologist and leader), Stan Black, Dick Hillson, Dave McDowell, and Dave Statham (meteorologists), Keith Hoskins (geologist), Ray McGowan (radioman), and Geoff Stride (diesel electric mechanic). Actually Hillson was seconded to Base Y from Base W only after Stride, Black, and Statham disappeared (*see* **Base W**, 1958, and **Deaths**, 1958). **1959 winter**: Robin Perry (meteorologist and leader), Jim Franks and Malcolm Hunt (meteorologists), Keith Hoskins (geologist), Gordon Mallinson (radioman), and Jim Malden (diesel electric mechanic). **1959-60 summer**: The *Kista Dan* arrived with the new party aboard. They couldn't get in because of the ice, and had to be flown in from the ship. They couldn't carry much. All they had in the way of comfort was one bottle of beer, a third of gin, and some liqueur. **1960 winter**: Peter Forster (surveyor and leader), Peter Grimley (geologist), Tony Davies (medical officer), and Charlie Le Feuvre (radioman). Russell Thompson was to have been base leader, but he never made it to the base. **Aug. 21, 1960**: The base closed, and the personnel transferred to Base E on Stonington Island. **March 7, 1969**: The base re-opened briefly, as Station Y, in order to complete local survey work. **July 11, 1969**: The base closed for good, although in the 1960s it was sometimes used by BAS personnel from Rothera Station. **March 1995**: BAS personnel from Rothera Station cleaned it up. **May 19, 1995**: Along with Blaiklock Island Refuge (q.v.), the base was designated Historic Site #63 under the terms of the Antarctic Treaty. **March 1997**: Building conservation work on this site was begun.

Base Z *see* **Halley Bay Station**

Basecamp Valley. 73°30' S, 94°22' W. A small, ice-filled valley at the W side of Avalanche Ridge, in the Jones Mountains. Mapped and named by the University of Minnesota Jones Mountains Party of 1961-62, who established a base camp, Camp Minnesota (q.v.) just N of the mouth of this valley. US-ACAN accepted the name in 1963.

Baseline Nunataks. 70°46' S, 67°01' E. A small group of nunataks, about 1700 m above sea level, and rising about 30 m above the surrounding plateau ice, 8 km S of Mount McKenzie, along the S face of the Aramis Range, in the Prince Charles Mountains. Bill Bewsher's ANARE Southern Party visited them in Jan. 1957. The nunataks formed the E end of a photo baseline (with Mount Hollingshead as the W

end), hence the name given by ANCA on July 22, 1957. US-ACAN accepted the name in 1962.

Baseline Rock. 67°36' S, 62°44' E. A small, isolated rock, or islet, partially ice-covered in winter, between Nøst Island and the Flat Islands, in Holme Bay, about 7 km W of Mawson Station. Photographed aerially by LCE 1936-37, and mapped from these photos by Norwegian cartographers in 1946. Later so named by ANCA because the rock was used as one end of the baseline of a 1959 ANARE triangulation of the area conducted by Chris Armstrong. US-ACAN accepted the name in 1965.

Basen. 73°20' S, 13°24' W. The northernmost massif in the Kraul Mountains, in New Schwabenland. Name means "the leader" in Norwegian. It is actually the NE end of the feature the Norwegians call Kraulberga (*see* **Kraul Mountains**).

Bases. *See also* Scientific stations. Some of the older bases are now covered over by drifting snows, or the ones built on ice shelves have left the continent and disappeared on icebergs. Certainly in the case of the Antarctic Peninsula, where so many Chilean, British, and Argentine bases exist(ed), it seems that today the prime raison d'être is one of military intelligence rather than science.

The *Bashkiriya*. Soviet passenger liner built in 1964, that took part in the following Antarctic expeditions: 1973-75 (Capt. Yevgeniy K. Balashov), 1976-78 (Capt. Kim Nikolayevich Loskutov), 1977-79 (Capt. Stanislav Ivanovich Rodin), 1978-80 (Capt. Loskutov), 1979-81 (Capt. Loskutov), 1980-82 (Capt. Rodon), 1981-83 (Capt. Loskutov), and 1982-84 (Capt. Viktor Fedorovich Belousov).

Nunatak Bashnja. 71°02' S, 11°10' E. A fairly isolated nunatak (Nunatak Igla is its closest companion), S of the Schirmacher Hills, on the Princess Astrid Coast. Named by the Russians.

Gora Bashnja Vetrov *see* **Wignall Peak**

Basil Halls Island *see* **Snow Island**

The *Basile*. French yacht, skippered by Alain Caradec (b. 1951), which took the Italian expedition led by Marco Morosini to Adelaide Island, the South Shetlands and the Antarctic Peninsula in 1984-85.

Basilica Peak. 70°02' S, 159°20' E. A granite peak rising to 1810 m, 4 km SE of Mount Gorton, in the S part of the Wilson Hills, in Oates Land, in Victoria Land. Mapped by USGS in 1962-63, and also by NZGSAE 1963-64, and named by the latter for its shape. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit later that year.

Basilisk Crag. 62°28' S, 60°08' W. A serrated crag, trending NE in a linear fashion at an elevation of about 70 m above sea level, in the NE part of Livingston Island, in the South Shetlands. It resembles, in a way, the shape of a lizard, and this was what inspired the name, after the basilisk, the mythical king of the serpents (the one you don't want to get stared at by). Named by UK-APC on Dec. 12, 1997. US-ACAN accepted the name in 1998.

Basin Lake. 76°09' S, 161°55' E. The largest of the lakes found on the Mawson Oasis, just E of Mount Murray, N of Mawson Glacier, in the Prince Albert Mountains, in Victoria Land. Named descriptively by NZGSAE 1962-63. NZ-APC accepted the name on Jun 27, 1963.

Basissletta. 72°17' S, 3°36' W. A small, gently-sloping, ice-covered plain between Pyramiden Nunatak and Stamnen Peak, or between Viddalen Valley and Schytt Glacier, near the SW end of Ahlmann Ridge, and between that ridge and the Borg Massif, in Maudheimvidda, the W part of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken by NBSAE 1949-52, and named by them ("the base-line plain"). US-ACAN accepted the name without modification in 1966.

Bass, Joseph *see* **USEE 1838-42**

Bass Rock *see* **Eden Rocks, Baldred Rock**

Arrecifes Basso *see* **Basso Island**

Islote Basso *see* **Basso Island**

Basso Island. 62°30' S, 59°44' W. A small island linked by a mainly submerged spit to the SW shore of Discovery Bay, near Labbé Rock, Greenwich Island, in the South Shetlands. During the extensive charting of Discovery Bay by ChilAE 1946-47, it was named by them as Islote Crucero, after 1st corporal Juan Basso Crucero, of the Chilean Navy, chief storekeeper on the *Iquique* during the expedition. The spit part was called Arrecifes Basso. It appears as such on a Chilean map of 1947. On a 1951 Chilean chart, the island is called Islote Basso, and the spit is not named. A similar situation occurred on a 1961 Chilean chart, except that the island is called Islote Cabo Basso. The island was charted again by an RN Hydrographic Survey unit in Jan. and Feb. 1964. The British had been calling it Basso Island, and it appears as such on a British chart of 1968. UK-APC accepted that name on Nov. 3, 1971, and it appears as such in the British gazetteer of 1974. US-ACAN also accepted that name, in 1972.

Bastei *see* **Mount Bastei**

Mount Bastei. 71°22' S, 13°32' E. A prominent buttress-, or bastion-type mountain, rising to 2460 m, 3 km W of Mount Mentzel, in the Gruber Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. GermAE 1938-39 discovered and photographed it aerially, and Ritscher named it Bastei (i.e., "bastion"). The Norwegians call it Bastionen (which means "the bastion"). US-ACAN accepted the name Mount Bastei in 1970.

Bastien Glacier *see* **Union Glacier**

Bastien Range. 78°50' S, 86°00' W. A mountain range of moderate height, extending for 60 km in a NW-SE direction, flanking the SW side of Nimitz Glacier and the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 1969, for Thomas W. Bastien (b. March 1933. d. July 4, 2010), geologist, leader of the helicopter-supported University of Minnesota Geological Party here in 1963-64. He had been to the Ellsworth Mountains in 1961-62 with the Camp Minnesota team.

Mont Bastin *see* **Mount Bastin**

Mount Bastin. 72°32' S, 31°15' E. Rising to 2000 m, 1.5 km N of Mount Perov, in the Belgica Mountains. Discovered by BelgAE 1957-58 led by Gaston de Gerlache, and named by him as Mont Bastin, for Frank Bastin. US-ACAN accepted the name Mount Bastin in 1965.

Bastin, Félix E. "Frank." b. Nov. 26, 1920, Belgium. He escaped to Britain in 1942 and became a captain in the Belgian section of the RAF, as a meteorologist. He helped the scientific preparation for BelgAE 1957-58, during IGY, and led the wintering-over party at Roi Baudoin Station in 1959 and 1960. In 1959 he became chief of operations at the Centre National de Récherches Polaires de Belgique. He died on Oct. 6, 1969, after a car crash.

Bastion. 62°13' S, 58°28' W. A hill between Tower Glacier and Windy Glacier, in Admiralty Bay, King George Island, in the South Shetlands. Named descriptively by the Poles in 1984.

Gora Bastion. 70°42' S, 66°30' E. A nunatak in the Prince Charles Mountains. Named by the Russians.

Le Bastion *see* ***under* L**

Mount Bastion. 77°19' S, 160°29' E. Rising to 2530 m at a point where the interior ice plateau meets the Willett Range, in Victoria Land. It stands W of Webb Glacier, and to its N is an icefall descending from the interior ice plateau to feed the glacier. This feature is separated from Gibson Spur, also to its W, by an ice-free hanging valley. Named by VUWAE 1959-60, for its buttress-like appearance. NZ-APC accepted the name, and US-ACAN followed suit in 1964.

Pico Bastión *see* **Bastion Peak**

Bastion Hill. 79°50' S, 158°19' E. A prominent ice-free feature, rising to 1490 m, at the extremity of a tongue of land that projects some distance southward into Darwin Glacier just E of Touchdown Glacier, in the Brown Hills. Descriptively named by the Darwin Glacier Party of BCTAE 1956-58. NZ-APC accepted the name on May 24, 1961, ANCA followed suit on Nov. 24, 1961, as did US-ACAN in 1965.

Bastion Peak. 66°10' S, 63°35' W. An ice-capped peak, rising to 1612 m, with rocky exposures on its S and E sides, at the head of Cabinet Inlet, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially by RARE 1947-48. Surveyed by Fids from Base D in Dec. 1947, charted by them, and so named by them because it forms a buttress or bastion to the plateau escarpment W of Morrison Glacier. UK-APC accepted the name on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears on a British chart of 1954, and in the British gazetteer of 1955. It appears on a 1957 Argentine chart as Pico Bastión, a name the Chileans also use.

Bastionen *see* **Mount Bastei**

Ensenada Basullo. 62°30' S, 59°42' W. A little inlet that forms the E part of Kitchen Point, 9 km SW of Harmony Point (the W extremity of Nelson Island), in the South Shetlands. Named by ChilAE 1946-47 as Ensenada Mecánico Basullo, after Warrant Officer mechanic Abraham Basullo, of the Chilean Navy, who was on the *Iquique* during this expedition. In 1951 the name was shortened.

Mount Basurto. 76°56' S, 160°42' E. An ice-free mountain rising to 2000 m, at the S end of Noring Terrace, in the Convoy Range of Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Juan T. Basurto, USARP cargo specialist at McMurdo for 21 summers between 1986 and 2007. NZ-APC accepted the name on April 7, 2008.

Baszta. 62°13' S, 58°28' W. A peak between Bastion and Blue Dyke, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles.

Batak Point. 63°03' S, 62°39' W. The point on the NW coast of Smith Island, 7 km NNE of Cape James, in the South Shetlands. Mapped by the Bulgarians in 2008, and named by them on Sept. 4, 2008, after the town of Batak, in southern Bulgaria.

Batchelor, Henry *see* **USEE 1838-42**

Bateman, David *see* **USEE 1838-42**

Isla Bates *see* **Bates Island**

Bates, James Gordon "Jim." b. 1925, Morrinsville, NZ. Engineer, skier, inventor, and yachtsman, he served in World War II, and went to the South Pole with Hillary during BCTAE 1956-58. He was the diesel electric mechanic at Scott Base in 1957-58.

Bates, Peter Charles. He joined FIDS in 1959, as an air frame fitter, and wintered-over at Base B in 1960.

Bates Glacier. 74°13' S, 163°51' E. A small tributary glacier flowing N from the W side of Mount Queensland into the W side of Campbell Glacier, just N of Mills Peak, in Victoria Land. Named by the Northern Party of NZGSAE 1965-66 for D.R. Bates, field assistant with the party that year. NZ-APC accepted the name on April 19, 1966, and US-ACAN followed suit later that year.

Bates Island. 65°49' S, 65°38' W. A narrow island, almost 5 km long, 5 km E of Jurva Point on the SE coast of Renaud Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956, and first shown accurately on an Argentine chart of 1957, but apparently not named until July 7, 1959, when UK-APC named it for Charles Carpenter Bates (b. 1918), American oceanographer specializing in sea ice studies, and chief scientist with the U.S. Coast Guard, 1968-79. As such it appears on a British chart of 1960. It appeared on a 1963 Chilean map as Isla Videla, named probably for Jorge Videla Cobo, director of the Naval Academy, June 23, 1944-April 8, 1948, and it appears as such again in the 1974 Chilean gazetteer. US-ACAN accepted the name Bates Island in 1971. It appears in the 1991 Argentine gazetteer, as Isla Bates.

Bates Nunatak *see* **Bates Nunataks**

Bates Nunataks. 80°15' S, 153°30' E. Three small isolated nunataks in the névé of Byrd Glacier, 30 km W of Vantage Hill, in the Britannia Range, below the crest of the Polar Plateau, in Marie Byrd Land. Discovered by the Darwin Glacier Party of BCTAE 1956-58. At first thought to be one small nunatak, rising to 1991 m above sea level, and named Bates Nunatak by NZ-APC on May 24, 1961, for Jim Bates. ANCA accepted that name on Nov. 24, 1961, and US-ACAN followed suit. It was later re-defined, and the new name, Bates Nunataks, was accepted by US-ACAN in 1966. However, it still appears in the (2009) NZ gazetteer in the singular.

Bates Peak. 69°35' S, 72°48' W. Rising to about 600 m, it is the westernmost peak on Rothschild Island (5 km W of the NW coast of Alexander Island). Photographed aerially by OpHJ 1946-47, and again in Nov. 1947, by RARE 1947-48. Using the RARE photos, Searle of the FIDS mapped this mountain in 1959-60, plotting it in 69°35' S, 72°55' W. In 1970-71 it was surveyed from the ground by BAS personnel from Fossil Bluff. Named by US-ACAN for Cdr. Lawrence O. Bates, of the U.S. Coast Guard, executive officer on the *Edisto* during OpDF 69 (i.e., 1968-69). UK-APC accepted the name on June 11, 1980. It has since been replotted.

Bates Point. 70°43' S, 166°47' E. An ice-covered point forming the N side of the entrance to Yule Bay, along the N coast of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Lt. Thomas R. Bates, USN, flight surgeon and medical officer at McMurdo in 1964.

Bathurst Island *see* **Ford Island**

Battenberg Hill. 62°36' S, 61°09' W. A rocky hill rising to 166 m, 1.85 km E of Start Hill and 1.93 km NW of Penca Hill, in the Dospey Heights, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the Spanish in 1992, and again by the Bulgarians in 2008-09, and named by the Bulgarians on Nov. 23, 2009, after Prince Alexander Battenberg of Bulgaria (1857-1893).

Cape Batterbee. 65°51' S, 53°48' E. A small, ice-covered point with prominent rocky exposures protruding through the coastal ice cliffs, it forms the most northerly projection of Enderby Land, just E of Proclamation Island. Discovered on Jan. 13, 1930, by BANZARE, and named by Mawson for Sir Harry Fagg Batterbee (1880-1976), assistant under-secretary of state, Dominions Office, 1930-38, and a help to their expedition. US-ACAN accepted the name in 1947, and ANCA followed suit.

Batterbee Mountains. 71°23' S, 67°15' W. Group of prominent mountains rising to 2225 m, between Ryder Glacier and Conchie Glacier, which forms part of the dissected edge of the Dyer Plateau, overlooking the George VI Sound, on the W coast of Palmer Land. Discovered and photographed aerially by Ellsworth on Nov. 23, 1935, charted from the ground in Oct. 1936, by BGLE 1934-37, and named by Rymill for Sir Harry Batterbee (*see* **Cape Batterbee**). They appear on W.L.G. Joerg's 1937 map of Ellsworth's expedition. US-ACAN accepted the name in 1947, UK-APC followed suit on Sept. 8, 1953, and it appears in the British gazetteer of 1955. In 1957 the Argentines, after toying with Montañas Batterbee, decided on Montes Avión Cruz del Sur, a name proposed by the Air Force for their famous Antarctic airplane (see **The *Cruz del Sur***). The Chileans, after toying with the name Montes Batterbee, decided on Montes Parodi, for Lt. Arturo Parodi of the Chilean Air Force, part of ChilAE 1948-49 (*see* **Teniente Arturo Parodi Station**), and, as such, it appears in their 1974 gazetteer. The mountains were surveyed from the ground by BAS personnel from Base E, between 1962 and 1972, and in the 1990s this feature's longitude was re-determined, from 66°55' W to 67°15' W.

Battke Point. 62°08' S, 58°07' W. A steep basaltic cliff, rising to about 65 m above sea level, delimiting Lions Cove from the S, on King George Island, in the South Shetlands. Named by the Poles on Sept. 1, 1999, for Zbigniew Battke, cartographer with PolAE 1987-89, and leader of PolAE 1998-2000.

Battle Point. 67°10' S, 64°45' W. A rocky and conspicuous coastal point just below and SE of Mount Dater, S of Monnier Point, on the Foyn Coast, on the E coast of Graham Land. The coastal area was photographed aerially by USAS 1939-41, by RARE 1947-48, and by USN in 1968. Mapped by BAS personnel from Base E in 1963-64, and named by UK-APC on Dec. 20, 1974, for British glaciologist Walter Ravenhill Brown "Ben" Battle (b. Dec. 23, 1919, Leeds. Drowned July 13, 1953, in a glacier stream on Baffin Island, in the Arctic). US-ACAN accepted the name in 1975.

Battlements Nunatak. 76°32' S, 159°21' E. A large, mostly ice-free nunatak, with several small, steep, rocky peaks running in a line W from the main peak (suggesting battlements), near the head of Mawson Glacier, 10 km NW of the Allan Hills, and 37 km NNW of Mount Brooke, in Victoria Land. Discovered and descriptively named by the NZ party of BCTAE 1956-58. US-ACAN accepted the name in 1962.

[1]**Battleship** *see* **Battleship Promontory**

[2]**Battleship**. 78°01' S, 161°44' E. A large, ice-free massif, separated from the Colwell Massiff by the Weir Icefall, in the Royal Society Range. La Count Mountain forms its N portion, and Ugolini Peak its central. So named by US-ACAN in 1995, because its shape resembles the superstructure and forward part of a battleship.

Battleship Promontory. 76°55' S, 160°55' E. An elongated sandstone massif promontory, resembling the superstructure and forward part of a battleship, rising from the floor of the Alatna Valley near its head, in Victoria Land. Descriptively named Battleship, by U.S. geologist Parker Calkin, here in 1960-61. NZ-APC accepted that name on June 29, 1989, and the New Zealanders call it by that name today. US-ACAN accepted the name Battleship Promontory in 1963.

Battye Glacier. 70°52' S, 67°54' E. Flows E into Radok Lake, in the E part of the Aramis Range, in the Prince Charles Mountains. It is marked by a glacier tongue that projects about 5 km into Radok Lake. Plotted by Australian cartographers from ANARE air photos taken in 1956 and 1960, and named by ANCA for Alastair Cameron P. Battye (b. April 10, 1936), glaciologist who wintered-over at Wilkes Station in 1962. US-ACAN accepted the name in 1967. The Russians call it Lednik Priozërnyj.

Batuliya Point. 62°24' S, 59°21' W. A point projecting out 550 m into the Bransfield Strait from the E coast of Robert Island, 5.4 km NE of the SE extremity of Robert Point, 3 km NNE of Sadala Point, and 1.9 km S of Kitchen Point, in the South Shetlands. Mapped by the Bulgarians in 2008-09, and named by them on Nov. 23, 2009, for the settlement of Batuliya, in western Bulgaria.

Gora Baturina. 70°16' S, 65°01' E. A nuntak, hard by Nunatak Boldyreva, in the area of Mount Hayne, 4 km NW of Moore Pyramid, on the N side of Scylla Glacier, in the Prince Charles Moutnains. Named by the Russians.

Picos Baudin *see* **Baudin Peaks**

Baudin Peaks. 68°49' S, 67°03' W. A group rising to about 800 m, at the SE corner of Mikkelsen Bay, immediately SW of the mouth of Clarke Glacier, and 15 km ENE of Cape Berteaux, on the Fallières Coast, on the W coast of Graham Land. This general area was discovered and roughly charted in Jan. 1909, by FrAE 1908-10. Charcot gave the name Cap Pierre Baudin to a cape in the vicinity, named after Pierre Baudin, the port engineer at Pernambuco, Brazil, who assisted the expedition in 1910. It appears on a British chart of 1914, as Cape Pierre Baudin. The peaks were roughly surveyed (but not named) in 1936, by BGLE 1934-37. A U.S. Hydrographic Office chart of 1945 shows the feature in error as Cape Berteaux. In 1948-49 Fids from Base E re-surveyed the peaks, and determined that they are what Charcot, in 1909, thinking that this feature was a cape, had called Cap Pierre Baudin. UK-APC accepted the name Baudin Peaks on Sept. 8, 1953, and it appears in the British gazetteer of 1955, and on a British chart of 1961. US-ACAN accepted the name in 1955. The Argentines call these peaks Picos Baudin.

Bauer Buttress. 67°23' S, 66°56' W. A projecting rock buttress on the NE side of Mount Rendu, on Arrowsmith Peninsula, near the head of Heim Glacier, on the Loubet Coast, on the W coast of Graham Land. Geological work was carried out here by BAS, between 1980 and 1983. Named by UK-APC on April 3, 1984, for Albert Bauer (b. 1916), French engineer and glaciologist, who conducted research on glaciers in the Kerguélen Islands, on the Adélie Land coast (he was attached to the French Polar Expeditions), and in Greenland and Iceland. US-ACAN accepted the name.

Bauhs Nunatak. 84°12' S, 163°24' E. A prominent nunatak, rising to 2225 m, at the N side of Walcott Névé, 5.5 km SSE of Mount Sirius, in the Queen Maud Mountains. Named by US-ACAN in 1965, for Luvern Raphael "Red" Bauhs (b. Jan. 10, 1918, Faulkton, SD. d. June 21, 1980, Sierra Vista, Ariz.), ionosphere physicist who wintered-over at Pole Station in 1959. NZ-APC accepted the name on Nov. 16, 1965.

Baulch Peak. 83°21' S, 163°05' E. 13 km NE of Claydon Peak, marking the extremity of a spur descending N from the Prince Andrew Plateau, in the Queen Elizabeth Range. Named by US-ACAN in 1965, for DeeWitt M. Baulch (b. Sept. 24, 1933), meteorologist who wintered-over at Pole Station in 1958. NZ-APC accepted the name on Nov. 16, 1965.

Bauman, Edward. b. 1913. Lived in Elizabeth, NJ. Oiler on the *Jacob Ruppert* during ByrdAE 1933-35. This information comes from the *New York Times* of Oct. 14, 1933, as the expedition was getting underway. He may not have actually made the trip.

Baumann Crag. 78°24' S, 161°05' E. A rock crag rising to 1265 m, and forming the S end of Halfway Nunatak, on the W side of The Landing, and almost in the center of the upper portion of Skelton Glacier, in Victoria Land. Named by US-ACAN in 1995, for Christopher C. Baumann, USGS cartographer, member of the satellite surveying team who wintered-over at Pole Station in 1984. He was also leader of the USGS mapping control field team on Seymour Island in 1992-93.

Baumann Valley. 77°27' S, 162°03' E. At the W side of Nottage Ridge, in the E part of the Olympus Range, in Victoria Land. Named by US-ACAN in 1997, for Clinton L. Baumann, electronics technician at the applied physics lab at Johns Hopkins, who was a member of the 1971-72 USGS field party that established a network of horizontal and vertical control in support of compilation of topographic maps at scale 1:50,000, of areas of the McMurdo Dry Valleys between 160°and 164°E and between 77°15' E and 77°45' E. NZ-APC accepted the name on Jan. 30, 1998.

Bauna *see* **Azuki Island**

Rocas Bauprés *see* **Bauprés Rocks**

Bauprés Rocks. 64°54' S, 63°37' W. Two rocks about 1400 m S of Py Point (the S extremity of Doumer Island), in the Palmer Archipelago. First charted by FrAE 1903-05. The descriptive name Rocas Bauprés (i.e., "bowsprit rocks") was first seen on an Argentine chart of 1953, and, indeed, from afar, the rocks do look like a bowsprit. Actually the feature comprises an island and a nearby rock, this fact being determined by an RN Hydrographic Survey unit on the *Protector*, in 1956-57. A landing was made on Advent Sunday, 1956, and, on July 7, 1959, the British re-named the island part of the feature as Advent Island. The rock did not get named. Another reason for the name "advent" was that the feature lies in the middle of the SW entrance (i.e., the advent) to Peltier Channel, the channel that separates Doumer Island from Wiencke Island. The feature appears as such on a British chart of 1960. US-ACAN, however, following the Argentine lead, accepted the name Bauprés Rocks in 1965, for the entire feature. However, the Chileans, on a 1962 chart, followed the British, and called the larger feature Islote Advent, and that is how it appears in the Chilean gazetteer of 1974.

Baur, Charles. b. Oct. 15, 1814, Strasbourg. Magasinier on the *Astrolabe* during FrAE 1837-40.

Bautaen *see* **Bautaen Peak**

Bautaen Peak. 71°58' S, 25°57' E. Rising to 2240 m, it is the most northeasterly of the peaks on Mount Bergersen, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken during OpHJ 1946-47, and named by them as Bautaen (i.e., "the monolith"). US-ACAN accepted the name Bautaen Peak in 1966.

Bautasteinane. 72°06' S, 16°05' E. A group of nunataks in Steingarden, in the SE part of Fimbulheimen, in Queen Maud Land. Name means "the monolith stones" in Norwegian.

Isla Bautismo *see* **Bearing Island**

Bawden Ice Rise. 66°59' S, 60°50' W. About 14 km long and about 3.5 km wide, near the edge of the Larsen Ice Shelf, about 75 km SSE of Cape Alexander, on the Oscar II Coast, on the coast of the Antarctic Peninsula. The feature may consist of more than one ice rise. Discovered and mapped on a BAS radio echo-sounding flight from Adelaide Island, in Feb. 1975, and named by UK-APC on Nov. 13, 1985, for John Bawden (b. 1931), finance officer with BAS, 1973-78 (he had been with BAS since 1971). US-ACAN accepted the name.

Bawtinhimer, Earl Stewart "Dutch." b. Sept. 24, 1919, NY, son of Canadian immigrant millwright D. Earl Bawtinhimer and his Pennsylvania-born wife Helen Stewart, who worked as an operator at Western Union. As his father wes known as Earl, the boy was known as Stewart until he enlisted in the U.S. Navy on Sept. 6, 1939, in Buffalo, when he adopted the name Dutch for fear of being nicknamed something bad. He was quartermaster 3rd class on the *Bear* during the 2nd half of USAS 1939-41. He was promoted to QM2c, and served from Jan. 14, 1943 on the *Independence*, during World War II, during which he was promoted again, to QM1c. He got out of the Navy after the war, married Betty in 1947, and worked as a physical education teacher before joining the Army and serving in Korea and Vietnam. He later worked as a tugboat captain. In 1982 he moved to Richmond, Va., and worked as a security guard. In the 1990s he moved to Denbigh, and Chesterfield, Va., and died in the latter place on Sept. 7, 1997.

Baxian Shan. 69°25' S, 76°04' E. A hill in the Larsemann Hills. Named by the Chinese.

Mount Baxter. 74°22' S, 162°32' E. A large, buttress-type mountain, rising to 2430 m (the New Zealanders say about 2600 m) between Mount Levick and Mount Mackintosh, just S of O'Kane Canyon, where it forms a rounded projection of the very easternmost escarpment of the Eisenhower Range, in Victoria Land. Discovered in 1902 by BNAE 1901-04, and named by Scott for George Washington Baxter (1853-1926; knighted 1904; created a baronet in 1921), partner in Baxter Brothers, flax manufacturers, chairman of University College, Dundee, and president of the Scottish Unionists Association, and his wife Lady Baxter (Edith, d. 1937; daughter of Major General James Lawtie Fagan) of Dundee, supporters of the expedition. US-ACAN accepted the name, and NZ-APC followed suit.

Baxter, Captain. From Whitby. Commander

of the *Cicero* during the 1820-21 and 1821-22 seasons (it is not known whether or not the *Cicero* was in Antarctic waters for those two seasons, and it is unlikely). Baxter was still in command of the *Cicero* during the first part of the 1822-23 season, when the vessel definitely went to the South Shetlands. He was replaced during that last season by Capt. Clarke, and took the *Lively* out of Whitby into Greenland fishing waters.

Baxter, Walter. b. 1895, Hull, son of coal trimmer Tom Baxter and his wife Mary Anne. Petty officer on the *William Scoresby*, during that vessel's first Antarctic cruise, 1926-27.

Baxter Glacier. 76°40' S, 161°51' E. A prominent glacier in the Convoy Range, beginning as an icefall from Flight Deck Névé, between Flagship Mountain and Mount Davidson, and joining Fry Glacier near the coast of Victoria Land. Named by VUWAE 1976-77, for James Keir Baxter (1926-1972), NZ poet and social critic. US-ACAN accepted the name in 1993.

Punta Bay *see* **Bay Point**

Bay of Polish Geodesists *see* ***under*** **P**

Bay of Sails *see* ***under*** **S**

Bay of Whales *see* ***under*** **W**

Bay of Winds *see* ***under*** **W**

Bay Point. 64°46' S, 63°26' W. Marks the extreme E side of the entrance to Börgen Bay, on the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99. The name appears on a 1929 chart based on a 1927 survey by the Discovery Investigations, but it was almost certainly named before that by whalers. It appears on a 1949 Argentine chart as Punta Bay, but on one of their 1953 charts as Punta Bahía, which is what the Argentines tend to call it today. US-ACAN accepted the name Bay Point in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955, just after a new (1955) survey done of it by Fids from Base N. It appears in the 1974 Chilean gazetteer as Punta Bay.

Islotes Bayard *see* **Bayard Islands**

Bayard Islands. 64°56' S, 63°14' W. A small group of islands, 1.5 km NE of Cape Willems, off the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Surveyed from the ground in 1956-57 by Fids from Base O, and photographed from the air by FIDASE that same season. Named by UK-APC on Sept. 23, 1960, for Hippolyte Bayard (1801-1887), French civil servant who, in 1839, independently invented a photographic process for obtaining direct positives on paper. The name appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Islotes Bayard.

Bayer, John J. "Teddy." b. July 7, 1887, Hanbury on the Lake, NY. He was a retired USN chief petty officer, and with the Fleet Reserve Association, and living in Brooklyn, when he became 1st assistant engineer (chief machinist's mate) on the *City of New York* during ByrdAE 1928-30. He left Little America for NZ on the *City of New York* on Feb. 22, 1929, midway through the expedition, and returned for the 2nd half of the expedition as 2nd engineer. He died on May 15, 1967, in Queens, NY.

Bayerngletscher. 71°00' S, 165°18' E. A glacier in the Anare Mountains of Victoria Land. Named by the Germans (means Bavaria Glacier).

Pico Bayet *see* **Bayet Peak**

Pointe Bayet *see* **Bayet Peak, Pelletan Point**

Punta Bayet *see* **Bayet Peak, Pelletan Point**

Bayet Peak. 65°02' S, 63°01' W. A conspicuous peak, rising to 1400 m, it overlooks the SE shore of Briand Fjord, in Flandres Bay, on the Danco Coast, on the W coast of Graham Land. During FrAE 1903-05, Charcot named the SE entrance to Briand Fjord as Pointe Bayet, for Charles-Marie-Adolphe-Louis Bayet (1849-1918), director of public instruction and (later) member of the Commission of Scientific Work of FrAE 1908-10. It appears as such in a French text of 1906; on a 1943 U.S. Hydrographic Office chart it appears as Bayet Point; and on a 1949 Argentine chart as Punta Bayet. FIDASE air photos of 1956-57 showed no well-defined points here, so the name was reapplied by UK-APC on Sept. 23, 1960, to this peak (*see also* **Pelletan Point**). It appears as such on a British chart of 1961. US-ACAN accepted the name in 1965. It appeared in the 1974 Chilean gazetteer, but still listed as Punta Bayet. However, it appears in the 1991 Argentine gazetteer as Pico Bayet.

Bayet Point *see* **Bayet Peak, Pelletan Point**

The *Baykal* *see* **The *Baikal***

Cape Bayle. 64°17' S, 63°10' W. Forms the extreme E point of the N coast of Anvers Island, 17 km E of Cape Grönland, in the Palmer Archipelago. Perhaps seen by Dallman, in 1874, it was roughly charted by FrAE 1903-05, and named by Charcot as Pointe Bayle, for Vice Admiral Charles-Jessé Bayle (1842-1918). Charcot refers to it as such in 1906. It appeared as Point Bayle on a 1943 U.S. Hydrographic Office chart, and as Punta Bayle on a 1949 Argentine chart. To this day, the Argentines call it Punta Bayle. It was photographed from the air by FIDASE in 1956-57, and on July 7, 1959, UK-APC accepted the name Cape Bayle, with US-ACAN following suit in 1971. It appears in the 1974 Chilean gazetteer as Punta Bayle.

Point Bayle *see* **Cape Bayle**

Pointe Bayle *see* **Cape Bayle**

Punta Bayle *see* **Cape Bayle**

Isla Bayley *see* **Bob Island**

Mount Bayliss. 73°32' S, 62°44' E. A fairly low elongated rock outcrop, extending E-W for about 14 km, 10 km (the Australians say 17 km) E of Mount Menzies, in the Prince Charles Mountains of Mac. Robertson Land. Discovered aerially by ANARE in 1957, and also seen that year from the ground by the ANARE southern seismic party led by Keith Mather. Named by ANCA for Edward Percival "E.P." Bayliss, Australian cartographer who drew the map of Antarctica in 1939 (*see also* **Cumpston Glacier**). US-ACAN accepted the name in 1961. The Russians call it Massif Sovëtskij Ekspedicij, for the Soviet expeditions.

Glaciar Bayly *see* **Bayly Glacier**

Bayly, Maurice Brian. Known as Brian. b. April 16, 1929, Northwood, Mdsx, son of Post Office boffin Arthur E. Bayly and his wife Doris Ellen Gillingham. After the Army, he got his BA and MSc from Cambridge, spent each summer between 1951 and 1955 in the Arctic, doing geological work, and then joined FIDS in 1955, as a geologist, wintering-over at Base O in 1956. After a brief while at Birmingham University, he left FIDS on Oct. 14, 1957, and from 1958 to 1960 was in Australia and New Guinea, working for the Bureau of Mineral Resources. On Sept. 9, 1960, in Canberra, he married astronomer Helen Bailey (who, incidentally was Grif Taylor's goddaughter). In 1962 he was awarded his doctorate in Chicago. He retired as professor of geology at Rensselaer Polytechnic Institute, in Troy, NY, and became a cognitive neuroscientist.

Bayly, William. b. 1737, Bishops Cannings, Wilts, son of small farmer John Bayly and his wife Elizabeth. He started as a ploughboy, became an usher in a school, and due to his phenomenal prowess as a mathematician, came to the attention of Nevil Maskelyne, the astronomer royal, who took him on as his "labourer" (i.e., assistant) at the Royal Observatory, in 1768. He was astronomer on the *Adventure*, during Cook's voyage of 1772-75. He also sailed on Cook's third voyage. In 1785 he became master of the Royal Naval Academy, at Portsmouth, retiring in 1807, and dying in Portsmouth in 1810.

Bayly Bay. 68°27' S, 78°15' E. A coastal bay, about 2 km long and about 0.5 km wide, in the Vestfold Hills. There are 3 islands which almost block the entrance to the bay. Named by ANCA on March 7, 1991, for limnologist Ian Albert Edgar Bayly (b. Aug. 3, 1934, New Plymouth, NZ), senior lecturer in zoology and comparative physiology at Monash University, in Clayton, Vic., authority on copepods, who has researched in this area.

Bayly Glacier. 64°37' S, 61°50' W. It flows N into the head of Bancroft Bay, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and mapped from these photos by FIDS. Named by UK-APC on Sept. 23, 1960, for Brian Bayly. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Glaciar Bayly.

Bayne, Henry. b. 1882, NZ. Before World War I, he married Alwine Matilda, and they lived in Hawkes' Bay, later moving to Wellington. He got his master's certificate in Aug. 1916, and in 1918 was 1st officer on the *Ilma*. He was 1st officer on the *Jacob Ruppert*, during the first half of ByrdAE 1933-35. He died on July 7, 1960, in Karori, NZ, and Alwine died in 1972.

Bayon, J. *see* **Órcadas Station**, 1915

Massif Bayonne *see* **Mount Bayonne**

Monte Bayonne *see* **Mount Bayonne**

Mount Bayonne. 68°56' S, 70°59' W. Rising to 1500 m (the Chileans say about 1400 m, and the British say 1600 m), it forms the N extremity of the Rouen Mountains, 22 km SW of Cabo Arauco (the extreme NE point of Alexander Island). Discovered in Jan. 1905, by FrAE 1903-

05, and named by Charcot as Massif Bayonne, for the French city. First mapped by FrAE 1908-10, it appears on their expedition maps of 1912 and 1914. It appears on a 1914 British chart as Bayonne Mount, and on a 1916 British chart as Mount Bayonne. It was re-sighted and photographed aerially in 1936, by BGLE 1934-37, and, again, appears as Mount Bayonne on a 1948 British chart. It appears on a Chilean map of 1947, as Monte Bayonne. On Sept. 8, 1953, UK-APC accepted the name Mount Bayonne, but with the coordinates 68°56' S, 70°58' W, and that is how it appears in the 1955 British gazetteer. It was remapped in 1959-60 by Searle of the FIDS, from aerial photos taken in Nov. 1947 by RARE 1947-48, and appears in the 1977 British gazetteer with his coordinates, which were 68°55' S, 71°03' W. US-ACAN accepted the name in 1965. It appears in the Chilean gazetteer of 1974, as Monte Bayonne, which is also what the Argentines call it. It has since been replotted.

Bayonne Mount *see* **Mount Bayonne**

Gora Bazal'tovaja. 73°05' S, 61°12' E. The eastern of 3 nunataks on what the Russians call Massif Zagadochnyj, just NE of Humphreys Ridge, in the Goodspeed Nunataks, in the S part of the Prince Charles Mountains. Named by the Russians.

Isla Bazett *see* **Bazett Island**

Bazett Island. 66°18' S, 67°06' W. A small island close S of the W end of Krogh Island, in Lewis Sound, in the Biscoe Islands. Mapped from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Henry Cuthbert Bazett (1885-1950), U.S. physiologist who specialized in the effects of temperature change on the human body. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer, as Isla Bazett.

Lednik Bazheevoj. 82°14' S, 41°20' W. A glacier in the Argentina Range of the Pensacola Mountains. Named by the Russians.

Nunataki Bazhova. 81°33' S, 21°52' W. A group of nunataks in the Shackleton Range. Named by the Russians.

Île Bazzano *see* **Bazzano Island**

Islote Bazzano *see* **Bazzano Island**

Bazzano Island. 65°11' S, 64°10' W. A small island off the SW end of Petermann Island, between Lisboa Island and Boudet Island, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1908-10, and named by Charcot as Île Bazzano, for surveyor Hamlet Bazzano (1876-1939), director of the Uruguayan National Institute of Weather Forecasting, and a specialist in Antarctica, who was of help to Charcot. It appears as Bazzano Islet on a 1943 U.S. Hydrographic Office chart, and as Islote Bazzano on a 1953 Argentine chart. It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Bazzano Island, on July 7, 1959, and US-ACAN followed suit in 1971. The Argentines still call it Islote Bazzano.

Bazzano Islet *see* **Bazzano Island**

BCTAE. This is the British Commonwealth Transantarctic Expedition (q.v.). It lasted from 1955 to 1958, but often in this book it will be seen as BCTAE 1957-58 (which signifies the NZ part of the expedition, i.e., Hillary's push to the Pole).

Beaches. There are several beaches in Antarctica, but not enough to make them commonplace. The early sealers used them to advantage in loading their kill. This is a list (with date named, where known): Half Moon (1820), John (1820), Robbery Beaches (1820), South Beaches (1820), Ridley (1899), Penguin (1904), Blacksand (1908), Home (1911), West (1911), Raised (1912), Waterpipe (before 1920), Cadwalader (1959), Caughley (1959), McDonald (1959), Romanes (1959), Waipuke (1959), Kaino-hama (1963), Kitami (1963), Koke Strand, President Beaches (1969), Kizahashi (1972), Oshiage (1972), Ogi (1973), Marinovic (1985), Bulgarian (1994), Dragon (1998), Zagore (2002), Memorable (2003), Pimpirev (2004), Arkutino (2005), North (2006), and South (2006). ChilAE 1990-91 identified a plethora of beaches on Cape Shirreff, on Livingston Island, in the South Shetlands. They call them playas, with the name Playa coming before the proper noun: Alcázar, Angosta, Antártico, Aranda, Bahamonde, Ballena Norte, Ballena Sur, Cachorros, Chica, Chungungo, Copihue, Daniel, Del Canal, Del Lobero, Del Plástico, El Módulo, El Remanso, Escondida, Golondrina, Larga, Lobería, Maderas, Marko, Nibaldo, Papúa, Paulina, Pinochet de la Barra, Pocitas, Roquerío, Schiappacasse, and Yamana.

Beacon Dome. 86°08' S, 146°25' W. A large, domelike mountain rising to 3010 m at the head of Griffith Glacier, along the Watson Escarpment, in the La Gorce Mountains, at the S end of the Transantarctic Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. So named by NZGSAE 1969-70 because it is composed of a granite basement with horizontally-layered sedimentary rocks of the Beacon series above. NZ-APC accepted the name on June 19, 1970, and US-ACAN followed suit that year.

Beacon Group. Flat-lying Devonian to Jurassic strata laid down about 200 or 300 million years ago on top of Precambrian rock, in the Pensacola Mountains.

Beacon Head. 67°49' S, 67°21' W. A small headland at the N side of the entrance to Lystad Bay, it forms the westernmost point of Horseshoe Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. Surveyed from Sally Cove by Fids between 1955 and 1957, and named by UK-APC on July 7, 1959, for a wooden beacon built here by the Argentines, and used by FIDS from 1955-57 during a survey on Horseshoe Island. US-ACAN accepted the name in 1960. It appears on a British chart of 1960.

Beacon Heights. 77°50' S, 160°50' E. A small ridge (or cluster) of peaks, rising to an elevation of 2345 m above sea level, situated S of Taylor Glacier, between Beacon Valley and Arena Valley, or (to put it another way), between Pyramid Mountain and New Mountain, in the Quartermain Mountains of Victoria Land. The feature includes East Beacon, West Beacon, and South Beacon. Named by Hartley Ferrar in 1903, during BNAE 1901-04, for the beacon sandstone which caps these heights. It appears inthe 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1964.

Beacon Hill. 68°04' S, 66°23' W. An ice-covered, dome-shaped hill, rising to 1810 m, 120 m above the surface of the surrounding plateau, 4 km NE of McLeod Hill, surmounting the divide between Northeast Glacier (to the W) and Bills Gulch (to the E), in the area of Marguerite Bay, on the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37. Surveyed in more detail by, and named by, USAS 1939-41. There was probably a beacon placed here during the expedition. USAS operated a plateau weather station close southwestward of the hill throughout the November and December of 1940 (in 68°07' S, 66°30' W). Fids from Base E further surveyed it between 1946 and 1950. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit later that year.

Beacon Ridge. 72°14' S, 1°19' E. In the Sverdrup Mountains of Queen Maud Land. This feature is found on the 1993 South African map of Queen Maud Land.

Beacon Sandstone formation. In ancient days the mountain ranges were worn away by erosion and replaced by a series of mainly quartzose sediments. This formation of platform sediments contains a rich record of extinct Antarctic life (*see* **Fossils**). This is the Beacon Sandstone formation.

Beacon Valley. 77°49' S, 160°39' E. One of the dry valleys in Victoria Land. Between Pyramid Mountain and Beacon Heights, in the Quartermain Range. Mapped by BAE 1910-13. Named by VUWAE 1958-59, in association with the heights. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1964.

The *Beagle*. Chilean ship that took part in ChilAE 1975-76 (Captain Enrique La Luz Ackermann).

Beagle Island. 63°25' S, 54°40' W. An island, NE of Darwin Island, it is the most northeasterly of the Danger Islands, 20 km ESE of Moody Point (the extreme SE point of Joinville Island), in the Weddell Sea, off the NE end of the Antarctic Peninsula. Discovered on Dec. 28, 1842, by Ross. Surveyed by FIDS in 1953-54 and 1958-61, and, in association with Darwin Island, it was named by UK-APC on Feb. 12, 1964, for the *Beagle* (Darwin's ship, which sailed around the world in 1831-36, but which, incidentally, was never in Antarctic waters). US-ACAN accepted the name later in 1964. The Argentines call it Islote Sarandí, after the river on whose banks in 1825 Uruguayan [sic] independence was assured. The Chileans call it Islote Bertil, after Bertil Frödin, geologist and glaciologist from the University of Uppsala, Sweden, who was invited to go on ChilAE 1950-51, and while on the cruise proved that the geological formation

of the Antarctic continent is the same as that of the Chilean Andes.

Beagle Peak. 69°37' S, 71°36' W. Rising to about 700 m, in the central Lassus Mountains, in the NW part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff in 1970-71. Named by US-ACAN in 1980, for Lt. Cdr. Clyde Alexander Beagle, Jr., USN, LC-130 aircraft commander with VXE-6, in Antarctica in 1968-69 and 1969-70. UK-APC accepted the name on June 11, 1980. Originally plotted in 69°36' S, 71°45' W, it has since been re-plotted.

Beaglehole Glacier. 66°33' S, 64°07' W. It flows SE into Cabinet Inlet, between Spur Point and Friederichsen Glacier, on the Foyn Coast, on the E coast of Graham Land. Surveyed by BAS personnel from Base E between 1963 and 1965, it was named by UK-APC on July 21, 1976, for John Cawte Beaglehole (1901-1971), NZ historian of Antarctica (*see* the Bibliography), and author of a biography on Captain Cook. US-ACAN accepted the name later in 1976.

Isla Beak *see* **Beak Island**

Beak Island. 63°37' S, 57°18' W. An arc-shaped island, 6 km long, and rising to 360 m above sea level, 0.8 km NE of Eagle Island, in the NE part of the Prince Gustav Channel, in the area of the Trinity Peninsula. First seen in 1902-03 by SwedAE 1901-04. Surveyed by FIDS in 1945, and so named by UK-APC on Nov. 21, 1949, because of its shape, and also because of its relation to Tail Island, Eagle Island, and Egg Island. It appears on a British chart of 1949. US-ACAN accepted the name in 1952. It appears as Isla Beak, on a Chilean chart of 1951, and also in their 1974 gazetteer. The Argentines have translated it all the way, as Isla Pico, and that name first appears on a 1957 chart, although it also appeared on one of their 1959 maps as Isla Acantilados (literally "cliffs island"; this name didn't catch on, as the Argentines still call it Isla Pico).

Beaked whales. Order: Cetacea (whales); sub-order: Odontoceti (toothed whales); family: Zipiidae. The Southern beaked whale is *Berardius arnuxii*, an uncommon species of whale, but found frequently in Antarctic waters. It can grow to 35 feet and weigh 8 tons. It is often confused with another beaked whale, the Southern bottlenose whale, which is *Hyperoodon planifrons*. This latter one, also called Flower's whale, flat-headed whale, Antarctic bottle-nosed whale, and Pacific beaked whale, can grow to 25 feet and 4 tons (*see also* **Whales**).

Beakers. Local slang for scientists in Antarctica.

Beakley Glacier. 73°51' S, 119°50' W. On the W side of Duncan Peninsula, on Carney Island, flowing N into the Amundsen Sea. Delineated by USGS from air photos taken in Jan. 1947 by OpHJ 1946-47. Named by US-ACAN in 1967, for Vice Admiral Wallace Morris Beakley (b. Jan. 20, 1903, Vineland, NJ. d. Jan. 1975, Alexandria, Va.), USN, deputy chief of naval operations for ship operations and readiness, during IGY (1957-59). NZ-APC accepted the name on June 29, 1967.

Cape Beale. 66°35' S, 162°45' E. A steep bluff along the SE side of Borradaile Island, in the Balleny Islands. Discovered by Balleny in Feb. 1839, and named by him for oil merchant William Beale, one of the 7 merchants who joined with Charles Enderby in sending out the Balleny Expedition of 1838-40. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer.

Beale Peak. 80°18' S, 155°30' E. A peak, 3 km SE of Vantage Hill, in the Ravens Mountains, in the Britannia Range. Named by US-ACAN in 2001, for Master Sgt. Garry A. Beale (b. Portland, Me.), of 109 Wing, Stratton Air National Guard Base, in Glenville, NY, who was logistics planner for the ANG during the transition of LC-130 aircraft operations from the USN to ANG in 1997.

Beale Pinnacle. 66°36' S, 162°45' E. A boot-shaped rock pinnacle, rising to 60 m out of the water like a lighthouse, lying close off Cape Beale, at the SE end of Borradaile Island, in the Balleny Islands. Discovered by Balleny in Feb. 1839, and named by him in association with the cape. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer.

Beall, James McClenahan. b. Dec. 9, 1917, Morgantown, W. Va., but raised in Springhill, Pa., son of the Rev. Clarence H. Beall and his wife Eula McClenahan. After the University of Idaho and Harvard, he became a meteorologist and forecaster with the U.S. Weather Bureau. He was at the Bureau's Montana office when he was selected to be their observer on OpW 1947-48.

Beall Island. 66°18' S, 110°29' E. An irregular-shaped rocky island, 1.6 km long, with small coves indenting it on the E and W sides, 330 m NW of Mitchell Peninsula, in the Windmill Islands, off the Budd Coast. First mapped from air photos taken by OpHJ 1946-47 and by OpW 1947-48. Named by US-ACAN in 1956, for James M. Beall. ANCA accepted the name on July 4, 1961.

Beall Reefs. 66°18' S, 110°27' E. A submarine feature with depths of less than one fathom, between 0.8 and 2 km W of Beall Island, in the Windmill Islands, off the Budd Coast. Discovered from the launch at Wilkes Station in 1961, and named by ANCA, in association with the island. US-ACAN accepted the name in 1963.

Beals, Artimeus W. *see* **USEE 1838-42**

Beaman Glacier. 70°58' S, 164°38' E. Close N of McLean Glacier, it flows into Ebbe Glacier, in the SW part of the Anare Mountains. Named by US-ACAN in 1964, for 1st Lt. Charles W. Beaman (b. May 19, 1929, Boliva, Miss. d. Feb. 19, 1998, Newport News, Va.), U.S. Army helicopter pilot here in 1962-63, flying support for the USGS Topo-West survey. Beaman was one of the first men ever to fly a helicopter to the South Pole (*see* **South Pole**, Feb. 4, 1963). NZ-APC accepted the name on July 16, 1964.

Bean Peaks. 75°58' S, 70°00' W. A group of peaks rising to 1305 m, and including Carlson Peak and Novocin Peak, they form the SW part of the Hauberg Mountains, on the Orville Coast of Ellsworth Land. Discovered aerially by RARE 1947-48. Mapped by USGS from ground surveys, and USN air photos taken between 1965 and 1967. Named by US-ACAN in 1968, for Lawrence J. "Larry" Bean, construction electrician who wintered-over at Pole Station in 1967. The peaks appear on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

The *Bear* *see* **The *Bear of Oakland***

Islote Bear *see* **[1]Bear Island**

Islotes Bear *see* **[1]Bear Island**

[1]Bear Island. 68°11' S, 67°04' W. A rocky island, about 0.4 km long, and a couple of hundred meters wide, with some offliers, about 1.3 km W of Stonington Island, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. This feature was presumably known by BGLE 1934-37, and by USAS 1939-41, both expeditions having bases in the vicinity. Surveyed in 1947 by FIDS, who named it Bear Islet, for the *Bear* (the old *Bear of Oakland*— see below). That year ChilAE 1947 surveyed the area, and fixed in this approximate location an island which they called Isla Teniente González (also seen in its abbreviated form of Isla Tte. González), after Army Lt. Jorge González Baeza, a member of the expedition. UK-APC accepted the name Bear Islet, on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a 1956 British chart. On July 7, 1959, UK-APC redefined it, as Bear Island, and as such it appears on a 1960 British chart. US-ACAN accepted the new name in 1963. It appears on a 1962 Chilean chart, as Islote Bear, and as such in the 1974 Chilean gazetteer. However, the Chileans, on a 1969 chart, show the island and its offliers as Islotes Bear, and a 1973 British chart followed suit, with Bear Islands. A British chart of 1974 has the main island (erroneously) as Beer Island. The Argentines call the main island Islote Bear.

[2]Bear Island *see* **Bear Peninsula**

Bear Islands *see* **[1]Bear Island**

Bear Islet *see* **[1]Bear Island**

The *Bear of Oakland*. A square-sailed wooden barquentine built in 1858, and refitted in 1874 in Dundee as a steam sealing ship by Alexander Stephen and Sons of Govan. Originally named the *Bear*, she was called "the strongest wooden ship ever built." 200 feet long, with 6-inch thick oak planks re-inforced with steel plate, she could run at 8 knots under sail and 9 under steam. Purchased by the U.S. Navy in 1884 for the successful rescue of Lt. Greely in the Arctic, the *Bear* was decommissioned in 1885 and transferred to the Revenue Cutter Service (which in 1915 became part of the Coast Guard). They sold her in 1929 to the city of Oakland, California, as a museum and movie star. She was re-named the *Bear of Oakland* and used by Byrd as one of his two ships on ByrdAE 1933-35, in fact as a replacement for his old *City of New York*. In 1939 the U.S. Navy bought her and gave her her old name back—*Bear*. Re-fitted, she was chartered to Byrd for a dollar a year as the flagship for his USAS 1939-41. Richard H. Cruzen commanded. Subsequently she did work in Greenland, and was decommissioned in 1944.

After World War II, Frank M. Shaw, a Canadian, bought her for $5199, and changed her name to *Arctic Bear*. In 1948 she was transferred to the Maritime Commission, who intended to bring the vessel back to life as a sealer, but she got caught in the mud near Halifax, NS, and was abandoned there. In 1962 she was purchased with a view to converting her into a floating restaurant and museum in Philadelphia, but on the way from Halifax she sank in a storm, 250 miles out from Boston, on March 19, 1963.

Bear Peninsula. 74°35' S, 111°00' W. About 80 km long and 40 km wide, it is ice-covered except for several isolated rock bluffs and outcrops along its margins, and lies 50 km E of Martin Peninsula, jutting out into the Amundsen Sea in the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. At first thought to be an island, and called Bear Island, for the *Bear*, it was later re-defined. First delineated from air photos taken in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1953, for the *Bear* (i.e., the old *Bear of Oakland*). Plotted in 74°36' S, 110°48' W, it was later replotted.

Beard, Robert. Marine corporal who joined the *Resolution* at Deptford, on May 29, 1772, from the Chatham division of Marines, for Cook's 2nd voyage, 1772-75. Promoted to sergeant, he married Elizabeth, and they lived at Portsmouth. He was drowned in Oct. 1780, when the *Thunderer* went down in a hurricane in the Caribbean.

Beard Peak. 86°40' S, 145°25' W. Rising to 2360 m, on the N edge of the La Gorce Mountains, 6 km S of the E tip of Mount Mooney. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Philip H. Beard, VX-6 photographer during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67).

Bearded penguin *see* **Chinstrap penguin**

Beardmore Air Operating Facility *see* **Beardmore Glacier Camp**

Beardmore Auxiliary Station *see* **Beardmore Glacier Camp**

Beardmore Glacier. 83°45' S, 171°00' E. One of the world's largest valley glaciers, it is over 160 km long, averages 20 km wide, and divides the Queen Alexandra Range from the Commonwealth Range. Its head is 9820 feet above sea level, and it descends about 8200 feet from the Polar Plateau to the Ross Ice Shelf. It contains petrified wood and fossils of fern and coral, evidence of a temperate climate once enjoyed by Antarctica. Shackleton discovered the Beardmore during BAE 1907-09, and pioneered it as a route to the South Pole, naming it for his employer and principal backer, William Beardmore (1856-1936; created a baronet in 1914, and raised to the peerage in 1921, as Baron Invernairn), the Scottish industrialist and director of the Arrol-Johnston motorcar company (*see* **Automobiles**). Scott used the same basic route in 1911-12, during his last expedition, thus assuring fame and immortality for this great glacier. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Beardmore Glacier Camp. 84°56' S, 166°00' W. American field station, more correctly called Beardmore Air Operating Facility, or Beardmore AirOpFac, it was also called Beardmore Auxiliary Station. **Oct. 24 and 25, 1956**: Doug Cordiner, VX-6 commanding officer, flew a reconnaissance flight over the foot of the Beardmore Glacier, with the intention of setting up an auxiliary summer-only camp at which planes flying to and from the Pole could be serviced and fueled during IGY. **Oct. 27, 1956**: Mike Baronick was chosen (he was actually the second choice; Noel Eichhorn had been first choice) to lead a 4-man team to the foot of the Beardmore Glacier. The team, so small because of the weather, also included: Dick Prescott (builder), John Zegers (radioman), and Ronald Hill (photographer). Ed Frankiewicz flew them in. One hut had been built in the hangar at McMurdo, for a trial run. It would be reassembled at Beardmore. **Oct. 28, 1956**: Construction was finished, 400 miles from the South Pole, except that the camp wasn't at the Beardmore at all, but at the foot of Liv Glacier, 122 miles to the east. **Oct. 30, 1956**: A Globemaster flew supplies to Beardmore, then went on to reconnoiter the Pole. **1957-58**: James A. McCue (leader). The name was finally changed to Liv Station. It was closed after the 1957-58 summer, and in 1960 would be replaced by Beardmore II, in a different location.

Beardmore South Camp. 85°02' S, 164°15' E. A large, remote, and temporary U.S. field camp consisting of Jamesway huts, built in Oct. 1984 by ITT/Antarctic Services, Inc., on the Bowden Névé, near the Beardmore Glacier. Lt. Cdr. William H. Barton (*see* **Barton Mountains**) developed, co-ordinated and executed the logistical plan for this camp, which supported about 60 scientists studying primarily geology for 78 days during the 1985-86 field season. It required 800 flight hours in support of research. In one 40-foot-long wooden modular hut were 4 showers, 7 toilets, 8 sinks, and 3 urinals. Three 80-foot-long huts provided the sleeping areas, and an 84-foot hut the galley/dining area. There was a 64-foot hut for helicopter maintenance, as well as other buildings. David H. Elliott was chief scientist, and David B. Waldrip was station manager. The camp closed in Feb. 1986, but was re-opened in 1988-89, and was open again for the 1989-90 and 1990-91 summer seasons.

Beardmore II. 83°21' S, 174°54' E. The replacement for Beardmore Glacier Camp (which was now known as Beardmore I), it was relocated closer to the actual Beardmore Glacier (the old station being near the Liv Glacier). It had 2 tents and could accommodate 7 men. It was open for the summers of 1960-61, 1961-62, 1962-63, and 1963-64, and was closed in Feb. 1965.

Beards. For most men in Antarctica they are almost necessary. There is a lot of variety, and a lot of vanity. Some men dislike them because they attract too much ice. But they do protect the face from the cold. Long beards were the fashion until ByrdAE, when one man out on the trail woke up to find his beard frozen to his sleeping bag. They had to cut him out. By the time of OpHJ 1946-47, short beards were not just the fashion, they were an order.

Bearing Island. 64°33' S, 62°02' W. A small island midway between Nansen Island and Enterprise Island, in Wilhelmina Bay, off the Danco Coast, on the W coast of Graham Land. An old whalers' name, it was also called Direction Island, and for the same reason — this island, and a rock patch on Nansen Island, were used as leading marks when entering Foyn Harbor from the SE. Charted by the British Imperial Antarctic Expedition of 1920-22, it appears as Bearing Island on M.C. Lester's expedition map (although he also calls it Direction Island), and Bearing Island was the name accepted by UK-APC on Sept. 23, 1960, and by US-ACAN in 1965. It was photographed aerially by FIDASE in 1956-57. This is probably the island that appears in this location on a 1957 Argentine chart, as Isla Bautismo (i.e., "baptism island").

Bearman Glacier. 72°21' S, 99°10' W. Its head is E of Mount Howell, in the central part of Thurston Island. The glacier flows S into Schwartz Cove, on the S side of the island. Named by US-ACAN in 2003, for Forrest O. "Bud" Bearman (b. April 23, 1926, Moorhead, Minn., but raised partly in Lansford, SD, son of a barber. d. Sept. 6, 2009, Kent Hospital, Warwick, RI), photographer's mate in the Eastern Group of OpHJ 1946-47, which obtained photos of this glacier and adjacent coastal areas.

Bearse, Francis Thomas Angus. b. Oct. 22, 1906, Chatham, Mass., son of fisherman Fernando Francis Bearse and his wife Helen Frances Mars Litchfield. He went to sea at 15, and, during those periods when he was on land, he became a radio station operator. He finally turned that experience to good use, and in the 1930s became a ship's radio operator on successively the *President Garfield*, the *Susan V. Luckenbach* and the *Veragua*, before becoming sparks and purser on the *North Star* during USAS 1939-41. After the expedition, he made his way back from the Panama Canal Zone to Brooklyn on the USAT *Hunter Liggett*, arriving in New York on May 24, 1941. During the war he served on the *Henry J. Raymond*, and then, at the tail end of the war, was in Europe on the *F. Scott Fitzgerald*, as chief radioman.

Mount Bearskin. 78°20' S, 85°37' W. Rising to 2850 m, 8 km NE of Mount Tyree, between Patton Glacier and Cornwall Glacier, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Leland Bearskin.

Bearskin, Leland Stanford. b. Sept. 11, 1921, on the Quapaw Wyandotte reservation, in Oklahoma, twin son of John Bearskin (the twin also became an Air Force pilot). Chief of the Wyandotte Nation, he was also a captain in the USAF when he participated in the setting up of Pole Station in the 1956-57 season. They took a picture of him at the Pole, wearing his Indian ceremonial headdress. He retired as a major, and died on Oct. 5, 1993. He is buried in Wyandotte.

Bahía Beascochea *see* **Beascochea Bay**

Baie Beascochea *see* **Beascochea Bay**

Beascochea Bay. 65°30' S, 64°00' W. A bay, 8 km wide, it indents the W coast of Graham Land for 16 km, S of Cape Pérez, off the Grandidier Channel, Graham Coast, on W coast of Graham Land. Discovered in 1898 by BelgAE 1897-99, but they thought it was the Bismarck Strait. SwedAE 1901-04 was the next expedition to consider this feature, and they called it Bismarck Bay. It was roughly surveyed by FrAE 1903-05, and named by Charcot as Baie Beascochea, for Cdr. (later Vice admiral) Mariano Beascochea (b. 1869. d. May 12, 1943), author, and hydrographer of the Argentine Navy, who assisted Charcot's expedition, at Ushuaia, in Jan. 1904. It appears on a 1908 British chart as Beascochea Bay, and the feature was more accurately charted on Jan. 4, 1909, by FrAE 1908-10. It was even more accurately charted in Aug. 1935, by BGLE 1934-37. US-ACAN accepted the name in 1951, UK-APC followed suit on Sept. 8, 1953, and it appears in the British gazetteer of 1955. In 1956-57 it was photographed aerially by FIDASE. It appears as Bahía Beascochea in the 1974 Chilean gazetteer, and the Argentines have also been calling it that since 1957.

The *Beatrice L. Corkum*. An 89-ton sealing schooner, built in 1899 in Lunenburg, which plied out of Halifax, Nova Scotia. She was in the South Shetlands and South Georgia in the 1901-02 season, under the command of Capt. Reuben Balcom. In 1902-03 and 1903-04 her skipper was Wentworth E. Baker, but the vessel operated only in the Falklands and Tierra del Fuego. E.F. Robbins was her skipper in 1906, but again, she was not in Antarctic waters. However, she was back in the South Shetlands in 1907-08, under the command of Frederick W. Gilbert. That season she left Nova Scotia at 2 P.M., on Sept. 14, 1907. Her departure had been delayed for two days owing to the non-appearance of two men who had signed on — hunter James Clark and seaman George Thomson. Seaman Angus Morash also failed to go. The registration of the vessel was changed from Lunenburg to Halifax. The crew who did sail were: Captain Gilbert, R.J. Gilbert (1st mate), Alex Ryan (2nd mate), W. Cornelius Croft (cook and steward), and J. Shippein (cabin boy). The hunters were: C. Morgan, Joseph Walsh, James Martin, Harry McFarlane, H. Walsh, and Frank Young. The boat steerers and seamen were: Thomas Roach (from Waterford, Ireland), Stephen Bellefontaine, Guss Laxell (from Finland), James Purdy, P. Chisholm, J. McAlasney, and W.J. Nickerson. Three days after leaving Halifax, Croft, the cook, was washed overboard and drowned. 52 days later the vessel pulled into Montevideo, where Capt. Gilbert cabled the bad news to the lad's widowed mother. On May 30, 1913, the vessel was stranded at Clarks Harbor, on her way from Halifax to Connecticut.

Punta Beatriz *see* **Cape Andreas**

Beaudoin, Jean-Baptiste. b. May 19, 1820, Quillebeuf, France. He joined the *Zélée* at Valparaíso, on May 28, 1838, as part of FrAE 1837-40. He died on board on Feb. 5, 1840.

Beaudoin Peak. 79°48' S, 81°00' W. A snow-free peak rising to 980 m, surmounting the SE part of the Meyer Hills, in the Heritage Range. Mapped by USGS from ground surveys, and USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Douglas W. Beaudoin, meteorologist who wintered-over at Ellsworth Station in 1961.

Mount Beaufort *see* **Mount Foster**

Beaufort Island. 76°56' S, 166°56' E. A small island in the Ross Sea, rising to an elevation of 2530 feet above sea level (the New Zealanders say 1700 feet), it lies 20 km (the New Zealanders say 16 km) to the NE of Cape Bird (the NW extremity of Ross Island). Discovered by Ross in 1841, and named by him for Capt. Francis Beaufort (1774-1857), RN, hydrographer to the Admiralty, 1829-55 (*see also* **Balleny Islands**). US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer. It was made an SPA because of its breeding grounds.

The *Beaufoy of London*. Generally referred to as the *Beaufoy*. British 62-ton single-deck sloop, under 60 feet in length, built in Dover in 1803, and, in 1821, owned by James Strachan of Leith and James Mitchell, a London insurance broker. She was the tender to the *Jane* during Weddell's last 2 expeditions to Antarctica, 1821-22, and 1822-24. Michael McLeod commanded the *Beaufoy* on the first one (he brought her back to Gravesend on July 23, 1822, arriving before the *Jane*, from which she had parted on May 4, 1822) and Matthew Brisbane on the second (he was appointed skipper on Sept. 7, 1822). She had a crew of 13. She arrived back in Gravesend on June 20, 1824, nearly 3 weeks before the *Jane*, and on Aug. 19, 1824, Brisbane took the *Beaufoy* out again, to Tierra del Fuego and the Falklands, returning to Deal on April 10, 1826, to Gravesend on April 14, and to London on April 15, 1826, with 3620 skins and 200 tons of sperm. This expedition was incorporated into the revised (1827) version of Weddell's book.

Beaufoy Ridge. 60°38' S, 45°33' W. A conspicuous black ridge, rising to 655 m above sea level at its NW end, at the W side of Sunshine Glacier, just N of (i.e., at the head of) Iceberg Bay, on the S side of Coronation Island, in the South Orkneys. Surveyed by FIDS in 1948-49, and named by them for the *Beaufoy of London*. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Mount Beaufurt *see* **Mount Foster**

Glaciar Beaumont *see* **Beaumont Glacier**

Islote Beaumont *see* **Beaumont Island**

Islotes Beaumont *see* **Beaumont Island**

Beaumont, Robert Arthur. Known as Arthur Beaumont. Of Lyttelton, NZ. Able seaman on the *Morning*, during the last season of BNAE 1901-04. He later worked in Lyttelton as a laborer, married Emily Eliza, and moved to Timaru as a coal hulk keeper. In that same occupation, he moved back to Lyttelton in 1919, and later worked as a waterside worker and crane operator. By 1954, he and Emily had retired, and were living in Akaroa.

Beaumont Bay. 81°31' S, 161°22' E. A small ice-filled Ross Ice Shelf indentation into the Transantarctic Mountains (this type of bay is called a re-entrant, and this particular bay is along the W edge of the Ross Ice Shelf), on the Shackleton Coast, between Young Head and Harris Point, or between Cape Douglas and Cape Wilson, eastward of Mount Albert Markham. Dickey Glacier flows into it. Discovered in Dec. 1902, by BNAE 1901-04, and named by Scott for Adm. Sir Lewis Anthony Beaumont (1847-1922), Arctic explorer and supporter of Scott's expedition, and who would later superintend the *Discovery* to rescue the stranded members of the *Endurance* on Elephant Island during BITE 1914-17, a mission that was never carried out. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Beaumont Glacier. 72°02' S, 62°00' W. A broad glacier flowing in a NE direction to the SW part of Hilton Inlet, on the E coast of Palmer Land. In Dec. 1940 it was discovered and photographed aerially by USAS 1939-41. It was seen from the air by RARE 1947-48, and named by Finn Ronne as Tejas Glacier, for the Tejas chapter of the Daughters of the Republic of Texas, in Beaumont, Texas. However, it appears on his 1949 map, as Beaumont Glacier, for the town of Beaumont, both the town and the daughters having been supporters of his expedition. UK-APC accepted the name Beaumont Glacier on Jan. 28, 1953, and US-ACAN followed suit that year. It appears in the British gazetteer of 1955. It appears on a 1966 Chilean map as Glaciar Beaumont, and between 1966 and 1969 the glacier was photographed aerially by USN.

Beaumont Hill. 64°01' S, 61°59' W. Rising to about 350 m, almost 7 km NE of Chauveau Point, on the W side of Liège Island, in the Palmer Archipelago. Photographed aerially by FIDASE in 1956-57, and mapped from these photos in 1959, by FIDS cartographers. Shown on an Argentine government chart of 1957, but not named. Named by UK-APC on Sept. 23, 1960, for William Beaumont (1785-1853), American surgeon who made researches into gastric function. US-ACAN accepted the name later in 1960.

Beaumont Island. 68°12' S, 66°57' W. A tiny, low, rocky island, no more than a rock, in Neny Bay, about 0.7 km from the mouth of Centurion Glacier, in Marguerite Bay, off the Fallières Coast, on the W coast of Graham Land. In 1936 it was discovered and roughly charted by BGLE 1934-37. It was again roughly mapped by USAS 1939-41. Fids from Base E surveyed it in 1947 and named it Beaumont Islet, for Ronne's ship, the *Port of Beaumont, Texas*, which wintered near here in 1947. UK-APC accepted this name on Sept. 8, 1953, and it appears as such in the British gazetteer of 1955, and on a British chart of 1956. US-ACAN accepted the name in 1956. However, on July 7, 1959, UK-APC re-defined it as Beaumont Island, and it appears as such on a British chart of 1960. US-ACAN accepted the new name in 1969. It appears on a Chilean chart of 1969, as Islote Beaumont. The Argentines have taken Beaumont Island and its satellite rock, Is-

lote Ayala, and grouped the two features together as Islotes Beaumont, and that is how they appear in their 1991 gazetteer. *See also* **Islote Ayala**.

Beaumont Skerries. 64°46' S, 64°19' W. Two small islands and several rocks, 1.5 km E of the Joubin Islands, off the SW coast of Anvers Island, in the Palmer Archipelago. Charted by an RN Hydrographic Survey unit in 1956–58. Field work was done here from Palmer Station, from 1965 onwards. Named by US-ACAN in 1974, for Malcolm J. Beaumont, electronics technician on the *Hero*, on that vessel's first Antarctic voyage in 1968–69. UK-APC accepted the name on Dec. 20, 1974, and it appears on a British chart of 1976.

Beaupertuis, Jean. b. Dec. 16, 1816, Braun, France. Ordinary seaman on the *Zélée* during FrAE 1837–40.

Caleta Beaupré *see* **Beaupré Cove**

Beaupré Cove. 64°42' S, 62°22' W. A cove, 1.5 km wide, immediately NW of Piccard Cove, on the SW side of Wilhelmina Bay, along the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897–99. In 1956 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base O. Named by UK-APC on Sept. 23, 1960, for Charles-François Beautemps-Beaupré (1766–1854), French hydrographer who briefed FrAE 1837–40. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Caleta Beaupré (which means the same thing).

Rocas Beaver *see* **Beaver Rocks**

[1]**Beaver Glacier**. 67°02' S, 50°40' E. A glacier, 24 km long and 6 km wide, flowing W from the Napier Mountains of Enderby Land into Amundsen Bay between Auster Glacier and Mount Gleadell, or (to put it another way) between Ragged Peaks and Mount Gleadell. Visited by an ANARE party led by Peter Crohn, on Oct. 28, 1956, and named by them for the Beaver aircraft used in coastal exploration. ANCA accepted the name on July 22, 1957, and US-ACAN followed suit in 1961.

[2]**Beaver Glacier**. 83°24' S, 169°30' E. A small glacier, between 20 and 24 km long, and between 3 and 6 km wide, flowing from the coastal mountains of the Queen Alexandra Range, immediately NW of Mount Fox, between Lennox-King Glacier and the Beardmore Glacier, into the Ross Ice Shelf at McCann Point, 8 km SE of Richards Inlet. Named by NZGSAE 1959–60 for the *City of Auckland* (q.v.), a Beaver airplane which crashed near here in Jan. 1960, while the NZ party was being airlifted from the Ross Ice Shelf to the edge of the Polar Plateau. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1966.

Beaver Island. 67°07' S, 50°47' E. An island, 3 km long and 1.5 km wide (the Australians say 7 km long and 4 km wide), and rising to an elevation of 567 m above sea level, on the S flank of Beaver Glacier, in Amundsen Bay. Peter Crohn led an ANARE party here in Oct. 1956, and so named it for its proximity to the glacier. ANCA accepted the name on Feb. 18, 1958, and US-ACAN followed suit in 1961.

Beaver Lake. 70°48' S, 68°20' E. A lake of smooth ice, 11 km long and 8 km wide, enclosed on the S and E by Flagstone Bench and Jetty Peninsula. The lake is situated at the S end of an area of rough ice (a stagnant glacier), between 2 arms of a horseshoe-shaped rock exposure, 27 km ESE of the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Discovered aerially in 1956 by ANARE, and in Sept. 1957 an ANARE camp (Beaver Lake Camp), was established in the vicinity, by Bruce Stinear and Morris Fisher. Used extensively as a landing area by Beaver aircraft (hence the name given by ANCA). US-ACAN accepted the name in 1961. *See also* **Ozero Zaprudnoe**.

Beaver Rocks. 63°40' S, 59°21' W. A group of rocks, with a highest elevation of 29 m above sea level, 3 km off the Trinity Peninsula, midway between Notter Point to the NE and Cape Kjellman to the SW. Surveyed by Fids from Base D in 1960–61. Named by UK-APC on Feb. 12, 1964, for the de Havilland DHC-2 Beaver aircraft, used by FIDS and BAS. US-ACAN accepted the name later in 1964. The feature appears as Rocas Beaver in the 1991 Argentine gazetteer.

Monte Beazley *see* **Stonethrow Ridge**

[1]**Mount Beazley** *see* **Stonethrow Ridge**

[2]**Mount Beazley**. 85°51' S, 142°51' W. Rising to 2410 m, it surmounts the N extremity of the California Plateau. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Robert Montague Beazley, USN, who wintered-over as medical officer and officer-in-charge of Pole Station in 1965. For many years Dr. Beazley was professor of surgery at the medical schools of first Louisiana State and then Boston University.

Bebresh Point. 64°00' S, 61°58' W. A point projecting 1.3 km from the NW coast of Liège Island, and forming the N side of the entrance to Palakariya Cove, 7.7 km SW of Moureaux Point, and 11.3 km NNE of Chauveau Point, in the Palmer Archipelago. Surveyed by the Bulgarians in 2008–09, and named by them on Nov. 23, 2009, for the settlement of Bebresh, in northern Bulgaria.

Monte Becar *see* **Mount Ancla**

Punta Becco *see* **Blue Point**

Islote Becerra. 62°12' S, 58°54' W. A small island, about 250 m long in an E-W direction, in the midle of, and sheltered by, Ardley Cove, on Ardley Island, in Maxwell Bay, off King George Island, in the South Shetlands. Named by the Hydrographic Institute of the Chilean Navy for the commander of the squadron during the construction of the Centro Meteorológico Antártico in Feb. 1969.

Beche Blade. 80°43' S, 24°19' W. A sharp-crested ridge at 1545 m above sea level, between Murchison Cirque and Arkell Cirque, on the S side of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Sir Henry Thomas de la Beche (1796–1855), first director general of the Geological Survey of Great Britain, 1835–55, and founder of the Museum of Practical Geology, in London. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Mount Béchervaise. 70°11' S, 64°48' E. A great massif of brown rock, bare, except for an ice cap on the flat summit area, and rising sheer to 2362 m above sea level from the plateau ice on the N face, with steep slopes on the other sides, 1.5 km E of Mount Lacey in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. First visited in Nov. 1955 by John M. Béchervaise and his ANARE party, and named for him by ANCA on Sept. 4, 1956. US-ACAN accepted the name in 1962.

Béchervaise, John Mayston "Béch." b. May 11, 1910, Melbourne, son of Herbert Walter Béchervaise and his wife Lilian Mayston. He was teaching at Geelong College when, on Jan. 3, 1935, he married Lorna Fearn-Wannan. He was editor of the travel magazine *Walkabout* when he was asked by Phil Law to become ANARE officer in charge of Heard Island Station in the South Atlantic, 1952–53. This was a departure from the established principle that a scientist must lead a station. Then he began a long association with Geelong Grammar School. He was officer in charge of Mawson Station for the winters of 1955 and 1959. He wrote *Blizzard and Fire: A Year at Mawson, Antarctica* (*see* the Bibliography). He died on July 14, 1998, in Geelong, Victoria.

Béchervaise Island. 67°35' S, 62°49' E. The largest and central of the Flat Islands in Holme Bay, Mac. Robertson Land, about 2 km WNW of Mawson Station. Norwegian cartographers, in 1946 working from air photos taken during LCE 1936–37, mapped the group as one island, and called it Flatøy (i.e., "flat island"). However, in 1954, ANARE found this one to be a separate island, and it was named by ANCA on Oct. 11, 1960, for John Béchervaise. US-ACAN accepted the name in 1965. An Australian field camp, nicknamed Béch, was established here.

Cape Beck. 78°18' S, 166°16' E. A rounded, bare rock cape that forms the S end of Black Island, in the Ross Archipelago. Named by NZGSAE 1958–59 for geologist Alan Copland Beck, of Lyttelton, the leader of the sub-party of the expedition that explored the SE coastline of Black Island, and visited this cape. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1973. *See also* **Speden Bench**.

[1]**Mount Beck**. 71°02' S, 67°01' E. A partly snow-covered mountain, about 3.5 km SW of Taylor Platform, in the Prince Charles Mountains of Mac. Robertson Land. Plotted by Australian cartographers in 71°03' S, 67°03' E, from ANARE air photos taken in 1956 and 1960, and later named by ANCA for John W. Beck, who wintered over at Mawson Station as assistant cook in 1964 and as storeman at Wilkes Station in 1966. US-ACAN accepted the name in 1974. It has since been re-plotted.

[2]**Mount Beck** *see* **Beck Peak**

Beck, Andreas. b. Oct. 8, 1864, Balsfjorden, Tromsø, Norway, son of Lars Beck and his wife Johanne Balsfjord. Arctic sealing skipper from the 1880s. On Nov. 10, 1887, in Tromsø, he married Josefine Henriette Petra Hanssen. He was ice-pilot on the *Fram* with Amundsen during NorAE 1910-12, and, at the end of the expedition, was one of the group who arrived back in London on June 29, 1912, on the *Highland Scot*, from La Plata. He died aboard the *Fram* on March 18, 1914, at Panama, and was buried at sea.

Beck, Brian. b. Aug. 11, 1933, Bolton, Lancs, but raised in Rochdale, son of Fred Beck and his wife Amy Harrison (who ran a store in Rochdale called "the Mac Shop," selling raincoats). He was going to go into forestry, and, indeed, trained in the north of Scotland, but, instead, went to the Falkland Islands in 1956. He worked on Pebble Island sheep station, his job including met obervations for the Beaver aircraft that serviced the islands. He joined FIDS in Stanley, in 1957, as a meteorologist, and left Port Stanley on the *Shackleton*, wintering-over at Signy Island Station in 1958. He really got into wildlife studies while he was there. At the end of his tour, in 1959, the *John Biscoe* took him back from Signy, via Montevideo, to the UK. He had intended to go to Antarctica again, and had been approved, but, instead, he went to northern Canada in 1960, with the Arctic unit of the Fisheries Research Board, working on whales and seals. In Jan. 1961 he went to Sable Island, Nova Scotia, where he took over the lighthouse keeper's house at East Light, staying there for 33 years, working on seals. But from 1962 to 1965 he was in NZ, and then to British Columbia working on water pollution from mines and pulp mills. He married Elaine Daley. In 1961-62 he wintered-over with Alan Gill and Fritz Koerner on the Devon Island Project (in the Arctic). He also worked in Baffin Island and in the north of Scotland, at Rona, employed by BAS.

Beck, William. b. 1804, Catskill, NY. He went to sea as a young man, and on Sept. 22, 1833, at Stonington, married Hannah Wilcox. In 1839 he bought Four Mile Point, in Coxsackie, NY. His first command was the *Charles Adams*, 1835-36, then he skippered the *Corvo*, 1836-39, and the New London brig *Somerset*, from 1840 until that vessel was sold in Rio. He was commander of the *Richard Henry*, in the South Shetlands, 1843-45, when that ship was wrecked there in Feb. 1845. He went on to skipper the *Atlantic*, and was a very sick man — had been for a few years — and would have died anyway but the *Atlantic* sank in 1846. Back in Four Mile Point, rumors began circulating about Captain Beck's treasure, and over the years people have dug and dug, but never found it.

Beck Peak. 86°05' S, 158°58' W. Rising to 2650 m, on the E flank of Amundsen Glacier, 3 km NW of Mount Stubberud, on the ridge descending from the N part of the Nilsen Plateau, in the Queen Maud Mountains. In Nov. 1911, when Amundsen was speeding toward the Pole, and without much time to bother too much about how accurately he plotted the features he discovered, he saw a mountain in this general area and called it Mount A. Beck, or Mount Beck, after Andreas Beck. He roughly plotted it in 87°15' S, 150°00' W. Modern geographers cannot be sure where this peak is, or was, or is meant to be, but they know it is in this general area, so they arbitrarily named this peak as Beck Peak. It seems to have been first photographed during ByrdAE 1928-30, both from the air and from the ground. USGS mapped it again from ground surveys, and USN air photos taken between 1960 and 1964. NZ-APC accepted the name Beck Peak on June 29, 1967, and US-ACAN followed suit that year.

Mount Becker. 75°06' S, 72°02' W. A prominent mountain rising to 1540 m, 1.5 km NE of Mount Boyer, between the English Coast and the Orville Coast, in the Merrick Mountains of Ellsworth Land. Discovered and photographed aerially by RARE 1947-48, and named by Ronne for Ralph A. Becker, legal counsel who helped get the expedition together. Mapped by USGS from their own 1961-62 Antarctic Peninsula Traverse, and also from USN air photos taken in 1965-66. US-ACAN accepted the name in 1966. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Becker, Konrad. b. Germany. Naturalized in Argentina. He had much experience on merchants ships when he became the cook in the 1927 wintering-over party at Órcadas Station.

Becker Peaks *see* **Spanley Rocks**

Becker Point. 78°08' S, 164°13' E. Close NW of Lake Garwood, and SW of Auger Hill, between Garwood Glacier and Koettlitz Glacier, in Victoria Land. Named by US-ACAN in 1995, for Robert A. Becker, vice-president and project director of ITT Services, 1982-90.

Beckett, William T. "Will." b. June 21, 1929. Utilitiesman at Little America V in the winter of 1956. In 1956-57 he drove a D-8 in Vic Young's tractor train that went out to open up Byrd Station. He was at Byrd Station for OpDF IV (1958-59), and wintered-over again at McMurdo for the winters of 1961 and 1963. He died on Nov. 12, 2000.

Beckett Nunatak. 76°02' S, 160°11' E. A flattish, mostly bare rock nunatak, rising to 1920 m above sea level, about 15 km W of Mount Armytage, and S of Harbord Glacier, in Victoria Land. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1965, for William T. Beckett. NZ-APC accepted the name on Feb. 1, 1965.

Beckmann, Søren. b. Sept. 8, 1889, Norway. He was already whaling in Antarctic waters by 1912-13 (that season he was gunner on the *Neko*, based out of South Georgia), and was in Antarctica on the old *Sevilla* in 1923-24. In Feb. 1924, he skippered the whale catcher *Terje VI* in Marguerite Bay.

Mont Beddie *see* **Mount Beddie**

Monte Beddie *see* **Mount Beddie**

Mount Beddie. 64°29' S, 62°43' W. A rounded mountain rising to 434 m on Hulot Peninsula, 3 km E of Lehaie Point, at the SW end of Brabant Island, in the Palmer Archipelago. It is snow-covered except for its steep, sheer face. Charted by FrAE 1903-05, and probably (although not for sure) named by Charcot. It certainly appears as Mont Beddie, on the chart prepared by FrAE 1908-10. Named by ArgAE 1948-49, as Monte Beddie, and it appears as such on their 1949 expedition chart. That is the name that appears in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. UK-APC accepted the name Mount Beddie, on Dec. 15, 1982, and it appears as such in the 1986 British gazetteer. US-ACAN also accepted that name.

Ensenada Bedford *see* **New Bedford Inlet**

Isla Bedford *see* **Bedford Island**

Bedford Island. 66°28' S, 67°09' W. An island, 1.5 km long, at the S end of the Barcroft Islands, in the Biscoe Islands. Photographed aerially in 1956-57 by FIDASE, and surveyed from the ground by Fids from Base W between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Thomas George Bedford (b. 1875), British physicist specializing in the measurement of the physical environment of human beings. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears as Isla Bedford, in the 1991 Argentine gazetteer.

Bedlam Cove. 60°44' S, 45°39' W. Between Moyes Point and Pandemonium Point, on the S coast of Signy Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1947 and 1950, and photographed aerially by the RN in 1968. A very large and extremely raucous penguin colony is to be found here, and the steep cliffs around the cove confine the sound, making it sound like bedlam. Named by UK-APC on Sept. 29, 2004.

Bednarz Cove. 66°21' S, 110°32' E. An indentation into the S side of Mitchell Peninsula, in the Windmill Islands, on the Budd Coast. First mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for chief electronics technician Donald Francis Bednarz (b. June 7, 1930, Rugby, ND. d. March 7, 1973, Hillsborough, Fla.), USN, who wintered-over at Wilkes Station in 1958.

Bedrock. If there were no ice cap in Antarctica, it would be a small continent of 2.7 million square miles, consisting of bedrock. In other words, it would be like any other continent in that respect. The continent would comprise East Antarctica (the actual continental land mass) and a nearby island archipelago (West Antarctica). There would be vast lowland plains, and reasonably high mountains, and the terrain would be generally hilly to mountainous. All this has been borne out by echo soundings, which give the lay of the land below the ice. The continental bedrock has been depressed by about 2000 feet on average by the sheer weight of the ice on top of it. At the South Pole, for example, there is 336 feet of bedrock beneath 9186 feet of ice.

[1]**Bee, William**. b. ca. 1747, Barton, near Croft, in northern Yorkshire. He was a quartermaster's

mate on the *Resolution*, during Cook's 2nd voyage, 1772–75. He married Jane, and they lived at Deptford. He was still sailing when he died in 1799.

[2]**Bee, William**. b. 1883, Edinburgh, son of rubber worker William Bee, and his wife Janet. He was a meteorologist at the Ben Nevis Observatory near Fort William, and in 1904 he and Angus Rankin and practically all the met boys at Nevis went to Buenos Aires to become part of the Servicio Meteorológico Nacional, under Walter G. Davis. In early 1906 he and Rankin accompanied Albin Lind's expedition to Órcadas Station, and set out on their own to establish another met station on Booth Island. On Dec. 21, 1907, he was leading the team to Booth Island, on the *Austral*, when the ship sank in the Río de la Plata. They were all rescued by the *Amazone*.

Beebe, Stephen Lloyd. Known as Lloyd Beebe. b. May 1916, near Huntington, British Columbia, Canada, but raised from infancy in Washington state, son of Kansas-born logger Charles E. Beebe and his Washington-born wife Jessie. Lloyd dropped out of school and became a logger too, eventually working a farm in Sequim, Wash., where he began his photography career. He married Catherine in 1939, and 10 years later contacted Disney about his wildlife photos, thus beginning another career as a documentary film maker, working for Disney in 1955 and 1956. He went to Antarctica on the *Glacier*, as Disney representative, and swarmed all over the continent filming in Cinemascope the contruction of the IGY bases, all except South Pole, which he couldn't get permission to go to. Instead, he got Bill Bristol, the Navy photographer, to film the Pole Station construction for him. In Feb. 1956 he was on the Otter (flown by Bob Streich) that went out to pick up Jack Bursey's Byrd Station trail party. He wintered over in 1956 at Little America. He returned to the USA, via NZ, on the *Curtiss*. He finally left Disney in 1984, and died at Sequim, Wash., on Jan. 6, 2011.

Beeby Peak. 77°15' S, 166°54' E. Rising to about 1400 m, 3.6 km ENE of the summit of Mount Bird, in the NW part of Ross Island. This was not the name proposed by US-ACAN on Jan. 12, 2000 (one does not know what the proposed name was). NZ-APC recommended a new name, Beeby Point, on March 31, 2000, and that name was accepted by NZ-APC on Feb. 20, 2001, named for Chris Beeby (b. 1935. d. March 19, 2000, Geneva), NZ diplomat involved with Antarctic negotiations for 30 years. US-ACAN accepted the name. Chris Beeby was on the Beardmore Glacier in 1982–83, playing cricket.

Caleta Beeche. 64°54' S, 63°26' W. A cove opening into the W coast of the cape that forms the extreme SE of Wiencke Island, in the Palmer Archipelago. Named by the Chileans for Capt. Eduardo Beeche Riofrío, skipper of the *Rancagua* during ChilAE 1956–57. The Argentines call it Caleta Matheu.

The Beehive *see* **Mount Ruth Gade**

Beehive Hill. 68°16' S, 66°10' W. An ice-covered hill, rising to 2030 m above sea level and projecting 610 m (the British say 620 m) above the surrounding ice sheet, on the Graham Land plateau, 16 km E of the head of Neny Fjord, E of Neny Glacier, and close N of the head of Wyatt Glacier, at the Fallières Coast. Roughly surveyed in 1940, during USAS 1939–41. It appears on their field charts as Sphinx. Re-surveyed in 1946 by Fids from Base E, who called it Beehive Hill, for its resemblance in shape to a wicker beehive. UK-APC accepted that name on March 31, 1955, and US-ACAN followed suit that year. It appears in the 1978 Argentine gazetteer, as Cerro Lanudo (i.e., "woolly hill").

Beehive Mountain. 77°39' S, 160°34' E. Rising to 2133.6 m, 8 km N of Finger Mountain, at the N margin and near the head of Taylor Glacier, in Victoria Land. Discovered and named descriptively by Armitage in 1902 during BNAE 1901–04. It was climbed on Jan. 21, 1956, by 3 members of the NZ Advance Party, during BCTAE. It appears in the 1958 NZ provisional gazetteer. US-ACAN accepted the name in 1962.

Beehive Nunatak *see* **Teall Nunatak**

Been, Carl Henrik Johan. b. May 28, 1873, Moss, Norway, son of dock foreman Johan Been Hansen and his wife Ragnhild Johannesdatter. He went to sea and was a fireman on the *Southern Cross* during BAE 1898–1900. After the expedition, he went back to Moss, and in 1901, in Moss, married Otilde "Otilie" Jørgensdatter. He became a ship's engineer.

Isla Beer *see* [2]**Beer Island**

Beer, James Arthur. b. 1875, Hull, Yorks, son of William Beer and his wife Mary Senior. His father died in 1890, and James became a sailor not long afterwards. He married in Hull, in 1898. He was a crew member on the *Morning*, 1902–03, during that vessel's relief of the Scott party during BNAE 1901–04.

Beer, Nicholas Anthony "Nick." b. Oct. 7, 1949. He joined the Merchant Navy in 1967, and spent between 1972 and 1994 on British government ships in Antarctica, as, successively, 3rd officer, 2nd officer, chief officer, and finally captain. He retired in 1994, to become a principal inspector with the UK Marine Accident Investigation Branch.

[1]**Beer Island** *see* **Bear Island**

[2]**Beer Island**. 66°00' S, 65°41' W. An island, 1.5 km long, immediately S of Jagged Island, and 13 km W of Prospect Point, SE of Renaud Island, in the Biscoe Islands, off the W coast of Graham Land. Charted and named in Feb. 1936, by BGLE 1934–37. It appears as Mutton Cove Island (named in association with nearby Mutton Cove) on a 1943 U.S. Hydrographic Office chart; as Isla Caleta Carnero on a Chilean chart of 1947; as Isla Mutton Cove on a 1949 Argentine chart; and as Isla Caleta Cordero (i.e., "lamb cove island") on a 1953 Argentine chart. UK-APC accepted the name Beer Island Sept. 8, 1953, and US-ACAN followed suit later that year. It appears as such in the 1955 British gazetteer. Photographed aerially by FIDASE 1956–57. The Argentines finally settled for Isla Caleta Cordero, and that is how it appears in their 1970 gazetteer. The Chileans settled for Isla Beer, and that it is how it appears in their 1974 gazetteer.

Península Beethoven *see* **Beethoven Peninsula**

Beethoven Peninsula. 71°44' S, 73°41' W. A major peninsula, 100 km long, and 100 km wide at its broadest, it runs in a NE–SW direction, is deeply indented and ice-covered, and forms the extreme SW part of Alexander Island as it projects out W from that island. It terminates in Perce Point. Discovered and photographed aerially in 1940, by USAS 1939–41. They compiled the first rough map of the SW part of Alexander Island. Re-sighted and re-photographed aerially in Dec. 1947, by RARE 1947–48, and from these photos Searle of the FIDS plotted it in 1959–60, in 71°40' S, 73°45' W. Named by UK-APC on March 2, 1961, for the great German pianist and composer Ludwig Van Beethoven (1770–1827). US-ACAN accepted the name later in 1961, and it appears on a 1962 U.S. Hydrographic Office chart. It appears on a 1966 Argentine chart, as Península Beethoven. The Chileans tend to call it Península Carvajal, after Capitán de fragata Guillermo Carvajal Musso, skipper of the *Angamos* during ChilAE 1951–52. It has since been replotted, from U.S. Landsat imagery of Jan. 1973.

Beetle Spur. 84°10' S, 172°00' E. A rock spur, 3 km N of Mount Patrick, in the Commonwealth Range, it descends from a small summit peak on the range to the E of the Beardmore Glacier. First seen by Shackleton in 1908, on his trip to the Pole, during BAE 1907–09. From the W it looks like a beetle, and was so named by John Gunner (*see* **Mount Gunner**) of the Ohio State University Geological Expedition of 1969–70. He collected geological specimens at this spur. US-ACAN accepted the name in 1972, and NZ-APC followed suit on Aug. 3, 1972.

Beetles. There are two species of beetles living in Antarctica, inhabiting islands near the Antarctic Peninsula, and are probably alien to the continent.

Begann, A.M.S. b. July 7, 1906, Tønsberg, Norway, as Leif Thorvaldsen, son of ship's mate Eugen Thorvaldsen and his wife Agathe Inga Cecilie Sørensen. Whaler who died in the South Shetlands under unknown circumstances on March 14, 1929, and was buried in the Whalers Bay Cemetery, on Deception Island.

Kapp Begichev. 67°59' S, 43°58' E. A point on the W side of Carstensfjella, on the Prince Olav Coast. Named by the Russians as Mys Begicheva, for Nikifor Alekseyevich Begichev (1874–1927), Arctic explorer. The Norwegians call it Kapp Begichev.

Mys Begicheva *see* **Kapp Begichev**

Behaim Peak. 68°47' S, 66°43' W. A conspicuous pyramid-shaped rock peak rising to 1150 m (the British say about 800 m), at the S extremity of the mountains separating Meridian Glacier and Doggo Defile, E of Mikkelsen Bay, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially in Nov. 1947, by RARE 1947–48, and surveyed from the ground by Fids from Base E in Dec. 1958. Named by

UK-APC on Aug. 31, 1962, for German cosmographer and navigator Martin Behaim (1459-1506), who is credited with the first adoption of the astronomer's astrolabe for navigation at sea, in 1480. US-ACAN accepted the name later in 1962.

Behaim Seamount. 67°48' S, 11°00' W. An undersea feature, out to sea beyond Queen Maud Land.

Mount Behling. 85°40' S, 161°04' W. Flat-topped and ice-covered, and rising to 2190 m, between Steagall Glacier and Whitney Glacier, 8 km N of Mount Ellsworth, in the Queen Maud Mountains. First mapped from ground surveys and air photos taken during ByrdAE 1928-30. Named by US-ACAN in 1967, for Robert Edward "Bob" Behling (b. Sept. 11, 1941, Milwaukee), Ohio State University USARP glaciologist on the South Pole — Queen Maud Land Traverse of 1965-66.

Behm Bank. 76°21' S, 30°00' W. An undersea feature in the Weddell Sea. The name was proposed in Jan. 1997, by Heinrich Hinze, of the Alfred Wegener Institute, in Bremerhaven, and accepted internationally in June of that year. Alexander Behm (1880-1952) was the inventor, in 1912-13, of an electronic sounding apparatus.

Península Behn. 64°23' S, 61°26' W. It projects toward the N from Valdivia Point, between Graham Passage and Hughes Bay, on the W coast of the Antarctic Peninsula. Named by the Chileans for Dr. Francisco Behn, of the University of Concepción, who made studies of flora and fauna in this area during ChilAE 1950. The Argentines call it Península Ballvé, for Horacio Balvé (q.v.).

Behr Glacier. 72°55' S, 168°05' E. A steep tributary glacier, 11 km long, flowing E along the N side of Clapp Ridge, to enter Borchgrevink Glacier, in Victoria Land. It first appears on a 1960 NZ map of Antarctica, which was based on USN air photos. Named by US-ACAN in 1973, for Col. Robert McLean Behr (b. Sept. 6, 1921, Detroit. d. Dec. 27, 2007, Milton, Fla.), USAF, an Antarctic administrator of policy, 1970-71. NZ-APC accepted the name on April 5, 1973.

Behrendt, John Charles. b. May 18, 1932, Stevens Point, Wisc. After university and some geophysical field trips, he left Davisville, RI, on Nov. 9, 1956, on the *Wyandot*, arriving in Antarctica on Jan. 17, 1957, to become USGS assistant seismologist at Ellsworth Station for the winter of 1957. He left Antarctica on Jan. 17. 1958, after having participated in the Filchner Ice Shelf Traverse. After marrying Donna Ebben in Madison, Wisc., on Oct. 6, 1961, he was in the Ellsworth Mountains again in 1961-62, leading the USGS Antarctic Peninsula Traverse; was in Marie Byrd Land in 1963-64; and in the Pensacola Mountains in 1965-66. In 1999 he wrote *Innocents on the Ice: a Memoir of Antarctic Exploration, 1957*, and in 2005 wrote *The Ninth Circle: a Memoir of Life and Death in Antarctica*, 1960-1962. He has gone to Antarctica 13 times, the last in 2003.

Behrendt Mountains. 75°20' S, 72°30' W. A group of mountains, 30 km long, rising to an elevation of about 1550 m above sea level, and aligned in the shape of a horseshoe, with the opening to the SW, 11 km SW of the Merrick Mountains, NW of Cape Zumberge, just to the N of the Orville Coast, in the E part of Ellsworth Land. Discovered and photographed from the air in Dec. 1947, by RARE 1947-48, but apparently not named by them. Surveyed during the USGS Antarctic Peninsula Traverse of 1961-62 (led by John Behrendt), and photographed from the air by USN, 1965-67. Named by US-ACAN in 1966, for Mr. Behrendt. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Gora Behtereva *see* **Kampesteinen**

Beibu Taidi. 62°11' S, 58°56' W. A small hill, on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Beike Dao. 62°10' S, 58°59' W. An island off Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Beiszer Nunatak. 83°29' S, 51°57' W. Rising to 1630 m, 1.5 km S of Ray Nunatak, at the SW end of the Forrestal Range, in the Pensacola Mountains. Mapped by USGS from USN air photos taken in 1964, and from USGS ground surveys conducted during the Pensacola Mountains Project of 1965-66. Named by US-ACAN in 1968, for John E. Beiszer (b. 1929), VX-6 aviation structural mechanic who wintered-over at Ellsworth Station in 1957. On April 9, 1961 he was one of the flight engineers on the Hercules that flew in to Byrd Station to evacuate Leonid Kuperov (q.v.). UK-APC accepted the name on Nov. 3, 1971.

Beitzel Peak. 80°17' S, 82°18' W. A peak, 2.5 km SE of Minaret Peak, in the Marble Hills of the Heritage Range. Named by US-ACAN in 1966, for John Edward Beitzel, University of Wisconsin geophysicist on South Pole — Queen Maud Land Traverses I and II, 1964-65 and 1965-66.

Islotes Bejin *see* **Puffball Islands**

Gora Beketova. 71°12' S, 66°04' E. A nunatak, NW of Dohle Nunatak, in the Prince Charles Mountains. Named by the Russians.

Bekkedahl, Clifford Lewis "Cliff." b. Dec. 11, 1930, Cleveland, son of mechanical engineer Donovan Forde Bekkedahl (Norwegian ancestry) and his wife Mildred Agnes Halsall (Isle of Man ancestry). At Miami University (in Ohio) he was given a reserve commission in the Navy as an ensign, and on graduating in 1953 was called up. His first assignment was as assistant navigator (then navigator) on the *Arneb*, during OpDF I (1955-56). After that, he became a regular Navy officer, serving mostly on destroyers, and married Victoria "Vicky" Becce on June 21, 1957. He retired in 1979, as a captain, and went to work as a senior executive for Lummus, a petrochemical engineering and construction company in New Jersey. He became managing editor of the *Polar Times*.

Bekker Nunataks. 64°42' S, 60°50' W. Three nunataks, rising to about 700 m, below Ruth Ridge, on the N side of Drygalski Glacier, SSW of Cape Worsley, on the Nordenskjöld Coast of Graham Land. Mapped from 1960-61 surveys conducted by Fids from Base D. Named by UK-APC on Feb. 12, 1964, for Lt. Col. Mieczyslaw Gregory Bekker (1905-1989), Canadian engineer specializing in the ice. US-ACAN accepted the name later in 1964.

Bela Hill. 68°36' S, 78°05' E. A prominent hill in a somewhat featureless area, in the S part of Breidnes Peninsula, in the Vestfold Hills. Named by ANCA on Nov. 22, 1973, for Lou Frank Ostril-Bela (known as Lou Ostril), who wintered-over as senior weather observer (radio) at Davis Station in 1969.

Bukhta Belaja. 70°03' S, 11°40' E. A bay, just NW of Dakshin Gangotri Station, on the Princess Astrid Coast. Named by the Russians.

Gora Belaja. 70°37' S, 67°49' E. A nunatak in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Gora Belaja Shapka. 70°36' S, 66°54' E. A nunatak in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

BelARE *see* **Belgian Antarctic Expeditions**

Belchin Rock. 62°32' S, 60°24' W. A rock in Hero Bay, off the N coast of Livingston Island, 2.2 km NE of Siddons Point, and 2 km N of Melta Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009, for the settlement of Belchin, in western Bulgaria.

Isla Belding *see* **Belding Island**

Belding Island. 66°24' S, 67°13' W. An island, 5 km long, W of the S end of Watkins Island, in the Biscoe Islands. Photographed aerially by FIDASE in 1956-57. Named by ArgAE 1958-59, as Isla Helicóptero (i.e., "helicopter island"), it appears as such on the 1959 chart of the expedition. Named Belding Island by UK-APC on Sept. 23, 1960, for Harwood Seymour Belding (1909-1973), U.S. physiologist specializing in the cold. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. By 1991 the Argentines were calling it Isla Belding.

Mount Belecz. 85°34' S, 163°27' W. A flat-topped, ice-covered mountain, rising to 2120 m, 10 km NE of Mount Ruth Gade, in the Quarles Range. First mapped from ground surveys and air photos taken during ByrdAE 1928-30. Named by US-ACAN in 1967, for Dan Michael Belecz, meteorologist who wintered-over at Pole Station in 1962.

Belemnite Point. 70°40' S, 68°32' W. The E extremity of a mainly ice-free, hook-shaped ridge, midway between Lamina Peak and Ablation Point, near the E coast of Alexander Island, N of Grotto Glacier, and 3 km inland from George VI Sound. First photographed aerially by Ellsworth on Nov. 23, 1935, and mapped from these photos the following year by U.S. cartographer W.L.G. Joerg. Again photographed aerially, and roughly surveyed from the ground, in Oct. 1936, by BGLE 1934-37. Visited on Dec. 10, 1948, by Fids from Base E, who found the rock to be rich in belemnite fossils. Surveyed

more accurately in 1949, by FIDS, who named it for these fossils. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Belemnite Valley. 71°18' S, 68°20' W. A small valley, mostly snow- and ice-free, with a central meltwater stream, about 2.5 km NW of Fossil Bluff Station, and bounded to the N by Eros Glacier, on Alexander Island. In scientific reports of the early 1960s it was sometimes referred to as Hollow Valley, and today is occasionally called Happy Valley. Named Belemnite Valley by UK-APC on April 23, 1998, because of the preponderance of belemnites found in the exposed rock here. US-ACAN accepted the name in 1999.

Laguna Belén *see* **Belén Lake**

Belén Beach. 62°14' S, 58°59' W. A raised shingle beach W of Eddy Point, on the S end of Fildes Peninsula, King George Island, in the South Shetlands. Named by UK-APC on June 6, 2007, in association with nearby Belén Lake.

Belén Lake. 62°14' S, 58°59' W. About 150 m long, and separated from Belén Beach by, and immediately N of, an unnamed rock and scree knoll, at the S end of Fildes Peninsula, King George Island, in the South Shetlands. In or around 1996 the Chileans named it Laguna Belén, and the British, almost immediately translated the name to Belén Lake. UK-APC accepted the name on June 6, 2007.

Belene Cove. 62°35' S, 61°12' W. A cove, 550 m wide, indenting the NW coast of Ray Promontory for 600 m, between Isbul Point and Start Point, on Byers Peninsula, Livingston Island, in the South Shetlands. Mapped by the UK in 1968. Named by the Bulgarians on Dec. 15, 2006, for the town of Belene, in Northern Bulgaria.

BelgAE *see* **Belgian Antarctic Expedition**

Belgau, A.M. Skipper of the whale catcher *Minerva*, in 1921-22, when she went down off Graham Land on March 13, 1922.

Belgen *see* **Belgen Valley**

Belgen Valley. 73°35' S, 4°00' W. A broad, ice-filled depression in the ice, 11 km wide, between Enden Point to the SW and Heksegryta Peaks to the NE, in the N part of the Kirwan Escarpment, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Belgen (i.e., "the bellows"). US-ACAN accepted the name Belgen Valley in 1966.

Belgian and Netherlands Antarctic Expeditions. There were four of these, the first in 1963-64, and the last in 1966-67, and were all taken to Antarctica on the *Magga Dan*. The leaders were, respectively, Lucien Cabès, Winoc Bogaerts, and (for the last two), Tony van Autenboer. Roi Baudoin Station was occupied during each of the expeditions, and closed at the end of the last one.

Belgian Antarctic Expedition 1897-99. Abbreviated as BelgAE 1897-99. Led by Adrien de Gerlache. Its missions — to collect zoological specimens, to conduct meteorological and magnetic observations, to do ocean soundings, to determine the position of the South Magnetic Pole, and to explore. **1894**: The expedition was conceived by de Gerlache, and he proposed it to the Royal Geographical Society of Brussels, who agreed with him, but came up with no money. Ernest Solvay, however, came up with 25,000 francs. **1895**: De Gerlache went to the Arctic to study cold-weather techniques, methods and ways of life. It was only with the Belgian press getting behind his idea that he gained support. De Gerlache asked astronomer Georges Lecointe to be his 2nd-in-command and skipper of the expedition ship. **Jan. 1896**: The Society got up a subscription list, but money was slow coming in. With government assistance, the kitty was raised to 250,000 francs. Preparations got under way, and de Gerlache and his friend Émile Danco sailed around Norway in the *Castor* looking for a suitable expedition ship. They found her — the *Patria*, which they bought and renamed the *Belgica*. Henryk Arctowski also came aboard. **July 1896**: A Norwegian sailor, Roald Amundsen, wrote a letter to de Gerlache, asking to be taken on, unpaid. **1897**: Still hopelessly low on funds, it was Madame Osterrieth who came through for them. **Aug. 16, 1897**: The *Belgica* left Antwerp. **Aug. 24, 1897**: The *Belgica* left Ostend. The crew of the *Belgica* were a mixture of nationalities: The Belgians were: Georges Lecointe (captain, hydrographer, and second-in-command of the expedition), Henri Somers (chief engineer), Max Van Rysselberghe (engineer); and the seamen Jan Van Mirlo, Gustave Dufour, Louis Michotte (who would ultimately become the cook), and Jules Malaerts. The Norwegians were: second mate Roald Amundsen; and seamen Adam Tollefsen, Hjalmar Johansen, Johan Koren, Engebrecht Knudsen, and Carl Wiencke. The scientists were: the Belgian Émile Danco (geophysicist, who paid to go on the expedition); the Poles Henryk Arctowski (meteorologist) and Antoine B. Dobrowolski (assistant meteorologist); the Rumanian Emile G. Racovitza (zoologist; there was no qualified Belgian zoologist in existence, so the Rumanian army let Racovitza go on the trip). The ship was forced to return to Ostend briefly for repairs, and two men jumped ship (not, however, any of those mentioned above). **Sept. 13, 1897**: They arrived at Madeira. **Sept. 16, 1897**: They left Madeira, bound for Rio. **Oct. 22, 1897**: They arrived at Rio in the late afternoon. **Oct. 30, 1897**: Dr. Frederick Cook, the American surgeon, boarded, as a replacement for the originally proposed M. Taguin, who never sailed from Belgium. Later that day the ship sailed for Buenos Aires, Montevideo (where the cook was fired after a fight, and a Swedish seaman was taken on as replacement cook). **Nov. 8, 1897**: The ship entered the Río de la Plata. **Nov. 14, 1897**: They left Montevideo. **Dec. 1, 1897**: They arrived at Punta Arenas, where an engineer was fired for having allowed the boiler to run dry, and the new Swedish cook and three Belgians were fired also. **Dec. 14, 1897**: They left Punta Arenas. **Jan. 19, 1898**: They arrived in Antarctic waters, with personnel problems on board, problems that necessitated a change of mission, at least for the first year of the expedition. It would now simply explore the coast of Graham Land and the Weddell Sea. **Jan. 20, 1898**: They arrived at the South Shetlands. **Jan. 21, 1898**: They explored the South Shetlands. **Jan. 22, 1898**: When the ship left for Hughes Bay, Carl Wiencke lost his balance, fell overboard, and drowned during a huge storm in which the ship lost a lot of its coal. Lecointe almost drowned too after jumping into the sea to try to rescue the dying Wiencke. **Jan. 23-Feb. 12, 1898**: The expedition ship made 20 separate landings on the islands off the Antarctic Peninsula, the first scientific vessel to visit the continent itself. They also discovered and charted the Belgica Strait (now called the Gerlache Strait) and the Danco Coast, as well as Anvers Island, Brabant Island, Liège Island, and Wiencke Island. **Jan. 26, 1898**: Amundsen became the first man to ski in Antarctica, when he did so on Two Hummock Island. **Jan. 31, 1898**: De Gerlache, Cook, Amundsen, Danco, and Arctowski sledged across Brabant Island. **Feb. 15, 1898**: The *Belgica* crossed the Antarctic Circle. **Feb. 16, 1898**: They sighted Alexander I Land. **Feb. 8, 1898**: They got stuck in the ice, but plowed through as best they could for over 3 weeks. **March 3, 1898**: They really got trapped, in 70°20' S, 85°W, in the Bellingshausen Sea, and drifted due to the weak engines not being efficient enough to pull the ship out. **March 10, 1898**: Still trapped and drifting, they were in 71°34' S, 89°10' W. They had been scheduled to be in Melbourne in April, and when they didn't show up, the world became alarmed for their safety, enough so that the BAE 1898-1900, led by Borchgrevink, now made it one of their main missions to look for the *Belgica* while it was in southern waters. Fortunately de Gerlache had three years' food supply, as their intention had been to be the first ever wintering-over party in Antarctica — but on land (as it were), not trapped in an ice-bound ship. **June 5, 1898**: Danco died of heart failure, leaving 17 men. **Nov. 19, 1898**: Amundsen had resigned due to prejudice by the Belgian majority against the non-Belgians on board. Two men, Tollefsen and Knudsen, went insane. **Jan. 11, 1899**: The crew finally began to cut their way out of the ice. **Feb. 15, 1899**: They finally escaped, after having been trapped for a year. Scurvy was rampant. **Feb. 26, 1899**: They explored Black Island. **Feb. 27, 1899**: They passed through the Cockburn Channel. **March 14, 1899**: They found open water, and headed north. **March 28, 1899**: They arrived at Punta Arenas. Amundsen refused to travel back to Belgium on the *Belgica*, taking Tollefsen and Knudsen home to Norway on a Norwegian mail boat (Tollefsen recovered; Knudsen died). **Nov. 1899**: The *Belgica* arrived home to celebration.

Belgian Antarctic Expeditions. There were four such expeditions (BelgAE) in the late 1950s and early 1960s. **BelgAE 1957-59**. Led by Gaston de Gerlache, son of the pioneer. On Nov. 12, 1957, the icebreaker *Polarhav* and the sealing

ship *Polarsirkel* left Antwerp. They carried 3 tractors, an airplane, and a helicopter. Xavier de Maere d'Aertrijke (radio operator and 2nd-in-command), Jacques Loodts (aurora scientist), Henri Vandevelde (ionosphere physicist), Luc Cabès (magnetist), Edgard E. Picciotto and Tony van Autenboer (geologists), Prince Antoine de Ligne (pilot and photographer), Charles Hulshagen (vehicle mechanic). On Dec. 26, 1957, the two ships arrived at Queen Maud Land. A party visited the Belgica Mountains, while most of the personnel built what was to be Belgium's only scientific station in Antarctica for decades, Roi Baudoin Station. **BelgAE 1958-60**. Led by Gaston de Gerlache, in the *Polarhav*. Other expeditioners included Tony van Autenboer and Ken Blaiklock (surveyor). On the way south the ship was stuck in the ice for 5½ weeks, until freed by the the U.S. icebreaker *Glacier*. This was the expedition in which they found a dead seal 120 miles inland. **BelgAE 1959-61**. Led by Guido Derom, on the *Polarhav*. Tony van Autenboer was on this expedition. **BelgAE 1960-62**. Led by Guido Derom on the *Erika Dan*. Roi Baudoin Station was closed on Jan. 15, 1961. These expeditions were succeeded by the series of Belgian and Netherlands Antarctic Expeditions (see below).

[1]**The *Belgica***. A modern Belgian 3-masted, one-funneled, steam/sailing vessel, originally a whaler/sealer called the *Patria*, built in 1884 by Johan Christian Jakobsen, of Selvig, Norway. She was bought in 1896 for 60,000 francs as the expedition ship for BelgAE 1897-99, was overhauled, given a new boiler, and a 150 hp engine, and re-named for the ancient province of Belgica. A gray ship, with natural wood and cream trimmings, the *Belgica* was bark-rigged with patent single topsails. 188 feet long, 26 feet wide, she had a draft of 13 feet 4 inches, auxiliary power aft, and could reach 7 knots maximum speed. Equipped as a scientific laboratory, her lab measured 15 feet by 12 feet in a special deck house. After the expedition, she returned to whaling, and was an occasional Arctic exploration ship. N.C. Halvorsen bought her in 1902, and later the Duke of Orleans bought her from Halvorsen. In 1916 she was sold to det Norske Kulsyndikat, and became the freighter *Isfjord*, being sold again in 1918, to become a floating codliver oil refinery and fish processing plant. In 1940 the British impounded here and used her as a floating ammunition depot. On May 19, 1940 she was sunk during a German air raid. Her wreck was discovered in 1990.

[2]**The *Belgica***. Whale catcher, built in 1925 for the Hektor Company. She was in Graham Land waters in 1927.

Canal de la Belgica *see* **Gerlache Strait**

Détroit de la Belgica *see* **Gerlache Strait**

Isla Belgica *see* **Hugo Island**

Monts Belgica *see* **Belgica Mountains**

Belgica Glacier. 65°23' S, 63°50' W. A glacier, 13 km long, flowing NW into Trooz Glacier, to the E of Lancaster Hill, E of Collins Bay, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37, and photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for the *Belgica*. US-ACAN accepted the name in 1971.

Belgica Guyot. 65°30' S, 90°30' W. An undersea tablemount, discovered by the *Polarstern* in Feb. 1995. It was named by US-ACAN in 1997, for de Gerlache's ship *Belgica*, based on a suggestion made in Feb. of that year by Rick Hagen of the Alfred Wegener Institute for Polar and Marine Research. The name was accepted internationally in June 1997.

Belgica Mountains. 72°35' S, 31°10' E. An isolated chain of mountains, about 16 km long, in the area that the Norwegians call Thorshavnheiane, at the fringe of Queen Maud Land, about 100 km ESE of the Sør Rondane Mountains, between those mountains and the Queen Fabiola Mountains. They include Mounts Bastin, Böe, Brouwer, Collard, Gillet, Hoge, Hulshagen, Imbert, Kerckhove de Denterghem, Lahaye, Launoit, Perov, Van der Essen, and Victor. Discovered and explored between Oct. and Dec. 1958, by BelgAE 1957-59, led by Gaston de Gerlache, who named them Monts Belgica, for his father's ship, the *Belgica*. US-ACAN accepted the name Belgica Mountains in 1962. The Norwegians call them Belgicafjella.

Belgica Sea *see* **Bellingshausen Sea**

Belgica Strait *see* **Gerlache Strait**

Belgica Subglacial Highlands. 76°30' S, 129°00' E. A group to the SE of Dome C, running in a N-S direction, and separating Peacock Subglacial Trench and Adventure Subglacial Trench from Wilkes Subglacial Basin, within the Australian Antarctic Territory near its E boundary with Adélie Land. Delineated by an airborne radio echo-sounding program taken by the Scott Polar Research Institute and the National Science Foundation in 1967-69, and named after the *Belgica*. ANCA accepted the name on July 26, 1983, and US-ACAN also accepted it.

Belgicafjella *see* **Belgica Mountains**

Belgium. In 1897, Belgium sent to Antarctica the ill-fated BelgAE 1897-99, led by Adrien de Gerlache, on the *Belgica*. The next expedition was BelgAE 1957-59, that country's IGY effort, led by Gaston de Gerlache, son of the great man. This expedition established Belgium's only (for many years) scientific station in Antarctica, Roi Baudouin (which was to close in 1967). This was followed by BelgAE 1958-60, and BelgAE 1959-61. One of the original 12 signatories of the Antarctic Treaty in 1959, Belgium still sends research parties to Antarctica, although in co-operation with other countries. In 2008 Princess Elisabeth Station was built.

Arrecife Belgrano. 65°09' S, 64°58' W. A reef, immediately N of Bergel Rock, off Quintana Island, in the SW part of the Wilhelm Archipelago. Named by the Argentines, for General Belgrano (*see* **Belgrano Bank**).

Base Belgrano *see* **General Belgrano Station**

Isla Belgrano *see* **Adelaide Island**

Belgrano Bank. 73°00' S, 48°30' W. Also known as General Belgrano Bank. A submarine feature out to sea beyond the Weddell Sea. Named for Gen. Manuel Belgrano (1770-1820), Argentine hero.

Belgrano Station *see* **General Belgrano Station**

Mount Belgrave. 76°36' S, 162°01' E. A prominent rock summit rising to over 1200 m, about 2.5 km W of Mount Creak, overlooking the N side of Fry Glacier, at the S extremity of the Kirkwood Range. Originally, US-ACAN were going to call this mountain Mount Varcoe, for Garth Varcoe, but, instead the late Mr. Varcoe gave his name to Varcoe Headland, and NZ-APC named the mountain Mount Belgrave, on Nov. 12, 1999, for Douglas Vincent "Vince" Belgrave of Palmerston, NZ), surveyor and project leader in several surveys and geodetic projects for the NZ Antarctic Project between 1984 and 1997. US-ACAN accepted the name in 2000. *See also* **Pa Tio Tio Gap**.

Belgun Peak. 63°44' S, 58°37' W. An ice-covered peak rising to 1205 m, with precipitous, ice-free W slopes, in the NE extremity of Trakiya Heights, E of Zlidol Gate, 890 m NW of Antonov Peak, 4.6 km NE of Skoparnik Bluff, 1.49 km ENE of Lepitsa Peak, 3.56 km E of Mount Schuyler (on the Detroit Plateau), 3.41 km SE of Sirius Knoll, and 5.2 km WSW of Mount Canicula, it surmounts the head of Russell West Glacier to the N, and the upper course of Victory Glacier to the S, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Belgun, in northeastern Bulgaria.

Le Bélier *see* ***under* L**

Belimel Bay. 63°52' S, 60°55' W. A bay, 5.9 km wide, which indents the SW coast of Trinity Island for 3.9 km, and which is entered between Asencio Point and Spert Island, in the Palmer Archipelago. Named by the Bulgarians on Nov. 23, 2009, for the settlement of Belimel, in northwestern Bulgaria.

Belitsa Peninsula. 63°44' S, 59°14' W. A peninsula, 13 km wide, projecting for 8.5 km in a NW direction from Trinity Peninsula, it is bounded by Bone Bay to the NE, Charcot Bay to the SW, and Bransfield Strait to the NW. Trapezoid in form, its W and N extremities are formed by Cape Kjellman and Notter Point respectively. Mapped by the Germans and British in 1996. Named by the Bulgarians on June 3, 2010, after the town of Belitsa, in southwestern Bulgaria.

Gora Beljaeva. 70°43' S, 66°33' E. A nunatak in the Aramis Range of the Prince Charles Mountains. Named by the Russians.

Gora Beljakova. 82°32' S, 51°13' W. A nunatak in the Pensacola Mountains. Named by the Russians.

Gora Beljankina. 70°54' S, 67°50' E. A nunatak in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Gora Belka. 71°23' S, 13°00' E. A nunatak in the Gruber Mountains, in the Wohlthat Mountains of Queen Maud Land. Named by the Russians.

Belknap Nunatak. 72°30' S, 97°36' W. A nunatak, 10 km WNW of Shelton Head, surmounting an ice-covered spur on the S coast of Thurston Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for William Belknap, field assistant at Byrd Station in 1964-65. Originally plotted in 72°26' S, 97°45' W, it has since been replotted.

Mount Bell. 84°04' S, 167°30' E. Rising to 4305 m (the New Zealanders say about 3200 m), it forms part of the NE edge of Grindley Plateau, 10 km (the New Zealanders say 6 km) SE (the New Zealanders say WSW) of Mount Mackellar, on the W side of the Beardmore Glacier, in the Queen Alexandra Range. Named by Shackleton during BAE 1907-09, for William Bell, a supporter of the expedition, and one of his cousins. A last-minute gift of £4000 from Bell enabled the *Nimrod*'s refitting to be completed. However, apparently that money never materialized, and the juggling Shackleton had done meant that the shortfall embarrassed him when time came to pay his crew. US-ACAN accepted the name in 1952, and NZ-APC followed suit.

Nunatak Bell. 66°03' S, 60°54' W. One of two nunataks (Nunatak Dewis being the other) which stand within a larger group of nunataks at the NE end of the Jason Peninsula, on the E coast of the Antarctic Peninsula. Named by the Argentines.

Punta Bell *see* **Bell Island**

Bell, Dennis Ronald "Tink." b. July 15, 1934, London, son of Frederick D. Bell and his wife Norah H. Husband. He joined FIDS in 1957, as a meteorological assistant, and wintered-over at Base G in 1958 and 1959. On July 26, 1959 he died in a crevasse on Stenhouse Glacier.

Bell, Keith Roland. b. 1926, Luton, Beds, son of Douglas J. Bell and his wife Isabel M. Judge. He was a tea planter is Assam, managing an estate, then started up a travel office in the UK, which failed because of under-capitalization. He joined FIDS in 1957, as a diesel electric mechanic (the other lads always wondered where he got the qualifications for this), and wintered over at Base F in 1958 and 1959, the second time also as base leader. He would collapse occasionally during his second year there, and then get up again. Doc Cumming examined him but couldn't find the cause. It got worse, and in early 1960 he was flown to the UK, where he was examined in London. Again they couldn't find anything wrong, but it was a brain tumor, and he died on (or close to) the operating table that year.

Bell, Martin Hutchinson. b. Dec. 24, 1969. BAS driver and plant operator at Halley Bay Station in the summer of 1992-93, and tractorman at the same station for the winters of 1994, 1995, and 1997, the last year being base commander. In 1998-99 he did again at Halley what he did in his first summer season there, and in 1999-2000 was facilities technician at Signy Island Station.

Bell, Robert W. b. June 23, 1914, Wash., son of Roy Clark Bell (a clerk with Pacific T & T) and his wife Clara. Roy died at the end of World War I, and Clara, with three young children, had to go to work as a bookkeeper in an automobile company. The elder son went to sea in 1940-41, his first berth being on the *North Star* for the 2nd half of USAS 1939-41. During World War II he served as junior 3rd officer on the USAT *William L. Thompson*, on the run from Seattle up to Vancouver, and was then out in the Pacific, at Guadalcanal and Leyte Gulf, as 3rd officer on the *Red Rover*. After the war he became 1st officer on the *Coastal Nomad*, plying between Portland, Oreg., and Vancouver, and occasionally down to Mexico and Peru. He was with the *Nomad* for several years, before going over to the *Santa Elisa* and the *Santa Leonor* in 1952, as chief mate, doing pretty much the same thing. He died on Sept. 30, 1997, in Willitts, Calif.

Bell, Stuart Andrew. b. Jan. 15, 1969. He joined BAS in 1990, and spent part of 2 summers in Antarctic waters, on the *John Biscoe*, as an electronics engineer. He was radioman at Rothera Station for the summers of 1992-93, 1993-94, 1994-95, and 1995-96. Later, he broke his back in a flying accident.

Bell, Thomas G. *see* **USEE 1838-42**

Bell Bay. 67°11' S, 58°25' E. A small bay just W of Law Promontory, between Mount Saint Michael and the Kring Islands, on the Kemp Coast of Enderby Land. Photographed aerially by LCE 1936-37, mapped from these photos by Norwegian cartographers in 1946, and named by them as Indrefjord (i.e., "inner fjord"). Renamed by ANCA on Oct. 11, 1960, for Flight Sgt. (he would later retire as a flight lieutenant) Stewart "Snow" Bell (b. April 28, 1929), RAAF, wireless fitter who wintered-over at Mawson Station in 1959. US-ACAN accepted the name in 1965.

Bell Bluff. 84°04' S, 170°00' E. A rock bluff on the W side of the Beardmore Glacier, just N of the mouth of Garrard Glacier. Named by US-ACAN in 1965, for Charles A. Bell, utilitiesman who wintered-over at Hallett Station in 1964. NZ-APC accepted the name on Nov. 16, 1965.

Bell Buttress. 77°18' S, 160°59' E. A forked, flat-topped ridge, just over 2 km long, extending N from The Fortress, into the SW part of Victoria Upper Névé, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Robin E. Bell, of Columbia University's Lamont-Doherty Earth Observatory, who conducted aerogeophysical research of the lithosphere of the West Antarctic rift system for 5 field seasons between 1991 and 1999. NZ-APC accepted the name on Sept. 12, 2005.

[1]**Bell Glacier**. 66°42' S, 124°54' E. Flows N into Maury Bay, at the Voyeykov Ice Shelf, immediately E of Blair Glacier, on the Banzare Coast of Wilkes Land. Delineated by U.S. cartographer Gard Blodgett in 1955 from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1955, for Thomas G. Bell. ANCA accepted the name on Oct. 22, 1968. Originally plotted in 66°40' S, 125°05' E, it has since been replotted.

[2]**Bell Glacier** *see* **Mackellar Glacier**

[1]**Bell Island**. 62°07' S, 58°52' W. A rocky island lying 10 km SW of Stigant Point, near the NW end of King George Island, in the South Shetlands. Charted and named Rocky Point by the personnel on the *Discovery II* in 1935. It appears on a 1946 Argentine chart as Punta Rocky. Rocky Point was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. Photographed aerially by FIDASE in 1956-57, and, because there were too many similar names, on Sept. 23, 1960 UK-APC renamed it Bell Point, for the unfortunate Fid, Tink Bell. US-ACAN accepted the new name later that year, and it appears as such on a 1962 British chart. The Argentines called it Punta Bell. In 1980 the Polish Antarctic Expedition found that, due to glacial recession, it had become an island, separated from the glaciers of the Ioannes Paulus II Coast, and they renamed it Bell Island. As such it appears in the Polish gazetteer of 1982, and the UK has followed suit, replotting it in late 2008 (but, oddly, as Bell Point). It appears in the 1991 Argentine gazetteer as Punta Bell.

[2]**Bell Island** *see* **Guesalaga Island**

Bell Peak. 85°22' S, 164°14' W. Rising to 1620 m, and surmounting a SE-trending spur of the Herbert Range, just SW of Sargent Glacier. Probably first seen by Amundsen in 1911, it was roughly mapped by ByrdAE 1928-30. Named by US-ACAN in 1967, for G. Grant Bell, cosmic ray scientist with the Bartol Foundation, who wintered-over at McMurdo in 1962. NZ-APC accepted the name on June 29, 1967.

Bell Point *see* [1]**Bell Island**

Bell Rock. 71°35' S, 66°26' W. A very conspicuous and isolated nunatak, rising to about 1200 m, on the N side of Goodenough Glacier, 20 km E of Mount Ward, at George VI Sound, in Palmer Land. Surveyed by BAS personnel from Base E and from Fossil Bluff, between 1962 and 1972. Named by UK-APC on July 21, 1976, for Charles Michael Bell (known as Michael) (b. Nov. 3, 1942), BAS geologist who wintered-over at Fossil Bluff Station in 1969, and at Base T in 1970. He was also involved in the Alexander Island Project of 1972-73, and was in South Georgia in 1974-75. He later lived in South Africa, working at the University of Port Elizabeth. US-ACAN accepted the name later in 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Bell Valley. 79°51' S, 82°00' W. A small, mainly ice-free valley, S of Urban Point, in the Enterprise Hills of the Heritage Range. Named by the University of Minnesota Geological Party of 1963-64 for the Bell helicopters used here during the expedition. US-ACAN accepted the name in 1966.

Bell Zygmunt. 62°07' S, 58°22' W. A bell-shaped nunatak, 300 m above sea level, E of Mount Wawel, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1984, after the famous Renaissance bell of Wawel Cathedral, in Krakow, founded by King Zygmunt I.

Bellafronto Bight. 78°13' S, 165°06' E. An

ice-filled embayment, extending SW-NE for 10 km from Hahn Island to Swyers Point, between the base of the W side of Brown Peninsula and the low NW foot of Mount Discovery, on the Scott Coast of Victoria Land. Named by US-ACAN in 1999, for Robert L. Bellafronto (b. 1946), USN, a public works officer at McMurdo during OpDF 77 (i.e., 1976-77) and OpDF 78 (i.e., 1977-78). NZ-APC accepted the name on Nov. 4, 1999.

Bellchambers, William Henry "Bill." b. July 10, 1923, Alverstoke, Hants. He was a corporal in the Hampshire Regiment during World War II (1941-46). He was an ionosphere physicist working for the Ministry of Transport and Civil Aviation, when he took part in the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, leading his specialist group, and wintering-over at Halley Bay in 1957 and 1958. At the end of the expedition, he left Cape Town on the *Kenya Castle*, arriving back in London on Feb. 27, 1959. He was with BAS at Halley Bay Station in 1964 and 1965. In 1968, in Gosport, he married Dorothy Mary Preece.

The *Belle-Étoile*. French yacht, skippered by Jean-Joseph Terrier, which visited the South Shetlands and the Antarctic Peninsula in 1985-86.

Belles, Leo George. b. Oct. 1, 1915, Leavenworth, Kans., son of Kansas City-born cement finisher Omer Robert Belles and his wife Myrtle. When Leo was an infant, the family moved to Kansas City, and Omer got a job in El Dorado, close to Wichita. The joys of raising a family in Kansas City did not compensate for the emormous commute between there and his place of employment, and Omer decided to try farming in Sarcoxie, Kans. That didn't work out, so they moved to Topeka, where Omer became a construction foreman. In the late 1920s, they moved again, to Sedro-Woolley, Wash., where Omer became a railroad section hand. Then the family moved to Everett, Wash. Leo was an oiler on the *North Star* during USAS 1939-41. Myrtle died in 1953, in Seattle, and Leo retired to Tulalip, Wash, and in 1993 moved to Marysville, dying in Everett, on July 2, 1992.

Terrasses des Belles Pierres *see* ***under*** **D**

Mar de Bellingshausen *see* **Bellingshausen Sea**

Mer Bellingshausen *see* **Bellingshausen Sea**

Mount Bellingshausen. 75°07' S, 162°06' E. A steep, conspicuous, cone-shaped mountain, rising to 1380 m (the New Zealanders say 975 m), 8 km NE of Mount Priestley, on the S side of Larsen Glacier, between that glacier and David Glacier, in the Prince Albert Mountains, on the E coast of Victoria Land. Discovered by BNAE 1901-04, and named by Scott for von Bellingshausen. US-ACAN accepted the name in 1947.

Bellingshausen, Fabian von *see* **von Bellingshausen, Fabian**

Bellingshausen Abyssal Plain *see* **Bellingshausen Plain**

Bellingshausen Basin *see* **Southeast Pacific Basin**

Bellingshausen Dome. 62°10' S, 58°53' W. A domed ice-cap, rising to about 200 m, forming the W end of the Arctowski Ice Cap, at the N end of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Poles in 1973, as Malyy Kupol (i.e., "little dome"). However, in 1984, the Poles renamed it, in association with nearby Bellingshausen Station. UK-APC accepted the name Bellingshausen Dome, on June 6, 2007. The British were the last to re-plot it, in late 2008. The name Collins has been attached to this feature since the mid 1980s — some call it Collins Glacier, others call it Collins Ice Cap, and others have translated those names in a variety of ways.

Bellingshausen Plain. 64°00' S, 90°00' W. Also called Bellingshausen Abyssal Plain. An enormous submarine feature beneath the Amundsen Sea and the Bellingshausen Sea. It wends a snakelike course between 60°S and 72' S, and between 77°W and 172°W, parallel to the continental rise in the Bellingshausen Sea. Named by international agreement in 1974, for von Bellingshausen.

Bellingshausen Sea. 71°00' S, 85°00' W. A vast sea in the Southern Ocean, constantly ice-floe'd, between Thurston Island and Alexander Island, S of Peter I Island. It reaches depths of from 500 feet to 13,000 feet and more. Von Bellingshausen (for whom it was eventually named) seems to have been the first into these waters, in Jan. 1821. During FrAE 1908-10, Charcot applied the name Mer Bellingshausen to the area of sea that centers in 67°S, and which lies between 85°W and 100°W, and the name Mer de la Belgica (named after the *Belgica*) to that area of sea that centers in 70°30' S, and which extended between the same longitudinal coordinates as that of Mer Bellingshausen. This situation is reflected in the expedition's charts and maps. However, it was not long before the name Bellingshausen Sea came to be applied (loosely) to that stretch of sea N, NW, and W of Alexander Island, or between the SW part of Graham Land and 98°W, with its S limit being the Antarctic mainland. It appears as such on a British chart of 1940, and that is how it was accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. However a 1929 American Geographical Society chart shows it as the Belgica Sea (with Bellingshausen Sea in parentheses). It appears on a 1940 Argentine chart as Mar Bellingshausen, but on a 1953 Argentine chart as Mar de Bellingshausen. Mar Bellingshausen is the name that appears in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer, despite the fact that in 1948 the Chileans flirted with the name Mar de O'Higgins. Other countries translated the name as they might, with all sorts of transliterated spellings and misspellings. In 1954 the name Bellingshausen Sea was restricted to that area of sea between Alexander Island and Thurston Island, and S of Peter I Island, that definition being accepted by UK-APC on Dec. 8, 1977.

Bellingshausen Station. 62°12' S, 58°58' W. Soviet year-round scientific station. **1967-68 summer**: The station was built in Collins Harbor, Potter Cove, Fildes Peninsula, King George Island, in the South Shetlands. **Feb. 22, 1968**: The station was opened. Its studies were atmosphere, meteorology, geomagnetism, and coastal hydrology. The original buildings were wooden, but were later metal. It could accommodate a maximum of 50 persons, although the usual number was 25. It had a winter population of about 15. Named for von Bellingshausen. **1968 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1969 winter**: Nikolay Federovich Kudryavtsev (leader). **1970 winter**: Igor Mikhaylovich Simonov (leader). **1971 winter**: Boris Mikhaylovich Belyayev (leader). **1972 winter**: Artur Nikolayevich Chilinganov (leader; b. 1939, Leningrad). **1973 winter**: Gennadiy Ivanovich Bardin (leader). **1974 winter**: Boris Ivanovich Imerekov (leader). **1975 winter**: Nikolay Nikolayevich Ovchinnikov (leader). **1976 winter**: Anatoliy Aleksandrovich Lebedev (leader). **1977 winter**: Oleg Nikolayevich Struin (leader). **1978 winter**: Valeriy Fedorovich Dubovtsev (leader). **1979 winter**: Nikolay Nikolayevich Ovchinnikov (leader). **1980 winter**: Vladimir Aleksandrovich Spichkin (leader). **1981 winter**: Aleksandr Voldemarovich Yanes (leader). **1982 winter**: Oleg Nikolayevich Struin (leader). **1983 winter**: Igor' Antonovich Korzhenevskiy (leader). **1984 winter**: Oleg Nikolayevich Struin (leader). **1985 winter**: Anatoliy Semenovich Aleksandrov (leader). **1986 winter**: Arnol'd Bogdanovich Budretskiy (leader). **1987 winter**: Vyacheslav Leonidovich Mart'yamov (leader). **1988 winter**: Ryurik Maksimovich Galkin (leader). **1989 winter**: Yuriy Petrovich Godoshnikov (leader). **1990 winter**: Pavel Vladimirovich Kolbatov (leader). **1991 winter**: Vladimir Konstantinovich Stepanov (leader). **1992 winter**: Pavel Valentinovich Seleznev (leader). **1993 winter**: Sergey Sergeyevich Potapov (leader). **1994 winter**: Vladimir Aleksandrovich Kuchin (leader). **1995 winter**: Sergey Sergeyevich Potapov (leader). **1996 winter**: Anatoliy Semenovich Aleksandrov (leader). **1997 winter**: Vladimir Ivanovich Bessanov (leader). **1998 winter**: Konstantin Konstantinovich Levando (leader). **1999 winter**: Oleg Sergeyevich Sakharov (leader). **2000 winter**: Konstantin Konstantinovich Levando (leader). The station was open every winter from that time on. During the 2009 winter, a fuel tank farm was established, and it became a major fuel depot for the Soviet Antarctic fishing fleet. The station is now Russian, of course, rather than Soviet. Trinity Church is here (see **Churches**).

Bellingshausenhavet *see* **Bellingshausen Sea**

Shel'fovyj Lednik Bellinsgauzena *see* **Trolltunga**

Bellinshausen Becken. 60°00' S, 100°00' W. An undersea basin, immediately W of the Southeast Pacific Basin. Named by the Russians.

Bellinshausen Küste *see* **Von Bellingshausenkysten**

Bellisime Glacier. 72°19' S, 99°53' W. About 6 km long, it flows S from Thurston Island, E

of Myers Glacier. Named by US-ACAN in 2003, for Lynda Bess Bellisime (b. Dec. 1943), part of the USGS team that compiled the 1:500,000,000-scale Advanced Very High Resolution radiometer maps of Antarctica, and the 1:250,000-scale Landsat image maps of the Siple Coast area in the 1990s.

Cabo Bello *see* **Cape Lamas**

Mount Bellows. 84°50' S, 178°58' E. Rising to 2390 m, 5 km W of Layman Peak, at the E side of Ramsey Glacier, near the edge of the Polar Plateau. Named by US-ACAN in 1966, for Frederick A. "Fred" Bellows (b. 1942), USN, radioman at McMurdo in 1964.

Cabo Bellue *see* **Phantom Point**

Cap Bellue *see* **Cape Bellue**

Cape Bellue. 66°18' S, 65°53' W. Forms the N side of the entrance to Darbel Bay, and divides the Graham Coast from the Loubet Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1908-10, and named by Charcot as Cap Bellue, for Vice Admiral Jean Bellue (1848-1924), superintendent of the dockyard at Cherbourg. It appears on a 1914 British chart as Cape Bellue, but in Aug.-Sept. 1935, the feature was surveyed by BGLE 1934-37, who mistakenly named it Cape Evensen, or Cape Evensen South. Chile picked up the error, calling it Cabo Evensen on a 1947 chart. However, US-ACAN accepted the name Cape Bellue in 1947, with UK-APC following suit on Sept. 8, 1953. It appears on a 1949 Argentine chart as Cabo Bellue. It appears in the 1955 British gazetteer as Cape Bellue, and also on a 1961 British chart. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base W. It appears as Cabo Bellue in the 1970 Argentine gazetteer and in the 1974 Chilean gazetteer. Not to be confused with Cabo Bellue (*see* **Phantom Point**).

Kapp Bellue *see* **Darbel Islands**

Point Bellue *see* **Cape Bellue**

Bellum Valley. 79°54' S, 155°15' E. A small valley E of Banna Ridge, in the NW part of the Britannia Range. The head of the valley is adjacent to the head of Atherton Glacier. Named by Mike Selby's 1978-79 University of Waikato geological party, in association with Britannia, Bellum being a historical place name used in Roman Britain. NZ-APC accepted the name, and US-ACAN followed suit.

Gora Belogolovaja. 73°38' S, 66°40' E. A nunatak, just south of the spur the Russians call Otrog Malyj, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Mount Belolikov. 70°29' S, 162°07' E. Rising to 1120 m, along the W wall of Gannutz Glacier, about 13 km WNW of Mount Bruce, E of Rennick Bay, in the Bowers Mountains. Photographed aerially during OpHJ 1946-47. Surveyed from the ground by SovAE 1958, and named by the Russians in 1961 as Gora Belolikova, for A.M. Belolikov (*see* **Deaths**, 1960). US-ACAN accepted the translated name Mount Belolikov in 1964.

Gora Belolikova *see* **Mount Belolikov**

Gora Belopol'skogo. 70°56' S, 67°08' E. A nunatak, NW of the O'Leary Ridges, in the Prince Charles Mountains of Mac. Robertson Land. Named by the Russians.

Gora Belosnezhka. 80°35' S, 30°10' W. A nunatak in the W part of the Shackleton Range. Named by the Russians.

Belousov Point. 69°50' S, 160°20' E. An ice-covered point forming the S tip of Anderson Peninsula, just N of the terminus of Suvorov Glacier. Mapped by SovAE 1958, and named by the Russians in 1961, as Mys Belousova, for polar captain Mikhail P. Belousov (1904-1946). NZ-APC accepted the translated name Belousov Point, on July 16, 1964, and US-ACAN followed suit in 1965.

Mys Belousova *see* **Belousova Point**

Halm Belozem *see* **Belozem Hill**

Belozem Hill. 62°38' S, 60°21' W. A hill, 880 m NE of Sinemorets Hill, 3.8 km WSW of Rezen Knoll, and 1910 m S by W of Aleko Rock, it is the most northeasterly hill in the chain that runs along Bulgarian Beach. Composed of boulder-clay, and snow-free in summer, it is capped by twin heights, the higher (to the ENE) rising to 41 m. Mapped by the Spanish in 1991, surveyed in detail by the Bulgarians in 1995-96, and named by them on Oct. 29, 1996, as Halm Belozem, for the settlement in Bulgaria of the same name (the name Belozem meaning "white soil"). The name was translated into English as Belozem Hill, a name accepted by UK-APC on April 29, 1997, and by US-ACAN later that year.

Cabo Belsham *see* **Cape Belsham**, **Cape Valentine**

Cape Belsham. 61°06' S, 54°53' W. A prominent cape, 0.8 km W of Point Wild, and WNW of Cape Valentine, on the N coast of Elephant Island, in the South Shetlands. Named before 1822, for it appears on Powell's chart published in that year. During USEE 1838-42, Wilkes mistook Cape Valentine for this point, and named it ("it" being Cape Valentine) as Cape Belsham. However, it correctly appears on a 1927 Discovery Investigations chart (the DI had just charted it), as Cape Belsham, and that is the name that was accepted by US-ACAN in 1952, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1939 Argentine chart as Cabo Belsham, and that is the name that appears in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer. It has also been seen occasionally as Point Belsham (which is slightly inaccurate), and even appears on a 1951 French chart as Île Belsham (which is very inaccurate). The British were the latest to replot it, in late 2008.

Île Belsham *see* **Cape Belsham**

Point Belsham *see* **Cape Belsham**

Cabo Beltrán. 66°07' S, 65°29' W. A cape, the NW tip of Conway Island, in Holtedahl Bay, off the W coast of Graham Land. Named by the Argentines.

Caleta Beltrán *see* **Ensenada Micalvi** (under **M**)

Islote Beltrán. 63°55' S, 60°44' W. An island between the Gaston Islands and Islote Leucotón, about 1.5 km E of Borge Point (the E extremity of Mikkelsen Harbor), on the S coast of Trinity Island, in the Palmer Archipelago. Named by ChilAE 1951-52, one of whose vessels, the *Leucotón*, effected a hydrographic survey of Mikkelsen Harbor in Feb. 1952.

Belweder. 62°11' S, 58°38' W. A mountain, about 250 m above sea level, between Zalewski Glacier and Doctors Icefall, Goulden Cove (inner Ezcurra Inlet), Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for the Warsaw residence of the President of Poland.

Poluostrov Belyj *see* **Belyj Peninsula**

Belyj Peninsula. 66°05' S, 100°35' E. In the Bunger Hills. Charted by SovAE 1957, and named by the Russians as Poluostrov Belyj. The name was later translated by ANCA on Jan. 11, 1989.

Cerro Benavides *see* **San Fernando Hill**

Benbrook Glacier. 81°27' S, 158°55' E. Flows SSE for 8 km from Egress Peak, in the Carlstrom Foothills, into Flynn Glacier, in the Churchill Mountains. Named by US-ACAN in 2003, for James Robert "Jim" Benbrook (b. 1959), of the department of physics at the University of Houston, who was a USAP team member in balloon-borne investigations of the ionosphere and magnetosphere over the South Pole in the period 1985 to 1995. NZ-APC accepted the name on Feb. 27, 2003.

Bender Glacier. 78°43' S, 85°20' W. Flows S from Mount Atkinson and Mount Craddock into the Nimitz Glacier, in the S part of the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, for Michael L. Bender, of the department of geosciences (geochemistry), at Princeton, whose paleoclimate research from 1984 on, centered on the glacial-interglacial climate change and the global carbon cycle.

Bender Mountains. 85°31' S, 140°12' W. A small group of mountains in the vicinity of Leverett Glacier, just to the E of the Harold Byrd Mountains, and 6 km SW of the Berry Peaks, between the Watson Escarpment and the SE edge of the Ross Ice Shelf, in Marie Byrd Land. Mount Mahan is the chief peak. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for Lt. Cdr. Leslie Colby Bender, Jr., USN, aircraft commander at McMurdo in 1962-63 and 1963-64.

Bendida Peak. 63°48' S, 58°54' W. An ice-covered peak rising to 1200 m, in the N foothills of the Detroit Plateau, 2.11 km NNW of Golesh Bluff, 12.22 km E of Pointer Hill, 4.27 km S by E of the Aureole Hills, 12.74 km SW of Mount Schuyler, and 10.64 km WNW of Darzalas Peak, it surmounts a tributary glacier to the W that is flowing northwestward into Pettus Glacier, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the ancient Thracian goddess Bendida.

Cabo Beneden *see* **Beneden Head**

Beneden Head. 64°46' S, 62°42' W. A steep-sided headland, rising to 700 m, forming the ex-

treme NE entrance point of Andvord Bay, on the Danco Coast, on the W coast of Graham Land. Discovered by BelgAE 1897-99, charted by them in Feb. 1898, and named by de Gerlache as Cap Van Beneden, for Prof. Édouard-Joseph-Louis-Marie Van Beneden (1846-1910), of the University of Liège, a member of the Académie Royale de Belgique, president of the *Belgica* Commission, and author of several of the zoological reports of the expedition. It appears as such on the expedition charts and maps, and as Cape Van Beneden on Dr. Frederick Cook's 1900 English language version of the expedition map. By 1908 the Argentines were calling it Cabo Beneden. It appears on a 1947 Chilean chart as Punta Copihue, named after the Chilean plant. It appears on a 1949 Argentine chart as Cabo Van Beneden, and that is the name that appears in their 1970 gazetteer, and also in the 1974 Chilean gazetteer. In April 1955, Fids from the *Norsel* surveyed it. UK-APC accepted the name Beneden Head, on Sept. 4, 1957, and it appears as such on a British chart of 1959. US-ACAN followed suit with that naming in 1960.

Punta Benedict *see* **Benedict Point**

Benedict Peak. 75°17' S, 110°32' W. A sharp, mostly ice-covered subsidiary peak, 10 km NE of the summit of Mount Murphy, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1967, for Philip C. Benedict, aurora scientist at Byrd Station in 1966. NZ-APC accepted the name on June 29, 1967.

Benedict Point. 66°09' S, 66°36' W. A point, 8 km S of Cape Leblond, on the E side of Lavoisier Island, in the Biscoe Islands. Mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Francis Gano Benedict (1870-1957), U.S. physiologist who, with W.O. Atwater (*see* **Atwater Hill**), perfected the technique for calorimetric measurement of metabolism. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Punta Benedict.

Benes Peak. 76°02' S, 124°07' W. Almost entirely snow-covered, and rising to 2450 m, 6 km E of Mount Aldaz, along the Usas Escarpment, in Marie Byrd Land. Surveyed by USGS on the Executive Committee Range Traverse of 1959. Named by US-ACAN in 1962, for Norman Stanley Benes (b. July 1, 1921, Detroit, but grew up in Long Island, NY. d. June 16, 2002, Fair Oaks, Calif.), meteorologist with the Polar Operations Section of the U.S. Weather Bureau in Washington, DC (very different to his previous posting — Arizona), USARP scientific leader at Byrd Station, 1961.

Mount Beney. 80°16' S, 27°45' W. The largest of the La Grange Nunataks, rising to about 1000 m, in the N part of the Shackleton Range. Roughly mapped in 1957 by BCTAE. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station, between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Ivor Beney. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Beney, Ivor Christopher. b. May 14, 1932, Hastings, Sussex, son of Arthur Beney and his wife Ida Harding. He joined the Royal Engineers, and was diesel engineer with the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, wintering-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Kenya Castle*, and arrived back in London on Feb. 27, 1959. He died in Chatham, in 1979.

Beney Nunataks *see* **La Grange Nunataks**

Bengaard Peak. 83°19' S, 163°29' E. A prominent rock peak, rising to 2110 m, 10 km S of the Fazekas Hills, on the E side of the Queen Elizabeth Range. Named by US-ACAN in 1965, for Hans-Jørgen Bengaard, USARP ionosphere physicist at Little America V in 1957. NZ-APC accepted the name on Nov. 16, 1965.

Bengtson Cliffs. 63°51' S, 57°47' W. Pale-colored coastal cliffs about halfway between Cape Lachman and Andreassen Point, on James Ross Island. Named by UK-APC on Dec. 2, 1993, for Peter Kristian Bengtson (b. 1945), a member of the BAS — James Ross Island party, 1988-89.

The *Benguela*. Built in 1897, by Richardson, Duck, of Thornaby, near Stockton-on-Tees, for the Johnston Line, as the 4547-ton *Oakmore*, and in 1911 bought by Bugge for his Hvalen Company, and converted at Rotterdam into the 4613-ton Norwegian factory whaling ship *Benguela*, for whaling off the African coast. In 1914, as part of the fleet owned by the Hektor Company's subsidiary company Kastor, she replaced the *Ronald*, and was in the South Shetlands and Graham Land for the 1914-15 and 1915-16 seasons (the latter season under skipper Frithjof Randulff Kjørboe). She was sunk by German gunfire off the Azores, on June 30, 1917.

Benguela Gully. 62°59' S, 60°31' W. A gully running ENE, N of South East Point, on Deception Island, in the South Shetlands. It is the site of the largest patch of *Colobanthus quitensis* (Antarctic pearlwort), one of only two flowering plants to be found in Antarctica. Named by UK-APC on March 17, 2010, for the *Benguela*.

Benighted Pass. 72°30' S, 166°15' E. A snow pass between Mount Watt and Mount Roy, in the Barker Range of the Victory Mountains, in Victoria Land. Malcolm Laird, the NZ geologist, suggested the name. His field party was forced to lay-over in an emergency tent here, during bad weather on the pass, 1981-82. NZ-APC accepted the name, and US-ACAN followed suit.

Cabo Benítez *see* **Cabo Del Pozo**

Mount Benjamin. 85°48' S, 160°06' W. A prominent mountain, rising sharply to 1750 m at the W side of Amundsen Glacier, 8 km SE of Mount Ellsworth, in the Queen Maud Mountains. Discovered and mapped during ByrdAE 1928-30. Named by US-ACAN in 1967, for Benjamin F. Smith, meteorologist who wintered-over at McMurdo in 1963.

The *Benjamin Bowring* *see* **The *Kista Dan***

The *Benjamin de Wolf*. Sealer out of Newport, RI, which was in the South Shetlands in the 1839-40 season, under the command of Capt. William Smyley. She also spent some time in the Falklands. She made it back to Providence, RI, after a successful voyage (2000 sealskins).

Mount Benkert. 73°38' S, 76°40' W. The most easterly of the Snow Nunataks, rising to about 700 m, SE of Carroll Inlet, and 13 km ESE of Mount Thornton, on the English Coast, Ellsworth Land. Discovered by USAS 1939-41. Photographed aerially by USN, 1965-66. Named by US-ACAN in 1968, for Capt. William Michael "Mike" Benkert, U.S. Coast Guard, commander of the *Eastwind* during OpDF 66 (i.e., 1965-66) and OpDF 67 (i.e., 1966-67). UK-APC accepted the name on Dec. 20, 1974.

Benkovski Nunatak. 62°30' S, 59°35' W. A rocky peak, projecting to a height of 450 m above sea level out of the ice cap of Greenwich Island, 600 m N of Parchevich Ridge, 1 km WSW of Bogdan Ridge, and overlooking Gruev Cove to the E, at the NE extremity of Breznik Heights, in the South Shetlands. Surveyed by the Bulgarians during their 2004-05 Tangra survey, and named by them on Dec. 15, 2006, for Georgi Benkovski (1843-1876), a leader of the 1876 April uprising for Bulgarian independence.

Benlein Point. 66°29' S, 110°29' E. The S point of Peterson Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47 and OpW 1947-48. Named by US-ACAN in 1963, for Franklin J. Benlein (b. 1937), USN, construction man at Wilkes Station in 1958.

Cabo Bennett *see* **Cape Bennett**

Cape Bennett. 60°37' S, 45°13' W. Also spelled Cape Bennet. A bold promontory at the NE extremity of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Powell and Palmer, and charted on Dec. 11, 1821, by Powell, who named it for his employer, Daniel Bennett, of Rotherhithe. It appears on various charts throughout the years, and was recharted by the Discovery Investigations team in 1933. US-ACAN accepted the name in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as Cabo Bennett on a 1945 Argentine chart, and that is the name that appears in the 1970 Argentine gazetteer.

Islas Bennett *see* **Bennett Islands**

Islotes Bennett *see* **Bennett Islands**

[1]**Mount Bennett** *see* **Stor Hånakken Mountain**

[2]**Mount Bennett**. 84°49' S, 178°54' W. A prominent snow-covered knob-type mountain, rising to 3090 m, about 5 km E of Mount Boyd, it surmounts the NW part of Anderson Heights, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed during Flight C, Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Bert Crary's Ross Ice Shelf Traverse Party of 1957-58, and named by Crary for Hugh Bennett (b. 1930), seismologist with the party. US-ACAN accepted the name in 1962.

Bennett, Arthur George. b. Jan. 26, 1888. He was appointed customs officer in Stanley on

Jan. 10, 1912, and was whaling officer in the South Orkneys, 1912-13. He became the first magistrate actually to live at the South Shetlands (Deception Island, 1913-14 summer), and served as such again in 1917-19, 1921-23, and 1925-27. In Dec. 1921 he was on board the *Graham* when they found Bagshawe and Lester, during the British Imperial Antarctic Expedition. A self-taught taxidermist, from 1924 to 1938 he was acting government naturalist in the Falkland Islands (cf. **William Barlas**). He died Oct. 26, 1954, in the Falklands.

Bennett, Floyd. b. Oct. 25, 1890, Warrensburg, NY. He left school at 17 and became an auto mechanic and part owner of a service station. He joined the U.S. Navy in 1917, as an aviation mechanic, and became a competent flyer. In Greenland with Byrd in 1925 and 1926, he became Byrd's close friend and personal pilot. On May 9, 1926 he and Byrd, in the 3-engine Fokker monoplane *Josephine Ford*, became the first men ever to fly over the North Pole. Floyd was promoted to warrant mechanic (Byrd was promoted to commander). He and Byrd were then going to fly the Atlantic in the *America*, but the plane crashed, injuring Benett, thus enabling Lindbergh to steal a march. Byrd did the Atlantic trip in 1927. Then he and Bennett planned ByrdAE 1928-30, their mission being to fly to the South Pole and back. Bennett did most of the planning, but caught pneumonia and died on April 25, 1928, in Quebec, thus never making Antarctica. He was buried in Arlington National Cemetery.

Bennett, Kenneth Lyle "Ken." They called him "KB." b. Jan. 15, 1936, Parramatta, NSW. Australian radio operator who wintered-over at Mawson Station in 1960, at Wilkes Station in 1965, and at Mawson again in 1967, this time as 2nd-in-command as well as radio operator-in-charge, a dual role he repeated at Davis Station in 1969 and 1986. In between he did 3 stints at Macquarie Island.

Bennett Bluff. 75°10' S, 134°30' W. A bluff, rising to 810 m, with prominent rock exposures on the N wall, behind the Hobbs Coast, between the upper reaches of Venzke Glacier and Berry Glacier, 11 km SWW of the Perry Range, in Marie Byrd Land. Discovered and photographed aerially on Dec. 18, 1940 by USAS. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Clarence E. Bennett, VX-6 aviation electronics technician who wintered-over at McMurdo in 1963. Originally mapped in 75°08' S, 134°35' W, it has since been replotted.

Bennett Dome. 71°48' S, 73°03' W. A rounded (dome-shaped), snow-covered peninsula, rising to about 460 m between Weber Inlet and Boccherini Inlet, on the S side of Beethoven Peninsula, Alexander Island. First roughly mapped by Searle of the FIDS, in 1959-60, from aerial photos taken in late 1947 by RARE 1947-48. Mapped definitively by USGS from USN air photos taken in 1967-68, and from U.S. Landsat images taken in 1972-73. Named by US-ACAN in 1988, for Joseph E. Bennett, head of the Polar Coordination and Information Section, Division of Polar Programs, National Science Foundation, 1976-86. UK-APC accepted the name on Feb. 15, 1988. It appears in the U.S. gazetteer of 1989, and in the British gazetteer of 1993.

Bennett Escarpment. 70°36' S, 64°19' E. A rock and ice escarpment curving in a general SW direction for 30 km from Mount Pollard and Mount Canham, about 13 km SSW of the Crohn Massif, in the Porthos Range of the Prince Charles Mountains, in Mac. Robertson Land. Mapped from terrestrial photography taken by Syd Kirkby, surveyor at Mawson Station in 1956, and from ANARE aerial photographs taken in 1965, and named by ANCA on Aug. 10, 1966, for John Michael Bennett, aurora physicist at Mawson in 1965. They plotted it in 70°34' S, 64°24' E, and the Russians later plotted it in 70°37' S, 64°10' E. US-ACAN accepted the name in 1970. It has since been re-plotted.

Bennett Islands. 66°56' S, 67°40' W. A group of 5 islands extending in a SW direction for 10 km, at the SW side of Liard Island, in the W side of Hanusse Bay, off the NE coast of Adelaide Island, between that island and the W coast of Graham Land. They were undoubtedly seen by Charcot during FrAE 1908-10, but were not mapped by him. They were sighted and sketched aerially on Feb. 13, 1937, by BGLE, but not named by them. In 1947, ChilAE named the four principal islands as (running from N to S): Isla Guacolda (later named Gränicher Island), Isla Quidora (Pfaff Island), Isla Fresia (Mügge Island), and Isla Runcumilla (Weertman Island), named after Chilean submarines. They did not name Jona Island, which lies between Pfaff and Mügge. Photographed aerially in late 1947 by RARE 1947-48. Named Bennett Islets, for Arthur G. Bennett. UK-APC accepted this name on Sept. 22, 1954, and US-ACAN followed suit in 1956. Surveyed from the ground by Fids from Base W between 1956 and 1959, and redefined on July 7, 1959, by UK-APC, as Bennett Islands. The feature appears as such on a British chart of 1961. US-ACAN followed suit with the new name in 1963. It appears on a Chilean chart of 1962 as Islotes Bennett (Bennet, actually, which is simply a misspelling), and Islotes Bennett is the name that appears in the 1974 Chilean gazetteer. It appears as Islas Bennett in the 1991 Argentine gazetteer.

Bennett Islets *see* **Bennett Islands**

Bennett Nunataks. 84°47' S, 116°25' W. Two rock nunataks, 0.8 km apart, 0.8 km N of Lackey Ridge, in the Ohio Range of the Horlick Mountains. Surveyed by the USARP Horlick Mountains Traverse party, in Dec. 1958. Named by US-ACAN in 1962, for John B. Bennett, geomagnetist and seismologist at Byrd Station in 1960.

Bennett Platform. 85°13' S, 177°50' W. A high, nearly flat, and almost snow-free mesa (or table) of dark rock, 8 km long in a NW-SE direction, and between 4 and 6 km wide, immediately NE of the summit of Mount Black, on the W side of, and near the head of, Shackleton Glacier, in the Transantarctic Mountains. Discovered and photographed aerially during the Feb. 16, 1947 flights to the Pole during OpHJ 1946-47. Named by US-ACAN in 1962, for Floyd Bennett (q.v.), Byrd's North Pole companion (also *see* **The *Floyd Bennett*** for details). NZ-APC accepted the name on June 28, 1962.

Bennett Saddle. 77°05' S, 126°26' W. The deep snow-saddle between Mount Waesche and Mount Sidley, in the Executive Committee Range of Marie Byrd Land. Named by US-ACAN in 1962, for Gerard A. Bennett, traverse specialist at Byrd Station, who took part in the Executive Committee Range Traverse in Feb. 1959, and who was on the Marie Byrd Land Traverse of 1959-60.

Bennett Spires. 83°51' S, 56°10' W. Two sharp peaks rising to about 1395 m, near the S end of the Washington Escarpment, and overlooking the head of Jones Valley, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964-65, surveyed from the ground by the USGS Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Staff Sgt. Robert E. Bennett, USAF, radio operator with the U.S. Air Force Electronics Test Unit (q.v.), 1957-58. UK-APC accepted the name on Nov. 3, 1971.

Bennett Spur. 82°26' S, 50°38' W. A rock spur, rising to about 800 m, between Wujek Ridge and Cox Nunatak, on the Boyd Escarpment, on the Dufek Massif, in the N part of the Pensacola Mountains. Photographed aerially by USN in 1964-65, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for David W. Bennett, who, with Robin Worcester (*see* **Worcester Summit**) in the winter of 1973, made up the first of the annual USGS satellite surveying teams at Pole Station. UK-APC accepted the name on May 21, 1979.

Mount Benninghoff. 77°55' S, 161°19' E. A mainly ice-free mountain, rising to 1965 m, 2.5 km SE of Terra Cotta Mountain, in the Quartermain Mountains of Victoria Land. Named by US-ACAN in 1992, for William S. Benninghoff (1918-1993), professor of botany at the University of Michigan, 1957-88, who made summer visits to Antarctica in 1968, 1976, 1977, and 1989.

Benoit Peak. 72°06' S, 163°40' E. A peak, 8 km NNE of Mount Camelot, in the Alamein Range of the Freyberg Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Robert E. Benoit, biologist at McMurdo, 1966-67 and 1967-68. NZ-APC accepted the name on Dec. 4, 1968.

Mount Bensley. 70°19' S, 64°15' E. Rising to 1920 m, it is the larger of two partly snow-covered mountains, 13.5 km (the Australians say 20 km) SSW of Mount Starlight, in the W extension of the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Recorded on terrestrial photos taken by Rob Lacey, surveyor at Mawson Station in 1955, and on aerial

photographs taken by ANARE in 1959 and 1965. Named by ANCA on Aug. 10, 1966, for Patrick Allen "Pat" Bensley, carpenter at Mawson in 1965, and at Casey Station in 1971. Plotted by the Australians in 70°20' S, 64°17' E, but since re-plotted.

Mount Benson. 78°37' S, 84°27' W. Rising to 2270 m, at the NE side of Thomas Glacier, 6 km E of Mount Osborne, in the SE part of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Robert F. "Bob" Benson, geomagnetician and seismologist from Minnesota, who wintered-over at Pole Station in 1957.

Punta Benson *see* **Benson Point**

Benson, Elof. b. Göteborg, Sweden, as Elof Berndtson, he came to the USA as a young man, and lived in Stonington, Conn. He was mate on the *Hersilia*, 1819-20, and kept the log book which turned up in 1956 after having been presumed lost (his descendants had it). In 1820-21 he was 1st mate on the *Catharina*, on a voyage to the South Shetlands. He later became captain of an American sealer, the *Adventure*. He was lost at sea in the 1820s.

Benson Bluff. 80°00' S, 157°57' E. A distinctive, triangular rock bluff, rising to about 1300 m, at the W side of Ragotzkie Icefall, in the Britannia Range, in Victoria Land. Named by US-ACAN in 2000, for Dale P. Benson, USGS cartographer who conducted surveys at Pole Station in 1993-94, and who supported the first airborne GPS-controlled photogrammetry project, which established photographic control on Black Island and positioned the location of seismographic equipment on the flanks of Mount Erebus. NZ-APC accepted the name on Feb. 20, 2001.

Benson Glacier. 76°49' S, 162°12' E. A major alpine glacier, 20 km long, it flows E from Flight Deck Névé, and continues E between Fry Glacier and Mackay Glacier, into the N part of Granite Harbor, where it forms a floating tongue. Mapped in 1957, by the NZ Northern Survey Party of BCTAE, and named by them for William Noel Benson, (retired) petrologist from the University of Otago. It appears in the 1st supplement (1960) of the NZ provisional gazetteer. US-ACAN accepted the name in 1962. The Benson Glacier, at that time, was thought to be 40 km long, but its size was re-determined after Trevor Chinn's 1989-90 NZARP field party found that Midship Glacier (which the lads in 1957 had thought was part of Benson Glacier) is a separate feature. NZ-APC accepted this new definition in 1992, and US-ACAN followed suit in 1993.

Benson Hills. 70°28' S, 62°17' W. A cluster of coastal hills, rising to an elevation of about 595 m, on the SW side of (i.e., near the head of) Smith Inlet, 5 km E of Berry Massif, on the Wilkins Coast, on the E side of Palmer Land. Mapped by USGS in 1974 from USN air photos taken in 1966, and from BAS ground surveys conducted in 1972-73. Named by US-ACAN in 1976, for Lt. Arthur K. Benson, USN, medical officer at Palmer Station in 1969. UK-APC accepted the name on July 21, 1976.

Benson Knob. 75°45' S, 159°17' E. A distinctive rock knob, rising to 1540 m, at the S extremity of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Anthony Joseph Benson (b. Sept. 8, 1932, Honolulu. d. April 1, 2008, Denver), USN, hospital corpsman who wintered-over at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

Benson Point. 62°39' S, 61°17' W. Forms the SW end of Rugged Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for Elof Benson. US-ACAN accepted the name in 1960. It appears in the 1991 Argentine gazetteer as Punta Benson. The British were the latest to replot this feature, in late 2008.

Benson Ridge. 82°46' S, 164°48' E. A rugged ridge between Robb Glacier and Bondeson Glacier, 8 km W of the N end of the Holland Range. Mapped by USGS from tellurometer surveys, and from USN air photos taken between 1960 and 1962. Named by US-ACAN in 1965, for Carl S. Benson (b. June 23, 1927, Minnesota), U.S. glaciologist at Roosevelt Island, 1961-62. Mr. Benson was back in Antarctica in 2004. NZ-APC accepted the name on Nov. 16, 1965.

Benstead, John Gordon. b. May 17, 1921, Exeter, son of Lincolnshire-born parents Alfred Sydney Benstead and his wife Edith Mildred Armstrong. J.G. went to Batley Grammar School, in Yorkshire, where his father was headmaster, and because his father had been a serviceman (captain in a Lincs regiment), he was awarded a scholarship to Cambridge. After Cambridge, he became a pathologist, and was working for the Department of Scientific and Industrial Research when he went to Antarctica as an observer on the whaling ship *Balaena*, 1947-48. In 1949, in Bradford, he married Nancy Carver, also a doctor, and they lived in Bradford until moving soon afterwards to Southport, Lancs. He died on Jan. 13, 1987, in Sefton, Lancs. His wife died in the same place, in Jan. 1992.

Mount Bent *see* **Mount Beck**

Benten Island. 69°01' S, 39°13' E. A small island, 8 km W of Ongulkalven Island, in the NE part of Lützow-Holm Bay, off the Prince Olav Coast. Mapped by Japanese cartographers from ground surveys and air photos taken by JARE between 1957 and 1962, and named by them on Oct. 1, 1962, as Benten-zima, or Benten-shima (i.e., "goddess of fortune island"). US-ACAN accepted the name Benten Island in 1968. The Norwegians call it Bentenøya.

Benten-zima *see* **Benten Island**

Bentenøya *see* **Benten Island**

Mount Bentley. 78°07' S, 86°14' W. Rising to 4245 m, 3 km N of Mount Anderson, in the main W ridge of the Sentinel Range, in the Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party of 1957-58, led by Charles Bentley, for whom this feature was named by US-ACAN in 1960.

Bentley, Charles Raymond "Charlie." b. Dec. 23, 1929, Rochester, NY, son of attorney Charles Raymond Bentley and his wife Janet Everest. Glaciologist, and one of the leading figures in Antarctic history. A professor at Columbia University when he went to Antarctica during IGY, arriving during the 1956-57 season. He was the chief traverse seismologist at Byrd Station from 1957 to 1959, wintering-over there in 1957 and 1958. He led the Marie Byrd Land Traverse Party 1957-58, and the Ellsworth Highland Traverse from Byrd Station between Nov. 14, 1960 and Feb. 11, 1961. He studied seismics of the polar caps and the sea floors, and used geophysical methods when dealing with glaciological problems. He wrote *Land Beneath the Ice* (*see also* the Bibliography). He was later professor emeritus at the University of Wisconsin at Madison.

Bentley, John. b. Oct. 11, 1909. He joined the Royal Navy as a cadet on the *Worcester*, and was selected, at the age of 15, to go to Antarctica on the *Discovery* expedition, 1925-27. This made him not only the youngest of the three cadets on board, but perhaps the youngest lad ever sent to Antarctica on an official British government mission. He was frequently sent before the mast, "for the good of his soul," and on one occasion they found him in the morning frozen into the crow's nest. He had to be chipped out. In 1933, he joined the Hong Kong Police, and, in the mid-1930s was out in Northern Rhodesia, still as a police officer. For years he was district commissioner at Chingola, and, Robin Short, in his 1973 book *African Sunset* describes him as "stiff, formal, upright, and unapproachable, a cartoon figure almost. When he made a joke, and that occurred once or twice a year, the earth shook." In 1938, he married Mary Winton, and they had two sons. He retired in 1952, and won the OBE. He and his family continued to live in Rhodesia. He died in July 1999, in Halifax, Yorks.

Bentley Crag. 67°17' S, 66°53' W. A rock crag rising to about 1000 m, between Humphreys Hill (to the N) and Seue Peaks (to the S), on Arrowsmith Peninsula, on the Loubet Coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base W between 1956 and 1959. Named by UK-APC on Sept. 23, 1960, for Wilson Alwyn Bentley (1865-1919), U.S. meteorologist and specialist in microphotography of snow and ice crystals. With W.J. Humphreys (*see* **Humphreys Ice Rise**), he wrote the 1931 book *Snow Crystals*. US-ACAN accepted the name in 1965.

Bentley Subglacial Trench. 80°00' S, 105°00' W. At about 2540 m below sea level, it is the deepest depression in the world. It lies partly under the West Antarctic land mass, and partly under the Amundsen Sea, in Marie Byrd Land, just to the S of the Byrd Subglacial Basin, from which it is separated by a ridge except for a junction of the two features near their E extremity. From that junction, near the Ellsworth Moun-

tains, the trench extends WSW along the N side of the Ellsworth Subglacial Highlands to about 81°S, 120°W, Named by US-ACAN in 1961, for Charlie Bentley (q.v.), who discovered it in 1957-58. Originally plotted in 78°00' S, 110°00' W, it has since been replotted, and more accurately delineated.

Benton Island. 77°04' S, 147°53' W. About 6 km long, and ice-covered, 8 km NW of Nolan Island, in the Marshall Archipelago. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for William T. Benton, USN, bosun's mate on the *Glacier*, which was along this coast in 1961-62.

Benz Pass. 63°41' S, 58°22' W. A narrow pass running at an elevation of about 750 m above sea level, between the S cliffs of the Louis Philippe Plateau and a rock nunatak 3 km NE of the head of Russell East Glacier, or (to put it another way) between Russell West Glacier and the Cugnot Ice Piedmont, on Trinity Peninsula. Mapped from air photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base D in 1960-61. Named by UK-APC on Feb. 12, 1964, for Karl Friedrich Benz (1844-1929), the automobile manufacturer. US-ACAN accepted the name later in 1964. ArgAE named it Paso Farrel, for Juan Farrel, a captain in the Argentine navy, and it appears as such in the 1978 Argentine gazetteer.

Mount Beowulf. 77°38' S, 161°48' E. A peak rising to about 2190 m, at the head of Beowulf Glacier, at the SE side of Mime Glacier, in the Asgard Range of Victoria Land. Mapped by USGS in 1962 from USN air photos taken between 1947 and 1959. Named by NZ-APC in 1983, after the hero of the old English epic poem of the same name. US-ACAN accepted the name.

Beowulf Glacier. 77°38' S, 161°49' E. A small, north-flowing glacier, between Mime Glacier and the head of Rhone Glacier, in the Asgard Range of Victoria Land. Named by NZ-APC in 1983, in association with Mount Beowulf, which stands at the head of this glacier. US-ACAN accepted the name.

Berckmanskampen. 71°59' S, 25°07' E. A mountain at the N side of Mefjell Glacier, in the N central part of the Sør Rondane Mountains. Named by the Norwegians.

Berdine, George. b. May 29, 1820, London. In 1838 he found himself in Tierra del Fuego, stranded with Swiss clockmaker John Niederhauser. The two sealers were picked up by Dumont d'Urville's FrAE 1837-40, and taken to Antarctica. **See Niederhauser** for the full story.

The *Berea*. Whale catcher, working for the *Tafelberg* in Antarctic waters in 1932-33. In 1933 she foundered in the Southern Ocean (although not in Antarctic waters). 12 men died.

Shel'fovyj Lednik Beregovogo. 70°20' S, 19°00' E. An ice tongue, SW of Godel Iceport, on the coast of Queen Maud Land. Named by the Russians.

Kupola Beregovye. 69°50' S, 13°00' E. A dome (or drift tail), just S of Opornyy Point, along the W side of the Lazarev Ice Shelf, on the coast of Queen Maud Land. Named by the Russians.

Skaly Beregovye. 70°51' S, 67°55' E. A group of rocks in Battye Glacier, in the Aramis Range of the Prince Charles Mountains, in Mac. Robertson Land. Named by the Russians.

Berende Cove. 62°28' S, 59°59' W. A cove, 3.3 km wide, indenting the coast of Greenwich Island for 1.15 km, it is entered S of Pelishat Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Berende, in western Bulgaria.

Beresino Island *see* **Greenwich Island**

Gora Berëzkinyh. 71°50' S, 11°48' E. A hill in the S part of the Humboldt Mountains, in the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Named by the Russians. Its coordinates are almost identical to those of the mountain the Norwegians call Medåsen, so much so that one might be tempted to believe that the two features are one and the same.

Monte Berezoski *see* **Neilson Peak**

The *Berezovo*. Russian ship that took part in SovAE 1988-90 and SovAE 1990-92. Skipper was G.A. Shestyuk.

Cerro Berg. 63°31' S, 57°45' W. A hill, rising to 304 m, 13 km NNW of Bald Head, and 15 km W of View Point, on Trinity Peninsula, on the E coast of the Antarctic Peninsula. Named by the Chileans. The Argentines call it Cerro Rinoceronte (i.e., "rhinoceros hill").

Berg, Carl E. b. Sweden. He wintered-over at Órcadas Station in 1916 and 1918, was deputy leader there in 1924, and led the parties there of 1926, 1930, and 1934.

Berg, J.L. *see* **Órcadas Station**, 1913

Berg, Jorgen. b. May 11, 1943, Copenhagen. After seaman's school, he went to work for the Lauritzen Line in 1960, as a 2nd officer, and was with them for 17 years, including a stint as 1st officer on the *Thala Dan*. He also served for 2 years as an officer in the Royal Danish Navy. After this, he worked for Lauritzen as a company representative in the USA, the West Indies, and Africa, and moved to Australia, as a frelance marine consultant.

Berg, N. Axel *see* **Órcadas Station**, 1910, 1912

Berg, Peder P. b. June 26, 1909, Sør-Vågsøy, Norway, son of Peder M. Berg and his wife Petrine. Went to sea in 1932, and was an ordinary seaman on the *Wyatt Earp* for Ellsworth's last Antarctic expedition, 1938-39. Brother of Torvald Berg.

Berg, Realf. b. Oslo (or Kristiania, as it was then), son of postmaster Realf Martinius Berg and his wife Alvide Christiane. Medical officer on Ellsworth's 1933-34 expedition.

Berg, Torvald. b. 1912, Sør-Vågsøy, Norway, son of Pder M. Berg and his wife Petrine. Went to sea in 1931, and was an ordinary seaman on the *Wyatt Earp*, with his brother Peder, during Ellsworth's last Antarctic expedition, 1938-39.

Berg Bay. 71°27' S, 169°27' E. A small bay, about 5 km wide, between Birthday Point and Islands Point, or (to put it another way) between Islands Point and Nigger Head, along the W coast of Robertson Bay, in northern Victoria Land. Surveyed and charted in 1911 by Campbell's Northern Party during BAE 1910-13, and so named by them because icebergs appear to gravitate here. Haffner Glacier, which also flows into this bay, may be a contributor of these bergs, or at least some of them. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

Berg Ice Stream. 73°42' S, 78°20' W. About 50 km long, it flows N into Carroll Inlet between Rydberg Peninsula and Espenschied Nunatak, on the English Coast of Ellsworth Land. Surveyed from the ground by USGS between 1961 and 1964, photographed aerially by USN, 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Capt. Harold Berg, commander of the *Eltanin*, 1964-65. UK-APC accepted the name on Dec. 20, 1974.

Berg Mountains. 69°13' S, 156°04' E. Also called Mount Dwyer. A mountain and 2 ridges, 22 km S of Cape Buromskiy, on the Krylov Peninsula, in Oates Land, Victoria Land. Photographed aerially during OpHJ 1946-47, again in 1958 by SovAE, and by ANARE in 1959. Visited by an airborne Soviet party during their expedition, and named by them as Gory L'va Berga, for geographer Prof. Lev Berg (1875-1950). ANCA accepted the translated name Berg Mountains, on Nov. 19, 1963, and US-ACAN followed suit in 1967.

Berg Peak. 71°32' S, 161°47' E. A prominent, sharp, ice-free peak, rising to 1870 m, 5 km S of El Pulgar, in the N part of the Morozumi Range. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Thomas E. Berg, geologist who wintered-over at McMurdo in 1961. He was in Victoria Land for 3 successive summers in the 1960s (*see* **Deaths**, 1969). NZ-APC accepted the name on July 16, 1964.

Hrebet Berga. 83°36' S, 54°58' W. A mountain, due W of Hannah Ridge, in the Pensacola Mountains. Named by the Russians.

Bergan Castle. 80°36' S, 21°21' W. A castle-like nunatak, rising to 1590 m, to the SW of Mount Dewar, near the E end of the Shotton Snowfield, in the Shackleton Range. Photographed by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Ole Ferdinand Bergan (1876-1956), Norwegian inventor who designed Bergan's meis (carrying-frames) and rucksacks, patented in Norway in 1909. It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Berge der Deutsch-Sowjetischen Freundschaft. 67°59' S, 47°22' E. A group of mountains, due E of Mount Christensen, in Enderby Land. Named by the Germans, for German-Soviet friendship.

Bergekongen. 78°20' S, 19°17' E. A small nunatak in the NW part of the glaciate ridge that

the Norwegians call Gandrimen, and W of Tussebreen, in the W part of the Sør Rondane Mountains. Name means "king of the hill gnomes" in Norwegian.

Arrecife Bergel *see* **Bergel Rock**

Roca Bergel *see* **Bergel Rock**

Bergel Rock. 65°10' S, 64°58' W. A rock rising to 6 m above sea level, 1.4 km S of Quintana Island, in the SW part of the Wilhelm Archipelago, off the coast of Graham Land. Named by UK-APC on Nov. 3, 1971, for Alexandra Mary Swinford Bergel (née Shackleton; born in 1940; married Richard Bergel), granddaughter of Shackleton. She sponsored the (later vessel) *Endurance* which, during an RN hydrographic survey of this area in Jan.-March 1969, made surveys here in the February of that season. US-ACAN accepted the name in 1972. It appears in the British gazetteer of 1974, and on a British chart of that year. This rock (and another rock to the NNW) were grouped together in the 1978 Argentine gazetteer, and called (collectively) Arrecife Bergel (i.e., Bergel Reef). However, in the 1991 Argentine gazetteer, this rock alone is listed as Roca Bergel.

Mount Bergen. 76°59' S, 160°48' E. A prominent rocky peak, rising to 2110 m, 3 km W of Mount Gran, on the N side of the upper Mackay Glacier, in Victoria Land. It is joined to Mount Gran by a high ridge which, on the N, is gently sloping and covered with snow, and which is steep-cliffed on the S. Surveyed and used as a reference point in Nov.-Dec. 1957, by the NZ Northern Survey Party of BCTAE 1956-58, and named by them for Trygve Gran's birth place in Norway. US-ACAN accepted the name in 1962.

Bergen Nunataks. 72°25' S, 64°53' W. A group of nunataks, rising to about 1660 m, E of the Seward Mountains, and 22 km N of the Journal Peaks, at George VI Sound, in the south central part of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Surveyed from the ground by BAS personnel from Fossil Bluff Station in 1974-75. Named by US-ACAN in 1978, for Michael Bergen, USARP engineer who wintered-over at Palmer Station in 1970. UK-APC accepted the name on May 21, 1979. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Bergendahl, Svante Rudolf. b. Jan. 19, 1876, Slöinge, Halland, Sweden. He went to sea in 1891, worked his way up through the mate ranks, and was a naval reserve sub lieutenant, on the *Frithiof* in 1903-04. In the 1920s, he was skipper of the *Tisnaren*, went to the *Mirrabooka* for several years, and then, just before World War II, to the *Parrakoola*. His wife, Monika, would often travel with him, as ship's nurse. He died in Limhamn, Sweden, on Jan. 15, 1957.

Mount Berger. 75°04' S, 71°57' W. Rising to about 1500 m, and with a steep N rock face, 3 km NE of Mount Becker, in the Merrick Mountains of Ellsworth Land. Mapped by USGS from their own ground surveys conducted during the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken in 1965-66. Named by US-ACAN in 1966, for Lt. Cdr. Raymond Eugene Berger, USN, pilot who flew the University of Wisconsin Traverse Party to this area, and flew support missions in its behalf, in 1965-66. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Mount Bergersen. 72°04' S, 25°48' E. Also called Mount Birger Bergersen, and Birger Bergersenfjellet. A large mountain massif, rising to 3170 m, at the W side of Byrdbreen, in the E-central part of the Sør Rondane Mountains. Photographed aerially by LCE 1936-37, and mapped 10 years later by Norwegian cartographers from these photos. Named by the Norwegians for Ambassador Birger Martin Bergersen (1891-1977), scientist and chairman of the Norwegian Whaling Board. Re-mapped by Norwegian cartographers in 1957, from air photos taken 10 years before by OpHJ 1946-47. US-ACAN accepted the name in 1947.

Bergersenfjella *see* **Mount Bergersen**

Berggravrista. 74°37' S, 10°53' W. A mostly ice-covered ridge between Cappelenbotnen and Helland-Hansenbotnen, in the N part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Eivind Berggrav (1884-1959), dedicated anti-Nazi Bishop of Oslo during World War II.

Berggreen, John Emil. b. Nov. 15, 1876, Sandefjord, Norway, son of sailor Andreas Berggreen and his wife Harriet Dorthea Kristoffersdatter. He was only 17 when he married Inga Amanda (she was 15), and they raised a family in Sandeherred. He joined the Norwegian merchant navy, and worked his way up through the mate ranks to be a captain, and in 1917-18 was skipper of the *Thor I*. He was skipper of the *Guvernøren* when that ship foundered at the Falklands on Nov. 29, 1921, on her way south to the South Shetlands for the 1921-22 whaling season.

Bergh, Yakov. He was chosen from the Russian fleet by General Staff Surgeon Leighton (the British painter Lord Leighton's father), to be surgeon on the *Vostok* during von Bellingshausen's 1819-21 expedition.

Mount Bergin. 67°42' S, 48°55' E. Rising to 700 m, 6 km W of Mount Maslen, in the Raggatt Mountains of Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA on Nov. 24, 1961, for Robert D. "Bob" Bergin, radio officer at Mawson Station in 1961. He was later (1963) at Macquarie Island. US-ACAN accepted the name in 1965.

Berglöf, Emil. b. Jan. 25, 1879, in Hamburg. He joined the *Gauss* at Cape Town in Dec. 1901, for GermAE 1901-03.

Bergnes *see* **Byrd Head**

Bergnunatakker Öst. 69°15' S, 156°20' E. Two nunataks, 5 km SSE of the Berg Mountains, in Oates Land. Named by the Germans on Oct. 20, 1998.

Bergnunatakker West. 69°08' S, 155°42' E. Three rock outcrops surmounting a flat-topped nunatak, 12 km WNW of the Berg Mountains, in Oates Land. Named by the Germans on Oct. 20, 1998.

Bergschrund. A gaping crevasse of great depth, at the head of a valley glacier, formed when the body of the glacier moves away from a snow field. In other words it separates the ice from the rock behind it. The term is sometimes used to denote the great cleft between the lower part of Denman Glacier and the Shackleton Ice Shelf, in Queen Mary Land.

Bergslienfallet. 74°37' S, 10°10' W. About 2 km long, it is the most southwesterly icefall in XU-fjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Solveig Bergslien (1919-1943), a police clerk in Norway during World War II, a member of Norwegian military intelligence, killed by the Gestapo.

Bergstrom, James. b. Feb. 26, 1929, Duluth, Minn. He joined the U.S. Navy in Feb. 1949, and was a lieutenant when he served as Dave Canham's executive officer at McMurdo for the winter of 1956. He came south on the *Edisto*. On April 17, 1956 he fell and broke both elbows, and was on the sick list for 80 days. He retired as a captain in June 1980.

Bergtussen. 72°20' S, 19°29' E. The most northerly of the three small nunataks on Gandrimen, in the Sør Rondane Mountains. Named by the Norwegians ("the gnome in the hill").

Bergy bit. A small bit of floating ice, usually glacier ice, and usually mostly under the water. It must be less than 10 meters in length to qualify as a bergy bit.

Bering Nunatak. 74°55' S, 71°18' W. Rising to about 1450 m, ESE of Mount Carrara, in the Sky-Hi Nunataks, where the S part of Palmer Land joins Ellsworth Land. Named by US-ACAN in 1988, for Edgar A. Bering, physicist at the University of Houston, in Texas, who conducted upper atmosphere research while at Siple Station in 1980-81. UK-APC accepted the name on Feb. 15, 1988.

Berkey Valley. 77°19' S, 161°21' E. A valley, 1.5 km long, on the E side of Price Terrace, it opens S to the Barwick Valley, in the Cruzen Range of Victoria Land. Named by US-ACAN in 2005, for Frank T. Berkey, of the Center for Atmospheric and Space Sciences, Utah State University, at Logan. He was USAP principal investigator for observation of the ionosphere from Siple Station, 1982 and 1983, and from Pole Station between 1984 and 1995. NZ-APC accepted the name on Sept. 12, 2005.

Berkley Island. 66°13' S, 110°39' E. An island, 0.8 km long, marking the NE end of the Swain Islands. Mapped from air photos taken during OpHJ 1946-47. Included in a 1957 ground survey of the Swain Islands, conducted by Wilkes Station personnel led by Carl Eklund, and named by Eklund that year, for Richard J. Berkley, geomagnetician who wintered-over at Wilkes Station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit on July 4, 1961.

Isla Berkner *see* **Berkner Island**

Berkner, Lloyd Viel. They called him "Mr. Berkner." b. Feb. 1, 1905, Milwaukee, but raised

in Sleepy Eye, Minn. Even at 14, he had his own radio station, and while studying electrical engineering at the University of Minnesota, he helped found one of the Twin Cities' first commercial radio stations. A naval officer from 1926, he was an ionosphere physicist in Minneapolis, working for the Bureau of Standards, and, just after marrying Lilian Fulks, was assigned by the Department of Commerce to ByrdAE 1928-30 as radio technician, to help Malcom Hanson set up the vital radio equipment there. He left Antarctica for NZ on the *City of New York* on Feb. 22, 1929, to set up a radio link between Little America and the outside world. His wife joined him in Dunedin, but he returned to Antarctica for the 2nd half of the expedition. In 1936 he and his family were in Europe, and in 1938 spent 9 months in the Australian outback. In 1941 he was in Alaska, but later that year the Navy called him back, and he became one of the developers of radar, during World War II. In April 1950, at a party at Van Allen's home, he proposed a third International Polar Year, which became IGY in 1957-58 while he was president of ICSU (the International Council of Scientific Unions). He died on June 4, 1967, in Washington, DC.

Berkner Bank. 75°00' S, 48°00' W. A submarine feature in the Weddell Sea, upon which Berkner Island and Henry Ice Rise are grounded ice features. Named for Lloyd Berkner. The name was accepted internationally in 1973.

Berkner Island. 79°30' S, 47°30' W. A high, ice-drowned island (it is more properly an ice rise), about 300 km long and about 135 km wide, rising to a height of 975 m above sea level, in the Weddell Sea, and which separates the Ronne Ice Shelf from the Filchner Ice Shelf. It has 2 ice domes on it — Reinwarthhöhe and Thyssenhöhe. First seen aerially on Dec. 12, 1947, by RARE 1947-48, but not distinguished by them from the ice shelf. In Oct. 1957, during a fly-over from Ellsworth Station, it was discovered to be an "island." A ground survey party went out from the same station, and named it Hubley Island, for Dr. Richard Charles Hubley (1930-1957), American IGY coordinator in Alaska, which is where he (Hubley) died. Renamed Berkner Island, by US-ACAN, in 1960, for Lloyd Berkner. UK-APC accepted the name on Aug. 31, 1962. It appears in the 1970 Argentine gazetteer as Isla Berkner. The feature was further delinated from Jan. 1973 U.S. Landsat images.

Berkovitsa Glacier. 62°34' S, 60°41' W. A glacier extending for 5 km in an E-W direction and 3 km in a N-S direction, and bounded by the SE slopes of Oryahovo Heights and the NW slopes of Snow Peak, it drains northeastward into Hero Bay between Avitohol Point and Remetalk Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for Berkovitsa, the town in the western Balkans of Bulgaria.

Mount Berlin. 76°03' S, 135°52' W. A prominent conical volcano, rising to 3500 m, 16 km W of Mount Moulton, at the W end of the Flood Range, overlooking the Hobbs Coast, in Marie Byrd Land. Lichens are to be found here. Discovered aerially in Nov.-Dec. 1934 during ByrdAE 1933-35, and named by Byrd as Mount Hal Flood, for his uncle. In 1947, US-ACAN reapplied the name Flood to the range of which this mountain is a part, and renamed the mountain Mount Berlin, after Len Berlin (q.v.), leader of the USAS party that sledged to this mountain in Dec. 1940.

Berlin, Arthur M. "Art." b. Dec. 16, 1909, Speonk, NY. He had been at sea for three years before serving as a seaman on the *City of New York* during ByrdAE 1928-30, the youngest man on the expedition (including Boy Scout Paul Siple). He left Little America for NZ on the same ship on Feb. 22, 1929, but re-joined the 2nd half of the expedition next season. He was still on the *City of New York* when he arrived back in NYC in 1930. He died on Nov. 22, 1976, in Los Angeles.

Berlin, Leonard Matt "Len." His nickname was "Whitey." b. March 18, 1908, Olympia, Wash. Cadastral engineer at West Base during USAS 1939-41. Leader of a party that sledged to Mount Berlin in Dec. 1940. He married Margaret "Peg" Wyller in the early 1940s (but they were divorced in the early 1950s). He served during World War II as a naval lieutenant, and later worked for the Bureau of Land Management, retiring in 1963, as chief engineer for the western region. His second wife was Evelyn (who died in 2002). He died on Aug. 16, 2004, in Vancouver, Wash.

Berlin Crater. 76°03' S, 135°52' W. High, circular, and ice-filled, near the summit of Mount Berlin, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, in association with the mountain.

Berlin Crevasse Field. 76°00' S, 136°30' W. About 16 km in extent, immediately W of Mount Berlin, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, in association with the mountain.

Berlindom. 73°34' S, 164°18' E. A dome in the Southern Cross Mountains of Victoria Land. Named by the Germans.

Berlininseln. 62°09' S, 58°57' W. Islands, named by the Germans. This is one of several features in precisely these coordinates, and one of many in the immediate area, all named by the Germans, in the N part of Fildes Peninsula, King George Island, in the South Shetlands.

Punta Berlioz *see* **Berlioz Point**

Berlioz Point. 72°12' S, 74°06' W. A snow-covered point on the S side of Beethoven Peninsula, on the SW side of Alexander Island, marking the NW entrance point to the embayment occupied by the Bach Ice Shelf. The S part of Alexander Island was first roughly mapped in 1940, by USAS 1939-41, but this point was not clearly identified. Photographed aerially in Dec. 1947, by RARE 1947-48, and mapped from these photos in 1959-60, by Searle of the FIDS. He plotted it in 72°10' S, 73°36' W. Named by UK-APC on March 2, 1961, for the French composer Hector Berlioz (1803-1869). US-ACAN accepted the name later in 1961. It has since been replotted from US-Landsat images taken in Jan. 1973, and the new coordinates appear in the 1977 British gazetteer. It appears on a 1966 Argentine map, as Punta Berlioz. The Chileans call it Punta Maratto, for Cabo 1st class Jorge Muratto, of Soberanía Station (what later became Capitán Arturo Prat Station), who took part in a 1949 hydrographic expedition to Robert Island.

Bermel Escarpment. 85°17' S, 89°30' W. A snow and rock escarpment, 24 km long, it extends from the base of the Ford Massif to King Peak, in the Thiel Mountains, dropping 300 to 400 m from the Polar Plateau to the ice surface N of these mountains. Named by US-ACAN in 1962, for topographic engineer Peter Frank "Pete" Bermel (b. Dec. 1, 1927, NY; son of an Army officer) of USGS, co-leader with Art Ford of the Thiel Mountains Party of 1960-61, and leader of the USGS Topo West Party which surveyed between Cape Adare and the Wilson Hills in 1962-63.

Bermel Peninsula. 68°27' S, 65°22' W. A rugged, mountainous peninsula, between 20 and 24 km long, and 11 km wide, and rising to an elevation of about 1670 m, in Bowditch Crests, between Solberg Inlet and Mobiloil Inlet, on the Bowman Coast of Graham Land. Features on it include Yule Peak, Mount Wilson, Campbell Crest, Vesconte Point, Wilson Pass, Rock Pile Peaks, Miyoda Cliff, and Rock Pile Point. It lies along the route explored and photographed aerially by Wilkins on Dec. 20, 1928, and by Ellsworth on Nov. 23, 1935, and was first mapped in 1937, by American cartographer W.L.G. Joerg, using Ellsworth's photos. USAS 1939-41 explored this area, roughly positioning the peninsula, and they also photographed the peninsula from the air, naming it The Rock Pile, or Rock Pile Point, because it looked like a mass of jumbled peaks. US-ACAN accepted the name Rock Pile Point in 1947, but shortly thereafter discontinued it, and the peninsula remained unnamed until Dec. 2, 1993, when UK-APC so named it, for Peter Bermel (*see* **Bermel Escarpment**). US-ACAN accepted the new name.

Bermúdez, J. *see* **Órcadas Station**, 1932

Bermúdez, Ramón. b. Argentina. Cook 2nd class in the Argentine Navy, he was cook on the *Uruguay* in 1903.

[1]**Cape Bernacchi**. 77°29' S, 163°51' E. A low rocky promontory which forms the N entrance point to New Harbor, between that harbor and Bernacchi Bay, on the E coast of southern Victoria Land. Discovered in 1902 by BNAE 1901-04, and named by Scott for Louis Bernacchi. US-ACAN accepted the name, and it appears in the 1958 NZ provisional gazetteer.

[2]**Cape Bernacchi** *see* **Bernacchi Head**

Bernacchi, Louis Charles. b. Nov. 8, 1876, in Belgium, eldest son of Angelo G.D. Bernacchi, Italian winemaker, who emigrated to Tasmania in 1884, with his Belgian wife and their

children. Trained in astronomy, Louis worked at the Melbourne Observatory, 1895–97. He was the magnetic and meteorological observer on BAE 1898–1900, with Borchgrevink, and also physicict on BNAE 1901–04, with Scott. He was the first Australian to work and winter-over in Antarctica. He wrote three books on Antarctica (see Bibliography), including one on Captain Oates. In 1905 he went exploring in British Namaqualand and German Southwest Africa, and in 1906 was in the primeval forests of Peru and in central Borneo. In 1906 Scott was his best man at his marriage to Winifred Edith Harris, and, a few years later, Scott tried to get Bernacchi to go down on BAE 1910–13, but the physicist turned him down, busy as he was now with family, running his rubber investments in Malaya, competitive fencing, and losing in British parliamentary elections as liberal candidate for first Widnes and then Chatham, both in 1910. During World War I he was a lieutenant commander, RNVR, anti-submarine division, and also served in the U.S. Navy, and was highly decorated by both countries. He was back and forth to Malaya after the war. In 1922 his 10-year-old son died of meningitis, and in 1925 Bernacchi, Worsley, and Skelton planned their own Antarctic expedition, to explore Graham Land, but failed to raise the funds. He was a council member of the Royal Geographical Society, 1929–31, organized the British Polar Exhibition of 1930, and helped organize the 2nd International Polar Year, 1930–31. During World War II he helped in the organization of the Q ships. He died on April 24, 1942, in London, and his widow died in 1973.

Bernacchi Bay. 77°28' S, 163°27' E. A small bay, about 5 km wide, just to the S of Marble Point, between that cape and Cape Bernacchi, on the W coast of McMurdo Sound, on the coast of southern Victoria Land. Discovered during BAE 1910–13, and named by them in association with nearby Cape Bernacchi. Both US-ACAN and NZ-APC have accepted the name.

Bernacchi Head. 76°08' S, 168°20' E. A precipitous cliff forming the SE extremity of Franklin Island, in the Ross Sea. Named Cape Bernacchi by Borchgrevink in 1900, for Louis Bernacchi. The feature was later re-defined by US-ACAN, to avoid confusion with the other feature with the same name. The name appears in the 1958 NZ provisional gazetteer.

Bernal Islands. 66°22' S, 66°28' W. A group of 4 mainly snow-covered islands and several rocks, in Crystal Sound, about 16 km E of the S end of Lavoisier Island, in the Biscoe Islands, off the Loubet Coast. RARE 1947–48 photographed this group aerially in 1947, as did FIDASE in 1956–57, and Fids from Base W surveyed it from the ground in 1958–59. It was mapped by FIDS cartographers from these efforts. Named by UK-APC on Sept. 23, 1960, for John Desmond Bernal (1901–1971), British physicist specializing in ice. It appears on a British chart of 1961. US-ACAN accepted the name in 1965.

Pointe Bernard *see* **Barnard Point**

Rocas Bernard *see* **Bernard Rocks**

Bernard, Charles-Louis. b. May 22, 1813, Toulon. Sailmaker on the *Zélée* during FrAE 1837–40.

Bernard, Louis. b. Jan. 14, 1807, Noirmoutiers, France. Able seaman who signed on to the *Zélée* as a pilot, on Sept. 1, 1837, at Toulon, for FrAE 1837–40.

Bernard, Pierre-Léon. b. Aug. 1, 1813, Auzay, France. Junior seaman on the *Astrolabe* during FrAE 1837–40.

Bernard, Robert C. *see* **USEE 1838–42**

Mount Bernard Horne *see* **Mount Horne**

Bernard Island. 66°40' S, 140°02' E. Also seen as Claude Bernard Island. A rocky island, 0.4 km long, and 75 m NE of Buffon Island, in the central part of the Géologie Archipelago. Charted by the French in 1951, and named by them as Île Claude Bernard, for Claude Bernard (1813–1878), French physiologist. US-ACAN accepted the name Bernard Island in 1962.

Bernard Rocks. 64°08' S, 62°01' W. Two rocks between Davis Island and Spallanzani Point, off the NE side of Brabant Island, in the Palmer Archipelago. First mapped by FrAE 1903–05. Photographed aerially by FIDASE in 1956–57, and mapped from these photos by FIDS cartographers in 1959. On Sept. 23, 1960, UK-APC applied this name to some rocks to the NE of Harry Island, and named them after Claude Bernard (*see* **Bernard Island**). US-ACAN accepted this in 1961. This would have been fine, except that the rocks did not exist. UK-APC very soon discovered the error, and re-applied the name to these two rocks SW of Harry Island. The new location appears on a British chart of 1961, and US-ACAN amended their records accordingly. The Argentines call them Rocas Bernard.

Bernardo O'Higgins Station *see* **General Bernardo O'Higgins Station**

Bernasconi, Irene. b. 1896, Argentina. A biology professor, an expert on starfish, who, when in her 70s, worked in the Antarctic Peninsula in 1968–69, one of the first women ever to work in Antarctica (*see* **Women in Antarctica**). She died in 1989.

The *Bernhard Kellermann*. East German fisheries ship in the South Orkneys from Dec. 1977 to Feb. 1978. S. Holzlöhner led the expedition.

Bernhardi Heights. 80°20' S, 25°00' W. A line of heights, rising to about 1220 m, snow-covered to the E, but with a west-facing rock escarpment, E of Schimper Glacier, on the E side of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for Reinhard Bernhardi (1797–1849), German geologist who, in 1832, first recognized the moraines and erratics of northern Germany as evidence of a former southern extension of the Arctic ice sheet (i.e., the first scientist to propose that there had been a glacial period in Earth's history). It appears in the British gazetteer of 1974. US-ACAN accepted the name.

Bernhardtinden. 72°07' S, 24°33' E. The southernmost peak in Lunckeryggen, in the S central part of the Sør Rondane Mountains. Named by the Norwegians for topographer, Bernhard Luncke (1894–1963), leader of NorAE 1957–58 (at least, leader of that particular segment of the long NorAE 1956–60, which was under the overall command of Sigurd Helle).

Mount Bernstein. 71°37' S, 163°07' E. A prominent mountain, rising to 2420 m, it forms part of the N wall of Linder Glacier, in the Lanterman Range, in the Bowers Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for Capt. Fred J. Bernstein (1927–1969), assistant chief of staff for operations and plans, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Bernt Balchen Glacier *see* **Balchen Glacier**

Bernt Balchen Valley *see* **Balchen Glacier**

Punta Berntsen *see* **Berntsen Point**

Berntsen, Søren. b. 1880, Norway. In 1907–08 he was in the Falkland Islands, as skipper of the *Bucentaur*; in 1916 and 1917 he was manager of the Husvik Harbor whaling station in South Georgia; and from the 1922–23 season until 1931 he was manager of the Tønsbergs Hvalfangeri's South Orkneys whaling fleet. He was also manager on the original *Orwell* for that vessel's first three seasons in Antarctica, 1922–23, 1923–24, and 1924–25. He died in 1940.

Berntsen Point. 60°43' S, 45°36' W. Forms the S side of the entrance to Borge Bay, on the E side of Signy Island, in the South Orkneys. Charted by personnel on the *Discovery* in 1927, during the Discovery Investigations, and named for Søren Berntsen. Capt. Berntsen assisted the *Discovery* in 1928, and also made the first collection or rocks from Signy island, in 1927–28. It appears on the DI chart of 1934, and was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears in the British gazetteer of 1955. The Argentines call it Punta Berntsen.

Beroe Hill. 62°35' S, 60°15' W. Rising to over 400 m, it forms the SW extremity of Gleaner Heights, 1.9 km SW of the summit of those heights, 4.7 km NNE of Rezen Knoll, and 3 km NW of Hemus Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004–05, and named by them on April 11, 2005, for the ancient Thracian town of Beroe (what later became the city of Stara Zagora).

Punta Berón. 62°35' S, 59°53' W. A point at Caleta Matamala, on Half Moon Island, in the South Shetlands. Named by the Argentines.

Beron Point. 62°27' S, 59°35' W. The point on the SW coast of Robert Island, 4.5 km SE of Negra Point, 1.7 km W of Bajo Nunatak, 1.8 km WNW of Zahari Point, and 3.7 km NW of Edwards Point, as well as 5 km NE of Ash Point (which is actually on Greenwich Island), in the South Shetlands. The shape has been enhanced by recent glacier retreat NNW of the point. Named by the Bulgarians on Dec. 15, 2006, for scientist and educator, Dr. Petar Beron (1795–1871).

Berquist Ridge. 83°31' S, 56°30' W. A curving ridge, 13 km long, and rising to an elevation of about 1055 m above sea level, it trends W from its junction with Madey Ridge, in the Neptune Range of the Pensacola Mountains. Photographed aerially by USN in 1964, surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Robert M. Berquist, USN, photographer who wintered-over at Ellsworth Station in 1958. UK-APC accepted the name on Nov. 3, 1971, and it appears in the British gazetteer of 1974.

Berr Point. 69°46' S, 39°04' E. A bare rock point along the SE (inner) shore of Lützow-Holm Bay, 6 km N of the Rundvågs Hills, on the Prince Olav Coast. Photographed aerially by LCE 1936-37, and plotted from these photos in 1946 by Norwegian cartographers, who named it Berrodden (i.e., "the bare point"). US-ACAN accepted the name Berr Point in 1966.

Bahía Berraz *see* **Bahía Aldoney**

Berreta, Fernando *see* **Órcadas Station**, 1946

Berrheia. 72°07' S, 27°36' E. The S part of Balchen Mountain, S and E of Oberst Glacier, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("bare hill").

Mount Berrigan. 66°40' S, 52°43' E. A mountain, 1.5 km E of Budd Peak, in Enderby Land. Plotted from ANARE air photos taken in 1957, and named by ANCA for Maxwell G. "Max" Berrigan, who wintered-over as assistant diesel mechanic at Wilkes Station in 1961. US-ACAN accepted the name in 1965.

Berrknausane. 69°45' S, 38°15' E. Bare crags (the literal translation of the Norwegians name) on the NE side of Djupvikneset Peninsula, on the Prince Harald Coast.

Berrnabbane *see* **Berrnabbane Crags**

Berrnabbane Crags. 69°44' S, 38°58' E. Rocky crags along the SE shore of Djupvika Peninsula, on the SW side of Lützow-Holm Bay. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named this feature Bernabbane (i.e., "the bare crags"). US-ACAN accepted the name Bernabbane Crags in 1968.

Berrodden *see* **Berr Point**

Berrodden-oike. 69°47' S, 39°07' E. A small lake on Berr Point, along the SE shore of Lützow-Holm Bay, on the Prince Olav Coast. Mapped by Japanese cartographers from air photos and ground surveys conducted by JARE between 1971 and 1975, and named by them on Feb. 26, 1988 ("Berrodden big pond"; Berrodden being the Norwegian name for what the Americans call Berr Point). The Norwegians call this lake Berroddvatnet.

Berroddvatnet *see* **Berrodden-oika**

Mount Berry. 64°26' S, 60°43' W. Rising to about 1650 m, SE of Brialmont Cove, and 5 km SE of Baldwin Peak, near the head of Cayley Glacier, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, surveyed from the ground by Fids from Portal Point between 1957 and 1959, and mapped by FIDS cartographers in 1959 from these efforts. Named by UK-APC on Sept. 23, 1960, for balloonist, leaper (i.e., parachutist) and notorious lyncher Albert "Bert" Berry (b. 1878, Philadelphia; reputed son of St. Louis balloonist Capt. John Berry), who had been parachuting from balloons since he was 16. On March 1, 1912, at Jefferson Barracks, Missouri, he jumped from 1500 feet from a Benoist pusher airplane piloted by Tony Jannus, thus becoming the second man to make a parachute descent from a powered airplane.

Berry, Alfred Thomas "Tom." b. Feb. 2, 1896, 31 Marshfield Street, Poplar, London, but raised mostly at 42 Glengall Road, in the same suburb, eldest child of shipyard laborer Joshua Berry and Sarah Woods, who finally decided to get married in 1900, after their third child together. He went to sea as a Merchant Navy cook, and graduated to steward. After coming back from Sierra Leone on the *Accra*, he became chief steward on the *Discovery II* on several cruises to the Antarctic between 1929 and 1939, spending 12 seasons there, summer and winter. He had moved from Plumstead, and was living in Gravesend, Kent, when he became Operation Tabarin purser and chief of stores at Port Lockroy Station (1943-44; i.e., during the first phase of the operation, the winter of 1944), and again at Base D (Hope Bay) for 1944-45 (i.e., the 2nd phase, the winter of 1945). He thus became one of the first FIDS, and a somewhat dangerously mutinous one at that. March and April 1944 was not a good period for Mr. Berry's foot (*see* **Port Lockroy**, March 20, 1944, for Mr. Berry's antics). He died in Bexley, London, at the end of 1978.

Berry, Charles *see* **USEE 1838-42**

Berry, James *see* **USEE 1838-42**

Berry, Raymond Arthur "Ray." b. Nov. 28, 1929, Chatham, Kent, son of Royal Marine sergeant Arthur Richard Charles Berry and his wife Kathleen Rose Lambourne. Just after the war he was in Switzerland on a school trip, went up to the top of the Jungfrau by railway, and decided to go to Antarctica. In order to achieve this, after school he went to work at the Met Office, and in 1951 joined FIDS, wintering-over at Base B in 1952, and at Signy Island Station in 1953. After leaving Antarctica in 1954, he went to the south of France, camping. He should have been senior met man at Base F for the winter of 1955, but instead Taffy Winstone, being more experienced, got the job, and Ray had to serve under him that winter. On his return to the UK, he became a house builder, and later lived in Whitstable, Kent. In 2007 he was back in the Ross Sea, as a tourist.

Berry, Victor "Vic." b. 1884, Peckham, London, one of an impressive number of children of ship's master Joseph Berry and his wife Alice George. He went to sea at 14, and in 1904 was part of the expedition on the steam yacht *Cavalier* that left for the Cocos Islands to find Captain Kidd's treasure. The expedition had to be aborted when Capt. Shepherd died of yellow jack. In 1906 Vic was a seaman on the *Mimiro*, in NZ waters. In 1907, he was at home, taking it easy, when he saw an article about the proposed *Nimrod* expedition. At Poplar, in London, on July 26, 1907, he signed on, as an able seaman for the first half of BAE 1907-09. By that time he had been around the world 9 times. He was discharged at Lyttelton, NZ, on March 25, 1908. On Dec. 23, 1915, he was living in Sydenham, and was a sub lieutenant in the RNR, when he married Laura Gladys Bates. He died on Oct. 4, 1935, at St. Alpheges Hospital, in Greenwich.

Berry Bastion. 80°13' S, 157°11' E. A large, mostly ice-covered mountain with abrupt north-facing rock cliffs, it rises to 3144 m between Mount Olympus on the one hand, and on the other Mount McClintock and the main ridge of the Britannia Range, in Victoria Land. Named by US-ACAN in 2000, for M. John Berry, assistant secretary for policy, management, and budget, with the U.S. Department of the Interior, 1997-2000. NZ-APC accepted the name on Feb. 20, 2001.

Berry Glacier. 75°00' S, 134°00' W. About 40 km long and 8 km wide, it flows between the Perry Range and the Demas Range, into the Getz Ice Shelf, on the coast of Marie Byrd Land. First photographed aerially and roughly charted in Dec. 1940, by USAS 1939-41. Mapped in detail by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1974, for Cdr. William H. Berry, USN, air operations officer for Task Force 43, during OpDF operations, 1969-72. He was operations officer in 1973.

Berry Head. 60°42' S, 45°37' W. A point which forms the division between Tern Cove and Stygian Cove (it forms the E entrance point to Stygian Cove), on the NE side of Signy Island, in the South Orkneys. Surveyed by personnel on the *Discovery II* in 1933, and named by them for Tom Berry (*see* **Berry, Alfred Thomas**). It appears on their 1934 chart of the expedition. US-ACAN accepted the name in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears in the 1955 British gazetteer.

Berry Hill. 63°48' S, 57°49' W. Rising to 370 m, SW of Cape Lachman, between that Cape and Lachman Crags, on James Ross Island. The hill is notable for an exposure of volcanic rocks and probable glacial beds of the Pliocene age. Named by UK-APC on Feb. 15, 1988, for Tom Berry (*see* **Berry, Alfred Thomas**). US-ACAN accepted the name.

Berry Massif. 70°27' S, 62°30' W. A compact, roughly circular and mainly snow-covered massif, rising to an elevation of about 850 m above sea level, at the S side of the terminus of Clifford Glacier, where that glacier enters Smith Inlet, on the Wilkins Coast, on the E coast of Palmer Land. Mapped by USGS in 1974, from USN air photos taken in 1966, and from ground surveys conducted by BAS personnel from Base E in 1972-73. Named by US-ACAN in 1976, for Dale L. Berry, USARP biologist and station scientific leader at Palmer Station for the winter of 1971. UK-APC accepted the name on July 21, 1976.

Berry Peaks. 85°26' S, 138°32' W. A small group, to the immediate E of the Bender Mountains, 16 km S of the terminus of Reedy Glacier, between the Watson Escarpment and the SE edge of the Ross Ice Shelf. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1967, for William Berry, radioman who wintered-over at Byrd Station in 1961.

Berry Spur. 78°21' S, 162°07' E. A spur to the W of Comberiate Glacier, on the W slopes of the Royal Society Range, in Victoria Land. Named by US-ACAN in 1995, for Russell D. Berry, USGS cartographer, a member of the satellite surveying team at Pole Station in the winter of 1983.

The *Berserk*. A 27-foot Norwegian sailboat, skippered by Jarle Andhøy, which visited the Antarctic Peninsula in 1998-99. Mr. Andhøy wrote *Berserk: Antarktis*. He and the vessel were back at the Antarctic Peninsula in 1999-2000.

Bertalan Peak. 72°04' S, 167°08' E. Rising to 2320 m, at the NW side of the head of Montecchi Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Robert E. Bertalan (b. March 6, 1935, Baltimore), who joined the U.S. Navy in June 1954, was chief machinery repairman at McMurdo in 1967, and retired in Jan. 1975. NZ-APC accepted the name in Nov. 1969.

Cabo Berteaux *see* **Cape Berteaux**

Cape Berteaux. 68°51' S, 67°27' W. A cape formed by a hill of dark-colored stone, surmounted by a high rock peak, it resembles a bastion, and forms the extreme W of Rasmussen Peninsula (a promontory which rises to an elevation of about 1200 m above sea level), and projects into Marguerite Bay, forming the N fringe of the Wordie Ice Shelf, between that ice shelf and Mikkelsen Bay, on the Fallières Coast, on the W coast of Graham Land. During FrAE 1908-10, Charcot, thinking it was an island, named it Île Berteaux, after politician Maurice Berteaux (1852-1911), a supporter of Charcot's FrAE 1903-05. It appears as Berteaux Island on a 1914 British chart. In the 1920s and 1930s, it would sometimes appear on charts as Cap Pierre Baudin, but this was simply an error. It was redefined in 1936, by BGLE 1934-37, and appears as Cape Berteaux on their expedition map, and on a British chart of 1948 (Fids from Base E surveyed it in 1948-49). A 1943 U.S. Hydrographic Office chart shows it both ways, as Cape Berteaux and as Cape Pierre Baudin. US-ACAN, after rejecting the Pierre Baudin name, accepted the name Cape Berteaux in 1947, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Cabo Berteaux, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Île Berteaux *see* **Cape Berteaux**

Berteaux Island *see* **Cape Berteaux**

Bertha Island. 67°23' S, 59°39' E. Also called Hamreneset. An island, 4 km long, 1.5 km S of Islay, at the E side of the entrance to William Scoresby Bay. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named by them. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Île Berthelot *see* **Berthelot Islands**

Isla(s) Berthelot *see* **Berthelot Islands**

Islote(s) Berthelot *see* **Berthelot Islands**

Berthelot Island *see* **Berthelot Islands**

Berthelot Islands. 65°20' S, 64°09' W. A group of islands, consisting of one main island (Berthelot Island), 1.5 km long and rising to an elevation of 165 m above sea level, and surrounded by little islands and rocks (the main one of these being the most northerly, Green Island), off Collins Bay, 2.5 km SW of Deliverance Point, near to Petermann Island, 6 km SSW of Cape Tuxen, off the W coast of Graham Land. They are composed of gabbro of the Lower Jurassic to Lower Tertiary ages. Discovered by FrAE 1903-5, roughly charted by them as one island, which Charcot named Île Berthelot, for Marcelin-Pierre-Eugène Berthelot (1827-1907), prominent French chemist and politician. Re-charted on Jan. 4, 1909, by FrAE 1908-10, re-defined (in the plural), and renamed by Charcot as Îles Berthelot. However, he also kept the name for the individual island, as Île Berthelot. The individual island appears on a British chart of 1914, as Berthelot Island. The group appears on a British chart of 1948 as Berthelot Islets, and that was the name accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. They appear on a 1949 Argentine chart as Islotes Berthelot, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Since 1957 this feature has appeared occasionally on Chilean charts as Islas Berthelot, and the "large" island has sometimes been individualized as Isla Berthelot. Similarly, the largest island appears on a 1958 Argentine chart as Islote Berthelot. The group was photographed aerially by FIDASE in 1956-57, and on July 7, 1959, UK-APC redefined the group as the Berthelot Islands, a situation accepted by US-ACAN in 1963.

Berthelot Islets *see* **Berthelot Islands**

Islote Bertil *see* **Beagle Island**

Monte Bertil Frödin *see* **Mount Frödin**

Bertodano Bay. 64°15' S, 56°44' W. Between Bodman Point and Cape Wiman, opening out onto the NE coast of Seymour Island, to the E of James Ross Island, in the Weddell Sea, off the N tip of the Antarctic Peninsula. The name appears on Argentine navy charts from 1957 onwards as Bahía López de Bertodano, named for Juan López de Bertodano (*see under* **L**). On May 13, 1991 UK-APC named it Bertodano Bay, and US-ACAN followed suit. The Chileans call it Bahía Venturini, after 1st Lt. Arturo Venturini Ramírez, hydrographer on the *Covadonga* during ChilAE 1947-48.

Bertoglio Glacier. 79°18' S, 160°20' E. A glacier, 11 km long, flowing from the Conway Range eastward between Cape Lankester and Hoffman Point, to the Ross Ice Shelf. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1959 and 1963. Named by US-ACAN in 1965, for Cdr. Lloyd Webb Bertoglio (b. May 17, 1917, Fresno, Calif. d. April 13, 1986, Jacksonville, Fla.), USN, base leader at McMurdo in 1960. NZ-APC accepted the name on May 20, 1965.

Nunatak Bertrab *see* **Bertrab Nunatak**

Bertrab Nunatak. 77°55' S, 34°32' W. Rising to about 500 m, along the S side of Lerchenfeld Glacier, SE of Vahsel Bay, and about 8 km WSW of the Littlewood Nunataks, on the Luitpold Coast. Discovered and roughly mapped in Jan.-Feb. 1912, by GermAE 1911-12, and named by Filchner for General Hermann von Bertrab, chief quartermaster on the German General Staff and chief of the Land Survey, who was chairman of Filchner's expedition. On some of Filchner's charts the feature appears pluralized, as Bertrab Nunataks, and even as von Bertrab Nunatak, and the name Bertrab Nunataks also appears on a 1943 USAAF chart. US-ACAN accepted the name Bertrab Nunatak in 1947. It was delineated from U.S. Landsat imagery taken in Jan. 1973. UK-APC accepted the name on Dec. 9, 1981. It appears as Nunatak Bertrab on Argentine charts beginning in 1952, and, with the coordinates 77°54' S, 35°20' W, appears as such in the 1970 Argentine gazetteer. In Jan. 1970, the Argentines established their seasonal station Label near this nunatak (this station became General Belgrano II). The nunatak appears in the 1991 Argentine gazetteer, with the corrected coordinates. The Germans used to call this feature Bertrabnunatakker.

Bertrab Nunataks *see* **Bertrab Nunatak**

Bertrabnunatakker *see* **Bertrab Nunatak**

Bertram, George Colin Lawder. Known as Colin Bertram. b. Nov. 27, 1911, Worcester, son of civil servant Francis George Lawder "Frank" Bertram and his wife Mabel Smith. Biologist at Cambridge, he went to the Arctic with Charcot, and had just arrived from coral reef studies in the Red Sea when he became the senior biologist on BGLE 1934-37. He was a member of the first sledge party ever to travel down the George VI Sound. After the expedition, he arrived back in Liverpool on the *Gascony*, on May 17, 1937. On Sept. 28, 1939 he married zoologist and educator Kate Ricardo, and, in 1949, became director of the Scott Polar Research Institute, in Cambridge, at the same time being a tutor at St. John's, Cambridge. His term at SPRI came to an end in 1958, and he died on Jan. 11, 2001, in Graffham, Sussex.

Bertram Glacier. 70°50' S, 67°28' W. A glacier, 24 km long, and 30 km wide at its mouth, flowing SW from the Dyer Plateau of Palmer Land, into George VI Sound between Wade Point and Gurney Point. Discovered and surveyed in Oct. 1936 by Stephenson, Fleming, and Bertram of BGLE 1934-37. Surveyed by Fids from Base E in 1948-49. Named by UK-APC on March 31, 1955, for George Bertram. US-ACAN accepted the name later that year.

Pie de Hielo Bertrand *see* **Bertrand Ice Piedmont**

Bertrand Ice Piedmont. 68°30' S, 67°00' W.

About 17.5 km long, and between 5 and 8 km wide, on the SE side of Rymill Bay, between that bay and Mikklesen Bay, on the Fallières Coast of Graham Land. It is bounded on its SE side by Pavie Ridge, and on its NE side by Black Thumb. Surveyed in Oct. 1936 by BGLE 1934-37, and again in 1948-49 by Fids from Base E. Named by UK-APC on March 31, 1955, for Kenneth J. Bertrand (1910-1978), geomorphologist and Antarctic historian, professor of geography at the Catholic University of America (in Georgetown), who served on US-ACAN, 1947-73, and was chairman from 1962 to 1973 (*see* the Bibliography). US-ACAN accepted the name later in 1955. It appears in the 1991 Argentine gazetteer as Pie de Hielo Bertrand (which, although it means the same thing, and is the best the Spanish language can do at this moment in time, is, in itself, all the evidence needed in the case for a nice, new, clean Spanish term for an ice piedmont).

Bertrand Island *see* **Stanley Island**

Glaciar Beruti *see* **Glaciar San Telmo**

Punta Beruti. 64°50' S, 63°07' W. A point, named by the Argentines. Although it occupies exactly the same coordinates as San Eladio Point (the NW point of Bryde Island, off the Danco Coast of the Antarctic Peninsula), it must be a different feature (San Eladio Point is too well-known to be confused with anything else, and besides, it was the Argentines who named San Eladio in the first place).

[1]**Berwick Glacier** *see* **Swinford Glacier**

[2]**Berwick Glacier**. 84°36' S, 165°45' E. A tributary glacier, 22 km long, it flows SE between the Marshall Mountains on the one side, and on the other the Wild Mountains and the Adams Mountains, to enter the W side of the Beardmore Glacier at Willey Point, in the Queen Alexandra Range of Victoria Land. In 1908, during BAE 1907-09, Shackleton named this glacier Swinford Glacier, for his eldest son, Raymond Swinford Shackleton (1905-1960). However, when cartographers were mapping from Scott's BAE 1910-13 charts, an accidental transposition took place between this glacier and the glacier Shackleton had named Berwick Glacier (20 m to the southwestward), and this glacier has ever since been known as Berwick Glacier. The *Berwick* was a ship Lt. Jameson B. Adams had served on (though this ship was never in Antarctica). It appears in the 1958 NZ provisional gazetteer, and NZ-APC accepted the (wrong, as it were) name on June 28, 1962 (thus making it right). US-ACAN accepted the name in 1966 (making it righter, still).

Beryl Hill. 67°00' S, 142°40' E. About 30 m high at the N end of a broad ridge to the E of Alga Lake, about 530 m ESE from Mawson's main AAE 1911-14 hut, at Cape Denison. Named by Mawson during that expedition, it appears on his maps. ANCA accepted the name on March 7, 1991.

Besapara Hill. 62°37' S, 59°52' W. A nunatak, projecting from the Sopot Ice Piedmont to an elevation of 250 m above sea level, 500 m N of Kaloyan Nunatak, 2 km E of Vaptsarov Peak, and 1.5 km W of Mesta Peak, on Livingston Island, in the South Shetlands. Surveyed by the Bulgarians during their Tangra survey of 2004-05, and named by them on Nov. 4, 2005, for the ancient Thracian town of Besapara, which, in the course of time, became the present town of Pazardzhik.

Mount Besch. 78°11' S, 84°43' W. Rising to 1210 m, it forms the S end of Barnes Ridge, and overlooks the terminus of Ellen Glacier, on the E side of the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Capt. Marvin Eugene Besch (b. March 21, 1924, Wisc. d. Jan. 29, 1985, Seattle), USAF, who helped build South Pole Station.

Besenbrock, August. b. Aug. 24, 1882, Swinemünde. Steward on the *Gauss* suring GermAE 1901-03. He was back on the *Deutschland* for GermAE 1911-12.

Gora Besformennaja. 73°33' S, 64°57' E. A somewhat isolated nunatak, E of Mount Ruker, in the S part of the Prince Charles Mountains. Named by the Russians.

Beskid. 66°16' S, 100°44' E. A group of hills, rising to 76 m above sea level, close to Dobrowolski Station, in the Bunger Hills. Named by the Poles in 1985, after Beskid, a chain of mountains in the Carpathians, in southern Poland.

Pointe Besnard *see* **Besnard Point**

Punta Besnard *see* **Besnard Point**

Besnard, A. E. b. 1863, France. He went to sea, as a sailor, and as such was on the Dunkerque vessel *Jacqueline*, when she arrived in Sydney from Marseille, on Sept. 5, 1897. The same day he finished his national service, he embarked at Brest as a sailor on the *Français*, during FrAE 1903-05, and again, with Charcot, as assistant bosun on the *Pourquoi Pas?*, during FrAE 1908-10. Charcot refers to him as an "ancien pupille de la marine," says he was very robust and had large shoulders, was capable and adroit, and had an open and intelligent face.

Besnard Point. 64°50' S, 63°29' W. At the SE side of Port Lockroy, on Wiencke Island, it marks the E side of the entrance to Alice Creek, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Discovered by FrAE 1903-05, and named by Charcot as Pointe Besnard, for A.E. Besnard. Re-charted by the Discovery Investigations in 1927, it appears on their 1929 chart as Besnard Point, but on a 1930 British chart as Point Besnard. It appears on a Chilean chart of 1947, as Punta Besnard. Besnard Point was the name accepted by US-ACAN in 1952, and it appears as such on a British chart of that year. UK-APC accepted the name on Sept. 8, 1953, and it appears in the British gazetteer of 1955. It appears as Punta Besnard in both the 1974 Chilean gazetteer and the 1991 Argentine gazetteer.

Bessinger Nunatak. 85°05' S, 64°41' W. Mound-shaped, and rising to 1640 m, at the SW end of the Mackin Table, 5 km E of Mount Tolchin, in the S part of the Patuxent Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1961-62, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Lt. Colonel Donivan "Don" Bessinger, Jr. (i.e., his first name, and that of his father, was actually "Colonel"; i.e., it was not a rank, but a name) (b. Oct. 15, 1936, Louisville, Ky), USNR, who, recently out of the University of North Carolina at Chapel Hill, and just out of an internship at Queens Hospital, in Honolulu, became the medical officer and officer in charge of Pole Station during the winter-over of 1963. UK-APC accepted the name on Nov. 3, 1971, but with the coordinates 85°05' S, 64°38' W. After Antartica, Dr. Bessinger did his residency in Greenville, SC, and then became a surgeon in that town from 1969 until he retired there in 2002. He is also a writer.

Besso Peak. 69°23' S, 76°18' E. About 3.3 km NW of Law-Racovitza Station, and about 0.7 km NE of Three Man Peak, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Ricky Besso, carpenter at Davis Station in 1985. He helped to establish Law Base (as it was then). The Chinese call it Xiaowuyi Shan.

Besson Spur. 77°23' S, 161°02' E. A rock spur descending N between Papitashvili Valley and Hernandez Valley, in the Apocalypse Peaks of Victoria Land. Named by US-ACAN in 2005, for physicist David Z. "Dave" Besson (b. 1957), of the University of Kansas, at Lawrence, who did 8 field seasons at Pole Station between 1997 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Mount Best. 66°49' S, 51°23' E. A mountain, 2.45 km SW of Mount Morrison, and about 6 km E of Mount Hampson, in the Tula Mountains of Enderby Land. Plotted by Australian cartographers from 1956 ANARE air photos, and named by ANCA for Frank Best. US-ACAN accepted the name in 1965.

Best, Francis William "Frank." b. 1895, East Hartlepool, son of Scottish shipyard laborer Frank Best and his wife Emma. He was a fireman on the *Discovery* during the 2nd half of BANZARE 1929-31. In 1932, in South Shields, he married Margaret Murtagh, and they had 4 children there.

Best Way Gap. 68°32' S, 78°16' E. On the N side of Club Lake, in the Vestfold Hills, it is conspicuous from the west. Through this gap is the best way to go along the route between Davis Station and Platcha. Named by ANCA on Nov. 27, 1973.

Besvikelsens Kap *see* [2]**Cape Disappointment**

Besvikelsens Udde *see* [2]**Cape Disappointment**

Isla Beta *see* **Beta Island**

Beta Island. 64°19' S, 63°00' W. A small island, immediately N of Kappa Island, and close SW of Alpha Island, in the Melchior Islands, in the Palmer Archipelago. Roughly surveyed by personnel on the *Discovery* in 1927, and probably named by them, for the 2nd letter of the Greek alphabet. It appears as such on their chart of

1929. The island was re-surveyed by ArgAE 1942, ArgAE 1943, and ArgAE 1948. It appears on a 1947 Chilean chart as Isla Beta, and that was the name accpted by the 1974 Chilean gazetteer. The name Beta Island was accepted by UK-APC on Sept. 8, 1953, and by US-ACAN in 1956. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Isla Rodeada ("surrounded island," i.e., an island surrounded by other islands), and as such appears in the 1970 Argentine gazetteer.

Beta Peak. 75°51' S, 160°06' E. A rock peak, rising to 1620 m, surmounting a small, ice-free mesa 3 km NE of Pudding Butte, between Richards Nunatak and Crash Nunatak, in the Prince Albert Mountains of Victoria Land. So named by the Southern Party of NZGSAE 1962-63, because, throughout the entire time they were there, they called it Station B. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1966.

Betagh, William. b. Ireland. He joined the RN, was a purser on a man o' war, and then captain of the Marines on the *Speedwell* in 1719, under George Shelvocke, when the ship went into high latitudes.

Cabo Betbeder *see* **Cape Betbeder**

Cap Betbeder *see* **Cape Betbeder**

Cape Betbeder. 63°37' S, 56°41' W. Marks the SW end of Andersson Island, in the Antarctic Sound, off Trinity Peninsula, off the NE tip of the Antarctic Peninsula. Probably discovered on Jan. 15, 1902, by SwedAE 1901-04, and certainly charted by them. Named by Nordenskjöld as Kap Betbeder, for Rear Admiral (later Vice admiral) Onofre Betbeder (1860-1914), Argentine minister of marine, who sent the *Uruguay* to rescue Nordenskjöld. The first Spanish-language translations of Nordenskjöld's maps show it as Cabo Betbeder, and that is the name that would finally be chosen by the Chilean gazetteer of 1974. Charcot, on his map of 1912, refers to it as Cap Betbeder, and a 1921 British chart has it as Cape Betbeder, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. Fids from Base D surveyed it between 1945 and 1947. Although the Argentines have always tended to call it Cabo Betbeder, there is a 1978 reference to it as Punta Castro, named for a sailor on the *Uruguay* in 1904. *See also* **Betbeder Islands**.

Île Betbeder *see* **Betbeder Islands**

Îlots Betbeder *see* **Betbeder Islands**

Islotes Betbeder *see* **Betbeder Islands**

Kap Betbeder *see* **Cape Betbeder**

Betbeder Islands. 65°15' S, 65°03' W. A group of two main islands, surrounded by several other small islets and rocks, in the SW part of the Wilhelm Archipelago, 35 km W of Cape Tuxen, on the Graham Coast, on the W coast of Graham Land. Judging from Lecointe's map of 1903, these islands may well have been discovered (but certainly not named) by BelgAE 1897-99. Roughly charted by FrAE 1903-05, and named by Charcot as Île Betbeder, for Onofre Betbeder (*see* **Cape Betbeder**), who facilitated the refit of the *Français* at Buenos Aires, in Dec. 1903. It appears in this singular form on the expedition's charts. However, during FrAE 1908-10, Charcot realized that it was a group, and renamed them Îlots Betbeder, and they appear as such on that expedition's maps. They appear as the Betbeder Islands on a 1940 British chart; as Betbeder Island on a 1942 USAAF chart; on a 1946 Argentine chart as Islas Betbeder; as Betbeder Islets on a 1948 British chart; and as Islotes Betbeder on another 1953 Argentine chart. It was as Betbeder Islets that US-ACAN accepted the feature, in 1950, with UK-APC following suit on Sept. 20, 1955. After studying the aerial photographs taken by FIDASE 1956-57, UK-APC, on July 7, 1959, redefined them as the Betbeder Islands, and US-ACAN followed suit in 1963. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Islotes Betbeder. The SCAR gazetteer says that in 1974 Chile rejected the name Isla Tucapel, which is true, but it has nothing to do with the Betbeders. Tucapel was rejected in favor of Arrecife Black, a rock to the W of the Betbeders, and lying between that group and Lumus Rock (*see* **Sooty Rock**).

Betbeder Islets *see* **Betbeder Islands**

Betbeder Refugio. 64°22' S, 56°55' W. Argentine refuge hut built on Jan. 1, 1954 on a rock surface, on Snow Hill Island, off the NE coast of the Antarctic Peninsula. Named Refugio Naval Betbeder, for Onofre Betbeder (*see* **Cape Betbeder**). It functioned until 1955.

Betechtinkjeda *see* **Betekhtin Range**

Hrebet Betehtina *see* **Betekhtin Range**

Betekhtin Range. 71°54' S, 11°32' E. About 23 km long, it forms the S arm of the Humboldt Mountains, in the Wohlthat Mountains of Fimbulheimen, in Queen Maud Land. The range includes Skarshaugane Peaks, Skeidsnutane Peaks, and Hovdenuten. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition. SovAE 1960-61 remapped it again, and it was named by the USSR in 1963 as Hrebet Betehtina, for geologist Anatoliy Georgiyevich Betekhtin (1897-1962). US-ACAN accepted the translated name Betekhtin Range, in 1970. The Norwegians tend to call it Betechtinkjeda (which means the same thing).

Bethell, George Richard. b. March 23, 1849, Rise, Holderness, Yorks, son of William Froggatt Bethell and his wife Elizabeth Beckett (sister of the 1st Baron Grimthorpe). The Bethells were the best-known family in Holderness. After school at Laleham, he joined the Navy in June 1862, as a cadet on the *Britannia* at Gosport, passing out with the rank of midshipman on Sept. 17, 1863, with a 2nd class prize for good conduct, and credited with 6 months sea time. On Sept. 25, 1863, he was appointed to the *Sutlej* (although the *Sutlej*, at that date, was halfway around the world, about to dock in San Francisco Harbor, and about to be fired upon — albeit with blanks — on Oct. 1, by Capt. William Winder, commander of Fort Alcatraz). G.R. was promoted to sub lieutenant on Sept. 17, 1868, and, as such, worked on Mediterranean and Gulf of Suez surveys. On Sept. 3, 1872, he was promoted to lieutenant, and took part in the *Challenger* Expedition of 1872-76, sailing into Antarctic waters. He was on the *Warrior* (1877-78), the *Alert* (1878-80), and the *Minotaur*, (1880-84; he was on this vessel during the Egyptian War of 1882), finally being attached to Sir Charles Warren's expedition to Bechuanaland in 1884. He retired as a commander (although, in 1900, he was legally entitled to assume the rank of captain, which he did), and was conservative MP for Holderness, 1885-1900. His attitude toward the South African War brought him censure from the Conservative Association, and they dropped their support of him. In 1906, he was defeated as the Free Trade candidate for Holderness. In 1893 he had bought the magnificent Sigglesthorne Hall, set in 18 acres in Holderness, which is where he died on Dec. 3, 1919. He never married.

Beton, Theodore *see* **USEE 1838-42**

Bettle Peak. 77°47' S, 163°30' E. Rising to 1490 m, W of Bowers Piedmont Glacier, and 10 km N of Granite Knolls, it is the highest peak between the lower portion of Ferrar Glacier and Blue Glacier, in Victoria Land. Named by US-ACAN in 1964, for James F. Bettle, meteorologist and scientific leader at McMurdo during the 1962 winter-over. NZ-APC accepted the name on June 16, 1964.

Betts, Martin Stephen "Marty." Australian Bureau of Meteorology oberver who spent the winters of 1968 and 1969 on Macquarie Island. He wintered-over at Mawson Station in 1971, and was a member of the ANARE Prince Charles Mountains survey in the summer season of 1971-72. From 1974 to 1981 he was editor of *Aurora*, the journal of the ANARE Club, and from 1977 was publications officer for the Australian Antarctic Division (information services officer from 1981). In May 1981 he produced the first issue of *ANARE News*. He was one of the expedition leaders on ANARE 1983-84, 1984-85, 1985-86, 1988-89, 1990-91, 1991-92, 1992-93, 1994-95, 1996-97. In all, he was leader on 12 expeditions, and deputy leader on 5. From 1986 he was ANARE coordinator, i.e., head of planning and coordination. From 1996 he was a senior policy officer with AAD, until he retired on May 2, 2001, after 33 years with ANARE.

Betts Island. 69°21' S, 76°13' E. In the N part of the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Marty Betts (q.v.), who was field leader of the 1987-88 ANARE Larsemann Hills Summer Party.

Betts Nunatak. 72°51' S, 61°10' E. A nunatak, 4 km E of Skinner Nunataks, it is one of the snow-covered Goodspeed Nunataks, in the S part of the Prince Charles Mountains of Mac. Robertson Land. First spotted by an ANARE seismic traverse party in 1957, and photographed by ANARE in 1958 and 1960. Named by ANCA on Nov. 27, 1973, for Marty Betts (q.v.), a mem-

ber of the ANARE Prince Charles Mountains Survey Party of 1972.

Mount Betty. 85°11' S, 163°45' W. A small ridge, 381 m (1250 feet) high, on the N side of Bigend Saddle, in the NE extremity of the Herbert Range, overlooking the Ross Ice Shelf on the shoulder of the foothills descending NE from Mount Fridtjof Nansen, between Storm Glacier and the Axel Heiberg Glacier, in the Queen Maud Mountains. This is almost certainly the same feature that Amundsen discovered on Nov. 17, 1911, and named Betty's Knoll, for Beata "Betty" Andersen (b. 1840, on the Onsala Peninsula, Sweden), the Amundsen family housekeeper when the explorer was a child. When the time came for Norway to get in line with the rest of western Europe, as regards surnames, she (the housekeeper, that is) had changed her name from Beata Andersdatter while working for her previous employer, Ole Larsen Røed, of Nøtterøy. A cairn was built, and a record left here. Larry Gould climbed this mountain during ByrdAE 1928-30. US-ACAN accepted the name and location in 1951.

Betty's Knoll *see* **Mount Betty**

Betzel Cove. 64°43' S, 64°12' W. In Wylie Bay, ENE of Dream Island, off Anvers Island, in the Palmer Archipelago. Named by US-ACAN in 1998, for Alfred P. "Buzz" Betzel, oceans projects manager for the NSF's Office of Polar Programs, 1974-86. He was the liaison in scheduling the deployment of U.S. Coast Guard icebreakers. UK-APC accepted the name on April 23, 1998.

Beverley, A. On Oct. 9, 1913, he signed on to the *Aurora* as donkeyman (3rd engineer), at £7 10s per month, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on March 19, 1914, with a bonus of £6.

Mount Bevilacqua. 76°14' S, 162°28' E. A mostly ice-free mountain, rising to 1343 m, 2.5 km N of Mount Evans, in the Saint Johns Range of Victoria Land. The summit is situated at the union of Y-shaped ridge lines. Named by US-ACAN on Jan. 15, 2008, for Chief Bevilacqua. NZ accepted the name on April 7, 2008.

Bevilacqua, Charles A. "CB." b. June 8, 1930, Woburn, Mass., son of laborer and truck driver Albert J. Bevilaqua (who was murdered in 1933) and his wife Margaret. He joined the U.S. Navy and the Seabees in 1948, went to Guam, and was serving in Korea in 1955 when he answered a USN notice for volunteers to go down and build the new IGY South Pole Station (*see* **South Pole Station**). He shipped out of Norfolk, Va., on the *Wyandot*, on Nov. 14, 1955, and headed through the Panama Canal to Christchurch, NZ, and then on to McMurdo Sound in the austral summer of 1955-56, where he was senior enlisted construction builder chief. He helped build the base there, and wintered-over there, assuming Richard Williams' duties after the latter's death. Then he was flown over to the Pole on Nov. 25-26, 1956, as part of the 2nd group of Seabees in at the Pole, and helped build the station there. He was one of the last out, on Jan. 4, 1957, flew back to McMurdo, and was then shipped home on the *Curtiss*. He never went back, and retired to Meredith, NH.

Glaciar Bevin *see* **Bevin Glacier**

Mount Bevin. 71°54' S, 169°27' E. A prominent, sharply pointed mountain, rising to 3490 m, at the W side of the head of Murray Glacier, 3 km WNW of Mount Sabine, in the Admiralty Mountains of Victoria Land. Named by NZ-APC on April 22, 2004, for Anthony J. "Tony" Bevin, surveyor general of NZ, and charirman of the NZ Geographic Board, 1996-2004. US-ACAN accepted the name on July 14, 2004.

Bevin Glacier. 66°17' S, 63°47' W. About 8 km long (the Chileans say about 17 km), it flows E from the plateau escarpment on the Foyn Coast, into the NW end of Cabinet Inlet between Attlee Glacier and Anderson Glacier, on the E side of Graham Land. In Dec. 1947, it was surveyed from the ground and charted by Fids from Base D, and photographed aerially by RARE 1947-48. Named by FIDS for Ernest Bevin (1881-1951), first general secretary of the Transport and General Workers Union, 1922-37, minister of labour, 1940-45, member of the War Cabinet (which authorized Operation Tabarin) and foreign secretary, 1945-51. UK-APC accepted the name on May 23, 1951, and US-ACAN followed suit in 1952. It appears on a 1954 British chart, and in the 1955 British gazetteer. It appears on a 1957 Argentine chart as Glaciar Bevin, and that is the name used by the Argentines, and by the Chileans, today.

Mount Bewsher. 70°54' S, 65°28' E. A prominent, flat-topped mountain, rising to 1973 m above sea level, and rising 200 m above the plateau to the W, about 10 km E of Mount McMahon, at the W end of the Aramis Range, in the Prince Charles Mountains, in Mac. Robertson Land. It has a spur running N, and a large moraine running NE. To the E there is a snow scarp, and a drop of 55 m. First visited by the ANARE Southern Party of 1956-57 led by Bill Bewsher, and named by ANCA on July 22, 1957, for Bewsher. US-ACAN accepted the name in 1961.

Bewsher, William Gordon "Bill." b. Feb. 22, 1924, Launceston, Tasmania, son of Gordon Bewsher. Officer-in-charge of Mawson Station during the winter of 1956. On Nov. 16, 1956 he led a party out of Mawson Station to the Prince Charles Mountains. 2 Weasels, 2 cargo sledges, one man-hauling sledge, and a wooden Nansen sledge pulled a 6-dog team (*see* **Husky Massif** for the names of the dogs). Bewsher's four companions were Kirkby, Crohn, Hollingshead, and Gardner. They got back to Mawson on Feb. 10, 1957.

Beyl Head. 74°05' S, 116°31' W. An ice-covered headland midway along the E side of Wright Island, along the Getz Ice Shelf, on the Bakutis Coast of Marie Byrd Land. Named by US-ACAN in 1978, for Cdr. David D. Beyle, USN, operations officer on OpDF 76 (i.e., 1975-76), who had responsibility for planning the Dome Charlie aircraft recovery pogram which resulted in the successful recovery of two LC-130 Hercules aircraft damaged during OpDF 75.

Bezbog Peak. 63°49' S, 58°34' W. A rocky peak rising to 950 m in the N extremity of Kondofrey Heights, 2.88 km NNW of Mount Reece, 1.29 km NE of Skakavitsa Peak, 6.89 km SE of Skoparnik Bluff, 5.39 km SSW of Bozveli Peak, and 6.57 km SW of Survakari Nunatak, it surmounts Victory Glacier to the N and E, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for Bezbog Peak, in Pirin Mountain, in southwestern Bulgaria.

Bezmer Point. 62°31' S, 60°15' W. The point on the NW coast of Varna Peninsula, 8.8 km ENE of Melta Point, and 2.6 km SW of Kotis Point, on Livingston Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, for Bezmer, the settlement in southeastern Bulgaria, in turn named for the 7th-century khan with the same name.

Gora Bezvershinnaja. 73°05' S, 68°40' E. A nunatak, due E of Helmore Glacier, on the Mawson Escarpment. Named by the Russians.

Ostrov Bezymjannyj. 65°57' S, 111°18' E. An island, just NE of Grierson Island, in the Balaena Islands, off the Budd Coast of Wilkes Land. Named by the Russians.

BGLE *see* **British Graham Land Expedition**

BGN. This is the U.S. Board on Geographical Names. *See* **US-ACAN**.

BGR-Firnfeld. 71°23' S, 163°30' E. Due W of Mount Verhage, in the Bowers Mountains. Named by the Germans. A firnfeld is a field of old snow, and BGR is the Bundesanstalt für Geowissenchaften und Rohstoffe, which, loosely translated (but conventionally so, and to the point) is Federal Institute for Geosciences and Natural Resources.

Bharti Station. The third Indian station in Antarctica. The idea was conceived in 2006, but nothing came of it. Then, the idea was revived, and work began in 2009-10. A compact station, 30 × 50 m, was built on a promontory by the sea, in the Larsemann Hills, and could house 25 scientists. It would become fully functional by 2012. Marine ecology was the main discipline, but seismology, climate change, and other sciences were also studied.

Caleta Bianchi *see* **Caleta Le Dantec**

Punta Bibby *see* **Bibby Point**

Valley of Bibby *see* **Italia Valley**

Bibby, John Selwyn. Known as Selwyn in Antarctica, because there were so many Johns. b. June 1, 1935, Warrington, Lancs, son of William Bibby and his wife Edna Doris Roberts. After studying geology at Nottingham University, he joined FIDS as a geologist, and, after the regular 6-week induction course, sailed on Oct. 1, 1957 on the *Shackleton* from Southampton. That was the season Asian flu broke out on the ship, and the Fids had to become the crew. On Oct. 25, 1957, the *Shackleton* pulled into Montevideo, and from there it was on to Port Stanley and then Antarctica. He was at Base G first, in the summer of 1957-58, then wintered-over at Base D in 1958 and 1959. In between winters he was back at Base G. In the 1959 winter he and

Allan Gill spent 130 days doing geological work on James Ross Island, mapping and sledging. In March 1960 he was picked up by the *John Biscoe*, and, after sailing down the west coast to help with the relief of Base E, he transferred, at Port Stanley, to the *Kista Dan*, for the trip back to the UK. From Aug. 1960 to March 1961 he worked at the FIDS Geology Unit at the Department of Geography and Geophysics at Birmingham University, married Mary Corfield (a mathematician and teacher) in 1961, in Warrington, then went into soil surveying in Aberdeen. Being one of the major figures in his field, he was visiting professor at various universities, and was head of the department of soil survey at the Macaulay Institute for Soil Research, in Aberdeen, from 1983 to 1987, and head of the land use division of the Macaulay when it became a land use institute, 1987-90. He was the coordinator of the Joint Agriculture Environment Programme, 1990-93, then retired. He still lives in Aberdeen.

Bibby Point. 63°48' S, 57°57' W. A steep, rocky point with snow slopes falling away inland, it forms the NE entrance point of Brandy Bay, on James Ross Island. Surveyed by Fids from Base D between 1958 and 1961, and named by UK-APC on Feb. 12, 1964, for John Bibby. US-ACAN accepted the name later in 1964. The Argentines call it Punta Bibby.

Bibra Valley. 79°57' S, 155°30' E. An ice-free valley, bounded on the E by the Danum Platform, 10 km NE of Haven Mountain, in the Britannia Range of Victoria Land. Named by M.J. Selby's 1978-79 geological team from the University of Waikato (NZ), in association with the name Britannia. Bibra was a Roman garrison at what is now Beckfoot, Cumria. NZ-APC accepted the name, and US-ACAN followed suit.

Cap Bickerton *see* **Cape Bickerton**

Cape Bickerton. 66°20' S, 136°56' E. Also called Cape Richardson. An ice-covered cape, WNW of Cape Robert, and 8 km ENE of Gravenoire Rock (which marks the N extremity of the coastal area close E of Victor Bay), between Commandant Charcot Glacier and Pourquoi Pas Glacier, on the Clarie Coast of Wilkes Land. Charted by AAE 1911-14, and named by Mawson for Frank Bickerton. US-ACAN accepted the name in 1947. The French call it Cap Bickerton.

Bickerton, Francis Howard "Frank." Also known as "Bill." b. Jan. 15, 1889, Iffley, Oxford, son of solicitor Joseph Jones Bickerton and his wife Eliza Frances Fox. Orphaned at 6, Frank went to live with his mother's brother in Plymouth. He became an aeronautical engineer, and was motor engineer in charge of the airplane and sledge during AAE 1911-14. He led the Western Party during that expedition. He was due to go south again on the *Endurance*, with Shackleton, but World War I took him into the Army (Middlesex Regiment), he was at Loos in 1915, and then the Royal Flying Corps, as a Sopwith Camel scout pilot. He sustained massive injuries during that war. Between the wars he was in Newfoundland, and Africa, sold real estate in California, and in 1937 married Joan Chetwynd Talbot, daughter of the late Viscount Ingestre (the Earl of Shrewsbury gave his sister away). He died while on vacation in Cardiganshire, Wales, on Aug. 21, 1954. In 2005 Stephen Haddelsey's book *Born Adventurer: The Life of Frank Bickerton, Antarctic Pioneer* was published by Sutton Publishing, in Stroud.

Bicycles. One might think "not a chance," but, no. Push-bikes (as we used to call them, the ones you actually pedal with your feet) have been much used in Antarctica. Thomas Orde-Lees took his trick cycle with him on BITE 1914-17, and would do stunts to amuse his companions. A bike was used in Victoria Land during the occasional survey, as the best form of transportation. On Feb. 11, 1969, Steve Buxton, radio operator on the *Shackleton*, cycled the 15 km from Halley Bay Station back to his ship, across the ice. It took him 1 hour and 20 minutes. Dave Gooberman of the *James Clark Ross*, also used one. For a related article, *see* **Motorcycles**.

Bidal, Charles. b. 1820, Bourbon-Vendée, France. On May 26, 1838 he joined the *Zélée* as élèves' steward, to replace Jean Gall, who had jumped ship three days before. Bidal ran at Hobart on Feb. 24, 1840.

Bidet, Joseph. b. April 2, 1813, Épargnes. Able seaman on the *Zélée* during FrAE 1837-40.

Bidlingmaier, Friedrich. b. Oct. 5, 1875, in Redar, Württemburg. Magnetician, and meteorologist from Potsdam Observatory, he was on GermAE 1901-03. He died in 1914.

Bieber Bench. 81°57' S, 160°23' E. An ice-covered, relatively horizontal upland area of 50 sq km, at an elevation of about 1800 m above sea level, between Mansergh Snowfield and the head of Algie Glacier, at the S side of the Surveyors Range, in the Churchill Mountains. Named by US-ACAN in 2003, for John W. Bieber, of the Bartol Research Institute, at the University of Delaware, USAP principal investigator for solar and heliospheric studies with Antarctic cosmic ray observations at McMurdo and Pole Station, 1988-2002. NZ-APC accepted the name on Feb. 27, 2003.

Monte Biedma *see* **Monte Gavilán**

Bieknatten *see* **Hikae Rock**

Bielecki Island. 64°46' S, 64°29' W. An island, 0.8 km N of Trundy Island, in the W part of the Joubin Islands, off the SW coast of Anvers Island. Following USARP field work here from Palmer Station, from 1965 onwards, it was named by US-ACAN in 1974, for Johannes N. Bielecki, assistant engineer on the *Hero* during that ship's first voyage to Antarctica, in 1968. UK-APC accepted the name, on Dec. 20, 1974.

Nunatak Bienatti. 66°12' S, 61°34' W. Due S of Nunatak Cabre, it is one of the large number of nunataks on Jason Peninsula, on the Oscar II Coast of the Antarctic Peninsula. Named by the Argentines.

Bieniaszewicz Bay. 61°58' S, 58°28' W. Between Davey Point and Tartar Point, on the Joannes Paulus II Coast, on the NW coast of King George island, in the South Shetlands. Named by the Poles in 1984, for Eugeniusz Bieniaszewicz, helicopter pilot on King George Island during PolAE 1980-81.

Cap Bienvenue *see* **Cape Bienvenue**

Cape Bienvenue. 66°43' S, 140°31' E. A small, rocky cape, partly ice-covered, and reaching an elevation of 44 m above sea level, which forms the E side of the entrance to Piner Bay, between Astrolabe Glacier and Zélée Glacier, on the coast of Adélie Land. Photographed aerially during OpHJ 1946-47. Charted and named Cap Bienvenue by Barré in 1951-52. It was a welcome discovery, a cape where a landing could be made, that had not been discovered before. He established an astronomical control station here. US-ACAN accepted the name Cape Bienvenue in 1956.

Bier Point. 74°10' S, 164°09' E. A projecting point on the E side of Campbell Glacier, 11 km NE of Mount Queensland, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Jeffrey W. "Jeff" Bier, biologist who wintered-over at McMurdo in 1966. He was with the Division of Microbiology, Food and Drug Administration, Washington, DC.

Bieringmulen. 74°44' S, 11°45' W. A mountain in Skjønsbergskarvet, in Sivorgfjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Aage Biering (1907-1963), Norwegian Resistance leader during World War II. "Mulen" means "the muzzle."

Mount Bierle. 71°30' S, 167°19' E. Rising to 2360 m, 7 km N of Mount Granholm, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Donald A. Bierle, of Sioux Falls College, USARP biologist at McMurdo, 1966-67 and 1967-68.

Bifeng Wan. 69°25' S, 76°14' E. A cove, immediately E of Murkwater Lake, in the Larsemann Hills. Named by the Chinese.

Bifrost Ledge. 77°35' S, 162°11' E. A ridge on the N side of Mount Holm-Hansen, in the Asgard Range of Victoria Land. Named US-ACAN in 1998, for Bifrost, the rainbow bridge linking Asgard with Earth, in Norse mythology. NZ-APC accepted the name on Oct. 7, 1998.

La Bifur *see* **under L**

Big Brother Bluff. 71°28' S, 159°48' E. A high, angular, granite bluff, rising to 2840 m, along the W wall of the Daniels Range, 10 km N of Mount Burnham, in the Usarp Mountains. With George Orwell in mind, the Northern Party of NZGSAE 1963-64 named it thus, because it is visible from 95 km N, and from many points across Rennick Glacier. NZ-APC accepted the name on Nov. 17, 1964, and US-ACAN followed suit later that year.

Big Diamonen Island *see* **Diamonen Island**

Big Razorback Island. 77°41' S, 166°30' E. Also (incorrectly) called Razorback Island, Great Razorback Island, and Large Razorback Island. Rising to an elevation of 64 m above sea level, it is the most southeasterly, and the 3rd largest, of the Dellbridge Islands, in Erebus Bay, about 0.8 km SSW of Little Razorback Island, off the

W coast of Ross Island, in McMurdo Sound. Discovered and so named by Scott in 1902 for its size and shape. US-ACAN accepted the name in 1952, and it appears in the 1958 NZ provisional gazetteer.

The *Bigbury Bay*. Royal Navy Bay-class frigate launched on Nov. 16, 1944 (she was going to be called the *Loch Carloway*, but things changed, and she was named for the bay in Devon). In 1947, while with the Far Eastern Fleet, she took 13 Japanese war criminals to Hong Kong, for trial. Then she went to the Mediterranean, and in July 1948 was transferred to the America and West Indies Squadron. She was based in Bermuda in the 1949-50 season, under the command of skipper Giles Richard Penn Goodden. Sub-lieutenant was Angus Bruce Erskine. On Jan. 30, 1950, she arrived in Port Stanley, and, leaving there with the governor of the Falklands aboard, she went to Antarctica to help pluck off Fuchs and his boys, stranded on Stonington Island. They also went to Deception Island. That season she encountered 1200 icebergs, 350 of them within a 3-day period, one being 4 miles long. It wasn't only Fids she brought out of Antarctica, it was the first ever emperor penguins (a couple) bound for a stay at London Zoo. On April 24, 1950, on her way home to the UK, she rescued 9 U.S. Marines and 2 Bermudans who had been adrift in a open boat for 2 days. In 1953, as a guardship in the Falklands, she joined the *Snipe* at Deception Island during the expulsion fracas in which Argentine soldiers kicked some Fids off the island (*see* **Wars**). Captain that season was Alfie Sutton. In 1953-54 she was re-fitted in Portsmouth, and arrived back in the Falklands on June 23, 1954, still as a guardship. The next several years were spent in the Americas, and in 1958 she was transferred to the Mediterranean Station. Along with the *Burghead Bay*, she was sold to the Portuguese Navy on May 12, 1959, and renamed the *Pacheco Pereira*, and on July 6, 1970 was sold to the breakers.

Bigelow Rock. 66°10' S, 95°25' E. Also called Burton Island Rock. Low, ice-covered, and about 130 m long, with numerous rock exposures close above sea level, immediately W of the Shackleton Ice Shelf, and about 40 km NE of Junction Corner. Delineated from air photos taken during OpHJ 1946-47. OpW 1947-48 set up an astronomical station here. Named by US-ACAN in 1955, for U.S. Marine Corps technical sergeant George H. Bigelow, tractor driver and mechanic on OpHJ 1946-47, and on OpW 1947-48.

Bigend Saddle. 85°12' S, 163°50' W. A broad, snow-covered saddle, on the SW side of Mount Betty, between that mountain and the spur extending westward from Mount Cohen, in the N part of the Herbert Range, in the Queen Maud Mountains. Traversed in Dec. 1929 by Larry Gould's party during ByrdAE 1928-30. So named by the Southern Party of NZGSAE 1963-64, because one of their motor toboggans was abandoned here with a smashed big end bearing. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Biggs, Ian James. b. May 6, 1929, Stanley, Falkland Islands, son of laborer Eric George John Biggs and his wife Helen McNicoll. As a baby he was already crossing the Atlantic to Britain (staying in Glamis, Scotland), and back to the Falklands. He joined FIDS in 1947, as a handyman, and wintered-over at Base G in 1948. He spent the winters of 1950 and 1951 on South Georgia, still with the FIDS, but as a meteorological assistant. In the mid 1970s he returned to the UK with his family, and lived in Bristol.

Biggs, John K. b. Falkland Islands. Handyman who came in on the *William Scoresby*, on March 8, 1945, as a last minute addition at Port Lockroy Station for the winter of 1945, during the 2nd phase of Operation Tabarin. That winter the operation became FIDS, so Biggs was one of the first Fids. He was due to go to Base B for the winter of 1946, but instead went back to the Falklands, to get his major dental problems taken care of, if nothing else.

Biggs, Patrick Eric "Pat." b. Aug. 7, 1924, Stanley, Falkland Islands, son of storekeeper Bernard Biggs and his wife Kathleen Biggs [Biggs is a very popular name in the Falklands]. He joined FIDS in 1946, as a handyman, and wintered-over at Signy Island Station in 1947, and at Base B in 1948. He later served on the *John Biscoe*. On June 9, 1950, at Stanley, he married Rebecca Ann Lillian Short. In 1957 he, his wife, and 3 children, sailed for London on the *Highland Chieftain*, arriving there on Sept. 5 of that year, and from there on to become a caretaker in Canada, where he died.

Biggs Island. 67°48' S, 68°53' W. A small island, the easternmost of the Henkes Islands, off the S end of Adelaide Island. Charted in Jan.-March 1963, by an RN Hydrographic Survey unit, and named by them for Thomas Biggs, a Falkland Islander, coxswain of the launch used during the survey. UK-APC accepted the name on Feb. 12, 1964, and US-ACAN followed suit that year.

Bigler Nunataks. 70°45' S, 159°55' E. A cluster of notable nunataks, just southeastward of the Pomerantz Tableland, between Keim Peak and Lovejoy Glacier, in Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1969, for John C. Bigler, of the University of California, at Davis, USARP biologist at McMurdo in 1966-67. NZ-APC accepted the name in Nov. 1969, and ANCA accepted it on July 31, 1972.

Bahía Bigo *see* **Bigo Bay**

Mont Bigo *see* **Mount Bigo**

Monte Bigo *see* **Mount Bigo**

Mount Bigo. 65°46' S, 64°17' W. Rising to 1980 m (the British say about 1700 m), immediately SW of Mount Perchot, at the head of Bigo Bay, on the Graham Coast, on the W coast of Graham Land. Discovered by FrAE 1908-10, and named by Charcot as Mont Bigo, for Calais shipowner Robert Bigo, a member of the Ligue Maritime Française, who, in Nov. 1900, started a regular bi-weekly service between Calais and London with his little steamer *Pauline*. It appears as such on the expedition's charts. It appears on a 1916 British chart as Mount Bigo, and, as such, on the expedition charts of BGLE 1934-37, and on a 1948 FIDS chart. That was the name accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1947 as Monte Bigo, and that was the name accepted by the Argentine gazetteer of 1970 and by the Chilean gazetteer of 1974. The feature was photographed aerially by FIDASE in 1956-57.

Bigo Bay. 65°43' S, 64°30' W. A bay. 10 km wide, indenting the Graham Coast for 13 km between Cape García and the peninsula surmounted by Magnier Peaks, on the W coast of Graham Land. Discovered by FrAE 1903-05, it appears on their charts, along with what is now called Leroux Bay, as Baie Leroux. This assumption, that it was all one big bay, was reflected in the charts of FrAE 1908-10, which show what is now Bigo Bay to be the S part of this greater Baie Leroux. However, BGLE 1934-37 determined that the above-named peninsula separates this bay from Leroux Bay, and Rymill so named it in association with Mount Bigo, which stands at the head of the bay. It appears as such on a British chart of 1940, and that was the name (and situation) accepted by US-ACAN in 1950, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1946 Argentine chart as Bahía Bigo, and that was the name accepted by the Argentine gazetteer of 1970, and by the Chilean gazetteer of 1974. The feature was photographed aerially by FIDASE in 1956-57.

Fiord Bigourdan *see* **Bigourdan Fjord**

Fiordo Bigourdan *see* **Bigourdan Fjord**

Seno Bigourdan *see* **Bigourdan Fjord**

Bigourdan Fjord. 67°33' S, 67°23' W. A sound, 21 km long in an ENE-WSW direction, and an average of 3 km wide, between Cape Sáenz (the S extremity of Arrowsmith Peninsula) to the N, and Blaiklock Island and the N coast of Pourquoi Pas Island to the S, along the Loubet Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1908-10, and named by Charcot as Fiord Bigourdan, for Camille-Guillaume Bigourdan (known as Camille Bigourdan) (1851-1932), astronomer, a member of the French Academy of Sciences from 1904, and a member of the Commission of Scientific Works for the expedition. It appears as Bigourdan Fjord on a British chart of 1914. Roughly surveyed in 1936, by BGLE 1934-37. It appears as Bigourdan Fiord on a U.S. Hydrographic Office chart of 1943. It was more accurately surveyed by Fids from Base E in Nov. 1948. It appears as Fiordo Bigourdan on a 1947 Argentine chart, and that was the name accepted by the 1970 Argentine gazetteer. It appears as Bigourdan Fjord on a British chart of 1951, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the 1955 British gazetteer. It appears as Seno Bigourdan on a 1962 Chilean chart, and that was the name accepted by the 1974 Chilean gazetteer.

Bigseth, Arnfinn. b. Norway. 3rd engineer on the *Wyatt Earp* during the Ellsworth Expedition, 1933-34. He played violin.

Biker Glacier. 77°12' S, 160°07' E. A glacier, 4 km long and less than 1 km wide, flowing N from the Polar Plateau, between Mount Littlepage and Mount Dearborn, into Mackay Glacier, in Victoria Land. In keeping with other features in the area with a cycling theme, this glacier was named by NZ-APC in 1995, for the fact that Trevor Chinn's 1992-93 NZ mapping party found a bicycle to be the best means of transportation in this area. US-ACAN accepted the name in 1996.

Bilbad Peak *see* **Bildad Peak**

Bildad Peak. 65°49' S, 62°36' W. Also misspelled as Bilbad Peak. A conspicuous snow-capped peak, rising to about 800 m, 8 km W of Spouter Peak, on the S side of Flask Glacier, at the head of Scar Inlet, on the Oscar II Coast, in the Antarctic Peninsula. Surveyed by Fids from Base D in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for the *Moby Dick* character. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

Glaciar Bilgeri *see* **Bilgeri Glacier**

Bilgeri Glacier. 66°01' S, 64°47' W. Flows E into Barilari Bay, S of Huitfeldt Point, on the Graham Coast, on the W coast of Graham Land. Charted by BGLE 1934-37. In 1956-57 it was photographed aerially by FIDASE and surveyed from the ground by Fids from Base J. Named by UK-APC on July 7, 1959, for Col. George Bilgeri (1873-1934), Austrian skiing pioneer, inventor of the first spring ski-binding. It appears on a British chart of 1960. US-ACAN accepted the name in 1965. The Argentines call it Glaciar Bilgeri.

Gora Bilibina. 72°55' S, 61°10' E. One of the Goodspeed Nunataks, in the southern Prince Charles Mountains. Named by the Russians.

Islote Bill *see* **Bills Island**

Bill Hill. 64°15' S, 56°44' W. A hill, 41 m above sea level, SW of Cross Valley, near Bertodano Bay, Seymour Island. In 1993-94 numerous well-preserved invertebrate fossils were found here. Named by the Poles on Sept. 1, 1999, for William John "Bill" Zinsmeister, paleontologist at the department of earth atrmospheric sciences, at Purdue University.

The Billboard. 77°04' S, 145°40' W. A massive, granitic, monolithic upland, with vertical faces rising to over 300 m above the level of the continental ice, just W of Mount Rea, between Arthur Glacier and Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Its two principal peaks are Mount Rea and Mount Cooper. Discovered in Nov. 1934 by Paul Siple's sledge party, during ByrdAE 1933-35. Named descriptively. US-ACAN accepted the name.

Billerbeck, Henry George *see* **The *Elkhorn***

Billey Bluff. 75°32' S, 140°02' W. Formerly called Landry Peak. A rocky coastal bluff 6 km SW of Mount Langway, in the W part of the Ickes Mountains, on the Ruppert Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for John P. Billey, ionosphere physicist and scientific leader at Byrd Station in 1971.

Islotes Billie *see* **Billie Rocks**

Pico Billie *see* **Billie Peak**

Billie Peak. 64°45' S, 63°23' W. Rising to 724 m, 2.5 km ENE of Bay Point, at the SW end of the Osterrieth Range, on the SE coast of Anvers Island, in the Palmer Archipelago. Discovered by BelgAE 1897-99, and charted by personnel on the *Discovery* in 1927. It appears on the DI expedition map, but may have been named before that, probably by whalers. US-ACAN accepted the name in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955, the same year it was resurveyed by Fids from Base N. It appears on an Argentine chart of 1949, as Pico Billie, and that was the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer.

Billie Rock *see* **Billie Rocks**

Billie Rocks. 60°43' S, 45°37' W. A group of 6 rocks in Borge Bay, 130 m NE of Drying Point, along the E side of Signy Island, in the South Orkneys. In 1927 personnel on the *Discovery* made a sketch survey of Borge Bay, and charted the easternmost of these 6 rocks as Billie Rock, which was a name that was probably in use before this time, perhaps given by whalers. It appears as such on the 1929 Discovery Investigations chart. The most westerly of the group they charted as Point Rock. The group was charted as Billie Rocks on the 1934 DI map, and the names for the individual rocks were discarded. That was the name (and situation) accepted by US-ACAN in 1953, and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It appears on a 1953 Argentine chart as Islotes Billie.

Mount Billing. 75°43' S, 160°54' E. A wedge-shaped mountain, rising to 1420 m, between Mount Mallis and Mount Joyce on the one hand, and Mount Bowen on the other, in the Prince Albert Mountains of Victoria Land. Named by NZ-APC for journalist Graham John Billing (b. 1936), PR officer at Scott Base, 1962-63 and 1963-64. He wrote *South: Man and Nature in Antarctica; a New Zealand View* (1973). US-ACAN accepted the name in 1966.

Billingane *see* **Billingane Peaks**

Billingane Peaks. 68°21' S, 59°18' E. A close cluster of 4 peaks, about 8 km ESE of See Nunatak, and about 42 km ESE of Mount Gjeita, at the E end of the Hansen Mountains, in Kemp Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named them Billingane. Plotted again from ANARE air photos. US-ACAN accepted the name Billingane Peaks in 1967. ANCA decided to call them Maruff Peaks, for Rodney N. Maruff, field assistant (survey), who was with the ANARE expedition on the *Nella Dan* in 1965, a leader of one of the survey parties that carried out a tellurometer traverse that passed through the Hansen Mountains that year. Rod Maruff later became a major dog trainer in Melbourne.

Billis Islet *see* **Bills Island**

Isla Bills *see* **Bills Island**

Islote Bills *see* **Bills Island**

Punta Bills *see* **Bills Point**

Bills Gulch. 68°05' S, 67°50' W. The northern of 2 glaciers flowing SE from the plateau upland into the head of Trail Inlet, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Probably seen from the air by Wilkins on Dec. 28, 1928, and again by Ellsworth on his flight of Nov. 23, 1935. Surveyed in Sept.-Oct. 1940, by USAS 1939-41, and named by them as Bill's Gulch, for Bill, the lead dog on Paul Knowles' transpeninsular traverse in 1940, during that expedition. Bill died here. It appears (with the apostrophe) on a 1943 U.S. Hydrographic Office chart. Re-surveyed by Fids from Base E in Dec. 1947, and used by a combined FIDS-RARE sledging party that 1947-48 season. US-ACAN accepted the name (without the apostrophe) in 1947, and UK-APC followed suit on Jan. 28, 1953. It appears as such in the 1955 British gazetteer. The Argentines sledged across this glacier from General San Martín Station to Mobiloil Inlet, during AAE 1951-52, and named it Baquiano Vargas. In Nov.-Dec. 1956, Argentines built Maipú Refugio on the plateau near the head of this glacier, and Chacabuco Refugio near its terminus.

Bills Island. 64°49' S, 63°30' W. Close NE of Goudier Island, in the harbor of Port Lockroy, Wiencke Island, in the Palmer Archipelago, off the Danco Coast. Discovered and roughly charted by FrAE 1903-05. In 1927 the Discovery Investigations personnel on the *Discovery* recharted it as Bills Islet, and it appears on their 1929 chart. It had already been named by that time, probably by whalers. It appears (erroneously) as Billis Islet on a 1946 U.S. Hydrographic Office chart. It appears as Islote Bills on a 1947 Chilean chart, and that was the name accepted by the Chilean gazetteer of 1974. It appears on a 1949 Argentine chart as Isla Bills. US-ACAN accepted the name Bills Islet in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. However, on July 7, 1959, UK-APC redefined it as Bills Island, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1960. It appears in the 1970 Argentine gazetteer, unaccountably pluralized as Islotes Bill (which needs correcting).

Bills Islet *see* **Bills Island**

Bills Point. 64°19' S, 62°59' W. Marks the S extremity of Delta Island, in the Melchior Islands. Apparently it was roughly charted in 1927 by the personnel on the *Discovery*, but, if, as has been suggested, they named it, then it would almost certainly have appeared, named, on their 1929 chart. But it doesn't. The first time the name Bills appears in connection with this feature is on an Argentine chart of 1946, as Punta Bills, the feature having been (re) surveyed by ArgAE 1942 and ArgAE 1943. This does not mean that the name of the feature had not been named long before, perhaps by whalers, as Bills Point. The feature appears on a 1947 British

chart as Bills Point, and was surveyed again by ArgAE 1948. UK-APC accepted the name Bills Point on Sept. 8, 1953, and US-ACAN followed suit in 1956. It appears as such in the 1955 British gazetteer. Both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer accepted the name Punta Bills.

Billycock Hill. 68°10' S, 66°33' W. A rounded, ice-covered hill, rising to 1630 m, and projecting 180 m above the surrounding ice sheet, close N of the head of Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. First surveyed during USAS 1939-41, it appears (unnamed) on Finn Ronne's 1943 map of that expedition. Resurveyed by Fids from Base E in Dec. 1946, and so named by them because it looks like a billycock hat. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit later in 1955.

Bilsby, Walter George. Known as George, but in Antarctica they called him "Chippy." b. 1872, Sculcoates, near Hull, Yorks, son of carpenter and shipwright George Bilsby and his wife Matilda Grayson. In 1895, in Hull, he married Clara Scholey, and raised a family there. He was carpenter and shipwright on the *Morning* in 1902-03, during BNAE 1901-04. After the expedition, he got the flu, and was hospitalized in NZ. On July 26, 1907, at Poplar, in London, he signed on to *Nimrod* for BAE 1907-09, signing off at Poplar after the expedition returned home, on Aug. 31, 1909. He died in Hull, on Jan. 30, 1930.

Bilyana Island. 62°23' S, 59°46' W. A small island, 450 m by 290 m, in the Aitcho Islands, on the W side of the English Strait, 70 m S of Jorge Rock, 1.85 km NNW of Barrientos Island, and 1.45 km NE of Emeline Island, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on Nov. 23, 2009. Bilyana (or Biljana) was the heroine in an old Bulgarian song, "Biljana platno belese."

Bilyar Point. 62°36' S, 60°57' W. A rounded ice-free point on the N coast of Livingston Island, projecting 350 m into Barclay Bay, 1.7 km NE of Nedelya Point, 3 km SW of Rowe Point, 4.5 km ENE of Lair Point, and NW of Rotch Dome, in the South Shetlands. The British mapped it in 1968, and the Bulgarians named it on Dec. 15, 2006, after the medieval city of Bilyar, capital of the Volga Bulgaria in the 12th to 13th centuries, i.e., before the Mongol invasion.

Binder Rocks. 74°14' S, 115°03' W. An isolated rock outcrop, 6 km S of Siglin Rocks, on the W side of Martin Peninsula, on the Bakutis Coast of Marie Byrd Land. Lichens and petrels are to be found here. First photographed, aerially, in Jan. 1947, during OpHJ 1946-47. Named by US-ACAN in 1967, for Lt. (later Lt. Cdr.) Raymond Alois Binder, USN, maintenance coordinator at Williams Field during OpDF 67 (i.e., 1966-67). NZ-APC accepted the name on June 29, 1967. First plotted in 74°14' S, 114°51' W, it has since been replotted.

Binders Nunataks. 72°36' S, 62°58' E. Two small, light-colored nunataks, snow-covered almost to the top of their N sides, and with steep faces to the S, situated about 59 km (the Australians say about 72 km) N of Mount Scherger, in the S part of the Prince Charles Mountains. Mapped by Australian cartographers from ANARE air photos taken in 1960, and from ground surveys conducted in 1960 by an ANARE survey party led by Henk Geysen, who established a base at one of these nunataks. Named by ANCA on July 4, 1961, for the fictional character in W.E. Bowman's novel, *The Ascent of Rumdoodle* (*cf.* **Rumdoodle Point**). US-ACAN accepted the name in 1966.

Bindschadler Glacier. 77°58' S, 162°09' E. In the NW part of the Royal Society Range, flowing N between Table Mountain and Platform Spur, to join Emmanuel Glacier, in Victoria Land. Named by US-ACAN in 1992, for NASA glaciologist Robert Alan Bindschadler who, from 1983, was a principal investigator for USARP studies of the West Antarctic ice sheet, including the dynamics of ice streams in the area of the Siple Coast, their interaction with the Ross Ice Shelf, and the role of polar ice sheets in global climate change.

Bindschadler Ice Stream. 81°00' S, 142°00' W. An ice stream between Siple Dome and MacAyeal Ice Stream. Originally called Ice Stream D. *See* **Macayeal Ice Stream** for further details. This one was named by US-ACAN in 2003, for Robert Bindschadler (*see* **Bindschadler Glacier**). NZ-APC accepted the name later in 2003.

Bing He. 62°11' S, 59°00' W. A stream on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Bing Hu *see* **Frozen Lake**

Bingen *see* **Bingen Cirque**

Bingen Cirque. 72°41' S, 3°18' W. A conspicuous cirque in the steep, eastern rock cliffs in the S part of Jøkulskarvet Ridge, in the Regula Range, in the NE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Bingen (i.e., "the bin"). US-ACAN accepted the name Bingen Cirque in 1966.

Glaciar Bingham *see* **Bingham Glacier**

Bingham, Edward William. You could call him Ted if you dared, otherwise it was "E.W." b. Jan. 2, 1901, Dreemore, Dungannon, co. Tyrone, Ireland. A little man, bald as a coot, and somewhat eccentric (for example, he had actually circumcised himself). In 1926 he graduated in medicine at Trinity, Dublin, and joined the Royal Navy in 1928. He was with Rymill in Greenland during the 1930-31 British Arctic Air Route Expedition, and in 1932 reached 28,000 feet on Everest, despite not being a mountain climber. He was in Labrador again (not with Rymill, though), on the *Challenger* during that vessel's surveying and hydrographic expedition, 1932-34. By now a surgeon lieutenant commander, he sledged as fast as he could down the east coast of Labrador, to catch the *Nova Scotia*, which took him to Liverpool, arriving there on July 26, 1934, in time to join Rymill's expedition to Antarctica (BGLE 1934-37), as doctor. At the end of the expedition Bingham and several of the other expeditioners made their way to Las Palmas, and caught the *Gascony* from there to Liverpool, arriving on May 17, 1937. He was surgeon commander at the naval hospital in Plymouth for the first two years of World War II, and then for a year was principal medical officer on the *Duke of York*, based out of Scapa Flow. In 1944 he and Freddy Marshall went to Labrador to pick up some huskies for the second phase of Operation Tabarin, 1944-45, returning to Liverpool on board the *Indochinois* from Montreal, on Nov. 15, 1944. Marshall took the dogs to Antarctica, and Bingham stayed in London, at Putney, where he was living at the time. On Feb. 23, 1946 he was back in Antarctica as the first overall FIDS leader, arriving at Stonington Island on Feb. 23, 1946, on the *Trepassey*, in order to set up Base E there. The next day he and his FIDS crew occupied the old USAS East Base, and by March 13, 1946, had created Base E, 250 yards away. He was relieved on Feb. 5, 1947, by Ken Butler (who had also wintered-over there in 1946). On March 26, 1947, Bingham arrived at Port Lockroy on the *Trepassey*, but, essentially, for March and April of that season, he was aboard the *Fitzroy*. He then ran the FIDS office for a year in London, won the OBE in 1947, and returned to the Navy. He was based in Ireland from 1948 to 1952, being promoted to surgeon captain in 1951. He retired in 1957, and died on Sept. 1, 1993, in Bridport, Dorset.

Bingham Col *see* **Safety Col**

Bingham Glacier. 69°23' S, 63°10' W. A large glacier, 24 km long, flowing E from the Eternity Range to the Larsen Ice Shelf, S of Finley Heights, on the Wilkins Coast, on the E coast of the Antarctic Peninsula, with Cape Reichelderfer as its S portal. Together with Fleming Glacier, which flows toward the W, it fills a great transverse depression across the Antarctic Peninsula. The coast where Bingham Glacier reaches the Larsen Ice Shelf was photographed aerially by Wilkins in 1928, and by Ellsworth in 1935. It was surveyed from the ground in Nov.-Dec. 1936, by John Rymill and E.W. Bingham, who sledged across the peninsula to a point close S of this glacier. It appears on Stephenson's 1940 map of that expedition. It appears (erroneously) as Casey Strait on a 1939 U.S. Hydrographic Office chart. It was surveyed again from the ground and photographed aerially by USAS 1939-41, and can be seen on a 1943 U.S. Hydrographic Office photograph. Named for Bingham by US-ACAN in 1947, the same year the glacier was re-surveyed by Fids from Base E. UK-APC accepted the name on Jan. 28, 1953, and it appears in the 1955 British gazetteer. It appears on a 1962 Chilean chart as Glaciar Bingham, and that was the name accepted by the 1974 Chilean gazetteer. The Argentines also call it Glaciar Bingham.

Bingham Peak. 79°26' S, 84°47' W. A sharp peak, rising to 1540 m, 4 km SE of Springer Peak, in the Heritage Range of Ellsworth Land. Mapped by USGS from ground surveys, and

USN air photos taken between 1961 and 1966. Named by US-ACAN in 1966, for Joseph Peter Bingham (known as Peter Bingham) (b. April 25, 1942), aurora scientist at Eights Station in 1965. Much later he was professor of electrical engineering at the University of Tennessee.

Bingley Glacier. 84°29' S, 167°10' E. A tributary glacier, caused by the highland ice spilling over the N slopes of Mount Kirkpatrick, Mount Dickerson, and Barnes Peak, and flowing SE for 13 km between Mount Dorman (to the N) and the Adams Mountains (to the S), to enter the W flank of the Beardmore, in the Queen Alexandra Range. The glacier is unconfined by rock walls on the N side, does not enter the Beardmore at grade, and is not entrenched. Named by Shackleton in 1908, during BAE 1907-09, for his ancestral home in Yorkshire. Scott, during BAE 1910-13, inadvertently named it Garrard Glacier, and this situation was accepted by US-ACAN in 1952. However, the confusion was sorted out by NZGSAE 1961-62, who applied the name Garrard to another (until then unnamed) glacier (*see* **Garrard Glacier**), and renamed this one Bingley Glacier, as Shackleton had intended. NZ-APC accepted this change on June 28, 1962, and US-ACAN followed suit.

Bingyuan Gudi. 62°14' S, 59°00' W. A valley near Eddy Point, on the S side of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Binn, Thomas *see* **Bunn, Thomas**

Binn Peak. 62°43' S, 60°25' W. Rising to about 400 m above Miers Bluff, at the SW end of Hurd Peninsula, Livingston Island, in the South Shetlands. Named by UK-APC on May 13, 1991, for Thomas Bunn (sic). It appears in the 1993 British gazetteer. US-ACAN accepted the name. The British were the latest to replot this feature, in late 2008.

Binnie, Edward Beveridge. b. Oct. 8, 1884, Falkland Islands, son of humble Scottish immigrants. He was the Falkland Islands government whaling officer at the South Shetlands, 1907-08 (for example, he boarded the *Nor* at Deception Island on Dec. 20, 1907), and in 1909 was temporary customs officer on board the *Gobernador Bories*, and acting customs officer at Port Stanley. He was customs officer at New Island, in the Falklands, 1910-11, acting magistrate at South Georgia, 1911-12, and the first magistrate of the South Shetlands and Graham Land, 1912-13. He went south from the Falklands on the *Hektoria*, and, although he was magistrate, he stayed aboard the ship, as the magistrate's house at Deception island would not be built until the following season (when Arthur Bennett would be his successor). From 1914 to 1927 he was magistrate of South Georgia. In 1923, in Oslo, he married Margrethe Olaug Larsen, and they had 4 children, one of them born on South Georgia. He died in Sandar, Norway, on June 27, 1956. There is a biography, *Antarctic Magistrate: the Biography of Edward Beveridge Binnie*, written by Ian Hart, and published by Pequena Books.

Binnie Øyane *see* **Bruce Islands**

Binon Hill *see* **Bynon Hill**

Isla Bío Bío *see* **Rambler Island**

Biologenbach. 62°12' S, 59°00' W. A little stream that flows into Biologenbucht, at Bothy Bay, in the NW part of Fildes Peninsula, King George Island, in the South Shetlands. Named by the Germans.

Biologenbucht. 62°12' S, 59°00' W. A bay indenting the NW part of Fildes Peninsula, at Bothy Bay, King George Island, in the South Shetlands. Named by the Germans.

BIOMASS. Biological Investigation of Marine Antarctic Systems and Stocks. Project BIOMASS, headed by SCAR (q.v.), came about as the result of concern over the exploitation of krill in the 1970s. It began in the 1980-81 season, and in 1981 researchers in the program discovered 10 million tons of krill. Phase 1 of BIOMASS was known as FIBEX (q.v.). BIOMASS ended in 1991. It involved 15 ships from 11 countries.

Cape Birchall. 78°30' S, 164°00' W. At the N entrance of Ver-sur-Mer Inlet, in the Bay of Whales. Named in 1929 by ByrdAE 1928-30, for Frederick Birchall (*see* **Birchall Peaks**). The cape disappeared when the Bay of Whales re-configured. It appears in the 1958 NZ provisional gazetteer.

Birchall Peaks. 76°29' S, 146°20' W. A group of peaks 5 km W of Mount Iphigene, on the S side of Block Bay, in Marie Byrd Land. Discovered in 1929 by ByrdAE 1928-30, and named by Byrd for Frederick Thomas Birchall (1871-1955), member of the staff of the *New York Times*, which published the expedition's press dispatches. US-ACAN accepted the name in 1952.

Cape Bird. 77°10' S, 166°41' E. The NW extremity of Ross Island, jutting out into the Ross Sea below Mount Bird. Discovered in 1841 by Ross, and named by him for Lt. Edward J. Bird. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ provisional gazetteer.

[1]**Mount Bird**. 73°45' S, 64°53' E. An outcrop about 9.5. km long and between 2.5 and 4 km wide, and oriented in a SSW-NNE direction, with 2 peaks, about 19 km SSW of Mount Rubin, in the S part of the Prince Charles Mountains. Plotted from photographs taken by an ANARE aircraft in 1956, and named by ANCA on July 4, 1961, for Ian George Bird (b. April 6, 1938), electronics engineer at Mawson Station in 1960.

[2]**Mount Bird**. 77°17' S, 166°43' E. The smallest mountain on Ross Island, it rises to 1765 m (the New Zealanders say 1719 m), and overlooks Wohlschlag Bay and Lewis Bay, about 11 km southward of Cape Bird. It has a swelling dome with a distinct longitudinal axis toward the north, and is capped by a ridge of 3 small, dark cones, which are the only outcrops of rock to be seen from McMurdo Sound. The slope of Mount Bird toward the N is very gradual. Named by Scott during BNAE 1901-04, in association with the cape, and mapped by his crew. US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Bird, Edward Joseph. b. 1798, son of the Rev. Godfrey Bird, rector of Little Witham, Essex. He entered the Royal Navy on Sept. 9, 1812, and served as a midshipman on the *Ville de Paris* during the blockade of Brest, and on the *Albion* at the Battle of Algiers. He served on Parry's last three Arctic voyages, and was second in command of the *Endeavour* during Ross's attempt on the North Pole. He was promoted to lieutenant on Nov. 7, 1827, joined the *Galatea*, under Napier, on May 14, 1831, and from Oct. 16, 1833 until Feb. 13, 1834, served on the *Thunderer*. On April 9, 1839, he joined the *Erebus* as 1st lieutentant, for RossAE 1839-43, and during the expedition, on Aug. 16, 1941, was promoted to commander. He was promoted to captain on Oct. 4, 1843. In 1848 he and Ross went looking for John Franklin, lost in the Arctic. On Feb. 6, 1863, he was promoted to read admiral, to vice admiral on July 2, 1869, and retired as a full admiral on Dec. 11, 1875. Admiral Bird died, unmarried, at his home, The Wilderness, on Dec. 3, 1881, in Little Witham.

Bird, Frederick George "Fred." b. Dec. 29, 1927, Leominster, son of John Bird and his wife Emily Gertrude Hall. He joined FIDS in 1952, as an ionosphere physicist, and wintered-over at Port Lockroy Station in 1953 and 1954, the second year as base leader. With his Welsh accent and great sense of humor, he was the life and soul of the party, but during the 1954 winter he suffered a massive overload of administrative work and (is said to have) cracked up. After his tour he returned to Port Stanley, then on to Montevideo, where he caught the *Andes*, bound for Southampton, where he arrived on Feb. 24, 1955. He later lived in Eastbourne, Sussex, and about 2002 had his second triple bypass operation, and had lost his sight.

Bird, John Reginald "Jack." b. June 21, 1906, Hingham, Mass, but raised in Brookline, son of wealthy roofing manufacturer Reginald William Bird and his Canadian wife Violet Dean Gooderham. After Harvard (1925-29), he sailed for New Zealand, and was taken on in Dunedin as a seaman on the *City of New York* on Dec. 9, 1929, for ByrdAE 1928-30, which gave him an opportunity to study Antarctic birds. In 1935, he was on an ornithological trip to Bermuda. In the late 1930s, he married Mary, and they lived at Waveney Farm, in Framingham. In 1940 he and Mary were in Jamaica, again studying birds. He died in Jan. 1987, in Fairfax County, Va.

Bird Bluff. 76°30' S, 144°36' W. A rock bluff on the N side of the Fosdick Mountains, 4 km E of Mount Colombo, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41. Re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Cdr. (later Capt.) Charles Felix Bird, USN, meteorological officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1968.

Bird Peninsula. 77°09' S, 166°38' E. Near the mouth of McMurdo Sound, on Ross Island. Apsley Cherry-Garrard used this name during BAE 1910-13, for a feature no one has been able to find since. It may well have been used for Cape Bird (q.v.). However, it does appear in the 1958 NZ provisional gazetteer.

Bird Ridge. 66°47' S, 55°04' E. A partly ice-covered ridge, 11 km long (the Australians say about 13 km), 10 km W of Mount Storegutt, W of Edward VIII Bay, in Enderby Land. Mapped from ANARE air photos taken in 1956, 1957, and 1960. Named by ANCA for Garry Bird, who wintered-over as senior electronics technician at Mawson Station in 1961.

Bird Saddle. 77°23' S, 166°53' E. One of the 3 prominent snow saddles on Ross Island, this one runs at an elevation of about 800 m between Mount Bird and Mount Erebus. Named in association with Mount Bird, which rises to about 1800 m to the N of the saddle. US-ACAN accepted the name in 2000, and NZ-APC followed suit on Feb. 20, 2001. *See also* **Terra Nova Saddle** and **Terror Saddle**.

Birdine, George *see* **Berdine, George**

Birds. About 45 species of birds live in Antarctica, but only 3 breed exclusively on the continent — the emperor penguin, the Antarctic petrel, and the south polar skua. Antarctic birds have strong homing instincts and navigational abilities (*see also* **Banding birds**). The seabirds feed mostly on crustacea, fish, and squid. Shorebirds forage for mollusks, echinoderms, and crustaceans. Birds can live well, as there are few mammalian predators. *See also* **Fauna, Albatrosses, Arctic terns, Antarctic terns, Cormorants, Fulmars, Penguins, Penguin rookeries, Petrels,** and **Phalaropes, Pintails**, **Prions, Shags, Shearwaters, Sheathbills, and Skuas**. For the "Terror Bird" *see* **Fossils**.

Birdsend Bluff. 64°45' S, 62°33' W. A rocky bluff at the S side of the mouth of Wheatstone Glacier, on the S side of Errera Channel, on the Danco Coast, on the W coast of Graham Land. First roughly surveyed and charted in Feb. 1898, by BelgAE 1897-99. In May 1956 two Fids were camping below the bluff when a rock fell and flattened a bird outside their tent, hence their name for it. Photographed aerially by FIDASE 1956-57, and surveyed from the ground that season by Fids from Base O. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit in 1965. It appears on a 1954 Argentine chart as Mesa Negra (i.e., "black table").

Birdwell Point. 74°18' S, 128°10' W. The NW point of Dean Island, within the Getz Ice Shelf, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Keith W. Birdwell, USN, electronics technician at Byrd Station in 1969.

Biretta Peak. 73°04' S, 163°12' E. A small peak, rising to 2530 m, on the E side of Pain Mesa, in the Mesa Range of Victoria Land. So named by the Northern Party of NZGSAE 1962-63, for its resemblance to a biretta cap. NZ-APC accepted the name on June 27, 1963, and US-ACAN followed suit in 1967.

Mount Birger Bergersen *see* **Mount Bergersen**

Birger Bergersenfjellet *see* **Mount Bergersen**

Birgerhøgda. 72°05' S, 25°53' E. A peak in the W part of Mount Birgersen, in the E-central part of the Sør Rondane Mountains. Named by the Norwegians for Birger Martin Birgersen (*see* **Mount Birgersen**). The SCAR gazetteer says that the Russians call it Hrebet Kuprina, and give its coordinates as 72°04' S, 25°51' E. This is close enough to assume that they are one and the same feature.

Birkenhauer Island. 66°29' S, 110°37' E. A mainly ice-free island, off the E side of Browning Peninsula, S of Boffa Island, in the Windmill Islands. First mapped from air photos taken by OpHJ 1946-47 and OpW 1947-48. It was also photographed aerially in 1956 by both ANARE and the Russians. Named by ANCA on Oct. 23, 1962, for Henry F. Birkenhauer, Jesuit seismologist priest of John Carroll University, Cleveland, who wintered-over at Wilkes Station in 1958. US-ACAN accepted the name in 1963, The Russians call it Ostrov Golyj.

Mount Birkenmajer. 62°03' S, 58°24' W. A mountain range with a southern peak at 300 m above sea level, and a northern one at 360 m, between Piasecki Pass and Rolnicki Pass, at the Keller Peninsula, Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980, for geologist Prof. Krzysztof Birkenmajer, leader of the earth sciences group who summered-over at Arctowski Station in 1977-78, 1978-79, and 1980-81 (the last time as base leader). Mike Stansbury (q.v.) of the FIDS, based at Admiralty Bay in 1959-60, named a feature in 62°04' S, 58°26' W, as Babylon Peak, and gave it a height of 330 m. This probably refers to the southern of these two peaks. Dr. Birkenmajer was back, at Paradise Harbor, in 1984-85.

Mount Birks. 65°18' S, 62°10' W. A conspicuous, pyramid-shaped mountain rising to 1035 m (the Chileans say 1160 m), at the N side of the mouth of Crane Glacier, at the head of Exasperation Inlet, on the Oscar II Coast, on the E coast of Graham Land. For its discovery and naming *see* **Mount Alibi** (which stands 63 km to the SW).

Glaciar Birley *see* **Birley Glacier**

Birley Glacier. 65°58' S, 64°21' W. At least 16 km long, it flows W into the E extremity of Barilari Bay, on the Graham Coast, on the W coast of Graham Land. Discovered and roughly surveyed in 1909 by FrAE 1908-10, but, apparently, not named by them. Re-surveyed in 1935-36, by BGLE 1934-37, it appears on Rymill's 1938 map of tha expedition, named for Kenneth Peel Birley (1868-1941), financial supporter of BGLE. UK-APC accepted the name on Sept. 22, 1954, and US-ACAN followed suit in 1955. Photographed aerially by FIDASE in 1957. It appears on a 1962 Chilean chart as Glaciar Birley, and that was the name accepted by the 1974 Chilean gazetteer, and also by the 1991 Argentine gazetteer.

Birthday Bluffs. 78°33' S, 164°22' E. Rock bluffs, rising to 1296 m, really a series of cliffs, caused by thick lava flows, that step up the escarpment between Anniversary Bluff and Windscoop Bluff, on the S side of Mason Spur, on the Scott Coast of Victoria Land. Anne C. Wright, of the department of geoscience at the New Mexico Institute of Mining and Technology, examined the bluffs on Nov. 21, 1983, and suggested the name, it being the birthday of her father, Peter Wright. US-ACAN accepted the name on Jan. 21, 1999, and NZ-APC followed suit on Nov. 12, 1999.

Birthday Point. 71°26' S, 169°24' E. The northernmost point of a bare, precipitous promontory, forming the W boundary of Pressure Bay, between that bay and Berg Bay, on the N coast of Victoria Land. Charted by Campbell's Northern Party during BAE 1910-13, and so named by them probably for someone's birthday. However, as we do not know the actual date this feature was charted, we have no way of knowing whose birthday it was. It appears in the 1958 NZ provisional gazetteer, and US-ACAN accepted the name.

Births in Antarctica. Countless dogs were born in Antarctica, from the time dogs started going south at the turn of the 20th century. Other species of animals — pigs, sheep, chickens, cattle — have given birth in Antarctica over the centuries. On March 14, 1961, Pandora the hamster, there with OpDF, gave birth to twins at Pole Station, the first recorded birth of a hamster in Antarctica, and the first recorded birth of any species at the Pole. On Jan. 6, 1948, Antarktyk Yemil'yanovich Keshelava was born on the Russian whaler *Slava*, while that whaler was in 61°S, 14°E, during an ocean crossing toward the South Sandwich Islands. The little fellow's mother was Aleksandra Akimovna Leonova, a waitress on board. Jenny Darlington was taken off Antarctica in Oct. 1948, at the natural end of RARE 1947-48, just before giving birth. One could say, with all propriety, and perhaps some degree of accuracy, that she was the first woman to conceive in Antarctica. It was not until Jan. 7, 1978, at Esperanza Station, that the first human birth took place on the actual Antarctic continent — Emilio Marcos Palma, the fourth of five children of Chief Officer Jorge Emilio Palma of that station. The new baby weighed 7½ pounds, and was in perfect health. Juan Pablo Camacho Martínez was born at Las Estrellas, Frei Station, on Nov. 21, 1984, the first Chilean born in Antarctica. On Dec. 2, 1984, at the same place, the first girl was born in Antarctica, Gisella Éster Cortés Rojas, and, on Jan. 23, 1985, same place, Ignacio Alfonso Miranda Lagunas was born.

Bisco Bay *see* **[2]Biscoe Bay**

The *Biscoe*. A tanker owned by Rupert Trouton, which supplied the *Balaena* and fleet in Antarctic whaling waters in the 1950s.

Archipiélago Biscoe *see* **Biscoe Islands**

Bahía Biscoe *see* **[2]Biscoe Bay**

Chaîne Biscoe *see* **Biscoe Islands**

Îles Biscoe *see* **Biscoe Islands**

Islas Biscoe *see* **Biscoe Islands**

Mount Biscoe. 66°13' S, 51°22' E. A distinctive, sharp, black rock peak, rising to 700 m above sea level, and surmounting Cape Ann, 5 km N of Cape Hurley, on the coast of Enderby Land, in East Antarctica. John Biscoe discovered Cape Ann on March 16, 1831, and named it thus.

What Biscoe thought was the cape, may indeed have been the cape, but it may have been the mountain he saw, thinking it was a cape, or it may have been both. On Dec. 22, 1929 Riiser-Larsen aerially photographed the cape, and the mountain as well, during a flight from the *Norvegia*, and on Jan. 14, 1930 Mawson did the same thing, on a flight from the *Discovery*, during BANZARE 1929-31. Mawson it was who named the mountain for John Biscoe. US-ACAN accepted the name in 1947. The mountain's position was fixed by an ANARE survey party in 1957. Whatever Biscoe's original concept of this area was, the name Cape Ann has been kept, for the cape.

Presqu'île de Biscoe *see* **Biscoe Point**

Punta Biscoe *see* **Biscoe Point**

Biscoe, John. b. June 28, 1794, Enfield, Mdsx, son of Thomas Biscoe and his wife Ann Tibbs. He was baptized the following day at St. Andrew's Church. He joined the Navy in 1812, fighting against the Americans in North America and the West Indies, and progressing from midshipman to acting master. In 1814, he was on the *Moselle*, under Capt. Moberley. In 1815, after the war, he became a merchant seaman, serving as mate and master all over the world. In 1830 he went to work for Enderby Brothers, as a whaling skipper, and was sent to Antarctica on a sealing-exploring expedition (*see* **Biscoe Expedition**). In mid-1833, 3 months after returning from the expedition, he was to have commanded the *Hopefull* and the *Rose* on another Antarctic expedition, but Capt. Prior took over because of Biscoe's ill health. He continued to ply the seas, mostly in the West Indies. On Sept. 8, 1836, in London, he married Emma Crowe, a girl from Horham, Suffolk, and the following year their first child, Emily V. Biscoe, was born in Liverpool. Later that year the family moved to Sydney, from where, in 1838-39, Capt. Biscoe tried another expedition to Antarctica in search of seals. The ship *Lady Emma* met John Balleny at Campbell Island, and then continued to circumnavigate Antarctica, stopping at the South Orkneys for repairs. Their farthest south was 75°S. Biscoe's next child, William John D. Biscoe, was born in Sydney in 1838, and then the family moved again, to Hobart Town, where their next two sons, John William Biscoe and Thomas MacMichael Biscoe were born in 1839 and 1841 resp. In 1843, in abject poverty, and with Emma pregnant again, the family returned to England as passengers on the *Janet Izat*, but Capt. Biscoe died en route. When the ship stopped at Calcutta, Emma gave birth to their fourth child, James Walter Biscoe. Emma and the children were in desperate circumstances when they arrived back in London, but she soon took up with a solicitor's clerk, Henry Buttery, seven years younger than herself, and they set up house together at 2 North Street, Marylebone. In 1850 they had a child together, Emma Buttery, and a year later decided to get married, as an afterthought registering young Emma's birth at the same time. Two of Emma's children continued to live at home, Emily and James, but William was boarded at the Hospital School in Greenwich. He became a seaman, and in 1861 was lodging in London with his younger brother John. In 1867 William married Anne Elizabeth Holmes, and they moved to Grays Inn Road, Holborn, where they had a son, William, Jr., in 1868. In 1881 William Sr. was a shipkeeper on the *Zealandia*. James Walter Biscoe became a carman, married the widow Eleanor Sands in 1869, set up house in Marylebone, and then in Bethnal Green, where Eleanor died in 1881. James died in Islington, in 1889, no children. Mrs. Emma Buttery (Captain Biscoe's widow) died in 1893, in Holborn, aged 76, and her daughter, Emily, continued to live with her stepfather, Henry Buttery. Henry Buttery died in 1904, in Islington, and Emily died there too, unmarried, in 1914. Young William Biscoe (the captain's grandson) became a cooper's porter, married Hannah, and lived in Poplar, where he died in 1911. He had two daughters, Lily Rosina (b. 1893) and Eva Sarah (b. 1899), both born in Poplar. Lily married Claude Ingram in 1927, in Poplar, and they had a son Derick W. Ingram, born in 1927. Eva married Henry Tallack in 1942, but they had no children, and she died in Redbridge, Essex, in 1994. Derick Ingram had children, so the descendants of John Biscoe live on. Interestingly, one Guy Biscoe (b. 1906, London), became president of the Royal Institution of Chartered Surveyors. He died in 1967. His obituary claimed that he was a descendant of the old captain. Guy's father was Francis Edwin Biscoe (1872-1962), whose father, in turn, was Edwin Williams Biscoe (1844-1922), scion of an old Gloucestershire family, nothing to do with old John Biscoe.

Biscoe Archipelago *see* **Biscoe Islands**

[1]**Biscoe Bay** *see* **Sulzberger Bay**

[2]**Biscoe Bay**. 64°48' S, 63°50' W. An indentation in the SW coast of Anvers Island, opening to the immediate NW of Biscoe Point, off Cape Errera, in the Palmer Archipelago, near Palmer Station. Discovered on Feb. 8, 1898, by BelgAE 1897-99, and named by de Gerlache for John Biscoe. De Gerlache figured that this was probably the actual place where Biscoe landed on Feb. 21, 1832 and proclaimed the land a British possession, thinking it to be part of the Antarctic mainland. It appears on the Belgian charts as Baie de Biscoe, Baie de Bisco, and, on English-language translations of these maps, as Biscoe Bay. On Dr. Frederick Cook's map of 1900 it appears as Bay of Biscoe. It appears as Bisco Bay on a 1946 USAAF chart. US-ACAN accepted the name Biscoe Bay in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and on a British chart of 1974. In 1955 Fids from Base N surveyed it. The South Americans had always called it Bahía Biscoe, and that is the name seen in the 1970 Argentine gazetteer, and also in the 1974 Chilean gazetteer.

Biscoe Expedition. 1830-33. Sealing and exploring expedition led by John Biscoe, working for Enderby Brothers. **July 14, 1830**: Biscoe left London, with two ships, the *Tula* and the *Lively*. He commanded the *Tula*, and Capt. Magnus Smith the *Lively*. They were on a "voyage towards the South Pole." The personnel on the two ships totaled 27 men and 2 boys. **Nov. 9, 1830**: They reached the Falklands. **Nov. 27, 1830**: They left the Falklands, with George Avery now in command of the *Lively*. **Jan. 22, 1831**: After a while in the South Sandwich Islands, they crossed the Antarctic Circle. **Jan. 29, 1831**: They reached 69°03' S, then sailed E through the pack-ice. **Feb. 24, 1831**: They sighted land, discovered the coast of Enderby Land, which Biscoe named for his employers, and also Cape Ann (for his mother). He was forced by scurvy (2 died in the Pacific) to Hobart. **May 10, 1831**: The *Tula* arrived at Hobart. **Aug. 1831**: The *Lively* came into Hobart, having lost 7 men out of 10 due to sickness. Of the remaining three (Avery, a man, and a little boy), the lad had had his hand shattered when the boat fell on it. Before arriving in Hobart, they had put in at Port Phillip in complete distress, had gone ashore to find food, and when they returned their ship had gone. Two weeks later they found it in another bay (it is not that it had moved, it was just that they had the wrong bay). Hobart was the first time the two ships had spoke each other since they parted company. **Oct. 8, 1831**: The two ships headed for NZ, and then south again. The crew of the *Lively*, at this point, were: Avery (captain), Thomas Brennan, James Darling, William Jones, William Lean, Samuel Pearce, Thomas Robinson, Francis Wrightson, Thomas Young, and John Read (boy). **Jan. 1832**: The two ships were back in Antarctica. **Feb. 3, 1832**: They reached 65°32' S. **Feb. 15, 1832**: They discovered Adelaide Island, and then the Biscoe Islands. **Feb. 21, 1832**: Biscoe annexed for England what was later to be known as Graham Land. In summary, he circumnavigated Antarctica, and discovered more land than had any other previous expedition. The *Tula* was badly damaged in the South Shetlands, so they headed back to the Falklands, where the *Lively* went down in a storm. The crew were saved. **Jan. 30, 1833**: Biscoe arrived back in London.

Biscoe Islands. 66°00' S, 66°30' W. A chain of islands and islets lying parallel to, and running at an average of 30 km from, the W coast of the Antarctic Peninsula, and extending for about 135 km N of Adelaide Island, in a NE-SW direction from the Pitt Islands to the Barcroft Islands and Matha Strait. Discovered by John Biscoe, who explored here on Feb. 17 and 18, 1832. The first references to this group are in 1833, one as Biscoe's Range, and the other as Chaîne Biscoe (i.e., the "Biscoe chain"). The name Biscoe Islands first appears on a British chart of 1839, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, but with the boundaries between the Pitt Islands and Decazes Island. It appears as such in the 1955 British gazetteer. However, in 1961, after FIDASE had photographed the group aerially in 1956-57, UK-APC redefined the boundaries as we know them today. BelgAE 1897-99 refers to them as both Îles Biscoe and Îles Bisco. An Argentine

map of 1903 has them as Archipiélago Bisco (sic), and 1908 references from the same country have them as both Archipiélago de Biscoe and Archipiélago Biscoe. The latter name was the one accepted by the Argentine gazetteer of 1970. FrAE 1903-05 charted them in Jan. 1905. On Feb. 1-2, 1909, FrAE 1908-10 roughly delineated the W side of this chain, and the results of this survey appear on the expedition's 1910 map. Maurice Bongrain's 1914 map (from that same French expedition of 1908-10) has them divided into Îles Biscoe du Nord and Îles Biscoe du Sud, the two separated by the Pendleton Strait. There is a Discovery Investigations reference to them as the Biscoe Archipelago. The Chilean gazetteer of 1974 lists them as Islas Biscoe. The principal features within the group are (alphabetically): the Adolph Islands, the Barcroft Islands, Bates Island, Bazett Island, Belding Island, the Bernal Islands, the Büdel Islands, Clements Island, Cornet Island, Decazes Island, Du Bois Island, Extension Reef, the Garde Islands, Guile Island, Hardy Rocks, the Hennessey Islands, Holmes Island, Hook Island, Horvath Island, Huddle Rocks, the Karelin Islands, Krogh Island, Lacuna Island, Laktionov Island, Lavoisier Island, Milnes Island, the Palosuo Islands, the Pitt Islands, Rabot Island, Renaud Island, Schule Island, the Symington Islands, the Trivial Islands, Vieugué Island, the Vize Islands, Watkins Island, Wittmann Island, and Woolpack Island.

Biscoe Islands Automatic Weather Station. 66°00' S, 66°13' W. Brazilian AWS in the Biscoe Islands, at an elevation of 20 m. It was removed for maintenance in Jan. 2005, and was not reinstalled, due to budget considerations.

Biscoe Point. 64°49' S, 63°49' W. A rocky promontory forming the SE side of the entrance to Biscoe Bay, immediately N of Access Point, 5.3 km NW of Cape Lancaster (the extreme S part of Anvers Island), in the Palmer Archipelago. The SW coast of Anvers Island was roughly surveyed in 1904 by FrAE 1903-05, and Charcot named a small peninsula on the SE side of Biscoe Bay as Presqu'île de Biscoe, for John Biscoe, who may have landed here in 1832. Fids from Base N re-surveyed it in 1955, and found two rocky points here. They gave the name Biscoe Point to the more prominent. UK-APC accepted this situation on Sept. 4, 1957, and US-ACAN followed suit in 1963. It appears as such on a British chart of 1958. It appears on a Chilean chart of 1962 as Punta Biscoe, and that was the name accepted by the 1974 Chilean gazetteer. In 1986 the point was designated SSSI #20.

Biscoe Wharf. 67°34' S, 68°08' W. A man-made (i.e., a person-made) wharf at Rothera Station, on Adelaide Island. Named after the (new) *John Biscoe*, the first vessel to use this wharf, in March 1991. Rather uncharacteristically (given that this is not a natural feature), UK-APC accepted the name on Dec. 2, 1993. No other country has been so bold.

Biscoe's Range *see* **Biscoe Islands**

Biscuit Depot. 77°50' S, 166°45' E. A depot, stocked mostly with biscuits (what the Americans call cookies), S of Hut Point, on Ross Island, by one of the parties during BAE 1910-13. It appears in the 1958 NZ provisional gazetteer.

Biscuit Step. 72°22' S, 168°30' E. A step-like rise in the level of Tucker Glacier above its junction with Trafalgar Glacier, in Victoria Land. It is very crevassed in its N half, but there is a good route of easy gradient through it toward its S end. NZGSAE 1957-58 went up the Tucker and left a stash of biscuits at the step, so they could use them as tucker during their return trip down the glacier, and they named the step accordingly. It appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1970. *See also* **Pemmican Step** and **Chocolate Step**.

Biser Point. 65°56' S, 65°01' W. A narrow, rocky point forming the E side of the entrance to Dimitrov Cove, on the NW coast of Velingrad Peninsula, next N of the terminus of Rusalka Glacier, 3.91 km WSW of Loqui Point, 7.7 km NW of Mount Paulcke, and 6.8 km ENE of Pripek Point, on the Graham Coast, on the W coast of Graham Land. Mapped by the British in 1971. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Biser, in southern Bulgaria.

Ozero Bisernoe *see* **Lake Bisernoye**

Lake Bisernoye. 68°31' S, 78°30' E. In the E part of Breidnes Peninsula, in the Vestfold Hills, just NE of Lake Zvezda. Photographed aerially during OpHJ 1946-47, and by the Russians in 1956 and ANARE in 1957 and 1958. Named by the Russians as Ozero Bisernoe (i.e., "lake beads"). ANCA accepted the name Lake Bisernoye.

Mount Bishop. 83°43' S, 168°42' E. A prominent mountain, rising to 3020 m, 3 km S of Ahmadjian Peak, in the Queen Alexandra Range. Named by US-ACAN in 1966, for Lt. Barry Chapman Bishop (b. Jan. 13, 1932. d. Sept. 24, 1994), USAF, an observer with ArgAE 1956-57. He served on the staff of the U.S. Antarctic Projects Officer in 1958 and 1959, and in 1962 climbed Mount Everest.

Bishop, William. Oiler and fireman on the *Eagle*, 1944-45, during the 2nd phase of Operation Tabarin.

Bishop and Clerk Islands. A group of tiny islands off Macquarie Island, and therefore not in Antarctica.

Bishop Glacier. 69°42' S, 71°27' W. Flows SW into Mozart Ice Piedmont, in the NW part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff Station in 1970-71. Named by UK-APC on June 11, 1980, for James Francis "Jim" Bishop (b. 1950), BAS glaciologist from 1972 to 1978, who, wintered-over at Fossil Bluff in 1973 and 1974, and who worked on Alexander Island. He was killed near Gilgit, in the Karakoram Range, in Pakistan, on July 14, 1980, while placing a survey marker at 15,000 feet. US-ACAN accepted the name in 2006.

Bishop Peak. 78°10' S, 162°09' E. A sharp peak rising to 3460 m, it surmounts the E end of Rampart Ridge, 13 km W of Salient Peak, in the Royal Society Range. Mapped by USGS from ground surveys and USN air photos. Named by US-ACAN in 1963, for the Bernice P. Bishop Museum, in Honolulu, which has sent many researchers to Antarctica. NZ-APC accepted the name on June 27, 1963.

Détroit de Bismarck *see* **Bismarck Strait**

Estrecho (de) Bismarck *see* **Bismarck Strait**

Estuaire de Bismarck *see* **Bismarck Strait**

Bismarck Bay *see* **Beascochea Bay**

Bismarck Estuary *see* **Bismarck Strait**

Bismarck Inlet *see* **Bismarck Strait**

Bismarck Strait. 64°51' S, 64°00' W. Between the S coast of Anvers Island and the Wauwermans Islands (the northernmost group in the Wilhelm Archipelago), with its SE limit at Cape Errera, Wiencke Island, it joins the S part of the Gerlache Strait with the exterior ocean, off the W coast of the Antarctic Peninsula. On Feb. 16, 1832, Biscoe entered it from the W, and described it as the mouth of a considerable entrance. In Jan. 1874, Dallmann's German expedition traversed it from the W, and Dallmann named it Bismarckstrasse, for the great Prussian statesman, Otto von Bismarck (1815-1898). On Bartholomew's map of 1886 it was considered to be a channel extending to the Weddell Sea. It appears on an 1894 U.S. Hydrographic Office chart as Bismarck Inlet. With its discovery that Flandres Bay is closed to the E, BelgAE 1897-99 proved that no channel to the Weddell Sea existed in this latitude, and that Dallmann was probably referring to Beascochea Bay, farther to the S. It was also thought that (what we now know as Bismarck Strait) might form the S entrance to Gerlache Strait. Edwin Swift Balch, who was one of those who proposed that theory, refers to it as Bismarck Strait, and it appears that way on a 1914 British map. On Feb. 6, 1904, FrAE 1903-05 proved correct the theory proposed by Balch and others, and showed that the Bismarck Strait is a deep inlet that does not run through to the E coast of Graham Land, as had been supposed. Charcot refers to it as Détroit de Bismarck and the Estuaire de Bismarck (which appears on a British map as Bismarck Estuary). The Argentines have been calling it Estrecho de Bismarck (or Bismark) since 1908, the spelling Bismark often being seen around this time. Lester, on his 1922 map of the British Imperial Antarctic Expedition, even spells it Bismark Straight. Bahía Bismarck, Bismarck Kanalen, Bismarck Sund, Bismarck-Stredet, and Kanal Bismarck, are all names seen pre-World War I. US-ACAN accepted the name Bismarck Strait in 1947, but with the coordinates plotted as 64°55' S, 64°05' W. UK-APC followed suit on Sept. 8, 1953. It appears that way in the 1955 British gazetteer, and also on a 1958 British chart. It was re-surveyed by RN Hydrographic Survey units between 1956 and 1958, as a result of which, on July 7, 1959, UK-APC corrected the coordinates, to 64°53' S, 63°55' W, and US-ACAN followed suit. It appears on a Chilean chart of 1947 as Estrecho Bismarck, and that was the name accepted by the Chilean gazetteer of 1974, as well as by the Argentine gazetteer of 1970. However, in the 1991 Argentine gazetteer, it appears as Estrecho de Bismarck. It appears (wrongly) on a 1957 Argentine chart as Archi-

piélago Bismarck. It was later replotted, by the Americans (in 64°51' S, 64°00' W) and by the British (in 64°51' S, 63°58' W).

Bismarckstrasse *see* **Bismarck Strait**

Bismark *see* **Bismarck**

Bisso, Pablo Hugo *see* **Órcadas Station**, 1940

Bistra Glacier. 63°00' S, 62°35' W. A glacier, 1.75 km long and 750 m wide, it drains the W slopes of Mount Foster and the N slopes of Slaveykov Peak, in the Imeon Range of Smith Island, and, flowing NW of Zavet Saddle, it enters the Drake Passage S of Garmen Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for the settlement of Bistra, in northeastern Bulgaria.

Mount Bistre. 65°03' S, 62°03' W. Rising to about 1295 m, N of Exasperation Inlet, on the N side of Evans Glacier, on the Oscar II Coast, on the E side of Graham Land. Surveyed by Fids from Base D in Nov. 1947 and again in Sept. 1955. Named by UK-APC on Sept. 4, 1957, for the bistre (a shade of dark brown) color of the mountain's steep E and S rock faces. It appears on a British chart of 1961. US-ACAN accepted the name in 1963.

BITE 1914-17 *see* **British Imperial Transantarctic Expedition**

Mount Bitgood. 76°29' S, 144°55' W. Rising to 1150 m, between Mount Lockhart and Mount Colombo, on the N side of the Fosdick Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USAS 1939-41, and re-mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for Charles D. Bitgood, geologist with the USARP party to the Fosdicks in 1967-68.

Bivouac Pass. 69°34' S, 72°53' W. At the W end of the Desko Mountains, on Rothschild Island, W of the N end of Alexander Island, in the Wilkins Channel. Following geological work done here in 1976-77, by BAS personnel from Fossil Bluff, it was named by UK-APC on June 11, 1980, for the fact that the geological field party here had to take temporary refuge in a snow hole in this pass, after their tent was blown down on Nov. 28, 1976.

Biyu Jiao. 62°11' S, 58°54' W. A cape on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Biyu Tan. 62°14' S, 58°58' W. A beach on Fildes Peninsula, King George Island, in the South Shetlands. Named by the Chinese.

Rocher Bizeux *see* **Bizeux Rock**

Bizeux Rock. 66°49' S, 141°24' E. A rocky little island, about 150 m long, about 150 m E of Manchot Island, close NE of Cape Margerie, between that cape and Cézembre Point, in the Géologie Archipelago. Charted by the French in 1950, and named by them as Rocher Bizeux, for the island in the center of the Rance Estuary in France. US-ACAN accepted the name Bizeux Rock in 1962.

Mount Bjaaland. 86°33' S, 164°14' W. A rock peak rising to 2675 m (the New Zealanders say 3261 m), one of a group of low-lying peaks barely projecting through the ice cap covering the Polar Plateau, about 40 km SW of the Nilsen Plateau, in the southeasternmost summit of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. It may or may not be the actual mountain discovered by Amundsen in 1911, and named by him as Mount Olav Bjaaland (also seen as Mount O. Bjaaland), for his companion on the Polar trek, but it is the one thus selected by modern geographers, albeit with an abbreviated name. US-ACAN accepted the name Mount Bjaaland in 1951, and NZ-APC followed suit. USGS mapped it, from ground surveys and USN air photos taken between 1960 and 1964.

Bjaaland, Olav Olavson. Last name also seen as Bjåland. b. March 5, 1873, Morgedal, Telemark, Norway. A carpenter and champion skier, he was one of the first group of men ever to reach the South Pole, as part of Amundsen's team during NorAE 1911-12. It was he who led the way up the Axel Heiberg Glacier in 1911, en route to the Pole, the man who led the final run-in to the Pole area, and the first to stand at the actual Pole point. After the expedition, he was one of the group who arrived back in London on June 29, 1912, on the *Highland Scot*, from La Plata, and from there he returned to his farm in Morgedal, and manufactured skis in a factory for which Amundsen lent him 20,000 kroner. In 1952 he lit the torch for the winter Olympics. He died at his home in Morgedal, on June 8, 1961, the last of the polarfarers (*see also* the Bibliography).

Mys Bjalokoza. 66°04' S, 114°08' E. A cape on the Budd Coast. Named by the Russians.

Bjarne Aagard Islands *see* **Aagard Islands**

Bjartodden *see* **Cape Akarui**

The *Bjerk*. Norwegian factory ship which, on Feb. 26, 1921, took Wilkins and Cope to Montevideo during the ill-fated British Imperial Antarctic Expedition.

Mount Bjerke. 71°58' S, 9°43' E. A large mountain, rising to 2840 m, it forms the S end of the Conrad Mountains, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Bjerkenuten, for Henry R. Bjerke, who wintered-over as mechanic at Norway Station in 1958 and 1959. US-ACAN accepted the name Mount Bjerke in 1970. *See also* **Gora Toreza**.

Bjerkenuten *see* **Mount Bjerke**

Bjerkø, Oscar M. Name also seen as Bjarko. Able seaman on the *Southern Cross* during BAE 1898-1900.

Bjerkø, Reidar. Norwegian gunner on the whale catcher *Bouvet II*, in Antarctic waters in 1930-31, a vessel catching for the *New Sevilla* (q.v.). It was from his deck that the coast of MacKenzie Bay, including what became known as Bjerkø Peninsula, was sketched, on Jan. 19, 1931.

Bjerkø Head *see* **Cape Darnley**

Bjerkø Peninsula. 67°50' S, 69°30' E. A prominent, broad, ice-covered peninsula, the N extremity of which is marked by Cape Darnley, and which forms the W shore of MacKenzie Bay, at the E extremity of Mac. Robertson Land, in East Antarctica. Mawson probably saw this peninsula on Dec. 26, 1929, albeit from a great distance. Norwegian whalers explored this area in Jan. and Feb. 1931, and named this feature as Bjerkøodden, for Reidar Bjerkø. US-ACAN accepted the translated name Bjerkø Peninsula in 1947, and ANCA followed suit on Oct. 22, 1968.

Bjerkøodden *see* **Bjerkø Peninsula**

Bjønnes-Hansen, Harald. b. 1886, Norway. Skipper of the *Solstreif*, in 1925.

Bjørn Spur. 71°55' S, 4°39' E. A rock spur extending northeastward from Skigarden Ridge, in the W part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Bjørnsaksa, for Bjørn Grytøyr, scientific assistant with the expedition. The name actually means "the bear trap." US-ACAN accepted the name Bjørn Spur in 1967.

Björnert Cliffs. 74°58' S, 135°09' W. A series of ice-covered cliffs which face the sea along the N side of McDonald Heights, between Hanessian Foreland and Hagey Ridge, in Marie Byrd Land, and which descend abruptly from about 800 m (which is the average elevation of the summits) to 400 m above sea level at the base. Photographed aerially by USAS 1939-41. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1975, for Rolf P. Björnert of the Office of Polar Programs, NSF, who was a station projects manager for Antarctica.

Bjørnerud, Ole Jonsson. b. 1868, Tinn, Telemark, Norway, son of Swedish immigrants John Sigurdsson Bjørnerud and his wife Kari Ingebritsson Gunnlieksrud. He was in Antarctica with Larsen in 1893, as smith on the *Jason*, and was the smith on the *Antarctic* during SwedAE 1901-04. In between expeditions, he had been on the *Stella Polaris* with the Duc D'Abruzzi, in the Arctic, where he had done much sledging.

Bjørnnutane. 74°37' S, 10°00' W. Crags in XU-fjella, in the Heimefront Range, in Maudheimvidda, in Queen Maud Land. Named by the Norwegians for two Bjørns, both students, both military intelligence leaders fighting the Nazis during World War II — Bjørn Eriksen (b. 1916), of Trondheim, and Bjørn Reinertsen (b. 1920), of Oslo, both killed.

Bjørnsaksa *see* **Bjørn Spur**

Bjørvig, Paul Johan Ludvig. b. Jan. 4, 1857, Tromsø, Norway, son of seaman Peter Olai Bjørvig and his wife Johanna Frederikka. He went to sea at 13, married Bergitta, and had several children. He was an able seaman on the *Aksel Thorsen*, in the Arctic, and went with Wellman on several unsuccessful attempts at the North Pole. Capt. Richard Vahsel drafted him as a crewman on the *Gauss* during GermAE 1901-03.

He was back in Antarctica on the *Deutschland* during GermAE 1911-12. He died in 1932.

Morro Blachet. 62°05' S, 58°08' W. A snow-covered hill about 5 km NNW of Lions Rump, on the W coast of King George Bay, King George Island, in the South Shetlands. Named by the Chileans for Lt. Santiago Blachet Villalobos, of the Chilean Air Force, part of the relief expedition to Presidente González Videla Station in 1953-54. The Argentines named it Morro Hielo ("ice hill").

Arrecife Black *see* **Sooty Rock**

Cabo Black *see* **Black Head**

Cape Black *see* **Black Crag**

Costa Black *see* **Black Coast**

[1]**Mount Black**. 85°14' S, 178°22' W. A distinctive landmark in the area, rising to about 3005 m (the New Zealanders say 2743 m), with a gentle snow-covered slope on its SW side and a steep rock face on its NW side, it forms part of the area just south of the high polar escarpment, and just W of Bennett Platform and the upper reaches of Shackleton Glacier, in the Queen Maud Mountains. Discovered by Byrd on the return leg of his flight to the Pole in Nov. 1929, and named by him for a friend of his, rags-to-riches success story Van Lear Black (1876-1930), owner of the *Baltimore Sun*, aviation enthusiast, "the richest man in Maryland," and a supporter of Byrd's first 2 expeditions. Mr. Van Lear took a "mystery plunge" off his yacht, the *Sabalo*, while off the NJ coast, and was never seen again. US-ACAN accepted the name, and NZ-APC followed suit.

[2]**Mount Black** *see* **Mount Ruth**

Black, George Hamilton "Blackie." b. July 11, 1898, Boston, son of Canadian parents, steam fitter William H. Black and his wife Catherine. During World War I he was in the U.S. Navy, and won the Navy Cross for his part in a sea battle off the coast of Ireland. He spent time as a merchant seaman, was the mechanic and supply officer on Byrd's Arctic expedition of 1926, then worked for 2 years on a rubber plantation in Liberia. He then went as mechanic and supply officer on ByrdAE 1928-30. He joined the Canadian infantry before the USA got involved in World War II, and won the British DSC for taking out a machine-gun nest at Dieppe. He also won the Silver and Bronze Stars with the U.S. Army, and later served as a sergeant in Korea. He died of lung cancer on July 28, 1965, at Fort Worth, Tex. His first wife was Emma Daves, and his second was Esther Van Luster.

Black, Henry Preston "Harry." b. April 20, 1919, Dulwich Hill, son of Henry Preston Black and his wife Cora Bullivant. In 1939 he joined the Army, but a year later switched to the RAAF. He was going to be a fighter pilot, but airsickness forced him into a welfare officer position in Papua New Guina, in 1942. He had always been with the YMCA, and after the war he rose high in their executive ranks. He was Australian officer-in-charge at Macquarie Island Station in 1957, and at Wilkes Station in 1960. At Wilkes he invented a highly effective blizzard mask, as well as a navigation system for Antarctica. He became a public relations officer, and, later, Dick Smith asked him to be the commentator on the first-ever champagne flight over Antarctica. He died in 2010.

Black, J. *see* **USEE 1838-42**

Black, John *see* **USEE 1838-42**

Black, Richard Blackburn "Dick." b. Aug. 10, 1902, Grand Forks, ND, son of railroad boilermaker George Edgar Black and his wife Mary Emeline Hogue. After the University of North Dakota, he became a civil engineer with the health service. In 1927 he went around the world on the *Rijndam*, and on Aug. 30, 1928 married Ruth Carolyn Schlaberg (whom he'd met in college; *see* **Mount Ruth**), and moved to Oakland, Calif. He was one of the shore party who wintered over, as surgeon, in 1934 during ByrdAE 1933-35. He went south on the *Bear of Oakland*, and on Jan. 22, 1934, while approching Antarctica, learned that his wife had died of a rare brain disease. In 1937 he married again, to Aviza Johnson, and was in Hawaii, in charge of preparing Howland Island for the arrival of Amelia Earhart during her round-the-world flight. It was he who monitored her last messages before she disappeared over the Pacific. As a commander, USNR, he was planning his own expedition to Antarctica in the late 1930s when President Roosevelt persuaded him to join USAS 1939-41. His wife came down independently to NZ to see him off, arriving in Auckland on the *Mariposa* on Dec. 22, and making her way to Dunedin. Black landed at Wellington on the 27th, and, after a ferry and rail trip, arrived in Dunedin (they spent New Year's Eve at the Grand Hotel there). During that expedition he was commander at East Base, and led the building of that base on Stonington Island. He led a flight on Dec. 30, 1940, which discovered the Black Coast. At Valparaíso, on his way back to the States, he took the *Aconcagua*, arriving in New York on May 5, 1941. He was recalled for active duty in Aug. 1941, and was at Pearl Harbor when the Japanese attacked. He won a bronze star at Tarawa and Saipan. After the war he worked as a Federal aeronautics official in Hawaii, and was a civilian aide in Korea during that conflict. He was acting chief of staff on OpDF from 1955 to Aug. 15, 1957, and retired from the Navy reserves in 1962, as a rear admiral. He died of cancer on Aug. 11, 1992, in Bethesda, Md., and is buried in Arlington National Cemetery.

Black, Robert. Captain of the tender *Success*, in the South Shetlands servicing the *King George* in 1821-22.

Black, Stanley Edward "Stan." b. 1933, Liverpool. He joined FIDS in 1956, as a meteorological assistant, and, after 3 months met training at Stanmore, Mdsx, left England on the *Shackleton*, in Oct. 1956, bound for Montevideo and the Falkland Islands. He wintered-over at Signy Island Station in 1957, and at Base Y in 1958. On May 27, 1958, he, Dave Statham, and Geoff Stride, set out on the trail, and were never seen again.

Black Beach *see* **Blacksand Beach**

Black Bluff. 73°17' S, 168°55' E. Black basaltic cliffs on the S face of Mount Lubbock, and the S end of Daniell Peninsula, on the Borchgrevink Coast of Victoria Land. Named by NZGSAE 1957-58, for its coloring. It appears in the 1960 NZ gazetteer.

Black Cap. 79°00' S, 161°51' E. A prominent black rock peak (the New Zealanders call it a bluff) that surmounts the NW end of Teall Island (the New Zealanders say it is on the E side of the island), just S of the mouth of Skelton Glacier. Discovered and named descriptively by the NZ party of BCTAE in Feb. 1957. It appears in the NZ gazetteer of 1958. US-ACAN accepted the name in 1965.

Black Coast. 71°45' S, 62°00' W. That portion of the E coast of Palmer Land, between Cape Boggs and Cape Mackintosh. Driscoll Island occupies a third of its area. Discovered and photographed aerially by USAS members from East Base on Dec. 30, 1940, and roughly surveyed from the ground by members of the same expedition. The most southerly point reached on the Dec. 30 flight was Wright Inlet, in 74°S, but features as far S as Bowman Peninsula are readily identifiable in the aerial photos taken. Named Richard Black Coast, for Dick Black, leader of the flight. It appears as such on a USAAF chart of 1942, as stretching between Cape Collier and about 76°30' S. On a U.S. Hydrographic Office chart of 1943 it stretches between Smith Inlet and 76°20' S, and it also appears on two USHO charts of 1947, one showing it between Hilton Inlet and Nantucket Inlet, and the other between Cape Boggs and Nantucket Inlet (the view shared by a 1953 Argentine map, on which they called it Costa Richard Black). A 1946 Argentine map had Costa Richard Black as parts of the coast extending between about 70°30' S and 76°30' S. In other words, there was no clearcut definition of what constituted the Richard Black Coast. The name Richard Black Coast was accepted by US-ACAN in 1947, and in 1947-48 the coast was surveyed by a combined FIDS-RARE team. UK-APC accepted the name Black Coast on Jan. 28, 1953, but describing parts of the coast between Cape Boggs and Cape Herdman, and, as such, it appears on a 1954 British chart. However, it appears in the 1955 British gazetteer with the limits we know today. US-ACAN accepted the shortened form, Black Coast, in 1956. It appears on a 1966 Argentine map as Costa R. Black, but in the 1970 Argentine gazetteer as Costa Richard Black, and with limits between Cape Boggs and Cape Mackintosh (i.e., the present limits). However, by 1991 the Argentines were calling it Costa Black. It appears as Costa Black in the 1974 Chilean gazetteer.

Black Crag. 71°52' S, 98°00' W. Also called Cape Black. A small, steep, cliff rock exposure at the NE end of Noville Peninsula, on Thurston Island, just S of Mulroy Island. Delineated from air photos taken by VX-6 in 1959-60. Named in 1960 by US-ACAN, for George H. Black. Originally plotted in 71°46' S, 98°06' W, it was later re-plotted.

Black Face. 77°51' S, 160°53' E. The S wall

of an E-W ridge in Arena Valley, 1.5 km S of East Beacon, in the Quartermain Mountains of Victoria Land. A prominent landmark, it is formed by a dolerite dike which rises over 300 m above the floor of the valley. Australian geologists Clifford McElroy (*see* **McElroy Glacier**) and Kerry J. Whitby (both of McElroy Bryan & Associates, of Sydney), and G. Rose [since 1974, assistant under secretary (technical) of the NSW Department of Mineral Resources, in Sydney], all worked here together in the 1980-81 summer, and NZ-APC named it for the color of the rock. US-ACAN accepted the name.

Black-faced sheathbill *see* **Sheathbills**

[1]**Black Glacier**. 62°58' S, 60°39' W. Next to the Soto Crater, it used to flow into Port Foster, on Deception Island, in the South Shetlands, but, in 1970, after the eruption, it was actively calving. An unofficial name for a glacier no longer there.

[2]**Black Glacier**. 71°40' S, 164°42' E. A broad tributary glacier marking the SE extent of the Bowers Mountains, and flowing NE into Lillie Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for University of Wisconsin geologist Robert Foster Black (b. Feb. 1, 1918, Dayton, O.), project leader for patterned ground studies for 3 consecutive summers based out of McMurdo, 1961-62, 1962-63, and 1963-64. NZ-APC accepted the name on Nov. 17, 1964. Originally plotted in 71°38' S, 164°50' E, it has since been re-plotted.

[1]**Black Head** *see* **Black Point**

[2]**Black Head**. 66°06' S, 65°37' W. A dark headland or promontory, marking the SW side of the entrance to Holtedahl Bay, on the Graham Coast, on the W coast of Graham Land. Mapped in Aug.-Sept. 1935 by BGLE 1934-37, and named descriptively by them. It appears on Rymill's 1938 map of that expedition, and also on a British chart of 1948. On some Chilean charts of 1947 it appears erroneously as Bahía Negra (i.e., "black bay"). It appears on a 1949 Argentine chart as Cabo Black Head, but on a 1953 Argentine chart as Cabo Morro Negro, and that is the version accepted by the 1970 Argentine gazetteer (it is not the best of translations. A "morro" would best describe a "knoll," whereas "promontorio" would be perfect. In the 1943 Argentine translation of the BGLE maps of 1938, it does, as a matter of fact, appear as Promontorio de Black). The name Black Head was accepted by US-ACAN in 1951, and by UK-APC on Sept. 8, 1953. It appears in the British gazetteer of 1955, and also on a 1967 British chart. It was photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957-58. It appears on a 1962 Chilean chart as Cabo Black, and that is the name accepted by the 1974 Chilean gazetteer.

Cabo Black Head *see* [2]**Black Head**

Black Hill *see* **Clark Nunatak**

Black Icefalls. 81°46' S, 157°14' E. A line of icefalls at the S margin of the Chapman Icefield, extending SW from Mount Massam to Vance Bluff, in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Alexander William Black, who wintered-over at Hallett Station in 1959, as a technician on the geomagnetic project. US-ACAN accepted the name later in 2003.

[1]**Black Island**. 65°15' S, 64°17' W. A little island, 315 m long, about 370 m SW of Skua Island, and separated from that island by Black Island Channel, it is one of the southernmost of the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named descriptively by them. It appears on Rymill's 1938 map of that expedition, and on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the British gazetteer of 1955. In the 1943 translated edition of Rymill's BGLE maps, it appears as Isla Black, but, by 1958 at least, the Argentines had translated it all the way as Isla Negra, and that is the name accepted by the 1970 Argentine gazetteer, and also by the 1974 Chilean gazetteer.

[2]**Black Island**. 78°12' S, 166°25' E. A grounded, mountainous, wedge-shaped island, embedded in the western Ross Ice Shelf, and composed largely of black volcanic rock, about 20.5 km long and the same distance wide, projecting through the ice shelf between Brown Island and White Island, with a central peak rising to 1040 m (the New Zealanders say 1109 m) and formed from high craters. A large area of low land surrounds this point, and provides the island's chief characteristic. The island is directly N of Minna Bluff, in the Ross Archipelago, and because of the protective bluff (that is, Minna Bluff), it does not get as much snow as its neighbor, White Island (which is almost completely hidden by snow)—in fact, it is almost always snow- and ice-free, and thus offers itself as a stark contrast. Discovered by Scott in 1902, during BNAE 1901-04, and named descriptively by him. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer. Originally plotted in 78°15' S, 166°29' E, it has since been re-plotted.

Black Island Channel. 65°15' S, 64°17' W. A channel, only 61 m wide, between Black Island and Skua island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Charted in 1935 by BGLE 1934-37, and named by them in association with the island. It appears on a British chart of 1947. US-ACAN accepted the name in 1950, and UK-APC followed suit on Sept. 8, 1953. It appears in the British gazetteer of 1955. It appears on a 1962 Chilean chart as Canal Isla Negra (which means the same thing), and that was the name accepted by the 1974 Chilean gazetteer.

Black Knob. 77°50' S, 166°40' E. A black rock outcrop, 300 m W of Twin Crater and Middle Crater, on Hut Point Peninsula, Ross Island. The descriptive name has been in use in reports and maps since at least 1971. US-ACAN accepted the name on June 19, 2000, and NZ-APC followed suit on Feb. 20, 2001.

Black Nunatak *see* **Black Nunataks, Mount Dedo**

Black Nunataks. 72°59' S, 74°28' E. A group of about 9 nunataks, about 18 km WSW of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken between 1956 and 1960, and named by ANCA on July 29, 1965, for Ian E. Black, from Surrey Hills, Vic., geophysicist who wintered-over at Mawson Station in 1963. US-ACAN accepted the name in 1967. In certain Russian texts the name Black Nunatak (i.e., in the singular) has been seen, but this is an error.

Black Pass. 67°40' S, 67°34' W. A pass trending NE-SW, 5 km W of Mount Arronax, on Pourquoi Pas Island, in the NE part of Marguerite Bay, off the Fallières Coast of Graham Land. BAS personnel from Base E did geological work here in 1965 and 1970, and it was named on June 11, 1980, by UK-APC, for Stan Black. US-ACAN accepted the name.

Black Peak *see* **Greaves Peak**

[1]**Black Point**. 62°29' S, 60°43' W. A point, 4 km SE of Cape Shirreff, on the N coast of Livingston Island, in the South Shetlands. Discovered by the sealers in the 1820-21 season, when it was roughly charted by Fildes as Black Head. The personnel on the *Discovery II* charted it in 1935 as Black Point, although that may have been a newer name that had been circulating for some time. It appears as such on a 1948 British chart, and that was the name accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year. It appears as such in the British gazetteer of 1955. It appears translated as Punta Negra, in the 1974 Chilean gazetteer, and that is also what the Argentines call it.

[2]**Black Point** *see* **Hannah Point**

Mount Black Prince. 71°47' S, 168°15' E. A very imposing, dark-colored, pyramidal sedimentary rock mountain, rising to anywhere between 3405 and 3456 m, from the N side of the névé of Leander Glacier, 6 km W of Mount Ajax (which is higher than the Black Prince), in the Admiralty Mountains of Victoria Land. Named by NZGSAE 1957-58, for its appearance and for the NZ cruiser, the *Black Prince* (not in Antarctic waters). NZ-APC accepted the name, and US-ACAN followed suit in 1967.

Black Pudding Peak. 76°50' S, 161°45' E. An isolated, squat, flat-topped, black mountain in the valley of Benson Glacier, 4 km NW of Mount Brøgger, in the Prince Albert Mountains of Victoria Land. Named by the NZ Northern Survey Party of BCTAE 1956-58; they used this feature as a reference point in Oct. 1957. NZ-APC accepted the name, and it appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1964.

Black Reef *see* **Sooty Rock**

[1]**Black Ridge** *see* **Blade Ridge, Hanson Ridge**

[2]**Black Ridge**. 74°24' S, 163°36' E. A prominent but narrow ridge, 11 km long, and rising to 1500 m (the New Zealanders say 1066 m), with sharp black rock peaks on it, it forms a divide between Priestley Glacier and Corner Glacier, in the Deep Freeze Range of Victoria Land. First

explored by Campbell's Northern Party during BAE 1910-13, and named descriptively by them. US-ACAN accepted the name, and it also appears in the 1958 NZ gazetteer.

Black Rock. 66°17' S, 100°44' E. A black, rocky hill, close to Dobrowolski Station, in the Bunger Hills. Named descriptively by the Poles in 1985.

Black Stump. 72°22' S, 163°48' E. A prominent but low mountain, a black peaked mass of andesitic rock, possibly the stump of an old volcano, 7.5 km SE of Monte Cassino (*see under* **M**), in the Freyberg Mountains of Oates Land, in Victoria Land. Named descriptively in 1982, by NZARP geologist, P.J. Oliver, who studied this mountain in the 1981-82 season. NZ-APC accepted the name, and US-ACAN followed suit.

Black Thumb. 68°25' S, 66°53' W. A peak, with notched and precipitous sides, rising to 1190 m (the Chileans say 1208 m), like a black thumb, between Romulus Glacier and Bertrand Ice Piedmont, and forming the S edge of Neny Fjord, just S of Marguerite Bay, in the center of the E coast of, and at the head of, Rymill Bay, 8 km SE of Morro Roca Rojo, on the Fallières Coast, on the W coast of Graham Land. Mapped in 1936-37 by BGLE 1934-37, and named descriptively by them as Black Thumb Mountain. As such, it appears on Rymill's 1938 map of the expedition. It appears on a 1947 Chilean chart with the translated name Monte Pulgar Negro. In 1948-49 Fids from Base E re-mapped it, and shortened the name to Black Thumb. It appears on an Argentine chart of 1949 as Monte Black Thumb. Despite the fact that UK-APC renamed it Black Thumb on Sept. 8, 1953, the longer name still appeared in the British gazetteer of 1955 (the Russians still use the longer name). However, in the British gazetteer of 1960 it appears with the shortened name, and that was the name accepted by US-ACAN in 1963. The 1970 Argentine gazetteer lists it as Monte Pulgar Negro, as does the 1974 Chilean gazetteer, although, today, the Chileans tend to call it Cerro Pulgar Negro (a "cerro" is a smaller "monte").

Monte Black Thumb *see* **Black Thumb**

Black Thumb Mountain *see* **Black Thumb**

Blackborow, Percy "Perce." b. April 8, 1894, Pillgwenlly, near Newport, Monmouthshire, eldest son of Bristol laborer John Edwin Colston Blackborow and his Welsh wife Annie Margaret Powell. Signing up on the *Golden Gate* bound for South America, he and his American friend Bill Bakewell found themselves stranded and without a ship in Buenos Aires, just as the *Endurance* pulled into port on its way south for BITE 1914-17. With the help of Bakewell and Wally How, Perce stowed away on the ship (*see* **Stowaways** for more details). After his discovery, he provided such sterling service on the expedition that Shackleton accorded him the honor of being the first human being ever to set foot on Elephant Island, where, in 1916, unfortunately, Perce had to have the toes of his left foot amputated because of frostbite (*see* **Amputations**). He spent 3 months in hospital in Punta Arenas, then returned to a hero's welcome in Newport. Rejected by the RN, he served out the rest of World War I in the Merchant Navy, then became a boatman in the Newport docks. He remained best friends with Bakwell and How, married Kate Kearns, and had 6 children. He died on Jan. 8, 1949 in Newport.

Mount Blackburn. 86°17' S, 147°16' W. A massive, flat-topped mountain rising to 3275 m, just E of Scott Glacier, where it surmounts the SW end of California Plateau, 16 km S of the W end of the Watson Escarpment, in the Queen Maud Mountains. Discovered by Quin Blackburn in Dec. 1934, during ByrdAE 1933-35, and named by Byrd as Mount Jessie O'Keefe. However, during USAS 1939-41, Byrd renamed it for Quin. US-ACAN accepted the name Mount Blackburn in 1947.

Blackburn, Quintus Alfred "Quin." b. June 19, 1899, Crow Wing, Minn., son of Thomas T. Blackburn, a timekeeper in a railroad shop who had come over from England in 1872, and his wife Margaret, also English, who had come over in 1890. As a teenager Quin worked in a lumber mill, then moved to Seattle with his uncle, and became a surveyor. While at Montana State College, he led the third party ever to climb the Grand Teton. He was the surveyor on ByrdAE 1928-30. Almost immediately after returning to the USA he married Kathryn Walton, on Aug. 27, 1930. He also went south on the *Bear of Oakland*, for ByrdAE 1933-35, and was one of the major members of the shore party on that expedition. In Dec. 1934 he took a sledging party the length of the Scott Glacier (Thorne Glacier, as it was known then), doing a vast amount of discovering in the process. He died on Feb. 8, 1981.

Blackburn Nunatak. 83°49' S, 66°13' W. A prominent nunatak, rising to 965 m, and marking the N extremity of the Rambo Nunataks, in the Pensacola Mountains. Surveyed from the ground first by USGS during their traverse of 1961-62, and second by the U.S. Wisconsin Traverse of 1963-64. It was photographed aerially by USN in 1964. It was mapped by USGS from all these efforts. Named by US-ACAN in 1968, for Lt. Archie B. Blackburn, USN, who wintered-over as medical officer and officer-in-charge of Plateau Station in 1967. UK-APC accepted the name on Nov. 3, 1971. It appears in the British gazetteer of 1974.

Blackend Nunatak. 79°54' S, 155°00' E. A prominent nunatak with sheer black cliffs (especially on the S side), rising to 2553 m above sea level, at the top of the S arm of Darwin Glacier, in the Transantarctic Mountains. Discovered in Dec. 1957 by the Darwin Glacier Party of BCTAE 1956-58, and named descriptively by them. ANCA accepted the name on Oct. 11, 1960, and is the only national naming body that seems to recognize this name (as at 2010).

Blackface Point. 67°57' S, 65°24' W. A rocky and precipitous point, on the S side of Seligman Inlet, 5 km NW of Cape Freeman, on the Bowman Coast of Graham Land. Photographed aerially by USAS 1939-41, and mapped by FIDS in 1947-48. Surveyed by BAS in 1963-64, and named by UK-APC on Dec. 20, 1974, to describe the extremely black rock exposed at the end of the point. US-ACAN accepted the name in 1975. It appears in the British gazetteer of 1975.

Blackfish *see* **Killer whale**, **Long-finned pilot whale**

Blackhead Rock *see* **Blackrock Head**

Blackie, Andrew. b. May 20, 1924, Airlie, Selkirk, Scotland. Meteorologist, glaciologist, seismologist, and geomagnetician on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition. He wintered-over at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Carnarvon Castle*, and arrived in London on Feb. 27, 1959. He died in 1993.

Blackie, James Robertson "Jim." He joined FIDS in 1959, as a geophysicist, and wintered-over at Halley Bay Station in 1960. On his return to the UK, he published *Analysis of Auroral Observations, Halley Bay, 1960*.

Blackrock Head. 67°15' S, 58°59' E. Also called Blackhead Rock. A conspicuous black, rocky coastal outcrop on the E part of Law Promontory, 5 km NW of Tryne Point, along the NW side of Stefansson Bay, at the extreme W end of the Mawson Coast, in Mac. Robertson Land. Discovered in Feb. 1936 by personnel on the *William Scoresby*, and named descriptively by them. US-ACAN accepted the name in 1947, and ANCA followed suit on July 22, 1959.

Blackrock Ridge. 64°17' S, 56°43' W. A ridge of exposed dark rock trending WSW to ENE, 2.5 km N of Penguin Point, in the central part of Seymour Island, off the NE tip of the Antarctic Peninsula. The Argentines surveyed the area in 1978, did geological work there, and named this ridge as Filo Negro (i.e., "black ridge"). It appears as such on an Argentine map of that year. The British and Americans, jointly, contemplated a straight translation, but, in order to avoid confusion with Black Ridge (in the Deep Freeze Range), named it Blackrock Ridge instead, UK-APC on May 13, 1991, and US-ACAN later in the year.

Blacks in Antarctica. Blacks have been going to Antarctica as long as whites, although, obviously, not in the same numbers. **Jan. 1, 1773**: Without question, the first black south of 60°S was James Tobias Swilley, Captain Tobias Furneux's servant on the *Adventure*, during Cook's 2nd voyage, 1772-75. **1820-21**: The Salem Expedition had a mulatto, William Mitchell, on board the *General Knox*, and a "brown" man, George Fay. **1820-21**: Peter Harvey, on the *Hero*, during the Fanning-Pendelton Sealing Expedition. **1820-21**: William White (mulatto cook), Cyrus Treadwell (mulatto steward), Cato Tobias, Jr., and one other "colored man," all on the *Huron*. **1829-31**: James Y. Williams and Samuel G. Brown, on the *Seraph*, during the Palmer-Pendleton Expedition. **1831-33:** Enoch Smith and Charles Williams (qq.v.) spent 2 seasons sealing in the South Shetlands as crew members on the *Courier*. That same season(s) the *Charles*

Adams was in the South Shetlands, in company with the *Courier*. On board were four "colored" crewmen — Blemiah Simpson, William Church, John Williams, and Peter Peters. **1832-33**. John Andire, in the *Henrietta*, in the South Shetlands. **1834-35**: Myro Disberry, a crewman on the *Talma*, and James A. Palmer and John Saunders, on the *Pacific*. **1838-42**: There must have been black crewmen on Wilkes's USEE 1838-42, but we can't identify them, with the possible exception of James De Sauls, the cook on the *Peacock*. **1839**: François-Ferdinand Andro, a Haitian, joined FrAE 1837-40. **1856-60**: The *Tenedos* spent several seasons in Antarctic waters, with Richard J. Lemar and Henry Cook as the 2 black crew men, and several "copper colored," whatever that means. **1871-72**: The *Peru*, in the South Shetlands, had Charles Gardner as a crewman. **1872-73**: On the *Flying Fi*sh, in Antarctic waters, were four blacks — James Henry Burke and Charles H. Lawton from New Bedford, and Manuel Montaro and Antone DeBar, both originally from Cape Verde, but now living in Connecticut. **1873-74**: On the *Flying Fish*'s return to Antarctic waters, there were 3 black crew members, all from New London — Elias Barbosa, Lawrence Lopez, and Petu Lopez. That season, on the *Golden West*, was a crewman named Charles Schware, a mulatto. The skipper of the *Francis Allyn*, Robert Glass, was a mulatto. He took that vessel into Antarctic waters this season, for the first of 6 such trips throughout the 1870s. **1874-75**: On the *Golden West*'s return to Antarctic waters, Antone Pedro, Fidel Bernardo, Lebon Gomes, Kiding DeLong, John DeGras, Anicitro Gelemte, and Phillip Gomes were all black crew members, and John Gomes was "swarthy." **1877-78**: There were several blacks from the Cape Verde Islands, serving as crewmen aboard the *Charles Colgate*, in Antarctic waters — Antone Pedro Correia (aged 29), Joseph de Pena (33; described as "tawny"), Manuel de Ross (22), Julio Gomes (20), Manuel Cross (18), Joseph Roderick (24; described as "tawny"), and Louis Napoleon (aged 20). **1914-18**: During World War I, still in the days when Norwegian whalers relied on coal to move their floating whaling factories, they would stop at Cape Verde on the way south. The war had depleted crews, so the skippers were forced to do what they normally refused to do, and that was take blacks aboard ship. The blacks taken on from Cape Verde were invariably given the worst berth on board — the "black gang," a term that had nothing to do with the color of anyone's skin, but which referred to the coal. These lads (along with several Norwegian black gangers) worked day and night below decks, shoveling coal into the furnaces. There was, incidentally, a disproportionate number of black stowaways from Cape Verde. When oil replaced coal, the whalers no longer needed to go Cape Verde. **1939-41**: George Gibbs, David Taylor, and Joseph Littleton were the first blacks in modern times to go to Antarctica, on the *Bear*, during USAS 1939-41. **Jan. 14, 1940**: George Gibbs was the first man (of any color) down the ladder of the *Bear* when that vessel pulled into the Bay of Whales during USAS 1939-41. Whether Gibbs was the first black man to step onto the continent itself or not, he is certainly the first to be recorded. **1941**: Cyrus Napier was officers cook on the 2nd half of USAS 1939-41. **1944**: Ken Blair, a black from Britain, was at Port Lockroy Station between Feb. 11 and March 24, 1944, as part of Operation Tabarin. He was deemed "unfit" to winter-over, and was replaced by Johnny Blyth. **1954-55**: A cook on the *Atka*, during the United States Navy Antarctic Expedition, was 30-year-old Henry L. Smith, of Oklahoma. **1956-57**: there were at least 4 black Seabees in Antarctica during OpDF II (1956-57) — Johnnie Edwards, Thomas Blaunt, Thomas Carter, and Eugene Hardy. There were many other blacks who took part in OpDF II: Thaddeus Collins, William Wilson, Lucious Peace, Thomas Giles, James Lemes, Samuel Gooch, Ralph Kofroth, Albert Hucks, Irvin Williams, Curtis Whitten, William Hamilton, Austin Rodgers, Luke Walton, Edward Griffin, Wilbert Bentley, Pete Williams, James Hyman, Willie Porter, Charles Reed, Samuel Jarrell, Dale Truley, Willie Samuel, Joseph Whittaker, James McKissic, Bernard McGrady, Lawrence Gardner, John Sprigos, and Ignatius Martin. **1957 winter**: U.S. Weather Bureau meteorologist Robert Johns wintered-over at Byrd Station, the only black to winter-over in Antarctica during IGY. In 1960, US-ACAN named Mount Johns after him. That was a first. Since then, a black person in Antarctica is as newsworthy as a white. However, Rod Miles was probably the first American black to winter-over at Pole Station, in 1969, and two black Navy personnel wintered-over at Palmer Station that year. **1998**: South African teams were all white until 1998, but that year diesel mechanic Boasa Tladi became the first black South African to winter over at Sanae.

Blacksand Beach. 77°33' S, 166°08' E. Also called Black Beach, and Sandy Beach. A beach formed of black volcanic sand, 0.8 km northward of Flagstaff Point, on Cape Royds, on the W coast of Ross Island. Named descriptively by BAE 1907-09, who discovered it within safe walking distance of their base. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name in 1971. Note: The New Zealanders, to mention one, generally call it Black Beach, and, indeed, in the NZ gazetteer it lists Blacksand Beach, but refers the reader to Black Beach, which it then proceeds not to list.

Blackstone, Henry *see* **USEE 1838-42**

Black-throated penguin *see* **Adélie penguin**

Montes Blackwall *see* **Blackwall Mountains**

Blackwall Glacier. 86°10' S, 159°40' W. A tributary glacier, 13 km long, it flows NW from a portion of the W slope of Nilsen Plateau, along the NE side of Hansen Spur, to join Amundsen Glacier. All the rock walls surrounding this glacier are black, and the feature was descriptively named by the Ohio State University field parties here in 1963-64 and 1970-71. US-ACAN accepted the name.

Blackwall Ice Stream. 82°52' S, 35°21' W. Slightly S-shaped (i.e., like the letter "S"), about 400 km long (sic) and about 20 km wide, it descends from about 1900 m to about 730 m above sea level, where it joins Recovery Glacier between the Whichaway Nunataks and the Argentina Range. As of 2011 this was the only Antarctic feature named by the Canadians, on Nov. 9, 2000, for Hugh Blackwall Evans (q.v.). US-ACAN accepted the name in 2003.

Blackwall Mountains. 68°22' S, 66°48' W. Rising to about 1370 m, they extend in a WNW-ESE direction for 8 km, close S of Neny Fjord, on the Fallières Coast, on the W coast of Graham Land. They are bounded to the E by Remus Glacier, and to the S by Romulus Glacier, and to the W are separated from Red Rock Ridge by Safety Col. This group includes Neny Matterhorn, Little Thumb, and The Spire. First roughly surveyed in 1936, by BGLE 1934-37, and named the Climbing Range. It appears with this name in an American text of 1949. The mountains were surveyed more accurately in 1948-49, by FIDS, who renamed them Blackwall Mountains for the fact that the black cliffs on the SW side of the mountains facing Rymill Bay remain snow-free all year. That name was accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. The Argentines call them Montes Blackwall.

Mount Blackwelder. 77°59' S, 161°04' E. A sharp, mainly ice-free peak rising to 2340 m, W of Vernier Valley, and 10 km N of Pivot Peak, in the N portion of the Wilkniss Mountains of Victoria Land. Mapped by USGS from ground sueveys, and USN air photos taken between 1947 and 1959. Named by US-ACAN in 1984, for Lt. Cdr. Billy G. Blackwelder (b. March 20, 1937, Cherryville, NC), who joined the U.S. Navy in March 1958, and was senior helicopter pilot with VXE-6 during OpDF 72 (i.e., 1971-72), and then again for OpDF 75 (i.e., 1974-75), OpDF 76 (i.e., 1975-76), and OpDF 77 (i.e., 1976-77). He retired from the Navy in June 1981.

Blackwelder Glacier. 77°56' S, 164°12' E. Also called Ricky Glacier. A small pocket glacier, 3 km long and 1.5 km wide, between Salmon Hill and Hobbs Glacier, in the area of Blue Glacier, in Victoria Land. Photographed aerially in 1956-57, and studied from the ground in Jan. 1958 by Troy L. Péwé, and named by him for Dr. Eliot Blackwelder (1880-1969), head of geology at Stanford, 1922-45. US-ACAN accepted the name in 1960, and NZ-APC followed suit on May 24, 1961.

Blackwell, Michael James "Mick." b. June 28, 1925, Scotland. After St. John's, Cambridge, he joined the Met Office, and from 1951 to 1955 worked at the Kew Observatory, getting his MA at Cambridge in 1954. From 1955 to 1958 he was superintendent of the observatory at Eskdalemuir, where he trained members of the British Royal Society Expedition (during the IGY period). He was seconded to FIDS in 1958, as a geophysicist, and wintered-over as senior scientific officer at Halley Bay Station in 1959. After the expedition, he and his wife Anne Helen left

Cape Town on the *Carnarvon Castle*, arriving in Southampton on March 25, 1960. He moved to Cambridge, as senior met officer. He was still alive in 2005.

Blade Ridge. 63°25' S, 57°05' W. A sharp rock ridge marked by 3 peaks, the highest rising to 575 m, and which, running SW from the head of Hope Bay, forms the NW wall of Depot Glacier, in the NE part of Trinity Peninsula. Discovered by SwedAE 1901-04. Surveyed and descriptively named by Fids from Base D in 1945. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears, by error, as Black Ridge, in the 1956 U.S. gazetteer.

Mount Blades. 77°10' S, 145°15' W. A mountain, 5 km WNW of Bailey Ridge, on the N side of Boyd Glacier, in the Ford Ranges of Marie Byrd Land. Discovered and mapped by USAS 1939-41. Named by US-ACAN in 1966, for Dusty Blades.

Blades, Jehu L. "Dusty" III. b. Feb. 5, 1925, Baltimore. Joined the Navy in 1943, and entered the Aviation Cadet Program. He was flight training throughout World War II, and in 1945 was based at Florida, followed by postings to the Far East. He married in 1946, in 1949 was in San Diego, then served in the Korean War, and in 1952 went to the Arctic on the *Burton Island*. He trained as a test pilot at Patuxent in 1953, and was then posted to France. He volunteered as a cargo helicopter pilot with VX-6, for OpDF I, and wound up as skipper of the oiler *YOG-34*, even though, when he assumed command, he was totally ignorant of what a YOG was. Cdr. Blades was back as commander of McMurdo for the winter-over of 1965. He later lived in Boulder, Col., and, in 2009, was living in a nursing home.

Blades, William Robert. b. May 23, 1923, in Boston. He joined the U.S. Navy on Nov. 30, 1940, and served in World War II. He was navigator lieutenant on OpHJ 1946-47, and also on the first four OpDF expeditions (i.e., 1955-59). On April 8, 1950, in Washington, DC, he married Meadows of Dan, Va., girl Delcie M. Rorrer. He retired from the Navy in Dec. 1969, and died on March 18, 1970.

Blades Glacier. 77°38' S, 153°00' W. Flows E from the snow-covered saddle just N of La Gorce Peak, in the Alexandra Mountains, and merges with Dalton Glacier, on the N side of Edward VII Peninsula. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for William Robert Blades.

Blåfallet. 72°00' S, 2°47' E. An icefall in the vicinity of Troll Station, in the Gjelsvik Mountains of Queen Maud Land. Named by the Norwegians on Oct. 12, 2007 ("the blue icefall").

Ozero Blagodatnoe. 67°40' S, 45°55' E. A lake at Cape Bliznetsov, in the Thala Hills of Enderby Land, about 5 km E of Molodezhnaya Station. Named by the Russians.

Isla Blaiklock *see* **Blaiklock Island**

Blaiklock, Kenneth Victor "Ken." b. Dec. 6, 1927, Palmer's Green, London, son of Harry G. Blaiklock and his wife Nellie Gurney. He was a junior surveyor with the Ordnance Survey for a year, then joined the Army, serving in Germany for 18 months with the Survey Squadron, Royal Engineers. In 1947 he volunteered for FIDS, as a surveyor, and wintered-over at Base E, on Stonington Island in 1948, the summer season of 1948-49, the winter of 1949, and the summer of 1949-50, being one of the Lost Eleven trapped on Stonington Island. He left Santos, Brazil, on the *Andes*, and arrived back in Southampton on April 16, 1950. He was involved with the Festival of Britain, managing the huskies at the Dome of Discovery, in 1951. In 1951 he sailed south again with FIDS, wintering-over at Hope Bay (Base D) in 1952, then spent the 1952-53 summer there, the 1953 winter, and the 1953-54 summer. In 1955 he was in charge of two survey parties on the *Norsel*, setting up bases on Anvers Island and Horseshoe Island. During BCTAE 1955-58 he was leader of the Advance Party of that expedition, wintering-over in 1956 at Shackleton Base, which he and his men built. He also accompanied Fuchs across the continent as dog driver and surveyor, and he spent the 1957 winter at South Ice. After the expedition, he returned to Wellington, and there took the *Rangitoto*, bound for Southampton, where he arrived on May 12, 1958. He was off again very soon, on BelgAE 1958-59, the only Englishman on the expedition (he never ate so well), surveying the Sør Rondane Mountains. He was away from base for 6 months. In 1960, back in the UK, he went to work for the hydrological department of the Middlesex County Council, he married Eileen Elliott on Feb. 12, 1962, and in 1963-64 summered over on Adelaide Island. In 1964 he went to work for Decca Survey Company, and, with their involvement with the Royal Navy, he summered-over on secondment in Antarctica in 1965-66. In 1968 he was seconded again, and surveyed the Shackleton Mountains. He was with Decca (and its successors) until 1986, when he went to work for gas and oil companies, surveying for many years in the North Sea. From 1986 to 1997 he was a consultant for companies connected with the Middle East and North West Africa. In 1994-95, 1995-96, and 1996-97, he and Bernard Stonehouse were in Antarctica for 3 successive summers involved in Project Antarctic Conservation (although Mr. Stonehouse has been going down on that project every summer since then). Mr. Blaiklock lives in Cheshire.

Blaiklock Glacier. 80°30' S, 29°50' W. A glacier, 26 km long, flowing N from Turnpike Bluff, then NW to Mount Provender and Mount Lowe, in the W part of the Shackleton Range, into the Filchner Ice Shelf. First surveyed and mapped in 1957 by BCTAE, and named for Ken Blaiklock. The name was accepted by UK-APC on Aug. 31, 1962, and by US-ACAN later that year. The British plot it in 80°35' S, 29°40' W.

Blaiklock Island. 67°33' S, 67°04' W. High, rugged, irregularly-shaped, and 14 km long, between Bigourdan Fjord and Bourgeois Fjord (it lies in the extreme N part of Bourgeois Fjord), it is separated from Pourquoi Pas Island (which lies directly to the SW) by The Narrows, and from the W coast of Graham Land by the Jones Channel (although it is actually joined to the W coast of the Antarctic Peninsula by an ice shelf), off the S coast of Arrowsmith Peninsula, on the Loubet Coast. Surveyed on its E, S, and W sides, in July-Aug. 1936, by BGLE 1934-37, who charted it as a promontory of the Antarctic Peninsula, but re-defined in 1949 by Ken Blaiklock, for whom it was named. US-ACAN accepted the new name on March 31, 1955, and US-ACAN followed suit in 1956. It appears as such on a British chart of 1957. A FIDS hut was built on the W coast of this island in March 1957, and is still in use. The island appears on a 1962 Chilean chart as Isla Blaiklock, and that is the name accepted by the 1974 Chilean gazetteer, and also by the 1991 Argentine gazetteer.

Blaiklock Island Refuge. 67°32' S, 67°12' W. Known informally as just Blaiklock. A British refuge hut built on rock, 9 m above sea level, on the NW side of Blaiklock Island, on the Loubet Coast, on the W coast of Graham Land. It was occupied from March 6, 1957, and for the rest of that 1956-57 summer, and then again in early 1958, during the 1957-58 season (i.e., it was not occupied during the winter of 1957), primarily as a satellite hut from which geology and surveying were conducted by personnel primarily from Base Y, but also from Base E and Base W. It was not used after 1958. In March 1997 personnel from Rothera Station cleaned it up and effected minor repairs, and on May 19, 1995, along with Base Y, it became Historic Site #63.

Blaiklockfjellet. 72°01' S, 24°07' E. A peak, about 8 km long, in the N part of Mount Walnum, in the north-central part of the Sør Rondane Mountains. Named by the Norwegians for Ken Blaiklock. The Russians call it Gora Chehova, and plot it in 72°03' S, 24°10' E.

Mount Blair. 72°32' S, 160°49' E. A small but conspicuous mountain, rising to 2120 m, 10 km NW of Mount Weihaupt, in the Outback Nunataks. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for Terence T. Blair, biologist at McMurdo in 1966-67.

Blair, D. b. NZ. Seaman on the *Eleanor Bolling*, Jan. 20, 1930-March 10, 1930, i.e., during the 4th and 5th voyages south during ByrdAE 1928-30.

Blair, John Hamilton. b. July 29, 1889, Scotland. On Sept. 17, 1913, he replaced Frank Fletcher as chief officer on the *Aurora*, for the 3rd and last voyage south during AAE 1911-14. He left the expedition on Feb. 28, 1914. During World War I he commanded patrol ships in the Irish Sea, becoming a submarine officer in 1915. He was later a naval commander, and retired as a captain. He went into business in Melbourne, and was a member of the Antarctic Club in England. He died on July 3, 1972, at Bedford.

Blair, James L. b. 1815, Franklin Co., Kentucky, son of Francis Preston Blair (editor of the *Washington Globe*) and his wife Elizabeth Violette Howard Gist. His elder brother was Mont-

gomery Blair (postmaster general in Abraham Lincoln's cabinet during the Civil War), and his younger brother was Frank Blair (who ran for vice president after the Civil War). A cousin of his was Gratz Brown, who also ran for vice president. About 1838 he married Mary (known as Polly), and then went off to serve as a midshipman during USEE 1838-42. He served primarily on the *Peacock,* (which he joined at Rio), but was also on the *Relief*, the *Flying Fish* (joined at Columbia River), and the *Vincennes* (joined at Honolulu). At one point he wanted to go home, but Wilkes refused his request. On another occasion, he was involved in a duel between Wilkes Henry (q.v. for details) and George Harrison. He left a journal of his time with the expedition. His eldest child, Sarah, was born while he was away. He became a farmer in Edmonson Co., on a farm between Brownsville and Mammoth Cave, in Kentucky, and had several more children, including the unfortunately epileptic daughter Judy.

Blair, Kenneth Cyril Gleeson "Ken." b. 1924, 2 North Villas, Camden, London, son of Barbadian immigrant Cyril Arthur Blair and his wife Florence Elizabeth Gleeson (actually they didn't marry until Ken was three, at which point his name changed from Kenneth Cyril Gleeson to Kenneth Cyril Gleeson Blair). He joined the Royal Navy, and in 1943, aged only 19, he was selected to be one of the very first group of what would later become the FIDS, sailing from London on the *Highland Monarch*, as one of the first 14 men of Operation Tabarin, bound for Port Stanley. As Andrew Taylor put it in his unpublished manuscript, "Another young member was K.C. Blair, who had been drawn from the Navy. He was a West Indian, from Barbados, I was told, and was dark with a fine physique. Blair had quite a talent for sketching, and was the possessor of a strong baritone voice, which he exercised with some gusto." The first modern-day British black man in Antarctica, Blair came down from Port Stanley to Port Lockroy Station, on the *Fitzroy*, as the cook, and was there between Feb. 11 and March 24, 1944. However, it was judged not fit to have him winter-over with the white boys, and he returned to Stanley on the *William Scoresby*. Within 48 hours he had been replaced by Johnny Blyth. Ken made his way to Montevideo, where he boarded the *Desirade*, and went via Freetown, Sierra Leone, to Avonmouth, England, arriving there on July 3, 1944. He is listed on the ship's manifest as a government official, aged 20, his residence being 2 North Villas, London N. It is interesting that the Scott Polar Research Instutute has no record of him. BAS Archives, however, do list "K.C. Blair" as one of their personnel for those days. After the war, he became a shipping agent in Malaya, and we pick him up coming in from Singapore, on the *Corfu*, arriving in England on Sept. 1, 1953. He continued to live at North Villas until 1969, when he moved to Flat 1, 278 Archway Road, Highgate. He was still there in 1984, but later moved and was still alive in 2005. His mother died in 1978, and his father in 1986.

Blair Bay. 69°24' S, 76°07' E. West of Donovan Promontory, on Stornes Peninsula, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988, for Jim Blair (*see* **Blair Peak**), who was a member of an ANARE party that landed by motor launch in the Larsemann Hills in Feb. 1958. The Chinese call it Taiping Wan.

Blair Glacier. 66°45' S, 124°32' E. Flows N into the Voyeykov Ice Shelf, on the W corner of Maury Bay, on the Banzare Coast of Wilkes Land. Delineated from air photos taken by OpHJ 1946-47, and named by US-ACAN in 1955, for James L. Blair. ANCA accepted the name on Oct. 22, 1968.

Blair Islands. 66°50' S, 143°10' E. A group of small islands, 6 km (the Australians say 9 km) W of Cape Gray, at the E side of the entrance to Commonwealth Bay, on George V Land. Discovered by AAE 1911-14, and named by Mawson for J.H. Blair. US-ACAN accepted the name in 1952, and ANCA followed suit.

Blair Peak. 67°48' S, 62°53' E. A sharp peak, isolated, rising to 960 m in the shape of an inverted "V," 3 km SE of Rumdoodle Peak, it is the N peak of the Central Masson Range, in the Framnes Mountains. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers. Re-mapped by ANARE between 1957 and 1960, and named by ANCA on July 22, 1959, for James "Jim" Blair (b. Feb. 3, 1916), senior diesel mechanic at Mawson Station during the winter of 1958. US-ACAN accepted the name in 1961. *See also* **Blair Bay**.

Blåisen *see* **Blåisen Valley**

Blåisen Valley. 72°32' S, 3°42' W. A small, cirque-like valley on the W side of Borg Mountain, just N of Borggarden Valley, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Blåisen (i.e., "the blue ice"). US-ACAN accepted the name Blåisen Valley in 1966.

Cape Blake. 68°26' S, 148°55' E. A rocky cape on Organ Pipe Cliffs, about 7 km WSW of Cape Wild, in George V Land. Discovered by AAE 1911-14, and named by Mawson for Leslie Russell Blake (1890-1918), English-born Australian geologist and cartographer with the Macquarie Island (not in Antarctica) party during AAE 1911-14. Mawson plotted it in 68°21' S, 148°58' E. It has since been replotted. US-ACAN accepted the name, and ANCA followed suit.

Isla Blake *see* **Blake Island**

Blake, J. On Sept. 10, 1913, he signed on to the *Aurora*, as a fireman, at £5 per month, for the third and last voyage south during AAE 1911-14. He left the expedition on Feb. 28, 1914, with a bonus of £7.

Blake, John L. *see* **USEE 1838-42**

Blake, Patrick John "Paddy." b. 1798, Bury St. Edmunds, Suffolk, but baptized in Midhurst, Sussex, on Nov. 1, 1798, 3rd son of Sir James Henry Blake, 3rd Bart., and his wife Louisa Elizabeth Gage (daughter of Gen. Thomas Gage). He joined the Royal Navy in April 1813, as a first-class volunteer on board the *Indus*, under the command of his uncle, Capt. (later Admiral) W.H. Gage, in the North Sea and Mediterranean. From 1814 he served as midshipman on the Home, West India, and South America stations, and was on the *Williams*, in 1820, when that vessel was in Antarctic waters. On July 19, 1823 he was promoted to lieutenant, and in 1824 posted on the *Tweed* to South America again. He spent the next several years on the *Warspite* and *Java*, serving as flag lieutenant to Admiral Gage, mostly on the East India station. On Jan. 15, 1830 he was promoted to commander, in 1837 was on the *Larne*, and immediately went east, where he took part in the China campaign, particularly in the attack on Chuenpee. He was promoted to captain on May 6, 1841, and returned to the UK. He commanded the *Juno* in the Pacific, 1845-49, on June 4, 1861 became a rear admiral, on April 2, 1866 a vice admiral, and made full admiral on Oct. 20, 1872, retiring in 1876. He died at his home, Thurston Cottage, in Thurston, near Bury St. Edmunds, Suffolk, on Sept. 29, 1884. He never married.

Blake, Samuel Charles Bernard "Sam." b. Aug. 20, 1923, Ireland. He joined FIDS in 1956, as a radio operator, and wintered-over at Base D in 1957 and 1958, at Fossil Bluff Station in 1962, and at Base E in 1963. A devout Catholic, he is now deceased.

[1]**Blake Island**. 63°38' S, 59°01' W. A narrow, ice-free island, 2.5 km long, in Bone Bay, along the NW coast of Trinity Peninsula, 10 km SSW of Cape Roquemaurel, on the W coast of the Antarctic Peninsula. Surveyed and charted in 1948 by Fids from Base D, and named by UK-APC on Jan. 28, 1953, as Blake Islet, for Paddy Blake. US-ACAN accepted the name later that year. It appears as such on a 1954 British chart, and in the 1955 British gazetteer. After aerial photography by FIDASE in 1956-57, it was redefined by UK-APC on July 7, 1959, as Blake Island, and US-ACAN followed suit with the renaming in 1963. It appears with the new name on a British chart of 1962. It appears as Isla Blake on a Chilean chart of 1963, and that was the name accepted by the Chilean gazetteer of 1974. There is a 1974 Argentine reference to it as Islote Laura, named after Almirante Brown's famous gunboat of 1814, but in the 1991 Argentine gazetteer it appears as Isla Blake. However, *see* **Islotes Laura**.

[2]**Blake Island** *see* **Koll Rock**

Blake Islet *see* [1]**Blake Island**

Blake Massif. 80°38' S, 158°00' E. A compact block of ridge lines with no prominent culminating summit, rising to about 1800 m, on the S side of Byrd Glacier, between the Lowry Massif to the NE and the Mandarich Massif to the SW. Named by US-ACAN in 2003, for Sir Peter Blake, environmentalist in Antarctic waters in Jan. 2001, in his vessel *Seamaster* (see **The *UAP Antarctica***). He was killed by pirates in the Amazon in Dec. 2001. NZ-APC accepted the name on Feb. 27, 2003.

Blake Nunataks. 74°10' S, 66°40' E. Also called Blake Peaks. A group of 3 low, flat-topped

nunataks running in line, in a NE-SW direction, between Wilson Bluff and Mount Maguire, near the head of the Lambert Glacier, in Mac. Robertson Land. Discovered aerially by Flying Officer John Seaton (*see* **Mount Seaton**), during a photographic flight in Nov. 1956, and named by ANCA on July 22, 1959, for John Roger Blake (known as Roger) (b. Oct. 2, 1936), aurora physicist who wintered-over at Mawson Station in 1958. US-ACAN accepted the name in 1962.

Blake Peak. 76°01' S, 143°44' W. An isolated peak on the SW side of Siemiatkowski Glacier, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for Dale G. Blake, ionosphere physicist at Byrd Station in 1964.

Blake Peaks *see* **Blake Nunataks**

Blake Rock. 85°11' S, 64°50' W. An isolated rock, rising to 1595 m, 8 km S of the S end of the Mackin Table, it is the southernmost feature of the Patuxent Range, in the Pensacola Mountains. Mapped by USGS from their own 1961-62 ground surveys, and from USN air photos taken in 1964. Named by US-ACAN in 1968, for Joseph Albert Blake, Jr., construction electrician who wintered-over at Pole Station in 1960. He retired from the Navy as a lieutenant. UK-APC accepted the name on Nov. 3, 1971.

Blakeney Point. 66°14' S, 110°35' E. The N point of Clark Peninsula, in the Windmill Islands, W of Stevenson Cove, off the Budd Coast. The area was photographed aerially in 1947, during OpHJ 1946-47, and again in 1948, during OpW 1947-48, and the feature was first roughly mapped from these photos. It was photographed again aerially by SovAE 1956, and also by ANARE in 1956 and 1962. Named by US-ACAN in 1963, for Art Arvil Blakeney (b. Nov. 18, 1925, San Angelo, Tex. d. Dec. 17, 2002, Baird, Tex.), who joined the U.S. Navy during World War II, and who was a photographer's mate on OpHJ flights in this area in 1946-47.

Blåklettane *see* **Blåklettane Hills**

Blåklettane Hills. 72°26' S, 21°30' E. A small group of hills (or nunataks), including Langekletten, Høgekletten, and Vesalkletten, about 28 km SW of Bamse Mountain, at the SW end of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers working from the air photos taken by the Americans during OpHJ 1946-47, and named by them as Blåklettane ("the blue hills"). US-ACAN accepted the name Blåklettane Hills in 1966.

Blånabbane Nunataks. 68°02' S, 63°01' E. A small group of nunataks, about 26 km E of Mount Twintop, in Mac. Robertson Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers who named it Blånabbane (i.e., "the blue nunataks"). An astrofix was obtained on one of these outcrops, by Dave Carstens (surveyor at Mawson Station), on Jan. 26, 1963, i.e., Australia Day, and consequently ANCA named this feature Anniversary Nunataks. US-ACAN accepted the name Blånabbane Nunataks in 1965.

Cerro Blanchard *see* **Blanchard Ridge**

Glaciar Blanchard *see* **Blanchard Glacier**

Mount Blanchard *see* **Blanchard Ridge**

Sommet Blanchard *see* **Blanchard Ridge**

Blanchard, John. b. 1890, Hull, son of railway carter Michael Blanchard and his wife Mary Ann Tiplady. His mother died when he was 8, and he joined the Navy. He was petty officer on the *William Scoresby*, during her first cruise to Antarctica, 1926-27. He died in Holderness, Yorks, in 1958.

Blanchard Glacier. 64°44' S, 62°05' W. Flows NW into Wilhelmina Bay between Garnerin Point and Sadler Point, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Jean-Pierre-François Blanchard (1753-1809), the first professional balloon pilot. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentine gazetteer of 1991 accepted the name Glaciar Blanchard.

Blanchard Hill. 80°26' S, 21°56' W. Rising to about 1360 m, between Mount Kelsey and Whymper Spur, in the Pioneers Escarpment, in the E part of the Shackleton Range. Photographed aerially by USN in 1967, surveyed by BAS personnel from Halley Bay Station, 1968-71, and mapped by USGS from these efforts. Named by UK-APC on Jan. 5, 1972, for Robert L. Blanchard, American inventor of a lightweight tent using a rigidly-tensioned frame erected outside the tent. US-ACAN accepted the name.

Blanchard Nunataks. 72°00' S, 64°50' W. An E-W trending group of nunataks, 26 km long, and rising to about 1500 m, which marks the S end of the Gutenko Mountains, in central Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. In association with Guthridge Nunataks and Journal Peaks, they were named by US-ACAN for Lloyd G. Blanchard of the NSF's Division of Polar Programs, and assistant editor of the *Antarctic Journal*, 1973-78. UK-APC accepted the name on Feb. 7, 1978. They appear on the 1979 USGS sketch map of the N part of Palmer Land.

Blanchard Peak *see* **Blanchard Ridge**

Blanchard Ridge. 65°12' S, 64°04' W. A rocky ridge, 520 m (the British say 535 m) above sea level, at the N side of the mouth of Wiggins Glacier, on the Graham Coast, on the W coast of Graham Land. Roughly mapped in 1909 by FrAE 1908-10, and named by Charcot as Sommet Blanchard (i.e., "Blanchard summit"), for Jean Blanchard, French consul at Punta Arenas, from 1894 (he had succeeded his late cousin, Gaston Blanchard — of the shipping company Braun & Blanchard — who had been consul since the post was established in 1888). Jean Blanchard was a shareholder in the Sociedad Ballenera de Magallanes (q.v.), and he helped Charcot's expedition. It appears on a 1943 U.S. Hydrographic Office chart as Blanchard Peak, and on an Argentine map of 1946 as Cerro Blanchard (i.e., "Blanchard hill"). US-ACAN accepted the name Blanchard Ridge in 1951, and UK-APC followed suit on July 7, 1959. It appears as such on a British chart of 1960. However, it appears on a 1956 U.S. Hydrographic Office chart as Mount Blanchard, but that was a solecism. The feature was photographed aerially by FIDASE in 1956-57.

Pointe Blanche. 66°40' S, 140°01' E. A mostly ice-covered extension, NE of Mount Cervin, on the N part of the E coast of Pétrel Island, between Chenal Buffon and Anse de la Baleinière, in the Géologie Archipelago. Named by the French in 1977.

Blancmange Hill. 64°00' S, 57°40' W. An outstanding ice-free coastal landmark, rising to 325 m, 5 km NE of Stark Point, on the E side of Croft Bay, James Ross Island. Surveyed by Fids from Base D between 1958 and 1961, and named descriptively by UK-APC on Feb. 12, 1964. US-ACAN accepted the name later that year.

Monte Blanco *see* **Mount Pendragon**

The *Bland* *see* **The *Schuyler Otis Bland***

Blank Peaks. 79°45' S, 158°45' E. A cluster of ice-free peaks occupying the isolated ridge (which, in plan, is shaped like a peninsula) which separates Bartrum Glacier from Foggydog Glacier, 11 km NE of Bastion Hill, in the Brown Hills. Discovered by VUWAE 1960-61, and named by them as Blank Peninsula, for geologist Horace Richard "Dick" Blank, Jr. (b. 1929, Eastchester, NY), American deputy leader of the expedition. US-ACAN accepted the name Blank Peaks in 1966, and ANCA followed suit on May 18, 1971.

Blank Peninsula *see* **Blank Peaks**

Blankenship Glacier. 77°59' S, 161°45' E. A steep glacier descending N between La Count Mountain and Bubble Spur, to enter the upper Ferrar Glacier, in Victoria Land. Named by US-ACAN in 1992, for Donald D. Blankenship, of the Geophysical and Polar Research Center, at the University of Wisconsin, geophysical researcher at Dome Charlie for several seasons between 1978 and 1982, and a researcher of Siple Coast ice streams between 1983 and 1988. From 1989 he was at the Byrd Polar Research Center, at Ohio state University.

Blåskimen *see* **Blåskimen Island**

Blåskimen Island. 70°25' S, 3°00' W. A high, ice-covered island, about 13 km N of Novyy Island, at the junction of the Fimbul Ice Shelf with the Jelbart Ice Shelf, on the coast of Queen Maud Land, it rises about 300 m above the general level of the ice shelf, and is surrounded by this ice, except for the N side, which borders the sea. Norwegian cartographers, working from air photos taken during NBSAE 1949-52, and from 1958-59 air photos taken during the long NorAE 1956-60, thought it was part of Novyy Island, or rather, that the two islands were one. They named this feature as Blåskimen. SovAE 1961 mapped the feature, and proved it to be 2 islands. They call this one Kupol Kruglyj. US-ACAN accepted the name Blåskimen Island in 1970. The word "blå" means "blue," but even the Norwegian naming board has been unable to tell us what "skimen" means.

Blåskimkilen. 70°25' S, 3°23' W. A channel in the ice on the W side of Blåskimen Island, 13 km N of Novyy Island, at the junction of the Fimbul Ice Shelf and the Jelbart Ice Shelf, on the Princess Martha Coast. Named by the Norwegians.

Isla Blass. 65°54' S, 65°18' W. An island, about 2.5 km long, barely separated from the SW coast of Larrouy Island by a channel between about 500 and 600 m wide, off Barilari Bay, in the Grandidier Channel (which separates the Biscoe Islands from the Graham Coast of Graham Land). Named by the Chileans for Bernardo Blass, seismologist with the Instituto Antártico Chileno, who worked here as part of ChilAE 1967-68. The Argentines call it Isla Vizcaína.

Blaszyk Moraine. 62°11' S, 58°27' W. A large moraine separating Baranowski Glacier from Sphinks Glacier, in Admiralty Bay, on King George Island, in the South Shetlands. Named by the Poles in 1980, for Janusz Blaszyk, paleontologist on PolAE 1978-79, who assembled a large collection of Tertiary plant imprints there.

Blaue, Lt. During World War II, he was one of the raiding party on the *Pinguin*, and was the one who took the *Ole Wegger* back to France.

Blauvelt, Abraham. American sealing captain, commander of the *Jane Maria*, 1821-22.

Bleclic Peaks. 75°01' S, 134°14' W. Two peaks, near the S end of the N-S trending Perry Range, in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, for John Peter Bleclic (b. July 1921, Toledo, O.), senior aerographer's mate on the *Glacier*, 1961-62. Originally plotted in 74°59' S, 134°16' W, it has since been replotted.

Bledisloe Glacier. 81°22' S, 156°21' E. Flows NW between All-Blacks Nunataks and Wallabies Nunataks, W of the Churchill Mountains. Following the rugby motif, it was named by NZ-APC on Feb. 27, 2003, for the Bledisloe Cup, which is contested between the NZ and Australian rugby teams. US-ACAN accepted the name later in 2003.

Bleikskoltane *see* **Bleikskoltane Rocks**

Bleikskoltane Rocks. 72°16' S, 27°22' E. A rocky outcrop, 11 km S of Balchen Mountain, in the SE part of the Sør Rondane Mountains. The highest point in this feature is Høgskolten. Mapped in 1957 by Norwegian cartographers working from aerial photos taken during OpHJ 1946-47, and named by them as Bleikskoltane (i.e., "the pale knolls"). US-ACAN accepted the name Bleikskoltane Rocks in 1965.

Blériot Glacier. 64°25' S, 61°10' W. Short and wide, E of Salvesen Cove, it flows N into Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Mapped by FIDS in 1960 from aerial photos taken by FIDASE in 1956-57, and from ground surveys conducted by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for the great French aviation pioneer Louis Blériot (1872-1936), who, in 1907 (and not until then) flew the first full-size powered monoplane. On July 25, 1909 he flew across the English Channel, from Calais to Dover, another first. It appears on a British chart of 1961, and US-ACAN accepted the name in 1965.

Bleset *see* **Bleset Rock**

Bleset Rock. 73°39' S, 3°57' W. A small crag, 8 km ESE of Enden Point, it surmounts the ice divide between Utråkket Valley and Belgen Valley, in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Bleset (i.e., "the blaze"). US-ACAN accepted the name Bleset Rock in 1966.

Blessing Bluff. 77°19' S, 163°03' E. A prominent rock bluff marking the E end of Staeffler Ridge, and overlooking Wilson Ice Piedmont, 11 km W of Spike Cape, in Victoria Land. Named by US-ACAN in 1976, for Cdr. George Richard Blessing, USN, officer-in-charge of McMurdo in the winter of 1973.

Anse Bleue *see* **Bleue Cove**

Île Bleue. 66°44' S, 141°12' E. An island off Port-Martin, in the Géologie Archipelago. Named by the French on Feb. 16, 2010 ("blue island").

Bleue Cove. 66°49' S, 141°24' E. Immediately E of Cape Margerie, in the Géologie Archipelago. Charted by the French in 1950, and named by them as Anse Bleue (i.e., "blue cove") because the waters are blue. US-ACAN accepted the name Bleue Cove in 1962.

Mount Blick. 81°21' S, 159°05' E. A conical peak rising to over 1400 m, on the W side of Bally Glacier, in the N extremity of the Carlson Foothills, about 14 km ESE of Pyramid Mountain, in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Graeme Hilton Blick. From 1970 to 1995, Mr. Blick worked with the Institute of Geological and Nuclear Sciences (which used to be called the NZ Geological Survey), as a geodetic surveyor in the Earth Deformation Group, and, during that time, worked in the area of Mount Erebus in 1983-84 and 1984-85. In 1995 he became a geodetic survey adviser with the office of the NZ surveyor general, and from 1998 worked closely with USGS on geodetic surveys in the Ross Sea area. US-ACAN accepted the name later in 2003.

Blind Bay. 67°31' S, 66°32' W. A small bay which forms the NE extremity and the head of Bourgeois Fjord, and which divides the Fallières Coast from the Loubet Coast, along the W coast of Graham Land. Roughly surveyed in 1936 by BGLE, it appears on Rymill's 1938 map of that expedition. Surveyed again in Nov. 1949, by Fids from Base E, who so named it because the bay was a blind alley to sledging parties. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1957. The Argentines call it Bahía Ciega (which means "blind bay," but which is not a good translation).

Blissett, Arthur Harry. Known as Harry. b. Jan. 21, 1878, Manthorpe, near Grantham, Lincs, son of police constable Reuben Blissett and his wife Annie. Reuben Blissett later ran the *Britannia Inn*, in nearby Brigg. Harry was a lance corporal in the Royal Marine Light Infantry, and living at Brigg, when he became a steward (ward room domestic) on BNAE 1901-04. He took part in Wilson's 1903 sledging party to the emperor penguin colony at Cape Crozier, and suffered severe frostbite. He was also the first man ever to find an emperor penguin's egg. On the *Discovery*'s return to Lyttelton, the lads went out looking for girls, of course. Harry found one Florence Rose Deighton, and they were duly married. The trouble was, Florence was already married, to a laborer named Alfred Smith Moleyneaux. Harry then returned to England on the *Discovery*, assuming Florence would follow. Instead, the case became public in 1906, and the Christchurch courts got involved. In 1907 Mr. Moleyneux was granted a divorce. Florence moved to Christchurch. After 16 years in the Marines, Harry moved back to Christchurch, with Florence, and became a laborer. It is reported that he later went into the prison service in Lyttelton, but if he did it was in a laboring capacity. He died in Lyttelton on Aug. 14, 1955.

Proliv Blizkij. 66°18' S, 110°29' E. A small strait off Beall Island, in the Windmill Islands. Named by the Russians.

Mys Bliznecov *see* **Bliznetsov Point**

Gory Bliznecy. 70°16' S, 65°32' E. A group of nunataks, just SW of Mount O'Shea, in the Athos Range of the Prince Charles Mountains. Named by the Russians.

Kupola Bliznecy. 70°08' S, 3°50' E. A drift tail, just NW of Proshchaniya Bay, along the coast of Queen Maud Land. Named by the Russians.

Cape Bliznetsov. 67°40' S, 45°54' E. Name also seen as Bliznetsov Point. A rock cape, on Alasheyev Bight, about 5.5 km E of Molodezhnaya Station, in the Thala Hills of Enderby Land. Photographed by ANARE in 1956, and by SovAE 1957, and named by the latter as Mys Bliznecov (i.e., "the cape of the twins," or, more specifically with astronomy in mind, "cape Gemini"). ANCA translated the name on July 31, 1972.

Bliznetsov Point *see* **Cape Bliznetsov**

The *Blizzard*. A 12-page magazine produced by Shackleton on board the *Discovery*, as an alternative to the *South Polar Times*, while they were frozen in at Hut Point for the winter of 1902. The title page showed a figure wreathed in snowflakes, holding a bottle, with the caption, "Never Mind the Blizzard, I'm All Right." It contained things like poems, and ribald caricatures by Michael Barne. Page 2 had notes, mainly editorial. Pages 4, 8, and 12 were blank. Only one edition appeared, on May 1, 1902. Everyone on the expedition got a copy (50 copies for 38 expeditioners).

Blizzard Heights. 84°37' S, 164°08' E. A high, elongate, flattish area, about 3 km long and 550 m above the surrounding snow surface in the Marshall Mountains, in the Queen Alexandra Range, 3 km NW of Blizzard Peak, from which it is separated by a broad snow col, and

in association with which it was named by the Ohio State University party here in 1966-67. NZ-APC accepted the name on June 29, 1967, but with a longitudinal coordinate of 163°53' W. US-ACAN accepted the name in 1968.

Blizzard Peak. 84°38' S, 164°08' E. Rising to 3375 m (the New Zealanders say about 3800 m), 6 km NW of Mount Marshall, it is the highest peak in the Marshall Mountains, in the Queen Alexandra Range. So named by the Northern Party of NZGSAE 1961-62, because stong SW gales in late Jan. 1962 prevented them from reaching it for several days. US-ACAN accepted the name in 1966.

Blizzards. Brief, localized snowstorms where no snow falls but the snow on the ground is swept up in the greatly turbulent katabatic winds. They appear suddenly, and the sky above is generally clear, although visibility on the ground can be zero. The temperature is low, and the winds can be 100 mph, or more.

The Blob. 73°24' S, 124°56' W. A fairly conspicuous, almost completely snow-covered, mound-shaped, knoll-like nunatak, standing midway between Thurston Glacier and Armour Inlet, on the N coast of Siple Island. First plotted by USGS from air photos taken in Jan. 1947, during OpHJ 1946-47. Named descriptively by US-ACAN in 1967 (on the air photos it looks like a blob).

Bloch Peak. 74°12' S, 163°15' E. A prominent peak, between Priestley Glacier and the W part of the Tourmaline Plateau, in the Deep Freeze Range of Victoria Land. Named by US-ACAN in 1990, for Erich Bloch, director of the National Science Foundation, 1984-90.

Mount Block. 85°46' S, 176°13' E. Rising to about 2700 m, it is the southernmost nunatak in the Grosvenor Mountains, about 9 km S of Block Peak, in the Queen Maud Mountains. Discovered by Byrd on his flight to the Pole in Nov. 1929, during ByrdAE 1928-30, and named by him as Mount Paul Block, Jr., for newspaper owner and research chemist Paul Block, Jr. (1911-1987), a patron, and son of Paul Block (*see* **Block Bay**). The name was later shortened to Mount Paul Block, and finally to Mount Block, a name accepted by both US-ACAN and NZ-APC.

Block, William Charles. b. March 22, 1937. On April 1, 1970 he joined BAS, as head of the terrestrial biology section, and worked in South Georgia and at Signy Island Station for the summers of 1971-72, 1976-77, 1977-78, 1978-79, 1979-80, 1980-81, 1981-82, 1982-83, 1983-84, 1984-85, and 1987-88, and in the Ross Dependency in 1986-87.

Block Bay. 76°15' S, 146°22' W. A long, ice-filled bay between Guest Peninsula (to the W) and the Ruppert Coast, Marie Byrd Land. Discovered in 1929 by ByrdAE 1928-30, and named by Byrd as Paul Block Bay, for Paul Block (1875-1941), newspaper publisher and patron, and father of Paul Block, Jr. (*see* **Mount Block**) and William Block (*see* **Block Peak**). US-ACAN accepted the shortened name, Block Bay, in 1966.

Block Mountain. 70°28' S, 68°52' W. A very prominent block-shaped mountain, rising to 1460 m (the British say about 1250 m), projecting E from the Douglas Range, immediately S of Transition Glacier, near the E coast of Alexander Island. Its N, E, and S sides, which are demarked by sharply defined corners, are nearly vertical, and from its NE corner a low spur connects the mountain with Tilt Rock. Photographed aerially by Ellsworth on Nov. 23, 1935, and first plotted from these photos in 1936 by U.S. cartographer W.L.G. Joerg. Photographed aerially and roughly surveyed from the ground in Oct. 1936 by BGLE 1934-37, and surveyed in more detail again in 1949 by Fids from Base E, who named it descriptively. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit that year. It is seen on a Russian chart of 1961, as Gora Blok.

Block Peak. 85°41' S, 176°13' E. A nunatak, rising to 2270 m, 6 km NW of Mauger Nunatak, 30 km SW of the head of Shackleton Glacier, and 30 km S of Mount Pratt, in the Grosvenor Mountains. Discovered by Byrd on his flight to the Pole in Nov. 1929, during ByrdAE 1928-30, and named by him as Mount William Block, for William Block (1915-2005), son of Paul Block (*see* **Block Bay**) and brother of Paul Block, Jr. (*see* **Mount Block**). That name was accepted by US-ACAN in 1947, and by NZ-APC on June 27, 1963. However, in 1966 US-ACAN accepted the shortened name, and NZ-APC followed suit.

Block Point. 62°12' S, 58°26' W. A small moraine promontory, built of large rock blocks, in front of Baranowski Glacier, Admiralty Bay, on King George Island, in the South Shetlands. Named by the Poles in 1980.

Blodget, David *see* **USEE 1838-42**

Blodgett Basin. 65°30' S, 130°00' E. Submarine feature off the Wilkes Coast. Named for U.S. cartographer Gard Blodgett (*see* **Blodgett Iceberg Tongue**).

Blodgett Iceberg Tongue. 66°05' S, 130°00' E. A large iceberg tongue extending seaward from the area of Cape Morse and Cape Carr, on the E side of Porpoise Bay, off the Wilkes Coast. Named by US-ACAN in 1966, for Gardner Dean Blodgett (b. Aug. 18, 1925, Concord, NH; always known as Gard, he later changed his name officially), cartographer with the Office of Geography, Department of the Interior, who, in 1955, working primarily from air photos taken during OpHJ 1946-47, prepared a sketch map of the coastal features of Antarctica between 84°E and 144°E. This feature was partially delineated for the first time on this map. ANCA accepted the name on Aug. 10, 1966. Originally plotted in 65°10' S, 130°12' E, it has since been replotted.

Blodwen Peak. 71°20' S, 68°22' W. A peak, rising to 914 m, and snow- and ice-free on its N slopes, just over 1.5 km WNW of Khufu Peak, and 0.6 km W of Pearce Dome, at Fossil Bluff, Alexander Island. In a 1962 BAS geology report (and in others from that time period), it was referred to as the 2nd Pyramid. Re-named by UK-APC on April 23, 1998, for one of the 3 Muskeg tractors used by BAS personnel at the nearby station in 1974. US-ACAN accepted the name.

Blohmhügel. 70°21' S, 161°05' E. A hill, just NE of Lenfant Bluff, and also NE of McCain Bluff, in the area of the mouth of Svendsen Glacier, in the Usarp Mountains of Victoria Land. Named by the Germans.

Gora Blok *see* **Block Mountain**

Blom, Axel Theodor. b. May 30, 1877, Norrköpping, Sweden. Sub lieutenant in the Swedish navy. In 1901 he was in Greenland on the trigonometrical survey expedition, and, two years later, was 1st officer and 2nd-in-command of the *Frithiof* expedition of 1903-04, sent to Antarctica to rescue the missing SwedAE 1901-04.

Mount Blood. 85°01' S, 167°30' W. At the S side of the mouth of Somero Glacier, 4 km NE of Mount Johnstone in the Queen Maud Mountains. Named by US-ACAN in 1966, for Richard H. Blood, USARP ionosphere physicist with the National Bureau of Standards, who wintered-over at Pole Station in 1965.

Mount Bloomfield. 72°59' S, 65°37' E. A low, domed, boulder-covered, dark rock outcrop, 7.5 km W of Mount Rymill, in the S part of the Prince Charles Mountains of Mac. Robertson Land. Plotted in 72°57' S, 65°36' E, from air photos taken by ANARE in 1956, and named by ANCA on July 4, 1961, for Flying Officer Ted Bloomfield, RAAF navigator with the Antarctic Flight, who wintered-over at Mawson Station in 1960. US-ACAN accepted the name in 1966. It was later replotted.

Bloor Pasage. 65°14' S, 64°15' W. Runs NE from Meek Channel, between Corner Island and Uruguay Island, in the Argentine Islands, in the Wilhelm Archipelago, off the Graham Coast of Graham Land. Named by UK-APC on July 7, 1959, for Able Seaman (later a leading seaman) Vincent Thomas Bloor (b. 1933), RN, a member of the RN Hydrographic Survey unit here in 1957-58. It appears on a British chart of 1960. US-ACAN accepted the name in 1971.

Blorenge Buttress. 76°43' S, 161°20' E. A beautiful and very prominent orange-colored pillar of Beacon sandstone, 4.5 km W of the summit of Flagship Mountain, at the W end of the Viking Hills, in the Convoy Range of Victoria Land. The pillar is flanked to the W by steep blue ice and a huge windscoop from Flight Deck Névé, and rises sheer from a large ice-free area to the N. It was mapped geologically by VUWAE 1976-77, led by Christopher J. Burgess, who named it after a similar feature overlooking Abergavenny, in Monmouthshire, Wales. NZ-APC accepted the name in 1977, just after the expedition, and US-ACAN followed suit in 1994. Blorenge is the only word that rhymes with "orange."

Blount Nunatak. 83°16' S, 51°19' W. A prominent nunatak, rising to 1630 m, 5 km SW of Mount Lechner, on the W side of the Forrestal Range, in the Pensacola Mountains. Discovered and photographed aerially on Jan. 13, 1956, on an American transcontinental nonstop flight from McMurdo Sound to the Weddell Sea and back (*see* **Operation Deep Freeze I**). Named by

US-ACAN in 1957, for Hartford E. Blount (b. Nov. 4, 1925, Jackson County, Fla., son of farmer Joshua H. Blount and his wife Johnnie. d. July 21, 2001, Marianna, Fla.), USN, VX-6 aviation machinist's mate in Antarctica during OpDF I. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer. Re-photographed aerially by USN in 1964-65, and surveyed from the ground by USGS during their Pensacola Mountains Project of 1965-66.

Mount Blowaway. 69°41' S, 158°09' E. A gneissic mountain, rising to 1320 m, and with extensive areas of exposed rock, between Matusevich Glacier and Tomilin Glacier, 20 km WNW of Governor Mountain, in the Wilson Hills of Oates Land, in Victoria Land. So named by the Northern Party of NZGSAE 1963-64 because 3 members of that party were forced by a blizzard to abandon their proposed survey and gravity station there, and, after examining the geology, had to sledge several km back to their camp in thick drifting snow. US-ACAN accepted the name in 1964, and ANCA followed suit.

Blow-Me-Down Bluff. 68°03' S, 66°40' W. A prominent rock bluff, rising to 1820 m above sea level, at the N flank of Northeast Glacier, on the Fallières Coast, on the W coast of Graham Land. Roughly surveyed in 1936 by BGLE 1934-37, again in 1940 by USAS 1939-41, and re-surveyed in 1946 and 1948 by Fids from Base E, who so named it because it stands in the windiest part of the glacier, and many FIDS sledgers have been blown down here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956.

Blubaugh Nunatak. 85°45' S, 134°06' W. A ridge-like nunatak, just S of the mouth of Kansas Glacier, where it enters Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Donald D. Blubaugh (b. Jan. 1933), construction mechanic who wintered-over at Byrd Station in 1957.

Bludau, Joseph. b. 1890, Germany. Medical doctor who in 1935 became a merchant marine surgeon working for the North German Lloyd Line on the *Elbe*, mostly plying between Seattle and Vancouver. Then he became surgeon on the *Schwabenland*, for GermAE 1938-39.

Bludauberge. 73°25' S, 3°30' W. A peak, just SE of Tverreggtelen Hill, on the Kirwan Escarpment, in Queen Maud Land. Named by the Germans for Joseph Bludau.

The *Blue Blade*. NC331N. The single-engine Fokker F-14 monoplane taken by Byrd on ByrdAE 1933-35. It crashed at Little America on March 13, 1934.

Blue Dyke. 62°13' S, 58°27' W. A promontory, some islets, and a headland, all form this feature which is located S of Bastion, in Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980. The Argentines call it Punta Cossio.

Blue Fields Camp. 77°30' S, 34°12' W. A Norwegian camp on the Luitpold Coast of Coats Land.

Blue Glacier. 77°50' S, 164°10' E. A large glacier, 30 km long and between 3 and 6 km wide, which flows into Bowers Piedmont Glacier about 16 km S of New Harbor, at McMurdo Sound, between Cape Bernacchi and Cape Chocolate, in Victoria Land. Discovered in 1903 by Armitage, during BNAE 1901-04, and named by him for its clear blue ice at the time of the discovery. US-ACAN accepted the name, and it appears in the NZ gazetteer of 1958. Originally plotted in 77°47' S, 164°00' E, it has since been re-plotted.

Blue Icefalls. 64°54' S, 62°20' W. Steep icefalls of blue ice, 6 km long, extending southwestward on the W edge of the Forbidden Plateau, S of Moser Glacier and Rudolph Glacier, and overlooking Henryk Cove (the easternmost cove of Andvord Bay), on the Danco Coast, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999. UK-APC accepted the name on Dec. 16, 2003, and US-ACAN followed suit in 2004.

Blue Lake. 77°32' S, 166°10' E. About 365 m long and 120 m wide, it is the largest of the several small frozen lakes near Cape Royds, on the W coast of Ross Island. It is actually 0.8 km NNE of Flagstaff Point, Cape Royds. Named by BAE 1907-09 for the striking blue color of the ice here. Their main base was about 1.5 km from here. It appears in the NZ gazetteer of 1958. US-ACAN accepted the name in 1968.

The *Blue Northern*. American yacht, skippered by Wayne Harden, which visited the Antarctic Peninsula in 1999-2000.

The *Blue Pearl*. Tourist vessel which could take 2 passengers. She was in Antarctic waters in 2002-03.

Blue Point. 62°11' S, 58°49' W. A rocky promotory consisting of bluish weathered lavas (hence the name given by the Poles in 1980), N of Buddington Peak, about 1.3 km NNE of Punta San Bernardo (what the Argentines call Punta Perro), and about 1.1 km WSW of Punta Valles (what the Argentines call Punta Valle), on the W coast of Collins Harbor, Maxwell Bay, in the SW part of King George Island, in the South Shetlands. The Argentines call this point Punta Becco, and the Chileans call it Punta Velásquez, for Guardián 1° clase Rudecindo Velásquez Almonacid, who was on the *Yelcho* in 1916, when Shackleton's boys were rescued from Elephant Island.

Blue whales. Order: Cetacea (whales); suborder: Mysticeti (baleen whales); family: Balaenopteridae. *Balaenoptera musculus* is the biggest animal that has ever lived on the face of the planet. Also called the sulfur-bottom whale and Sibbald's rorqual, it can grow to 110 feet (the longest ever recorded; a female) and over 100 tons, maybe even 200 (one was weighed at 190; it was 90 feet long). They are gray, but when they submerge they are definitely blue. Sleek and slender, despite their size, they are streamlined and fast swimmers. They can swim at 30 mph when alarmed, and in that state can maintain 23 mph for 10 minutes. They can dive to 360 m, but this is rare. A slit along the underbelly contains and protects the sex organs when not in use. A blue whale's testicles weigh in at 85 pounds, and measure 2 feet. Its penis is anywhere up to 10 feet and a foot thick. Perhaps because of this, the blue makes the loudest noise of any creature on Earth, and can be heard 500 miles away. Calf blues are 23 feet long at birth, and can weigh 3 tons. The blue whale lives all over the world, and while in Antarctica it follows the edge of the pack-ice looking for krill, of which it must catch 3.6 tons a day in order to survive. In the 20th century they were a prime target of whalers, 330,000 blues being slaughtered over the period 1910-66. In the 1930-31 season alone, just in Antarctica, 29,400 were reported killed (and that is just the ones reported). Almost wiped out, the blue whale has been a protected species since 1966, but despite this fact, there are only about 1500 left, and they may well become extinct.

The Bluff *see* **Minna Bluff**

Islas Bluff *see* **Buff Island**

Bluff Depot. 79°S. Used by the Ross Sea Party during BITE 1914-17. Named for its location, at Minna Bluff.

[1]**Bluff Island**. 68°33' S, 77°54' E. With a width of about 500 m, it lies 0.8 km S of Magnetic Island, 1.5 km NW of Anchorage Island, 3 km W of Breidnes Peninsula, and 3.3 km NW of Davis Station, in the Vestfold Hills, in Prydz Bay. Photographed by LCE 1936-37, and mapped (but not named) by Norwegian cartographers in 1946 from those photos. Re-mapped by ANARE in late 1957, and so named at that point of time by Phil Law, because the S end of the island is marked by a steep cliff face. ANCA accepted the name on Aug. 11, 1958, and US-ACAN folllowed suit in 1965.

[2]**Bluff Island** *see* **Buff Island**, **Murray Island**

[1]**Bluff Point** *see* **Cape Wollaston**

[2]**Bluff Point**. A high bluff on the SW side of Trinity Island, rising to over 2000 feet. This is a name no longer used.

Blumberg, Charles. Fireman on the *Bear of Oakland* during ByrdAE 1933-35.

Promontorio Blümcke *see* **Blümcke Knoll**

Blümcke Knoll. 66°50' S, 68°00' W. A small, steep-sided feature protruding through the ice to a height of about 500 m above sea level, about 17.5 km SW of Mount Vélain, in the N part of Adelaide Island. Mapped by FIDS cartographers from air photos taken by RARE 1947-48 and by FIDASE 1956-57, and from ground surveys conducted in 1958 by Fids from Base W. For a while in the second half of the 1950s, it was confused with Mount Vélain (q.v. for more details). Named by UK-APC on Sept. 23, 1960, for Adolf Blümcke (1854-1914), German glaciologist. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentine gazetteer of 1991 lists it as Promontorio Blümcke.

Lake Blundell. 69°26' S, 70°07' E. On the S side of Blundell Peak, in the Larsemann Hills. Named by ANCA on Nov. 24, 1987, in association with the peak.

Blundell, George. He joined FIDS in 1960,

as a geophysicist, and wintered-over at Halley Bay Station in 1961 and 1962.

Blundell Peak. 69°24' S, 76°06' E. A prominent rock peak, rising to about 160 m, on Stornes Peninsula, in Prydz Bay, in the Larsemann Hills. First mapped by Norwegian cartographers in 1946 from aerial photographs taken by LCE 1936-37, and plotted in 69°26' S, 76°06' E. It was occupied as a survey station by ANARE in 1968-69, and named by ANCA on Oct. 22, 1968, for Anthony A. "Tony" Blundell, radio operator-in-charge at Mawson Station in the winter of 1968, during which he assisted in the tellurometer traverse from this point to the Reinbolt Hills. He was also a member of a survey party which set out from the Larsemann Hills in 1967-68. US-ACAN accepted the name in 1971. The Chinese call it Jinggang Shan.

Blunn Island. 66°19' S, 110°26' E. A irregular-shaped island about 0.5 km NE of Cronk Island, in the Windmill Islands. Named by ANCA on April 23, 1996, for Anthony Stuart "Tony" Blunn. Between 1983 and 1987, Mr. Blunn was secretary of the department of Housing and Construction, which had responsibilty for the rebuilding of Australia's Antarctic bases. Between 1987 and 1993, he was secretary of the department of Arts, Sport, Tourism, and Territories, responsible for the Antarctic program, and he supported the Antarctic Division in the acquisition of the *Aurora Australis*, Australia's new Antartcic relief vessel.

Mount Blunt. 68°48' S, 65°48' W. A rounded, ice-covered mountain rising to 1500 m (the British say about 1700 m) from the W flank of Weyerhaeuser Glacier, S of Mercator Ice Piedmont, on the Bowman Coast, on the E side of the Antarctic Peninsula. Photographed aerially by USAS on Sept. 28, 1940. Roughly surveyed from the ground by FIDS from Base E in Dec. 1958, and again in Nov. 1960. Named by UK-APC on Aug. 31, 1962, for Edmund Blunt (1770-1862), American chart publisher, whose establishment was taken over by the U.S. government, and became the nucleus of the U.S. Hydrographic Office. US-ACAN accepted the name in 1965.

Blunt, Simon Fraser. b. Va. He entered the U.S. Navy on Sept. 7, 1831, and was passed midshipman on the *Vincennes* during USEE 1838-42, joining the expedition at Orange Harbor, and leaving sick at Honolulu in April 1841. He was promoted to lieutenant on July 28, 1842, and on Jan. 27, 1846, he married Ellen Lloyd Key, daughter of Francis Scott Key. He died on April 27, 1854, at his home in Baltimore. His widow's subsequent adventures make interesting reading.

Blunt Bay *see* **Blunt Cove**

Blunt Cove. 66°54' S, 108°48' E. A cove (the Australians call it Blunt Bay, and describe it as a small bay) in the SW extremity (i.e., at the head) of Vincennes Bay, at the E end of the Knox Coast of Wilkes Land. First mapped in 1955 by Gard Blodgett, from aerial photos taken during OpHJ 1946-47. Named by US-ACAN in 1955, for Simon Blunt.

Blustery Cliffs. 71°25' S, 67°53' E. A line of rocky cliffs, about 6 km long, on the N part of the Fisher Massif, in Mac. Robertson Land. John Manning, surveyor with the ANARE Prince Charles Mountains Survey Party in Jan. 1969, occupied a survey station on one of the cliffs at 1135 m. There is a lot of turbulence here, hence the name given by ANCA on May 18, 1971. US-ACAN accepted the name in 1973.

Blüthgen, Richard. b. Germany. A meteorologist, he left Buenos Aires in early Jan. 1914 to lead the team at Órcadas Station for the 1914 winter.

The *Blyde Bootschap*. Correctly the *Blijde Bootschap* (the "Good News"). There are two distinct reports of this Dutch ship reaching 64°S. The generally held one is that in 1599, under the command of Dirck Gerritsz (q.v.), she was blown off course and reached this far south. However, one Laurens Cless claimed to be bosun on the ship (under Gerritsz) when she reached the same spot in March 1603, after being captured by Spanish pirates. He tells of seeing much snow, but no mention is made of land. Both versions of the story are suspect. *See also* **Gerritsz, Dirck**.

Blyth, John "Johnny." b. Oct. 31, 1923, Stanley, Falkland Islands, eldest son of laborer Alexander Latto Blyth and his wife Christina Agnes Dickson Morrison. He went to school with Gordon Howkins's future wife, Olga. In 1944, while on sentry duty at Mount Low, as part of the Falkland Islands Defence Force, he heard about Operation Tabarin needing a cook. What had actually happened during that first Tabarin season (1943-44) is that Ken Blair, a black man, had been the cook at Port Lockroy from Feb. 11, scheduled to winter-over in 1944, but when the *William Scoresby* left Lockroy on March 24, 1944, to return to Stanley, Blair was aboard. Within 48 hours of the *Scoresby* arriving back at Stanley, Blyth had been interviewed as the replacement, had accepted the job, was packed and ready to go back down with the *Scoresby*, and so got to winter-over there in 1944, for the first phase of Tabarin. In Dec. 1944 he returned briefly to Stanley, but in Jan. 1945, set sail again for Base D, where he wintered-over in 1945, in July of that year becoming one of the first FIDS. He was back at Port Lockroy Station for the winter of 1948, as handyman and 2nd-in-command. On Oct. 12, 1949, back in Stanley, he married Hilary Maud McGill. Over the years he worked as a carpenter, handyman, gardener, stevedore, storeman, telephone operator, lighthouse keeper, and shepherd. In 1975 he and his family moved to England, where he worked as a security officer at Debenham's department store in Oxford. In 1977 they moved to Perth, Scotland, where he was a catering assistant at Air Service Training. They returned to the Falklands in 1979, got divorced, and Blyth put up British soldiers during the Falklands Islands War in 1982. In 1985 he married Paz Igao, a Filipino lady, and on his retirement began making model ships. He died on May 1, 1995, in Stanley, of a malignant melanoma.

Blyth Bay *see* **Blythe Bay**

Blyth Harbor *see* **Blythe Bay**

Blyth Spur. 64°03' S, 57°51' W. A high spur or ridge, composed of flow-foot breccias underlain by tuffaceous breccias, rising to 620 m, and trending ESE from Dobson Dome, on James Ross Island. Following geological work by BAS, 1985-86, it was named by UK-APC on Feb. 15, 1988, for Johnny Blyth. It appears in the 1993 British gazetteer. US-ACAN accepted the name.

Bahía Blythe *see* **Blythe Bay**, **Hero Bay**

[1]**Blythe Bay**. 62°28' S, 60°19' W. An anchorage on the SE side of Desolation Island, N of Livingston Island, in the South Shetlands. In Dec. 1820, Capt. Fildes charted it as Wood Harbour, or Port Wood (Wood being Fildes' mother's maiden name). It is also seen as Port Hood. However, later in that 1820-21 season, Fildes and other sealers were referring to it as Blyth Bay (sic), Blythe Bay, Blyth Harbor, or simply as Blyth, presumably for Blythe, William Smith's home in England. It was in this bay that Fildes anchored the *Cora* between Dec. 16, 1820 and Jan. 6, 1821 (when she was wrecked) and the *Robert*, between Dec. 8 and Dec. 15, 1821. Powell visisted the bay in the *Eliza* and the *Dove*, and charted it as Blythe Bay in 1822. Capt. Davis was here in 1821, and charted it as Blyth's Bay. The name Blythe Bay was seen on a 1901 British map. This should have been quite clear. The sealers were in no doubt as to its basic name, and certainly they knew exactly where it was. However, in the 1930s, the Discovery Investigations teams got confused, and re-applied the name Blythe Bay to the much larger bay on the N coast of Livingston Island (the bay we now know as Hero Bay). It appears thus erroneously on their 1934 chart. They anchored in the real Blythe Bay in 1934-35, and renamed it Desolation Harbour, in association with the island which it indents. It appears thus on a 1948 FIDS chart, and that was the name accepted by US-ACAN in 1953 (spelled "harbor," of course), and by UK-APC on March 31, 1955. It appears as Desolation Harbor in the 1956 American gazetteer. It appears on a 1949 Argentine chart as Puerto Desolación, and that was the name accepted by the 1970 Argentine gazetteer. Something made UK-APC re-evaluate the situation, and on July 7, 1959, they changed things back to the way they had been in the beginning, and US-ACAN followed suit in 1960. It appears with both names in the 1961 British gazetteer, but only to warn the reader. It appears as Blythe Bay on a British chart of 1962. It appears on a 1962 Chilean chart as Rada Desolación (which means roughly the same thing), and that was the name accepted by the 1974 Chilean gazetteer, and, apparently, still the name the Chileans use to this day. The Argentines, however, accepted the name Bahía Blythe in their 1991 gazetteer. To make matters worse, the town of Blythe, in Northumberland, is now spelled Blyth. The British were the latest to replot this feature, in late 2008.

[2]**Blythe Bay** *see* **Hero Bay**

Blythe Harbor *see* **Blythe Bay**

BNAE *see* **British National Antarctic Expedition**

Mont Bo *see* **Mount Boë**

Mount Bo *see* **Mount Boë**

Boat Harbour. 66°59' S, 142°39' E. A prominent inlet running S, to the W of Penguin Knob, at Cape Denison, about 50 m NW from Mawson's Main Hut (used during AAE 1911-14). Named descriptively by Mawson, it appears on official maps of the expedition. ANCA accepted the name on March 7, 1991, but no one today except the Australians use this name.

Île Bob *see* **Bob Island**

Îlot Bob *see* **Bob Island**

Isla Bob *see* **Bob Island**

Bob Bartlett Glacier *see* **Bartlett Glacier**

Bob Island. 64°56' S, 63°26' W. A rocky island, 1.5 km long and rising to an elevation of 145 m above sea level, 6.5 km ESE of Cape Errera, off the S end of Wiencke Island, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Surveyed, photographed, and roughly mapped on Feb. 9, 1898, by BelgAE 1897-99, and named by de Gerlache as Îlot Famine, because a landing party with short supplies was stranded here for a while before they could re-embark on the *Belgica*. The name is seen on some of the expedition maps, and in some of the reports, as Île Famine, Île Bob, and Îlot Bob. Frederick Cook's 1900 map of the expedition misspells it as Bab Island, and Arctowski's 1901 map (again, of the same expedition) gives it as Bob Islet. Jimmy Marr, in 1935, called it Bob Island. In 1944, Operation Tabarin personnel from Port Lockroy Station surveyed part of this area, but could not find de Gerlache's Bob Island (it was there; it's just that they didn't find it). ArgAE 1948-49 confused it with Breakwater Island. It appears on a 1953 Argentine chart as Isla Bob, but on 2 separate 1954 Argentine charts as, respectively, Isla Bayley and Isla Bailey, named after a member of ArgAE. However, it was the name Isla Bob that was accepted by the 1970 and 1991 Argentine gazetteers. Fids from the *Norsel* surveyed it in April 1955, and, although they found it to be different in shape and size from the island nominated by de Gerlache, they found that it looked a lot like the one in his photos, and so they named it Bob Islet. They also landed on it. The name Bob Islet was accepted by UK-APC on Sept. 4, 1957, and also by US-ACAN, and appears on a British chart of 1958. However, on July 7, 1959, UK-APC redefined it as Bob Island, it appeared as such on a British chart of 1959, and US-ACAN went along with that in 1963, although it does appear on a 1963 U.S. Hydrographic Office chart of 1963 as Bob Islet (they simply had not caught up yet). There is an ephemeral 1959 reference to it as Duck Island. The Argentines today call it Isla Bob. It appears on a 1962 Chilean chart as Isla Poisson, named for Capitán de corbeta Maurice Poisson Eastman (*see* **Poisson Hill**), again on a 1966 Chilean map (misspelled as Isla Poison), and that (i.e., Isla Poisson) was the name accepted by the 1974 Chilean gazetteer. Bob was de Gerlache's nephew, Robert-Frédéric de Gerlache de Goméry. *See also* **Bahía Maurice**.

Bob Islet *see* **Bob Island**

Bobby Rocks. 75°49' S, 159°11' E. A group of ice-free rocks, 6.5 km S of the Ricker Hills, in the Prince Albert Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1956 and 1962. Named by US-ACAN in 1968, for Bobby J. Davis, who wintered-over as commissaryman at Pole Station in 1966. ANCA accepted the name on Sept. 26, 1978.

Bobo Ridge. 85°51' S, 150°48' W. An isolated rock ridge, 3 km long, extending W along the N side of Albanus Glacier, and marking the SW extremity of the Tapley Mountains. First roughly mapped by ByrdAE 1933-35. Named by US-ACAN in 1967, for Robert Bobo, meteorologist who wintered-over at McMurdo in 1963. NZ-APC accepted the name on June 29, 1967.

Bob-Pi Hut. A British field hut built on Nov. 6, 1962 in the vicinity of Halley Bay Station in order to serve as a depot and staging post for expeditions into Coats Land, as well as for recreational purposes for personnel from the station.

The *Bobruyskles*. Polish B-45 timber-carrying ship, built in 1962, and owned by Sudoimport, she took part in SovAE 1970-72 (Capt. Yuriy P. Mochalov).

Skala Bobyl'. 67°22' S, 46°13' E. A rock, SW of Kirkby Head, in Enderby Land. Named by the Russians.

Boccherini Inlet. 71°50' S, 72°20' W. An ice-filled inlet, 26 km wide, indenting the S side of Beethoven Peninsula for 29 km, and forming the NE arm of the Bach Ice Shelf, on Alexander Island. First mapped in 1959-60 by Searle of the FIDS, working from air photos taken in Dec. 1947, by RARE 1947-48. He plotted it in 71°42' S, 72°00' W. Named by UK-APC on March 2, 1961, for the Italian composer, Luigi Rodolfo Boccherini (1743-1805). US-ACAN accepted the name later in 1961. It has since been replotted, working from U.S. Landsat images taken in Jan. 1973. It appears, with the corrected coordinates, in the 1977 British gazetteer.

Nunatak Bocharova. 71°58' S, 35°40' W. Named by the Russians. However, *see* **Nunatak Izmajlova** for details of this feature.

Bockel, Heinrich Mathew. b. 1908, Cape Town. From 1927 to 1930 he was steward aboard the *General Botha*, South Africa's training ship, and from 1930 to 1935 was fireman on the *Discovery II*, several times in Antarctic waters. He served in World War II.

Mount Bockheim. 78°02' S, 161°59' E. Rising to 2749 m, at the NW end of Maine Ridge, in the Royal Society Range of Victoria Land. It is bordered N and S by Tedrow Glacier and Marchant Glacier. Named by US-ACAN in 1995, for James G. Bockheim, of the department of soil science, at the University of Wisconsin, at Madison, who made soil development studies in the McMurdo Dry Valleys in 12 field seasons during the 1970s and 1980s.

Mount Boda. 68°05' S, 48°52' E. A mountain just NE of Amphitheatre Peaks, at the W end of the Nye Mountains, in Enderby Land. Plotted by Australian cartographers from air photos taken by ANARE in 1956, and named by ANCA on Nov. 24, 1961, for John Boda (b. April 6, 1924), a refugee from the Russian invasion of Hungary, and medical officer who wintered-over at Wilkes Station in 1959 and at Davis Station in 1962. US-ACAN accepted the name in 1965.

Bode, Karl-Heinz. b. 1912, Germany. In July 1931, when he was 18 he signed on to the North German Lloyd Line ship *Europa* as an electrical assistant, and that was his job for years, sailing back and forth between Bremerhaven and New York on the *Europa*, as an electrician. He did change to the *Bremen*, and it was off this ship that he walked on to the *Schwabenland*, as Number 2 electrician for GermAE 1938-39.

Bode Nunataks. 72°30' S, 75°07' E. Two nunataks, partly snow-covered, about 40 km N of Mount Harding, in the Grove Mountains of Princess Elizabeth Land. Mapped by Australian cartographers from ANARE air photos taken 1956-60, and named by ANCA on July 29, 1965, for Ortwin Bode, weather observer at Mawson Station in 1962. US-ACAN accepted the name in 1967.

Cabo Bodman *see* **Bodman Point**

Cape Bodman *see* **Bodman Point**

Kap Bodman *see* **Bodman Point**

Bodman, Gösta. b. 1875, Sweden. Hydrographer, physicist, and meteorologist on SwedAE 1901-04. He died in 1960.

Bodman Cape *see* **Bodman Point**

Bodman Point. 64°14' S, 56°48' W. A rocky point, the NW point of Seymour Island, E of James Ross Island, in the Weddell Sea. Surveyed and mapped in 1902-03, by SwedAE 1901-04, and named by Nordenskjöld as Kap Bodman, for Dr. Gösta Bodman (q.v.), a member of the sledge party along the NW coast of Seymour Island in Nov. 1902. It appears on a 1921 British chart as Cape Bodman, and again, as such, on a 1948 British chart. It appears as Bodman Cape on a 1946 USAAF chart. Re-surveyed and redefined by Fids from Base D in 1952. US-ACAN accepted the redefinition in 1956, and UK-APC followed suit on Sept. 4, 1957. The Argentine gazetteer of 1970 accepted the name Cabo Bodman. The Chileans also call it Cabo Bodman.

Ustupy Bodnarskogo. 82°10' S, 162°45' E. A ridge in Victoria Land. Named by the Russians.

Monte Bodys *see* **Mount Bodys**

Mount Bodys. 67°09' S, 67°48' W. Rising to over 1220 m, and mostly ice-covered, it is the most easterly mountain on Adelaide Island. Roughly surveyed in Jan. 1909 by FrAE 1908-10. Re-surveyed in 1948 by FIDS, and named by later Fids for Sgt. William Stuart Bodys (b. Nov. 15, 1921, Paisley, Scotland), RAF mechanic for the Norseman airplane which, in Jan.-Feb. 1950, flew from the Argentine Islands to relieve the long-suffering Fuchs party at Base E. UK-APC accepted the name on March 31, 1955, and it appears in the British gazetteer of that year. US-ACAN accepted the name in 1956. It appears as Monte Bodys in the 1991 Argentine gazetteer. In the late 1950s Sgt. Bodys was serving in Venezuela.

Mount Bodziony. 74°34' S, 111°54' W. A

bluff-type mountain with a steep W rock face, rising to over 400 m, at the N end of Hunt Bluff, Bear Peninsula, on the Walgreen Coast of Marie Byrd Land. Named by US-ACAN in 1977, for Major Ronald J. Bodziony (b. Dec. 1939), U.S. Army, terminal operations officer on OpDF 1973-76. Maj. Bodziony retired after 15 years in the Army, went into the cargo carrier business, and finally retired to Rhode Island.

Mont Boë *see* **Mount Boë**

Mount Boë. 72°35' S, 31°19' E. Also called Mount Bo, and Mont Bo, both of which are just as inaccurate as the official name. Rising to 2520 m, 1.5 km NE of Mount Victor, in the Belgica Mountains. Discovered by BelgAE 1957-58, led by Gaston de Gerlache, who named it for Capt. Sigmund Bøe, captain of the *Polarhav*, which transported the expedition. His name was actually spelled Bøe, and he was born in Norway in 1916. US-ACAN accepted the name Mount Boë in 1966, and have never looked back.

Lago Boeckella *see* **Lake Boeckella**

Lake Boeckella. 63°24' S, 57°00' W. A small lake, about 365 m long by about 180 m wide, about 550 m SE of Hope Bay, and about 1.1 km S of Seal Point, it drains N by a small stream into Eagle Cove, in the extreme NE of Trinity Peninsula, at the NE end of Graham Land. Discovered by SwedAE 1901-04, and named by them as Boeckella-See, for Boeckella, a species of crustacean found here. Surveyed by FIDS in Dec. 1945, and named by them as Lake Boeckella. UK-APC accepted that name on Nov. 21, 1949, and it appears on a British chart of 1950. US-ACAN accepted the name in 1952. It appears on a 1953 Argentine chart as Lago Boeckella, and that was the name accepted by the 1974 Chilean (sic) gazetteer. Presumably the Argentines still call it that too.

Boeckella-See *see* **Lake Boeckella**

Boeger Peak. 75°49' S, 116°06' W. Rising to 3070 m, and snow-covered, 3 km W of Richmond Peak, on the Toney Mountain massif in Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Alvin C. Boeger, chief aerographer's mate, a member of the USN Ice Reconnaissance Unit, which made several flights between NZ and Antarctica between Oct. and Dec. 1972, these flights contributing to ships' operations and routing.

Boehning, Max E. b. Feb. 22, 1901, Hillsboro, Tampa, Fla., son of newspaper typist William Henry Max Boehning (known as Max) and his wife Maria Louise Purdy. He was really a marine engineer, but was checking cargo in Panama when he was taken on (along with Lyle Womack) as a seaman on the *City of New York* during ByrdAE 1928-30. He left for NZ on the *City of New York*, on Feb. 22, 1929, and, rather than remain idle in NZ for 6 months, he and 11 others decided to hop on the *Tahiti*, bound for San Francisco, where they arrived on April 12, 1929. He went back for the 2nd half of the expedition. After the expedition, he signed on to the *Emidio*, as 3rd engineer, plying between Vancouver and San Francisco. He died on June 19, 1931, on board ship, and was buried in Tampa.

Mount Boennighausen. 75°47' S, 132°18' W. A snow-covered mountain, rising to 2970 m, 6 km SSW of Mount Kosciusko, in the Ames Range of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1974, for Lt. Cdr. Thomas L. Boennighausen, USN, officer-in-charge of the nuclear power plant at McMurdo in 1966. He was a civil engineer on the staff of the commander, U.S. Naval Support Force, Antarctica, 1969-70 and 1970-71.

Boffa Island. 66°28' S, 110°37' E. A rocky, ridge-like island, about 1.3 km long, 0.8 km E of Browning Peninsula, between Bosner Island and Birkenhauer Island, in the S part of the Windmill Islands, off the Budd Coast. First plotted from air photos taken in Jan. 1947 by OpHJ 1946-47, and in Jan. 1948, by OpW 1947-48. Named by US-ACAN in 1956, for Waldo C. Boffa (b. Aug. 6, 1916, Danbury, Conn. d. Oct. 1978, Omaha), SAC observer who assisted OpW parties in establishing astronomical control stations in the area in Jan. 1948. ANCA accepted the name on July 4, 1961.

Isla Bofill *see* **Midas Island**

Gora Bogatyr'. 70°45' S, 66°19' E. "Gora" means "mountain," "hill," or "nunatak." It does not mean "ridge." Yet, with these coordinates, Gora Bogatyr' occupies exactly the same coordinates as Allison Ridge, about 1 km W of Mount Bunt, in the Aramis Range of the Prince Charles Mountains. Named by the Russians. There is a Bogatyr' Ridge, in the Kurile Islands, in Russia, so this feature may well be the Russian name for Allison Ridge itself.

Bogbrerinden. 72°16' S, 25°25' E. A ridge, mostly covered in ice and snow, in the upper part of Langbogbreen, in the E part of the Sør Rondane Mountains. Named by the Norwegians, in association with Langbogbreen.

Bogdan Ridge. 62°30' S, 59°34' W. A conspicuous rocky ridge, rising to 440 m, and forming the NE extremity of Breznik Heights, extending 1.3 km W of Santa Cruz Point, on Greenwich Island, in the South Shetlands. Named by the Bulgarians on Nov. 4, 2005, after Bogdan Peak, the summit of Sredna Gora Mountain in central Bulgaria.

Lednik Bogdashevskogo. 74°40' S, 75°00' W. A glacier, due E of Mount Peterson and Henkle Peak, in Ellsworth Land. Named by the Russians.

Bogepynten *see* **Cape Bogepynten**

Cape Bogepynten. 67°52' S, 80°49' E. A cape, SE of Barrier Bay, in East Antarctica. Named by the Norwegians as Bogepynten. The Australians have been calling it Cape Bogepynten since at least 1959.

Bogevika. 67°52' S, 80°54' E. A cove, SE of Barrier Bay, in East Antarctica. The SCAR gazetteer says it was named by the Russians, but it is a somewhat Norwegian-sounding name.

Cabo Boggs *see* **Cape Boggs**

Cape Boggs. 70°35' S, 61°22' W. A bold, ice-covered headland marking the E extremity of Eielson Peninsula, and dividing the Wilkins Coast from the Black Coast, on the E coast of Palmer Land. Discovered by members from East Base during USAS 1939-41, and during that expedition this feature was surveyed from the ground and photographed from the air in 1940, and named by them as Cape Eielson (*see* **Eielson Peninsula**). Subsequently, it was renamed Cape Boggs, for Samuel Whittemore Boggs (1889-1954), special adviser on geography to the U.S. Department of State, who studied Antarctica. US-ACAN accepted the name in 1947. It was further surveyed by Fids from Base E, and appears on Dougie Mason's 1950 map. UK-APC accepted the name on Sept. 8, 1953. It appears on a British chart of 1954, and in the 1955 British gazetteer, with the coordinates 70°33' S, 61°23' W. By the time of the 1977 British gazetteer, the coordinates were corrected. It appears on a 1953 Argentine chart as Cabo Boggs, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. USN photographed it aerially in 1966.

Boggs Strait *see* **Stefansson Strait**

Boggs Valley. 71°55' S, 161°30' E. Heavily strewn with morainal debris, it indents the E side of the Helliwell Hills between Mount Van der Houven and Mount Alford, in Oates Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for William J. Boggs, USARP biologist at McMurdo in 1967-68. NZ-APC accepted the name in Nov. 1969.

Bogomil Cove. 62°38' S, 61°17' W. A cove, 350 m wide, indenting the W coast of Rugged Island for 760 m, off the W coast of Byers Peninsula, in the South Shetlands. One enters it 1.2 km N of Cape Benson and 2 km S of Cape Sheffield. Mapped by the British in 1968. Named by the Bulgarians on Dec. 15, 2006, for 10th-century reforming priest Pop (father) Bogomil.

Nunataki Bogorova. 80°55' S, 159°10' E. A group of nunataks just W of Skinner Saddle, E of Mount Field, in the Churchill Mountains. Named by the Russians.

Glaciar Böhnecke *see* **Böhnecke Glacier**

Böhnecke Glacier. 72°23' S, 61°25' W. A steep glacier, 5 km wide, it flows SE into the NW side of Violante Inlet, on the Black Coast, on the E coast of Palmer Land. Discovered and photographed aerially on Dec. 30, 1940 by USAS 1939-41. It appears (unnamed) on a U.S. Hydrographic Office chart of 1943. Photographed aerially again in late 1947 by RARE 1947-48, and surveyed from the ground in Nov. 1947 by the joint sledging team of RARE personnel and Fids from Base E. Named by FIDS in 1948 for Günther Karl Gustav Böhnecke (b. Sept. 5, 1896, Berlin. d. April 12, 1981, near Hamburg), German oceanographer who, while an assistant at the Institut für Meereskunde, at the University of Berlin, became a member of the German Atlantic Expedition of 1925-27, on the *Meteor*. He was director of the Observatory at Wilhelmshaven, from 1935 to 1945, and director of the German Hydrographic Institute, in

Hamburg, from 1946 to 1960. The name was accepted by UK-APC on Jan. 28, 1953, and by US-ACAN later that year. It appears in the 1955 British gazetteer, on a U.S. Hydrographic Office chart of the same year, and also on the 1979 USGS sketch map of the N part of Palmer Land. It appears on a 1966 Chilean map as Glaciar Böhnecke.

Bohner Stream. 77°42' S, 162°32' E. A meltwater stream, 3 km long, flowing N from the S end of Sollas Glacier, to Priscu Stream, in the Taylor Valley of Victoria Land. Named by US-ACAN in 1966, for Robert T. "Bob" Bohner (known as "Beez"), USN, VXE-6 helo pilot, who flew in Antarctica from 1986. From 1989 to 1991, he was liaison with the NSF, and in 1991 organized the first spring Winfly helo flights into the McMurdo Dry Valleys. He retired from the Navy in 1994, after 20 years, and became a pilot for the powerline industry in Baltimore.

Bohyo Heights. 68°08' S, 42°44' E. A small, rocky flat-topped hill, rising to 130 m above sea level, and which overlooks the coast of Queen Maud Land, 3 km ESE of Cape Hinode. Mapped by Japanese cartographers from JARE air photos taken in 1962, and from ground surveys conducted by JARE in 1972 and 1973, and named by them on Nov. 22, 1973, as Bohyo-dai (i.e., "ice view heights"). US-ACAN accepted the name Bohyo Heights in 1975.

Bohyo-dai *see* **Bohyo Heights**

The Boil. 74°09' S, 161°32' E. A prominent snow eminence (at first thought to be a nunatak, and it may well, still, actuallly be a nunatak), marked by rock exposures, and rising to over 2300 m, on the NE side of Reeves Névé, and 6 km E of Shepard Cliff, in Victoria Land. Apparently named descriptively by the Southern Party of NZGSAE 1962-63, during a visit to this feature in Dec. 1962, it was plotted by them in 74°09' S, 161°34' E. US-ACAN accepted the name in 1967. It has since been replotted.

Boil Point. 63°30' S, 57°27' W. Forms the W side of the entrance to Retizhe Cove, 6.45 km NW of View Point, 7.45 km SE of Theodolite Hill, 8.45 km S of Camel Nunataks, and 5.82 km WSW of Garvan Point, on the S coast of Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the settlement of Boil, in northeastern Bulgaria.

Bojahr, Kurt. 1st ship's radio officer on the *Schwabenland* during GermAE 1938-39.

The *Bøk*. Norwegian whale catcher working for the *Solstreif* in 1910-11, in the South Shetlands. *See also* **The *Eik***.

Boker Rocks. 72°28' S, 98°29' W. A rocky exposure, 8 km NE of Von der Wall Point, in the Walker Mountains, on the S coast of Thurston Island. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1966. Named by US-ACAN in 1968, for Helmut C. Boker, meteorologist at Byrd Station in 1964-65. Originally plotted in 72°25' S, 89°40' W, it has since been replotted.

Gora Bokovaja. 70°43' S, 67°40' E. A nunatak just W of the Manning Massif, in the E part of the Aramis Range, in the Prince Charles Mountains. Named by the Russians.

Bol, Peter. b. March 8, 1909, Holland, Michigan, son of Dutch-Michigander barber Martin Bol and his wife Katie Ellens. Just before the end of World War II he joined the Navy, and was a lieutenant commander when he became the Protestant (Calvinist) chaplain with the 1956 winter party at Little America V. He was subsequently posted to Port Hueneme, Calif. He was one of 47 who died over California in a plane collision on Feb. 1, 1958, while on his way to Washington, DC, to be awarded Chaplain of the Year. He was buried at Fort Rosecrans National Cemetery.

Bol Glacier. 77°52' S, 162°34' E. Between Darkowski Glacier and Condit Glacier, it flows N from Cathedral Rocks into Ferrar Glacier, in Victoria Land. Named by US-ACAN in 1964, for Peter Bol. NZ-APC accepted the name on June 16, 1964.

Mount Boland. 65°18' S, 63°50' W. Rising to over 1065 m (the British say about 1200 m), 10 km E of Lumière Peak, on the E-W ridge between Bussey Glacier and Trooz Glacier, on the Graham Coast, NE of Collins Bay, on the W coast of Graham Land. Discovered and roughly mapped in 1909, by FrAE 1908-10, and named by Charcot as Sommet Boland, for Benoît Boland. It appears as Mount Boland on a 1943 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN in 1950. The mountain was photographed aerially by FIDASE in 1956-57, and UK-APC accepted the Americans' name for it, on July 7, 1959.

Sommet Boland *see* **Mount Boland**

Boland, Benoît. b. 1886, Donnery, near Paris, son of Françoise (sic) Boland. He was an élève (training officer) with the merchant marine, when he was taken on as an able seaman, on the *Pourquoi Pas?*, for FrAE 1908-10. Charcot promoted him to lieutenant during the expedition. In 1916, he was promoted from first oficer to captain, and in the 1930s he was sailing in Chinese waters.

Bold Cliff *see* **Williams Cliff**

Gora Boldyreva. 70°16' S, 65°01' E. A nunatak hard by Gora Baturina, in the area of Mount Hayne, on the N side of Scylla Glacier, in the Prince Charles Mountains. Named by the Russians.

Bolek Cove. 62°01' S, 57°35' W. A small, picturesque cove at Cape Melville (the E extremity of King George Island), in the South Shetlands. Named by the Poles in 1984, for Bolek Jablonski (*see* **Jablonski Bay**).

Bolgrad Glacier. 78°44' S, 85°08' W. A glacier, 7.4 km long and 5.7 km wide, S of Brook Glacier and N of Sirma Glacier, it drains WSW from Mount Allen, Mount Liptak, and Mount Southwick, and flows S of Krusha Peak, to join Bender Glacier, on the W side of the southern Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988, and named by the Bulgarians on Sept. 14, 2010, for the Bulgarian high school of Bolgrad established in 1858.

Bolin, Jacob *see* **USEE 1838-42**

Bolinder Beach *see* **Bolinder Bluff**

Bolinder Bluff. 61°56' S, 57°55' W. A prominent bluff crowned by 3 buttresses of dark gray and light brown rock, on the SW side of, and overlooking, Venus Bay, 5 km SE of False Round Point, on the N coast of King George Island, in the South Shetlands. The bluff was known to 1820s sealers using the anchorage at nearby Esther Harbor. In Jan.-Feb. 1821, Capt. Sherratt noted it as one of the few ice-free features on the island, but he did not name it. Charted by personnel on the *Discovery II* in Jan. 1937, when the Bolinder engine broke down on one of their boats, and caused 6 men to be maooned for 9 days on the beach at the foot of the bluff. They named it for the engine. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit later that year. It appears on a 1960 Argentine chart as Pico Amarillo (i.e., yellow peak"). It has occasionally been confussed with Brimstone Peak. The British were the latest to replot this feataure, in late 2008. Note: There is a 1945 British reference to the beach as Bolinder Beach, but that name never caught on, and in fact, the beach remains unnamed.

Bølingen Islands. 69°28' S, 75°45' E. A group of small islands, about 13 km in extent, immediately off the N side of the Publications Ice Shelf, in the SE part of Prydz Bay, about 14 km WSW of the Larsemann Hills. Discovered and roughly charted by Klarius Mikkesen in Feb. 1935. Mapped by Norwegian cartographers in 1946, from air photos taken during LCE 1936-37, and named by them as Bølingen (i.e., "the herd"). US-ACAN accepted the name Bølingen Islands in 1947, and ANCA followed suit on July 20, 1957. Originally plotted in 69°30' S, 75°45' E, this feature has since been replotted. However, the Australians plot it in 69°32' S, 75°42' E. The SCAR gazetteer says that the Russians call them Bølingenøya, but that sounds too much like a Norwegian name (in fact it is a Norwegian name).

Bølingenøya *see* **Bølingen Islands**

Bolivia. The first Bolivian in Antarctica may well have been archeologist Leo Pucher de Kroll, who was born an Austrian. He was with ChilAE 1948-49. Aside from that, Bolivia seems to have had no interest in Antarctica.

Mount Bolle. 71°54' S, 6°50' E. Rising to 2685 m, above Larsen Cliffs, 5 km S of Kyrkjeskipet Peak, in the eastern Mühlig-Hofmann Mountains, in Queen Maud Land. Named Bolle-Berg (or rather, some peak in this vicinity was called that) by GermAE 1938-39, for Herbert Bolle. US-ACAN accepted the name Mount Bolle in 1970.

Bolle, Herbert R. Aviation supervisor on GermAE 1938-39. After the war, he worked for Lufthansa, making regular flights from Germany to New York in the 1950s.

Bolle-Berg *see* **Mount Bolle**

Bollen *see* **Manju Rock**

Bollene *see* **Bollene Rocks**

Bollene Rocks. 72°15' S, 27°14' E. A group of rocks just W of Bleikskoltane Rocks, at the head of Byrdbreen, in the Sør Rondane Moun-

tains. Mapped in 1957 by Norwegian cartographers, using aerial photos taken by the Americans during OpHJ 1946–47, and named by them as Bollene (i.e., "the buns"). US-ACAN accepted the name Bollene Rocks in 1966.

Böllerberg. 70°30' S, 162°08' E. The peak immediately to the SE of Mount Belolikov, about 13 km WNW of Mount Bruce, in the Bowers Mountains. Named by the Germans.

The *Bolling* *see* **The *Eleanor Bolling***

Bolling Advance Weather Station. 80°08' S, 163°57' W. This was the place where Byrd holed up alone, from March 28 to Aug. 11, 1934, during ByrdAE 1933–35. 123 miles from Little America II, the station was named by Byrd after his mother, Eleanor Bolling Byrd. A structure prefabricated in Boston by Chips Tinglof, it measured 800 cubic feet, weighed 1500 pounds, and had walls that were 4 inches thick. It was shipped to Antarctica and assembled at Little America II for a trial run of 6 weeks, and on Feb. 15, 1934 it was dismantled. It was taken to 80°08' S by a 9-man party led by June and Demas, and re-assembled on March 21, 1934, in a hole dug in the ice, 15 feet long by 11 feet wide by 8 feet deep. Outside the structure was a windspeed gauge on a 12-foot pole, and 200 feet of radio antenna strung on bamboo sticks by Bud Waite. On March 22, 1934 Byrd, Bailey, and Bowlin flew in the Pilgrim from Little America II, and almost a week later Byrd began his lonely vigil, to test man's ability to live alone in the heart of Antarctica, during the winter, a concept he had come up with as far back as 1930. His supplies included 360 pounds of meat, 792 pounds of vegetables, 73 pounds of soup, 176 pounds of canned fruit, 90 pounds of dried fruit, 56 pounds of desserts, half a ton of various staples, including cereals, a 5-gallon can stuffed with toilet paper, 350 candles, 3 flashlights, a 300-candlepower gasoline pressure lantern, 2 sleeping bags (one fur, one eiderdown), 2 primus stoves, 2 kerosene lanterns, 2 decks of playing cards, and a Victrola. Byrd almost died from the slow leakage of fumes from the faulty generator, and on Aug. 11, 1934, Demas, Poulter, and Waite arrived overland, being greeted by Byrd's "Hello, fellows, come on below. I've got a bowl of hot soup waiting for you." They spent until Oct. 14 there with Byrd, helping him recuperate, and on that day Bowlin and Schlossbach arrived in the Pilgrim, and flew Byrd back to Little America II. See Byrd's book, *Alone*.

Gora Bolotova. 71°14' S, 67°02' E. A somewhat isolated nunatak, NW of Mount Lanyon, in the Prince Charles Mountains. Named by the Russians.

Treshchiny Bol'shaja Rjab'. 70°35' S, 14°54' E. A fissure in the ground, somewhat isolated, SE of Entuziasty Glacier, in Queen Maud Land. Named by the Russians.

Gora Bol'shakova. 80°18' S, 25°23' W. A nunatak, just N of Maclaren Monolith, and due W of Schimper Glacier, in the central part of the Herbert Mountains, in the Shackleton Range. Named by the Russians.

Nunataki Bol'shie Kamni. 71°12' S, 65°49' E. A group of nunataks, close SW of Armonini Nunatak, in the Prince Charles Mountains. Named by the Russians.

Ostrova Bol'shie Skalistye. 69°11' S, 77°05' E. A group of islands, NE of Brattstrand Bluffs, on the Ingrid Christensen Coast of Queen Maud Land. Named by the Russians.

Ozero Bol'shoe Dolinnoe. 70°29' S, 68°46' E. A lake, due S of Else Platform, in Mac. Robertson Land. Named by the Russians.

Kar Bol'shoj. 71°34' S, 67°36' E. A pass, SW of the Fisher Massif, in the Prince Charles Mountains. Named by the Russians.

Otrog Bol'shoj. 73°30' S, 66°52' E. A spur, NW of the Cumpston Massif, in the Prince Charles Mountains. Named by the Russians.

Bahía Bolsón *see* **Bolsón Cove**

Caleta Bolsón *see* **Bone Bay**

Bolsón Cove. 65°09' S, 63°05' W. A cove, 1.5 km wide, and indenting the Danco Coast for 2.5 km in a SSW direction, at the head of Flandres Bay (it is the S arm of that bay), immediately E of Étienne Fjord, between that fjord and Bahía Pelletan (what the Argentines call Bahía Briand), on the W coast of Graham Land. Charted by BelgAE 1897–99, and roughly charted by FrAE 1903–05. Charted by ArgAE 1951–52, who named it descriptively as Bahía Bolsón, a name that first appears on an Argentine chart of 1954. That was the name accepted by the 1970 Argentine gazetteer. A bolsón is a large purse. Surveyed by Fids on the *Shackleton*, in 1956, and photographed aerially by FIDASE in 1956–57. UK-APC named it Schulze Cove, on Sept. 23, 1960, for Joseph Heinrich Schulze (1687–1744), German anatomist who, in 1725, discovered that the darkening of silver salts by light could be applied to the making of transient images, an important step toward the invention of photography. In 1962 the Hydrographic Institute of the Chilean Navy named it (for the Chileans only) as Bahía Cruz, for Capt. Gustavo Cruz Cáceres, leader of ChilAE 1957–58. It appears as such on a Chilean chart of 1962, and was the name accepted by the Chilean gazetteer of 1974. US-ACAN accepted the name Bolsón Cove in 1965.

Mount Bolt. 71°05' S, 165°43' E. A high peak, rising to 2010 m, on the N side of, and overlooking, Ebbe Glacier, 8 km NW of Peterson Bluff, in the S end of the Anare Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1964, for Lt. (later Cdr.) Ronald L. Bolt (b. Sept. 1, 1933, Long Beach, Calif.), who joined the U.S. Navy in Sept. 1950, was a pilot here in 1961–62 and 1962–63 (this last season flying an R4D in support of the USGS Topo West survey here), and retired in Sept. 1979.

Bolten *see* **Bolten Peak**

Bolten Peak. 71°49' S, 1°44' W. Isolated, 5 km N of Litvillingane Rocks, on the E side of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Surveyed from the ground by NBSAE 1949–52, who also photographed it aerially. It was photographed again, aerially, in 1958–59, by NorAE 1956–60. Mapped from all these photos by Norwegian cartographers, who named it Bolten (i.e., "the bolt"). US-ACAN accepted the name Bolten Peak in 1966.

Glaciar Bolton *see* **Bolton Glacier**

Mount Bolton. 85°56' S, 129°43' W. A prominent mountain, rising to 2840 m, in the W part of the Wisconsin Range, 10 km SE of Mount Soyat, along the E side of Reedy Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. James L. Bolton, USN, helicopter pilot here during OpDF 65 (i.e., 1964–65), OpDF 66 (i.e., 1965–66), and OpDF 67 (i.e., 1966–67).

Bolton Glacier. 65°01' S, 62°58' W. Flows W into the head of Briand Fjord, Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956–57, and mapped by FIDS cartographers in 1959, from those photos. Named by UK-APC on Sept. 23, 1960, for William Blanchard Bolton (1848–1889), British photography pioneer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer as Glaciar Bolton.

Bolza, Alfons "Alf." b. March 2, 1918. Weather observer at Macquarie Island in the winter of 1955, and who fulfilled the same role at Mawson Station in 1958. A noted mountain climber, he was first up Mount Hordern. *See also* **Kolven Island**, and **Stedet Island**.

Mount Boman. 82°32' S, 162°00' E. Rising to 1630 m, between Tranter Glacier and Doss Glacier, in the N part of the Queen Elizabeth Range. Mapped by USGS from tellurometer surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1966, for William M. Boman, American USARP traverse engineer at Roosevelt Island in 1962–63, and who wintered-over at McMurdo in 1965.

Bomb Peak. 77°32' S, 169°15' E. Rising to 805 m (the New Zealanders say 750 m), 3.5 km westward of Cape Crozier, on Ross Island. Charted by NZGSAE 1958–59, and named by them for the bomb-like (pyroclastic) geological formations surrounding the summit of this peak. The rocks showered out by volcanic eruption left the appearance of a bomb-pocked region. The rocks, which are the size of a fist and have become eroded by the wind, are particularly in evidence here. NZ-APC accepted the name on June 28, 1962, and US-ACAN followed suit in 1964.

Bombardier Glacier. 64°19' S, 59°59' W. Flows SE from the edge of the Detroit Plateau, in Graham Land, through a deep trough, to join Edgeworth Glacier, at the Nordenskjöld Coast of Graham Land. Mapped by FIDS cartographers from ground surveys conducted by Fids from Base D in 1960–61. Named by UK-APC on Feb. 12, 1964, for Joseph-Armand Bombardier (known as Armand) (1907–1964), Canadian engineer and developer of the Snowmobile in the 1920s and 30s. US-ACAN accepted the name later in 1964. M. Bombardier died on Feb. 18, 1964.

The *Bombay*. A 2040-ton Norwegian floating factory whaling ship, built in 1882, by Mitchell's, of Newcastle, for Nelson Donkin & Co. In 1910 she was sold to Chris Christensen's Nor Company, and was in at Mikkelsen Harbor, in Antarctica, every season for six weeks or more at a time, between the 1909-10 season and the 1920-21 season. In 1917-18 her skipper was Capt. Johan Johannessen. During that time she was bought by the Ørnen Company, and in 1922 was sold to the Congo Company, and renamed the *Professor Gruvel* (q.v.).

Isla Bombay *see* **D'Hainaut Island**

Bombay Island *see* **D'Hainaut Island**

Bommen *see* **Bommen Spur**

Bommen Spur. 72°37' S, 3°08' W. A snow-covered spur, or small ridge, creating a barrier that runs eastward from Jøkulskarvet Ridge to Flogstallen, in Regulakjeda, in the NE part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Bommen (i.e., "the barrier"). US-ACAN accepted the name Bommen Spur in 1966.

Baie du Bon Accostage *see* under **D**

Nunatak du Bon Docteur *see* **Bon Docteur Nunatak**

Bon Docteur Nunatak. 66°40' S, 140°01' E. A small coastal nunatak (actually a group of rocky outcrops), rising to 28 m above sea level, at the W side of Astrolabe Glacier Tongue, about 310 m S of Rostand Island, in the S part of the Géologie Archipelago. Photographed aerially during OpHJ 1946-47. Charted by the French in 1952-53, and named by them as Nunatak du Bon Docteur, for Dr. Jean Cendron. US-ACAN accepted the name Bon Docteur Nunatak in 1956.

Mount Bonaparte. 83°05' S, 160°50' E. Rising to 3430 m, it is the northernmost of 3 summits about 70 km inland from the W side of the Ross Ice Shelf, 6 km NW of Mount Lecointe, and about 28 km SE of Mount Markham, in the Queen Elizabeth Range (the New Zealanders locate it in the Queen Alexandra Range). Discovered in 1908 by BAE 1907-09, and named for Prince Roland Bonaparte (1858-1924), president of the Geographical Society of Paris. US-ACAN accepted the name, and NZ-APC followed suit.

Punta Bonaparte *see* **Bonaparte Point**

Bonaparte Channel. Off Anvers Island, in the area of Palmer Station. A term no longer used.

Bonaparte Point. 64°47' S, 64°05' W. A narrow point that forms the S entrance point of Arthur Harbor, Anvers Island, in the immediate area of Palmer Station. Probably discovered in Feb. 1832, by John Biscoe. Charted in Feb. 1904, by FrAE 1903-05, and named by Charcot for Prince Roland Bonaparte (*see* **Mount Bonaparte**). On Charcot's maps and other expedition references, the name figures variously as Cap Rolland (sic) Bonaparte, Pointe Roland Bonaparte, and Pointe Bonaparte. The name Roland Bonaparte Point, referring to the W entrance point of Biscoe Bay, appears on a British map of 1908, on British charts of 1948 and 1952, as well as on a 1949 Argentine chart (as Punta Rolando Bonaparte). That situation was accepted by US-ACAN in 1951, and by UK-APC on Jan. 28, 1953, and appears in the 1955 British gazetteer. However, following ground surveys by Fids from Base N in 1955, it was determined to be the S entrance point to the harbor, rather than the W entrance point, and the new situation appears on a British chart of 1957, and was amended by UK-APC on Aug. 31, 1958. It appears on a 1957 Argentine chart as Punta Bonaparte, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. However, both the Chileans and the Argentines persist with the western-entrance situation.

Bonaparte Point Automatic Weather Station. 64°47' S, 64°05' W. American AWS, at an elevation of 8 m, at Bonaparte Point, at the S side of Arthur Harbor, Anvers Island, near Palmer Station. It was installed in Jan. 1992, and is still going (2009). Long term ecological research (LTER) is its mission.

Mount Bond. 66°49' S, 51°07' E. Just S of Mount Rhodes, about 3 km ESE of Mount Porteus, in the Tula Mountains of Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for Ernie Bond. US-ACAN accepted the name in 1965.

Punta Bond *see* **Bond Point**

Bond, Charles Alonzo "Charlie." b. March 29, 1904, Philadelphia, son of photometrist Charles Otis Bond and his German wife Mathilde Charlotte Zeller. The father became a farmer near Collegeville, Pa., and Charlie was raised partly on the family farm. On June 30, 1921, he entered the Naval Academy, and graduated in the class of 1925. In 1928 he was an ensign on the *Wood*, and in 1932 was a lieutenant (jg). On Aug. 7, 1937, he married Kathleen Ogilvy Strong. He skippered the *Bougainville* in 1944, during World War II, and was a lieutenant commander, a naval aviator, and had been in the Aleutians, when he was picked to lead the Western Group of OpHJ 1946-47. He retired in July 1955, and lived in Colorado Springs, and later in San Diego, where he died on Oct. 25, 1989.

Bond, Ernest "Ernie." Assistant steward on the *Discovery* in 1930-31, during the 2nd half of BANZARE 1929-31. In trying to track this fellow, we come across an assistant steward named Ernest Bond leaving London on the *Narkunda*, and arriving in Sydney on Feb. 20, 1922. The ship's manifest says he is 20, and born in London. The only Ernest Bond born in London around this time was born in Feb. 1901, in Islington, son of railway lampman William Bond and his wife Rosina Jones. Then we find an Ernest Bond, same rough age, who went to sea in New York in 1919, as a messboy, and who worked his way up to assistant steward on a variety of U.S. merchant vessels mostly in the Caribbean. None of these American voyages conflict with the *Narkunda*'s run in 1922; however, the trouble is, the assistant steward on the American voyages was a U.S. citizen. Of course, it is possible to reconcile the two men, but it needs proof of naturalization, and satisfactory proof is not (yet) forthcoming.

Bond, Peter Robert "Bob." b. May 29, 1933, Bromley, Kent, youngest child of George J. Bond and his wife Margaret E. Skipper. RAF flight lieutenant, and FIDS pilot who wintered-over at Base B in 1961 and 1962. He spent the summer of 1962-63 at Base T, as senior pilot with the BAS aviation unit. He retired as group captain.

Bond, Ralph. Captain of the London sealer *Hetty*, in the South Shetlands for the 1820-21 and 1821-22 seasons. In the 2nd season he transferred to the *Martha* and remained with that vessel for the 1822-23 season. Capt. Bond went bankrupt in Dec. 1830. He is described as a "formerly of Dempster Street, then of York Street, Stepney, and late of 85 Heath Street, all in Middlesex, mariner and captain of a Southseaman."

Bond, W. Captain of the Plymouth sealer *Enchantress*, in 1821-22. Related to Ralph Bond.

Bond Glacier. 66°58' S, 109°00' E. A steep, heavily crevassed glacier, to the W of Ivanoff Head, it flows from the continental ice to Blunt Cove, at the head of Vincennes Bay. Mapped by U.S. cartographer Gard Blodgett in 1955, from air photos taken OpHJ 1946-47, and named by US-ACAN in 1955, for Capt. Charles A. Bond.

Bond Nunatak. 67°09' S, 68°10' W. A snow-capped nunatak, rising to about 1200 m, with rock exposures in its W face, N of Mount Bouvier, in central Adelaide Island. Surveyed by FIDS in 1961-62, and named by UK-APC on Feb. 12, 1964 for Peter Bond. The name appears in the British gazetteer of 1964. US-ACAN accepted the name later in 1964.

Bond Peaks. 72°11' S, 25°24' E. A group of peaks rising to 3180 m on the SW side of Mount Bergersen, in the south-central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957, from air photos taken by OpHJ 1946-47. Named by US-ACAN in 1966, for Capt. Charlie Bond. Called Bondtoppane by the Norwegians.

Bond Point. 62°41' S, 60°49' W. The W entrance point of Walker Bay, NE of Elephant Point, on the S side of Livingston Island, in the South Shetlands. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by FIDS in 1957-58. Named by UK-APC on July 7, 1959, for Ralph Bond. US-ACAN accepted the name in 1960. It appears on a British chart of 1962. It appears in the 1991 Argentine gazetteer as Punta Bond. The British were the latest to replot this feature, in late 2008.

Bond Ridge. 70°16' S, 65°13' E. A rock ridge 1.5 km NE of Moore Pyramid, on the N side of Scylla Glacier, in the Prince Charles Mountains of Mac. Robertson Land. Plotted from ANARE air photos taken in 1965, and named by ANCA for David W.G. "Dave" Bond, senior diesel mechanic-in-charge at Mawson Station in 1968. US-ACAN accepted the name in 1971.

Bondeson Glacier. 82°44' S, 165°00' E. About 11 km long, it flows N along the E side of Benson Ridge, into the lower portion of Robb Glacier. Mapped by USGS from USN air photos

taken in 1960, and from tellurometer surveys conducted in 1961–62. Named by US-ACAN in 1965, for Wilhelm Fredrik Bondeson (b. Aug. 16, 1907, Göteborg, Sweden. d. Jan. 23, 1995, Stockholm), captain of the *Towle* during OpDF 64 and OpDF 65. Capt. Bondeson had started off in the Swedish merchant Navy, as a deck steward, moved to Connecticut (and later NY) during the early part of World War II, joined the U.S. Army, become a U.S. citizen, and was, after the war, 1st mate and subsequently skipper of Army oil tankers. For several years he skippered the *Sagitta*, and then took command of the *Towle*. NZ-APC accepted the name on Nov. 16, 1965.

Bondknausane. 72°17' S, 25°31' E. Crags, partly covered in ice and snow, in the SW part of the Bond Peaks, in the E part of the Sør Rondane Mountains. Named by the Norwegians, in association with the peaks.

Bondtoppane *see* **Bond Peaks**

Bahía Bone *see* **Bone Bay**

Caleta Bone *see* **Bone Bay**

Bone, Douglas Gordon. b. Jan. 17, 1945. BAS marine biologist who wintered-over at Signy Island Station in 1967 and 1968. In the mid-1970s he was part of the offshore biological program from the *John Biscoe*.

Bone, Thomas Main. b. 1798, 17 Hanover Street, London, 5th of 6 sons of famous artist Henry Bone (the "prince of enamelers") and his wife Elizabeth Van der Muellen. He joined the RN, and was a midshipman on the South America station, when he went to the South Shetlands on the *Williams* under Bransfield, in the early part of 1820. He kept a diary. "The only cheer the sight afforded was the idea that this might be the long sought after southern continent." In 1817 he exhibited two paintings of boats.

Bone Bay. 63°38' S, 59°04' W. A rectangular bay, nearly 16 km wide at the entrance, between Notter Point and Cape Roquemaurel, along the NW coast of Trinity Peninsula. The early whalers, about 1915, included it with Charcot Bay in what they called Gvas Cove (q.v.). Following a survey by Fids from Base D in 1948, the semi-circular cove at the terminus of Russell West Glacier (i.e., within the bay that would later be called Bone Bay) was named Bone Cove, by UK-APC, on Jan. 28, 1953, named for Thomas M. Bone. US-ACAN accepted the name later in 1953, and it appears as such in the 1955 British gazetteer. It appears on a Chilean chart of 1961, translated as Caleta Bone, and that was the name that appeared in the 1974 Chilean gazetteer. However, following air photography by FIDASE in 1956–57, the name Bone was extended to include what is now Blake Island, Boyer Rocks, and Whaleback Rocks, and was renamed Bone Bay. The term Bone Cove was discontinued, as was Gvas Cove (*see also* **Charcot Bay**). US-ACAN accepted this situation. The S part of today's Bone Bay appears in the Argentine gazetteer of 1991, as Caleta Bolsón. In the same gazetteer, they refer to the whole bay as Bahía Bone.

Bone Cove *see* **Bone Bay**

Bone Point. 66°25' S, 110°40' E. Rock point forming the SE extremity of Herring Island, in the Windmill Islands. First mapped from air photos taken by OpHJ 1946–47 and by OpW 1947–48. Named by US-ACAN in 1963, for Steven D. "Steve" Bone, Australian meteorologist who wintered-over at Wilkes Station in 1962.

[1]**Islote Bonert** *see* **Bonert Rock**

[2]**Islote Bonert**. 68°45' S, 70°37' W. The smaller and more northerly of 2 little islands (the other one is Terminal Island) off Cabo Arauco, at the extreme N of Alexander Island. Named by ChilAE 1946–47, as Isla Teniente Bonert, for Federico Bonert Hozapfel (see the entry immediately below). Since 1963, in order to avoid compound names, Chile has been using the name Islote Bonert.

Bonert Holzapfel, Federico. Chilean naval officer. As a lieutenant 1st class he left Valparaíso on Feb. 23, 1940, on the *North Star*, for Antarctica, accompanying USAS 1939–41, as an observer. By April 4, 1940 he was back at Cape Horn. Later as a capitán de corbeta he was commander of the *Angamos*, and 2nd-in-command of ChilAE 1946–47.

Bonert Rock. 62°27' S, 59°43' W. The largest, and central of a group of 2 islets and a rock, rising 6 m above sea level, 0.8 km SE of Canto Point, Discovery Bay, Greenwich Island, in the South Shetlands. Surveyed by ChilAE 1946–47, and named by them as Isla Del Campo. The name was changed immediately to Islote Cap. Bonert, for Federico Bonert Holzapfel (*see under* Bonert, above). By 1951, the name had been shortened to Islote Bonert, and, even though the name Islote Capitán Bonert appears on a 1961 Chilean chart, it was the shortest version of the name that was accepted by the 1974 Chilean gazetteer. Re-charted by an RN Hydrographic Survey unit in Jan. and Feb. 1964, it appears as Bonert Rock on their 1965 chart, and on a 1968 British chart, and was the name accepted by UK-APC on Nov. 3, 1971. It appears as such in the 1974 British gazetteer.

Punta Bonete. 64°23' S, 63°17' W. A point, just N of Holt Inlet, Lapeyrère Bay, Anvers Island, in the Palmer Archipelago. Named by the Argentines.

Boney Point. 76°39' S, 162°43' E. A rock point along the S side of the entrance to Tripp Bay, on the coast of Victoria Land. In association with nearby Brough Nunatak, it was named by NZ-APC on Nov. 4, 1999, for Lt. Cdr. (later Cdr.) Bobby E. Boney (b. Aug. 11, 1924, Choctaw Co., Ala. d. Jan. 7, 2005, Tuscaloosa, Ala. Buried at the Naval Air Station, in Pensacola), USN, who, after service in World War II and Korea, was skipper of the *Brough*, in Antarctic waters during OpDF III (i.e., 1957–58) and OpDF IV (i.e., 1958–59). US-ACAN accepted the name in 2000.

Cabo Bongrain *see* **Bongrain Point**

Cape Bongrain *see* **Bongrain Point**

Punta Bongrain *see* **Bongrain Point**

Bongrain, Maurice. b. 1879. French naval sub lieutenant, 1st officer of the *Pourquoi Pas?* and 2nd-in-command of FrAE 1908–10. A surveyor, his other specialities were hydrography, astronomy, seismology, and terrestrial gravitation. He made the first map of the NW coast of Alexander Island. He was promoted to captain on Dec. 30, 1933, and to rear admiral on Jan. 15, 1934, and died in 1951. His wife's name was Jenny (*see* **Jenny Island**).

Bongrain Ice Piedmont. 69°00' S, 71°42' W. A large ice piedmont, 45 km long (in the 1950s it was described as 100 km long) in a NE-SW direction, and 20 km wide at its broadest (in the 1950s it was described as at least 27 km at its widest part), it occupies the NW coastal area of Alexander Island between Cape Vostok and Mount Bayonne. First seen from a distance in Jan. 1909, by FrAE 1908–10, and roughly surveyed by them. Charcot named it for Maurice Bongrain. The French term for this feature might, perhaps, today, be "piémont de glace," but one is not hopeful that that is what Charcot called it. Photographed aerially on Aug. 15, 1936 by BGLE, and roughly mapped from those photos. Re-photographed aerially in 1947, by RARE 1947–48. UK-APC accepted the name Bongrain Piedmont Glacier on March 31, 1955, and US-ACAN followed suit that year. Back then, it was plotted in 69°10' S, 72°00' W, but the coordinates were corrected by UK-APC on Dec. 8, 1977, after studying U.S. Landsat images from Feb. 1975. US-ACAN accepted the coordinates 69°00' S, 71°30' W.

Bongrain Point. 67°43' S, 67°48' W. A headland, rising to an elevation of 490 m above sea level, and forming the S side of the entrance to Dalgliesh Bay, on the W side of Pourquoi Pas Island, at Marguerite Bay, off the Loubet Coast, on the W coast of Graham Land. Roughly charted in Jan. 1909, by FrAE 1908-10, and named by Charcot as Cap Lainez, for Manuel Láinez (*see* **Lainez Point**). It appears as such on the expedition's 1912 maps. Surveyed in 1936 by BGLE 1934–37, who misapplied the French name to the N entrance point of Dalgliesh Bay (i.e., the point now called Lainez Point), and this error appears as Lainez Point on Rymill's 1938 map of the expedition, as well as on a British chart of 1948. ChilAE 1946–47 charted this S point as Punta Yungay, after the Chilean town of Yungay, while on their chart the N point appears duly as Cabo Lainez. Both the S and N points were re-surveyed by Fids from Base E in Sept. 1948. UK-APC accepted the name Lainez Point for the N point on March 31, 1955, and US-ACAN followed suit in 1956. It was re-surveyed by Fids from Base Y in 1957, and the error was discovered, but they decided that long tradition was long tradition, and they named the S point as Cape Bongrain, after Maurice Bongrain. and on Sept. 23, 1960 UK-APC redefined it as Bongrain Point, and it appears as such in the 1977 British gazetteer. US-ACAN followed suit with the change in 1963. It appears on a 1962 Chilean chart as Cabo Bongrain, and that was the name accepted by the 1974 Chilean gazetteer, as was Cabo Lainez for the N point. One of the Argentine Antarctic expeditions called it Cabo Barracas, after the riverboat of the Argentine

naval squadron, ca. 1810, and it appears as such in a 1978 reference. However, the name accepted by the 1991 Argentine gazetteer was Punta Bongrain. Both the 1970 and 1991 Argentine gazetteers have accepted Cabo Lainez for the N point.

Cabo Bongrein *see* **Bongrain Point**

Bonnabeau Dome. 73°31' S, 94°10' W. A prominent ice-covered dome mountain on the W side of Gopher Glacier, 6 km W of Anderson Dome (which appears similar), in the Jones Mountains. Mapped by the University of Minnesota Jones Mountains Party of 1960-61, and named by them for Dr. Raymond C. Bonnabeau, Jr. (b. Sept. 1933), medical officer with the party. US-ACAN accepted the name in 1963.

Bonne Glacier. 77°53' S, 163°49' E. A steep glacier, 1.5 km WSW of Hobbs Peak, descending NW from Hobbs Ridge into Blue Glacier, in Victoria Land. Named by NZ-APC in 1992, after the Bonne map projection, a derivative conical projection in which the parallels are spaced at true distances along meridians which are plotted as curves. US-ACAN accepted the name in 1993.

Bonner, Samuel "Sam." b. April 4, 1888, Rincon Grande, East Falkland, son of English-born shepherd William Bonner and his wife Helen Malvina Pitaluga. In 1903, when Sam was 15, the family traveled to England on the *Oropesa*, arriving in Liverpool in July, then, on Aug. 1, 1903, they left Liverpool on the *Etruria*, arriving in New York on Aug. 8, moving to Brookfield, Mass., where his father would run a farm. Sam and his younger brother Harry got jobs as beaters in the local paper mill, and then came World War I, and Sam served in Europe. On the family's return to the Falklands, Sam joined them there in 1919. He went whaling in South Georgia, and during World War II, in 1944, joined Operation Tabarin, wintering-over at Base B in 1945, as the cook. By April 15 of that year he was worried about his health, and requested permission to return to the Falklands as soon as possible. A heavy smoker, he had already suffered from nicotine poisoning. Now he was suffering from recurring earache and a bad cough, as well as chronic headache and breathlessness. To make it worse there was no doctor at the base. Dr. Back was at Hope Bay, and there was much radio traffic between the two stations regarding Bonner's health. The *William Scoresby* was sent from the Falklands, but couldn't get through the ice and had to turn back. Bonner's health deteriorated. On June 23, 1945 he had what seemed like a stroke, and became comatose. He slowly recovered, and on Jan. 14, 1946 he was taken off on the *Fitzroy*. He was also, for a short while, one of the crew of the *Eagle*. He died of meninigitis in Montevideo, in 1946.

Bonner Joch. 71°28' S, 163°37' E. A pass, due W of Mount Bradshaw, in the Bowers Mountains. Named by the Germans.

Bonnevie-Svendsenbreen. 74°49' S, 11°27' W. A glacier on the S side of Skjønsbergskarvet, in the SW part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the Rev. Conrad Bonnevie-Svendsen (1898-1983), Resistance leader in Norway during World War II.

Lake Bonney. 77°43' S, 162°25' E. A meromictic, permanently ice-covered lake, 100 m above sea level, to the S of the Asgard Range, at the head of Taylor Valley, and at the mouth of Taylor Glacier, in the dry valleys of southern Victoria Land. Visited in 1903 by BNAE 1901-04. Named in Feb. 1911, by Grif Taylor's Western Geological Party, during BAE 1910-13, for the Rev. Thomas George Bonney (1833-1923), professor of geology at University College, London, 1877-1901. US-ACAN accepted the name in 1964, and NZ-APC followed suit. The Americans left a cache here, on the E shore of the lake, in a hut built in 1989-90.

Bonney Bowl. 80°21' S, 25°35' W. A cirque to the SE of Sumgin Buttress, in the W-central part of the Herbert Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed from the ground by BAS personnel from Halley Bay Station between 1968 and 1971. Named by UK-APC on Jan. 5, 1972, for T.G. Bonney (*see* **Lake Bonney**, above), who worked on the origin of cirques. US-ACAN accepted the name.

Bonney Lake *see* **Lake Bonney**

Bonney Riegel. 77°43' S, 162°22' E. A ridge (a "riegel" is a "rock bar"), about 1.2 km wide, running N from the Kukri Hills at an elevation of 152 m above sea level, across the Taylor Valley (it is 0.8 km E of the snout of Taylor Glacier), to Lake Bonney, in southern Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13, in association with the lake. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name in 1964.

Point Bonnier *see* **Bonnier Point**

Pointe Bonnier *see* **Bonnier Point**

Punta Bonnier *see* **Bonnier Point**

Bonnier Point. 64°28' S, 63°57' W. Marking the NE entrance point of Hamburg Bay, it is actually the extreme W point of the peninsula that separates Hamburg Bay from Perrier Bay, on the NW coast of Anvers Island, in the Palmer Archipelago. First roughly charted by FrAE 1903-05, and named by Charcot as Pointe Bonnier, for Jules Bonnier (1859-1908), assistant director of the zoological station at Wimereux, who installed a laboratory on the *Français*. It appears on a 1943 U.S. Hydrographic Office chart as Point Bonnier, and on a 1949 Argentine chart as Punta Bonnier, a name that was accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57, and that same season surveyed from the ground by FIDS from Base N. UK-APC accepted the name Bonnier Point, on July 7, 1959, and it appears as such on a British chart of 1961. US-ACAN did not accept that name until 1971.

Boobyalla Islands. 67°15' S, 46°34' E. Two small islands, 3 km NE of Kirkby Head, in Enderby Land. Plotted from 1956 ANARE aerial photos. Named by ANCA for the native Australian willow, the boobyalla. US-ACAN accepted the name in 1965.

Boogie Island. 64°49' S, 63°30' W. A small, low-lying island in the entrance to Port Lockroy, about 550 m W of Goudier Island, off Wiencke Island, in the Palmer Archipelago. Roughly charted in 1904 by FrAE 1903-05. Between 1911 and 1931 it was used as a fixed mooring for whaling ships. In 1944, personnel from Operation Tabarin surveyed it, and named it. UK-APC finally got around to accepting the name on May 10, 2006, and US-ACAN followed suit on July 17, 2007. The name has, in the past, been transposed with that of Woogie Island. Faint echoes of boogie-woogie would come through the radio waves to the lads at Port Lockroy.

The *Boojum*. One of the three Supermarine amphibious Walrus airplanes overhauled and re-equipped at Saunders-Roe for United Whalers, Ltd., and which were part of the *Balaena* whaling expedition of 1946-47. Each plane carried a crew of three — the pilot, a navigator, and a radio operator. They were equipped with a covered-in dinghy, a lightweight tent, and the latest Navy immersion suits, just in case.

Books. The first book published in Antarctica was *Aurora Australis*, a 120-page book written in 1908 by Shackleton and his 14-man crew of winterers to ward off boredom during BAE 1907-09. They wrote it, printed it, and bound it. Joyce and Wild typeset it, Marston illustrated, and Day created the covers. Shackleton's printing press had been presented to him by Messrs. Joseph Causton & Sons, and it was they who had trained Joyce and Wild in printing and typesetting. During FrAE 1908-10, Jules Rouch wrote a novel for a bet. It was called *L'amant de la dactylographe* (*The Typist's Lover*). Charcot brought 1500 books of all sorts with him on that expedition. The Ross Sea Party of BITE 1914-17, under Mackintosh, had an *Encyclopaedia Britannica* available. On the other side of Antarctica, Hurley salvaged some volmes of the same august work when the *Endurance* went down in 1915.

Mount Bool. 70°11' S, 64°57' E. A mountain, about 2 km long, 3 km E of Mount Béchervaise, between Mount Peter and Mount Dwyer, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted from ANARE air photos taken in 1965, and named by ANCA for Geoffrey A. "Geoff" Bool, weather observer at Mawson Station for the winter of 1969, who assisted in the Prince Charles Mountains Survey of 1969. US-ACAN accepted the name in 1971.

Boom Basin. 78°14' S, 162°48' E. A basin on the N side of Radian Ridge, immediately W of the confluence of Pipecleaner Glacier and Radian Glacier, on the E side of the Royal Society Range, in Victoria Land. On Dec. 3, 1977, members of NZGSAE 1977-78 heard a loud, explosive boom while working in this area. They never found out what caused it. NZ-APC named the feature in 1980, and US-ACAN followed suit in 1995.

Boomerang Glacier. 74°33' S, 163°54' E. A gently curving glacier, 16 km long, and 1.5 km wide at its mouth, it flows southward from Mount Dickason in the Deep Freeze Range, and enters Campbell Glacier at Browning Pass, at the

N side of the Nansen Ice Sheet, in Victoria Land. Discovered by Campbell's Northern Party during BAE 1910-13, and named (probably) by Ray Priestley on Jan. 20, 1912, for its shape. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name.

Boomerang Range. 78°30' S, 158°45' E. A long, narrow range, curving like a boomerang for 26 km (the Australians say 35 km) in a generally N-S direction, between Escalade Point and Deception Glacier, about 57 km W of Mount Harmsworth, it forms part of the W limits of Skelton Névé, just to the E of the Warren Range, in southern Victoria Land. Mapped and descriptively named by the NZ party of BCTAE in 1957. US-ACAN accepted the name in 1962.

Île Booth *see* **Île Wandel**

Isla Booth *see* **Booth Island**

Mount Booth. 77°26' S, 161°46' E. Rising to 1575 m, it surmounts the junction of mountain ridges at the SW end of Murphy Valley, in the Olympus Range, in the McMurdo Dry Valleys. Named by US-ACAN in 2004, for John H. "Johan" Booth, astronomer and electronics equipment technician who wintered-over a dozen or so times at Palmer Station and Pole Station between 1994 and 2010. He wintered-over 6 times at Pole, 4 of those (2005, 2006, 2007, and 2008) being consecutive. NZ-APC accepted the name on Nov. 30, 2004. Mr. Booth was also the Antarctica table tennis champion.

Booth-Insel *see* **Booth Island**

Booth Island. 65°05' S, 64°00' W. A Y-shaped island, between 6 and 8 km long, and 6 km wide at its broadest, separated from the Graham Coast of Graham Land by the Lemaire Channel, in the NE part of the Wilhelm Archipelago. Its N point is about 8 km SW of Cape Renard. Dallmann discovered it in Jan. 1874, and named it Booth-Insel (or Boothinsel) for Oskar and Stanley Booth, members of the Hamburg Geographical Society, which had sent out the expedition. He included it as part of what would later be called the Dannebrog Islands, and, indeed, it was considered to be part of that group until 1959. On Feb. 12, 1898, it was charted as a new discovery by BelgAE 1897-99, and de Gerlache renamed it Île Wandel, for Carl Frederik Wandel (1843-1930), Danish hydrographer and Arctic explorer who helped de Gerlache's expedition. It appears on Frederick Cook's 1900 chart of that expedition, as Wandel Island. FrAE 1903-05 wintered-over here, at Port Charcot, in 1904, and Charcot gave credit to the Germans for the discovery. However, he kept up the name Wandel, so as to avoid confusion (although on at least one of his maps, he gives both names, as others also did over the years, and this practice became official in the UK in 1938). It was known as Wandel Island for years, in one translated form or another (e.g. the BGLE called it that on their 1938 chart), but on the 1929 Discovery Investigations chart it appears as Booth Island, and that was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1950. It appears as such in the 1955 British gazetteer, and also on a 1958 British chart. It appears on a French map of 1937 as Île Booth, and on an Argentine chart of 1949 as Isla Booth. The name Isla Booth was accepted by the Argentine gazetteer of 1970 and by the Chilean gazetteer of 1974. It was photographed aerially by FIDASE in 1956-57.

Booth Peninsula. 66°06' S, 101°13' E. Also called Booth Ridge. An irregularly-shaped rocky peninsula, 6 km long and 1.5 km wide, it projects W from the coast 5 km SW of Remenchus Glacier, in the N part of the Bunger Hills. Mapped from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1956, for George H. Booth, radioman from Sea Girt, NJ, who flew with Bunger during OpHJ 1946-47. The Russians call it Poluostrov Charnokitovyj. On Jan. 19, 1989, ANCA (which seems to have previously accepted the name Booth Peninsula), accepted the name Charnokitovyj Peninsula.

Booth Ridge *see* **Booth Peninsula**

Booth Spur. 75°37' S, 142°01' W. A small rock spur at the N side of El-Sayed Glacier, 2.5 km SW of Mount Shirley, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1972, for Lt. Cdr. (later Cdr.) Robert Midgley Booth, USN, public works officer in Antarctica during OpDF 68 (i.e., 1967-68) and OpDF 69 (i.e., 1968-69).

Cape Boothby. 66°34' S, 57°16' E. A rounded cape along the E side of the large coastal projection of Edward VIII Plateau, on the coast of Kemp Land, 6 km N of Kloa Point, at the NW end of Edward VIII Bay, at the foot of the Napier Mountains of Enderby Land. Discovered on Feb. 28, 1936 by personnel on the *William Scoresby*, and named for the captain, Lt. Cdr. C.R.U. Boothby. US-ACAN accepted the name in 1947, and ANCA followed suit.

Boothby, Claude Reginald Underwood. b. 1903, Daventry, Northants, son of draper John William Boothby and his wife Alice Evelyn Underwood. A merchant seaman, working for the Lamport & Holt Line, he first shipped out from Hull as an apprentice on July 22, 1919. He joined the RNR, and in 1929, while a 3rd mate, was posted to the *Renown*, for training as a sub lieutenant. He was captain of the *William Scoresby*, during the Discovery Investigations tours of 1934-35, 1935-36, and 1936-37. During World War II, at the very beginning of the war, he was 2nd mate on the *Arlington Court* when that vessel was torpedoed in the Atlantic. He was still plying the seas as a 2nd mate in the late 40s, for the Foreign Tankship Corporation, as well as holding the RNR rank of lieutenant commander. He was still alive in 1957, but one loses him after that. Apparently, the National Library of Scotland has his papers, so it is probable that he died in that country.

Boothinsel *see* **Booth Island**

Boots. The standard, especially for tourists, is the pull-on, rubber, unlined, waterproof, knee-high (14"-16" high) boot with a strong, rubber-ridged, non-skid sole. Leather boots are inappropriate. *See also* **Finneskoes**.

Boracchia, Alejandro J.B. Argentinian who wintered-over as a meteorological observer at Órcadas Station in 1920. He was back for the winter of 1930, as 2nd-in-command.

Islote Borceguí *see* **Borceguí Island**

Borceguí Island. 61°03' S, 55°09' W. An ice-free island (really just a large rock rising to an elevation of 6 m above sea level), with several attendant smaller rocks, midway between Cape Yelcho and Gibbous Rocks, 1.5 km off the N coast of Elephant Island, in the South Shetlands. Named Islote Borceguí, by the personnel on the *Chiriguano* in 1954-55. It appears as such on their 1957 chart, and was the name accepted by the 1970 Argentine gazetteer. The name signifies a half-boot, in Spanish (what the English might call a "buskin"), and denotes the shape of the island. US-ACAN accepted the name Borceguí Island in 1972. The first British Joint Services Expedition to Antarctica named it Buskin Rocks, and that was the name accepted by UK-APC on Nov. 3, 1971. It appears as such in the 1974 British gazetteer.

Borch-Johnsennuten. 74°32' S, 9°58' W. A peak in the N part of XU-fjella, in the Heimefront Range of Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for surgeon Erling Borch-Johnsen (1873-1962), Norwegian Resistance leader in Narvik during World War II.

Mount Borchgrevink. 72°07' S, 23°08' E. A mountain, 10 km long and rising to 2390 m, between Mount Widerøe and Hansenbreen, 5 km S of Tanngarden Peaks, in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Otto Borchgrevinkfjellet, for Otto Borchgrevink. US-ACAN accepted the name Mount Borchgrevink in 1966.

Nunatak Borchgrevink *see* **Borchgrevink Nunatak**

Roca Borchgrevink *see* **Borchgrevink Nunatak**

Borchgrevink, Carsten Egeberg. Pronounced "Bork-re-vink"). b. Dec. 2, 1864, Kristiania (later called Oslo), son of mortgage bank treasurer Henrik Christian Borchgrevink by his English wife, Annie Ridley (*see* **Ridley Beach**). He moved to Australia in 1888, as a surveyor, teacher of languages, and lecturer in geography and natural history at the University of Sydney. On his return to Norway he became a deckhand and part time scientist on the *Antarctic*, during Bull's *Antarctic* (q.v.) whaling expedition of 1894-95. He collected the first vegetation ever found within the Antarctic Circle, and it was at Cape Adare that he made his landing, on Jan. 24, 1895, making him one of the first to set foot on the actual continent of Antarctica. Of course, he claimed to be the very first, and wrote a book called *First on the Antarctic Continent*. He led BAE 1898-1900 (also known as the *Southern Cross* Expedition), after which he married Constance Prior Standen on Sept. 7, 1906, in Tendring, Essex (the wedding cake was an iceberg). Unpopular in England, Borchgrevink lived the rest of his life in Norway, dying in Slemdal, Oslo, on April 21, 1934.

Borchgrevink, Otto. b. July 21, 1889, Molde, Norway, son of police inspector Johann Borchgrevink and his wife Justine. Norwegian whaling captain who worked for the Antarctic Whaling Company out of Tønsberg. As skipper of the *Antarctic* he was leader of the Norwegian Whaling Expedition of 1930-31. He was in command of the *Terje Viken*, in Antarctic waters, in 1938-39, and, during that season, on Feb. 21, 1939, one of his 9 catchers killed a 59-foot blue whale. Cdr. H.V. Hemming, the British inspector on board, who had a running feud with Borchgrevink, reported Borchgrevink to the British authorities. The killing of blues under 70 feet long was strictly forbidden by the British, who ordered the captain to appear in court in Britain in May 1939. This was the first summons of its kind, and the case was dismissed.

Borchgrevink Canyon. Between 69°10' S and 70°15' S, and between 168°30' E and 170°15' E. An undersea feature on the continental rise of Iselin Bank. US-ACAN accepted the name in 1988. By 2004 it had become apparent that this feature is not a trench at all, more like a basin. The name will undoubtedly change to Borchgrevink Basin.

Borchgrevink Coast. 73°00' S, 171°00' E. That part of the coast of northern Victoria Land between Cape Adare in the N and Cape Washington in the S, on the Ross Sea. Named by NZ-APC on May 24, 1961, for Carsten Borchgrevink. US-ACAN accepted the name in 1964.

Borchgrevink Glacier. 73°04' S, 168°30' E. A large glacier flowing S from the SE portion of the Victory Mountains, between the Malta Plateau and Daniell Peninsula, or between Mount Phillips and Mount Lubbock, in Victoria Land, and thence projecting into the sea for several miles as the Borchgrevink Glacier Tongue. In Feb. 1900, during BAE 1898-1900, Carsten Borchgrevink visited this area, and first saw the glacier tongue. It was named for him by NZGSAE 1957-58, and appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1961.

Borchgrevink Glacier Tongue. 73°21' S, 168°50' E. The large seaward extrension of Borchgrevink Glacier, in Victoria Land, it forms the northernmost part of the Lady Newnes Ice Shelf. It discharges into Glacier Strait, just S of Cape Jones. Named by US-ACAN in 1968, in association with the glacier. NZ-APC accepted the name on Dec. 4, 1968.

Borchgrevink Nunatak. 66°03' S, 62°30' W. Rising to 640 m, and 2.5 km long, at the S side of the entrance to Richthofen Pass, N of Adélie Inlet, it is the most northerly of 3 nunataks which stand out on the base of Jason Peninsula, on the Oscar II Coast, on the E coast of Graham Land. In its N face a rock outcrop is very visible. Discovered on Oct. 18, 1902 by SwedAE 1901-04, and named by Nordenskjöld as Nunatak Borchgrevink, for Carsten Borchgrevink. In 1905 Swedish Antarctic literature prepared by the expedition, it is described as being part of the mainland, yet on a map therein it appears as an isolated nunatak on the Larsen Ice Shelf, and plotted in 65°56' S, 62°17' W (i.e., a short distance from the mainland). It appears as Borchgrevink Nunatak on a British chart of 1921, and on a 1942 USAAF chart. It appears on a 1947 Chilean chart as Roca Borchgrevink. In late 1947 it was photographed aerially by RARE 1947-48, and in Dec. 1947 it was surveyed from the ground by Fids from Base D. This survey proved the nunatak to be part of the mainland. UK-APC accepted the name Borchgrevink Nunatak on Jan. 22, 1951, and US-ACAN followed suit in 1952. It appears as such in the 1955 British gazetteer. It appears as Nunatak Borchgrevink in both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer.

Borchgrevink Trench *see* **Borchgrevink Canyon**

Borchgrevinkfjellet *see* **Mount Borchgrevink**

Borchgrevinkisen. 72°10' S, 21°30' E. A glacier flowing northward to the W of Taggen Nunatak, at the W end of the Sør Rondane Mountains, between those mountains and Fimbulheimen (in Queen Maud Land). Mapped by Norwegian cartographers in 1957 from air photos taken during OpHJ 1946-47, and named by them as Carsten Borchgrevinkisen (i.e., "the Carsten Borchgrevink ice"), for Carsten Borchgrevink. They thought it was a large, ice-capped area, but subsequent investigations found it to be a glacier. US-ACAN accepted the name Borchgrevinkisen in 1966.

Mount Borcik. 86°12' S, 153°38' W. A prominent mountain, rising to 2780 m, 7 km NNW of Mount Dietz, in the S sector of the Hays Mountains, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Lt. Cdr. Andrew J. Borcik, photographic pilot in Antarctica in 1965-67.

Bordogna Plateau. 83°18' S, 165°19' E. A high, triangular plateau, bordered by steep cliffs, in the S part of the Holland Range, about 70 sq km in extent, and varying from 3000 to 4000 m in elevation, on the Shackleton Coast. To the N it is bounded by Mount Lloyd, and to the S by Clarkson Peak and Mount Miller. The abrupt S cliffs rise 1200 m above the Bowden Névé. Named by US-ACAN in 2005, for Joseph Bordogna, assistant director of engineering with the NSF, 1992-96; assistant deputy director, 1996-99; and director, 1999-2005. NZ-APC accepted the name on June 17, 2005.

Punta Boreal. 62°27' S, 60°47' W. The extreme N point of Cape Shirreff, immediately NW of Punta Este, on Livingston Island, in the South Shetlands. Named descriptively by scientific personnel from the Instituto Antártico Chileno who took part in ChilAE 1991-92.

Punta Boreal *see* **Boreal Point**

Boreal Point. 63°07' S, 55°48' W. Forms the W side of the entrance to Rockpepper Bay, along the N coast of Joinville Island. Surveyed by Fids from Base D in 1953-54. Named by UK-APC on Sept. 4, 1957, for its northerly (boreal) position. It appears on a British chart of 1962. US-ACAN accepted the name in 1963. It appears in the 1991 Argentine gazetteer as Punta Boreal.

Boreas *see* **Boreas Nunatak**

The *Boreas*. A 10-ton, pusher-propeller Dornier Super Wal hydroplane owned by Lufthansa, and loaned to GermAE 1938-39. The plane carried pilot, navigator, mechanic, and photographer. *See also* **The *Passat***.

Mount Boreas. 77°29' S, 161°06' E. A prominent peak, rising to 2180 m (the New Zealanders say 2400 m), between Mount Aeolus and Mount Dido, in the Olympus Range of Victoria Land. Named by VUWAE 1958-59, for the Greek mythological figure. US-ACAN accepted the name in 1964.

Boreas Nunatak. 71°18' S, 3°57' W. Rising to 220 m, 1.3 km SW of Passat Nunatak, at the mouth of Schytt Glacier, S of the Jelbart Ice Shelf, between the Princess Martha Coast and Maudheimvidda, in Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as simply Boreas, for the *Boreas*. US-ACAN accepted the name Boreas Nunatak in 1947. The Norwegians call it Boreas. This feature was surveyed by NBSAE 1949-52.

Boreas Peak. 69°38' S, 68°20' W. A nunatak, rising to 670 m, on the NW side of the terminus of Eureka Glacier, at George VI Sound, on the Rymill Coast of Palmer Land, on the W coast of the Antarctic Peninsula. The best ramp for the approach to Eureka Glacier is normally to be found close to this nunatak. Surveyed by BAS, 1970-73. In association with other features in this area that were named for different winds, this one was named by UK-APC on Dec. 8, 1977, for Boreas, the north wind of the Ancient Greeks. US-ACAN accepted the name. It appears in the 1980 British gazetteer.

Boree Islands. 67°41' S, 45°20' E. Two small islands, about 3 km (the Australians say 5 km) W of Point Widdows, in Enderby Land. Plotted by Australian cartographers from 1956 ANARE aerial photos. Named by ANCA for the native Australian acacia tree, the boree. US-ACAN accepted the name in 1965.

Borg Bastion. 78°10' S, 162°29' E. A prominent summit, rising to 3730 m, on Johns Hopkins Ridge, 2.7 km NW of Mount Rucker, in the Royal Society Range, in Victoria Land. Named by US-ACAN in 1995, for geologist Scott G. Borg, who conducted field investigations in Antarctica, 1978-94. From 1992 onwards he was program manager for Polar Earth Sciences, with the NSF's Office of Polar Programs.

Borg Island. 66°58' S, 57°35' E. Between 1.6 and 2 km long, in the E part of the Øygarden Group. Photographed by LCE 1936-37, and mapped in 1946 by Norwegian cartographers using these photos. They named it Borgøy (i.e., "castle island"). ANCA accepted the name Borg Island, on Feb. 18, 1958, and US-ACAN followed suit in 1961.

Borg Massif. 72°45' S, 3°30' W. A spectacular mountain massif, about 50 km long, lying along the NW side of Penck Trough, in the easternmost part of Maudheimvidda, in Queen Maud Land. It has summits rising to over 2770 m, the

summits of the massif being divided into 3 rough groups by the ice-filled Raudberg Valley and Frostlendet Valley, which trend northeastward through the massif. Discovered and photographed aerially during GermAE 1938-39, and plotted (incorrectly) from these photos. Mapped more accurately by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Borgmassivet (i.e., "the castle massif"), in association with Borg Mountain, its most prominent feature. US-ACAN accepted the translated name Borg Massif in 1962.

Borg Mountain. 72°32' S, 3°30' W. Also called Borgen. Large, flattish, and ice-topped, with many exposed rock cliffs, it is the northernmost mountain area of the Borg Massif (it is also the most prominent feature on that massif), and is actually part of the Ritscher Upland, in New Schwabenland, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Borga (i.e., "the castle"). US-ACAN accepted the name Borg Mountain in 1962.

Borga *see* **Borg Mountain**

Borga Massif *see* **Borg Massif**

Borga Station. 72°58' S, 3°48' W. A small South African research camp (field base) on Ahlmann Ridge, in the Borg Massif of Queen Maud Land. It was completed on May 6, 1969, for summer traverse parties. However, 4 men did winter over in 1969, led by mechanic Wilf Hodsdon. The other three were Anton Aucamp and Leon Wolmarans (geologists), and radioman Chris B. Muir. Due to adverse weather conditions, it was not occupied in the winter of 1970. **1971 winter**: Andy W.W. Paterson (leader). **1972 winter**: W.J.H. "Hampie" Venter (leader). **1973 winter**: Rudi Seveik (leader). **1974 winter**: Rudi Seveik (leader). **1975 winter**: Hennie D. Barnard (leader). The station was closed after the 1975 winter (*see also* **Grunehogna**).

Bahía Borge *see* **Borge Bay**

Punta Borge *see* **Borge Point**

Borge, Hans Engelbert. b. Oct. 5, 1873, Tønsberg, Norway. He wnt to sea, and in 1905 married Karen Margrethe, and they proceeded to have a family in Kristiania. He became a captain, and was skipper of the *Hvalen*, in the South Shetlands for the 1910-11 whaling season, and of the *Polynesia*, in the South Shetlands in 1913-14. In 1914-15 he was surveying Mikkelsen Harbor, in Trinity Island. In the 1920s he was manager of Borges Skibsrederei in Tønsberg, and a little later of the Falkland Whaling Company. He also had interest in Tønsbergs Hvalfangeri, and in the Anglo-Norse Company, and for the latter was manager of their whaler *Anglo-Norse*, in Antarctic waters in 1927-28. Even later he was Norwegian consul. He died in 1946.

Borge Bay. 60°43' S, 45°37' W. A small bay between Balin Point and Berntsen Point, on the E coast of Signy Island, in the South Orkneys. Charted in 1912-13 by Petter Sørlle, and in 1913-14 by Hans Borge. It (or, perhaps, at least part of it) appears as Queen Bay, or Queen's Bay, on Sørlle's chart of 1913, and also on a British chart of 1916. It was also occasionally known as Factory Bay and Middleton Harbor. In the 1920s, the Norwegian whaling station was in this area, at Factory Cove (q.v.), which is the SE arm of the bay. In 1927, the Discovery Investigations conducted a sketch survey of the S part of this bay, and the bay appears as "Queens Bay or Borge Bay" on their 1929 chart. It appears as Bruce Bukt (i.e., "Bruce bay") on Sørlle's 1930 chart, named after William Speirs Bruce. This was a name much used by the Norwegian whalers of the 1920s, and was often translated as Bruce Harbor. It appears again on a 1933 British chart as Queen Bay, or Queen's Bay, but in Jan. 1933, was re-surveyed by the DI, and it appears on their 1934 chart as Borge Bay. Jimmy Marr, in 1935, referred to it as Borge Harbour. In 1947 Signy Island Station was built here. The bay appears on a 1947 Argentine chart as Bahía Borge, and that was the name accepted by the 1991 Argentine gazetteer. On Sept. 8, 1953, after years of uncertainty as to what really constituted Borge Bay and what constituted Queen's Bay, UK-APC accepted the name Borge Bay for the whole bay, and did away with the name Queen's Bay. This new situation appears in the 1955 British gazetteer, and US-ACAN followed suit in 1956 (after rejecting the name Borge Harbor). It was further surveyed by RN Hydrographic Survey units on the *Burghead Bay*, in 1954-55, and the *Protector*, in 1964-65.

Borge Harbor *see* **Borge Bay**

Borge Harbour *see* **Factory Cove**

Borge Point. 63°54' S, 60°45' W. The end of a peninsula, average height 360 m above sea level, which projects toward the S, and which forms the SE entrance point of Mikkelsen Harbor, Trinity Island, in the Palmer Archipelago. Charted by Hans Borge, in 1913-14, during his survey of the harbor, and named by him for himself. It appears on his chart of 1915. Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit later that year. It appears on a British chart of 1961. It appears in the 1991 Argentine gazetteer as Punta Borge. The Chileans call it Punta Fuenzalida, for Prof. Humberto Fuenzalida Villegas (1904-1966), geologist at the University of Chile, the first Chilean representaive to SCAR.

Borgebotnen. 74°23' S, 9°41' W. A corrie in the S part of Milorgfjella, in the N portion of the Heimefront Range, in the S part of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for World War II Resistance leader Ole Borge (1916-1995), a lawyer, and one of the leading lights in the Milorg organization.

Borgehavna *see* **Factory Cove**

Borgen *see* **Borg Mountain**

Bahía Börgen *see* **Börgen Bay**

Baie (de) Börgen *see* **Börgen Bay**

Borgen, Arne. Son of Johan Carlson Borgen. Both father and son were gunners on Onassis's whaler *Olympic Challenger* in the 1950s. Johan Carlson, "Cap'n John," as they called him, began as a gunner in 1931, and by 1957 was reputed to have killed 5100 whales.

Börgen Bay. 64°45' S, 63°30' W. An indentation in the SE coast of Anvers Island, 6 km wide, close W of Bay Point, between that point and Canty Point, N of the Neumayer Channel, in the Palmer Archipelago. Discovered and roughly charted on Feb. 8, 1898, by BelgAE 1897-99, and named by de Gerlache as Baie Börgen, or Baie de Börgen, for German astronomer Carl Nicolay Jensen Börgen (1843-1909), then director of the Marinobservatorium in Wilhelmshaven, who advised Danco on observations to be made during the expedition. Börgen was also a member of the German North Pole Expedition of 1869-70. It appears as Börgen Bay on Frederick Cook's 1900 English-language chart of the Belgian expedition, and it appears again on British charts of 1901 and 1947. In differing versions of all these charts it also appears as Borgen Bay (i.e., without the accent). Nordenskjöld called it Börgen Bucht or Börgens Bukt (both of which mean the same thing). The Argentines had been calling it Bahía Börgen since before 1908, it appears as such on a 1953 Argentine chart, and that was the name accepted by the Argentines gazetteer of 1970, and also by the 1974 Chilean gazetteer. UK-APC accepted the name Börgen Bay on Sept. 8, 1953. It was surveyed by Fids from the Arthur Harbour station in 1955. After rejecting the name William Bay (in association with Mount William), US-ACAN accepted the name Börgen Bay in 1956.

Börgen Bucht *see* **Börgen Bay**

Borgen Mountains *see* **Borg Massif**

Mount Borgesen *see* **Mount Borgeson**

Mount Borgeson. 72°12' S, 99°00' W. Also seen spelled (erroneously; the name is Swedish) as Borgesen. A peak, 8 km SSE of Smith Peak, in the Walker Mountains of Thurston Island. First delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1961, for Warren Thomas Borgeson (b. Aug. 1924, Vernon, ND), topographic engineer here in Feb. 1960, with the USN Bellingshausen Sea Expedition. He was later much involved in the space projects. Originally plotted in 72°07' S, 99°10' W, it has since been replotted. The Russians have it in 72°18' S, 98°48' W.

Borggarden *see* **Borggarden Valley**

Borggarden Valley. 72°34' S, 3°48' W. A broad, ice-filled valley, about 16 km long, between (on the one hand) Borg Mountain and (on the other) Veten Mountain and Høgskavlen Mountain, in the NW part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Borggarden (i.e., "the castle courtyard"). US-ACAN accepted the name Borggarden Valley in 1966.

Borghallbrotet. 72°22' S, 3°18' W. An icefall on the S side of Viddalen Valley, between the Borg Massif and Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Named by

the Norwegians ["castle slope ridge" (sic)]. The word "brot" signifies "broken."

Borghallet. 72°25' S, 3°30' W. A gently sloping plain (the Norwegians describe it as an icefall) with an area of 100 sq miles, N of Borg Mountain, on the N side of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Borghallet (i.e., "the castle slope"). US-ACAN accepted the name without modification, in 1966.

Borgmassivet *see* **Borg Massif**

Borgøy *see* **Borg Island**

Mount Borgstrom. 74°16' S, 162°53' E. Rising to 2610 m, 3 km SE of Mount Meister, on Nash Ridge, in the Eisenhower Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1955 and 1963. Named by US-ACAN in 1968, for Cdr. (later Capt.) Charles Olaf Borgstrom, Jr. (b. June 23, 1930, Arlington, Mass. d. July 2, 2001, Punta Gorda, Fla.), USN, veteran of Korea and Vietnam, and VX-6 air operations officer during OpDF 66 (i.e., 1965-66).

Islote Bories *see* **Avian Island**

Grupo Comandante Bories *see* **Paul Islands**

The *Boris Davydov*. Russian ship named for the Russian hydrographer (*see* **Cape Davydov**), which took part in SovAE 1967-69 (Capt. Boris Nikolayevich Mikhaylov).

Boris Island. 62°29' S, 59°39' W. In the N part of Iquique Cove, Greenwich Island, in the South Shetlands. Named by the Chileans, it appears on one of their charts of 1998. UK-APC accepted the name on May 11, 2005. The British were the latest to replot this island, in late 2008.

The *Boris Petrov* *see* **The *Akademik Boris Petrov***

Borkowski, Joe *see* **The *Nathaniel B. Palmer***

Mount Borland. 74°25' S, 67°45' E. A large, gently-domed mountain, 8 km S of Mount Twigg, near the head of (i.e., at the S end of) the Lambert Glacier. Discovered aerially by Flying Officer John Alex Seaton, RAAF, on a Nov. 1956 photographic flight for ANARE, and named by ANCA on July 22, 1959, for Raymond Alexander "Ray" Borland (b. 1925), meteorologist at Heard Island for the winter of 1952, and at Mawson Station in 1958. US-ACAN accepted the name in 1961.

Cape Borley. 65°56' S, 55°10' E. An ice-covered cape protruding slightly from the coast of Enderby Land between Cape Close and Cape Boothby, or midway between (on the one hand) Cape Batterbee and Proclamation Island, and (on the other) Magnet Bay, and overlooked by the Napier Mountains. Discovered on Jan. 12, 1930 by BANZARE, and named by Mawson for one of the pioneers of modern oceanography, John Oliver Borley (b. Sept. 12, 1872. d. Dec. 30, 1938), a member of the Discovery Committee (q.v.), who helped BANZARE acquire the *Discovery* as their ship. US-ACAN accepted the name in 1947, and ANCA followed suit.

La Borne *see under* **L**

Bornmann, Robert Clare "Bob." b. June 29, 1931, Pittsburgh, Pa., but from the age of four raised in Charleston, W. Va., son of oil company chartered accountant John Arthur "Art" Bornmann and his wife Iona. After Harvard and the University of Pennsylvania Medical School, he did a year's internship at Henry Ford Hospital in Detroit, then joined the USNR as a surgeon lieutenant, volunteering for duty in Antarctica, taking over as military leader of Hallett Station from Juan Tur on Jan. 16, 1958. In turn, Albert Bridgeman took over from him. Bornmann joined the regular Navy, and retired in 1985 as a captain, after spending almost three years on duty in England, and also being with the office of the Oceanographer of the U.S. Navy. He later lived in Reston, Va.

Bornmann Glacier. 72°20' S, 170°13' E. Flows from the W side of Hallett Peninsula, 1.5 km S of Seabee Hook, and forms a short floating ice tongue on the shore of Edisto Inlet, 1.5 km S of Hallett Station, and on the S side of Shear Cliff. Named by NZGSAE 1957-58 for Bob Bornmann. It appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1962.

Borns Glacier. 77°47' S, 162°01' E. A small glacier just W of Mount Coates, in the Taylor Valley, it flows N from the Kukri Hills of Victoria Land. Charted by BAE 1910-13. Named by US-ACAN in 1964, for Harold William Borns, Jr., professor of geology at Maine University, a USARP geologist here in 1960-61. NZ-APC accepted the name on July 16, 1964.

Mount Borodin. 71°38' S, 72°38' W. A mainly ice-covered mountain, rising to 695 m (so say the Americans; originally it was measured at about 250 m, but today the British say 350 m), with a rock outcrop on the E side, 11 km NNW of Gluck Peak, N of Boccherini Inlet, in the SW part of Alexander Island. A number of peaks in this general vicinity were photographed aerially in Dec. 1947, by RARE 1947-48, and first appear on maps produced by that expedition. Whether this one appears on those maps or not, it certainly appears on their photos, and was the one mapped by Searle of the FIDS, working from the RARE photos in 1959-60. He plotted it in 71°32°S, 72°41' W. Named (with those coordinates) by UK-APC on March 2, 1961, for Russian composer, Alexander Porfir'yevich Borodin (1833-1887). US-ACAN accepted the name later that year, and it appears on a 1962 U.S. Hydrographic Office chart. The coordinates were corrected from 1973 U.S. Landsat images, and, with the new coordinates, the feature appears in the 1977 British gazetteer. US-ACAN plots this feature in 71°36' S, 72°38' W.

Borodin Mountain *see* **Mount Borodin**

Borodino Island *see* **Smith Island**

Borovan Knoll. 63°55' S, 59°29' W. Rising to 878 m on the W coast of Lindblad Cove, 1.85 km ESE of Dragor Hill, and 3.88 km SSE of Almond Point (which is formed by an offshoot of the hill), on Trinity Peninsula. Mapped by the Germans and British in 1996, and named by the Bulgarians on June 3, 2010, for the settlement of Borovan in northwestern Bulgaria.

Borowski Peak. 80°11' S, 159°13' E. A small, but distinctive peak, rising to 1176 m, 9 km SW of Rand Peak, in the Nebraska Peaks, in the Britannia Range of Victoria Land. Named by US-ACAN in 2000, for Daniel Borowski, of the Alfred Wegener Institute in Germany, a member of the USARP geophysical party with the Ross Ice Shelf Project, 1974-75. NZ-APC accepted the name on Feb. 20, 2001. Dr. Borowski is an authority on the Antarctic Circumpolar Current.

Terrasa Borozdchataja. 73°07' S, 61°15' E. A slope, in the form of a terrace, due E of Humphreys Ridge, in the Prince Charles Mountains. Named by the Russians.

Borradaile Island. 66°35' S, 162°45' E. One of the Balleny Islands, 3 km long, 1.5 km wide, and lying about 8 km southward of the SE extremity of Young Island in the same group. Discovered in Feb. 1839 by Balleny, who named it for William Borradaile (1787-1844; son of Richardson Borradaile), fur merchant and shipowner of 34 Fenchurch Street, London, who teamed with Charles Enderby in sending out the expedition. US-ACAN accepted the name in 1947, and it appears in the 1958 NZ gazetteer.

Valle Borrascoso *see* **Windy Valley**

Borrello Island. 66°19' S, 110°22' E. A small island off the W side of Hollin Island, in the Windmill Islands. Delineated from air photos taken during OpHJ 1946-47. Named by US-ACAN in 1963, for Sebastian Ronald Borrello (b. Sept. 1935), then a recent graduate of Syracuse, and geomagnetician at Wilkes Station in 1958. He later worked for Texas Instruments, and wrote *Gravity Decoded*. ANCA accepted the name.

Canal Borrowman. 64°19' S, 62°55' W. A marine channel between Eta Island to the N, and Omega Island to the S, in the Melchior Islands, in the middle of Dallmann Bay, in the Palmer Archipelago. Dallmann's expedition of 1873-74, which discovered the Melchior Islands, did not discover this channel, and one can hardly wonder at this considering FrAE 1903-05 thought that Eta Island and Omega Island were one big island (they called it Île Melchior). The Discovery Investigations, in 1927, conducted an incomplete survey of the area. Named by the Chileans for Capitán de navío Carlos Borrowman Sanhueza, leader of ChilAE 1970-71. In 1973 he was director of the Chilean naval school. The Argentines call it Canal Murature, after the *Murature*.

Borshchevskijhalvøya. 67°50' S, 45°00' E. A peninsula, about 42 km wide, E of Carnebreen, on the Prince Olav Coast, at the E edge of Queen Maud Land. Named by the Russians as Poluostrov Borschevskogo, for Russian geologist Yu. A. Borshchevskiy. Translated by the Norwegians.

Poluostrov Borshchevskogo *see* **Borshchevskijhalvøya**

Boruta Point. 64°52' S, 62°51' W. A promontory at the NW entrance to Leith Cove, at Paradise Harbor, on the Danco Cost, on the W coast of Graham Land. Named by the Poles on Sept. 1, 1999, for Jan Boruta, skipper of the *Jantar* during PolAE 1984-85.

Gora Borzova. 67°37' S, 98°53' E. A nunatak, SW of Mount Garan, in Wilkes Land. Named by the Russians.

Boschert Glacier. 74°43' S, 111°30' W. To the SE of Hayden Peak, flowing SW from Bear Peninsula into the Dotson Ice Shelf, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from USN air photos taken in 1966. Named by US-ACAN in 1977, for Ralph G. Boschert, USGS cartographer, who wintered-over at Pole Station in 1975, as a member of the USGS satellite surveying team.

Nunatak Bosicio. 66°11' S, 61°31' W. One of the many nunataks on the Jason Peninsula named by the Argentinians.

Bosner Island. 66°27' S, 110°36' E. A rocky island, about 550 m long, about 185 m NW of Boffa Island, and 0.8 km E of Browning Peninsula, in the S part of the Windmill Islands. Plotted from air photos taken in 1947 during OpHJ 1946-47, and in 1948 during OpW 1947-48. Named by US-ACAN in 1956, as Bosner Rock, for Paul Bosner, photographer on OpW. US-ACAN later redefined it, and ANCA accepted the name Bosner Island, on July 4, 1961.

Bosner Rock *see* **Bosner Island**

Boss, John Edward. b. March 9, 1919, Seattle, son of English immigrant steam engineer (later a petroleum salesman) John Boss and his New York wife, Frances Beatrice Carter. He went to sea, and was a replacement sailor on the *North Star* for the second half of USAS 1939-41. He died on Sept. 25, 1993, in Creswell, Oreg.

Boss Peak. 71°52' S, 166°15' E. An isolated black peak, rising to 2170 m, on the E side of the terminus of Jutland Glacier, 13 km NNE of Thomson Peak, and overlooking the watersheds of Tucker Glacier and Lillie Glacier, in the NW part of the Victory Mountains of Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for 3 reasons — its resemblance to the boss on a shield, for its dominance in the area, and with reference to Shackleton's nickname. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit later that year.

Bosse Nunatak. 72°08' S, 65°22' E. A small nunatak in an area of disturbed ice, about 30 km (the Australians say about 43 km) W of Mount Izabelle, in the Prince Charles Mountains. Discovered by John Manning, surveyor with the ANARE Prince Charles Mountains Survey Party of 1971. Named by ANCA for Howard E. Bosse, helicopter pilot with the survey party. US-ACAN accepted the name in 1973.

Bostelmann, Robert Walter "Bob." b. Aug. 9, 1945. BAS veterinary surgeon in charge of the 150 huskies, and acting medical officer, during the winter of 1973 at Base E. In 1975, in Cambridge, he married Susan Fison. In 1977 he was in Darwin, Australia, but he later practiced as a vet in Staffordshire.

Boston, George Duncan. Known as Duncan. b. 1933, Wakefield, Yorks, son of Leonard Boston and his wife Lilian Fordham. He joined FIDS in 1957, as a general assistant and mountain climber, and wintered-over as base leader at Base O (Danco Island) in 1958.

The Boston Expedition. Not an expedition as such, but rather 3 Boston vessels in the South Shetlands together during the summer of 1820-21. **Aug. 19, 1820**: The *O'Cain* sailed from Boston, captained by Jonathan Winship. **Sept. 23, 1820**: The other two ships, the *Esther*, commanded by F.H. Low, and the *Emerald*, commanded by John G. Scott, left Boston. They did belong together. **Dec. 25, 1820**: The *O'Cain* lost a man. **March 7, 1821**: The *Esther* and the *Emerald* saved the crew of the *Venus* when she was wrecked. The *Esther* and the *Emerald* collected 9000 sealskins between them and sailed for Chile, where the *Emerald* was sold. **March 18, 1821**: The *O'Cain* left Antarctica with 12,000 sealskins, in company with a British ship, the *King George*. **June 8, 1821**: The *O'Cain* arrived in Boston, also with minerals, stones, and shells.

Bostwick, William *see* **USEE 1838-42**

Bosumschneefeld. 73°51' S, 163°42' E. A snow field in Victoria Land. Named by the Germans.

Bosun Island. 69°42' S, 73°52' E. A small island, with 3 outliers, in Sandefjord Bay, about 20 km WNW of Mount Caroline Mikkelsen. Plotted in 1946 by Norwegian cartographers from aerial photos taken during LCE 1936-37, and named by them as Ystøy (i.e., "outer island"). In Jan.-March 1968, the island was visited several times by the ANARE party off the *Nella Dan*, led by Don Styles. Named by ANCA on Oct. 22, 1968, for the bosun of that ship, who helped in the sounding of Sandefjord Bay.

Bahía Botánica *see* **[1]Botany Bay**

[1]Botany Bay. 63°41' S, 57°53' W. A small bay between Church Point and Camp Hill, on the SE coast of Trinity Peninsula, directly to the N of Red Island, on the N side of Prince Gustav Channel. Surveyed by Fids from Base D in Dec. 1946, and named by UK-APC on Nov. 21, 1949, for the fossil plants collected here. It appears as such on a British chart of 1949. It appears on a Chilean chart of 1951, and on an Argentine chart of 1957, both times as Bahía Botánica (which is a simple translation). US-ACAN accepted the name Botany Bay in 1952, and it appears as such in the British gazetteer of 1955. It appears as Bahía Botánica in the Chilean gazetteer of 1974 and the Argentine gazetteer of 1993.

[2]Botany Bay. 77°00' S, 162°35' E. A small bight on the S coast of Granite Harbor, between Cape Geology and Discovery Bluff, in Victoria Land. Mapped by the Western Geological Party of BAE 1910-13, which explored the area of Granite Harbor in 1911-12, and named at that time by Grif Taylor and Frank Debenham (both Australians on that expedition), after Botany Bay, New South Wales. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name.

Botany Peak *see* **Lichen Peak**

Botany Point. 62°05' S, 58°19' W. A small rocky promontory S of Professor Glacier, and W of Tern Nunatak, at Martel Inlet, Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980.

Nos Botev *see* **Botev Point**

Botev Peak. 62°45' S, 60°19' W. Rising to about 370 m, in the S extremity of Veleka Ridge, 1.4 km S of the summit of that ridge, 4.3 km WSW of Yambol Peak, and 9.3 km WSW of Samuel Point, overlooking Tarnovo Ice Piedmont to the E and NE, Botev Point to the S, and Barnard Point 1.55 km to the WNW, at the S extremity of Rozhen Peninsula, in the Tangra Mountains, in the southeasternmost extremity of Livingston Island, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on Feb. 17, 2004, in association with Botev Point.

Botev Point. 62°46' S, 60°19' W. The S extremity of Rozhen Peninsula, and therefore also of Livingston Island, formed by an offshoot of Veleka Ridge, 1.55 km ESE of Barnard Point, and 9.3 km WSW of Samuel Point, in the South Shetlands. Mapped by the British in 1968. Named by the Bulgarians on March 15, 2002, as Nos Botev (i.e., "Botev point"), for Hristo Botev (1848-1876), poet and leader of the Bulgarian liberation movement.

Bothma, Johannes. b. South Africa. He joined FIDS in 1958, as a meteorologist, and wintered-over at Halley Bay Station in 1959.

Bothy Bay. 62°10' S, 58°59' W. A small bay on the NW side of Fildes Peninsula, on the S coast of King George Island, in the South Shetlands. The entrance is 1.1 km SE of Square End Island, and the bay is backed by a wide beach, with low cliffs on the NE and SW sides. BAS did geological work here in 1975-76. Named by UK-APC on Dec. 8, 1977, for a crude stone hut (bothy), on the shore of the bay, which was evidently built by 19th-century sealers. This bay is listed in the 1980 British gazetteer. US-ACAN accepted the name. It appears on a 1984 Brazilian map of Fildes Peninsula, as Dos Lobos Marinhos. This name does, of course, mean "two Antarctic fur seals," but there is probably a more complex reason behind this Brazilian naming. Originally plotted in 62°09' S, 58°57' W, it was replotted by the UK in late 2008.

Bothy Lake. 60°44' S, 45°40' W. A small lake at the head of Cummings Cove, on the S side of Signy Island, in the South Orkneys. BAS conducted freshwater biological studies here from 1970. The feature was so named by UK-APC on Dec. 9, 1981, in reference to the refuge hut (bothy) at Cummings Cove. US-ACAN accepted the name.

Gora Botkina *see* **Klakemulen**

Botnebrekka. 72°25' S, 22°13' E. An ice slope with crevasses, about 14 km long, at the top of H.E. Hansenbreen, in the W part of the Sør Rondane Mountains. Named by the Norwegians ("steep slope at the head of the glacier").

Botnfjellet *see* **Botnfjellet Mountain**

Botnfjellet Mountain. 71°45' S, 11°25' E. Rising to 2750 m, it forms the NE and E walls of Livdebotnen Cirque, in the central part of the Humboldt Mountains, in the W part of the Wohlthat Mountains, in the E part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-

60, and from 1958-59 air photos taken during the same long expedition, and named by them as Botnfjellet (i.e., "the cirque mountain"). US-ACAN accepted the name Botnfjellet Mountain in 1970.

Botnfjorden *see* **Cirque Fjord**

Botnhø. 72°04' S, 27°42' E. A peak in the N part of Berrheia, on Balchen Mountain, in the Sør Rondane Mountains. Named by the Norwegians ("cirque heights").

Botnhøgdene. 70°21' S, 38°16' E. Heights on the NE side of Botnnuten, in Queen Maud Land. Named by the Norwegians ("the bottom heights"). Botnnuten is one of its features.

Botnneset *see* **Botnneset Peninsula**

Botnneset Peninsula. 69°44' S, 37°35' E. A large, mainly ice-covered point forming a peninsula between Fletta Bay and Djupvika, along the S (or "bottom") side of Lützow-Holm Bay, on the Prince Harald Coast. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Botnneset ("the bottom ness"). US-ACAN accepted the name Botnneset Peninsula in 1968.

Botnnuten. 70°24' S, 38°01' E. An isolated rock peak, or nunatak, rising to 1460 m, S of Havsbotn, in the heights the Norwegians call Botnhøgdene, 35 km SW of Shirase Glacier, in Queen Maud Land. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who so named it ("the bottom peak") because it is the southernmost peak in the immediate vicinity, and also in association with Havsbotn. US-ACAN accepted the name without modification, in 1962.

Botnryggen. 68°49' S, 90°34' W. A mountain ridge, mainly ice- and snow-covered, running northeastward from the S part of Lars Christensen Peak, in the NE part of Peter I Island. Named by the Norwegians ("ryggen" means "ridge"), in association with nearby Austbotnen.

Islas Botones *see* **The Buttons**

Böttcher, Fritz. Able seaman who joined the *Deutschland* on Dec. 10, 1911, at South Georgia, just in time to go Antarctica on GermAE 1911-12.

Bottle-nosed whales *see* **Beaked whales**

Bottom ice *see* **Anchor ice**

Bottomley, Alec. b. Yorkshire. BAS meteorological assistant who wintered-over at Base B in 1963 and at Base T in 1964. He was back in Antarctica, wintering-over at Base E as a diesel electric mechanic in 1966, and then at Base T in 1967, as base leader that winter.

Bottrill Head. 67°42' S, 66°57' W. A rugged headland on the E side of Bourgeois Fjord, it forms the N entrance point of Dogs Leg Fjord, on the Fallières Coast, on the W coast of Graham Land. Surveyed in 1936 by BGLE 1934-37. Resurveyed by Fids from Base E in 1948, and named by them for Harold Bottrill (1895-1948), chairman of the board of directors (and later general manager) of Maclean and Stapledon, shipping agents of Montevideo, who was of assistance to BGLE and also to FIDS between 1943 and 1948. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. By 1978 the Argentines were calling it Cabo Garay, for Pedro Garay (*see* **Deaths**, 1958).

The *Bouchard*. Argentine patrol ship, sister ship of the *Seaver*, she was built in 1938, by Hansen & Puccini, of Buenos Aires, and named for Hipólito Bouchard. Along with the *Fournier*, the *Parker*, the *Spiro*, and the *Robinson*, she took part in two successive expeditions from Ushuaia, as a patrol vessel, to study ice conditions in the Drake Passage and the northern part of the Antarctic Peninsula: Oct.-Nov. 1947 (under the command of Capt. Emilio O. Morroni, and late 1948 (Captain Elbio Castelo).

Estrecho Bouchard *see* **Admiralty Sound**

Bouchard, Hipólito. b. 1783. A Marine lieutenant colonel, he was captain of the *Halcón*, in 1815, when that vessel, and 3 others, got blown off course to 65°S (*see* **Brown, Guillermo**). He fought in the Argentine navy, under General San Martín, and died in 1837.

Bouchard Refugio *see* **Groussac Refugio**

Bouchet, Guillaume. b. March 22, 1816, Bordeaux. Ordinary seaman on the *Zélée* during FrAE 1837-40.

Bouchet, Joachim. b. Sept. 13, 1815, Bordeaux. Junior seaman on the *Astrolabe* during FrAE 1837-40.

Boucot Plateau. 82°25' S, 155°40' E. A small, ice-covered plateau, N of Mount Macpherson, W of Wellman Cliffs, and S of McKay Cliffs, in the Geologists Range. Plotted by USGS from their own tellurometer surveys of 1961-62, and also from USN air photos taken in 1960. Named by US-ACAN in 1965, for Arthur J. Boucot, geologist at Byrd Station, 1964-65, who, that season, was also in the Horlick Mountains. NZ-APC accepted the name on Nov. 16, 1965. ANCA also accepted the name.

Île Boudet *see* **Boudet Island**

Islote Boudet *see* **Boudet Island**

Boudet Island. 65°11' S, 64°10' W. The largest of the several small islands off the S end of Petermann Island, in the Penola Strait, in the Wilhelm Archipelago, off the Graham Coast, on the W coast of Graham Land. Discovered and roughly charted by FrAE 1908-10, and named by Charcot as Île Boudet, for Jean Boudet, the French consul in Rio, who assisted the expedition. It appears on the expedition maps. It appears as Boudet Islet on a 1943 U.S. Hydrographic Office chart, and as Islote Boudet on a 1953 Argentine chart. It was photographed aerially by FIDASE in 1956-57. UK-APC accepted the name Boudet Island, on July 7, 1959, and it appears on a 1960 British chart. US-ACAN accepted that name in 1971.

Boudet Islet *see* **Boudet Island**

Boudette Peaks. 76°50' S, 126°02' W. Twin peaks, rising to 2810 m and 2815 m resp., 1.5 km WSW of Lavris Peak, in the N portion of Mount Hartigan, in the Executive Committee Range of Marie Byrd Land. Lichens are to be found here. Mapped by USGS from ground surveys, and USN air photos taken between 1958 and 1960. Named by US-ACAN in 1962, for Eugene L. Boudette (b. Aug. 24, 1926, Claremont, Mass. d. Nov. 10, 2007, Concord, Mass.), geologist who, after spending some time in the Arctic, was with USGS, 1953-85, during which time he was a member of the Marie Byrd Land Traverse Party of 1959-60. He was later involved in several Apollo moonshots, and from 1986 to 2000 was New Hampshire's state geologist.

Baie Boué de Lapeyrère *see* **Lapeyrère Bay**

La Bouée *see* **La Borne** (under **L**)

The *Le Boulard* *see under* **L**

Punta Boulder *see* **Boulder Point**

Boulder Cones. 77°48' S, 166°42' E. A group of cones, 1.4 km SW of Castle Rock, on Hut Point Peninsula, Ross Island. Named descriptively by Frank Debenham, during BAE 1910-13, who made a plane table survey of the peninsula in 1912. NZ-APC accepted the name on June 19, 2000, and US-ACAN followed suit on Oct. 31, 2000.

Boulder Hill. 68°36' S, 78°30' E. A big hill, rising to 158 m, overlooking the E end of Krok Lake, it is probably the highest isolated rock feature in the Vestfold Hills. Named by ANCA on July 26, 1983. An ANARE survey station was established here in Jan. 1979, and named NM/S 261 (signified by a brass pin in the rock).

Boulder Lake. 69°25' S, 76°23' E. A frozen lake, under an overhang of plateau ice, about 2.5 km S of Law-Racovitza Station, in the Larsemann Hills. So named by the 1986-87 ANARE field party here, because of the rock boulders marking the E and W shores of the lake. ANCA accepted the name on Nov. 24, 1987.

Boulder Point. 68°11' S, 67°00' W. The S extremity of Stonington Island, close off the Fallières Coast, on the W coast of Graham Land. Surveyed in 1940 by USAS 1939-41 (it is shown on Glenn Dyer's map of 1941), and again in 1946-47 by FIDS, and named by the latter for a prominent granite boulder here. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. It appears on a British chart of 1956. It appears on a 1969 Chilean chart as Punta Boulder.

Boulder Rock. 71°19' S, 170°13' E. Along the W side of Adare Peninsula, immediately S of Ridley Beach, in northern Victoria Land. Surveyed, charted, and named in 1911 by Campbell's Northern Party during BAE 1910-13. It appears in the 1958 NZ gazetteer. US-ACAN accepted the name.

Boulder Valley. 63°59' S, 57°35' W. A wide, U-shaped valley, about 2.4 km long, between Terrapin Hill and Blancmange Hill, on James Ross Island. So named by UK-APC on Nov. 15, 2006, because of the numerous large boulders lying on the E side of the valley.

Boulderclay Glacier. 74°45' S, 164°00' E. A laterally elongated glacier with an extensive area covered by boulderclay and debris, lying along the Northern Foothills, in Victoria Land. Named descriptively by NZ-APC on Nov. 16, 1989.

Boulding Ridge. 68°02' S, 66°55' W. A ridge running NE-SW at an elevation of about 1015 m, and separating Todd Glacier from McClary Glacier, on the Fallières Coast, on the W coast

of Graham Land. Surveyed from the ground by BAS personnel from Base E in 1967-69. Named by UK-APC on Nov. 3, 1971, for Richard Andrew "Dick" Boulding (b. Aug. 19, 1944, Dartford, Kent. d. May, 2001, Stockport, Lancs), BAS surveyor who wintered-over at Base E in 1967. US-ACAN accepted the name in 1972.

Islotes Boulier *see* **Rho Islands**

Boulton Peak. 64°06' S, 60°42' W. Rising to about 1250 m, on the SE side of Curtiss Bay, 8 km S of Cape Andreas, on the Davis Coast of Graham Land. Photographed aerially by FIDASE 1956-57, and mapped from these photos by FIDS cartographers in 1959. Named by UK-APC on Sept. 23, 1960, for Matthew Piers Watt Boulton (1821-1894), English inventor, in 1868, of ailerons for lateral control of aircraft. US-ACAN accepted the name later in 1960. It appears on a British chart of 1961.

Bounty Nunatak. 71°37' S, 159°59' E. A high, prominent, massive, largely ice-free nunatak, rising to 2350 m, 6 km SE of Mount Burnham, standing out from the S end of the Daniels Range, in the Usarp Mountains of Oates Land, in Victoria Land. So named by NZGSAE 1963-64 because the party was out of food when it arrived at a cache that had been set up by aircraft near here earlier that season. US-ACAN accepted the name in 1964, and NZ-APC followed suit on Nov. 17, 1964. ANCA also accepted the name.

Bahía Bouquet *see* **Bouquet Bay**

Bouquet Bay. 64°03' S, 62°10' W. Between 8 and 11 km wide, and about the same distance in length, bounded by Davis Island, the W coast of Liège Island, and Pasteur Peninsula (in the NE part of Brabant Island), in the Palmer Archipelago. Roughly charted by Foster in 1829, during the *Chanticleer* Expedition, and named by him as Melville Bay, for Lord Melville (*see* **Melville Highlands**). Re-discovered and re-charted by FrAE 1903-05, and named by Charcot as Baie Bouquet de la Grye, for hydrographic engineer Jean-Jacques-Anatole Bouquet de la Grye (1827-1909), who helped publish the scientific results of the expedition. M. Bouquet de la Grye is perhaps known best for his work in helping to found the autonomous port of La Rochelle. It appears as Bouquet de la Grye Bay on British charts of 1909 and 1948, but UK-APC accepted the shortened name Bouquet Bay on Jan. 28, 1953. US-ACAN followed suit with the British naming, in 1960. The Chileans used to call it Bahía Bouquet de la Grye, but have also accepted a shortened version, Bahía Bouquet, as have the Argentines.

Bahía Bouquet de la Grye *see* **Bouquet Bay**

Baie Bouquet de la Grye *see* **Bouquet Bay**

Bouquet de la Grye Bay *see* **Bouquet Bay**

Bourchier Cove. 62°57' S, 62°33' W. A cove, 2.35 km wide, indenting the NW coast of Smith Island for 860 m between Jirecek Point and Villagra Point, in the South Shetlands. Mapped by the Bulgarians in 2009, and named by them on June 3, 2010, for Bourchier Peak, in Rila Mountain, in southwestern Bulgaria. James Bourchier (1850-1920) was a British journalist and Bulgarian activist.

Fiord Bourgeois *see* **Bourgeois Fjord**

Fiordo Bourgeois *see* **Bourgeois Fjord**

Seno Bourgeois *see* **Bourgeois Fjord**

Bourgeois Fjord. 67°40' S, 67°05' W. An inlet, 50 km long in a NE-SW direction, and between 5 and 8 km wide, between the E sides of Pourquoi Pas Island and Blaiklock Island, in the NE part of Marguerite Bay, it divides the Loubet Coast from the Fallières Coast, on the W coast of Graham Land. Discovered and charted by FrAE 1908-10, and named by Charcot as Fiord Bourgeois, for Colonel (a general from 1912) Joseph-Émile-Robert Bourgeois (1857-1945), director of the Geographic Service of the French Army, and successor in 1908 to Henri Poincaré as chair of astronomy and geodesy at l'École Polytechnique, a post he held until 1929. From 1920 to 1936 he was senator from Haut-Rhin. It appears as "Bourgeois Fd." on a British chart of 1914. The outline of this inlet was more accurately delineated in July-Aug. 1936, by BGLE 1934-37, and it appears on Rymill's 1938 map of that expedition as Bourgeois Fjord. US-ACAN accepted the name Bourgeois Fiord in 1947. The feature was further surveyed by Fids from Base E in 1948-49. It appears as Bourgeois Fjord on a 1951 British chart, UK-APC accepted that spelling on Sept. 8, 1953, and it appears as such in the 1955 British gazetteer. US-ACAN also subsequently accepted this spelling. It appears on a 1947 Chilean chart as Fiordo Bourgeois, but on a 1962 Chilean chart as Seno Bourgeois. From then on the Chileans tended to use the term "seno" rather than "fiordo," a "seno" really implying a small bay or inlet, but not quite an "ensenada." However, it seems that the 1974 Chilean gazetteer accepted Fiordo Bourgeois, as did the 1970 Argentine gazetteer.

Bourgeois Nunataks. 69°54' S, 158°22' E. A group of nunataks, about 19 km SW of Pope Mountain, and about 20 km SW of Governor Mountain, in the Wilson Hills of Oates Land, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for William L. Bourgeois, USN, chief aviation machinist's mate, flight engineer on LC-130 Hercules aircraft during OpDF 67 (i.e., 1966-67) and OpDF 68 (i.e., 1967-68). NZ-APC accepted the name in Nov. 1969, and ANCA followed suit on July 31, 1972.

Bousquet Island. 66°25' S, 110°41' E. About 550 m long, immediately E of Herring Island, in the Windmill Islands. First mapped from air photos taken during OpHJ 1946-47. Carl Eklund named it for Edward A. Bousquet, USN, utilitiesman 2nd class who wintered-over at Wilkes Station in 1957. US-ACAN accepted the name in 1960, and ANCA followed suit on Aug. 27, 2008.

Rocas Boutan *see* **Boutan Rocks**

Boutan Rocks. 64°54' S, 63°10' W. A small group of 5 rocks, rising to an elevation of 5 m above sea level, 2.5 km SW of Bruce Island, NE of Cape Willems, off the Danco Coast, on the W coast of Graham Land. The feature appears on an Argentine chart of 1954, apparently not named. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Louis-Marie-Auguste Boutan (1859-1934), French biologist and pioneer of submarine photography in the last decade of the 19th century. The feature appears on a British chart of 1961. US-ACAN accepted the name in 1965. The Argentines call them Rocas Boutan.

Boutin, Michel-Antoine. b. July 25, 1811, Toulon. Carpenter on the *Astrolabe* during FrAE 1837-40.

The *Bouvet I*. A whale catcher belonging to the factory ship *New Sevilla*, in Antarctic waters in 1930-31, 1931-32, 1932-33, 1933-34, 1934-35, and 1935-36. Her dimensions and history until 1936 are exactly the same as for the *Bouvet III* (q.v.). In 1936-37 she was catching for the *Sourabaya*, and in 1937-38, 1938-39, and 1939-40 for the *Salvestria*. In March 1940, she was requisitioned by the Royal Navy, and served during World War II, being returned to Salvesen's, her owner, in 1945. In 1945-46 she was catching for the *Empire Victory*, and from then until 1961 she continued to work for Salvesen. Between 1961 and 1964 she was laid up at Leith Harbor, in South Georgia, and in Sept. 1964 a heavy snow forced her deck underwater, and she sank at her moorings, along with the *Sabra*, the *Solvra*, the *Sorsra*, the *Southern Paul*, the *Southern Peter*, and the *Sondra*.

The *Bouvet II*. A whale catcher off the coast of Mac. Robertson Land in Jan. 1931, during the 1930-31 whaling season, catching for the *New Sevilla*. Reidar Bjerkø was the gunner. She was back with the *New Sevilla* in 1931-32, 1932-33, 1933-34, 1934-35, and 1935-36.

The *Bouvet III*. A Norwegian whale catcher, 245 gross tons, 85 net tons, 116 feet 2 inches long, 24 feet 2 inches wide, built in 1930 by Smith's Dock, Middlesbrough, and belonging to the factory ship *New Sevilla*, in Antarctic waters in 1930-31. She was off the coast of East Antarctica in Jan. 1931, under the command of Carl Sjövold. She was back in Antarctic waters for the season 1931-32, and in Aug. 1932, along with the *New Sevilla* and the other *Bouvet* catchers, she was bought by Christian Salvesen, of Leith, Edinburgh, and thus became a British whale catcher. She was in Antarctica again in 1932-33, 1933-34, 1934-35, and 1935-36. In the summer of 1936 she was off the coast of Peru, and from the 1936-37 season to the 1939-40 season she was catching for the *Salvestria*. In March 1940 she was requisitioned by the Royal Navy, and returned to Salvesen after the war. Between 1946 and 1949 she was in the Arctic. In 1949 she was sold to the Western Whaling Corporation of Vancouver, and in 1950 sold again, in Vancouver. In 1962 she was sold to the Western Canada Whaling Corporation of Vancouver, and her name was changed to *Westwhale 2*. She was broken up in 1965-66.

The *Bouvet IV*. A 245-ton, 116 foot 2-inch whale catcher built in 1930, by Smith's Dock, in Middlesbrough, for Waalman & Bugge's Sevilla Company, in Tønsberg, Norway. She was in Antarctic waters in 1930-31 and 1931-32, catching

for the *New Sevilla* (q.v.). *See* ***Bouvet III***, for more history. Working for Salvesen's, she was back with the *New Sevilla* every year between the 1932–33 season and the 1939–40 season, and in 1940 was requisitioned by the Royal Navy. In 1946 she was returned to Salvesen's, who promptly sold her to a company in Valparaíso, where her name was changed to the *Indus 7*. In 1962 she was sold again, and became the *Ruiz I*. She was still working in the mid 1980s.

The *Bouvet V*. Whale catcher built in 1930, and owned by the Sevilla Company. She was trapped by pack-ice in the Ross Sea, and sank on March 31, 1931. One man died.

Bouvet Island. Also known as Bouvetøya. Not in Antarctica.

Massif Bouvier *see* **Mount Bouvier**

Mont Bouvier *see* **Mount Bouvier**

Monte Bouvier *see* **Mount Bouvier**

Mount Bouvier. 67°14' S, 68°09' W. A massive, mainly ice-covered massif-type mountain, rising to about 2070 m, immediately N of the head of Stonehouse Bay, in the east-central part of Adelaide Island. Discovered and roughly charted by FrAE 1903–05, and named by Charcot as Pic Bouvier, for Louis-Eugène Bouvier (1856–1944), the French naturalist, and a member of the commission appointed by the Ministre de l'Instruction Publique to publish the scientific results of the expedition. It appears as Bouvier Peak on a British chart of 1908. It was further charted in Jan. 1909, by FrAE 1908–10, and appears on that expedition's charts as Massif Bouvier. However, the name Massif Bouvier was misapplied on the expedition's charts, to what became Mount Reeves, which is actually 8 km to the NE. This would cause cause confusion with the Chileans in 1947, when, on one of their charts that year, it appears erroneously as Monte Bruyn (i.e., what the British and Americans call Mount Reeves). It appears correctly as Mount Bouvier on a British chart of 1914, and on a 1937 French map as Mont Bouvier. Re-surveyed by FIDS between 1948 and 1950. US-ACAN accepted the name Mount Bouvier in 1951, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1961 British chart. It was further surveyed by Fids from Base T in 1961–62. Both the Argentine gazetteer of 1970 and the Chilean gazetteer of 1974 accepted the name Monte Bouvier. There is a 1968 reference to it as Bouvier Massif, and, in the same reference, Bouvier South (referring to the S part).

Pic Bouvier *see* **Mount Bouvier**

Bouvier Massif *see* **Mount Bouvier**

Bouvier Peak *see* **Mount Bouvier**

Bouvier South *see* **Mount Bouvier**

Bouzet, Joseph-Fidèle-Eugène du *see under* **Du Bouzet**

Campo Bove *see* **Italia Valley**

Bove, Giacomo. Italian naval lieutenant who, although he never quite got to Antarctica, did lead an Italian expedition to the continent, or tried to. He was born on April 23, 1852, in the Piemontese town of Maranzana, son of farmer and winemaker Francesco Bove and his wife Antonia Garbarino. He served on various expeditions, including the *Vega* with Nordenskjöld, in an effort to find the Northeast Passage. In 1880 he became involved in the abortive Italian Antarctic Expedition, 1880–82 (q.v.), and on June 7, 1881, married Luisa Bruzzone. Although the Antarctic expedition didn't work out, he did exploring work in South America for the Argentine government. After a bad trip to the Congo in 1885, he committed suicide in Verona on Aug. 9, 1887.

Roca Bóveda *see* **Cove Rock**

Bøving Island. 66°17' S, 110°31' E. A small island in the S part of Newcomb Bay, about 160 m E of McMullin Island, and S of Kilby Island, in the Windmill Islands. Mapped from air photos taken during OpHJ 1946–47. Photographed aerially again by SovAE 1956, and by ANARE in 1956, 1962, and 1963. Named by ANCA on July 29, 1965, for Frants J. Bøving, 3rd officer on the *Thala Dan* in 1965, who assisted in a hydrographic survey in the area. US-ACAN accepted the name in 1970.

Bowden Glacier. 78°08' S, 163°07' E. On the SE flank of Salient Ridge, it flows NE to Blue Glacier, in Victoria Land. Named by NZ-APC in 1994, for Charles Bowden (*see* **Bowden Névé**). US-ACAN accepted the name in 1995.

Bowden Névé. 83°35' S, 165°00' E. A large snow-covered area about 30 km wide, at an elevation of about 1800 m above sea level, southward of Mount Miller, between the Queen Elizabeth Range and the Queen Alexandra Range, near the Beardmore Glacier, in the Queen Maud Mountains. Discovered from Claydon Peak by the NZ Southern Party of BCTAE in 1958, and named by them for Charles Moore Bowden (1886–1972), first chairman of the Ross Sea Committee, which organized the NZ party of BCTAE. Bowden was a cabinet minister with the National Government of NZ, 1949–54, when he retired. A temporary American summer station was established here in 1984–85, and was used for an international conference. NZ-APC accepted the name on May 26, 1960, and US-ACAN followed suit in 1966.

Bowditch Crests. 68°30' S, 65°22' W. A line of precipitous cliffs surmounted by 4 summits, and rising to about 1670 m, overlooking the NW corner of Mobiloil Inlet, on Bermel Peninsula, SW of Periphery Point, on the Bowman Coast, on the E coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 21 and Nov. 23, 1935, and mapped the following year from these photos by U.S. cartographer W.L.G. Joerg. Surveyed from the ground by Fids from Base E in Dec. 1958. Named by UK-APC on Aug. 31, 1962, for Nathaniel Bowditch (1773–1838), U.S. astronomer, and author in 1801 of *The New American Practical Navigator*. US-ACAN accepted the name later in 1962.

Mount Bowen. 75°45' S, 161°03' E. A mountain of stratified sandstone capped by a sharp black peak rising to 1875 m (the New Zealanders say about 1250 m), on the N side of Davis Glacier, and about 10 km south-southwestward of Mount Howard, in the Prince Albert Mountains of Victoria Land. Discovered during BNAE 1901–04, and named by Scott for Charles Christopher Bowen (1830–1917), whose daughter, Gertrude had married a professor of engineering at Canterbury College, in NZ, named Robert J. Scott, who just happened to be a cousin of Scott of the Antarctic. In addition to this, Bowen's brother-in-law was Sir Clements Markham. Bowen was Scott's NZ host during BNAE 1901–04 and BAE 1910–13, and a major supporter. He was knighted in 1910. US-ACAN accepted the name, and NZ-APC followed suit.

Bowen, Peter *see* **USEE 1838–42**

Bowen Cirque. 80°42' S, 23°27' W. A cirque, NNE of Mount Wegener, near the E end of the Read Mountains, in the Shackleton Range. Photographed aerially by USN in 1967, and surveyed by BAS personnel from Halley Bay Station, 1968–71. Named by UK-APC on Jan. 5, 1972, for Norman Levi Bowen (1887-1956), U.S. experimental petrologist who specialized in the phase equilibria of silicate melt systems. US-ACAN accepted the name. It appears in the 1974 British gazetteer.

Mount Bower. 72°37' S, 160°30' E. A prominent mountain, rising to 2610 m, 10 km ENE of Roberts Butte, in the Outback Nunataks of northern Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1964. Named by US-ACAN in 1970, for John R. Bower, ionosphere physicist at Pole Station in 1968.

Bower Canyon *see* **Bowers Canyon**

Bower Hills *see* **Bowers Mountains**

Mount Bowers. 85°00' S, 164°05' E. Rising to 2430 m, 3 km SSE of Mount Buckley, on the W side of the upper Beardmore Glacier (i.e., at the head of that glacier), just to the S of the Queen Alexandra Range. Named by BAE 1910–13 for Henry Bowers. US-ACAN accepted the name in 1966, and NZ-APC followed suit.

Bowers, Henry Robertson. b. July 29, 1883, Westbank, 57 Esplanade, Greenock, Scotland, son of Greenock sailor Capt. Alexander "Alex" Bowers and his Gloucestershire wife Emily. He was named Henry Robertson for his uncle, a Dundee merchant. The family had just got back from Penang when Birdie was born (he was known as Birdie, for his beaky nose). His father, who was a lieutenant in the RNR (dated 1862), and a merchant in Malaya and Burma, left again, and died in Merqui, Burma on April 12, 1887. Birdie and his two sisters, May and Edith, were raised by their mother in Chislehurst, Kent. He was in the Merchant Navy at 16, and from 1905 in the Royal Indian Marine. In 1909 he became a lieutenant, and joined BAE 1910–13 as ship's officer in charge of stores on the *Terra Nova*. Scott chose him for the shore party because of his organizational and navigation abilities. He took part in the "worst journey in the world," along with Wilson and Cherry-Garrard, to Cape Crozier, to collect emperor penguins' eggs, and Scott chose him for the Pole party of 1911. Short (5'4') for an explorer, he was, however, the toughest of the polar party, had a foghorn voice, red hair, and was one of the first 10 men ever to

reach the South Pole. He didn't make it back, dying in the tent with Scott and Wilson on or about March 29, 1912.

Bowers, Richard Alan "Dick." b. June 19, 1928, Harrisburg, Pa., son of railroad electrician Jacob Robert Bowers. After studying engineering at Yale, he moved to New York, enlisted in the U.S. Naval Reserve in 1950, became an officer in the Civil Engineer Corps, and was posted to Quonset Point, RI, which is where he became a volunteer for Operation Deep Freeze. At that point he was a lieutenant (jg), married to Sally Foster (in 1951), and they had two young children. In March 1955 he joined the Seabees at Davisville, RI, and in late Oct. 1955 left Boston on the *Edisto*, bound for Antarctica and OpDF I (1955-56), arriving at McMurdo on Dec. 20, 1955. He led the construction team at McMurdo Sound from the austral summer of 1955-56 through the winter of 1956, and led the party that built Pole Station over the 1956-57 summer season (OpDF II). He was delivered to the Pole area with the first party of Seabees, on Nov. 20, 1956, in the *Que Sera Sera* flown by Gus Shinn. He had sledges, and other equipment, such as a Weasel and 11 dogs. The Weasel broke down and he had to make the 8-mile trip to the Pole by dog-sledge. Paul Siple joined him later and headed up the establishment when it was ready for occupation. On Jan. 4, 1957 Bowers headed back to McMurdo when his job was done. He was the 4th leader (*see* **Amundsen**, **Scott**, and **Dufek**) and the second man by the name of Lt. Bowers to stand at the South Pole (for the list of his party *see* **Seabees** and **South Pole Station**). In Feb. 1957, he left Antarctica, joined the regular Navy, and taught cold weather engineering, led construction of a series of naval air facilities, went back to Washington for 4 years with Naval Personnel, and then went to Oslo as part of NATO. He was at the Naval War College, as a commander, when he went to Vietnam in 1968, retiring from the Navy in 1972. He went to work for Lafayette College, in Pennsylvania, as their physical plant director, and was there for 10 years, before retiring to the mountains of New Hampshire, and becoming involved in energy work. He finally moved to Indianapolis.

Bowers Automatic Weather Station. 85°12' S, 163°24' E. An American AWS at an elevation of 2090 m, in the Transantarctic Mountains. Installed on Jan. 9, 1986, it began operating 2 days later, and ceased to function in Aug. 1986. Named for Birdie Bowers.

Bowers Canyon. 71°00' S, 173°00' E. Also known (erroneously) as Bower Canyon. Submarine feature of the Ross Sea, off northern Victoria Land. By 2004 it had become apparent that this feature does not exist.

Bowers Corner. 79°01' S, 84°21' W. A peak, 14 km SE of Lishness Peak, at the extreme S end of the Sentinel Range, in the Ellsworth Mountains, at the E side of the terminus of Nimitz Glacier, where it bends, or makes a corner (hence the name) on joining Minnesota Glacier. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1959. Named by US-ACAN in 1961, for Dick Bowers.

Bowers Glacier. 72°37' S, 169°03' E. On the W side of Mount Northampton, and E of Elder Glacier, in the Victory Mountains of Victoria Land, it flows northward into Tucker Glacier. Mapped by USGS from ground surveys, and USN air photos taken betwen 1960 and 1962. Named by US-ACAN in 1964, for Chester H. Bowers, meteorologist and senior U.S. representative at Hallett Station in 1962. NZ-APC accepted the name on July 16, 1964.

Bowers Hills *see* **Bowers Mountains**

Bowers Mountains. 71°10' S, 163°15' E. A major and complex mountain system, about 140 km long and 56 km wide, trending N-S, and rising to 2590 m (in Mount Marwick), they form the E flank of Rennick Glacier, in Oates Land, in northern Victoria Land. They are bounded by the coast to the N, by Canham Glacier to the S, and by Lillie Glacier to the east. Slightly lower than Mount Marwick are Mount Ford and Mount Bernstein. When Pennell sighted the seaward (i.e., northern) end in Feb. 1911, from the *Terra Nova*, he called them the Bowers Hills, for Birdie Bowers. The name was also seen (erroneously) as Bower Hills. The mountains were photographed aerially by USN in 1946-47, during OpHJ, and again in 1960-62. In 1962-63, USGS surveyed them from the ground, and then mapped them from all of these efforts. It was only after this mapping that the name was amended by US-ACAN in 1964, to the Bowers Mountains. NZ-APC accepted that name on July 16, 1964, although many post-1964 references are still to the Bowers Hills.

Bowers Peak. 71°45' S, 163°20' E. A high peak, rising to 2140 m, it forms part of the divide between Hunter Glacier and Hoshko Glacier, in the Lanterman Range of the Bowers Mountains, in Oates Land, in Victoria Land. Named by the Northern Party of NZGSAE 1963-64, for Lt. John M. Bowers, Jr., VX-6, who flew support flights for this party. US-ACAN accepted the name in 1964, and NZ-APC followed suit on July 16, 1964.

Bowers Piedmont Glacier. 77°41' S, 164°24' E. About 40 sq miles in area, just southward of New Harbor, along the SW coast of McMurdo Sound, it merges at its S side with Blue Glacier, in Victoria Land. Discovered by BNAE 1901-04, and called Butter Point Piedmont by them. Renamed by Grif Taylor of BAE 1910-13, for Henry Bowers. US-ACAN accepted the name, and it appears in the 1958 NZ gazetteer.

Bowie Crevasse Field. 79°03' S, 84°45' W. A large crevasse field at a break in the slope on Minnesota Glacier, between the Anderson Massif and the SE end of the Bastien Range, in the Ellsworth Mountains. Named by the University of Minnesota Ellsworth Mountains Party of 1962-63, for Glenn E. Bowie, geophysicist with the party. US-ACAN accepted the name in 1964.

Bowin Glacier. 84°53' S, 177°20' E. A tributary glacier, 8 km long, it flows NE between Sullivan Ridge and Fulgham Ridge, to enter Ramsey Glacier. Named by US-ACAN in 1965, for Charles F. "Charlie" Bowin, USN, commissaryman in Antarctica during OpDF 65 and OpDF 66. NZ-APC accepted the name on Nov. 16, 1965.

Bowl Island. 67°09' S, 50°50' E. An island with a bowl-like depression in the center, just S of Crohn Island and Beaver Island, at the head of Amundsen Bay, in Enderby Land. Discovered by a 1956 ANARE airborne field party led by Peter Crohn, and named descriptively by them. US-ACAN accepted the name in 1965.

Bowler, Bryan Anthony. An Army sergeant, mechanic, driver, and cross-country skier, who was seconded to FIDS in 1960, as a general assistant and tractorman, and wintered-over at Base E in 1961 and 1962. He was responsible for the Muskegs.

Bowler, Robert Edward "Bob." b. Oct. 28, 1948, London, son of Robert W. Bowler and his wife Rosina D. Fuller. BAS diesel mechanic who wintered-over at Faraday Station in 1979, at Rothera Station in 1980, and at Halley Bay Station in 1982 and 1983, the last year as base commander. He won the Fuchs Medal in 1989.

Bowler Rocks. 62°21' S, 59°50' W. A group of rocks, 0.8 km SW of Table Island, in the English Strait, in the South Shetlands. ArgAE 1948-49 named one of these rocks as Roca Canal, or Roca Channel, and it appears as such on their 1949 chart. But this was an error (*see* **Channel Rock**). Surveyed in 1967 by an RN Hydrographic Survey unit, and named by UK-APC on Nov. 3, 1971, for David Michael Bowler (b. 1943), surveying recorder on the unit's launch *Nimrod*. US-ACAN accepted the name in 1972. It appears in the 1974 British gazetteer.

Cabo Bowles *see* **Cape Bowles**

Cape Bowles. 61°19' S, 54°05' W. A massive, cliffed cape forming the S tip of Clarence Island, in the South Shetlands. Roughly charted on Feb. 4, 1820, by Bransfield, in the *Williams*, when a landing was made to take formal possession of the island for George IV. The cape was named by Bransfield, for Capt. (later Adm.) William Bowles (1790-1869), RN, commander-in-chief of the British fleet in South America from 1816 to 1820. It appears on various sealing charts of the 1820s (including Powell's, of 1824), and also on Foster's 1829 chart drawn up during the *Chanticleer* Expedition of 1828-31. It was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, and appears in the 1955 British gazetteer and on a British chart of 1962. It appears in the 1970 and 1991 Argentine gazetteers as Cabo Bowles, and, as such, also in the 1974 Chilean gazetteer. The British were the latest to replot this cape, in late 2008.

Hrebet Bowles *see* **Bowles Ridge**

Monte Bowles *see* **[2]Mount Bowles, Samuel Peak**

[1]Mount Bowles *see* **Mount Irving**

[2]Mount Bowles. 62°37' S, 60°12' W. An ice-covered mountain rising to 834 m (the British say about 750 m), between South Bay and Moon Bay, it forms the summit of Bowles Ridge, 5 km N of Mount Friesland, in the E part of Livingston

Island, in the South Shetlands. Roughly charted by Foster in 1829, during the *Chanticleer* Expedition of 1828-31, and named by him for Capt. William Bowles (*see* **Cape Bowles**), with whom Foster surveyed La Plata (in South America), from the *Creole*, in 1819. It appears on a British chart of 1901. It appears as Pic Bowles on Charcot's 1912 map of FrAE 1908-10. It appears as Monte Bowles on a 1947 Chilean chart and a 1954 Argentine chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. US-ACAN accepted the name Mount Bowles in 1952, and UK-APC followed suit on Sept. 8, 1953. It appears as such in the 1955 British gazetteer. It was photographed aerially by FIDASE in 1956-57. The British were the latest to replot this feature, in late 2008.

Pic Bowles *see* **[2]Mount Bowles**

Vrah Zapaden Bowles *see* **Bowles West Peak**

Bowles Creek. 77°37' S, 163°03' E. A glacial meltwater distributary stream, 0.4 km long, which flows E from Maria Creek into the SW end of Lake Fryxell, close W of Green Lake, in the Taylor Valley of Victoria Land. Named by Diane McKnight, for USGS hydrologist Elizabeth C. Bowles, a member of her hydrological field team here in 1987-88. US-ACAN accepted the name in 1992.

Bowles Ridge. 62°37' S, 60°10' W. A ridge, 1.5 km wide, extending 6.5 km in an E-W direction, in the east-central part of Livingston Island, in the South Shetlands. Its summit is Mount Bowles (834 m). It is bounded by Kaliakra Glacier to the N, by Perunika Glacier to the W and SW, and by Huron Glacier to the SE and E. It is connected to Friesland Ridge (in the Tangra Mountains) by Wörner Gap, and to Hemus Peak by Dimov Gate. Mapped by the British in 1968, and surveyed in detail in 1995-96 by the Bulgarians, who named it Hrebet Bowles (i.e., "Bowles ridge") on March 15, 2002, in association with the mountain (which had already been named), although the name Bowles Ridge had been in use for some time before that.

Bowles West Peak. 62°37' S, 60°13' W. Rising to 678 m, with steep and partly ice-free W slopes, at the W extremity of Mount Bowles, it overlooks Perunika Glacier to the SW, 1130 m W by N of the summit of Mount Bowles (834 m), 920 m S by E of Hemus Peak, 6.24 km E of Aleko Rock, and 3.17 km ENE of Rezen Knoll, in the E part of Livingston Island, in the South Shetlands. Roughly mapped by the British in 1968 and by the Spanish in 1991, it was surveyed in great detail by the Bulgarians in 1995-96, and named by them on Oct. 29, 1996, as Vrah Zapaden Bowles (i.e., "Bowles west peak"), in association with Mount Bowles. US-ACAN accepted the translated name in 1997.

Mount Bowlin. 86°28' S, 147°18' W. Rising to 2230 m, between the mouths of Van Reeth Glacier and Robison Glacier, in the Queen Maud Mountains. Discovered in Dec. 1934 by Quin Blackburn's party during ByrdAE 1933-35, and named by Byrd for Bill Bowlin. US-ACAN accepted the name.

Bowlin, William Milton "Bill." b. March 19, 1899, Roachdale, Ind. Long-time Navy man, he enlisted in 1918, and that same year went into aviation. He drifted for 9 days in the Pacific with Cdr. John Rodgers after their plane crash on the way to Honolulu in 1925. They were in one of the first two Navy seaplanes ever to fly from the U.S. mainland to Hawaii. He was 2nd pilot on the shore party of ByrdAE 1933-35. He won the DFC for his wintering-over role. He married Mary, later worked as an aviation machinist's mate at the Philadelphia Navy Yard, and retired as a lieutenant commander. He died on Aug. 8, 1973, at Lemon Grove, Calif.

Bowling Green Col. 79°40' S, 158°35' E. An ice-filled col running E-W between the Reeves Plateau and the Bowling Green Plateau, in the Cook Mountains. Named by US-ACAN in 2000, in association with the plateau. NZ-APC accepted the name on Feb. 21, 2001.

Bowling Green Plateau. 79°42' S, 158°36' E. A small but prominent plateau of snow and ice, about 9 km N of Bastion Hill, with an area of about 90 sq km, and rising to an elevation of about 1830 m above sea level, which is considerably higher than the Brown Hills, which it overlooks from the N, in the Cook Mountains. Discovered by VUWAE 1962-63, and named by them. Prof. Charles C. Rich, geologist and deputy leader of the expedition, was affiliated to Bowling Green State University of Ohio. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1965. ANCA has also accepted the name.

Costa (de) Bowman *see* **Bowman Coast**

Península Bowman *see* **Bowman Peninsula**

Bowman Coast. 68°10' S, 65°00' W. That portion of the E coast of southern Graham Land between Cape Northrop and Cape Agassiz, or (to put it another way) on the other side of the Antarctic Peninsula from Marguerite Bay. It fronts the Weddell Sea, and consists of mountains rising to a high interior plateau, with glaciers descending to the Larsen Ice Shelf. Photographed by Hubert Wilkins on his flight of Dec. 20, 1928, and identified by him as that part of the coast "which lies further south than Nordenskjöld and Larsen had been and is opposite Fallières Coast." He named it for geographer Isaiah Bowman (1878-1950), director of the American Geographical Society, 1915-35, and president of Johns Hopkins University, 1935-48. Re-photographed aerially by Ellsworth on Nov. 23, 1935, and, during that same time period, BGLE 1934-37 was surveying it. The U.S. cartographer, W.L.G. Joerg, in 1936, began to try to define this coast accurately, by comparing Wilkins' photos, Ellsworth's photos, and the preliminary reports then coming in from BGLE. Wilkins' 1929 map had this coast trending N-S, and extending between about 68°S and 69°35' S. The American Geographical Society's map of the same year had the coast's N limit at Cape Northrop, in 67°30' S, and its S limit in 69°25' S. Joerg followed Wilkins with the limits, but altered the trend from N-S to NW-SE. On a 1939 U.S. Hydrographic Office chart, the name Bowman Coast was applied to a short stretch of coast S of Mobiloil Inlet, but this may simply have been an error. The coast was surveyed from the air and from the ground by USAS 1939-41, and its limits fixed as being between 66°30' S and 70°35' S, and, as such it appears on a 1943 U.S. Hydrographic Office chart. However, in 1947, US-ACAN accepted the name, but with its N limit at Cape Northrop (in about 67°20' S) and its S limit at Cape Rymill (in about 69°30' S). It appears on a 1945 Argentine map as Costa de Bowman. In 1947-48 the coast was further surveyed by Fids from Bases D and E. On a British chart of 1952, the Bowman Coast was re-defined as extending from Cape Northrop to Cape Agassiz, and this definition was accepted by UK-APC on Jan. 22, 1951, and appears as such in the British gazetteer of 1955. US-ACAN also accepted this definition. The coast appears as Costa Bowman on a 1953 Argentine chart, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer. *See also* **Bowman Peninsula**.

Bowman Glacier. 85°34' S, 162°00' W. Deeply entrenched, and 60 km long, it flows from the Polar Plateau, between the Quarles Range and the Rawson Plateau, into Amundsen Glacier, where that glacier enters the Ross Ice Shelf. Discovered in Dec. 1929 by Larry Gould's party during ByrdAE 1928-30, and named by Byrd as Isaiah Bowman Glacier (*see* **Bowman Coast**). The name was later shortened. US-ACAN accepted the name in 1965, and NZ-APC followed suit.

Bowman Inlet. 68°42' S, 64°23' W. An ice-filled Larsen Ice Shelf indentation into the Bowman Coast, between Kay Nunatak and Platt Point, at Hollick-Kenyon Peninsula, on the S side of Mobiloil Inlet, on the E coast of the Antarctic Peninsula. Photographed aerially by Ellsworth on Nov. 23, 1935, and its W shore was mapped from these photos by U.S. cartographer W.L.G. Joerg, in 1936. Re-photographed aerially in 1940, by USAS 1939-41, and again in Nov. 1947, by RARE 1947-48. Surveyed from the ground by Fids from Base E in 1958. Named by US-ACAN for Lt. Bradley J. Bowman, USNR, officer-in-charge of Palmer Station's construction unit during OpDF 69 (i.e., 1968-69). It appears on the 1979 USGS sketch map of the N part of Palmer Land. The name was accepted by UK-APC on May 21, 1979, and appears in the 1980 British gazetteer.

Bowman Island. 65°17' S, 103°07' E. A high, ice-covered island, 36 km (the Australians say about 44 km) long, between 3 and 11 km wide, and shaped like a figure 8, it rises above the NE part of the Shackleton Ice Shelf (which partially encloses the island), 40 km (the Australians say 53 km) NE of Cape Elliott, off the Knox Coast of Wilkes Land. Discovered on Jan. 28, 1931 by BANZARE, and named by Mawson for Isaiah Bowman (*see* **Bowman Coast**). It was originally plotted in 65°20' S, 103°08' E. US-ACAN accepted the name in 1947 (with the coordinates 65°17' S, 103°07' E), and ANCA followed suit (with the coordinates 65°12' S, 103°00' E).

Bowman Peak. 77°29' S, 153°13' W. On the

S side of Butler Glacier, in the Alexandra Mountains of Marie Byrd Land. Discovered during ByrdAE 1928-30, and named by Byrd as John Bowman Peak, for John McEntee Bowman (1875-1931), Toronto-born president of Bowman Biltmore Hotels, who donated headquarters during the preparation of the expedition. US-ACAN accepted the name in 1947. In 1966, US-ACAN accepted the shortened name, and NZ-APC followed suit.

Bowman Peninsula. 74°47' S, 62°22' W. An ice-covered peninsula, 40 km long in a N-S direction, and 24 km wide in its N and central portions, lying between Nantucket Inlet and Gardner Inlet, S of Smith Peninsula, on Trinity Island, it narrows toward the S and terminates in Cape Adams, on the E coast of the Antarctic Peninsula. It divides the Lassiter Coast from the Orville Coast. Discovered and photographed aerially on Nov. 21, 1947, by RARE 1947-48, following which the name Isaiah Bowman Coast was applied to that stretch of the coast SW of Mount Tricorn, and as such it appears on the 1948 American Geographical Society's map, named for Isaiah Bowman (*see* **Bowman Coast**). However, the following month (Dec. 1947), the area was surveyed from the ground by a combined RARE/FIDS sledging party, and the name Bowman Peninsula was applied to this feature. US-ACAN accepted the name, and UK-APC followed suit on Jan. 28, 1953. It appears on a British chart of 1954, in the 1955 British gazetteer, and on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. The Chileans and Argentines both call it Península Bowman.

Bowra, Gordon Trevor "Doc." b. June 28, 1936, London, son of Charles J. Bowra and his wife Evelyn Kate Mitchinson. He became a doctor in 1960, joined BAS in 1962, as a medical officer, and wintered-over at Halley Bay Station in 1963 and 1964, the second year being also deputy base commander. In 1967, in London, he married Wendy Burry.

Bowrakammen. 74°55' S, 12°09' W. A mountain ridge in the N part of the Tottan Hills, in the Heimefront Range, in Maudeheimvidda, in Queen Maud Land. Named by the Norwegians for Gordon Bowra.

Mount Bowser. 86°03' S, 155°36' W. A prominent peak, rising to 3655 m, 3 km S of Mount Astor, at the N end of Fram Mesa, in the Queen Maud Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Carl James Bowser (b. April 21, 1937, Los Angeles), geologist at McMurdo, 1965-66 and 1966-67.

Bowser Valley. 77°20' S, 161°55' E. A valley that encloses a small glacier at the headwall, E of Crawford Valley, in the Saint Johns Range of Victoria Land. Named by US-ACAN in 2005, for Samuel S. Bowser, of the divison of molecular medicine, NY State Department of Health (in Albany), who conducted research of giant foraminifera in McMurdo Sound, for 10 field seasons between 1984 and 2004. NZ-APC accepted the name on Sept. 12, 2005.

Bowsprit Moraine. 76°37' S, 161°15' E. A medial moraine, 2.5 km long (the New Zealanders say it is between 3 and 4 km long), off the NE point of Elkhorn Ridge, where Towle Glacier and Northwind Glacier join Fry Glacier, in the Convoy Range of Victoria Land. The mapped form of the moraine protrudes like a bowsprit out from the end of Elkhorn Ridge, hence the name given by a 1989-90 NZARP field party. US-ACAN accepted the name in 1993.

Bowyer Butte. 74°59' S, 134°45' W. An isolated, steep-cliffed eminence, somewhat like a nunatak, 5 km wide, and rising to 1085 m, between the lower ends of Johnson Glacier and Venzke Glacier, on the Hobbs Coast of Marie Byrd Land. Lichens and mosses are to be found here. Discovered and photographed aerially by USAS 1939-41. Named by US-ACAN in 1966, for Donald W. Bowyer, USARP meteorologist at Byrd Station in 1962.

Box Reef. 67°45' S, 69°03' W. A semicircular line of drying rocks between the Esplin Islands and League Rock, 5 km W of Base T, off the S end of Adelaide Island. Charted by an RN Hydrographic Survey unit on the *Protector*, in 1963. Named by UK-APC on Feb. 12, 1964, in association with nearby Cox Reef. US-ACAN accepted the name later that year. In 1847, John Maddison Morton's comedy *Box and Cox — A Romance of Real Life in One Act*, was produced on the London stage. In this play, two lodgers — Box and Cox — shared the same lodgings, one by day, one by night, without ever knowing each other. The term "box and cox" has entered the English language, and means "to take turns."

Isla Boxing *see* **Boxing Island**

Boxing Island. 64°35' S, 61°41' W. A small island in Charlotte Bay, forming the W entrance of Giffard Cove, E of Harris Peak, off the Danco Coast, on the W coast of Graham Land. First charted (but not named) by BelgAE 1897-99. Named by the Fids from Base O who saw it on Dec. 26, 1955 (Boxing Day). Photographed aerially by FIDASE in 1956-57. UK-APC accepted the name on Sept. 23, 1960, and US-ACAN followed suit in 1965. It appears in the 1991 Argentine gazetteer as Isla Boxing.

Boy Point. 62°10' S, 58°10' W. A point (or cape), E of Legru Bay, between Wesele Cove and Zielony Balonik Cove, or (to put it another way), between Cinder Spur to the W and Low Head to the E, on the shore of the Bransfield Strait, on the S side of King George Island, in the South Shetlands. Named by the Poles in 1980, for Polish writer Tadeusz Kamil Marcjan Zelenski (1874-1941), known by his pseudonym Tadeusz Boy-Zelenski (*see* **Zielony Balonik Cove**), son of the composer Wladyslaw Zelenski. Boy was murdered by the Nazis. UK-APC accepted the name on April 3, 1984, and US-ACAN followed suit. It appears in the 1986 British gazetteer. The British were the latest to replot this feature, in late 2008.

Boy Scouts *see* **Scouts**

Lednik Boyana *see* **Boyana Glacier**

Boyana Glacier. 62°42' S, 60°05' W. East of Peshev Ridge, S of Silistra Knoll, and SW of Serdica Peak, on Livingston Island, it flows SE into Bransfield Strait, W of Aytos Point, in the South Shetlands. Named by the Bulgarians on March 15, 2002, as Lednik Boyana, after Boyana, the old Bulgarian settlement that is now a part of Sofia. The name was later translated into English. The British were the latest to replot this feature, in late 2008.

Boyce Ridge. 78°31' S, 86°14' W. A ridge, extending from Taylor Ledge 8 km westward to the head of Nimitz Glacier, in the Sentinel Range, in the Ellsworth Mountains. The ridge adjoins the N flank of the lower part of the Branscomb Glacier. Named by US-ACAN in 2006, for Joseph Boyce, a retired NASA manager, who was instrumental in facilitating the U.S. meteorite program in partnership with the NSF and the Smithsonian. He was a member of the 2004-05 ANSMET field party in Antarctica.

Canal Boyd *see* **Boyd Strait**

Détroit de Boyd *see* **Boyd Strait**

Estrecho Boyd *see* **Boyd Strait**

Mount Boyd. 84°48' S, 179°24' W. A pyramid-shaped mountain rising to 2960 m (the New Zealanders say about 2800 m), in the N portion of Anderson Heights, 5 km W of Mount Bennett, in the Bush Mountains, in the Queen Maud Mountains. Discovered and photographed aerially on Flight C, Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Bert Crary, leader of the Ross Ice Shelf Traverse Party of 1957-58, and named by him for Walt Boyd (*see* **Boyd Escarpment**), glaciologist with the party. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Boyd, Vernon Davis "Buck." b. Sept. 11, 1907, Hancock, Vermont, son of farmer Carl S. Boyd and his wife Ona Gardner. U.S. Marine machinist, one of nature's freewheeling spirits, formerly in the U.S. Navy, and many times in Antarctica. He was living in Turtle Creek, Pa., when he became one of the crew on the *Bear of Oakland*, and one of the shore party on ByrdAE 1933-35. He was also chief mechanic at West Base during USAS 1939-41. He served in World War II. During OpHJ, 1946-47, he was head of the motorized section of Little America IV, and was transportation officer on OpW 1947-48. He served in Korea, retired as a major in 1954, helped plan OpDF, was in the Arctic in 1960 and 1962, and died of cancer in Oakland, Calif., on May 29, 1965.

Boyd Escarpment. 82°26' S, 50°30' W. A rock and snow escarpment, rising to about 1000 m, and extending NE for about 16 km from Wujek Ridge, in the Davis Valley, on the Dufek Massif, at the extreme N of the Pensacola Mountains. It includes Bennett Spur, Cox Nunatak, and Rankine Rock. Photographed aerially by USN in 1964, surveyed from the ground in 1965-66 by USGS, during their Pensacola Mountains Project, and mapped by USGS from these efforts. Named by US-ACAN in 1979, for Walter W. "Walt" Boyd, Jr., USARP glaciologist who wintered-over at Little America in 1957. He was also with USGS in the Pensacola Mountains

as a geologist, for 3 summers between 1962 and 1966. UK-APC accepted the name on May 21, 1979, and it appears in the 1980 British gazetteer. *See also* **Mount Boyd**.

Boyd Glacier. 77°14' S, 145°25' W. Also called Ames Glacier. Heavily crevassed, and 72 km long, it flows WNW for about 72 km into the Sulzberger Ice Shelf between Bailey Ridge and Mount Douglass, in the Ford Ranges of Marie Byrd Land. Discovered aerially in 1934 during ByrdAE 1933-35, and named by Byrd for Vernon D. Boyd. US-ACAN accepted the name in 1947.

Boyd Head. 75°17' S, 110°01' W. A prominent headland, with rock exposed to seaward, rising to over 1000 m above sea level, close E of the mouth of Vane Glacier, on the coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1976, for Capt. Hugh F. Boyd III, U.S. Army, construction projects officer during OpDF 72 and OpDF 73.

Boyd Island. 68°33' S, 77°57' E. Just SSW of Lugg Island, and about 3.5 km NNW of Davis Station, in the Vestfold Hills. Named by ANCA on Nov. 27, 1973, for Jeffrey J. "Jeff" Boyd, who wintered-over as medical officer at Davis in 1970.

Boyd Nunatak. 69°50' S, 74°44' E. A small nunatak, about 90 m high, standing 13 km (the Australians say 17 km) SE of Mount Caroline Mikkelsen, on the S side of the Publications Ice Shelf, on the Ingrid Christensen Coast. First mapped by Norwegian cartographers in 1946 from air photos taken by LCE 1936-37, and plotted in 69°51' S, 74°39' E. Re-mapped by ANARE and named by ANCA on May 18, 1971, for John S. Boyd, physicist at Wilkes Station in the winter of 1965. US-ACAN accepted the name in 1973.

Boyd Ridge. 76°57' S, 116°57' W. An ice-covered ridge, 35 km long, extending in an E-W direction and forming the S end of the Crary Mountains, in Marie Byrd Land. It is separated from the main peaks of the group by Campbell Valley. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for John C. Boyd, USARP biologist at McMurdo in 1965-66 and 1966-67. NZ-APC accepted the name on June 29, 1967.

Boyd Strait. 62°51' S, 61°54' W. Over 30 km wide, and running NW-SE, it separates Smith Island from Snow Island and the rest of the group, in the South Shetlands. Charted by Weddell on Oct. 26, 1823, and named by him as Boyd Strait or Boyd's Straits, for Capt. David Boyd (who had nothing to do with Antarctica), under whom Weddell had served on the *Firefly*, in 1810-11. Capt. Boyd died in 1858. The name Boyd's Strait appears on Powell's chart of 1828. The name Estrecho de Boyd appears on a Spanish chart of 1861. The name was later simplified as Boyd Strait, appearing as such on British charts of 1901 and 1938. It was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 8, 1953, appearing as such in the 1955 British gazetteer, and on a British chart of 1962. It appears on a 1910 Charcot map (FrAE 1908-10), as Détroit de Boyd. The strait was recharted by the Discovery Investigations in 1930-31. There is a Chilean reference to it in 1945, as Estrecho Boyd, but on Chilean charts of 1947 and 1953, it figures as Canal Boyd. However, the 1974 Chilean gazetteer accepted the name Estrecho Boyd. It appears on a 1953 Argentine chart as Estrecho Larrea, named after Jean Larrea (1782-1847), Argentine patriot. That was the name accepted by the 1970 Argentine gazetteer. The feature was originally plotted in 62°50' S, 61°50' W, but in late 2008 the British replotted it.

Glaciar Boydell *see* **Boydell Glacier**

Boydell Glacier. 64°09' S, 59°07' W. About 14 km long, it flows SE from the Detroit Plateau, in Graham Land, and merges on the S side with Sjögren Glacier, on Trinity Peninsula. Mapped by FIDS cartographers from surveys conducted in 1960-61 by Fids from Base D. Named by UK-APC on Feb. 12, 1964, for Welsh land surveyor James John Boydell (1803-1859), 19th-century British inventor of a steam traction engine, the first practical track-laying vehicle. US-ACAN accepted the name in 1964. It appears in the 1991 Argentine gazetteer as Glaciar Boydell.

Boyds Straits *see* **Boyd Strait**

Boyd's Straits *see* **Boyd Strait**

Mount Boyer. 75°07' S, 72°04' W. Rising to about 1500 m, 1.5 km SW of Mount Becker, in the Merrick Mountains of Ellsworth Land. Mapped by USGS from their own ground surveys conducted during the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken in 1965-66. Named by US-ACAN in 1966, for Chief Petty Officer Francis C. Boyer, USN, of Poplar Bluff, Mo., hospital corpsman and officer-in-charge of Eights Station in 1964. It appears on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Rocas Boyer *see* **Boyer Rocks**

Boyer, Joseph-Emmanuel-Prosper. b. May 9, 1815, Avignon. Élève on the *Zélée* during FrAE 1837-40. On Dec. 28, 1839 he transferred to the *Astrolabe*, the flagship of the expedition, but returned to the *Zélée* on April 29, 1840.

Boyer Bluff. 81°10' S, 160°05' E. A mostly ice-covered bluff, rising to 1080 m, at the SW periphery of the Darley Hills, between 6 and 8 km SW of Constellation Dome, in the Churchill Mountains. Named by US-ACAN in 2003, for David S. "Dave" Boyer (b. April 23, 1920, Salt Lake City. d. April 2, 1992, Bethesda, Md.), of *National Geographic Magazine*'s foreign editorial staff, who was on assignment to Antarctic during OpDF II (i.e., 1956-57). The famous shot of the Kennedy family standing on the steps of St. Matthew's, in Washington, 3 days after the president was assassinated, that was David Boyer's photo. NZ-APC accepted the name on Feb. 27, 2003.

Boyer Butte *see* **Bowyer Butte**

Boyer Glacier. 73°18' S, 167°21' E. A short tributary glacier, 16 km W of Index Point, in the E part of the Mountaineer Range, it flows N into the lower part of Mariner Glacier, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Jack W. Boyer, USN, radioman at Hallett Station in 1962. NZ-APC accepted the name on Dec. 4, 1968. Originally plotted in 73°19' S, 167°18' E, it has since been replotted.

Boyer Rocks. 63°35' S, 59°00' W. A small group of rocks in the NE corner of Bone Bay, 5 km SW of Cape Roquemaurel, Trinity Peninsula. Mapped by FIDS cartographers from surveys conducted by Fids from Base D in 1961-62. Named by UK-APC on Feb. 12, 1964, for Joseph Boyer. US-ACAN accepted the name later that year. The Argentine gazetteer of 1991 accepted the name Rocas Boyer.

Boyer Spur. 71°51' S, 62°48' W. A mountainous spur projecting from the base of Condor Peninsula, between Kellogg Glacier and Gruening Glacier, about 8 km WNW of Malva Bluff and the NW head of Hilton Inlet, on the Black Coast, on the E side of Palmer Land. Mapped by USGS in 1974 from their own ground surveys conducted during the Antarctic Peninsula Traverse of 1961-62, from USN air photos taken in 1965-66, and from ground surveys conducted by BAS personnel from Halley Bay Station in 1972-73. Named by US-ACAN in 1976, for Stephen J. Boyer, geologist here with the USGS geological and mapping party to the area of the Lassiter Coast, in 1972-73. UK-APC accepted the name on July 21, 1976.

Boyesennuten. 74°34' S, 11°14' W. A mountain in the NW part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Name means "Boyesen peak." Named by the Norwegians for Jens Mogens Boyesen (1920-1996), a member of the Resistance during World War II. After the war, Mr. Boyesen became a politician, and Norway's youngest ambassador.

Boyle, Robert *see* **USEE 1838-42**

Boyle Mountains. 67°21' S, 66°38' W. A wall of mountains, rising to about 2100 m, between the heads of Lallemand Fjord and Bourgeois Fjord, on the Loubet Coast of Graham Land. They include Bartholin Peak and Quervain Peak. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on July 7, 1959, for Robert Boyle (1627-1691), natural philosopher specializing in cold. The feature appears on a British chart of 1961. US-ACAN accepted the name in 1964.

Mount Boyles. 75°34' S, 70°56' W. Rising to 1485 m, it is the highest peak in the Thomas Mountains, S of the Sweeney Mountains, on the Orville Coast, in the E part of Ellsworth Land. Discovered aerially, and roughly mapped, by RARE 1947-48. Mapped in greater detail by USGS, from ground surveys conducted by the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken in 1964. Visited by a USGS geological party in 1977-78. Named by US-ACAN for Joseph Michael Boyles, geologist

with that party. UK-APC accepted the name on Nov. 13, 1985.

Boyn Ridge. 69°07' S, 71°48' W. The most northerly ridge (the British call it a spur) of the Havre Mountains, in the N part of Alexander Island. BAS personnel from Fossil Bluff did geological work here in 1976-77. Named by UK-APC on June 11, 1980, for Scotsman Charles Nicol Boyn (b. 1850), director of the Agence Maritime Général, manager of the marine journal *Le Yacht*, former French naval paymaster, and friend of Charcot's, who superintended the building of the *Pourquoi Pas?* US-ACAN accepted the name in 1993.

Boyson, John W. *see* **USEE 1838-42**

Bozhinov Glacier. 64°36' S, 61°27' W. A glacier, 5 km long and 2.5 km wide, N of Krebs Glacier and S of Nobile Glacier, it flows W to enter the Gerlache Strait at Charlotte Bay, on the Danco Coast of Graham Land. Named by the Bulgarians on Nov. 23, 2009, for Georgi Bozhinov (1879-1955; name more commonly rendered Bojinov), whose innovative aircraft, *Bozhinov-1*, was patented in France in 1912 (although it was not actually built until 1926).

Bozu Peak. 69°25' S, 39°47' E. Rising to 243.5 m, it is the central and highest of the Byvågåsane Peaks, on the E shore of Lützow-Holm Bay, N of Skarvsnes Foreland, on the Prince Olav Coast. Photographed by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers (they did not name it). Surveyed by JARE between 1957 and 1962, and named by the Japanese on Oct. 1, 1962, as Bozuyama (i.e., "shaved-head peak"). US-ACAN accepted the name Bozu Hill in 1968. The Norwegians translated the name as Fleinskallen (i.e., "naked hill").

Bozu-san *see* **Bozu Peak**

Bozu-yama *see* **Bozu Peak**

Bozveli Peak. 63°46' S, 58°32' W. Rising to 1256 m in Trakiya Heights, 3.78 km SE of Antonov Peak, 2.7 km SW of Mount Daimler, and 6.45 km NNE of Skakavitsa Peak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named By the Bulgarians on June 3, 2010, for Neofit Bozveli (1785-1848), a leader in the struggle for the restoration of the autocephalous Bulgarian church.

Cape Braathen. 71°53' S, 96°06' W. An ice-covered cape at the NW termination of Evans Peninsula, on Thurston Island. Delineated from VX-6 air photos taken in Jan. 1960, and plotted in 71°48' S, 96°05' W. Named by US-ACAN in 1961, for Chris Braathen. It has since been replotted.

Braathen, Christoffer "Chris." b. June 29, 1895, Eker, near Oslo, son of farmer Paul Braathen and his wife Elisabeth. Educated at Horten, he went to sea, sailing many times to Africa. In World War I he served with the British in the English Channel, and was later with the Norwegian Naval Air Service. Then to Germany, and fame as a skier. He was ski expert and dog driver on ByrdAE 1928-30. During the winter-over he was in charge of the oil hut, and was known as the "Oil King." He also built a model of the *City of New York* in 1500 hours of darkness in Antarctica. He was the mechanic on Ellsworth's 1933-34 and 1934-35 expeditions. On Aug. 1, 1937 he, his wife Arild Widerøe, and 2 others, were taking a sightseeing flight 1300 feet over Oslo Harbor when a wing came off the plane, and they plunged.

Île Brabant *see* **Brabant Island**

Isla Brabant *see* **Brabant Island**

Brabant Island. 64°15' S, 62°20' W. An ice-covered, mountainous island, 54 km long in a N-S direction, with an average width of 20 km, lying between Anvers Island and Liège Island, it is the second largest island in the Palmer Archipelago, being separated from the Danco Coast by the Gerlache Strait, off the W coast of Graham Land. It actually extends from 64°00' S to 64°32' S, and its highest peak is Mount Parry, rising to 2520 m. The N coast of the island was discovered in 1829 by Foster, during the *Chanticleer* Expedition of 1828-31, and appears on their chart. It was probably sighted by Dallmann in Jan. 1874. The E coast was discovered and roughly charted between Jan. 23 and Feb. 8, 1898, by BelgAE 1897-99, and the island was named by de Gerlache as Île Brabant, for the Belgian province, which had supported his expedition financially. They made a landing here, at D'Ursel Point. It first appears as Brabant Island on Dr. Frederick Cook's 1900 English language version of the expedition maps. FrAE 1903-05 roughly charted the N and W coasts in Feb. 1904 and again in Jan. 1905. There is a 1948 map wherein the island is named Isla José Torobio Medina, after José Torobio Medina (1852-1930), the Chilean writer, historian, and great student of Magellan, but this name did not catch on. US-ACAN accepted the name Brabant Island in 1947, and it appears as such on a British chart of 1951. UK-APC accepted the name on Sept. 8, 1953, and it appears in the 1955 British gazetteer. It appears on an Argentine chart of 1954 as Isla Bravante (the Spanish-speaking world is very liable to interchange "b" and "v"), but the real spelling of Isla Brabante appears in the 1970 Argentine gazetteer, as well as in the 1974 Chilean gazetteer. The island was mapped by FIDS cartographers from air photos taken by FIDASE in 1956-57, and it was surveyed by the British Joint Services Expedition of 1983-85.

Isla Brabante *see* **Brabant Island**

Punta Brabazón *see* **Brabazon Point**

Brabazon Point. 64°24' S, 61°16' W. Forms the E entrance point of Salvesen Cove, at Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Charted by BelgAE 1897-99. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point, 1957-58. On Sept. 23, 1960, UK-APC named it for John Theodore Cuthbert Moore-Brabazon, 1st Baron Brabazon of Tara (1884-1964), pioneer aviator (he was the first British subject to fly an airplane in the British Isles, in April 1909) and aerial photographer. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. There is a (rather clever) 1978 Argentine reference to it as Cabo Altamirano (i.e., "cape Altamirano"), named after radiotelegrapher Ricardo Altamirano, a 1st class cabo in the Argentine Navy who was lost with the *Fournier* (q.v.) (although the *Fournier* had been in Antarctic waters, the tragedy occurred in the Straits of Magellan, on Oct. 4, 1949). However, the 1991 Argentine gazetteer lists Punta Brabazón.

Mount Brabec. 73°34' S, 165°24' E. Rising to 2460 m, it surmounts the E wall of Aviator Glacier, 16 km N of Mount Monteagle, in the Mountaineer Range of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Lt. Cdr. (later Cdr.) Richard Curtis "Dick" Brabec (b. Nov. 13, 1930, Pipestone, Minn. d. Feb. 17, 2007, Granbury, Texas), USN, Hercules aircraft commander during OpDF 66 (1965-66).

Bracken Peak. 77°51' S, 85°24' W. Rising to 1240 m, S of the terminus of Newcomer Glacier, 5 km NE of Mount Malone, on the E side of the Sentinel Range, in the Ellsworth Mountains. First mapped by USGS from ground surveys, and from VX-6 air photos taken during flyovers on Dec. 14-15, 1959. Named by US-ACAN in 1961, for Harold C. "Harry" Bracken, pilot on these flights.

Braddock Nunataks. 70°48' S, 65°55' W. A group of prominent nunataks, rising to 1640 m, inland from Bertram Glacier, 14 km SE of Perseus Crags, on the W margin of the Dyer Plateau, at George VI Sound, in Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969, and from ground surveys conducted by BAS personnel from Fossil Bluff Station in 1970-72. Named by US-ACAN in 1976, for Lt. (later Cdr.) Robert Lillard Braddock, Jr., USN, officer-in-charge of Pole Station in 1974. UK-APC accepted the name on July 21, 1976. The feature appears on the 1979 USGS sketch map of the N part of Palmer Land.

Braddock Peak. 72°27' S, 166°28' E. A prominent peak rising to 2960 m, immediately SE of Mount Aorangi, in the SE part of the Millen Range, in the Victory Mountains of Victoria Land. Named by geologist Roger Cooper (*see* **Cooper Nunatak**), for Peter Braddock, field leader of geological parties in the area, 1974-75 and 1980-81. NZ-APC accepted the name, and US-ACAN followed suit.

Bradford Glacier. 65°51' S, 64°18' W. Flows N from Mount Dewey into Comrie Glacier, at Bigo Bay, on the Graham Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base J in 1957. Named by UK-APC on July 7, 1959, for Samuel Clement Bradford (1878-1948), keeper of the Science Library, in London, 1930-38, and pioneer of scientific information services. It appears on a British chart of 1960, with the coordinates 65°54' S, 64°09' W. US-ACAN accepted the name in 1971, but with different coordinates.

Bradford Rock. 66°13' S, 110°34' E. A partly submerged, ice-covered rock in water, it marks the NW end of the Swain Islands, in the Wind-

mill Islands. First roughly mapped from air photos taken during OpHJ 1946-47, it was photographed aerially again in 1956 by both ANARE and SovAE 1956. It was included in a 1957 ground survey of the Swains conducted by Wilkes Station personnel under Carl Eklund, who named it for Don L. Bradford, USN, radioman at Wilkes that winter (i.e., 1957). ANARE re-photographed it aerially in 1962. US-ACAN accepted the name in 1960, and ANCA followed suit.

Mount Brading. 64°17' S, 59°20' W. Rising to 980 m, and topped by a snow peak, 6 km E of the NE corner of Larsen Inlet, and 30 km NW of Cape Longing, on the Nordenskjöld Coast, on the E coast of Graham Land. First climbed by Fids Chris Brading, Ian Hampton, Dick Harbour, and John Winham in early 1960. Surveyed by Fids from Base D in 1960-61, and plotted by them in 64°17' S, 59°17' W. Named by UK-APC on Feb. 12, 1964, for Mr. Brading. US-ACAN accepted the name later that year. It has since been replotted, and the new co-ordinates appear in the 1977 British gazetteer. The Chileans call it Montaña Exequiel, for 1st Lt. Ezequiel Rodríguez Salazar (q.v under **R**), Chilean Navy observer on USAS 1939-41 (the names Exequiel and Ezequiel are interchangeable). The Argentines call it Montaña González Albarracin (presumably for Vicecomodoro Adolfo Horacio González Albarracin), and have plotted it in 64°18' S, 59°16' W.

Brading, Christopher Graham "Chris." b. Oct. 12, 1932, Portsmouth, son of schoolmaster Montagu C. Brading and his wife Mary Chambers. From the age of 7 he was raised in Godalming, Surrey, and immediately after school did his national service, 1952-54, in the Army, much of it in North Africa. While at the University of Southampton (he was a geographer and botanist), in 1957, he applied to FIDS as a glaciologist, but it wasn't until a year later, and after a climbing expedition in the Alps, that he joined FIDS, as a surveyor, and sailed from Southampton on the *Shackleton*, in Oct. 1958, bound for Montevideo and Port Stanley. The *Protector* set out to take him down to Hope Bay, but a helicopter crashed, and they had to return to the Falklands, for just over two months. Then the *Protector* set sail again, and (the now fixed) helo flew him from the ship to Base D, where he wintered-over in 1959 and 1960. In 1961 the *Shackleton* came to pick him up, and took him back to the UK. He wrote up his report on lichens and mosses, and then joined the military survey, doing mapping and geodesy, retiring from there in 1997. He married Kathleen Harrison, and they live in Weybridge, Surrey.

Cabo Bradley. 64°19' S, 58°45' W. A cape, SE of Downham Peak, Trinity Peninsula. Named by the Argentines.

Monte Bradley *see* **Mount Bradley**

Mount Bradley. 63°53' S, 58°37' W. A pyramidal mountain rising to 835 m, at the SE end of a ridge descending from the Detroit Plateau, 6 km SW of Mount Reece, and 11 km WSW of Pitt Point, on the W side of the Prince Gustav Channel, in the S part of the Trinity Peninsula of Graham Land. Climbed in 1945 by FIDS, who named it for Kenneth Granville Bradley (1904-1977), colonial and financial secretary of the Falkland Islands, 1942-46, and director of the Commonwealth Institute, 1953-69, famous for his book, *Diary of a District Officer* (1942), which detailed his life and service in Northern Rhodesia, 1926-39. He was knighted in 1963. UK-APC accepted the name on Nov. 21, 1949, and US-ACAN followed suit in 1952. It appears on a British chart of 1949, and in the 1955 British gazetteer. It appears on a Chilean chart of 1951, as Monte Bradley, and that was the name accepted by the 1974 Chilean gazetteer. It appears on a 1963 Argentine chart as Monte Director, for the *Director*, an Argentine frigate of 1810-20, which, in pursuit of seals, may have sailed close to 60°S. It appears as such in the 1970 Argentine gazetteer.

Roca Bradley *see* **Bradley Rock**

Bradley, Bernard Orton Joseph. Known as "B.O.J." b. Oct. 17, 1913, Christchurch, NZ, son of William Bradley and his wife Elizabeth Mahar. He became a crewman on the *Jacob Ruppert*, 1933-34, during the first half of ByrdAE 1933-35. After the expedition he married Betty, and became a company representative in Sumner, Canterbury. He enlisted in World War II, and gained a field commission as 2nd lieutenant in the 23rd Battalion of the NZ Infantry. He was killed a month later, on May 26, 1944, just outside Rome.

Bradley, R. On Nov. 1, 1912, he signed on to the *Aurora* as a crewman, at £5 per month, for the 2nd voyage south during AAE 1911-14. He left the expedition at Hobart, on March 19, 1913.

Bradley Nunatak. 81°24' S, 85°58' W. A prominent nunatak, 16 km SW of Mount Tidd, in the Pirrit Hills. Positioned on Dec. 7, 1958 by the U.S. Ellsworth-Byrd Traverse Party, and named by US-ACAN in 1964, for Edwin A. Bradley, Jesuit seismologist priest from Xavier University, Cincinnati, who worked with the party.

Bradley Ridge. 70°14' S, 65°15' E. A rock ridge about 12 km SE of Mount Peter, in the Athos Range of the Prince Charles Mountains, in Mac. Robertson Land. Plotted from ANARE air photos, and named by ANCA for R. Garland "Garry" Bradley, weather observer at Davis Station in 1962 and Mawson Station in 1964. US-ACAN accepted the name in 1967.

Bradley Rock. 65°01' S, 64°42' W. An isolated rock about 14 km NW of the entrance to French Passage, in the Wilhelm Archipelago. Named by UK-APC on Dec. 20, 1974, for Lt. Cdr. (later Cdr.) Edgar Michael "Joe" Bradley (b. 1929, Oldham, Lancs), RN, who directed an RN Hydrographic Survey unit in the area in March 1965, on the *Protector*. It appears on a British chart of 1974. US-ACAN accepted the name in 1975. It appears in the 1991 Argentine gazetteer as Roca Bradley.

Mount Bradshaw. 71°28' S, 163°52' E. A prominent mountain peak, rising to 2240 m, at the NE side of the névé of Leap Year Glacier, 6 km NW of Ian Peak, in the Bowers Mountains of Oates Land, in Victoria Land. Named by NZ-APC in 1982, for John Dudley Bradshaw, geologist with the University of Canterbury, a member of NZARP geological parties to the area in 1974-75 and 1981-82. US-ACAN accepted the name.

Bradshaw, Edward Foyles "Eddie," Jr. b. Aug. 17, 1916, Wilmington, NC, son of city cop Edward Foyles Bradshaw and Fanita C. "Annie" Sharpe. He joined the U.S. Navy in Sept. 1935. On Sept. 23, 1939, he boarded the *San Jacinto* at San Juan, Puerto Rico, and arrived 4 days later in New York, bound for the Boston Navy Yard, where he was to pick up the *Bear*, upon which he served as a seaman 1st class during the 1st half of USAS 1939-41. He retired from the Navy in Aug. 1959, and died on March 18, 1995, in Interlachen, Fla.

Bradshaw, Margaret Ann. NZ geologist and paleontologist, specializing in the Devonian fossil record. She first went to Antarctica in 1975, and made 6 trips altogether up to 1992. She was in the Ohio Range, 1979-80 and 1983-84. She planned and led her last 5 trips. She was curator of geology at Canterbury Museum, the first NZ woman to be awarded the Polar Medal, and was president of the NZ Antarctic Society, 1993-2003.

Bradshaw Peak. 81°03' S, 158°34' E. Rising to 1640 m, on the SW side of McLay Glacier, 4 km SE of Turk Peak, in the Churchill Mountains. Named by NZ-APC on Feb. 27, 2003, for Margaret Bradshaw. US-ACAN accepted the name that year.

Braem, Fritz. Zoologist from Breslau, who went on the German Navy Oceanographic Expedition, 1898-99.

Islotes Bragg *see* **Bragg Islands**

Mount Bragg. 84°06' S, 56°43' W. Rising to 1480 m, 10 km SW of Gambacorta Peak, in the S part of the Neptune Range, in the Pensacola Mountains. Surveyed from the ground by USGS in 1963-64, photographed aerially by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Ralph L. Bragg, USN, VX-6 photographer at McMurdo in 1964. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Bragg Islands. 66°28' S, 66°26' W. A small group of islands at the E side of Crystal Sound, 11 km N of Cape Rey, on the Loubet Coast of Graham Land. Included are Rambler Island, Atom Rock, Molecule Island, Sudany Island, and Vagrant Island. During the 1930-31 survey of the area by the Discovery Investigations, these islands were named the Marin Darbel Islands (*see* **Darbel Islands**). They appear as such on British charts of 1942 and 1948. They were charted from the air in 1935-36, by BGLE 1934-37, and appear on a 1937 French chart. They were re-photographed aerially by RARE 1947-48. Because they were readily confused with the Darbel Islands to the NE, after a Sept. 1958 FIDS survey, and after FIDS cartographic consultation of the RARE air photos, they were re-

named by UK-APC on Sept. 23, 1960, as the Bragg Islands, for Sir William Henry Bragg (1862-1942), British physicist, co-winner of the 1915 Nobel Prize for physics (his son, William Lawrence Bragg was the other winner; this is unique). They appear as such on a British chart of 1961. US-ACAN accepted the new name in 1965. They appear in the 1991 Argentine gazetteer as Islotes Bragg.

Brahms Ice Front. 71°25' S, 73°42' W. The seaward face of the Brahms Ice Shelf, in the SW part of Alexander Island. U.S. Landsat images of Jan. 1973 convinced the British that it should have its own name, and it was so named by UK-APC on Dec. 8, 1977. It appears in the British gazetteer of 1980. The Americans have been much more conservative when considering ice fronts.

Brahms Ice Shelf. 71°28' S, 73°41' W. The ice shelf in Brahms Inlet, in the SW part of Alexander Island. Named by UK-APC on Dec. 8, 1977. It appears in the 1980 British gazetteer. US-ACAN finally accepted the name in 2006.

Brahms Inlet. 71°28' S, 73°41' W. An ice-filled inlet (i.e., it is filled by the Brahms Ice Shelf), 40 km long, and 10 km wide, in the N side of Beethoven Peninsula, between Mendelssohn Inlet and Verdi Inlet, or between Harris Peninsula and Derocher Peninsula, in the SW part of Alexander Island. Seen from the air and photographed by RARE 1947-48. In 1959-60, Searle of the FIDS, working from the RARE photos, mapped it in 71°25' S, 73°55' W. Named by UK-APC on March 2, 1961, for the great German composer, Johannes Brahms (1833-1897). US-ACAN accepted the name later in 1961. The coordinates were corrected based on Jan. 1973 U.S. Landsat images, and appear in the 1977 British gazetteer.

Pontal Braillard *see* **Braillard Point**

Braillard, Albert Thomas. b. 1903, Steyning, Sussex, son of Edwin Charles Braillard and his wife Rose Annie Kennard. He went to sea at 14, got tattooed on his left arm, and had just come off plying the Atlantic as bosun on the *Port Huon*, when he served as an able seaman on the *Discovery II*, 1931-33 and 1933-35. He died in Brighton, in 1950.

Braillard Point. 62°13' S, 58°55' W. Forms the NE point of Ardley Island, off the SW end of King George Island, at Maxwell Bay, in the South Shetlands. Charted by the personnel of the *Discovery II* in 1931-33 and 1934-35, and named by them for Albert Braillard. The name was accepted by UK-APC on Sept. 23, 1960, and by US-ACAN later that year. It appears on a British chart of 1961. It appears on a 1984 Brazilian map, translated as Pontal Braillard.

Brama. 62°12' S, 58°28' W. A prominent hill, rising to about 200 m above sea level, between Baranowski Glacier and Tower Glacier, at Admiralty Bay, King George Island, in the South Shetlands. Named by the Poles in 1980. Also called Brama Hill.

Brama Hill *see* **Brama**

Bramble Peak. 72°22' S, 166°59' E. Rising to 2560 m, it surmounts the NE side of the head of Croll Glacier, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1969, for Edward J. Bramble, USN, VX-6 aviation machinist's mate at McMurdo in 1967. NZ-APC accepted the name in Nov. 1969.

Mount Bramhall. 72°15' S, 98°16' W. A mountain, 8 km E of Mount Hawthorne, in the Walker Mountains of Thurston Island. First delineated from air photos taken during OpHJ 1946-47, and plotted in 72°10' S, 98°24' W. Named by US-ACAN in 1960, for Ervin H. Bramhall. It has since been replotted.

Bramhall, Ervin H. b. Jan. 14, 1905, Palo Alto, Calif., son of railroad clerk George B. Bramhall and his wife Emma. After Stanford and MIT, he was at the Cavendish Labs in Cambridge, England, was selected to go as physicist on the *Bear of Oakland* for ByrdAE 1933-35, and was one of the shore party of that expedition. Until World War II he taught at the University of Alaska, at Fairbanks, survived the big earthquake of July 22, 1937, and then served in the Air Force, becoming a lieutenant colonel, and serving with the OAS. A professor at the University of Hawaii, he was then on the technical staff of the State Department in Germany, later worked for RCA, and then retired. He married Marion. He died on July 3, 1998, in Sun City, Ariz.

Mount Branco *see* **Mount Rio Branco**

Brand, Royston Thomas "Roy." b. July 22, 1912, London, son of Thomas Richard Brand and his wife Agnes Kate Canfield. In 1936, in Worthing, he married Alice F. Felstead. He was an RAF mechanic when he joined FIDS in 1960, as an air fitter, considerably older than the rest of the guys, and wintered-over at Base B in 1961, 1962, and 1966 (FIDS became BAS in 1962). He helped build the hangar at Deception Island in 1961. He died in Worthing, in 1983.

Brand, Russell James. Wintered over at Mawson Station in 1977, and at Casey Station in 1984 and 1988.

Brand Peak. 70°01' S, 63°55' W. A sharp, snow-covered peak, rising to about 2000 m, 16 km ESE of the Eternity Range, and 6 km NW of Mount Duemler, in the north-central part of Palmer Land. Mapped by USGS in 1974 from USN air photos taken between 1966 and 1969. Named by US-ACAN in 1976, for Timothy "Tim" Brand, USARP biologist at Palmer Station in 1974. UK-APC accepted the name on July 21, 1976. It appears on the 1979 USGS sketch map of the N part of Palmer Land.

Brandalberg. 72°51' S, 166°21' E. One of the Lawrence Peaks, in Victoria Land. Named by the Germans for Capt. Peter Brandal, skipper of the *Polar Queen*, which took German expeditions to Antarctica in the 1990s.

Brandau Crater. 78°12' S, 163°22' E. An unglaciated volcanic crater, S of the snout of Howchin Glacier, on Chancellor Ridge, in southern Victoria Land. Originally called Brandau Vent, for Jim Brandau (*see* **Brandau Glacier**). NZ-APC accepted the name Brandau Vent in 1980. It was re-defined somewhat, and US-ACAN accepted the new name in 1995.

Brandau Glacier. 84°54' S, 173°30' E. A wide tributary glacier, 24 km long, it flows westward from an ice divide between the Haynes Table and Husky Heights, into Keltie Glacier just W of Ford Spur. Originally plotted in 84°54' S, 173°45' E. Named by US-ACAN in 1965, for Lt. Cdr. James F. "Jim" Brandau (b. 1934), USN, VX-6 pilot, 1963-64, 1964-65, 1969-70, and 1971-72. He was pilot of the helicopter that crashed on Nov. 19, 1969 (*see* **Deaths**), and his hands were badly burned rescuing two of the survivors. He was back on a tourist ship in 2001-02, as a tourist. NZ-APC accepted the name on Nov. 16, 1965. The feature has since been replotted.

Brandau Rocks. 76°53' S, 159°20' E. Rock exposures about 0.8 km (the Australians say 2 km) W of Carapace Nunatak, in Victoria Land. Discovered by the NZARP Allan Hills Expedition of 1964, and named by them for U.S. helo pilot Jim Brandau (*see* **Brandau Glacier**), who made a difficult rescue flight here to evacuate an injured member of the party. US-ACAN accepted the name in 1965, and NZ-APC followed suit on July 15, 1965. ANCA accepted the name on Aug. 10, 1966.

Brandau Vent *see* **Brandau Crater**

Brandenberger Bluff. 75°58' S, 136°05' W. A steep rock bluff rising to 1650 m, at the extreme N side of Mount Berlin, in the Flood Range of Marie Byrd Land. Algae and lichens are to be found here. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1966, as Brandenburger Bluff, for Arthur J. Brandenberger (b. July 2, 1916, St. Gallen, Switzerland), USARP glaciologist, leader of the Byrd Station Traverse of 1962-63. The name was later corrected.

Brandenburger Bluff *see* **Brandenberger Bluff**

Brandstorpnabben. 74°18' S, 9°50' W. A nunatak in the moraine the Norwegians call Sømmemorenen, in Milorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Ola Johan Brandstorp (1902-1963), journalist, and member of the Resistance during World War II.

Mount Brandt. 72°10' S, 1°07' E. Rising to 1540 m, it is the most northerly nunatak of the Rømlingane Peaks, in the Sverdrup Mountains of Queen Maud Land. Discovered by GermAE 1938-39, and named by Ritscher as Brandt-Berg, for Emil Brandt. This may or may not be precisely the mountain that Ritscher named, but modern geographers have decided that it is close enough. US-ACAN accepted this situation, and the name Mount Brandt, in 1970.

Brandt, Emil. b. 1900, Germany. Sailor for the North German Lloyd Line, who went to sea in 1922. In 1938 he sailed to New York on the *Bremen*, transferred to the *Minden* for the trip back to Germany, and was on the *Schwabenland* during GermAE 1938-39.

Brandt-Berg *see* **Mount Brandt**

Brandwein Nunataks. 80°02' S, 159°55' E. Two nunataks, rising to 870 m, which stand close together and mark the NE extent of the Nebraska Peaks, in the E part of the Britannia Range. Named by US-ACAN in 2000, for Sidney S. "Sid" Brandwein (b. Oct. 1, 1948), a member of the USARP geophysical field party with the Ross Ice Shelf Project (RISP), in 1973-74. NZ-APC accepted the name on Feb. 20, 2001.

Brandy Bay. 63°50' S, 57°59' W. A bay, 3 km wide, it is entered W of Bibby Point, and lies between that point and San Carlos Point, on the NW coast of James Ross Island. SwedAE 1901-04 were probably the first to see it, in Oct. 1903. FIDS surveyed it in Dec. 1945, and Fids from Base D surveyed it again in Aug. 1952. While they were here in 1952, some Fids were discussing the efficacy of brandy for a dogbite. UK-APC accepted the name on Sept. 4, 1957, and it appears on a British chart of 1962. US-ACAN accepted the name in 1963. This point has occasionally been confused with Bahía Aramburu, several km to the north.

Brandy Point *see* **San Carlos Point**

Brannan, William. b. 1875, Dundee, son of Irish laborer John Brannan and his wife Annie. He was working in a jute mill when he stowed away on the *Balaena* during DWE 1892-93. He and Terry McMahon were found too late, and wound up going on the expedition. At Port Stanley they officially signed on to replace 3 deserters. Soon after the expedition returned to Dundee in 1893 he became a plasterer's laborer, married a local jute spinner named Euphemia, they settled down in South Tay Street, and had a couple of children. *See* **Stowaways**.

Branscomb Glacier. 78°32' S, 86°05' W. A glacier, 10 km long, flowing W from the NW side of the Vinson Massif, into Nimitz Glacier, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1957 and 1960. Named by US-ACAN for Lewis M. Branscomb, chairman of the National Science Board, 1982-84.

Branscomb Peak. 78°31' S, 85°42' W. A small, snowy prominence, rising to 4520 m, 1.7 km NW of Mount Vinson, it is the highest point of the ridge that forms the top of the main W face of the Vinson Massif, overlooking the upper section of Branscomb Glacier, in the Sentinel Range, in the Ellsworth Mountains. Named by US-ACAN in 2006, in association with the glacier.

[1]**The *Bransfield***. A 158-ton, 104 foot 6 inch whale catcher, built in Oslo in 1911, and belonging to the Hektor Company. She was based in the South Shetlands from the 1911-12 season for several years, working for the *Ronald*. In 1920-21 she was working for the new *Ronald*. During a hurricane, she capsized in South Bay, Doumer Island, in the South Shetlands (some sources say she capsized in Whaler's Bay, Deception Island), on March 11, 1924, while assisting with the unloading of materials to increase the size of the whaling company's station (a fact which does point toward Whaler's Bay). Four of the men — Georg Christensen, Carl Olaf Gjerdøe (the skipper), Niels Enest Samuelsen (who was 58), and Mathias Andressen, all died immediately, and Thorleif Bjarne Hansen died 5 days later.

[2]**The *Bransfield***. A 7000-ton refrigeration ship which accompanied the *Balaena* into Antarctic waters from the 1948-49 season until she was scrapped in 1958.

[3]**The *Bransfield***. A 4816-ton, 99.2-meter ice-strengthened British Royal research and supply ship, designed by Graham & Woolnough, of Liverpool, for NERC, built by Robb Caledon, of Leith, launched on Sept. 4, 1970 by Sir Vivian Fuchs' wife, and commissioned at Leith, on Dec. 31, 1970. She then sailed for the Weddell Sea, under the command of Capt. Thomas Woodfield, who was also her skipper in Antarctic waters in 1971-72, 1972-73, and 1973-74, when he was succeeded by Stuart Lawrence for the 1974-75 season. Her skipper in 1975-76 was Malcolm Phelps, and then, for every season from 1976-77 until 1996-97 there were two skippers, Stuart Lawrence and John Cole. On March 27, 1980 she struck a rock. She was back in 1997-98, under captains Lawrence and John Bryce Marshall. On Oct. 17, 1998, she left Grimsby, again under captains Lawrence and Marshall, bound for Antarctica and the 1998-99 BAS season. In 1999 she was sold to Rieber Shipping, but was back in Antarctic waters in 1999-2000, same skippers.

Cerro Bransfield *see* **Mount Bransfield**

Estrecho Bransfield *see* **Bransfield Strait**

Isla Bransfield *see* **Bransfield Island**

Mont Bransfield *see* **Mount Bransfield**

Monte Bransfield *see* **Mount Bransfield**

Mount Bransfield. 63°17' S, 57°05' W. A prominent, conical-topped, completely ice-covered mountain, rising to 756 m, 2.75 km WSW of Cape Dubouzet, at the NE tip of Trinity Peninsula, at the tip of the Antarctic Peninsula. Discovered and roughly charted on Jan. 20, 1820, by Bransfield, and named by him as Mount Wakefield. It was further mapped on Feb. 27, 1838, by FrAE 1837-40, and renamed by Dumont d'Urville, as Mont Bransfield, for Bransfield himself. It appears as Mount Bransfield on an 1839 British chart. Wilkes, on his 1845 map, charted "the eastern point of Palmer's Land" as Mount Hope (i.e., this mountain), and plotted it in 63°25' S, 57°55' W. It appears on an 1861 Spanish chart as Monte Bransfield, and on a 1943 U.S. Hydrographic Office chart as "Mount Hope (Mount Bransfield)." It was surveyed by Fids from Base D in 1945-47. US-ACAN accepted the name Mount Bransfield in 1952, and UK-APC followed suit on Sept. 8, 1953, It appears as such in the 1955 British gazetteer. There is a 1908 Argentine reference to it as Cerro Bransfield, but the 1970 Argentine gazetteer and the 1974 Chilean gazetteer both list it as Monte Bransfield. The naming of this feature bears a striking resemblance to that of Mount Hope.

Point Bransfield *see* **Bransfield Island**

Punta Bransfield *see* **Bransfield Island, Turnbull Point**

Bransfield, Edward. b. 1785, Ballinacurra, co. Cork. A merchant seaman, he was press-ganged into the RN in June 1803, but made the best of it. He was an ordinary seaman on the *Ville de Paris*, and in 1805 was promoted to able seaman. He served on the *Royal Sovereign*, and in 1808 was promoted to 2nd master's mate, to midshipman in 1808, and to 2nd master in 1812. Later that year he became acting master of the *Goldfinch*. He skippered several ships, and in 1816 the *Severn*, on which he took part in the bombardment of Algiers. He was made master of the *Andromache* in 1817, under the command of Capt. William H. Shirreff. The *Andromache* was posted to Valparaíso, where, in 1819, William Smith arrived reporting his discovery of New South Britain (i.e., the South Shetlands). Shirreff placed Bransfield in command of Smith's ship, the *Williams*, and, with Smith as pilot, they sailed from Valparaíso on Dec. 20, 1819, in order to conduct hydrographic experiments and to chart the newly-discovered island group, where they arrived on Jan. 16, 1820. They landed on King George Island, to take possession, explored for a week, then on Jan. 27, 1820, sailed SW. They went to Deception Island, and went farther south still. On Jan. 30, 1820, they saw "high mountains covered with snow." These were the peaks of Trinity Land, on the mainland, and they charted part of it (crudely). They also discovered Bransfield Strait, and, on Feb. 4, 1820, landed at Clarence Island. Bransfield left the Navy later that year, re-joined the merchant marine, and skippered several ships. With his wife Ann, he retired to 61 London Road, Brighton, where he died on Oct. 31, 1852. His wife, living off her investments and renting rooms out to lodgers, lived until 1863.

Bransfield Basin *see* **Bransfield Strait**

Bransfield House. The main hut at Port Lockroy Station.

Bransfield Island. 63°11' S, 56°36' W. An almost circular island, about 7 km across, and ice-capped, 5 km directly SW of d'Urville Island, and separated from that island by Burden Passage, off the NE tip of the Antarctic Peninsula, it forms the E entrance of Antarctic Sound. The N coast was roughly charted by Bransfield on Jan. 20, 1820. Ross named "the low western termination of the land" on Dec. 30, 1842, as Point Bransfield, for Edward Bransfield. At that time Joinville Island was thought to be joined to Dundee Island and d'Urville Island, and Ross's Bransfield Point signified the W extremity of d'Urville Island, with the much smaller offlying island (that would become Bransfield Island) not charted, let alone named. That situation was repeated on a 1921 British chart, and (as Punta Bransfield) on a 1947 Chilean chart. Fids on the *Trepassey* re-surveyed it in Jan. 1947, and found that the W end of d'Urville Island was actually this small island they named Bransfield Island. It appears as such on a British chart of 1949, and was the name accepted by UK-APC on Nov. 21, 1949, and by US-ACAN in 1952. It appears as such in the 1955 British gazetteer. It appears as Isla Bransfield on a Chilean chart of 1951, and that was the name accepted by both the 1970 Ar-

gentine gazetteer and the 1974 Chilean gazetteer. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Base D in 1960-62. Ross's Point Bransfield, to the NNE, was renamed Turnbull Point, except by the Chileans, who call it Punta Bransfield.

Bransfield Rocks. 61°46' S, 56°52' W. Between O'Brien Island and Ridley Island, in the South Shetlands. Apparently these rocks have disappeared, for the term is no longer in use, except by the Russians.

Bransfield Sea *see* **Bransfield Strait**

Bransfield Sound *see* **Bransfield Strait**

Bransfield Strait. 63°00' S, 59°00' W. A body of water, 100 km wide, it extends for 300 km in an ENE-WSW direction, and separates the South Shetlands from Trinity Peninsula and the Joinville Island group, off the N tip of the Antarctic Peninsula. In the E it opens between Clarence Island and Joinville Island, and to the W between Smith Island and Brabant Island. Discovered by Edward Bransfield on Jan. 20, 1820, while he was in command of the *Williams*, and thought by him to be a gulf. It was subsequently charted by sealers in the area. In the *Hero*'s logbook, written up by her captain Nat Palmer, there is reference to Christmas Sound, and it is believed that what is meant by this is the Bransfield Strait. On Dec. 30, 1821, Pendleton made a note referring to Kiles Way, which signified the W part of the strait. On Weddell's 1825 map, he names it Bransfields Strait (it is also seen, erroneously, as Branfields Strait), after Edward Bransfield. Powell's 1828 chart calls it Bransfield's Strait. It appears on an 1839 British chart as Bransfield Strait, and that was the name accepted by US-ACAN in 1947 (after they had rejected Bransfield Sound), and by UK-APC on Sept. 8, 1953. It appears as such in the 1955 British gazetteer, and also on a 1962 British chart. It appears on an 1861 Spanish chart as Estrecho de Bransfield. All the interested countries translated it as Bransfield something or other, and it was also seen as Bransfield Basin. A 1946 USAAF chart showed it as the Bransfield Sea, with the name Bransfield Strait relegated to the W end. It appears on a 1948 Argentine chart as Mar de la Flota (i.e., "sea of the fleet"), referring to the Argentine Navy's involvement in ArgAE 1947-48. That was the name accepted by the 1970 Argentine gazetteer. It has also been seen as Mar de Bransfield. The Chileans call it Estrecho Bransfield.

Bransfield Trough. A submarine trough centering on 61°30' S, 54°00' W, and lying between the Antarctic Peninsula and the South Shetlands. Named by international agreement in 1977, for Edward Bransfield.

Branson Nunatak. 67°55' S, 62°46' E. A prominent peak between Price Nunatak on the one hand, and, on the other, Mount Burnettt and the main massif of the South Masson Range, in the Framnes Mountains of Mac. Robertson Land. Mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37, and named by them as Horntind (i.e., "horn peak"). Re-named by ANCA for John C. Branson, geophysicist at Mawson Station in the winter of 1962, who carried out investigations here. US-ACAN accepted that name in 1965.

Branstetter Rocks. 70°08' S, 72°37' E. A small group of rocks, abut 1.75 km ENE of Thil Island, in the E part of the Amery Ice Shelf. Delineated by U.S. cartographer John H. Roscoe in 1952, who named this feature for J.C. Branstetter, air crewman on OpHJ photographic flights over this area in 1946-47. US-ACAN accepted the name in 1956, and ANCA followed suit on July 22, 1959.

Glaciar Brant *see* **Hobbs Glacier**

Bråpiggen *see* **Bråpiggen Peak**

Bråpiggen Peak. 72°54' S, 3°18' W. One of the ice-free peaks at the S side of Frostlendet Valley, between that valley and Penck Trough, 1.5 km S of Friis-Baastad Peak, in the southernmost part of the Borg Massif, in Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Bråpiggen (i.e., "the abrupt peak"). US-ACAN accepted the name Bråpiggen Peak in 1966.

Brash ice. Or brash. Small (must be under 6 feet across) fragments and nodules of ice, resulting from a floe breaking up.

Brash Island. 63°24' S, 54°55' W. An isolated island, about 8 km NW of Darwin Island, and about 11 km off the SE end of Joinville Island, between that island and the Danger Islands. Surveyed by Fids from Base D in 1953, and named by them as Brash Islet, for the brash ice in the area. UK-APC accepted the name Brash Islet on Sept. 4, 1957, and US-ACAN followed suit. However, on July 7, 1959, UK-APC accepted the re-definition Brash Island. It appears as such on a British chart of 1962. US-ACAN accepted the new name in 1963.

Brash Islet *see* **Brash Island**

Brasquern, Louis-Marie. b. March 6, 1816, Langaïdic, France. Junior seaman on the *Astrolabe* during FrAE 1837-40. He ran at Talcahuano, Chile, on May 13, 1838.

The *Bråtegg*. Norwegian cargo vessel of 500 tons, the ship chosen by the Norwegian Antarctic Expedition 1947-48. She was equipped with an additional sounding winch for hydrological work. In addition to the crew of 17, led by Capt. Nils Larsen, there were 4 scientists on the expedition, led by Holger Holgersen. She was in at Deception Island on March 5, 1948, 2 days after having been detained and boarded by the *Parker*.

Banco Bråtegg *see* **Bråtegg Bank**

Bråtegg Expedition *see* **Norwegian Antarctic Expedition 1947-48**

Bråtegg Bank. 65°16' S, 68°36' W. A submarine feature with a least depth of 99 m, NW of the Biscoe Islands, off the Graham Coast, on the W coast of Graham Land, about 140 km NNW of the extreme N tip of Adelaide Island, and about 115 km WSW of Hugo Island. It was charted by the Norwegian Antarctic Expedition of 1947-48, and named by them as Bråteggen (i.e., "the *Bråtegg*"), for their ship, the *Bråtegg*. It appears on British charts of 1950 and 1952, and the name was accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956, but with coordinates of 65°05' S, 68°21' W. Its coordinates were corrected by the time of a 1957 British chart, and, as such, it appears in the 1977 British gazetteer. It appears on a 1960 Argentine chart as Banco Bråtegg, and that was the name accepted by the 1970 Argentine gazetteer. The English-language name of the bank was accepted by international agreement in July 1964.

Bråteggen *see* **Bråtegg Bank**

Bratholm *see* **Steepholm**

Bratina Island. 78°01' S, 165°32' E. A small island, rising to an elevation of 160 m above sea level, at the N tip of Brown Peninsula, in the Ross Ice Shelf. Named by US-ACAN in 1963, for VX-6 Chief Aviation Machinist's Mate Joseph H. Bratina (b. Nov. 9, 1914, Ladysmith, Wisc. d. Aug. 6, 2006, Tomah, Wisc.), USN, who was at McMurdo in 1958-59, and who was injured in the plane crash of Jan. 4, 1959, at McMurdo (*see* **Deaths**, 1959). He was back in 1960-61, and again in 1961-62. He retired as a chief petty officer, after 30 years. The New Zealanders built some huts here in Dec. 1989. NZ-APC accepted the name on June 27, 1963.

Bratina Lagoon. 78°01' S, 165°30' E. A tidal lagoon of sand flats, ponds, and channels, about 700 m long and about 250 m wide, on the SW side of Bratina Island, at the N tip of Brown Peninsula, in the Ross Ice Shelf. Named by Clive Howard-Williams (*see* **Howard-Williams Point**), in association with the island. NZ-APC accepted the name on Dec. 1, 1993, and US-ACAN followed suit in 1994.

Bratina Valley. 77°28' S, 161°29' E. An upland valley at the E side of Harris Ledge, opening N to McKelvey Valley, in the Olympus Range, in the McMurdo Dry Valleys, in Victoria Land. Named by US-ACAN in 2004, for Bonnie J. Bratina, of the department of microbiology at Michigan State University at East Lansing. She was with USAP for 4 seasons at Lake Vanda in the 1990s.

Bratsberg, Paulus Villas "Paul." b. June 8, 1916, Arendal, Norway. He became a merchant seaman in Norway at the age of 14, serving on a variety of ships to places like Cardiff, San Francisco, Curaçao, and New York, and worked his way rapidly up to bosun. On Dec. 2, 1938, at Oslo, he signed on to the *Solitaire*, bound for New York, where he arrived on Sept. 8, 1939. He signed off there, and joined the crew of the *British Columbia Express*, on the run from Oregon to the Canal Zone. Back in Seattle, he joined the crew of the *North Star* for the 2nd half of USAS 1939-41. He was naturalized an American citizen on May 12, 1947, at Seattle, which is where he died on Dec. 21, 1975.

Bratsberghorten. 74°40' S, 11°57' W. A nunatak in the SW part of Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for Erik Bratsberg (b. 1923), a member of the Resistance during World War II.

Bratsigovo Hills. 63°39' S, 58°00' W. A chain of rocky hills, rising to over 300 m, and

extending from the coast of Prince Gustav Channel 4 km northwards, on the SE side of the Cugnot ice Piedmont, 3.77 km W of Chernopeev Peak, and 6.5 km ENE of Levassor Nunatak, on Trinity Peninsula. Mapped by the Germans and British in 1996. Named by the Bulgarians on Dec. 6, 2010, for the town of Bratsigovo, in southern Bulgaria.

Nunataki Bratstva. 72°20' S, 19°23' E. A group of nunataks, on the W side of the glacier the Norwegians call Tussebreen, in the west-central portion of the Sør Rondane Mountains. Named by the Russians. It is possible that this is the collective Russian name for the 3 small nunataks on the 26 km-long ridge the Norwegians call Gandrimen.

Brattebotnen *see* **Brattebotnen Cirque**

Brattebotnen Cirque. 71°45' S, 10°15' E. A steep-sided cirque (or corrie) in the W wall of Mount Dallmann, in the Orvin Mountains, in Fimbulheimen, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and from 1958-59 air photos taken during the same long expedition, and named by them as Brattebotnen (i.e., "the steep cirque"), and plotted it in 71°47' S, 10°15' E. US-ACAN accepted the name Brattebotnen Cirque in 1970, but with new coordinates.

Brattebotthalsen. 71°08' S, 10°16' E. An ice ridge S of Mount Dallmann, in the Orvin Mountains of Fimbulheimen, in Queen Maud Land. Named by the Norwegians in association with the relatively nearby Brattebotnen Cirque.

Bratteli, Trygve Martin. b. Jan. 11, 1910, Ramnaes, Norway, but raised in Nøtterøy, son of shoemaker Torjer Hansen Bratteli and his wife Marta. He worked on whalers in Antarctic waters, became a leader of Norway's Labor Party youth section, was with the Resistance in World War II, was arrested and interned. He was elected to Parliament in 1950, and became party leader in 1965. He was prime minister of Norway from 1971 to 1972, and from 1973 to 1976. He resigned as a member of Parliament in 1981, and died on Nov. 20, 1984, in Oslo, after suffering a brain hemorrhage.

Brattfjellet. 72°27' S, 27°59' E. A mountain S of the Bleikskoltane Peaks, at the SE end of the Sør Rondane Mountains. Named by the Norwegians ("the steep mountain").

Brattfloget. 72°28' S, 28°00' E. A steep rock face E of Vørterkaka Nunatak, S of the Bleikskoltane Rocks, at the SE end of the Sør Rondane Mountains. Named by the Norwegians ("the steep rock").

Bratthamaren *see* **Byobu Rock**

Bratthø. 66°39' S, 54°40' E. A peak, rising to about 1820 m above sea level, in the Newman Nunataks of Enderby Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it ("steep hilltop"). ANCA accepted the name without change, on July 31, 1972.

Brattingen. 72°17' S, 25°54' E. A mountain at the W side of Mjellbreen, between Breskilkampen and Keipen, at the SE end of the Sør Rondane Mountains. Named by the Norwegians ("the steep cliff").

Brattnevet. 69°24' S, 76°15' E. A small peninsula, shaped like a clenched fist, on Fisher Island, in the Larsemann Hills. Photographed aerially by LCE 1936-37, and named (according to the SCAR gazetteer) by ANCA. It is more likely to have been named by the Norwegians (it means "the steep mountain" in Norwegian). The Chinese call it Huaxi Bandao.

Brattnipane *see* **Brattnipane Peaks**

Brattnipane Peaks. 71°54' S, 24°33' E. A group rising to 2361 m (*see* **Tekubi-yama**), in the Luncke Range, 15 km NW of Mefjell Mountain, in the north-central part of the Sør Rondane Mountains. The peaks contain 5 ridges stretching northward; they are (from E to W) Oyayubi-one, Hitotsasiyubi-one, Nakayubi-one, Kusuruyubi-one, and Koyubi-one. Photographed aerially by LCE 1936-37, and mapped by Norwegian cartographers from these photos in 1946 (apparently they did not, at that stage, name this feature). Norwegian cartographers remapped it in 1957, from aerial photos taken during OpHJ 1946-47, and this time they did name it, as Brattnipene (i.e., "the steep peaks"). US-ACAN accepted the name Brattnipane Peaks (note the spelling), in 1965. JARE took air photos in 1981-82 and again in 1986, and they saw the group resembling a left hand, hence their naming of the 5 individual ridges.

Brattnipene *see* **Brattnipane Peaks**

Brattodden *see* **Abrupt Point**

Brattøy *see* **Abrupt Island**

Brattskarvbrekka *see* **Brattskarvbrekka Pass**

Brattskarvbrekka Pass. 72°10' S, 1°25' E. An E-W pass (the Norwegians call it an ice fall) between Brattskarvet Mountain and Vendeholten Mountain, in the Sverdrup Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Brattskarvbrekka (i.e., "the steep mountain slope"). US-ACAN accepted the name Brattskarvbrekka Pass in 1966.

Brattskarvet *see* **Brattskarvet Mountain**

Brattskarvet Mountain. 72°06' S, 1°27' E. Rising to 2100 m, next N of Vendeholten Mountain, in the Sverdrup Mountains, in the W part of Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially during GermAE 1938-39. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Brattskarvet (i.e., "the steep mountain"). US-ACAN accepted the name Brattskarvet Mountain in 1966.

Brattstabben *see* **Jennings Bluff**

Brattstrand Bluffs. 69°13' S, 77°00' E. Rock outcrops about 5.5 km ENE of Hovde Island, on Prydz Bay and part of the Ingrid Christensen Coast, about 30 km N of the Larsemann Hills. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Brattstranda (i.e., "the abrupt shore"). ANCA accepted the name Brattstrand Bluffs on May 18, 1971, and US-ACAN followed suit in 1973.

Brattstranda *see* **Brattstrand Bluffs**

Brattvågen. 67°39' S, 62°39' E. A small bay, with steep-sided coasts, due W of Ring Rock, in Holme Bay, Mac. Robertson Land. The SCAR gazetteer says it was named by the Russians, which is odd, given that it is such a Norwegian name ("the steep bay").

Brauer, August. b. April 3, 1863, Oldenburg, Germany. On Oct. 30, 1885, he was awarded his PhD from the University of Bonn; in 1890 he became an assistant zoologist at the Berlin Institute; and in 1893 went to a similar position at the Marburg Institute. He went on the German Navy Oceanographic Expedition, 1898-99. In Dec. 1905 he became professor of zoology at Berlin University, and died on Sept. 10, 1917.

Mount Braun. 69°26' S, 71°24 W. Rising to about 900 m on the S side of Palestrina Glacier, it forms the NE part of a horseshoe-shaped ridge about 6 km ESE of Mount Holt, and also forms the NE extremity of the Sofia Mountains, in the NW part of Alexander Island. Surveyed by BAS personnel from Fossil Bluff in 1975-76, and plotted in 69°26' S, 71°31' W. Named by US-ACAN for Lt. Cdr. William K. Braun, USN, VXE-6 commander of a C121J (Super Constellation) during OpDF 70 (i.e., 1969-70) and OpDF 71 (i.e., 1970-71). UK-APC accepted the name on June 11, 1980. It has since been replotted.

Braun Point. 69°28' S, 76°05' E. A small, rocky cape on the S side of Wilcock Bay, in the Larsemann Hills. Named by ANCA on Sept. 29, 1988.

Lake Braunsteffer *see* **Braunsteffer Lake**

Braunsteffer Lake. 68°32' S, 78°22' E. A lake, 0.8 km long, and 1.5 km W of the central part of Lake Zvezda, in the E part of the Vestfold Hills. Photographed aerially by OpHJ 1946-47, and mapped from air photos taken by SovAE 1956 and by ANARE 1957-58. Named by ANCA as Lake Braunsteffer, for Claude Braunsteffer, weather observer who wintered-over at Davis Station in 1959, who carried out scientific investigations on this and other lakes in the Vestfold Hills. US-ACAN accepted the name Braunsteffer Lake in 1973.

Brautnuten *see* **Brautnuten Peak**

Brautnuten Peak. 71°46' S, 1°21' W. A low peak (or even a nunatak), in Straumsida Bluff, 8 km SE of Snøkallen Hill, on the E side of Ahlmann Ridge, in Maudheimvidda, in Queen Maud Land. Surveyed by NBSAE 1949-52, who also photographed it from the air. It was photographed again, aerially, in 1958-59, during the long NorAE 1956-60. Mapped from all these photos by Norwegian cartographers, who named it Brautnuten (i.e., "the broken peak"). US-ACAN accepted the name Brautnuten Peak in 1966.

The *Braveheart*. A 39-meter all-steel former

Japanese research vessel, she was bought in 1998 by the Stoney Creek Shipping Company (owned by Nigel Jolly), of Palmerston North, and operated by them as an expedition vessel. She had 2 crew and could take 10 passengers. In 1999, she was at Campbell Island (not in Antarctica), and on Jan. 17, 2001 left Lyttelton bound for the Ross Sea, with a crew of American and NZ researchers aboard who were going there to study B-15, the monstrous iceberg that had calved off the year before. This expedition, partly sponsored by the (American) National Geographic Society, was called the 2001 Ice Island Antarctic Expedition. Dr. Gregory Stone, of the New England Aquarium, and Wes Skiles, experienced Antarctic cinematographer, led the expedition. Iain Kerr was the vessel's skipper, and John Spruit was engineer. She carried a 2-man Hughes 300 helicopter on her deck. They returned to Wellington on March 10, 2001. Greg Stone wrote the book of the expedition, *Ice Island: the Expedition to Antarctica's Largest Iceberg*.

Glaciar Bravo *see* **Bravo Glacier**

Rocas Bravo *see* **Snag Rocks**

Bravo, Pablo *see* **Órcadas Station**, 1960, 1962, 1964

Bravo Automatic Weather Station. 74°41' S, 164°06' E. An Italian AWS, at sea level, at Gerlache Inlet, in the NW corner of Terra Nova Bay, along the coast of Victoria Land. Not permanent, it was used when needed, being erected in the November of a given year, and taken down in the following February. It has operated since Oct. 1993.

Bravo Glacier. 62°31' S, 59°48' W. An ice-cliffed glacier, between 20 and 60 m high, between Triangle Point and Glacier Bluff, it forms the NW side of Yankee Harbor, on the S coast of Greenwich Island, in the South Shetlands. In Jan. 1953, ChilAE 1952-53 conducted a thorough survey of Yankee Harbor, and named this feature Glaciar Bravo, probably for an officer on the *Lientur*, which took part in the survey. US-ACAN accepted the name Bravo Glacier in 2003, and UK-APC followed suit on July 8, 2003. The British were the latest to replot this feature, in late 2008.

Bravo Hills. 84°41' S, 171°00' W. a group of low peaks rising to 780 m, they border the Ross Ice Shelf between Gough Glacier and Le Couteur Glacier. Named by the Southern Party of NZGSAE 1963-64, for their supply Depot B (i.e., B for Bravo) near here. NZ-APC accepted the name on July 16, 1964, and US-ACAN followed suit in 1966.

Bråvold, Hjalmar. Manager of the Norwegian factory whaler *Thorshammer*, 1932-33 and 1936-37.

Brawhm Pass. 77°53' S, 160°41' E. A small pass which provides easy passage between Beacon Valley and Arena Valley, on the E side of Farnell Valley, or (to put it another way) between Beacon Valley and Ferrar Glacier, in southern Victoria Land. Named somewhat acronymically by NZ-APC in 1968 for the 6 members of the University of New South Wales (Australia) expeditions of 1964-65 and 1966-67 (Bryan, Rose, Anderson, Williams, Hobbs, and McElroy) who used this pass. US-ACAN accepted the name in 1969.

Brawn Rocks. 73°12' S, 160°45' E. A prominent group of isolated rocks extending over 5 km, 20 km SW of the Sequence Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for James E. Brawn, VX-6 aviation machinist's mate at McMurdo in 1966. NZ-APC accepted the name on Dec. 4, 1968.

Mount Bray. 74°50' S, 114°04' W. A rounded mountain that is ice-capped, but which has a steep, bare rock SE face, on the SE side of Martin Peninsula, 1.5 km NW of Klimov Bluff, and E of Jenkins Heights, in the Kohler Range, on the Walgreen Coast of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1966. Named by US-ACAN in 1967, for Thomas K. Bray, USGS topographic engineer with the Marie Byrd Land Survey Party of 1966-67. Originally plotted in 74°50' S, 113°52' W, it has since been replotted.

Bray Nunatak *see* **Office Girls**

Brazil. A port of call (so to speak) for many ships plying the Atlantic on the way to Antarctica, Brazil had another oblique involvement in Antarctica as early as 1913, when the *Dantas Barreto*, a whale catcher owned by the Companhía de Pesca Norte do Brasil, chartered out to the Hvalen Company for the 1913-14, 1914-15, and 1915-16 seasons. Brazil was ratified as the 18th signatory of the Antarctic Treaty on May 16, 1975, and became the 15th nation to achieve Consultative status on Sept. 12, 1985, having sent down a few expeditions (*see* **Brazilian Antarctic Expeditions**). Brazil has a scientific station, Comandante Ferraz.

Mount Brazil. 72°03' S, 167°59' E. Rising to 2090 m, at the S end of the McGregor Range, in the Admiralty Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1962. Named by US-ACAN in 1964, for CWO John Elmer Brazil (b. March 1, 1926, Hobart, Okla. d. March 13, 2010), in the U.S. Navy during World War II, then a farmer, then in the U.S. Army for 30 years. He was a helicopter pilot supporting the Topo North-South survey in the area, 1961-62. After retiring to Oklahoma, he became Governor George Nye's pilot. NZ-APC accepted the name.

Brazilian Antarctic Expeditions. These are the expeditions (BrazAE). **BrazAE 1982-83**: This was the first Brazilian Antarctic expedition. After years of planning, and fighting a tight budget, a two-ship expedition was sent to the Antarctic Peninsula, in a major reconnaissance effort. The ships were the *Barão de Teffe* and the *Professor Wladimir Besnard*. C.F. Eugenio-Nevia was chief scientist. The *Barão de Teffe* visited other nations' stations in the Antarctic Peninsula, the South Shetlands, and Anvers Island. **BrazAE 1983-84**: Two ships left Brazil on Jan. 6, 1984, for a 10-week expedition, three scientific cruises in Antarctic waters, and Comandante Ferraz Station was established as a summer station on Feb. 6, 1984. They used the same two ships as on the previous expedition. Fernando Sergio Nogueira de Araújo led the expedition. **BrazAE 1984-85**: Led by Fernando Nogueira de Araújo, with the same two ships as on the previous two expeditions. Two refugios were established — Astrónomo Cruls and Engenheiro Wiltgen. **BrazAE 1985-86**: Summer leader was Fernando Nogueira de Araújo. Same ships used as for the previous three expeditions. Comandante Ferraz was opened as an all-year station. **BrazAE 1986-87**: Same ships as on the previous expeditions. Padre Balduíno Rambo Summer Station was opened. **BrazAE 1987-88**: Same ships as before, plus the *Almirante Camara*. **BrazAE 1988-89**: The ships were the *Barão de Teffe* and the *Alvaro Alberto*. **BrazAE 1989-90**: The ship was the *Barão de Teffe*. The following refugios were open for the summer: Padre Balduino Rambo, Astrónomo Cruls, Engenheiro Wiltgen, and Goeldi. **BrazAE 1990-91**: The ship was the *Barão de Teffe*. Rambo, Cruls, and Wiltgen were open for the summer. **BrazAE 1991-92**: The ship was the *Barão de Teffe*. Rambo, Cruls, and Wiltgen were open for the summer. **BrazAE 1992-93**: The ship was the *Barão de Teffe*. Rambo, Cruls, and Wiltgen were all open for the summer. **BrazAE 1993-94**: The ship was the *Barão de Teffe*. Rambo, Cruls, and Wiltgen were all open for the summer. **BrazAE 1994-95**: Jose de Souza Braga was operations manager. The ship was the *Almirante Ary Rongel* (known as the *Ary Rongel*). The Brazilian Air Force transported cargo and personnel. Rambo, Cruls, Wiltgen, and Goeldi were open for the summer. **BrazAE 1995-96**: The *Ary Rongel* was the ship. Rambo and Wiltgen were open for the summer. A joint Russian/Brazilian team of glaciologists led by Jefferson Cardia Simõens, made a double traverse along the King George Island ice-cap, taking core samples. **BrazAE 1996-97**: The *Ary Rongel* was the ship. Wiltgen was open for the summer. **BrazAE 1997-98**: The *Ary Rongel* was the ship. Rambo and Cruls were open for the summer. Wiltgen was dismantled. **BrazAE 1998-99**: The ships were the *Ary Rongel* and the *H-44*. Rambo and Cruls were open for the summer. **BrazAE 1999-2000**: The *Ary Rongel* was the ship. Rambo and Cruls were open for the summer. **BrazAE 2000-01**: The *Ary Rongel* was the ship. Rambo, Cruls, and Goeldi were all open for the summer. **BrazAE 2001-02**: The *Ary Rangel* was the ship. Rambo, Cruls, and Goeldi were all open for the summer. **BrazAE 2002-03**: The ship was the *Ary Rongel*. Rambo, Cruls, and Goeldi were all open for the summer. **BrazAE 2003-04**: The ship was the *Ary Rongel*. Rambo, Cruls, and Goeldi were all open for the summer. Rambo was dismantled at the end of the season. **BrazAE 2004-05**: The ship was the *Ary Rongel*. Cruls and Goeldi were open for the summer. **BrazAE 2005-06**: The ship was the *Ary Rongel*. Cruls and Goeldi were open for the summer. **BrazAE 2006-07**: The ship was the *Ary Rongel*. Cruls and Goeldi were open for the summer. **BrazAE 2007-08**: The ship was the *Ary Rongel*. Cruls

and Goeldi were open for the summer. The expeditions have continued.

Brazitis Nunatak. 84°58' S, 67°23' W. Rising to 1625 m, along the edge of an escarpment 8 km S of the DesRoches Nunataks, in the SW part of the Patuxent Range of the Pensacola Mountains. Surveyed from the ground by USGS during the Antarctic Peninsula Traverse of 1961-62, photographed from the air by USN in 1964, and mapped by USGS from these efforts. Named by US-ACAN in 1968, for Peter F. Brazitis (b. April 1944), cosmic ray scientist at Pole Station in 1967. UK-APC accepted the name on Nov. 3, 1971, and it appears in the 1974 British gazetteer.

Breached Cone. 77°48' S, 166°48' E. A volcanic cone, inland from Castle Rock, near Hut Point, on Ross Island. Named descriptively by Frank Debenham during BAE 1910-13, while he was making his plane table survey of the area in 1912. It appears in the 1958 NZ gazetteer.

Breadloaf Island. 69°23' S, 76°13' E. An island, shaped like a loaf of bread, in the Larsemann Hills, about 700 m W of Easther Island, and about 6.3 km WNW of Law-Racovitza Station, on the SE shore of Prydz Bay. Plotted in 1946 by Norwegian cartographers using air photos taken by LCE 1936-37, but not named by them. Named descriptively by the 1986-87 ANARE Larsemann Hills party. ANCA accepted the name on Nov. 24, 1987. The Chinese call it Yaner Dao.

Mount Breaker. 67°53' S, 67°16' W. It has double summits, the E one, at 880 m, being the highest elevation on Horseshoe Island, off the Fallières Coast, on the W coast of Graham Land. Surveyed by FIDS in 1955-57, when the first ascent was made. Descriptively named by UK-APC on July 7, 1959. The 2 summits are separated by a shallow col, and, when seen from the W, the feature resembles a breaking wave. US-ACAN accepted the name in 1960. The Argentines translated it as Monte Rompiente.

Breaker Island. 64°46' S, 64°07' W. A small, rocky island close SW of Norsel Point, and WNW of Arthur Harbor, off the SW coast of Anvers Island, 2.5 km NW of Palmer Station, in the Palmer Archipelago. Surveyed by FIDS in 1955. Named Breaker Islet by UK-APC on Sept. 4, 1957, because the island causes breakers when the sea is rough. It appears as such on a British chart of 1958, and US-ACAN accepted the name. On July 7, 1959, UK-APC redefined it as Breaker Island, and it appears as such on a British chart of 1960. US-ACAN accepted the new name in 1963.

Breaker Islet *see* **Breaker Island**

Breaking the Ice. A rather unusual expedition to Antarctica, in 2004. In 2002 Israeli real estate developer Hezkel Nathaniel (the names in this article, because they were originally not written in English characters, can be spelled in a variety of ways), who had been living in Germany since 1993, conceived and developed an idea, through an organization he founded, Extreme Peace Missions,— leading a team of Israeli Jews and Palestinians to Antarctica, as a peace statement, to be extensively covered by the press and camera. They would live and work together on this 35-day expedition, and climb a previously unconquered mountain, where a peace message, written by all of them, would be read at the summit. The expeditioners were Mr. Nathaniel, aged 41; Israeli leader Doron Erel, 44, mountain climber (e.g. Everest) and former commando; Nasser Quass, 35, a Palestinian soccer coach who had spent 3 years in an Israeli prison camp for throwing a Molotov cocktail at Israeli troops; Olfat Haidar, an Israeli Arab woman gym teacher and famous volleyball player from Haifa; Yarden Fanta, 33, who, as a girl of 14, had trekked from her native Ethiopia, across the Sudan, to Israel, where she arrived, illiterate, and had since become a candidate for a PhD; Ziad Darwish, 53, a Palestinian journalist and lawyer from Jerusalem; Avihu Shoshani, 44, Israeli lawyer and former commando; Suleiman Jamal al-Khatib, 32, a Palestinian former activist with al-Fatah, who had spent his life between the ages of 14 and 25 in an Israeli prison. After the expedition had been blessed by Yasser Arafat, in late Dec. 2003 Mr. Nathaniel and 6 others flew from Tel Aviv to Barcelona, then on to Madrid where they picked up 3 members of the support team — British communications engineer Tony Robinson, German production editor Mario Dieringer, and French mountain guide Denis Ducroz, from Chamonix. Other support team members were: Michael Greenspan, Israeli correspondent and video editor; Nadav Khalifa, Israeli mountain guide, alpine specialist, and camp master; Colin Rosin, Israeli director of photography, with 3 cameras; Dr. Arik Schechter, Israeli physician; and Kim Bodin, mountain guide from Chamonix. They arrived at the Chilean port on Dec. 28, 2003, and Nasser Quass arrived the following day. On Jan. 1, 2004 their yacht, the *Pelagic Australis* (skippered by Australian Steve Wilkins, and with Dr. Catrin Ellis Jones as 1st mate, and Nicolas "Nico" Pichelin, French crewman for both vessels), in company with the *Pelagic* (skippered by Richard Howarth, and also with Skip Novak, owner of the two yachts, aboard), set out from Punta Arenas, heading into the Drake Passage, en route for the Antarctic Peninsula. On Jan. 3, 2004 they crossed 60°S, and on Jan. 4, they reached Deception Island, in the South Shetlands. From there they made their way to the Antarctic Peninsula, climbed their mountain, near Prospect Point, calling it the Mountain of Israeli-Palestinian Friendship, and then returned to Chile.

Islote Breakwater *see* **Breakwater Island**

Breakwater Island. 64°47' S, 63°13' W. A small island, resembling a stone cube, and rising to an elevation of 33 m above sea level, with a line of rocks extending from it in a SW arc, 0.5 km off the NE side of Wiencke Island, opposite Nipple Peak, 8.5 km S of Cape Astrup, in the Palmer Archipelago, off the Danco Coast, on the W coast of Graham Land. Surveyed in 1944 by personnel from Port Lockroy Station, during Operation Tabarin, and descriptively named by them as Breakwater Islet, the name that was accepted by UK-APC on Nov. 21, 1949. It appears as such on a 1950 British chart, and US-ACAN accepted the name in 1952. It appears as such in the 1955 British gazetteer. ArgAE 1948-49 erroneously charted it in 1949 as Islote Bob (*see* **Bob Island**), and it appears on a 1953 Argentine chart as Islote Roberto, which is what the Argentines still call it. UK-APC redefined it as Breakwater Island, on July 7, 1959, and US-ACAN followed suit in 1963. It appears on a 1962 Chilean chart as Islote Breakwater, and that was the name accepted by the 1974 Chilean gazetteer.

Breakwater Islet *see* **Breakwater Island**

Mount Brearley. 77°48' S, 161°45' E. A small, sharp peak, rising to 2010 m, between Cavendish Icefalls and Hedley Glacier, it is the most westerly of the Kukri Hills, in Victoria Land. Named by Grif Taylor's Western Journey Party during BAE 1910-13, for Harry Brearley (1871-1948), inventor of stainless steel, and a former pupil of Grif Taylor's father's. US-ACAN accepted the name in 1972, and NZ-APC followed suit.

The Breasts *see* **Régnard Peaks**

Nunatak Brebbia. 66°15' S, 61°50' W. One of the scores of nunataks on Jason Peninsula named by the Argentines. Fossilized plants have been found at this nunatak.

Breccia Crag. 62°10' S, 58°32' W. A buttress, about 200 m above sea level, between Hervé Cove and Monsimet Cove, at Ezcurra Inlet, Admiralty Bay, King George Island, in the South Shetlands. Selwyn Bibby, a Fid at Base G in the 1950s, was aware of this feature, calling it Unconformity Buttress in his field report of 1961. However, Dick Barton, a Fid who, in 1965, wrote a geological monograph on King George Island, does not mention it, and it does not appear on maps. So, it was fair game for the Poles to rename, which they did in 1980, for the fact that the crag is built mostly of volcanic breccia. As this name is too similar to Breccia Crags (q.v.), it may have a hard time passing through the portals of other naming committees.

Breccia Crags. 60°42' S, 45°13' W. Rising to 305 m (the British say 270 m), 1.5 km W of Petter Bay, at the SE end of Coronation Island, in the South Orkneys. Surveyed by Fids from Signy Island Station between 1956 and 1958. So named by UK-APC on July 7, 1959, for the interesting geologic contact displayed here between brecciated schist and conglomerate. US-ACAN accepted the name in 1964.

Breccia Island. 68°22' S, 67°01' W. A small, low island, 1.5 km NW of Tiber Rocks, in the N part of Rymill Bay, off the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Nov. 27, 1947, by RARE 1947-48, and, after geological work done here, so named by Bob Nichols of that expedition, because the country rock is a plutonic breccia. UK-APC accepted the name on Aug. 31, 1962, and US-ACAN followed suit later that year. It was surveyed by Fids from Base E in 1962.

Mount Brecher. 85°24' S, 124°22' W. A jagged rock mountain, rising to 2100 m, immediately W of Mount LeSchack, in the northern

Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken in 1959-60. Named by US-ACAN in 1962, for Henry H. Brecher (b. 1932, Germany), glaciologist who wintered-over at Byrd Station in 1960, and who spent several subsequent summers in Antarctica. Mr. Brecher was, at that time, using the name Rosenthal.

Brecher Glacier. 80°42' S, 157°28' E. A broad glacier, 8 km long, in the N part of the Churchill Mountains, it flows NW between Rundle Peaks and the Mandarich Massif into the Byrd Glacier. Named by US-ACAN in 2003, for Henry Brecher (*see* **Mount Brecher**). NZ-APC accepted the name on Feb. 27, 2003.

Brechin, Gregor. b. Aug. 5, 1891, Alford, Aberdeenshire, son of stableman Gregor Smith Brechin and his wife Jane Mackie. He settled in the Falkland Islands after the wreck of the *Oravia*, on Nov. 15, 1912, married Teresa, had a family, and became the leading baker and butcher in Stanley. With Sidney Riches, he was the last of the Falkland Islands Dependencies government whaling inspectors under the whaling license regime, working on Deception Island, 1928-31. His assistant was Johan Aarseth, a Norwegian. In 1937 he was a sealing inspector on the *Port Saunders*, in Falklands waters. After World War II he kept a boarding house in Stanley, and died on Feb. 15, 1964.

Mount Breckenridge *see* **Breckinridge Peak**

Breckenridge Peak *see* **Breckinridge Peak**

[1]**Mount Breckinridge**. 66°37' S, 53°41' E. Rising to 2050 m, 6.3 km SSE of Stor Hånakken Mountain, in the Napier Mountains of Enderby Land. Fist mapped by Norwegian cartographers in 1946, from aerial photographs taken by LCE 1936-37, and named by them as Langnuten (i.e., "the long peak"). Re-photographed by ANARE flights of 1956, plotted from these photos by Australian cartographers, and re-named by ANCA for John E. Breckinridge, U.S. Weather Bureau meteorologist from Binghamton, NY, senior U.S. representative at Wilkes Station in the winter of 1961. Not to be confused with Breckinridge Peak. US-ACAN accepted the name in 1965.

[2]**Mount Breckinridge** *see* **Breckinridge Peak**

Breckinridge Peak. 78°04' S, 155°07' W. Also seen (erroneously) as Breckenridge Peak. A peak, 1.5 km SW of Mount Nilsen, in the S group of the Rockefeller Mountains, on Edward VII Peninsula. Discovered in 1929, during ByrdAE 1928-30, and named by Byrd as Mount Breckinridge, for Colonel and Mrs. Henry Skillman Breckinridge of New York. US-ACAN accepted the name in 1947, and it appears as such in the 1956 U.S. gazetteer, and the 1958 NZ gazetteer. The name was also seen (erroneously) as Mount Breckenridge. However, in 1966, US-ACAN changed the name to Breckinridge Peak, and NZ-APC followed suit. Col. Breckinridge (1886-1960) was assistant secretary of war under Wilson, 1913-16, was Lindbergh's lawyer during the kidnapping trial, and in 1936 was FDR's only serious rival for the Democratic nomination. His 2nd wife was the remarkable Cuban New York socialite Aida de Acosta (1884-1962), the first woman ever to fly solo in a powered aircraft (when she was 18). She had previously been married to Elihu Root's nephew, Oren Root. She and Col. Breckinridge divorced in 1947.

Gora Bredihina. 71°06' S, 66°51' E. A nunatak, just SW of Mayman Nunatak, in the Prince Charles Mountains. Named by the Russians.

Breeding Nunatak. 77°04' S, 142°28' W. An isolated nunatak, 16 km NE of the Allegheny Mountains, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from ground surveys, and USN air photos taken between 1959 and 1965. Named by US-ACAN in 1970, for George H. Breeding, USN, storekeeper who wintered-over at Byrd Station in 1967.

Glaciar Breguet *see* **Breguet Glacier**

Breguet Glacier. 64°10' S, 60°48' W. Flows W into Cierva Cove S of Gregory Glacier, at Hughes Bay, on the Danco Coast, on the W coast of Graham Land. Shown as Glaciar Grande on a 1956 Argentine chart. Photographed aerially by FIDASE in 1956-57, and surveyed from the ground by Fids from Portal Point between 1957 and 1959. Named by UK-APC on Sept. 23, 1960, for brothers Louis-Charles Breguet (1880-1955) and Jacques Breguet (1881-1939), who built and flew the first helicopter to carry a man in vertical flight (1907). They were of the famous French watch- and clock-making family. It appears on a British chart of 1961. US-ACAN accepted the name in 1965. It appears in the 1991 Argentine gazetteer, as Glaciar Breguet.

Breid Basin. 68°30' S, 78°29' E. The E part of Langnes Fjord, in the Vestfold Hills, it is connected to the main part of the fjord by narrows, and is probably less saline. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who, thinking it was a lake, called it Breidvatnet (i.e., "the broad lake"). The feature was also photographed aerially during OpHJ 1946-47, by SovAE 1956, and by ANARE in 1957 and 1958. Subsequent to the Norwegian naming, it was discovered to be a basin, rather than a lake, and was renamed Breid Basin, by ANCA. It has been traversed many times by ANARE parties on their way to and from the remote station Platcha.

Breid Bay. 70°15' S, 24°15' E. Also called Broad Bay. A bay, about 30 km wide, irregularly indenting the ice shelf fringing the Princess Ragnhild Coast of Queen Maud Land for as much as 20 km. Photographed aerially on Feb. 6, 1937 by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographer H.E. Hansen, who named it Breidvika (i.e., "broad bay"). US-ACAN accepted the name Breid Bay in 1953. The Belgian IGY station, Roi Baudouin, was here.

Breidhovde *see* **Law Promontory**

Breidnes Peninsula. 68°34' S, 78°10' E. A rocky peninsula, 22 km long and 8 km wide, extending W from the main section of the Vestfold Hills, between Ellis Fjord and Langnes Fjord, on the Ingrid Christensen Coast. Discovered and photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Breidneset (i.e., "the broad ness"). US-ACAN accepted the name Breidnes Peninsula in 1956. ANCA accepted the name Broad Peninsula, on Sept. 4, 1956. Davis Station is here.

Breidneset *see* **Breidnes Peninsula**

Breidneskollen *see* **Gardner Island**

Breidnesmulen *see* **Mule Peninsula**

Breidskaret *see* **Breidskaret Pass**

Breidskaret Pass. 72°44' S, 3°24' W. A mountain pass between Høgfonna Mountain and Jøkulskarvet Ridge, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Breidskaret (i.e., "the wide gap"). US-ACAN accepted the name Breidskaret Pass in 1966.

Breidsvellet. 72°39' S, 3°10' W. A steep ice slope on the E side of Jøkulskarvet Ridge, in the Borg Massif of Maudheimvidda, in Queen Maud Land. Mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them ("the broad ice sheet"). US-ACAN accepted the name without modification, in 1966.

Breidvåg *see* **Breidvåg Bight**

Breidvåg Bight. 69°20' S, 39°44' E. A small bight along the E shore of Lützow-Holm Bay, just W of Breidvågnipa Peak. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946, by Norwegian cartographers who named it Breidvåg (i.e., "broad bay"). US-ACAN accepted the name Breidvåg Bight in 1968.

Breidvågnipa *see* **Breidvågnipa Peak**

Breidvågnipa Peak. 69°21' S, 39°48' E. Rising to 325 m, 0.8 km SE of Mount Hiroe, on the coast of Queen Maud Land. Photographed aerially by LCE 1936-37, and mapped from these photos in 1946 by Norwegian cartographers, who named it Breidvågnipa (i.e., "the broad bay peak"), in association with nearby Breidvåg Bight. US-ACAN accepted the name Breidvågnipa Peak in 1968.

Breidvatnet *see* **Breid Basin**

Breidvika *see* **Breid Bay**, **Gwynn Bay**

Breiodden. 69°58' S, 9°00' E. A point, N of the ice shelf that the Norwegians call Vigridisen, on the Princess Astrid Coast. Named by the Norwegians ("the broad point").

Breiskaret *see* **Breidskaret Pass**

Breisvellet *see* **Breidsvellet**

Glaciar Breitfuss *see* **Breitfuss Glacier**

Breitfuss Glacier. 66°54' S, 65°01' W. A glacier, 16 km, flowing SE from an elevation of about 1500 m above sea level at the Avery Plateau into Mill Inlet, to the W of Cape Chavanne and the W side of Tindal Bluff, on the Foyn Coast, on the E coast of Graham Land. Photographed aerially by RARE 1947-48, and named Shelby Glacier, after Marjorie Shelby (*see* **Mount Shelby**). It appears as such in Finn Ronne's book of 1949. Surveyed by Fids from Base D in Dec. 1947, and renamed by them for biologist Leonid Lvovich Breitfuss (1864-1950), German-Russian Arctic explorer, working in the Barents Sea at

the turn of the 20th century. UK-APC accepted that name on Jan. 22, 1951, and US-ACAN followed suit in 1952. US-ACAN had contemplated Wilson Glacier, for Maj. Gen. R.C. Wilson (*see* **Mount Wilson**), but rejected the notion. It appears on a 1957 Argentine chart as Glaciar Breitfuss, and that was the name accepted by the 1991 Argentine gazetteer.

Breivåg *see* **Breidvåg Bight**

Breivågnipa *see* **Breidvågnipa Peak**

Breivika *see* **Breid Bay**

Brekilen *see* **Brekilen Bay**

Brekilen Bay. 70°08' S, 25°48' E. An indentation into the ice shelf about 16 km SW of Tangekilen Bay, along the coast of Queen Maud Land. Photographed by LCE 1936-37, and mapped in 1946 from these photos by Norwegian cartographers, who named it Brekilen (i.e., "the glacier bay"). They plotted it in 70°10' S, 25°54' E. US-ACAN accepted the name Brekilen Bay, but with new coordinates.

Brekkerista *see* **Brekkerista Ridge**

Brekkerista Ridge. 72°14' S, 0°18' W. A mountain ridge, 3 km NE of the summit of Jutulrøra Mountain, between that mountain and Straumsvola Mountain, in the NW part of the Sverdrup Mountains, in Fimbulheimen, in Queen Maud Land. Discovered and photographed aerially by GermAE 1938-39, and first plotted from these photos. Re-mapped by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and also from 1958-59 air photos taken during the long NorAE 1956-60, and named by them as Brekkerista (i.e., "the slope ridge"). US-ACAN accepted the name Brekkerista Ridge in 1966.

The *Bremen*. Specially-built ice-strengthened 111.52-meter eco-cruise ship, launched in 1990 as the *Frontier Spirit* (q.v.) but re-named in the mid-1990s when she was bought by a German company. Registered in the Bahamas, she made regular trips to the South Shetlands, the South Orkneys, and the Antarctic Peninsula —1993-94 (Captain Heinz Aye), 1994-95, 1995-96 (Capt. Aye), 1996-97, 1997-98 (Captains Rüdiger Hannemann and Thilo Koch), 1998-99 (Capt. Koch), 1999-2000 (Capt. Koch; that season she dropped the *James Caird II* off at Hope Bay, to reenact Shackleton's voyage for TV coverage), 2000-01 (Capt. Aye), 2002-03, 2005-06. She could carry 94 crew and 164 passengers, had a heli-pad on her top deck, and carried several Zodiacs for tourists.

Bremeninsel. 64°19' S, 62°56' W. An island, about 1 sq km in area, and rising to an elevation of about 50 m above sea level, it is 95 per cent covered by ice, in the Melchior Islands, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. It appears as part of Omega Island on a 1957 Argentine chart, on a 1974 BAS chart, and on a 1986 UK Hydrographic Office chart. On Feb. 2, 2003, the *Bremen* was cruising here, and a Zodiac craft set out from the ship on a cruise, discovering a channel (named Bremenkanal) separating this island from Omega Island, and Germany named the new island on June 11, 2004, after the cruise vessel.

Bremenkanal. 64°19' S, 62°57' W. A marine channel, about 1 km long, separating Bremeninsel from Omega Island, in the Melchior Islands, in the Palmer Archipelago, off the W coast of the Antarctic Peninsula. Discovered on Feb. 2, 2003, by a Zodiac craft off the cruise ship *Bremen*, and named for that vessel by the Germans, on June 11, 2004.

Bremer Pass. 71°02' S, 165°38' E. A pass, NW of Mount Bolt, in the Anare Mountains. Named by the Germans.

Bremner Bluff. 62°10' S, 58°13' W. Cliffs, rising to about 100 m above sea level, on the W side of Legru Bay, King George Island, in the South Shetlands. Named by UK-APC on Feb. 15, 1998, for Alexander Bremner (1863-1943), geomorphologist and pioneer of the glaciology of northeastern Scotland.

Bremnesflaket. 74°36' S, 10°30' W. A glaciated area, about 13 km long, between XU-fjella and Sivorgfjella, in the Heimefront Range of Maudheimvidda, in Queen Maud Land. Named by the Norwegians for the village of Bremnes, a center of Resistance during World War II. "Flak" is a Norwegian word for an ice floe, and the suffix "-et" indicates the definite article.

Bremot, John *see* **USEE 1838-42**

Bremotet *see* **Bremotet Moraine**

Bremotet Moraine. 71°41' S, 12°05' E. A small morainal area on the NW side of Zwiesel Mountain, at the point where the glacial flow of the Humboldt Graben meets that of Parizhskaya Kommuna Glacier, in the Wohlthat Mountains, in Fimbulheimen, in Queen Maud Land. First plotted from air photos taken by GermAE 1938-39, and remapped by Norwegian cartographers from ground surveys conducted during NorAE 1956-60, and also from 1958-59 air photos taken during the same long expedition, and named by them as Bremotet (i.e., "the glacier meeting"). US-ACAN accepted the name Bremotet Moraine in 1970.

Brenabbane. 70°05' S, 38°58' E. The Norwegian collective name for Oku-hyoga Rock (what the Norwegians call Indre Brenabben, i.e., "the inner rock") and Mae-hyoga Rock (what the Norwegians call Ytre Brenabben, i.e., "the outer rock"), two features E of the Shirase Glacier, on the Prince Olav Coast. Name means "the glacier nunataks." Given the fact that its two components are small, and that both are well-named by both the Japanese and the Norwegians themselves, it is unlikely that this name will catch on with the international naming communities.

Indre Brenabben *see* **Oku-hyoga Rock**

Ytre Brenabben *see* **Mae-hyoga Rock**

Brenan, Philip Michael. b. Nov. 8, 1931, Leeds, son of Sydney Herbert Brenan and his wife Phyllis Mabel Binyon. Radio astronomer on the 2nd and 3rd parts (i.e., 1956-58 and 1957-59) of the British Royal Society Expedition, wintering-over as such at Halley Bay in 1957 and 1958. After the expedition, he left Cape Town on the *Carnarvon Castle*, and arrived back in London on Feb. 27, 1959. In 1961, in Wrexham, he married Margaret E. Dodd, and they raised a family in Manchester, Wokingham, and Wales.

Mount Brennan. 84°15' S, 175°54' E. A dome-shaped mountain top, rising to 2540 m (the New Zealanders say about 2400 m), and marked by rock outcrops on the SE side of the summit, 11 km NE of Mount Cartwright, it is the most prominent summit in the northernmost portion of the Hughes Range (Mount Kaplan, 30 km to the S, is the highest in the entire range). Discovered and photographed aerially on Flight C, Feb. 29-March 1, 1940, during USAS 1939-41. Surveyed by Bert Crary in 1957-58, and named by him for Matthew J. Brennan, who took over from Finn Ronne as scientific leader at Ellsworth Station on Jan. 16, 1958. US-ACAN accepted the name in 1962, and NZ-APC followed suit.

Brennan, Philip Michael *see* ***under*** **Brenan**

Brennan Inlet. 74°28' S, 116°35' W. An ice-filled inlet in the SE part of the Getz Ice Shelf, bounded to the W by Scott Peninsula and Nunn Island, and to the E by Spaulding Peninsula, on the Bakutis Coast of Marie Byrd Land. Named by US-ACAN for Lt. Cdr. Lawrence A. Brennan, USNR, who helped plan and execute the recovery of the three damaged LC-130 aircraft from Dome Charlie in East Antarctica, in the summer seasons of 1975-76 and 1976-77.

Brennan Point. 76°05' S, 146°31' W. An ice-covered point, forming the E side of the entrance to Block Bay, on the coast of Marie Byrd Land. Discovered on Dec. 5, 1929, on a flight by Byrd, during ByrdAE 1928-30, and named by him for Irishman Captain Michael J. Brennan (1888-1976), in the USA since 1910, who helped select personnel for that expedition. He had been the skipper of the *Chantier* during Byrd's attempt on the North Pole in 1926. US-ACAN accepted the name in 1970.

Brennecke, Carl Wilhelm Adolf. Known as Willi. b. July 6, 1875, Hildesheim, son of teacher Adolf Brennecke. He finished school in Elberfeld in 1893 and studied mechanical engineering, mathematics, and natural sciences, at Charlottenburg Technical School in Berlin. He became a meteorologist, was on the staff of Deutsche Seewarte (the German Naval Observatory) from 1904 until his death, and was the oceanographer on the *Deutschland*, during GermAE 1911-12. He died on Feb. 19, 1924.

Brennecke Nunataks. 72°14' S, 63°35' W. A group of large nunataks, rising to about 1700 m, on the N side (i.e., at the head of) Beaumont Glacier, to the SW of the Holmes Hills, in the central part of Palmer Land. Mapped by USGS from USN air photos taken between 1966 and 1969. Surveyed from the ground by BAS personnel from Base E in 1974-75. Named by UK-APC on Feb. 7, 1978. US-ACAN accepted the name. It appears on the 1979 USGS sketch map of the N part of Palmer Land, and also in the 1980 British gazetteer.

Breoddane *see* **Scoble Glacier**

Breplogen *see* **Breplogen Mountain**

Breplogen Mountain. 71°55' S, 5°27' E. A large, broad mountain, ice-covered except on its

N and E sides, and rising to 2725 m, W of Austreskorve Glacier, in the central part of the Mühlig-Hofmann Mountains, in Fimbulheimen, in Queen Maud Land. Plotted by Norwegian cartographers from ground surveys and air photos taken during NBSAE 1949-52, and named by them as Breplogen (i.e., "the glacier plow"). US-ACAN accepted the name Breplogen Mountain in 1967.

Breskilkampen. 72°14' S, 25°59' E. A mountain dividing Mjellbreen and Langbogbreen, in the E part of the Sør Rondane Mountains. Named by the Norwegians ("breskil" means "glacier divide" and "kampen" means "the hilltop").

Mount Bresnahan. 71°48' S, 161°28' E. A flat-topped, mainly ice-free mountain, rising to 1630 m, along the E side of the Helliwell Hills, 10 km NNE of Mount Van der Hoeven. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for David Michael "Dave" Bresnahan (b. May 21, 1947, Alexandria, Va.), USARP research diver at McMurdo in June 1967. He was back in the summer of 1968-69, as manager of the Field Party Processing Center (later the Berg Field Center), and, from Dec. 1970 until July 2007, of the Office of Polar Programs, NSF, many times at McMurdo and Palmer Station as NSF representative. He was an observer on a cruise ship to Antarctica in Feb. 2010.

Breste Cove. 63°35' S, 59°47' W. A cove, 700 m wide, indenting the E coast of Tower Island for 850 m, in the Palmer Archipelago. It is entered N of Castillo Point and S of Cape Dumoutier. Mapped by the Germans and British in 1996. Named by the Bulgarians on Sept. 14, 2010, after the settlement of Breste, in northern Bulgaria.

Brestupet. 68°53' S, 90°29' W. A rock face, mainly ice- and snow-covered, in the SE part of Storfallet, in the SE part of Peter I Island. Named by the Norwegians ("the glacier cliff").

Bretangen. 69°27' S, 76°03' E. An ice tongue extending from the plateau S of Stornes Bay, in the S part of Stornes Peninsula. Photographed aerially by LCE 1936-37, and named (according to the SCAR gazetteer) by ANCA. It does mean "glacier tongue" in Norwegian.

Îlot Breton *see* **Breton Island**

Breton Island. 66°48' S, 141°23' E. A small, rocky island, 350 m SW of Empereur Island, N of Cape Margerie, at Port-Martin. Charted in 1950 by the French, and named by them as Îlot Breton, for the mostly Breton crew of the *Commandant Charcot*. US-ACAN accepted the name Breton Island in 1962.

Brett, Henry B. b. 1865, NZ. Cook in the Merchant Navy, taken on at Lyttelton, NZ, on BNAE 1901-04. Scott put him in irons for insubordination against Shackleton, in Jan. 1902, and left him out on deck all day, in the extreme cold. In March 1903 he was sent back on the *Morning*.

Brewer Peak. 71°34' S, 168°28' E. Rising to 2110 m, along the W wall of, and near the head of, Pitkevich Glacier, in the Admiralty Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1969, for Thomas J. Brewer, USN, commissaryman at McMurdo in 1967. NZ-APC accepted the name in Nov. 1969.

Cape Brewster *see* **Byewater Point**

Mount Brewster. 72°57' S, 169°23' E. A small peak, S of Mount Northampton, and on the S side of Tucker Inlet, it rises to 2025 m (the New Zealanders say 1219 m) above the general level of the central part of Daniell Peninsula (it is the highest point on the peninsula), near the N end of Victoria Land. Named in 1841 by Ross, for David Brewster (*see* **Byewater Point**). During BNAE 1901-04, Hartley Ferrar gave a description of this mountain, but what he was describing was Mount Prior (q.v.). US-ACAN accepted the name in 1947, and NZ-APC followed suit.

Brewster Island. 64°43' S, 62°34' W. A small island, NE of Danco Island, in the Errera Channel, off the Danco Coast, on the W coast of Graham Land. It appears on a 1950 Argentine government chart, but (if that date is correct, i.e., if it be not confused with the 1957 chart) then it was unnamed at that point. Photographed aerially by FIDASE 1956-57, and that same season charted by Fids on the *Shackleton*. It appears on two 1957 Argentine charts, as Islote Sorpresa (which is the name accepted by the 1970 Argentine gazetteer) and as Islotito Sorpresa ("islotito" meaning "a really tiny island"). It appears on a 1958 Argentine chart as Isla Sorpresa (i.e., "surprise island"). Nothing along these lines was remotely acceptable to the British, so UK-APC came up with Brewster Island, on Sept. 23, 1960, for David Brewster (*see* **Byewater Point**). US-ACAN accepted this name in 1965.

Mount Breyer *see* **Breyer Mesa**

Breyer Mesa. 86°01' S, 161°12' W. An ice-covered mesa, 8 km long, it rises to over 3000 m, between Christy Glacier and Tate Glacier, on the W side of Amundsen Glacier, in the Queen Maud Mountains. Discovered by Byrd on his South Pole flight of Nov. 1929, and named by him as Mount Breyer, for Los Angeles lawyer Robert S. Breyer (b. Dec. 22, 1887, Texas. d. Oct. 19, 1964, Orange Co., Calif.), a fast friend of Byrd's since 1927, and a patron and the de facto West Coast representative of the expedition. US-ACAN accepted the name in 1951, but since then the term "mesa" has been deemed more appropriate. NZ-APC accepted the new name. In 1947, Breyer's son, Robert Garnett Breyer, married Byrd's daughter Katherine.

Breznik Heights. 62°31' S, 59°40' W. Rising to over 600 m, they extend for 12 km between Santa Cruz Point in the NE, and the base of the moraine spit at the mouth of Yankee Harbor in the SW, in the SE part of Greenwich Island, in the South Shetlands. The heights are ice-covered except for certain limited areas, such as Oborishte Ridge, Ephraim Bluff, Viskyar Ridge, and Bogdan Ridge. Named by the Bulgarians on Nov. 4, 2005, for the town of Breznik, in western Bulgaria.

Baie (de) Brialmont *see* **Brialmont Cove**

Caleta Brialmont *see* **Brialmont Cove**

Brialmont Bay *see* **Brialmont Cove**

Brialmont Cove. 64°16' S, 61°00' W. Also called Primavera Bay. In Hughes Bay, between Charles Point and Spring Point, on the Danco Coast, on the W coast of Graham Land. Roughly charted on Jan. 24, 1898, by BelgAE 1897-99, and named by de Gerlache as Baie Brialmont (or Baie de Brialmont), for Dutch-born Belgian Lt. Gen. Henri-Alexis Brialmont (1821-1903), one of the great fortifications engineers of the 19th century, a member of the Académie Royal de Belgique, and first president of the *Belgica* Commission. It appears as Brialmont Bay on Frederick Cook's English language version of the expedition's maps. It first appears as Brialmont Cove on a 1921 British chart, and that was the name accepted by US-ACAN in 1947, and by UK-APC on Sept. 23, 1953. It appears as such in the British gazetteer of 1955, and on a 1961 British chart. It appears on a 1947 Chilean chart as Caleta Brialmont, and that was the name accepted by the Chilean gazetteer of 1974. The Argentines tend to call it Bahía Maldita. *See also* **Cierva Cove**.

Brian *see* **Brian Island**

Isla Brian *see* **Brian Island**

Brian Island. 68°08' S, 67°07' W. The most westerly of the Debenham Islands, in Marguerite Bay, between Millerand Island and the Fallières Coast, on the W coast of Graham Land. Charted in Feb. 1936, by BGLE 1934-37, and named by Rymill as Brian (that's it, just Brian) for Frank Debenham's 2nd son, Herbert Brian Debenham (known as Brian; b. 1923, Cambridge) (for the other children, *see* **Debenham Islands**). It appears as such on a British chart of 1947. It appears as Brian Island on a 1946 U.S. Hydrographic Office chart, and that was the name accepted by US-ACAN in 1949. It appears as such on a 1950 British chart, UK-APC accepted that name on Sept. 28, 1953, and it appears as such in the 1955 British gazetteer. It appears on a 1952 Argentine chart as Islote Brian, and that was the name accepted by the Argentine gazetteer of 1970. It appears on a Chilean chart of 1962, as Isla Brian, and that was the name accepted by the 1974 Chilean gazetteer.

Bahía Briand *see* **Briand Fjord**, **Bahía Pelletan**

Baie Briand *see* **Briand Fjord**

Briand Bay *see* **Briand Fjord**

Briand Fjord. 65°01' S, 63°01' W. A bay, 1.5 km wide, and almost 5 km long (the Chileans say 3 km), it is the NE arm of Flandres Bay, in fact the most northerly of the several bays opening out onto the NE coast of Flandres Bay, on the Danco Coast, on the W coast of Graham Land. Explored (but not named) by BelgAE 1897-99. Charted by FrAE 1903-05, and named by him as Baie Briand, for Aristide Briand (1862-1932), French politician (he was minister of public instruction in 1906). He was later prime minister, and in 1926 won the Nobel Peace Prize. It appears as Briand Bay on a 1943 U.S. Hydrographic Office chart. UK-APC accepted the

name Briand Fjord on Sept. 23, 1960, and US-ACAN followed suit in 1965. The Chileans call it Bahía Briand, and the Argentines call it Bahía Dedo (i.e., "finger bay').

Brianna Automatic Weather Station. 83°54' S, 134°07' W. American AWS, at an elevation of 549 m, installed on Nov. 30, 1994, on the Polar Plateau, and still operating in 2009. Named for Dave Bresnahan's daughter.

Brian's Isle *see* **Bridgeman Island**

Mount Brice. 75°22' S, 72°37' W. A mountain, rising to about 1500 m, 4 km W of Mount Abrams, in the Behrendt Mountains of Ellsworth Land. Mapped by USGS from ground surveys conducted during the Antarctic Peninsula Traverse of 1961-62, and from USN air photos taken between 1965 and 1967. Named by US-ACAN in 1966, for Neil Mather Brice (b. Feb. 27, 1934), USARP radioscience researcher at Camp Sky-Hi near here, in 1961-62. While professor of electrical engineering at Cornell, he was killed in a Pan Am crash at Pago Pago in Jan. 1974, while returning to the U.S. from Australia. The feature is shown on the 1969 USGS sketch map of Ellsworth Land-Palmer Land. UK-APC accepted the name on Dec. 20, 1974.

Brichebor Peak. 78°34' S, 85°55' W. Rising to 2900 m, 6.35 km SW of Silverstein Peak, at the end of a side ridge descending southwestward from Príncipe de Asturias Peak, it surmounts Tulaczyk Glacier to the SE and Cairns Glacier to the NW, on the Vinson Massif, in the Sentinel Range, in the Ellsworth Mountains. Mapped by USGS in 1988. Named by the Bulgarians on Sept. 14, 2010, for Brichebor Peak, in Rila Mountain, in southwestern Bulgaria.

Mount Bride *see* **Skorefjell**

Bridge, Harry. b. Wellington, NZ, son of dentist Joseph William Bridge, of Kelburn and his wife Marion Clara. When Byrd pulled into Wellington in 1928, on his way to Antarctica for ByrdAE 1928-30, Mr. Bridge, who had been a soldier and a farmer, volunteered his services. At 6 foot 4, he was impressive, and with a good past record, but there was no room on the ships. However, on Feb. 18, 1929, Bridge sailed out of Dunedin on the *Eleanor Bolling*, as assistant cook with no pay. The ship got only as far as the Antarctic pack-ice before Byrd ordered her back to Dunedin, where she arrived on March 6. Thus, Mr. Bridge was in Antarctic waters, albeit for only a short time.

Bridge Pass. 81°46' S, 160°42' E. A high pass, running at an elevation of about 1200 m, between the Surveyors Range and the Nash Range, at the upper reaches of Dickie Glacier and Algie Glacier, and affording a passage from the area of the Nimrod Glacier to Beaumont Bay. Named by the Southern Party of NZGSAE 1960-61, for Capt. Lawrence Drake Bridge, RNZE (engineers), leader at Scott Base from Nov. 1960 to Feb. 1961. NZ-APC accepted the name on May 24, 1961, and US-ACAN followed suit in 1965.

Bridge Riegel. 76°43' S, 161°00' E. A prominent flat-topped rock ridge (or rock-bar, or buttress), on the N side of Greenville Valley, immediately above Greenville Hole, in the Convoy Range of Victoria Land. It provides a platform that overlooks the entire valley, similar to the bridge of a ship. Named by a 1989-90 NZARP field party. US-ACAN accepted the name in 1993.

Îlot Bridgeman *see* **Bridgeman Island**

Isla Bridgeman *see* **Bridgeman Island**

Mount Bridgeman *see* **Mount Bridgman**

Volcan Bridgeman *see* **Bridgeman Island**

Bridgeman Island. 62°04' S, 56°43' W. A small, almost circular volcanic island, 0.8 km long, and marked by steep sides, the remnant of a once-larger volcano, it stands alone in the Bransfield Strait, 37 km E of King George Island, in the South Shetlands, rising to a single pyramidal peak of 233 m. Discovered by Bransfield, in the *Williams*, on Jan. 22, 1820, and named Bridgeman's Island, for Capt. (later Vice Adm.) the Hon. Charles Orlando Bridgeman, RN (1791-1860), serving at that time on the *Icarus*, on the South America station. It appears as such on Bransfield's chart of 1820, and on another British chart of 1822 (sometimes with, sometimes without the apostrophe). On Jan. 26, 1821, von Bellingshausen re-charted it, and named it Ostrov Yelena (i.e., "Helena island"), or Yelena Kamen', after St. Helena, Napoleon's place of exile. It would appear as such on his 1831 maps. Sherratt's map of 1821 shows it (incorrectly plotted) as Brian's Isle, or Burning Mount, because it was erupting when ships passed by that year (it has not erupted since). On Powell's 1822 and 1824 charts it appears spelled as Bridgman's Island (with or without the apostrophe), on his 1828 chart it appears as Bridgman's Isle and Volcano, and on his 1831 chart comes the note "Captn. Weddell passed within 200 yards of this island, and saw smoke issuing with great violence through fissures in the rock (1823)." What this means is that it was cooling off after the 1821 explosion. There is an 1837 reference to it as Bridgman's Isle, and on various charts and maps prepared by FrAE 1837-40, it appears as Volcan Bridgeman or Îlot Bridgeman. It appears on an 1839 British chart as Bridgman Island, and on an 1861 Spanish chart as Isla y Volcán Bridgeman. On an American chart of 1901, it appears as Bridgman Volcano, and on Gravelius's German map of 1902, it appears as Hirschinsel (i.e., "stag island"), being a mistranslation of the name Yelan given by von Bellingshausen (the word "olen'" in Russian, meaning "stag"). It appears on FrAE 1903-05 maps as Île Bridgman. On Dec. 24, 1909, FrAE 1908-10 made what was possibly the first landing on the island, fixed its position, and charted it as Île Bridgemann, a name that was sometimes translated into English as Bridgemann Island. It was used by whalers as an anchorage. The Discovery Investigations chart of 1930 gives both Bridgman Island and Bridgeman Island. It appears as Bridgeman Island on a USAAF chart of 1942 and on a 1945 British chart, and that was the spelling accepted by UK-APC on Sept. 8, 1953, and by US-ACAN later that year (after they had rejected Helena Island). It appears as such in the British gazetteer of 1955. Frank Debenham, in 1945, referred to it as Helena Rock. It appears on a 1947 Chilean chart as Isla Bridgeman, but (erroneously) as Isla Bridgerman on one of their 1953 charts. The 1974 Chilean gazetteer accepted Isla Bridgeman. It appears erroneously pluralized on a 1958 Argentine chart as Islas Bridgeman, but the 1970 Argentine gazetteer accepted the spelling Isla Bridgman. However, today, they also call it Isla Bridgeman. The UK were the latest to replot this feature, in late 2008.

Bahía Bridger *see* **Bridger Bay**

Mount Bridger. 72°17' S, 167°35' E. Rising to 2295 m, along the S side of Pearl Harbor Glacier, 8 km NNE of Conard Peak, in the Cartographers Range, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1970, for William D. "Billy" Bridger (b. 1933. d. May 30, 2007, Lafayette, La.), USN, VX-6 aviation machinist's mate and flight engineer on Hercules aircraft at Willy Field, during OpDF 68 (i.e., 1967-68).

Bridger, John Frederick Douglas "Doug." b. Nov. 7, 1930, Swansea, Wales, son of John Richard Douglas Bridger and his wife Dora Averil Nancarrow. He joined FIDS in 1955, as a surveyor, and in October that year sailed from Southampton on the *John Biscoe*, bound for Port Stanley. He wintered-over at Signy Island Station in 1956 and 1957. He died in Sept. 1992, in Beverley, Yorks.

Bridger Bay. 60°33' S, 45°51' W. A semicircular bay, 4 km wide, W of Tickell Head, between that head and Penguin Point, along the N side of Coronation Island, in the South Orkneys. Discovered in Dec. 1821 by Palmer and Powell. Surveyed by the Discovery Investigations in 1933, it appears on their chart of 1934. Surveyed by Fids from Signy Island Station (including Doug Bridger) in 1956-58. Named by UK-APC on July 7, 1959, for Bridger (q.v.), who surveyed Coronation Island and Signy Island. US-ACAN accepted the name in 1964. It appears in the 1991 Argentine gazetteer as Bahía Bridger.

Isla Bridgerman *see* **Bridgeman Island**

Île Bridgman *see* **Bridgeman Island**

Isla Bridgman *see* **Bridgeman Island**

Monte Bridgman *see* **Mount Bridgman**

Mount Bridgman. 66°50' S, 67°23' W. A prominent mountain, rising to about 1200 m, it is the highest point on Liard Island, and surmounts and dominates the center of the island, in Hanusse Bay, off the Loubet Coast, on the W coast of Graham Land. Roughly charted by FrAE 1903-05, and later the name Sommet Gaudry was erroneously applied collectively to this mountain and Glen Peak. It appears as such on Bongrain's map of 1914. This situation was sorted out by FIDS mapping from aerial photos taken by RARE 1947-48 and by FIDASE in 1956-57, and from ground surveys conducted by Fids from Base W in 1958-59. Named by UK-APC for Percy Williams Bridgman (1882-1961), U.S. physicist specializing in ice, who won the 1946 Nobel Prize. However, it appears erroneously as

Mount Bridgeman in the 1961 British gazetteer. US-ACAN accepted the name Mount Bridgman in 1965. It appears in the 1991 Argentine gazetteer as Monte Bridgman.

Bridgman Glacier. 72°23' S, 170°05' E. A steep glacier falling away from the W side of Hallett Peninsula, and forming a floating ice tongue on the E shore of Edisto Inlet, between Salmon Cliff and Roberts Cliff, in Victoria Land. Named by NZGSAE 1957-58 for Lt. Albert Henry Bridgman (b. Aug. 16, 1928), USN, surgeon and military officer-in-charge at Hallett Station during the winter of 1959. He later practised in Black Mountain, NC. It appears in the 1960 NZ gazetteer. US-ACAN accepted the name in 1962.

Bridgman Island *see* **Bridgeman Island**

Bridgman Volcano *see* **Bridgeman Island**

Île Bridgmann *see* **Bridgeman Island**

Bridgmann Island *see* **Bridgeman Island**

Bridgman's Isle and Volcano *see* **Bridgeman Island**

Bridwell Peak. 71°56' S, 166°28' E. Rising to 2220 m, 10 km SE of Boss Peak, in the Victory Mountains of Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1963. Named by US-ACAN in 1970, for Ray E. Bridwell, USARP meteorologist at Hallett Station, 1964-65.

Brien Rocks. 73°13' S, 161°23' E. Prominent rock outcrops, 10 km W of the Caudal Hills, in Victoria Land. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1968, for Robert J. Brien, VX-6 aviation electronics technician at McMurdo in 1966. NZ-APC accepted the name on Dec. 4, 1968.

Brier Icefalls. 80°15' S, 155°36' E. About 150 m high and 8 km wide, at the E side of Vantage Hill, in the Britannia Range. Named by US-ACAN in 2001, for Frank Brier of the NSF's Office of Polar Programs, who was facilities, engineer, and construction program manager for renovation of McMurdo Station and Pole Station, 1995-2001.

Mount Briesemeister *see* **Briesemeister Peak, Mount Martin**

Briesemeister Peak. 69°28' S, 62°45' W. Rising to 690 m, 11 km WNW of Cape Rymill, on the Wilkins Coast, on the E coast of Palmer Land. Photographed aerially by Wilkins on Dec. 20, 1928, and included by him in what he called Finley Islands (*see* **Finley Heights** for more details). The area was re-photographed aerially in Sept. 1940 by USAS 1939-41, and appears on a 1943 U.S. Hydrographic Office chart. In Jan. 1948 RARE/FIDS conducted a ground survey of this area during a sledging trip, and, later that year, from the RARE expedition reports, U.S. cartographer William Arthur R. Briesemeister was able to sort out, from Wilkins' 1928 photos, a truer picture of this area. Finn Ronne named this peak Mount Briesemeister, for the cartographer, except that he misapplied the name to Mount Martin. Briesemeister (1895-1967), who became a cartographer with the American Geographical Society when he was 17, worked with John D. Kay under W.L.G. Joerg in 1937, to produce Antarctic maps from the aerial photos of Wilkins (1928) and Ellsworth (1935). He was chief cartographer with the AGS until 1963, and supervised the preparation of maps of Antarctica for use during IGY in the 1950s and 1960s. He retired in 1964, one of the great map makers. UK-APC accepted the name Briesemeister Peak on Jan. 28, 1953, and US-ACAN followed suit that year. It appears as such in the 1955 British gazetteer, and on the 1979 USGS sketch map of the N part of Palmer Land.

Punta Brigadier Escobar *see* **Niujiao Jian**

Brigdon, Capt. British sealer, skipper of the *Henry Wellesley*, which was in the South Shetlands for the 1820-21 season.

Península Briggs *see* **Briggs Peninsula**

Punta Briggs *see* **Briggs Peninsula**

Briggs, Alfred Charles. b. Aug. 3, 1905, Plympton St. Mary, Devon. British ordinary seaman on the *Discovery*, 1925-26, and an able seaman on the same ship, 1926-27. He was an able seaman on the *Alert*, 1928-30, and again on the *Discovery II*, 1931-35, during the Discovery Investigations. He was 2nd engineer on the ship between 1937 and 1939. From 1939 to 1965, he was with the Marine Biological Assocation, in Plymouth. He died on March 11, 1988, in Plymouth.

Briggs Hill. 77°49' S, 163°00' E. A conspicuous ice-free hill, rising to 1210 m, on the S side of Ferrar Glacier, between Descent Glacier and Overflow Glacier, in Victoria Land. Charted (but apparently not named) during BAE 1910-13. Named by US-ACAN in 1964, for Raymond S. "Ray" Briggs, meteorologist at McMurdo in 1962, and scientific leader there in 1963. NZ-APC accepted the name on July 16, 1964.

Briggs Peak. 68°59' S, 66°42' W. An isolated conical mountain, rising to 1120 m (the British say 340 m), on the NE side of the Wordie Ice Shelf, on the Fallières Coast, on the W coast of Graham Land. First roughly surveyed in 1936-37, by BGLE 1934-37, it appears on their expedition charts, but, apparently, unnamed. Photographed aerially on Nov. 22 and 27, 1947, by RARE 1947-48. Re-surveyed from the ground by Fids from Base E in 1949 and 1958. Named by UK-APC on Aug. 31, 1962, for Henry Briggs (1556-1630), co-inventor of logarithms, about 1614. US-ACAN accepted the name later in 1962.

Briggs Peninsula. 64°30' S, 63°01' W. A small peninsula forming the W side of Inverleith Harbor, Parker Peninsula, on the NE coast of Anvers Island. The NE point of the peninsula was charted in 1927 by personnel on the *Discovery*, who named it Briggs Point, for Alfred Briggs. That name was accepted by both US-ACAN and UK-APC, and appears in the 1955 British gazetteer. It appears on a 1947 Chilean chart as Punta Briggs, and that was the name accepted by both the 1970 Argentine gazetteer and the 1974 Chilean gazetteer, both acceptances being rather odd, in that, as early as July 7, 1959, UK-APC, having failed to find such a point on 1956-57 FIDASE air photos, had reapplied the name Briggs to cover the whole (small) peninsula, and in 1971 US-ACAN had followed suit. It appears as Briggs Peninsula on a British chart of 1959. However, the Argentine gazetteer of 1991 did accept the change, calling it Península Briggs. The Chileans still seem to call it Punta Briggs.

Briggs Point *see* **Briggs Peninsula**

Mount Brigham. 77°07°S, 162°18' E. A peak, rising to 1450 m, 3 km WSW of Mount Curtiss, at the center of the Gonville and Caius Range, in Victoria Land. Named by US-ACAN on Jan. 15, 2008, for Capt. Lawson W. Brigham, U.S. Coast Guard, skipper of the *Polar Sea* in Antarctic and Arctic waters between 1993 and 1995. He was later a researcher at the Scott Polar Institute. The name was accepted by NZ-APC on April 7, 2008.

Bright, Washington *see* **USEE 1838-42**

Brightwell, Neil Leonard. b. Feb. 9, 1941, Sydney. In 1962 he became a forester in Papua New Guinea, and in 1968 joined ANARE, as officer-in-charge at Wilkes Station that winter. He oversaw the construction of the new Casey Station.

Brimblecomb, Joseph *see* **USEE 1838-42**

Pico Brimstone *see* [1]**Brimstone Peak**

Brimstone Bluff *see* [1]**Brimstone Peak**

[1]**Brimstone Peak**. 61°55' S, 57°45' W. A conspicuous cliffed peak, rising to about 120 m, surmounting the rocky headland between Venus Bay to the W and and Emerald Bay to the E, 12 km WSW of North Foreland, and to the SE of False Round Point, on the N coast of King George Island, in the South Shetlands. This peak was, itself, charted by George Powell in 1821-22, and appears on his 1822 chart as as North Foreland. It was re-charted by personnel on the *Discovery II* in 1937, and so re-named by them as Brimstone Bluff, Brimstone Peak, or Brimstone Point (it appears all three ways on their charts), because of the yellow color of its sides, while the name North Foreland was applied to the NE cape of King George Island. The name Brimstone Bluff appears on a British chart of 1942. It was photographed from the air by FIDASE in Dec. 1956, and plotted in 61°55' S, 57°48' W. It appears on an Argentine chart of 1958, as Pico Brimstone, but on a 1960 Argentine chart as Pico Amarillo (i.e., "yellow peak"), and that latter name was the one accepted by the Argentine gazetteer of 1970. UK-APC accepted the name Brimstone Peak on Sept. 23, 1960, and the Chilean gazetteer of 1974 accepted the name Pico Brimstone. It was replotted by the British in late 2009.

[2]**Brimstone Peak**. 75°48' S, 158°33' E. Rising to 2340 m, and surmounting a small, ice-free mesa between the Outpost Nunataks 8 km to the SW, and the Ricker Hills and Tent Rock over 20 km to the N, at the top of Mawson Glacier, in the Prince Albert Mountains of northern Victoria Land. Discovered and mapped by the Southern Party of NZGSAE 1962-63, who named it for its coloring, which suggested hellfire and brimstone. ANCA accepted the name on Nov. 19, 1963 (with the coordinates 75°38' S, 158°33' E), and US-ACAN followed suit in 1966

(but with different coordinates). The American coordinates are the right ones.

Brimstone Point *see* [1]**Brimstone Peak**

Brindle Cliffs. 69°23' S, 68°33' W. A precipitous mass of ice-free rock, rising to 610 m, 10 km E of Cape Jeremy, on the Fallières Coast, on the W coast of Graham Land. Discovered and photographed aerially on Aug. 16, 1936 by BGLE 1934-37. Surveyed in 1948 by Fids from Base E, who named them for their color. UK-APC accepted the name on March 31, 1955, and US-ACAN followed suit in 1956. The feature appears on a 1961 British chart.

The *Brinknes*. Ship that took the 15th Indian expedition to Antarctica in 1995.

Brinton Nunatak. 85°35' S, 132°24' W. A small nunatak, marking the W extremity of the Ford Nunataks, in the Wisconsin Range, in the Horlick Mountains. Mapped by USGS from ground surveys, and USN air photos taken between 1960 and 1964. Named by US-ACAN in 1967, for Curtis C. Brinton (b. March 1936), utilitiesman who wintered-over at Byrd Station in 1957.

Mount Bris. 63°59' S, 59°47' W. A broad mountain, rising to 1675 m, 1.5 km W of the head of Sabine Glacier, E of Lanchester Bay, and 17.5 km S of Cape Kater, on the Davis Coast, on the W coast of Graham Land. Photographed aerially by FIDASE in 1956-57. Named by UK-APC on Sept. 23, 1960, for Jean-Marie Le Bris (1808-1872), French glider designer and the first pilot of such an aircraft, in 1857. US-ACAN accepted the name later in 1960.

Alturas Brisbane *see* **Brisbane Heights**

Brisbane, Matthew. b. 1787, Blairgowrie, Perth, Scotland. Sailor from a seafaring family, captain of the *Beaufoy of London*, from Sept. 7, 1822 until 1826, a period which took in Weddell's 3rd expedition to Antarctica, 1822-24. He took the *Beaufoy* south again for the 1824-26 period, then commanded the *Prince of Saxe-Coburg*, which, after a brief trip to the South Shetlands, was wrecked on Dec. 16, 1826, off Tierra del Fuego. He was wrecked again, while in command of the *Hope*, off South Georgia, on April 23, 1828. In Feb. 1830 Brisbane was wrecked a 3rd time, off Tierra del Fuego, and from that time on lived in the Falklands. In June 1828 Louis Vernet had become the Argentine governor of the Falkland Islands (he was actually a German merchant), and Brisbane became his agent. In 1831 Vernet seized 3 American vessels, and, with war imminent, was sent back to Buenos Aires. In 1832 the British arrived to reassert their claim over the islands, and expelled the small Argentine Army detachment on Jan. 5, 1833. Two days later the British Navy sailed away, leaving the islands (or the settlement at Port Louis, anyway) in the control of Brisbane. This was the beginning of the British colony of the Falkland Islands. On Aug. 26, 1833 Brisbane was murdered by three gauchos and six Indians.

Brisbane Heights. 60°36' S, 45°38' W. A series of ice-covered heights, rising to 960 m (the British say 920 m), extending in an arc from Worswick Hill on the one hand, to High Stile and Beaufoy Ridge on the other, in the west-central part of Coronation Island, in the South Orkneys. Roughly surveyed in 1948-49 by Fids from Signy Island Station, and named by them as Brisbane Plateau, for Matthew Brisbane. This name was accepted by UK-APC on March 31, 1955, and by US-ACAN in 1956. It was redefined by UK-APC on July 7, 1959, following a 1956 survey by Fids from Signy. It appears in the 1991 Argentine gazetteer as Alturas Brisbane (which means the same thing).

Brisbane Plateau *see* **Brisbane Heights**

Brisbane's Bluff *see* **Cape Faraday**

Brisco, William. Name sometimes seen as Briscoe. Armorer on USEE 1838-42. He started off on the *Relief*, and transferred to the *Vincennes* on June 20, 1839.

The *Brisk*. Ship belonging to the Southern Whale Fishery Company (established in 1849 by Samuel Enderby's son, Charles). **Aug. 7, 1849**: Under the command of Captain Thomas Tapsell, and in company with the *Nancy* (Capt. David Davidson) and the *Samuel Enderby* (Capt. William Henry Henderson), she left London, bound for Plymouth. **Aug. 17, 1849**: The 3 ships left Plymouth. The *Samuel Enderby* had on board Charles Enderby, just appointed lieutenant-governor of the Auckland Islands. **Dec. 2, 1849**: The *Samuel Enderby*, the first to arrive, sighted the western shores of the Auckland Islands. **Dec. 4, 1849**: The *Samuel Enderby* was piloted into Laurie's Harbor, in the Auckland Islands, by a New Zealander. **Dec. 11, 1849**: The *Brisk* arrived at the Auckland Islands. **Dec. 27, 1849**: The *Nancy* arrived at the Auckland Islands. **Jan. 20, 1850**: The *Brisk*, under Tapsell, and with a mixed crew of volunteers from the 3 ships, and with two New Zealanders as well, left the Auckland Islands for a 6-week whale-seeking expedition to the south. **Feb. 1850**: They sighted the Balleny Islands, and went as far as 143°W, and into the Ross Sea, farther south than Wilkes had gone, but without seeing land. **March 17, 1850**: After going through a hurricane, the *Brisk* arrived back at the Auckland Islands, with no whale-oil. Tapsell, however, recommended an earlier start in the season for any future trips to the ice. The *Brisk* and the *Samuel Enderby* then went whaling in warmer waters, while the *Nancy* stayed at the islands.

Brissenden, Robert. b. Feb. 7, 1872, Chartham, Kent, son of farm worker Robert Brissenden and his wife Harriet Greenstreet. Leading stoker, RN, on the *Terra Nova*, during BAE 1910-13, who drowned while conducting survey work in Admiralty Bay, Lyttelton, NZ, on Aug. 17, 1912.

Bristly Peaks. 69°23' S, 66°15' W. A series of sharp rock peaks, rising to about 430 m on a ridge separating Seller Glacier from Fleming Glacier, and extending ESE from the Forster Ice Piedmont, on the Fallières Coast, on the W coast of Graham Land. Photographed aerially on Feb. 1, 1937, by BGLE 1934-37, and again on Dec. 22, 1947, by RARE 1947-48. Fids from Base E surveyed the W section in 1958 and the E section in 1960. Named descriptively by UK-APC on Aug. 31, 1962, for their likeness to the bristles of a brush. US-ACAN accepted the name later in 1962.

Bristol, William Wallace "Bill." b. June 14, 1925, San Diego, Calif., son of sundries salesman Wesley Oscar Bristol and his wife Goldia Pearl Neville Partridge. He joined the U.S. Navy in April 1943, and served as a yeoman and in aircraft in the Pacific during World War II. In 1945 he married Marilyn "Lynn" Howarth. He got out of the Navy in July 1946, worked in Albuquerque for 2 years, and went back in the Navy in Oct. 1948. He was in Korea and Guam, and from Aug. 1952 to June 1955 was stationed at Anacostia, DC, as a naval photographer. It was here he answered the Navy notice looking for volunteers to go to the South Pole. It was an 18-month tour of duty. His wife said, "Bill, if you go, I'll kill you." He went, shipping out from Norfolk, Va., through the Panama Canal, to Christchurch, NZ, then to McMurdo Sound, where he wintered-over, and then flew in with the first batch of Seabees to the South Pole, on Nov. 20, 1956. He not only photographed but helped build Pole Station. Disney had wanted their film maker Lloyd Beebe (q.v.) to go to the Pole, to film, but were not allowed, so Bill learned from Beebe how to shoot Cinemascope moving pictures, and, aside from working for the Navy, he became the Disney stringer too (without any form of credit whatever). Those TV movies we saw back in the 1950s of the construction of Pole Station were Bill Bristol's work, not Beebe's (*see* **South Pole Station**). He was among the last group to leave the Pole, on Jan. 4, 1957, and flew to McMurdo, finally shipping back to the USA. He married again, in 1962, to Shirley Pettet, and retired from the Navy as a lieutenant on Oct. 1, 1970, in Oakland. He then moved up to Portland, Oreg. In 1977 he had a heart operation, but an accident in the hospital lost him the use of his left arm. He died on April 24, 1998, in Portland.

Britain *see* **Great Britain**

The *Britannia*. The British royal yacht. On Dec. 19, 1956 the *Britannia* left Chatham Island, New Zealand, bound for Antarctica, with Prince Philip aboard. John Harold Adams was captain of the yacht, and Peter Mitchell was navigator. Edward Seago was the artist aboard. Cdr. Mike Parker, the prince's aide, was also aboard, as were Bill Sloman (the FIDS recruiter), Ray Priestley, and Crawford Brooks (first secretary of the U.S. embassy in Montevideo, and observer at FIDS bases that season). There were also two lady clerks aboard, Miss A. Stevenson and Miss Ione Eadie. They were all going to visit either the Ross Sea or the Weddell Sea base of BCTAE 1955-58, but it was decided that if the prince got stuck in the ice and had to winter-over at one of the bases, his "nuisance value" (his words) would be too great. **Dec. 31, 1956**: They crossed the Antarctic Circle, a first for British ladies. Then they rendezvoused with the whaler *Southern Harvester*. The Duke was basketed across, just in time for lunch (pea soup, corned beef, and salt pork, followed by strawberries and cream),

then he was given a tour of the whaler, and was finally basketed back after tea. **Jan. 1, 1957**: The *Britannia* met the *John Biscoe* at Matha Strait, and the Duke was transferred, going off on a tour of Base W, where the tennis match took place between Brooks and Priestley (*see* **Tennis**), followed by Base F and Base N. **Jan. 2, 1957**: The *Protector* led the *Britannia* into Base A, and the Duke arrived on the *John Biscoe* to tour Port Lockroy with the governor of the Falkland Islands. Then, after tea, all three ships went off to Base O, and then on to Base B (Deception Island). **Jan. 3, 1957**: They arrived at 11 A.M. The Duke invited the Fids and FIDASE men aboard to watch *Seven Brides for Seven Brothers*. **Jan. 4, 1957**: At 11 A.M. they left Deception, and made for their final base, Base G, arriving there just in time for tea. The ladies caused quite a stir when they came ashore. They all left at 10 P.M., heading north. **Jan. 5-6, 1957**: They were crossing the Drake Passage. **Jan. 7, 1957**: They arrived at the Falklands in the morning.

Mount Britannia. 64°43' S, 62°41' W. Rising to 1160 m (the British say about 1120 m), in the center of Rongé Island, it is the highest peak on that island, off the Danco Coast, on the W coast of Graham Land. First charted by BelgAE 1897-99. In 1956-57 FIDASE photographed it aerially, and Fids from Base O surveyed it from the ground. Named by UK-APC on Sept. 23, 1960, for the royal yacht *Britannia*, which, with Prince Philip aboard, visited this area at New Year's, 1957. US-ACAN accepted the name in 1965.

Britannia Range. 80°05' S, 158°00' E. A range of mountains in the Transantarctic Mountains, to the N of Barne Inlet, between that inlet and the Cape Murray depression, and overlooking the W end of the Ross Ice Shelf. It is bounded on the N by Hatherton Glacier and Darwin Glacier, and on the S by Byrd Glacier. Mount McClintock (11,450 feet), Dartmouth Peak (10,092 feet), and Mount Henderson are in it. Discovered in 1902 by the Southern Polar Party during BNAE 1901-04, surveyed in 1903 by Barne and Mulock, and named by Scott for the *Britannia*, the naval training ship on which many of his officers had passed through their cadetship. US-ACAN accepted the name in 1947, and ANCA followed suit. It appears in the 1958 NZ gazetteer.

British Antarctic and Oceanographical Expedition. 1914-17. An expediton that never happened. Cdr. Joseph Foster Stackhouse, USN (ret.), a Quaker and nephew of Sir Jonathan Hutchinson, planned in 1913 to lead an expedition to explore King Edward VII Land and Graham Land. Supposedly, Scott, before he left on his last expedition, had asked Stackhouse to undertake this, but this idea was quickly attacked by several members of Scott's expedition, as well as by Scott's widow. Stackhouse planned to sail from London in the middle of August 1914, in the Norwegian steam yacht *Polaris*, but this was changed to Aug. 1, 1914 in Scott's old ship the *Discovery*, now owned by the Hudson Bay Company, but which Stackhouse had acquired with £1000 down. Support came from Sir Clements Markham, among others. Lt. John A. Rupert-Jones, RN, was 2nd-in-command, A.E. Harbord was skipper of the *Discovery*, Lt. Richard H. Garstin, of the Royal Indian Marine, was 1st officer, and Lt. R. Beatty was navigator. Tom Crean was nominated as bosun, and Alf Cheetham was also touted as an expeditioner. Lord Congleton, W.H. Stewart Garnett, D. Hector Pearson, and Capt. A.S. Cantrell were the surveyors, and the Master of Sempill was meteorologist. All were giving their services free to an expedition, the cost of which, including the airplane, was estimated at £25,000. At that very moment Shackleton was putting together his British Imperial Transantarctic Expedition, also scheduled to leave in Aug. 1914. By the middle of June, the Stackhouse expedition's departure was postponed until Dec. 1914. War broke out, delaying Stackhouse's venture (but not Shackleton's). Stackhouse deferred it until 1916, and crossed to the USA to raise funds. However, on the way back he chose the wrong ship. The *Lusitania* was torpedoed in 1915, and Stackhouse was buried in Cork, as was his expedition.

British Antarctic Expedition 1898-1900. Led by Borchgrevink in the *Southern Cross*, it is also called the *Southern Cross* Expedition. Borchgrevink, who, by the mid-1890s, was famous (or notorious) as the first man ever to step on to the Antarctic continent (during Bull's whaling expedition of 1894-95), began, as early as late 1895, plans for his own 12-man sealing and whaling expedition to set out in Aug. 1896. That deadline was missed, but by Christmas 1896 a British syndicate, under the chairmanship of Gilbert Bowick, had obtained the funds necessary for obtaining two vessels for the expedition — one of 300 tons and a steamer of 70 tons. However, the funds evaporated, and Borchgrevink married, so the trip was postponed. By late 1897 Sir George Newnes, the publisher, had guaranteed funds for the expedition, whose purpose was now to winter-over and conduct scientific work, and Borchgrevink had, at last, bought a ship. **Aug. 22, 1898**: The *Southern Cross* left London. The crew were: Bernhard Jensen (captain); Jørgen Petersen (1st mate); Hans Hansen (2nd mate); Christian Olsen (1st engineer; *see* **Olsen, Johann Christian**); Julius Johannesen (2nd engineer); Klement Klementsen (bosun); Hans Ulis (carpenter); Lars Andersen (steward); Carl H.J. Been and Karl Brynildsen (firemen); Johannes Jahnsen (cook); and the following able seamen: Franz Johan Magnüssen, Oscar Bjerkø, Ingvard Samuelsen, Hans Nielsen, Hans J. Johnson, Johan A. Andersen, Olaf Larsen, and Lars A. Larsen. Also on the expedition were Adolf M. Karlsen and Axel Johansen. **Jan. 3, 1899**: They crossed the Antarctic Circle. **Jan. 12, 1899**: They sighted the Balleny Islands. **Feb. 18, 1899**: They arrived at Cape Adare, Oates Land, whereupon a salute was fired. **March 2, 1889**: The *Southern Cross* left for NZ, and the first ever deliberate wintering-over in Antarctica took place. 75 dogs and 10 men, including Borchgrevink, Anton Fougner (scientific assistant and factotum), Nikolai Hanson (zoological taxidermist), Hugh Evans (assistant zoologist), Kolbein Ellefsen (cook), Louis Bernacchi (magnetic observer, astronomer and photographer), Dr Herluf Kløvstad, Lt. William Colbeck, (magnetic observer), as well as 2 Finns, Per John Savio and Ole Must, brought along as dog handlers (this was the first time that dogs were ever used on the continent). **March 12, 1899**: After setting up Camp Ridley 300 yards from the beach, Borchgrevink and Bernacchi climbed to the highest point on Cape Adare (3670 feet), finding traces of penguins as high as 1000 feet. They set up a magnetic observatory about 300 yards from the huts. **April 22, 1899**: Borchgrevink and his party set out on the solid ice of Robertson Bay, and almost didn't make it back. On one later occasion Evans was lost for 3 hours. **July 1899**: Several short sledging expeditions were made on and off the coast of Victoria Land, and depots were laid on Robertson Bay. They discovered Duke of York Island, and collected valuable geological specimens. **July 24, 1899**: A fire in the hut almost burned it down (one of Borchgrevink's huts is still standing, another is partially ruined). **Aug. 1899**: On the return journey from one of the sledging expeditions, the lowest temperature was recorded, -52°F. **Aug. 31, 1899**: Hanson, Ellefsen, and Bernacchi were almost smothered by leaking fumes in the hut. **Sept.-Oct. 1899**: They set up a 2nd camp for 7 weeks at Mount Sabine, and Savio nearly died when he fell into a crevasse. His escape, using a knife to cut footholds into the ice wall of the crevasse, is nothing short of thriller material. **Oct. 15, 1899**: Hanson, the naturalist, died, either of scurvy or beriberi. **Jan. 28, 1900**: The *Southern Cross* returned, just in time, as friction was developing between Borchgrevink and his scientists, due to some bad decisions made by the leader. In a dramatic moment, especially after such a long isolation, Capt. Jensen flung open the hut door, yelling, "Mail." **Feb. 2, 1900**: The ship picked the men up for Part II of the expedition, which was to sail around the coast into the Ross Sea, and along the Ross Ice Shelf. Mapping as they went, they landed on the Possession Islands and on Coulman Island, to collect rocks and vegetation, as well as making several other landings on the E shore of Victoria Land. **Feb. 6, 1900**: They landed on the continent, and found a good camping ground of 100 acres. At the foot of Mount Terror, Borchgrevink and Jensen almost drowned when an iceberg calved off. **Feb. 16, 1900**: Borchgrevink, Colbeck, and Savio sledged 10 miles south over the Ross Ice Shelf, setting a new southing record of 78°50' S. **Feb. 19, 1900**: Bernacchi, Evans, Fougner, and Johansen (one of the ship's crew) got there as well. Borchgrevink discovered the northward movement of the Ross Ice Shelf, made meteorological observations, discovered the emperor penguin rookery at Cape Crozier, and made the first sledge journey on the Ross Ice Shelf. They left due to the advanced season. **Feb. 28, 1900**: They were over the Antarctic Circle and headed for home. **May 28, 1900**: They arrived back in London.

British Antarctic Expedition 1901-04 *see*

British National Antarctic Expedition 1901-04

British Antarctic Expedition 1907-09. Abbreviated to BAE 1907-09. Led by Ernest Shackleton. Its primary aim was to be the first to the South Pole, its secondary goal being to get to the South Magnetic Pole, and there were other scientific and exploration aims. It took Shackleton a few years to get the backing for his first expedition (the first one led by him, that is), and principal supporters were shipbuilder William Beardmore and the Misses Dawson-Lambton. Aside from Shackleton, the expedition consisted of: Edgeworth David (geologist and director of the scientific staff), Jameson Adams (meteorologist and second-in-command of the shore party), James Murray (biologist, who would be in charge of the base when Shackleton was away), Douglas Mawson (physicist and geologist), Leo Cotton (geologist), Ray Priestley (assistant geologist), Sir Philip Brocklehurst (junior geologist, baronet, and paying guest), Rupert Michell and Eric Marshall (both surgeons), Alister Forbes Mackay (assistant surgeon and biologist), Bertram Armytage (in charge of the ponies), Ernest Joyce and Frank Wild (both in charge of provisions and dogs), Bernard Day (electrician and motor engineer, in charge of the motor car), George "Putty" Marston (artist and general handyman), William C. Roberts (cook and assistant zoologist), and George Buckley (a backer of the expedition). The *Nimrod*'s crew were: Rupert England (captain), John King Davis (chief officer), Aeneas Mackintosh (2nd officer), A.E. Harbord (auxiliary 2nd officer), Alf Cheetham (3rd officer and bosun), Henry Dunlop (chief engineer), Christian Craft (2nd engineer); Hugh McGeown (3rd engineer); Edward Morrison (sailmaker); Chippy Bilsby (carpenter); John Montague (cook); the following able seamen: Vic Berry, Ernest Ellis (later a steward), George Kemp, James Paton, G. Rooney, Walter Spice (b. 1883, St. Leonards, Sussex), and W. Williams (this last mentioned being an ordinary seaman); the following firemen: H. Holmes, Harold Bull, Sidney Riches, Felix Rooney, and A. Schofield; Murdoch McRae (steward); William Ansell (2nd steward). It was decided to try ponies, because of the poor showing (not their fault, and therein lay the problem) of Scott's dogs in 1901-04 (an expedition Shackleton had been on). **July 30, 1907**: The *Nimrod* left London, with Shackleton on board only as far as Torquay. **Aug. 7, 1907**: The *Nimrod* left Torquay. **Aug. 23, 1907**: The *Nimrod* arrived at the Cape Verde Islands, coaled up, and headed for Cape Town. **Oct. 3, 1907**: The *Nimrod* arrived at Cape Town. **Oct. 5, 1907**: The *Nimrod*, having coaled up, left Cape Town. **Nov. 23, 1907**: The *Nimrod* arrived in Lyttelton, NZ. Shackleton traveled on the *India* to Australia (all was not boring on this trip—*see* **Mount Donaldson**), and boarded the *Nimrod* in Lyttelton, NZ. The NZ government established a post office with stamps specially surcharged "King Edward Land." **Nov. 28, 1907**: Walter Spice was discharged at Lyttelton. **Dec. 19, 1907**: George Kemp and A. Schofield were discharged at Lyttelton. **Dec. 28, 1907**: Frederick G. Abraham signed on to the *Nimrod* as an able seaman, and D. Donovan and Jack Partridge signed on as firemen. **Jan. 1, 1908**: In order to save coal, the *Nimrod* was towed out of Lyttelton by the steamer *Koonya* (Capt. F.P. Evans) in the afternoon. There was a new steward on the *Nimrod*—Henry Handcock. **Jan. 14, 1908**: After 1500 miles, the 2 ships were at the Antarctic Circle. **Jan. 15, 1908**: After a dangerous disconnection of the tow lines due to the icebergs, the *Koonya* left for home (with George Buckley aboard). **Jan. 16, 1908**: The *Nimrod* arrived at the Ross Sea. **Jan. 21, 1908**: The *Koonya* arrived back in Wellington. **Jan. 23, 1908**: The *Nimrod* sighted the Ross Ice Shelf. **Jan. 24, 1908**: Shackleton named the Bay of Whales. **Jan. 29, 1908**: The *Nimrod* entered McMurdo Sound. **Jan. 31, 1908**: Dr. Marshall was forced to remove Aeneas Mackintosh's eye. **Feb. 1, 1908**: The first automobile in Antarctica was lowered onto the ice. Adams, Joyce, and Wild sledged to Hut Point from the *Nimrod*. **Feb. 3, 1908**: Adams, Joyce, and Wild returned to the ship from their sledging expedition. Shackleton went ashore and selected Cape Royds, Ross Island, as his base, and the *Nimrod* finally docked there. Cape Royds (indeed, McMurdo Sound) was Shackleton's 4th choice for a base site, at least it was publicly. Scott had asked him in no uncertain terms to leave his old area alone and go another way. So, Shackleton had publicly avowed that his intention was to make a landing on Edward VII Land, and later claimed that he tried, but that that coast was too iced in. So (as he claimed), he had no alternative but to go into McMurdo Sound. The hut was built (*see* **Shackleton's Hut**). **Feb. 22, 1908**: The *Nimrod* left Cape Royds for NZ, with Leo Cotton on board, as well as Shackleton's mailed instructions aboard to replace Capt. England with Capt. Evans (of the *Koonya*) the next time the *Nimrod* came to Cape Royds. This was simply due to Capt. England's ill health. The men left in Antarctica would now winter-over. **March 2, 1908**: The expeditioners decided to climb Mount Erebus (it had never been done). **March 5, 1908**: Mawson, David, and Mackay set off for the peak, with Adams leading the support party which included himself, Brocklehurst, and Marshall. **March 6, 1908:** The *Nimrod* sighted NZ, where she would winter-over. Handcock, the steward, left the expedition. **March 10, 1908**: They conquered Erebus at 10 A.M. **March 11, 1908**: They returned to Cape Royds. **March 21, 1908**: Christian Craft was discharged from the *Nimrod* at Lyttelton, and Hugh McGeown was promoted from 3rd engineer. Jack Partridge was also discharged. **March 23, 1908**: F.G. Abraham was discharged from the *Nimrod* at Lyttelton, but, more important, Capt. England was discharged. **March 25, 1908**: Vic Berry was discharged from the *Nimrod* at Lyttelton. **March 28, 1908**: Doonvan, the fireman, was discharged at Lyttelton. **April 6, 1908**: Dr. Marshall was busy with his scalpel again, assisted by Mackay, this time on the baronet's metatarsals. **May 20, 1908**: Edward Morrison was discharged at Lyttelton. **Aug. 7, 1908**: Tom Meyrick was taken on the *Nimrod* as a new trimmer. **Aug. 14, 1908**: Shackleton revisited the Discovery Hut. **Aug. 15, 1908**: Shackleton, David, and Armytage pushed out onto the Ross Ice Shelf. **Aug. 16, 1908**: The party was back at the Discovery Hut, in a blizzard. **Aug. 18, 1908**: Spring outings started. **Aug. 22, 1908**: Shackleton, David, and Armytage were back at Cape Royds. **Sept. 19, 1908**: Day, Brocklehurst, and Adams went expeditioning in the automobile. **Sept. 22, 1908**: Shackleton, Adams, Marshall, Wild, Joyce, and Marston left for the Discovery Hut on a depot-laying expedition. **Sept. 25, 1908**: They were at White Island. **Oct. 5, 1908**: David, Mawson, and Mackay left for the South Magnetic Pole. **Oct. 6, 1908**: Shackleton's party laid Depot A, in 79°36' S. **Oct. 17, 1908**: Shackleton's party were back at the Discovery Hut again. **Oct. 18, 1908**: Shackleton's party were back at Cape Royds. **Oct. 28, 1908**: Hugh McGeown was discharged from the *Nimrod* at Lyttelton. **Oct. 29, 1908**: Shackleton's polar party, and the supporting party set out on their first leg to the Pole. **Oct. 30, 1908**: They reached the Discovery Hut. **Oct. 31, 1908**: Shackleton walked back to Cape Royds for more equipment and salt for the ponies. **Nov. 1, 1908**: Shackleton was back with his party at Hut Point. **Nov. 3, 1908**: Shackleton finally set out on his polar trek. **Nov. 7, 1908**: The supporting party turned back for base, so now it was just the "Boss," Wild, Adams, and Marshall, the four of them heading south for the Pole with their ponies. **Nov. 15, 1908**: They reached Depot A. **Nov. 16, 1908**: They passed 80°S. **Nov. 19, 1908**: They reached 80°32' S. **Nov. 21, 1908**: They had to shoot Chinaman, but they also established Depot B. **Nov. 22, 1908**: They sighted the Queen Maud Mountains. **Nov. 26, 1908**: They set a new southing record of 82°18' 30" S (in 168°E). **Nov. 27, 1908**: They had to shoot Grisi, but again, established Depot C. **Nov. 30, 1908**: At Lyttelton, David Nelson signed onto the *Nimrod*, as 2nd engineer, replacing Hugh McGeown, who had left the expedition. Charles Hunt signed on as the new 3rd engineer, and Tom McGillion signed on as a new trimmer. Richard Nodder came aboard as a new able seaman. **Dec. 1, 1908**: Quan was shot, but they set another new southing record of 83°16' S. The *Nimrod* left NZ, heading south to pick up the expeditioners. Evans was now skipper (having replaced Capr. England), and the ship carried 280 tons of coal, and enough provisions for 38 men to last them a year, if necessary. The ship had been completely overhauled, with a much-enlarged scientific deck that could also be used as a hospital if any of the men needed it. Davis was still chief officer; Mackintosh was 2nd officer; Harbord was auxiliary 2nd officer; Cheetham was 3rd mate and bosun; Michell was surgeon; Dunlop was chief engineer; David Nelson was the new 2nd engineer (having replaced Hugh McGeown); Charles Hunt was the new 3rd engineer; Bilsby was the carpenter; Ansell

was the steward; Montague was the cook; as for the seamen Ellis was back aboard, as were Riches (doubling as fireman), J. Rooney, Paton, Harold Bull, and Williams, as well as new ones — Richard Nodder and Alfred Bull (an able seaman named J. Gunn was scheduled to go, but didn't). There was a new fireman aboard, Robert McNeil, and two new trimmers — Tom Meyrick and Tom McGillion. Those who had left the expedition (and who did not take part in the 2nd half) were: Craft (the 2nd engineer), McGeown (who had replaced Craft as 2nd engineer), Morrison (the sailmaker), Handcock and McRae (the stewards), the firemen Donovan, Holmes, Felix Rooney, Partridge, and Schofield, and the able seamen Abraham and Berry. **Dec. 2, 1908**: Shackleton decided to attack the mountains rather than circumvent them. **Dec. 3, 1908**: They discovered the Beardmore Glacier, and the following day began their ascent of it. **Dec. 6, 1908**: 1700 feet up the Beardmore, Shackleton established Depot D. **Dec. 7, 1908**: They lost Socks, the last pony, down a crevasse on the Beardmore. **Dec. 16, 1908**: They reached 84°50' S. **Dec. 17, 1908**: They laid Depot E. **Dec. 19, 1908**: They set another southing record of 85°05' S. **Dec. 20, 1908**: They set another southing record, 85°17' S. They were now 8000 feet up and still climbing. **Dec. 27, 1908**: They reached 86°19' S. **Dec. 31, 1908**: they reached 86°54' S. **Jan. 1, 1909**: They reached 87°06' 30" S, a new polar record for either pole. **Jan. 4, 1909**: They established Depot F. **Jan. 5, 1909**: The *Nimrod* returned to McMurdo Sound, to wait for Shackleton's pole party. **Jan. 6, 1909**: The polar trekkers reached 88°07' S. **Jan. 9, 1909**: A bad day, one to remember. The polarfarers reached 88°23' S (in 162°E) — 97 miles from the Pole, but the "Boss" decided they couldn't get to the Pole and get back to base alive. "Better a live ass than a dead lion," he said, or at least something very close to that. At this point they were 360 miles farther south than any human being had ever been before. They had pioneered the Beardmore Glacier route (which Scott would follow in 1911-12), and they had, of course, discovered that glacier and so many other features of consequence on this trip, including 100 mountain peaks, and now the time had come for Shackleton to make the decision to return. Marshall took the photo of their most southerly point, and they set out on their return trip. As it was, the party would barely make it back to Cape Royds. **Jan. 16, 1909**: The *Nimrod* got to Cape Royds. David, Mackay, and Mawson discovered the South Magnetic Pole, the other major highlight of the expedition. **Jan. 20, 1909**: Shackleton's party reached Depot E, on the Beardmore, on their return trip. **Jan. 28, 1909**: They reached Depot D, on the lower part of the Beardmore. **Feb. 2, 1909**: They reached Depot C. **Feb. 4, 1909**: David, Mawson, and Mackay returned to the *Nimrod*, after 1260 miles of sledging in 122 days. **Feb. 13, 1909**: Shackleton reached Depot B. **Feb. 20, 1909**: Shackleton reached Depot A. **Feb. 23, 1909**: Shackleton reached Bluff Depot, at Minna Bluff. **Feb. 27, 1909**: Shackleton and Wild left Bluff Depot for Hut Point. **Feb. 28, 1909**: Shackleton and Wild arrived at Hut Point. **March 1, 1909**: They fired signals to the *Nimrod*. **March 2, 1909**: They got back to the ship. The four lads had walked 1708 of the toughest miles in the world, in 126 days, an incredible average of 14 miles a day. Shackleton's expedition, as an overall expedition, collected coal specimens and fossilized plants, was the first Antarctic expedition to take moving pictures, and the first to try out an automobile on the continent. **March 4, 1909**: The *Nimrod* left McMurdo Sound. **March 9, 1909**: The *Nimrod* cleared the Ross Sea. **March 10, 1909**: They left Antarctic waters for home. **April 3, 1909**: Tom McGillion left the *Nimrod* at Lyttelton. **April 7, 1909**: Sydney Richardson (b. 1881, London) joined the *Nimrod*, at Lyttelton, as the new 2nd officer, and Ernest Reynard and H. Vaughan joined as firemen. Several men left the expedition at Lyttelton. **April 20, 1909**: John King Davis brought the *Nimrod* into Sydney Harbor. Those aboard were: Harbord, Richardson, Cheetham, Dunlop, Bilsby, Ansell, Ellis, Paton, both Bulls, Riches, Nelson, Hunt, J. Rooney, Williams, Nodder, Vaughan, and Reynard. **May 7, 1909**: John McMillan and John Brolly signed on as able seamen at Sydney. **May 26, 1909**: Priestley, Marston, Joyce, Wild, and Day were the first to arrive back in England, on the *Paparoa*, which called at Plymouth. **June 12, 1909**: That evening Shackleton arrived in Dover on the mail packet *Victoria*, from Brindisi, having sailed from NZ on the *India*. **June 14, 1909**: Shackleton arrived in London to a triumphant welcome. **Aug. 26, 1909**: John King Davis brought the *Nimrod* back to Falmouth. **Aug. 31, 1908**: the expedition ended, at Poplar (in London). The whole expedition, privately funded, cost no more than £30,000.

British Antarctic Expedition 1910-13. Scott's last expedition, also referred to as the *Terra Nova* Expedition. Its mission: To be the first to get to the South Pole. **Sept. 1909**: The *Terra Nova* was purchased as the expedition's ship. **Nov. 7, 1909**: The *Terra Nova* arrived in London from Newfoundland. **Jan. 14, 1910**: Cecil Meares left for Siberia to find dogs and ponies. **June 1, 1910**: The *Terra Nova* left London, commanded by Teddy Evans. **June 4, 1910**: The *Terra Nova* arrived at Portsmouth. **June 10, 1910**: The *Terra Nova* arrived at Cardiff, to take on coal. **June 15, 1910**: The *Terra Nova* left Cardiff. **June 26, 1910**: The *Terra Nova* left Madeira, bound for Cape Town. **July 3, 1910**: Wilfred Bruce left England, bound for Vladivostok, to join Meares. **July 16, 1910**: Scott, his wife, and Francis Drake, left Southampton on the *Saxon*, bound for Cape Town. **July 27, 1910**: G.F. Wyatt, manager of the expedition, left England for New York, to pick up some extra dogs and take them to Wellington, NZ. **Aug. 4, 1910**: Bernard Day left England with the motor sledges. **Aug. 15, 1910**: The *Terra Nova* arrived at Cape Town, several days late. **Sept. 3, 1910**: The *Terra Nova* sailed from Cape Town, minus Aubrey Ninnis, who had been injured. **Sept. 16, 1910**: Ponting left from London, bound for Sydney. **Oct. 12, 1910**: The *Terra Nova* arrived at Melbourne, on her way to Lyttelton, NZ. It was at Melbourne that Scott received the famous telegram informing him that Amundsen had switched his plans for an attack on the North Pole to an assault on the South Pole instead, and was turning the *Fram* southward. There would now be a race for the Pole, and the honor of the British Empire was suddenly at stake. **Nov. 26, 1910**: The *Terra Nova* left Christchurch, NZ. **Nov. 29, 1910**: The *Terra Nova* left Port Chalmers, NZ, with 65 men, 33 dogs, and 462 tons of coal, and heading south. The expeditioners were: Robert Falcon Scott (leader), Edward Wilson (zoologist, artist, and chief of the scientic staff), George Simpson (meteorologist), Charles Wright (physicist), Ray Priestley, Frank Debenham, and Grif Taylor (geologists), Edward Nelson (biologist), Apsley Cherry-Garrard (assistant zoologist), Herbert Ponting (cameraman), Trygve Gran (ski expert), Bernard Day (motor engineer), Birdie Bowers (in charge of stores), Captain Oates (in charge of ponies), and Cecil Meares (in charge of dogs). The crew of the *Terra Nova* were: Teddy Evans (captain, and 2nd-in-command of the expedition), Lt. Victor Campbell (1st officer), Harry Pennell, Henry Rennick, Wilfred Bruce (lieutenants), Alf Cheetham (boatswain), Frederick Parsons (coxswain), Edgar Evans, Robert Forde, Tom Crean, Thomas Williamson, Patsy Keohane, George Abbott, Frank Browning, William L. Heald, Arthur Bailey, John Hugh Mather (all petty officers of one grade or another), Murray Levick (surgeon, RN), Edward Atkinson (surgeon, RN, and parasitologist), Denis Lillie (biologist in ship), Francis Drake (assistant paymaster, RN, and meteorologist in ship), William Williams (chief engine room artificer and engineer), William Horton (engine room artificer 3rd class, and 2nd engineer), Francis Davies (shipwright and carpenter), Albert Balson (leading seaman), Joseph Leese, Robert Oliphant, Thomas McLeod, Mortimer McCarthy, Harry Dickason, Bill Knowles, Charles Williams, James Skelton, William McDonald, James Paton (able seamen), William Lashly (chief stoker), Robert Brissenden, Edward McKenzie, William Burton, and Bernard Stone (leading stokers, RN), Angus McDonald, Thomas McGillion, and Charles Lammas (firemen), Walter Archer (chief steward), Frederick J. Hooper and W.H. Neale (stewards), Thomas Clissold (cook), James Dennistoun (in charge of mules in ship), Anton Omelchenko (groom), and Dimitri Gerov (dog driver). The dogs included Osman (the leader), Vaida, Mukaka, Stareek, and Krisravitsa. There were also 2 rabbits, and 2 cats. Those who did not make it south were: W.G. Thompson (geologist), Lt. E.W. Reilly, RN (chief engineer), Tom Feather (in charge of sledges; see Feather, for his biography), W.A. Johnson and A.J. Brewster (petty officers, RN), William Louis Schermuly (able seaman; born July 7, 1882, Bloomsbury, London); William Smith (sailmaker; seen in the records as Smythe, but that is because he has been confused with Willie Smythe of BNAE 1901-04; anyway, for Smith, *see under* **Smythe,**

William). **Dec. 2, 1910**: One of the dogs was washed overboard and drowned during a storm, and two ponies died, one by hanging (strangled by his chain, not as the result of a legal verdict). **Dec. 5, 1910**: In 56°40' S. **Dec. 6, 1910**: In 59°07' S. **Dec. 7, 1910**: 61°22' S, 179°56' W. They saw their first ice. **Dec. 8, 1910**: 63°20' S, 177°22' E. Osman, the lead dog, nearly died of exposure. **Dec. 9, 1910**: 65°08' S, 177°41' E. They reached the pack-ice, which was unexpectedly far north this season. **Dec. 10, 1910**: 66°38' S, 178°47' E. They were caught in the pack-ice. **Dec. 11, 1910**: Still caught in the pack, with snow falling. Everyone skied on the floes, and they and the ship drifted 15 miles to the SE. **Dec. 13, 1910**: 67°30' S, 177°58' W. They were now making smoother sailing. **Dec. 14, 1910**: The temperature was 35°F. Gran taught skiing on the big floe to which they had become attached. **Dec. 15, 1910**: 66°23' S, 177°59' W. **Dec. 17, 1910**: 67°24' S, 177°34' W. **Dec. 18, 1910**: They saw their first full-grown emperor penguin. **Dec. 20, 1910**: 68°41' S, 179°28' W. **Dec. 22, 1910**: The ponies were getting sick. Atkinson discovered a new tapeworm, very small, in the intestines of Adélie penguins. **Dec. 24, 1910**: 69°01' S, 178°29' W. Caught by the pack. **Dec. 25, 1910**: Crean's rabbit gave birth to a litter of 17. Christmas dinner was tomato soup, stewed penguin breast, roast beef, asparagus, plum pudding, mince pies, champagne, and port (at least that was what the officers had. The men, being men, had beer). **Dec. 30, 1910**: After a miserable 3 weeks in the pack-ice they got through into the calm of the Ross Sea. **Jan. 1, 1911**: 73°05' S, 174°11' E. **Jan. 2, 1911**: They landed at Cape Evans, Ross Island (Amundsen, who crossed the Antarctic Circle on this date, would use the Bay of Whales as his base. He would enter the pack the following day, and reach the Ross Sea on Jan. 7, 1911). **Jan. 5, 1911**: They unloaded from the *Terra Nova*. **Jan. 6, 1911**: Campbell led the Eastern Party on a 14-mile expedition. **Jan. 7, 1911**: The ponies caused several problems, Mukaka the dog got dragged half a mile, and several trips were made. **Jan. 8, 1911**: A motor sledge fell through the ice, with Wilkinson. Wilkinson was saved. **Jan. 9, 1911**: One of the dogs died. **Jan. 15, 1911**: Scott re-visited the Discovery Hut after 7 years. The day before, Amundsen had reached the Bay of Whales. **Jan. 24, 1911**: Scott and the main party at Cape Evans began laying depots in preparation for their push to the Pole in the 1911-12 austral summer. With 13 men, 8 ponies, and 24 dogs they set out going south. **Jan. 28, 1911**: The *Terra Nova*, now under the command of Harry Pennell, sailed E on the Edward VII Land party led by Victor Campbell, his mission being to explore what is now Edward VII Peninsula. **Feb. 3, 1911**: The *Terra Nova* met the *Fram* in the Bay of Whales. Campbell's crew were invited by Amundsen to lunch at Framheim, the Norwegian base nearby, and then Amundsen went aboard the *Terra Nova*. There was no place to land, so Campbell aborted the Edward VII Land effort, and the *Terra Nova* went back to Cape Evans. There they told Scott of the *Fram*. **Feb. 9, 1911**: Campbell took the ship north instead, becoming the Northern Party of the expedition. He and his party were dropped at Cape Adare for the 1911 winter. Other members of this party were Levick, Browning, Priestley, Dickason, and Abbott. From a scientific standpoint the Northern Party was generally unsatisfactory, some exploration being done of the coast of Victoria Land (more on this party later). The *Terra Nova* continued around the coast of Victoria Land, still under the command of Pennell. He discovered the entire coast of Oates Land. **Feb. 17, 1911**: Scott's party laid One-Ton Depot at 79°28' 30" S. Three days earlier, Amundsen's successful depot-laying party had reached 79°59' S. They were back at Framheim by Feb. 16, 1911, the day the *Fram* left for Buenos Aires for the winter. **Feb. 1911**: The sea ice broke up and the only pony to survive was Nobby. **March 2, 1911**: Scott's party arrived back at Cape Evans. The following day Amundsen successfully laid a 2nd depot at 81°01' S. He would lay a 3rd, at 82°S, on March 8, 1911. **March 31, 1911**: The *Terra Nova* arrived in NZ. **June 27, 1911**: "The worst journey in the world" began — at least, that is how Cherry-Garrard, one of the 3 participants, described it in his later book of that title. With Wilson and Bowers he went E to Cape Crozier, in the dark of winter, to collect emperor penguins' eggs for naturalist Wilson to study. **July 29, 1911**: Campbell, Priestley, and Abbott, of the Northern Party, went sledging. **Aug. 1, 1911**: Cherry-Garrard, Wilson, and Bowers barely made it back from the "worst journey in the world." **Oct. 24, 1911**: Scott left Cape Evans, for the Discovery Hut, en route to the Pole. He was 4 days behind Amundsen, who was already at his 80°S depot. **Nov. 3, 1911**: Scott's big push began from the Discovery Hut. The 5 polar trekkers, the most famous in history, were Scott, Bowers, Wilson, Edgar Evans, and Oates. Accompanying and preceding them was a support party, from which men would drop off at regular intervals and return to base. **Nov. 5, 1911**: Grif Taylor's Western Journey Party set out for Victoria Land. Aumndsen was now at his 82°S depot. **Nov. 24, 1911**: Day and Hooper turned back turned back from Scott's party at 81°15' S. **Dec. 10, 1911**: Scott's party began the ascent of the Beardmore Glacier. **Dec. 11, 1911**: Meares and Gerov turned back from Scott's main party. Everyone had turned back by now except 12 men: the 5 Polar trekkers and Wright, Crean, Teddy Evans, Keohane, Lashly, Atkinson, and Cherry-Garrard. In the meantime, Amundsen and his 4 men had already climbed the Axel Heiberg Glacier, had made it to the Polar Plateau, and were rapidly heading toward the Pole. **Dec. 21, 1911**: Keohane, Cherry-Garrard, Wright, and Atkinson turned back at the Beardmore. Scott didn't know it, but a week before Amundsen had reached the Pole. **Jan. 1, 1912**: Scott's main party reached the Polar Plateau on their way to the Pole, and Amundsen started off the Polar Plateau, on his way back from the Pole. Both parties were in the same degree of latitude, with one going and the other coming. It would be interesting to speculate on a meeting between the two leaders at this point. Would Scott have pressed on anyway? There would not have been much point in being second, so he probably wouldn't have. What would he have done? Also, at this point in time there were several famous Antarctic explorers on the continent — Scott, Amundsen, Shirase, Filchner, and Mawson. **Jan. 3, 1912**: The returning *Terra Nova* picked up Campbell's Northern Party from Cape Adare. Interestingly, bosun of the *Terra Nova* on this trip was John William Vincent, who would later re-visit Antarctica with Shackleton. **Jan. 4, 1912**: At 87°32' S, Crean, Teddy Evans, and Lashly of the Polar supporting party, dropped back to base. At this stage Scott's Pole party was only 171 miles to 90°S (it is one of the unsung stories, but for Crean, Evans, and Lashly to make such a trip back by themselves deserves the great recognition it never got). **Jan. 8, 1912**: The *Terra Nova* dropped Campbell's party at Evans Coves. The ship would return around Feb. 18, 1912, to pick them up again, so, with 6 weeks rations, they were left there. **Jan. 9, 1912**: Scott reached 88°23' S, 162°E. **Jan. 17, 1912**: In about 89°55' S Scott's party, very close to the Pole, saw the Norwegian ski marks on the ice. At 6.30 P.M., Scott and his 4 companions reached the Pole — too late. The Norwegian flag that waited for them, and the black tent, and the message from Amundsen, and all the other things left by the Norsk polarfarers over a month earlier, devastated Scott and his men. "Great God, this is an awful place," said Scott about the Pole. Meanwhile, Amundsen and his men were back at their 82°S depot, fast heading home. They would reach Framheim on Jan. 25, 1912. **Jan. 18, 1912**: Scott figured that they were 3 miles out, and they walked the remaining distance. It would seem, from a microscopic examination of Scott's records, that his party never set foot at the actual mathematical Pole point, but then Amundsen probably didn't either. But then, again probably, neither did Admiral Dufeks's party of Oct. 31, 1956, and so it might well be that it remained until sometime in Nov. 1956 before anyone actually stepped on 90°S — Dick Bowers and his Seabees. But that's not important. It had taken Scott 81 days to get there, and the return journey would be beset by hunger, sickness, tiredness, and blizzards. They had started off the trek with 10 Manchurian ponies, and 2 dog teams, but none of the animals even got to the Beardmore. The men really manhauled their sledges most of the way there and back (a round-trip distance of 1700 miles from Ross Island to the Pole), across the ice, snow, crevasses, and glaciers. **Feb. 5, 1912**: The *Terra Nova* arrived back at Cape Evans. **Feb. 7, 1912**: Scott's party began their descent of the Beardmore. This would get them down off the Polar Plateau, and onto the vastness of the Ross Ice Shelf. That would then give them a clear run (!) back to base. **Feb. 17, 1912**: It was at the Beardmore that Evans died. **Feb. 18, 1912**: They buried Evans out there, at the foot of the Beardmore. **Feb. 21, 1912**: A gale damaged 2 of Campbell's tents. The *Terra Nova* was overdue

to pick them up. However, the ship had tried, but couldn't get through the ice. **March 17, 1912**: Campbell's party moved into an ice cave for the 1912 winter. The cave was 12 feet by 9 feet, and 5½ feet high. For this group it would be a most frightful winter-over. That same day, way out on the Polar trail, Oates, riddled with scurvy and frostbite, left Scott's tent in the blizzard. It was his 32nd birthday. He was never seen again. Scott said he left voluntarily, and, if so, his motives were noble. He was slowing the party down to such a point that he had become a danger rather than a liability. **March 21, 1912**: One of Campbell's party, Browning, killed a seal that contained 36 still-edible fish in its stomach. **March 29, 1912**: The 3 remaining Polar trekkers — Scott, Wilson, and Bowers — now in shocking condition, mentally and physically, got to within 11 miles of One-Ton Depot (they knew this), when they got caught in a blizzard. On, or around, this date, they all died in their tent, 176 miles from their base at Cape Evans — and a legend was born, and an enormous amount of Amundsen's (and Norway's) thunder was stolen. Questions remain. Why didn't they make it to One-Ton? Despite the astonishing hardship, and despite the condition they were in, these were 3 men with strong powers of endurance. They knew that they had failed themselves and their country, and the Empire, by losing the Pole race. Did they feel that they couldn't face Britain when they returned? Did they realize that the only way to salvage their dignity, and the Empire's dignity, was to become legends by dying out there in the frozen waste? They were all romantics, for whom life would have been dreadfully dull after what they had just been through. It seems unlikely that the three would die together, unless they chose to. After all, with the survival instinct they had, it seems surprising that at least one would not have tried to press on, come what may, unless it was a deliberate choice by all three not to. **Aug. 17, 1912**: Brissenden drowned in NZ. **Sept. 30, 1912**: Campbell's party made a break for Cape Evans. **Oct. 28, 1912**: Campbell's party crossed Granite Harbor, and could now *see* Ross Island. **Oct. 29, 1912**: The search party — Atkinson (leader), Wright, Williamson, and Gran — left Cape Evans heading toward the Pole, looking for Scott. **Nov. 7, 1912**: Campbell's party reached Hut Point after 40 days traveling and after having been away almost 2 years. **Nov. 12, 1912**: Scott's party were found dead in their tent, the men lying as they had died, with diaries, records, and 35 pounds of geological specimens from the Beardmore Glacier. **Dec. 14, 1912**: At 5 A.M., the rat-infested *Terra Nova* left Lyttelton, heading to the Ross Sea. **Dec. 17, 1912**: The *Terra Nova* passed the Antipodes Islands. Alf Cheetham did a good job of getting rid of the rats. **Dec. 26, 1912**: In 63°S, the *Terra Nova* passed her first iceberg. **Dec. 29, 1912**: The *Terra Nova* reached 69°S. **Jan. 6-7, 1913**: The *Terra Nova* was beset by ice, in 71°40' S, 168°47' W. **Jan. 16, 1913**: The *Terra Nova* eventually got through the pack ice, in 74°50' S, 177°15' E. **Jan. 18, 1913**: The *Terra Nova* rounded Cape Bird, and arrived at Cape Evans, to be greeted by the bad news. The men there had been preparing for a third winter. **Jan. 19, 1913**: The *Terra Nova* left at 5.20 P.M., for Cape Royds, with everyone on board (at least, those who were still alive). **Jan. 20, 1913**: They arrived at Hut Point, and Atkinson led a 7-man crew to Observation Hill, to erect the cross to their dead comrades. **Jan. 21, 1913**: Atkinson's party returned to the ship. **Jan. 22, 1913**: The *Terra Nova* made for Granite Harbor. **Jan. 26, 1913**: After stops at other places, they set sail for NZ. **Feb. 2, 1913**: In 62°10' S, 158°15' E, the *Terra Nova* was beset by icebergs. **Feb. 10, 1913**: The *Terra Nova* reached Oamaru, in NZ's South Island. **Feb. 12, 1913**: News of Scott's death reached Britain, and they immediately became heroes, Scott and Oates most of all. That day the *Terra Nova* reached Lyttelton. **Feb. 14, 1913**: Memorial service held for Scott's party at St. Paul's. **March 13, 1913**: The *Terra Nova*, commanded by Harry Pennell, left Lyttelton, bound for England. Bruce had gone home on a mail steamer with Lady Scott, and Nelson became (a very good) 2nd mate. Gibson Anderson, of Christchurch, volunteered to make the trip, as a coal trimmer. There were 13 dogs aboard, which were going to be pets for various expeditioners once they got back to England. **April 11, 1913**: The *Terra Nova* passed Cape Horn. **April 28, 1913**: The *Terra Nova* reached Rio. **May 2, 1913**: The *Terra Nova* left Rio. **June 11, 1913**: The expedition arrived back in Britain, at the Scilly Islands. **June 14, 1913**: The *Terra Nova* pulled into Cardiff, 3 years to the day since she had left.

British Antarctic Expedition 1937-39. Never happened. In 1936 Ernest Walter Walker began fund-raising for his expedition. Much of the funding was dependent on his acquiring the *Discovery* for the expedition, and when the *Discovery* was handed over to the Boy Scouts in late 1936, this sabotaged the expedition. However, Walker pressed on, and acquired the 4-masted auxiliary sailing yacht *Westward*, which, in late 1937 he had fitted out at Gravesend. In Dec. 1937, she set sail from Plymouth, bound for the Panama Canal, with 80 passengers aboard, on the first leg of the expedition, via the Panama Canal, to NZ, the southern base of this expedition. The *Westward* returned to Plymouth in Sept. 1938. However, the expedition kept getting postponed until, in Sept. 1939, it had to be canceled because of World War II. Walker became a stoker petty officer, and served with distinction.

British Antarctic Survey. Known as BAS, the name (if not the organization) replaced FIDS (Falkland Islands Dependencies Survey) on Jan. 1, 1962. Like FIDS was, it is the official name for the total ongoing British scientific effort in Antarctica (*see also* **British Antarctic Territory**). On April 1, 1967 it was transferred from the Commonwealth Relations Office (incorporating the former Colonial Office) to NERC (Natural Environment Research Council), of the Department of Education and Science, although the BAS scientific programs are managed from Cambridge. BAS employs about 400 personnel, and runs scientific stations in Antarctica. Vivian Fuchs was Director, 1958-73; Dick Laws from 1973 to 1987; David Drewry from 1987 to 1994; Barry Heywwood, 1994-1998; Chris Rapley, 1998-2007; and Nick Owens, 2007-.

British Antarctic Territory. A British overseas dependent territory since Feb. 26, 1962 (ratified on March 3, 1962), administered first by a high commissioner, resident in the Falkland Islands, and then, from 1989, by the Foreign and Commonwealth Office. It is a section of Antarctica, between 80°W and 20°W, and south of 60°S, i.e., the Antarctic territory claimed by the UK since 1908. It includes the South Orkneys, South Shetlands and the Antarctic Peninsula. Population maybe 50 in the winter, but maybe 400 in the summer, mostly scientists who maintain the British Antarctic Survey (BAS) stations. Until 1962 this was part of the larger colony of the Falkland Islands Dependencies, but that year Britain split that colony into two, with 60°S as the dividing line of latitude. All south of that was BAT (about 1,710,000 sq km of it), and all north was the Falkland Islands Dependencies. The BAT has its own legal system, and its own legal and postal administrations. Revenue from income tax and from the sale of postage stamps make it a self-sufficient colony. This British claim is contested by Chile and Argentina, both of whom also claim it. Now there are only 3 stations in the territory — Halley, Rothera, and Signy Island, and a ship patrolling in the austral summer. The old Faraday Base was there too, but that is now in the hands of the Ukrainians. Many other countries have stations here (with the UK's permission, of course). The High Commissioners were also the governors of the Falkland Islands: Edwin Porter Arrowsmith (1962-64), Cosmo Dugal Patrick Thomas Haskard (1964-70; knighted 1965), Ernest Gordon Lewis (1971-75), Neville Arthur Irwin French (1975-77), James Roland Walter Parker (1977-80), Rex Masterman Hunt (1980-85), Gordon Wesley Jewkes (1985-88), William H. Fullerton (1988-90). The Commissioners were: M. Baker Bates (1990-92), Peter M. Newton (1992-95), Anthony J. "Tony" Longrigg (1995-97), John White (1997-2001), Alan Edden Huckle (2001-04), Tony Crombie (2004-06), Robert Leigh Turner (2006-08), Colin Roberts (2008-). From 1998 the commissioner has also been commissioner for the British Indian Ocean Territory.

British Army Antarctic Expedition 2001-02. Known as BAAE. Under the patronage of Prince Charles, the expedition left Britain in Aug. 2001, in the ketch *John Laing*, and in late Nov. 2001, in the same vessel, left the Falkland Islands, bound for the Danco Coast, where 16 British soldiers would spend about 6 weeks conducting geological surveys, wildlife studies, mapping, and mountain climbing. Lt. Col. Andy Bristow, of the Royal Corps of Signals, was expedition leader. Maj. James Harris (aged 38), Royal Anglian Regiment, officer in charge of mountain climbing, fell into a 200-foot crevasse on the Forbidden Plateau, hung for several hours

at the end of a rope ("I had a quick look down, and didn't do that again"), and was rescued by Capt. Harry Scrope (27; of Leyburn, Yorks) and Tim Hall (44; of Newport, Salop), the expedition's photographer. Other membes of the team included 2nd Lt. Sarah Piesse (23; of Colwyn Bay; the only woman on the expedition), of the Royal Engineers. Lt. Piesse broke a thumb during a climbing accident near Port Lockroy, and on Jan. 13, 2002, they had to take her to Palmer Station for an x-ray and thumb-setting. Also on the expedition were Maj. Dick Pattison (39; from Basildon, Essex; brother of the dean of King's College, Cambridge), with the Royal Anglian Regiment, who brought his bagpipes; Sgt. Steve Ayres (29; of Darlington); Capt. Simon Horne (29; of Torquay), the doctor; and Capt. Will Mace (27; of Huntingdon), Scots Guards. Nine members of the expedition arrived back in England on a flight from the Falklands, on Valentine's Day, 2002, and the *John Laing* got back in May, with, among other things, geological samples from Elephant Island.

British Army Antarctic Expedition 2004-05. Also known as the British Army Forbidden Plateau Expedition. Maj. Richard Pattison, Lt. Cdr. Clive Waghorn, Lt. Mark Wyldbore, Sgt. Steve Ayres. It set out to cross previously unexplored regions of the Antarctic Peninsula. It took 4 weeks, and they were the first to climb Mount Walker.

British Army Antarctic Expedition 2007-08. In mid-December 2007, 16 soldiers sailed from the Falkland Islands, across the Drake Passage, to the Danco Coast, on the 67-foot yacht *Discoverer*, to carry on work done by the previous two BAAEs. The team included Conor Ryan, Steve Ayres, Martin Carey, Rob Hadfield, Col. Richard Clemens, and Maj. Dick Pattison. The expedition ended on Jan. 30, 2008.

British, Australian and New Zealand Antarctic Research Expedition. 1929-31. Abbreviated to BANZARE. A cooperative venture supported by the three respective governments, and led by Douglas Mawson, but organized by the Australian government, the directing committee being under the chairmanship of Senator Sir George Pearce. It was really two summer expeditions in successive years, 1929-30 and 1930-31. It was Mawson's second major Antarctic expedition, and the third time he had been to Antarctica. It was all done from ship, only 5 landings being made in order to make political claims. Planned secretly by the Australian government as early as July 1927, the first time the world got any inkling that an expedition was afoot was just after the New Year, 1929. **Jan. 10, 1929**: Mawson sailed, rather surreptitiously, from Adelaide on the *Orama*, bound for England. But word had leaked out that he was after the *Discovery*, Scott's old barque, for some unspecified reason. By the time he docked in London the press was all over him, but still he wouldn't talk, except to say that he had some intentions of conducting a purely scientific cruise to "a region south of the continent of Australia." **Feb. 21, 1929**: Prime Minister Bruce announced in Canberra that, yes, there was going to be an Antarctic expedition at the end of the current year, led by Mawson in the *Discovery*, and that NZ was cooperating. As the British government had loaned (free of charge) the *Discovery* and certain scientific personnel, including a member of the Discovery Committee as an observer and plankton expert, the expedition would cost only £16,000, and NZ was going to contribute £2500 of that, as well as personnel of their own. The PM said that airplanes would be taken; he also said that Australian scientific interests would be expanded, that the aims of BANZARE included exploration of the 2500 miles of coastline between the Wilhelm II Coast and Coats Land, including the Kemp Coast and Enderby Land. He also did more than hint that territorial claims were really at the base of the expedition, and that whaling possibilities "within the Australian sector" were to be determined. **April 3, 1929**: John King Davis left Melbourne for London, to pick up the *Discovery*. **Late April 1929**: Australian chocolate manufacturer Sir Macpherson Robertson ("Mac-Robertson," as he was known) donated £10,000 toward equipment for the expedition, and Samuel Hordern of Sydney donated £250. **May 9, 1929**: Mawson left London for Australia. **Aug. 1, 1929**: In drenching rain and with great informality, the *Discovery* set sail from London, bumping into the quay and damaging it while still under tow. Aboard were 4 members of the expedition, including Jimmy Marr (the Discovery Committee man), and photographer Frank Hurley, as well as a de Havilland Moth airplane, echo-sounding gear, trawling gear, and ultra-modern radio equipment. **Aug. 5, 1929**: They reached Cardiff, where they took on 500 tons of Welsh patent fuel. **Aug. 10, 1929**: With barely 40 somewhat interested spectators watching from the quay, the *Discovery* nosed out of Cardiff and immediately disappeared into a Bristol Channel fog, bound for St. Vincent, in the Cape Verde Islands (where she took on 100 tons of coal), and then Cape Town. Meanwhile Mawson was in Australia, wrapping up arrangements that end. **Sept. 18, 1929**: The *Nestor*, with Mawson and the other expeditioners on board, sailed from Adelaide for Fremantle, Western Australia. **Sept. 25, 1929**: The *Nestor* left Fremantle, bound for Cape Town. **Oct. 13, 1929**: The *Nestor* arrived in South Africa, to join the *Discovery*. The *William Scoresby* happened to be in Cape Town at the same time, and they made a gift of a tiny black kitten to the Mawson expedition. That was how Nigger came to go south. **Oct. 18, 1929**: The *Discovery* left Table Bay amid a thunderous send-off and after having checked thoroughly for stowaways (the 15 live sheep on board were not stowaways; they would pay for their passage), bound for the south. **Nov. 8, 1929**: The *Discovery* reached the Kerguélen Islands, where she took on coal delivered there from Cardiff for the expedition, by the whaling firm of Messrs Irvin & Johnson. **Nov. 24, 1929**: The *Discovery* reached Heard Island, and from there on to the deep south. The 13 expedition members were: Mawson (geologist and expedition leader), Jimmy Marr, Arthur Williams (British radio expert and telegraphist), Morton Moyes (cartographer, physicist, and special survey officer), Alf Howard (chemist and hydrologist), Harvey Johnston (senior zoologist), Harold Fletcher (taxidermist and assistant biologist); Wilson Ingram (medical officer and bacteriologist), the 2 New Zealanders Bob Falla (ornithologist) and Ritchie Simmers (meteorologist), Frank Hurley, and RAAF men Flight Lt. Stuart Campbell and Flying Officer Eric Douglas. The crew were: John King Davis (captain and 2nd-in-command of the expedition), Kenneth MacKenzie (1st officer), William Colbeck (2nd officer, son of William Colbeck, former Antarctic explorer), John Child (3rd officer, normally of the P & O line), Wilfrid Griggs (chief engineer, normally of the P & O line), Bernard Welch (2nd engineer, normally of the P & O line), Herbert Letten (donkeyman, i.e., 4th engineer), Lofty Martin (bosun), William Simpson (bosun's assistant), Charles Degerfeldt (carpenter), John Miller (sailmaker), Frank Dungey (chief steward), Clarence Sellwood and Harry Gage (assistant stewards), Fred Sones (cook), Allan Bartlett (cook's assistant), John Matheson (leading seaman), Fred Marsland, John Park, George Ayres, Raymond Tomlinson, and Kenneth McLennan (able seamen), and James Kyle, Stanley Smith, and Richard Hampson (firemen). Leaving for Antarctica about the same time was Riiser-Larsen's Norwegian expedition to the same area of the continent, and the press instigated a rivalry, thinking back to the days of Scott and Amundsen (and, perhaps, ahead to the days of Fuchs and Hillary). **Dec. 8, 1929**: They entered the pack ice. **Dec. 31, 1929**: First reconnaissance flight, by Campbell and Douglas. **Jan. 5, 1930**: A second flight, by Campbell and Mawson, discovered Mac. Robertson Land. **Jan. 13, 1930**: They landed on Proclamation Island, and Mawson claimed for Britain all land south of 60°S, and between 47°E and 73°E, i.e., Enderby Land. **Jan. 14, 1930**: The *Discovery* met the *Norvegia*, and the British and Norwegians came to a compromise on exploration — the British to the east of 40°E, the Norsemen to the west of that point (this was later changed to 45°E). **Jan. 22, 1930**: Nigger fell overboard, and his adopted master, Lofty Martin, dived in and succeeded in getting him out. Martin was fine, but Nigger required some time in the engine room in which to thaw out. They spent their time coasting the Antarctic continent and sending out airplane flights (Hurley often shooting color and sound movies), and conducting scientific experiments, including meteorological balloons, and marine trawling. **Jan. 27, 1930**: The coal supply was dangerously low. Mawson made arrangements for more coal to to taken aboard from the South African whaler *Radioleine*, but Captain Davis felt that to try the transfer at sea would be too risky, and they decided to get out early. Mawson and Douglas flew out again, failing to confirm the existence of Knox Land, and the plane was damaged when it was hauled aboard the ship. **Feb. 6, 1930**: The plane, now repaired, flew out again. **Feb. 8,**

1930: They arrived at Kerguélen. **Feb. 20, 1930**: Coaling was completed. Davis refused Mawson's suggestion to go back to Antarctica. **March 2, 1930**: They left Kerguélen, bound for Australia. **March 29, 1930**: They reached Australia. **April 1, 1930**: They docked at Adelaide. **April 3, 1930**: They left Adelaide. **April 8, 1930**: They arrived at Melbourne. There was, by no means, any guarantee that there would be money forthcoming for part 2 of the expedition, what with the Depression raging, but, lured on by "wealth in their own backyard" (meaning minerals and whaling possibilities in Antarctica), and by the fact that the *Discovery* was only available for one more year, the Australian government relented and found the money. John King Davis refused to skipper the *Discovery*, claiming a younger man was needed (what he meant was he'd had enough of the quarrels between himself and Mawson). **Early May 1930**: The crew was paid off, but many would be taken on again. **Nov. 1, 1930**: The *Discovery*, after re-fitting, left Melbourne. **Nov. 5, 1930**: They arrived in Hobart, where they loaded up with coal, 19 sheep, and 20,000 eggs. **Nov. 22, 1930**: They left Hobart for Macquarie Island, on the second half of BANZARE. Alexander Lorimer Kennedy had replaced Moyes as physicist and surveyor, and Lt. Karl Oom was along as cartographer; MacKenzie had taken over as ship's captain and 2nd-in-command of the expedition from Davis; Arthur M. Stanton was 2nd officer. Others who had left the expedition were: Degerfeldt, Dungey, Gage, Hampson, Kyle, Marr, McLennan, Marsland, Park, Sellwood, Simpson, Smith, Sones, and Tomlinson. Those new to the expedition were: Joseph Williams (carpenter), Josiah Pill (chief steward), Ernie Bond (steward's assistant), John Reed (cook), George Rhodes (assistant cook), Aage Henriksen, Lauri Parviainen, Fred Ward, Norman Mateer, Will Porteus, David Peacock, and William Howard (able seamen), Frank Best, Murde Morrison, and William Crosby (firemen). Allan Bartlett was now 2nd steward. **Dec. 1, 1930**: They arrived at Macquarie Island. **Dec. 5, 1930**: They left Macquarie Island. **Dec. 10, 1930**: They entered the pack ice. **Jan. 5, 1931**: They arrived at Cape Denison. **Jan. 6, 1931**: They staked a claim, and the ship then cruised the coast. More flights were made in the Moth by Campbell and Douglas. That season Mawson claimed the George V Coast, and discovered the Banzare Coast, Princess Elizabeth Coast, and MacKenzie Bay. They also rediscovered the Sabrina Coast, and charted 1000 miles of coastline. The coasts they discovered covered 29 degrees of longitude. **Feb. 9, 1931**: Running low on coal, they left Antarctica. **March 19, 1931**: They arrived back in Hobart. **March 22, 1931**: They left Hobart. **March 26, 1931**: They reached Melbourne, after a second trip of 10,557 miles (about 22,000 miles for both voyages). But no one really cared anymore, except Mawson and his boys. **Aug. 1, 1931**: The *Discovery* arrived back in London, via Cape Town.

British Commonwealth Transantarctic Expedition. 1955-58. Abbreviated to BCTAE, or sometimes to CTAE (Commonwealth Transantarctic Expedition). It was separate from IGY. Led by Vivian Fuchs, this was the first successful land traverse of the Antarctic continent, and perhaps the last truly great polar journey. It was a two-pronged operation. Fuchs was to lead the main party from the Weddell Sea, in heated vehicles, with air reconnaissance and radio contact, across a vast stretch of unknown land, to the Pole, and then on to McMurdo Sound, on the other side of the continent, in the summer of 1957-58. From that other side, Sir Edmund Hillary was to lay depots that same season from Ross Island toward the Pole, and to guide Fuchs back to McMurdo Sound. The idea for this expedition had come to Fuchs on Alexander Island, while he had been trapped on the ice as FIDS leader at Base E in 1949. With the help of Sir James Wordie and others, Fuchs got started. Fids such as Ken Pawson applied to be on it, but the Korean War got in the way for a while. The British government donated £10,000 toward the expedition, and this started the ball rolling. The NZ government took responsibility for the Ross Sea Party, led by Hillary. London and Wellington were the two headquarters for the expedition. **Nov. 14, 1955**: Fuchs' part of the expedition left London on the *Theron* (skipper Harald Marø), with huts, 2 Auster aircraft, a Sno-cat, some tractors, 2 years' worth of stores, 24 dogs (this number would increase to 34 by the time they arrived), and much miscellaneous equipment, as well as 17 members of the expedition. Hillary and surveyor Bob Miller joined the ship in Montevideo (Hillary as observer), after which they called at South Georgia (54°S). **Dec. 20, 1955**: The main party left South Georgia. **Dec. 26, 1955**: The main party experienced their first problems with the pack-ice, and flew one of the Austers out for reconnaissance. For 33 days the *Theron*, slowed to 3 knots, battled her way through ice floes up to 10 feet thick. **Jan. 20, 1956**: The main party were finally able to fly the plane again. **Jan. 23, 1956**: The *Protector*, which had been on patrol off the coast of Graham Land (1000 miles away) came to the rescue of the main party. **Jan. 28, 1956**: After visiting the recently built Halley Bay Station, the main party reached Vahsel Bay, on the Filchner Ice Shelf, off the Weddell Sea coast. **Jan. 30, 1956**: The landing of supplies and equipment began. Fuchs oversaw this operation. **Feb. 8, 1956**: The *Theron* left Vahsel Bay, with Fuchs on board. **Feb. 9, 1956**: Early in the morning, the *Theron* was back at Halley Bay Station, where the leader there, David Dalgliesh, told Fuchs that the Halley Bay party had contributed £100 toward BCTAE. **Feb. 10, 1956**: The main party were finally clear of the pack ice, and went via the South Sandwich Islands to Grytviken, in South Georgia. **March 23, 1956**: The *Theron* reached London, and Fuchs continued his organization of the expedition. Eight men stayed at Vahsel Bay in the winter of 1956, setting up Shackleton Base. Surveyor Ken Blaiklock was leader of this advance party, and the others were: Ralph Lenton (radio operator and carpenter, and 2nd-in-command of this advance party), Tony Stewart, Peter Jeffries, and Hannes la Grange (meteorologists), Roy Homard (engineer), Rainer Goldsmith (doctor), and Taffy Williams (RAF radio operator). *See* **Shackleton Base** for their remarkable story. The NZ summer support team for this stage of BCTAE was: R.F. Barwick (biologist), Dr. J.F. Findlay (medical officer and biologist), and Corporal E. Becconsall, K.J. Boyd, and Corporal A. Edwards (construction unit). **May 8, 1956**: First radio contact was established between Shackleton Base and the outside world. **Aug. 1956**: The *Endeavour* (formerly the *John Biscoe*) sailed from London to Wellington with 12 huskies and various specialized stores, and Hillary and his 22 men were in training in the NZ Alps. **Sept. 29, 1956**: Blaiklock and Goldsmith sledged 25 miles to Vahsel Bay. **Oct. 8, 1956**: Blaiklock and Goldsmith returned, after a trip of 80 miles. **Nov. 15, 1956**: Fuchs left London, this time on the *Magga Dan* (Danish crew under Capt. Pedersen), accompanied by the relief party for Halley Bay Station. Allan Rogers was on board to replace Goldsmith as doctor. Other brand new members of BCTAE were Jon Stephenson (geologist), Hal Lister (glaciologist), and Geoffrey Pratt (geophysicist). **Dec. 28, 1956**: Blaiklock and Goldsmith returned after 350 miles of sledging, during which they established a depot 50 miles south of Shackleton Base, and then pressed on another 100 miles. **Dec. 31, 1956**: The *Endeavour* left NZ, carrying Hillary's Ross Sea party to McMurdo Sound, on the other side of Antarctica. Bob Miller was 2nd-in-command of the team. Others were: Bernie Gunn and Guyon Warren (geologists), Ron Balham (marine biologist), George Marsh (surgeon), Richard Brooke and Roy Carlyon (surveyors), P.D. Mulgrew and Ted Gawn (radio operators), Murray Ellis and Jim Bates (engineers), Harry Ayres (dog handler), Selwyn Bucknell (cook), and Derek Wright (photographer). Geoffrey Lee Martin (born in Christchurch) was the reporter for the *New Zealand Herald* and the *Daily Telegraph* (England), invited by Hillary. **Jan. 12, 1957**: The *Magga Dan* reached Halley Bay, that base's supplies and personnel were offloaded, and from there John Lewis flew Fuchs, Lowe, and Donald Milner to Shackleton Base. **Jan. 13, 1957**: The *Magga Dan* arrived at Shackleton Base in the evening. **Jan. 14-18. 1957**: The *Magga Dan* unloaded 850 barrels of fuel, 2 aircraft, 3 more Sno-cats, two extra Weasels, and a muskeg tractor, as well as many other supplies. With the help of 10 men from Halley Bay, Shackleton Base was greatly extended. **Jan. 20** and **23, 1957**: Two long-range reconnaissance flights were made. **Jan. 24, 1957**: The *Magga Dan* set out looking for seals (dog food). **Jan. 26, 1957**: Building at Shackleton Base was finished. **Jan. 28, 1957**: The *Magga Dan* left. **Jan. 30, 1957**: The last day of air reconnaissance flights, a site was selected for South Ice, a depot at 81°57' S, 24°48' W, 290 miles S of Shackleton Base and 4430 feet above sea level, en route to the Pole. **Jan. 31, 1957**: The *Endeavour* arrived at McMurdo Sound. Hillary built Scott Base on Pram Point, Ross

Island, then explored the Ross Sea Basin. He then flew out to the foot of Skelton Glacier to build a depot there. He later built Plateau Depot at the top of the glacier. **Feb. 4, 1957**: Blaiklock, Lister, Stephenson, and Lowe were flown out to set up the small aluminum and plywood prefabricated hut that would be South Ice. 19 flights, each carrying one ton, were needed to set it up and stock it. **Feb. 18, 1957**: Radio communication was made for the first time between Scott Base and Shackleton Base. **Feb. 22, 1957**: South Ice was ready. **March 25, 1957**: South Ice was occupied by a 3-man wintering team — Lister, Blaiklock, and Stephenson. **Sept. 10, 1957**: Hillary left to investigate Ferrar Glacier. He split his crew into 3 teams. **Oct. 4, 1957**: The first of the Ross Sea parties, the Northern Sledge Party — Brooke, Ellis, Gunn, and Warren — set out from Scott Base, to go up the Mackay Glacier to the Polar Plateau. A party of 3 was flown to the Skelton Depot, and Hillary led 3 others to cover the route Fuchs would take on the final leg from the Pole to Scott Base. **Oct. 8, 1957**: On the other side of the continent the advance party of Fuchs, Stratton, and the two Pratts, left Shackleton Base, to scout the trail to South Ice. **Nov. 13, 1957**: Fuchs' advance party reached South Ice, after a very difficult journey. They then flew back immediately to Shackleton Base. **Nov. 24, 1957**: With a recent telegram — "My husband and I wish every success to you and your companions. Elizabeth R." — ringing in his ears, Fuchs led the main Transantarctic party out of Shackleton Base at 9.45 P.M. (GMT). 3 Sno-cats, 2 Weasels, and a muskeg tractor were pulling 20 tons, and there were 10 men — Blaiklock, David Stratton (surveyor, and second-in-command), la Grange, Homard, Geoffrey Pratt, David Pratt (engineer), Rogers, Lister, Stephenson, and George Lowe (photographer). Their RAF aerial backup comprised Squadron Leader John Lewis, Flight Lt. Gordon Haslop, Flight Sgt. Peter Weston (mechanic), and Sgt. Taffy Williams. The NZ summer support party was: R.F. Barwick and A. Packard (biologists), RNZAF leading aircraftmen A.M. Breese and LAC I.A. Chapman, B.G. Broadhead (NZ Broadcasting Service), Corp. A. Edwards and Pvt. A.L. Burton (maintenance party), F.A. de Hamel (medical officer), R.C.D. McKenzie (reporter), R.R. Mitchell (architectural draftsman), Corp. P.H. Tate (aircraft mechanic and radio operator), and R. Derek Wright (cinematographer). **Nov. 25, 1957**: Hillary created Depot 480. **Dec. 15, 1957**: Hillary began work on Depot 700. The NZ depot-laying party, which discovered much on their travels, consisted of Hillary, Miller, Ayres, Gunn, Mulgrew, Ellis, Bates, Gawn, Marsh, Brooke, Bucknell, Warren, Carlyon, Wright, and Balham. The RNZAF aerial contingent that supported them consisted of Squadron Leader John Claydon (leader), Flying Officer Bill Cranfield, and Sgt. Walter Tarr. **Dec. 21, 1957**: Fuchs reached South Ice. **Dec. 25, 1957**: Fuchs' main party left South Ice, on Christmas Day, for the next, 575-mile, leg that would take them to the Pole. For the first several days, two dog teams acted as outriders, 75 miles ahead, building snow cairns every five miles to guide the way and warning of dangerous ground. The main party were: Fuchs and Stratton in the leading Sno-cat "Rock 'n roll"; David Pratt's Sno-cat "Able" brought up the rear with his engineering equipment; Geoffrey Pratt and J.J. la Grange traveled in the seismic Sno-cat "Haywire"; Homard drove the "County of Kent," the fourth Sno-cat; Lowe had his photographic equipment in the Weasel "Wrack and Ruin"; Hal Lister drove the Weasel "Charlie," with his glaciological gear; Rogers had his medical equipment in the third Weasel, the "Rumble"; and Lenton drove the muskeg "Hopalong." As Fuchs was crossing the continent toward the Pole, doing scientific work along the way, Hillary was at Depot 700, having stocked it with supplies. With a month to wait for Fuchs, and fearing that the lateness in the season might force Fuchs to abandon the expedition, Hillary decided to go "hell bent for the South Pole." His orders had been to wait for Fuchs at Depot 700 and not go to the Pole, that honor, naturally, to go to the leader, Fuchs. But, Hillary made the decision, which he regarded as the correct one, and set out with Ellis, Bates, Mulgrew, and Wright. **Jan. 1, 1958**: Fuchs was over 300 miles from the Pole, and, coming from the other direction, Hillary was 70 miles from the same objective. **Jan. 2, 1958**: It was said that Fuchs was in 87°S (200 miles from the Pole), but that was optimistic. **Jan. 4, 1958**: Hillary arrived at the Pole. Fuchs was still 357 miles away. Some say Hillary stole his leader's thunder by this move. In fact, everyone said it, and those that didn't, thought it. "Everybody is delighted," claimed an expedition spokesman in London, which, of course (translated from the British) means, "Everyone is horrified." **Jan. 5-6, 1958**: Hillary flew back to Scott Base in one of two American Neptunes, along with 3 of his men (Mulgrew remained at the Pole). Rumors about a quarrel between Fuchs and Hillary were increased when Hillary suggested Fuchs abandon the expedition when he reached the Pole, in other words not make the last leg between the Pole and McMurdo Sound. Not only Fuchs, but everyone else, protested violently. **Jan. 7, 1958**: Fuchs, now having dropped a Weasel (the "Rumble"; Rogers then traveled with Lister in "Charlie") and the muskeg "Hopalong" (Lenton moved in with Homard) to make the going quicker, was reported in 85°40' S, about 290 miles from the Pole. **Jan. 8, 1958**: They were in 86°02' S, at a height of 8000 feet, and 260 miles from the Pole. At that point a new depot, Depot 800, i.e., 800 miles from Scott Base and 100 miles nearer to the Pole, was being proposed, and rejected by Hillary as too expensive. Another problem was that if Fuchs was very late, Hillary's team would have to winter-over again at Scott Base, which was something he wouldn't tolerate. Jim Bates had gone back to NZ earlier in Jan. 1958, as had 4 men of the IGY team — Trevor Hatherton, Herbert Orr, Peter Macdonald, and Vernon Gerard. Later in the month Neil Sandford, the last of the IGY men, sailed out in the American ship *Greenville Victory*, along with Ted Gawn and Selwyn Bucknell, whose reliefs had already arrived earlier in January. Hillary also requested relief for the three flyers, Claydon, Cranfield, and Tarr. **Jan. 18, 1958**: Fuchs was 56 miles from the Pole, and Hillary flew from Scott Base to the Pole in a Neptune, in company with American admiral George Dufek and 9 reporters. **Jan. 19, 1958**: At 8.30 P.M., from an observation tower at the Pole, they could make out Fuchs's party, 11 miles away and coming in. By 10.50 P.M. Fuchs was 6 miles from the Pole. **Jan. 20, 1958**: Fuchs finally arrived at 1.18 A.M. (GMT). It had taken him 56 days to cover 932 miles. "Hello, Bunny," said Hillary, at 12.45 P.M. that day, about a mile from the buildings of the Americans' South Pole Station. "Damn glad to see you, Ed," replied Fuchs. Some of the press cleaned up Fuch's answer as, "How happy I am to see you again." Neither phrase was probably anywhere close. When questioned by reporters about Hillary's dash for the Pole, Fuchs said that he was "perfectly happy." The object now was to get from the Pole to Scott Base before the winter closed in, forcing the *Endeavour* to leave without them. However, the Danes came forth with an offer of the *Magga Dan* or the *Thala Dan*, and there were always American icebreakers. Fuchs planned to be back at Scott Base by March 1. Admiral Dufek airlifted the dogs to Scott Base so the team could travel more quickly, and Hillary flew off again. **Jan. 24, 1958**: Fuchs set out on his last leg, from the Pole to Scott Base, a day late because of a blizzard. **Jan. 26, 1958**: By 5.30 A.M. (GMT) he was already 80 miles from the Pole, heading fast toward McMurdo Sound. **Jan. 27, 1958**: By 5.30 A.M. (GMT) the Pole was 117 miles behind Fuchs. Now he knew that the American icebreaker as well as the *Endeavour* would remain at Scott Base until March 10. **Jan. 29, 1958**: Geoffrey Pratt collapsed on the Polar Plateau, 400 miles or so from Depot 700, suffering from carbon monoxide poisoning coming from the "Haywire." Two USN Neptunes, under Cdr. Vernon Coley, flew out and dropped oxygen to him. **Jan. 30, 1958**: Pratt was fine. **Jan. 31, 1958**: They abandoned the ailing "Wrack and Ruin." **Early Feb. 1958**: Fuchs ran into crevasse trouble. **Feb. 7, 1958**: "Rock 'n Roll" and "County of Kent" pulled into Depot 700, followed by the other 2 vehicles about 10 miles behind. Fuchs radioed Hillary at Scott Base. **Feb. 9, 1958**: Hillary joined the party at Depot 700, having come in after a 5-hour flight from Scott Base in the expedition's Beaver, flown by John Claydon. **Feb. 10, 1958**: They all left Depot 700, with Hillary guiding Fuchs back to the Ross Sea. Claydon, who had stayed the night at Depot 700, left that morning too. **Feb. 13, 1958**: They had passed through another zone of treacherous crevasses, and had arrived at Midway Depot, half way between the Pole and Scott Base. They had 600 miles to go. **Feb. 17, 1958**: They reached depot 480, but then were delayed because of whiteouts and blizzards. **Feb. 21, 1958**: They had 400 miles to go. **Feb. 23, 1958**: They arrived at Plateau Depot, 280 miles from Scott Base.

Now they would begin the descent from the Polar Plateau. An Otter and a Beaver flew to Plateau Depot and pulled out dog handlers Blaiklock and Stephenson, no longer needed, as the dogs had gone, and also to lighten the load for the rest. And, Miller and Marsh returned from their long surveying trip of 1600 miles, from Scott Base to the Queen Alexandra Range, the longest dog-sledging trip in Antarctic history. **Feb. 26, 1958**: Fuchs' party had descended Skelton Glacier and were at Skelton Depot, 180 miles from Scott Base. **Feb. 27, 1958**: They had begun the last, and easiest stage, a run across the Ross Ice Shelf to base. **Feb. 28, 1958**: Dr. James Adam was flown out to the trekkers to do physiological tests on them during the run in. **March 2, 1958**: A knighthood was waiting for Fuchs when he arrived at Scott Base at 1.47 P.M., as was a telegram, "My husband and I send our warmest congratulations to you. Elizabeth R." For Fuchs it had been a 2158-mile journey in 99 days, a huge success for him. The expedition had cost half a million pounds. **March 5, 1958**: They left in the *Endeavour* (under Capt. Harry Kirkwood). **March 17, 1958**: They steamed into Wellington Harbour amid a thunderous reception. **April 12, 1958**: Sir Vivian sailed for England on the *Rangitoto*. **April 29, 1958**: They passed through the Panama Canal. **May 12, 1958**: Fuchs arrived back in England, with his wife, on the *Rangitoto*, from Wellington.

British Graham Land Expedition. 1934-37. Abbreviated to BGLE 1934-37, or simply as BGLE. First conceived (slightly differently, as it turned out) by Greenland explorers Gino Watkins and Australian John Rymill in 1932, fresh from their 1930-31 British Arctic Air Route Expedition. However, they couldn't get funding due to the Great Depression, so instead, in 1932, they returned to the Arctic, where Watkins died and Rymill took over the expedition. In 1934 Rymill pushed ahead with the southern expedition, and obtained sponsorship from the British Colonial Office with a grant of £10,000 from the Falkland Islands Dependencies Research and Development Fund, the Royal Geographical Society (with a contribution of £1000), Lord Wakefield (£500), Mrs. Patrick Ness (£200), Lord Leverhulme (£100), the City of London (£250), and others. The Prince of Wales was patron. Its mission was to explore Graham Land, or, as was stated in the press from the time news of the expedition first broke in England in March 1934, the coastline between Luitpold Land and Charcot Land (i.e., the Luitpold Coast and Charcot Island), a distance of 1000 miles, and to determine once and for all if Antarctica was one or two continents, or, put another way, if the Antarctic Peninsula (as it would later be called) was attached to the rest of the continent, or not. Rymill planned the expedition at a cost of only £20,000 (£15,000 originally), including the purchase of a plane and a ship (the *Navaho*). The average cost of an Antarctic expedition prior to this date had been anywhere between £40,000 and £100,000. Members of the expedition were: Rymill (leader, surveyor and second pilot), Wilfred Hampton (second-in-command and chief pilot), Alfred "Steve" Stephenson (chief surveyor and meteorologist), George Bertram (senior biologist), Ian Meiklejohn (radio officer, on loan from the Army), Brian B. Roberts (ornithologist and assistant biologist), W.L.S. Fleming (geologist, glaciologist, and chaplain), Quintin Riley (meteorologist and man in charge of the motor boat *Stella*), and E.W. Bingham (expedition doctor). The crew of the ship were: Lt. Red Ryder (captain and hydrographer), Hugh Millett (chief engineer), James Moore (second engineer and surveyor), James Martin (first mate), Lisle Ryder (second mate), Verner Carse and Norman Gurney (seamen), all of whom, in April 1934, answered ads for naval volunteers to be seconded by the Royal Navy, with pay, to the expedition. Five of the actual expeditioners — Rymill, Hampton, Stephenson, Bingham, and Riley — had been with Watkins in Greenland in 1930-32. BGLE took a plane, a small, single-engine de Havilland Fox Moth, capable of landing on skis or floats, and of carrying 3 persons, or 2 with an Eagle III survey camera. 60 dogs were purchased by F.S. Scott in Greenland (Scott had been with Rymill in Greenland, but did not go on BGLE). **Mid-July 1934**: A cargo steamer set out from England for the Falklands with Hampton and Stephenson aboard, guarding the plane, the dogs, sections of the base hut, and 60 tons of stores. However, 37 dogs died and 6 became ill, so Rymill arranged for the purchase of 34 more from Labrador, and Bingham waited in Liverpool to receive them, and then take them out to the Falklands under his own steam. **Sept. 10, 1934**: The *Navaho* (now re-baptized the *Penola*), after having been blessed by the Bishop of Gibraltar at the suggestion of the Bishop of Stepney, left London, 8 days late due to a tardy arrival of engine parts from Germany. She was loaded with a Bristol air-cooled tractor, 12 sledges, skis, fuel for power and lighting, scientific apparatus, 2 pigs and 8 fowls, 2 dogs, food for three years, and 4000 gallons of fine Diesel fuel just for the outward trip. **Late Oct. 1934**: Bingham arrived in Montevideo with his dogs, one of whom was suffering from bites and another from dysentery, but not hearing any news from the *Penola*, he pressed on to the Falklands in early November. **Nov. 11, 1934**: The *Penola* reached Montevideo after a delay in Madeira. They then pressed on to the Falklands, and an advance party of 2 immediately set out in the *Discovery II* (loaned, as it were, to the expedition by the RN) for Port Lockroy, on Wiencke Island, in the Palmer Archipelago, with the aircraft, dogs, and heavy stores. **Dec. 31, 1934**: The *Penola* set out for Port Lockroy, but developed engine trouble (the engine beds had worked loose coming over from England), and the ship made her way back to the Falklands. Rymill could either delay the *Penola*'s trip by a year while it was fixed, or simply leave under sail alone, using the engines for emergencies. He chose the latter option, even though this would necessarily limit his base to one much farther north than he had hoped, it being too dangerous to press far south without reliable engines. **Jan. 6, 1935**: The *Penola* left for Port Lockroy again. **Jan. 22, 1935**: The *Penola* arrived at Port Lockroy. **Jan. 27, 1935**: After an air reconnaissance, Rymill chose the Argentine Islands as a base, picking Winter Island specifically as the location. **Feb. 14, 1935**: They occupied the hut on the SE point of Winter Island. **Feb. 28, 1935**: A trip in their motor boat *Stella* by Rymill, Riley and one of the Ryder brothers, convinced Rymill to move his base farther south the next summer. Sledging began in earnest. **March 8, 1935**: Their hut was finished, after 3 weeks of building, using wood and other materials they had cannibalized from the old whaling station on Deception Island. It was a two-story building, heavily insulated, with an enclosed porch in one corner housing the generator. One room downstairs and one up, the downstairs measuring 22 × 15 feet, and serving as workshop, kitchen and dining-room, and one corner was partitioned off to form the radio room. The bedroom was upstairs, accessible by ladder, with a stove in the center, and plenty of gramophone records and books. The men had a bath every 18 days in a tin tub. Adjoining the hut was the hangar, which housed the plane, the tractor, a work-bench and other bits and pieces. The sledges were stored on the roof of the hangar, out of reach of the dogs, who had a tendency to gnaw at the leather lashings. Behind the hangar was a small shed for the dogs, specifically the mothers. Several births took place during BGLE. A meteorological screen was erected at the top of the island, about five minutes' walk away. The *Penola*, with its crew aboard, anchored a short way off in a sheltered cove. They all wintered-over in 1935. **Jan. 3, 1936**: The *Penola*, after being cut out of the ice, left for Deception Island to pick up materials with which to construct the new, southerly, base. **Feb. 17, 1936**: The *Penola* set out on a southern expedition cruise with everyone on board except Hampton and Stephenson, who came down later. **Feb. 29, 1936**: The *Penola* eased into the Debenham Islands, in Marguerite Bay, and Rymill set up the new base on Barry Island. **March 12, 1936**: The *Penola* left to winter in the Falklands. **March 24, 1936**: The new hut was completed and occupied. **June 1936**: Their one (9 hp) tractor had to be abandoned when an ice floe broke. **Aug. 15, 1936**: They aerially discovered the George VI Sound, their most important find. **Sept. 5, 1936**: Sledging parties went out looking for Stefansson Strait, Casey Channel and Lurabee Channel, all of which Wilkins had claimed earlier connected the E and W parts of the Antarctic Peninsula (as it later became known). After a 10-week trip covering hundreds of miles, to a point 340 miles south of the Barry Island base, BGLE failed to find these features, and concluded that they might not exist, and that therefore the entire peninsula might well be a part of the Antarctic continent, as was originally thought before Wilkins had made his flight in 1928. **Sept. 24, 1936**: They found a suitable landing place for the Moth, and Rymill and Bingham turned back to fetch it. At this point they were 90 miles from

base, in the interior of Graham Land. **Oct. 10, 1936**: By this date 6 flights had been made here, and they set up a depot. From the Barry Island base Rymill and Bingham returned to the depot, and then made the first ever land crossing of the Antarctic Peninsula (*cf* **British Imperial Antarctic Expedition**), exploring the Graham Land coast as far as Cape Evensen. **Nov. 22, 1936**: They arrived on the E coast of the Antarctic Peninsula. **Dec. 25, 1936**: They turned back only when they reached the sea ice on Christmas Day. **Jan. 25, 1937**: They got back to base. **Feb. 13, 1937**: The *Penola* arrived. **March 12, 1937**: The expedition left for home. **May 17, 1937**: All but Hampton and Riley arrived in Liverpool, on the *Gascony*, from Las Palmas. The two absentees were separately bringing back the plane, the *Stella*, and 5 dogs. BGLE mapped much of Graham Land, and found that it is really an 8,000-foot-high plateau. They explored and correctly defined Alexander Island, surveyed 1000 miles of coastline, and discovered and charted several anchorages. They conducted aerial photography and studies in geology, meterology, and biology. And above all they determined the nature of the Antarctic Peninsula.
